"Mention is made of the economy of the recuperative type of furnace. In one case, careful consideration of such a furnace developed the fact that, out of six plants where, theoretically, it might be profitably used, there were only two locations in which it would be a physical possibility to install a furnace of such length, without prohibitive expense in changing existing equipment. Another drawback to the general adoption of the recuperative type of furnace in brass mills, as well as some other seemingly valuable devices, is the mistaken idea regarding the value of an automatically maintained uniform furnace temperature. A steel mill runs all day, commonly, on a product of uniform character requiring a uniform heat treatment. In a brass mill the character of the work varies greatly in the course of a day. One lot requires a certain temperature. The following lot may require 100 deg., or more, above or below that.

"The accurate control or determination of temperature in the electric furnace is of great advantage for some of the most rigid requirements in the finished product and the saving of rejected output. The duplicating of savings made elsewhere is dependent upon a comparison of the previous practices as well as other factors. Failure to install electric annealing furnaces may, therefore, be due in no small measure to the fact of careful overall consideration rather than to lack of it."

In reply, Mr. Keeney said that the small user cannot get 1c. power, but the large one can so adjust his power consumption as to obtain power at that price on his furnace. While it is true that the recuperative furnace is hard to adapt in brass rolling mills, there are other simpler ones which can be used. It is always best to consult the power company before installing any furnace.

High-Frequency Melting of Sterling Silver

Operating data obtained from melting sterling silver in Ajax-Northrup high-frequency furnaces at the plant of the Handy & Harman Co., Bridgeport, are given in a paper, "Melting Sterling Silver in High-Frequency Furnaces," by Robert H. Leach, manager of research and development of that company. The performance of both the oscillator and motor generator types is discussed, as well as the relative efficiency of the air-cooled and water-cooled coil when used with the generator type. Costs, as compared with the operation of oil-fired furnaces, are also summarized. These are said to compare favorably with the type of oil-fired furnaces previously used, with the principal advantages as follows: Accurate control of temperature and uniform heating, prevention of metal losses, reduction in the amount of metal absorbed in the furnace, and improved working conditions.

Answering a question as to whether there is not in such furnaces considerable churning of the hot metal so as to cause absorption of gases, Mr. Leach said that there is churning in the motor generator types, but the metal made in these stands the very highest tests.

Over 80 sat down at a round table luncheon Friday, April 27, presided over by Dr. B. D. Saklatwalla, vice-president Vanadium Corporation of America. A very interesting discussion on "Refractories for Electric Brass Furnace" followed. Representatives of many of the electric furnace builders and users were present, as well as producers of refractories and electrodes.

These round table discussions, which originated with the society, are regarded as occasions on which anyone can speak his mind freely without being quoted. Many phases of this important problem were brought up. It is apparent that a satisfactory solution has not yet been reached and that there is much room for improvement in finding a refractory suitable as to life and efficiency, particularly for copper and red brass melting furnaces.

Paul J. Kruesi, Elected President of the American Electrochemical Society for 1928-1929, *Is President of the Southern Ferro Alloys Co., Chattanooga, Tenn.*

The relative merits of various refractories were freely discussed, such as fused magnesite and carborundum, and considerable difference of opinion was expressed. The question as to whether a lining should be put in a furnace by ramming in the refractory or by the use of blocks of material suitably cemented together took up considerable time. There were arguments for and against both. There was considerable free discussion of new refractory materials. The interchange of opinion on the life of refractories developed from the experience of users was illuminating.

New Officers

At the annual business meeting, the following officers were announced as elected:

President for one year: Paul J. Kruesi, president Southern Ferro Alloys Co., Chattanooga, Tenn.

Secretary for one year: Dr. Colin G. Fink, Columbia University.

Treasurer for one year: Acheson Smith, Acheson Graphite Co., Niagara Falls, N. Y.

Vice-presidents for three years: Dr. F. C. Frary, director of research Aluminum Co. of America, New Kensington, Pa.; F. N. Speller, metallurgical engineer National Tube Co., Pittsburgh; Dr. Alfred Stansfield, professor of metallurgy McGill University, Montreal, Canada.

Managers for three years: Dr. F. M. Becket, vice-president Union Carbide & Carbon Co., New York; L. E. Saunders, manager abrasive plants, Norton Co., Worcester, Mass.; S. Skowronski, research chemist Raritan Copper Works, Perth Amboy, N. J.

It was announced that the late Dr. Carl Hering of Philadelphia, one of the founders of the society, left it a substantial sum of money, the amount not to be known for a year or so.

Future Conventions

The fall convention is to be held at Charleston, W. Va., Sept. 20, 21 and 22. The "Chemistry and Metallurgy of Nickel" will be the subject of one symposium, and there will be a group of papers on "Chemical Reactions at 1000 Deg. C. and Above."

It was decided by the board of directors that the spring meeting next year, upon invitation by the University of Toronto, will be held at Toronto, Canada, May 27, 28 and 29.

Plant Visitations

Several plants threw open their doors to those attending the convention. Among these were: Bridgeport Brass Co.; General Electric Co.; Remington Arms Co.; Holmes & Edwards Silver Co.; American Tube & Stamping Co.; Handy & Harman, and Connecticut Light & Power Co.

Japanese Railroads Buy 60,000 Tons of Rails from Domestic Mill

WASHINGTON, April 30.—An order for 60,000 tons of 100-lb. rails has been placed by the Japanese Imperial Government Railways with the Yawata Steel Works, covering requirements for the coming half year in connection with a rail replacement program, according to a report received by the Department of Commerce from Tokio. The rails will be laid on the electrified portion of the government railroads, some parts of the Tokaido line and a portion of the Sanyo line.

In addition to the replacement of 75-lb. rails with 100-lb. rails, 65-lb. rails will be replaced with 75-lb. rails. The use of light rails and a narrow gage have always seriously restricted speed and carrying capacity, the report says, and in some quarters this replacement is considered as preliminary to a general movement for widening gages, although this would require an extensive relocation of many parts of the main lines.

Steel Plants Have Larger Forces and Bigger Payrolls

WASHINGTON, April 28.—Employment in iron and steel plants increased 1.9 per cent and the payroll 2.1 per cent in March when compared with February, according to the Bureau of Labor Statistics, Department of Labor. The number of employees in 200 plants was 262,853 in March, against 258,060 in February, while the respective weekly payrolls were $8,394,777 and $8,225,173. Employment in the machine tool industry increased 2.2 per cent in March; in cast iron pipe foundries, 3.7 per cent, and in plants making foundry and machine shop products, 1.6 per cent.

When compared with March of last year employment in iron and steel plants showed a decline of 6.3 per cent, while the decrease in the payroll was 5.8 per cent. Cast iron pipe plants showed declines of 13.9 and 14.9 per cent; machine tools, 6.3 and 0.9 per cent; foundry and machine shop products, 9.7 and 10.7 per cent.

Employment in manufacturing industries in general increased 0.7 per cent in March when compared with February, and payroll totals increased 1.3 per cent. Employment in March stood at a higher level than at any time since October, 1927, while payroll totals were greater than at any time since June, 1927, with the single exception of October, when they were the same as in March. The bureau's weighted index of employment for March was 86.1 per cent.

New Continuous Sheet Mill Projected in Germany

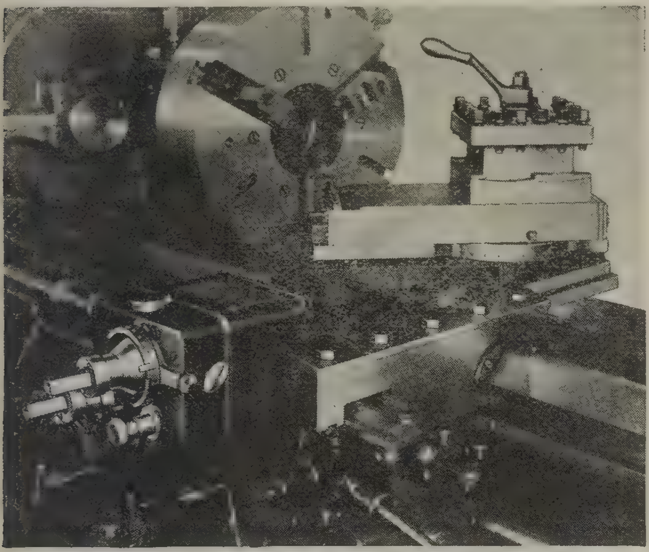
HAMBURG, GERMANY, April 15.—Since the return of engineers who visited steel mills in the United States, the Hoesch Steel Works, Dortmund, is understood to be preparing to introduce the continuous rolling of sheets. This will be the second mill in Germany to produce sheets by the continuous method. The United Steel Works is operating a small mill on an experimental basis, with the intention of increasing capacity in the near future.

The Hoesch works has started the construction of a large cold-rolling mill at Stockheide, where a new development will be utilized. Thin-gage sheets, it is understood, will be electroplated with aluminum at a low cost and offered in competition with tin plate. It is believed that the price will be below that on tin plate. Patents for this process are controlled by the Wickeder Eisen und Stahlwerke, a subsidiary of the Hoesch works, and the plant is being constructed by the Grusonwerke, a subsidiary of the Friedrich Krupp A. G. at Essen.

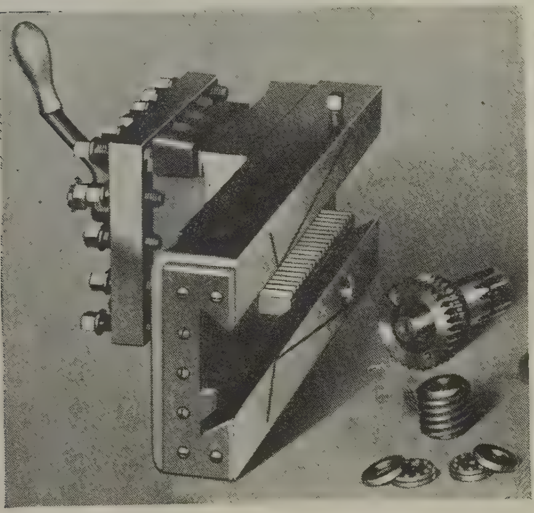
COMPOUND CROSS-SLIDE

Device for Warner & Swasey Lathes Permits Steep-Angle and General-Purpose Work

FOR turning bevel gear blanks and other parts having steep tapers, as well as for heavy-duty general purpose work, the Warner & Swasey Co., Cleveland, has brought out the new compound cross-slide shown in the accompanying illustrations. The device can be furnished for the company's new Nos. 3-A and 4-A turret lathes.



The Full Stroke and Swing Capacity of the Lathe Is Not Affected by the Compound Slide. Arrangement of the bottom of the slide may be noted from the view below



In addition to strength and rigidity for angle and heavy general purpose work the device is designed so that the full stroke and swing capacity of the turret lathe is not affected by the compound attachment. Other features include ease of operation and quick setting to any angle; powerful feed mechanism; wide range of operation; and thorough lubrication.

The compound cross-slide is of massive construction. The square turret, which carries the cutters, is made from a solid forging. The company's patented lock bolt is used so that it is not necessary to lift the turret from its seat for indexing. A swivel plate, made from a steel casting, is held securely to its base by four bolts in order to give maximum rigidity for the heaviest cuts and forming when used either as a compound or for regular straight cutting work. The cross-slide is held to its base by a square lock construction and to this is attributed unusual rigidity of the cross-slide, swivel plate and square turret, even when the slide has traveled to the extreme end of its stroke and somewhat overhangs the base.

The new cross-slide may be used as a straight turning and facing slide, as well as a compound slide, and is securely held and locked in place by four bolts, two on either side of the slide. By locating the four binding nuts underneath the swivel base rather than above, the graduated dial on the compound base has been made narrower than usual, thus minimizing overhang of the cutters and preventing interference with the chuck jaws. Angles can be faced or turned up to the full swing capacity of the Nos. 3-A and 4-A turret lathes and the swivel plate can be rotated through 360 deg., the full swing stroke of the slide being 8 in. It is also possible to use the standard taper attachment with this compound cross slide.

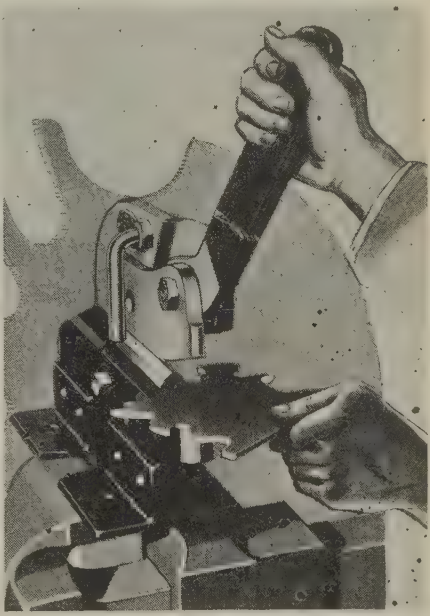
Both the cross and compound slides have power feed, and the arrangement is such that it is impossible to engage both of these at the same time. Graduated dials are large and are proportioned to assure quick and accurate setting of the clips. The power feed knock-off is operated in the same manner as that on the company's standard cross-slide. The feed mechanism is of the worm and worm gear type, the worm gear being of large proportions and mounted directly on a hardened and ground feed pinion shaft, which has a bearing both above and below the worm gear. Ball thrust bearings mounted on both sides of the feed worm are submerged in a bath of oil. It is pointed out that with the rack and pinion construction it is possible for the pinion to run entirely off its rack at either end of its stroke, thus providing a safety feature.

A large hinged oil cup at the front of the cross-slide provides a central oiling station. A wick, feeding from an oil well, lubricates the pinion feed shaft, the worm and worm gear running in a bath of oil. Wipers are used to protect the dovetail beneath the compound from grit and dirt.

Forming cuts 1/32 in. deep, cutting a chip ½ in. wide in 30 carbon steel, are said to have been taken over an extended period and under actual operating conditions without any signs of wear in the feed mechanism.

Hand-Operated Shear and Nibbler

A hand-operated slitting shear and nibbler for use in pattern shops and tool rooms, in making templets and gages, has been placed on the market by the National Machine Tool Co., Racine, Wis. The capacity of the shear and nibbler is for ⅛-in. flat stock. Provision is also made for rod cutting, the capacity of the rod cutter being for material up to 5/16 in. in diameter.



The Capacity Is for Shearing or Nibbling Flat Stock ⅓ In. and Less in Thickness. Rods Up to 5/16 in. may also be cut

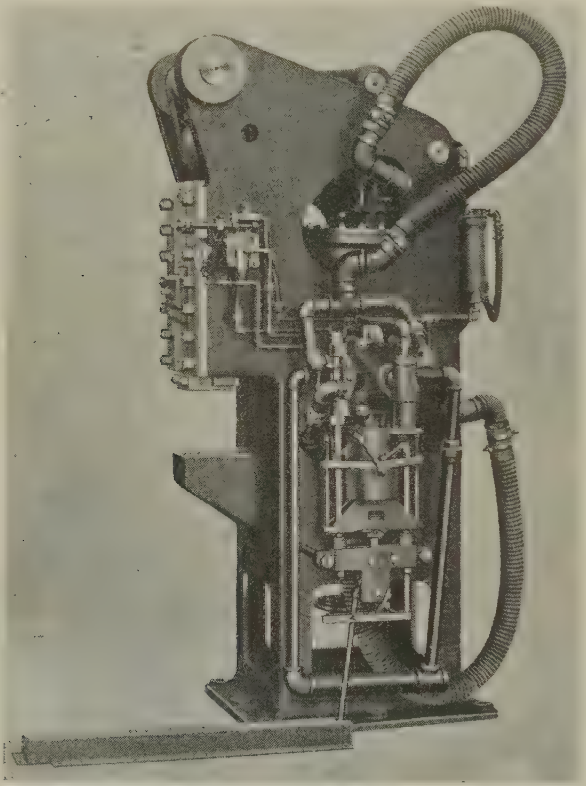
The machine may be mounted in a vise or on a bench. The clamping device consists of a taper latch which will adjust itself to the vise and which may be swung out of the way when bench mounting is desired. Shear blades are of tool steel and are arranged for convenient removal for sharpening. Special blades for cutting intricate shapes are obtainable, and extra upper and lower shear blades and die bushings of standard design can be furnished. The weight of the machine is 13 lb.

High-Speed Pneumatic Press for Coining, Punching and Other Operations

A high-speed pneumatic press for coining, squeezing, forming, upsetting, shallow-drawing, extrusion and punching operations has been made available by the Hanna Engineering Works, 1765 Elston Avenue, Chicago.

The arrangement of the machine may be noted from the accompanying illustration. An air cylinder piston unit actuates the ram through a toggle and lever mechanism such as employed on the company's compression riveters. The toggles are designed to close the gap between the dies with little air consumption, while the lever exerts uniform tonnage on the dies through a considerable portion of ram strokes regardless of variation in thickness of work. The stroke of the die or ram may be set for a wide range of lengths by adjusting a handwheel at the base of press and the pressure exerted between dies may be set for any amount from 20 per cent of the full press rating by adjusting a pilot valve regulating spring. The pressure for which the machine is set is indicated directly on a gage which is visible to the operator at all times.

High speed of 30 to 40 cycles a minute is attributed to a number of features, including the use of shock absorbing cushions at both extremes of piston stroke, air counterbalance and automatic reverse from down stroke to up stroke. The foot trip pedal for starting each stroke cycle requires movement of only 1 in. of the operator's heel, who, in operating the machine, stands naturally with his weight on both feet. The machine is arranged so that only one die stroke cycle will result from each depression of foot trip pedal, even if the pedal is held down. The pedal is guarded against accidental depression. An adjustment is provided to simplify die setting and eliminate shims less than ¼ in. thick. This adjustment, together with the stroke adjustment, is emphasized as minimizing air consumption. The return stroke is accomplished at less than one-tenth the air consumption of full tonnage working stroke. The press illustrated is rated as exerting 150 tons between the dies, at 100 lb. air pressure.



From 30 to 40 Stroke Cycles Per Min. Are Obtainable. The pressure for which the machine is set may be read from a gage

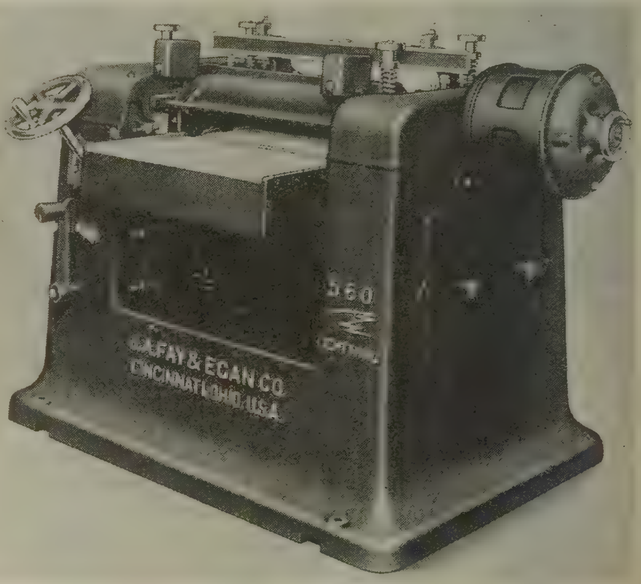
The eighteenth annual May lecture to the Institute of Metals (London), will be delivered by Prof. Cecil H. Desch on "The Chemical Properties of Crystals" at the Institution of Mechanical Engineers, Westminster, S.W.1, London, on Tuesday, May 8.

Two-Speed Single-Cylinder Surfacer for Work Up to 24-In. Wide

A general utility single-cylinder surfacer with a capacity for stock up to 24 in. wide and 8 in. thick has been added to the line of the J. A. Fay & Egan Co., Cincinnati. The machine, designated as the Safety Sealed No. 560, features full electric drive, ball bearings and the arrangement for two-speed operation.

The frame is a one-piece "safety sealed" cabinet with lines free from recesses which accumulate dirt. It incloses all the feed driving parts and removable plates are provided so that gears and working parts may be accessible. Covers are also furnished to prevent entrance of shavings into the raising screw gears or accumulating in lower part of frame. The table, also a one-piece casting, is accurately fitted in the frame and has long ways with gibs for taking up wear.

The feed consists of four rolls, all driven. The upper feed-in roll is fluted. The drive is from the cylinder by means of combination wedge contact link belt, through cut steel gears having true rolling contact. Pressure is maintained by automatic graduated spring levers. Pressure bars are provided before and after the cylinder, acting close to the cutters, and with the close centers of the rolls enable the producing of smooth work on short stock. For feeding a number of pieces, varying up to ⅛ in. in thickness, through the machine at one time, a flexible sectional feed roll and sectional chipbreaker are available. Two rates of feed, 18 and 30 ft. per min., are obtained by means of hardened sliding clutch gears, feed changes being made by a lever at the front of the column.



Two-Speed Gear Shift, Push Button Start and Stop, and Use of Ball Bearings Are Features

For motor drive, a 5-hp. 3600-r.p.m. motor is employed. The machine can also be arranged for belt drive. The floor space occupied is 44 x 65 in.

Switch Throws Motors Across the Line

A new magnetic switch, suitable for throwing squirrel-cage motors directly across the line, or for use as a primary switch for a wound-rotor motor the secondary of which is handled by a drum controller, has been introduced by the General Electric Co. It consists of a triple-pole, restricted-blowout type, magnetically-operated contactor, with normally open interlock, and two hand-reset, temperature overload relays, all mounted on a molded base and inclosed in a drawn-shell, steel case. It is designed for use on standard voltages and frequencies. Maximum ratings are from 50 hp. on three-wire 220-volt circuits to 125 hp. at 550 or 600 volts.

The Hanna Furnace Co., Cleveland, has placed a contract with the W. B. Pollock Co., Youngstown, Ohio, for the rebuilding of one of its Buffalo blast furnaces, including the construction of a new furnace stack.

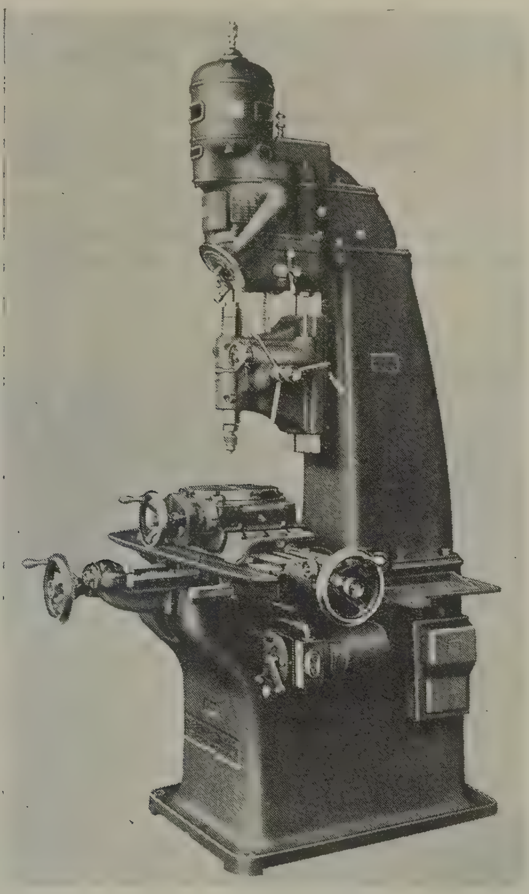
SMALL JIG BORER

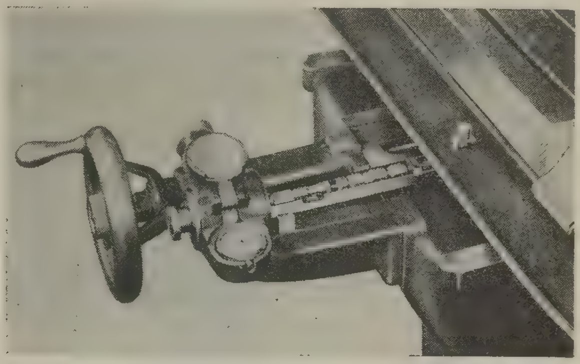
Simplicity of Operation and Wide Range Are Features of Precision Machine

SAVINGS in cost of making jigs and in general precision boring are claimed for the small jig borer here illustrated, which is being marketed by the Pratt & Whitney Co., Hartford. The machine, which is designated as the No. 1 or No. 1A, according to its capacity, is of the same fundamental principle as the company's No. 2 jig borer, previously announced, but is of new design throughout.

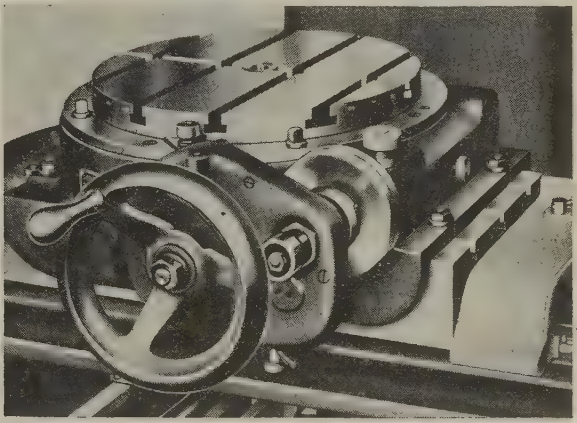
Like the larger machine the new jig borer is in effect a combination of a precision vertical boring mill of single-column type and an accurately built measuring machine for locating the work. The single column construction is emphasized as providing the necessary rigidity for precision boring and at the same time giving full accessibility for setting up without interfering with the light on the work.

The No. 1 and the No. 1A machines are identical except for the difference in the distance between the table surface and the spindle nose, which is 4½ in. greater in the No. 1A machine. A vertical variable-speed motor, built into the machine at the top of the column, is arranged to drive the spindle either directly or through sliding back gears. Shifting from one speed range to the other may be simply accomplished. The shifting lever has a circular motion and operates a spiral cam which engages and disengages the clutches which, in turn, connect the back gears or the direct drive. A complete turn of this lever makes the change from low to high speed or vice versa without stopping the motor. The four motor speeds and the back gears give a total of eight spindle speeds ranging from 132 to 1800 r.p.m., which adapts the machine for drilling and reaming as well as boring.





The No. 1A Jig Borer Is at Left. A close-up view of the indexing circular table is below, and detailed view of one of the measuring slides, as the operator sees it, is above.



The spindle quill construction is used, the quill being carried in a heavy spindle head. The spindle head is mounted on a single slide with broad bearing surfaces and with a gibbed narrow guide to maintain accurate vertical alinement. It is balanced by means of counterweights inside the column and is moved vertically by rack and pinion operated by the large handwheel on the side of the head. Binder bolts on either side provide for locking the head in position.

There is a double worm and clutch device by means of which power feed to the spindle quill, either up or down, is available. A large spoked handwheel at the right-hand side of the head operates a rack and pinion hand rapid traverse to the spindle quill. The round knob at the center of this handwheel serves to engage either one or the other of the two worms giving the up or the down power feed, and also provides a neutral position. A small handwheel on the front of the head is used for slow motion hand feeding of the spindle quill. Power for the quill feed, taken from the motor that drives the spindle, is transmitted through back gears which provide for two power feeds of 0.002 and 0.005 in. per spindle revolution. These back gears are engaged by a small lever on the side of the column and can be shifted while the machine is in motion.

The spindle is mounted in large bronze bearings inside the quill and has a ball thrust bearing at its lower end. The quill has a 4 in. travel in addition to the travel of the spindle head on the column face. This permits the boring of the deepest holes for which the machine is designed without the necessity of resetting the head. Graduations on the face of the quill permit boring to a definite depth. The spindle nose is recessed for collets and is threaded for a collet closing ring.

The measuring instruments and the general arrangement of the work table and slides is the same as in the company's larger jig borer. The work table is traversed in two directions by screws operated by handwheels, and each slide is equipped with a complete measuring device. Slow motion is provided for close positioning. The traversing screws have no connection with the measuring instruments, and errors in the screws, wear or backlash do not affect the accuracy of positioning. The measuring device consists of end measures for even inches, an inside micrometer for fractions of an inch and a ten thousandth dial indicator for determining the final exact accuracy. There is a small adjustable slide attached to the table through a binder which determines the zero position for any one job. With this zero position determined and registered on the dial indicator the table can be moved any desired amount and located exactly by means of the end measures and inside micrometers. The dial indicators show the position of the table relative to the zero position and indicate instantly any minute change that may occur in the location of the table. Thus they form a continual check on the accuracy of the job.

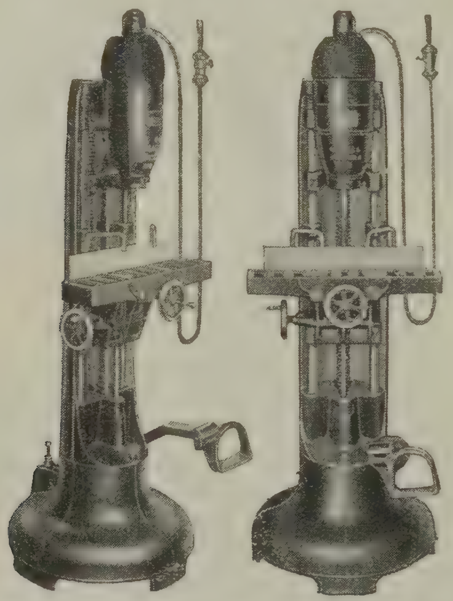
In addition to simplicity and its being readily understood by all mechanics, this method of measuring is said to have the advantage of using the same instruments and the same set-up as the tool maker must use to check the finished job on a surface plate.

Controls are simple and are grouped to facilitate operation. The net weight of the No. 1 jig borer is 2650 lb. and of the No. 1A, 2800 lb. Floor space occupied by the machines is 58½ in. by 59 in. The table working surface is 9¾ by 18 in. and the table longitudinal and transverse travels are 18 and 10 in., respectively. In the No. 1 machine the minimum and maximum distance from the table top to the spindle end are 1¾ in. and 10¾ in. and in the No. 1A machine these distances are 6¼ and 15¾ in. In both machines the spindle head travel on the column is 5 in. and the spindle quill travel 4 in. The distance from the center of the spindle to the face of the column is 9¼ in.

Extra equipment includes a new rotary table for extremely accurate indexing, this table being offered for use in boring circular jigs and drill plates which are most easily laid out by using polar dimensions, i.e., angle and distance from center. It is available for use on other types of machines also. The table has a scraped surface 12 in. in diameter and is arranged for clamping to the regular rectangular table of the jig borer.

New Electric Hollow-Chisel Mortiser

Simplicity is a feature of a new portable electric hollow-chisel mortiser of ½-in. capacity which has been brought out by J. D. Wallace & Co., 134 South California Avenue, Chicago. All attachments and adjustments not required in ordinary work have been omitted and casters have been provided in the base to facilitate moving the machine from one location in the shop to another.



The Capacity of the Mortiser Is For Holes Up to ½ In. Square and 17/32 In. in Diameter. Casters are provided in the base of the machine

The machine is driven by a special General Electric vertical motor, which operates at constant speed under the maximum load, and is kept cool by air drawn through a screen at the top. The air is forced downward by a fan on the armature shaft and, in addition to cooling the motor, serves also to cool the chisel and bit and blow away the chips. The chisel holder is built into the lower motor end-flange, which entirely incloses the bit chuck mounted on the motor shaft. The operating speed is 3450 r.p.m., which is said to be suitable for all work falling within the capacity of the machine, square holes of ¼, ⅜ and ½ in., or round holes up to 17/32 in. in diameter. The motor is entirely inclosed and dustproof. Seepage of oil from the bearing down into the motor, causing trouble in the armature, is avoided by the use of an oil slinger on the armature shaft, just below the ball bearing. Oil dripping from the bearing is caught by this slinger and thrown into an annular chamber which conducts it away from the motor.

Depression of the motor head of the machine for mortising is by means of the foot treadle. The latter has an iron stirrup which hangs vertically and is turned outward to accommodate the foot of the operator as he stands in a natural position. The head may be adjusted for any lower position desired by means of a set screw in the rear of the base, and is automatically carried back to the upper position by an adjustable tension spring. The table of the machine slides on accurately machined rods and is adjusted vertically and horizontally by means of conveniently located handwheels. Means are provided to maintain alinement at all times and to take up any play which may develop in the slide rod bearings. A steel fence and two hold-down rods are fastened to the rear of the table. The maximum distance from the center of chisel to the fence is 3 in.

Compressed Air Hoist on Side of Building

IN the illustration is shown a compressed air hoist with "turbin-air" motor made by the Sullivan Machinery Co., Chicago. This equipment is fastened to the side of a foundry building and is used for hoisting pattern skids for shipping machines from one level to another. The machine weighs 345 lb. It will lift one ton on a direct single line or will pull a 50-ton freight car on a level track.

Pattern Skids and Other Pieces Are Hoisted from One Floor to Another

---

Reports from 1500 employers in Illinois, employing 363,944 workers, indicate that employment in March gained 0.7 per cent. The gain in car and locomotive shops was 16.2 per cent; in iron and steel, 5 per cent; in automobile accessories, 8.1 per cent; in electrical apparatus, 5.5 per cent, and in farm implements, 1.4 per cent. Foundry reports were somewhat more optimistic, especially from larger units. In spite of these increases there were 5.4 per cent fewer people employed in Illinois metal establishments at this time than in March, 1927.

Foreign Trade Outlook Favorable

Increasing World Production Begets More Consumption—Expansion, Rather Than Curtailment, of American Trade Best Way to Aid European Recovery

BY JAMES A. FARRELL*

ONE of the indications of the accelerating pace of world commerce that many of our traders have felt in their own business is the stiffening competition they are encountering in some of the so-called neutral markets. But we are meeting it, and it justifies a certain optimism on our part that our sales are expanding just as rapidly, in many cases a little more rapidly, than those of our competitors.

There is a specially significant phase of last year's trade figures. It is that, although total values of raw material imports, both into the United States and into other industrial nations, were smaller than in 1926, volume of such imports was generally larger. That means, of course, increasing production. That definitely indicates continuation for some time, at least, of the stiffer competition just referred to, for the immediate effect of expanding industrial activity is naturally more active sales effort.

Competition Most Severe in a Narrow Market

The ultimate effect, however, is a more cheerful subject of contemplation. For out of increased production and sale comes inevitably increased consumption. It is in the narrow market that competition is most severely felt. As the market broadens that severity decreases. But markets can broaden only as their producers go ahead, as the margin for accumulation develops, in a word, as prosperity manifests itself.

It is only natural that Europe, which suffered most from the war, should be slowest in gathering headway for recovery. In our eagerness to get ahead we must not be impatient at Europe's lower rate of progress. Americans have already been vastly helpful in many ways, which is both appropriate and creditable.

But continuation of that course need not involve us in any departure from sound economic method or egitimate business endeavor. It is not necessary for us to relax our efforts in any market in order to speed up European recovery. We shall be better able to keep up, and even expand, our present course of helpfulness by going on with the forward movement of our trade, than we should be by restricting our efforts for the purpose of giving wider scope to European activities. Curtailment of our enterprise for such a purpose would not only prove detrimental to us, it would not benefit Europe. She will complete her recovery and regain prosperity by hard work, not on doles.

One Country Thrives as Other Lands Thrive

For in this modern world of highly developed transportation and communication national isolation is no onger possible. Conditions in one country react upon he others, and it is as our prosperity is maintained hat the best result in Europe will be achieved.

During nearly 1800 years of the Christian era the truggle with conditions of living made only little more than negligible advance. Transportation by sea mproved. Ships were larger, stauncher, faster and more skilfully handled. But transportation by land was of the same general character as in the days of the Romans, and roads were seldom as good as those the Romans made.

The nineteenth century gave us the railroad, the steamship and the telegraph.

The twentieth century has already given us the automobile, the airplane and the radio.

With these six agencies of transportation and communication the world has made more advance in the last century and a quarter than in all previous recorded time. Yet we are hardly more than over the threshold.

These six things have given new meaning to our life and our work. They have helped us the better to visualize the true relationship that we in this country bear to those in any other land. No longer is it possible for human life anywhere within the range of these six agencies of advance to go on as it did a hundred years ago in the simple routine of ordinary existence.

Now it is gradually coming into the active consciousness of all men everywhere that there is something of both give and take in the mere fact of the existence of numbers of other men elsewhere. The labor, the products and the service of one people constantly ameliorate the life of all other peoples, and all are coming to realize it.

Inasmuch as an important part of the program of this convention deals with the trade relations between the United States and our Latin American neighbors, it will not be out of place for me to say something as to the views of business men generally in the United States, with whom I frequently come in contact, concerning the republics to the south of us.

Trade Demands a Stable and Self-Contained Latin America

We have only one desire for them. We wish them peace, unbroken and undisturbed, from any source, either of international aggression or civil contention. We desire to see them all and always strong, stable and self-contained, for that is the best assurance of uninterrupted tranquillity. We want to have them go their own way, to work out their own destiny, with peaceful purpose and by peaceful methods, and we should be happy indeed if there might never arise any situation that demanded other resort.

That, I am confident, is the hope and wish of American business for all of Latin America. And I am very sure that American business will be found uniformly and unfailingly glad to be of any possible help to make that hope effective in realization.

But I should not have stated this position fully if I were to fail to add one thing in explanation of this attitude. It is the frank admission that our primary motive is intensely practical. In desiring to see all of Latin America always stable, strong and peaceful, we are not actuated by idealism or altruism. Both are strong and high motives. But ours is, after all, an even stronger reliance upon that basic human desire, which has been chiefly responsible for all world advance, the primal urge to better our own circumstances of life.

For we know that peace is the best condition for trade and prosperity. Therefore, we want Latin America peaceful. We know that trade is the chief agency of prosperity. We seek prosperity for ourselves, and we seek it through trading with Latin America. Therefore, we want Latin America to increase in prosperity, so that out of her increase in trade we may derive a share.

---

*President United States Steel Corporation and chairman ational Foreign Trade Council. Abstract of an address by r. Farrell read before fifteenth convention of National oreign Trade Council, held at Houston, Tex., April 25 to 27.

We who are producers and traders in the United States have very much in common with the peoples of Latin America, as for that matter we have with the other peoples of the world. We have learned from experience and observation that trade begets trade. We have noted that if two nations merely trade with each other that trade is often neither as profitable nor as beneficial as if the same exchange occurred through other countries as well. We know that it is not a mere coincidence that those nations which display the greatest industrial activity in competition with us are at the same time the heaviest purchasers of our products, manufactured as well as crude. It is production that gives buying power, and it is buying power that consumes.

So we wish for Latin America and for all the world peace, strength, stability and prosperity. So will their trade grow and thrive. So will ours advance. So will foreign trade progress.

BUILDING OUTLOOK GOOD

Increased Construction the Result, Not Cause, of Better Business Conditions—No Signs of Boom

"THE general level of building activity that has prevailed during the past three years probably represents the new standard or normal level for the industry in this country, and there is no reason to expect any material recession from this level in the future," said Virgil Jordan, chief economist of the National Industrial Conference Board, New York, in a recent address before the Credit Association of the Building Trades of New York.

"The immediate outlook for building," Mr. Jordan said, "depends chiefly upon general business and credit conditions in the next few months, and in these respects there is nothing to worry about, even though money may be temporarily tighter and business a little hesitant during the summer. It is far more reasonable to expect that after the stock market has had some of its speculative enthusiasm knocked out of it, easier money and rising prices will stimulate speculation in commodity markets and lead to a rapid and general expansion of business which will carry building along with it to still higher levels next year.

"In the building industry as in all other fields of business, it is high time that we throw overboard some of our traditional ideas of what is normal and proper and recognize that we live on a radically different plane of public demand and industrial accomplishment than before the war.

"Economists and statisticians like to fit all the ups and downs of business into regular cycles and to make its development conform over long periods to a smooth curve of growth. These formulas may be true enough as a historical record of our brief past, but there is no reason to suppose that we are chained to them for the future. Business is no mere machine following purely mechanical laws; it is determined fundamentally by changes in human psychology, but these the statistician has no means of taking into account.

"This is particularly true in its application to the building industry. During the past five years statisticians have been wrangling about the length of time before the war-time 'shortage' in building will be made up and the probable return to some 'normal' of building activity. Invariably these calculations have been upset by the facts, because the future growth of any fundamental type of consumption demand, such as building, cannot be measured by any purely statistical means.

"The deficit in building during the war has very little, if anything, to do with the level of building activity in the past few years or at the present time. The level of building, like that of industrial and trade activity, is not determined by what happened in the past but by the way we feel and the things we want now and in the future. The demand for building depends not merely on the growth of population nor even upon the size of the existing population, but upon the current ideas, habits and customs of the public in respect to building accommodations and services and upon their general purchasing power or effective demand for such services.

"It is far more accurate, therefore, to say that the level of building activity today depends upon general business conditions and national prosperity than to say, as we used to, that business activity and prosperity depend upon the amount of building that is done. Vast as the building industry is, our business activity has grown more rapidly in extent and variety, so that business is relatively less affected by building construction than the building industry is by business, and the relation between the tail and the dog has become more normal.

"Instead of talking about building shortages as a result of the war or about the building 'boom' during the past three years, we should rather consider that throughout the entire past the United States has been underbuilt from the point of view of current standards of living.

"So far as the question of disposable capital for building purposes goes, there is no ground for fearing any stringency in the long run. The constant flow of capital abroad and the outburst of speculation in the security markets all testify to the fact that even now the United States is saving a larger part of its national income than it should and is investing it in ways far more questionable than even the most speculative forms of building investment can be considered to be. Changes in our financial system and banking conditions at home and abroad are releasing increasing credit resources, which can be drawn upon for building purposes. If they are not used for such purposes they will be used for other types of speculation and investment far less sound from an economic or social point of view."

Milton Mfg. Co. Reorganized; W. W. Wilson New President

The Milton Mfg. Co., Milton, Pa., manufacturer of iron bars, bolts, nuts, rivets, etc., which was recently discharged from receivership, has been reorganized with a new board of directors and the following officers have been elected by the board: W. W. Wilson, president; R. W. Krise, vice-president; Harry W. Chamberlin, secretary; O. S. Stamm, treasurer. Mr. Wilson, the new president, was one of the receivers of the company. The following executive committee was also named: Mr. Wilson, Mr. Chamberlin, N. Thompson Marsh, James B. Graham and Seth T. McCormick, Jr.

The stockholders elected the following board of directors: William P. Beeber, president First National Bank, Williamsport, Pa.; William Cawley, vice-president Peoples Savings & Dime Bank & Trust Co., Scranton, Pa.; Harry W. Chamberlin, president Milton National Bank, Milton, Pa.; Chauncey P. Colwell, Cassatt & Co., Philadelphia; William C. Dickerman, vice-president American Car & Foundry Co., New York; James B. Graham, president Lycoming Trust Co., Williamsport, Pa.; Raymond W. Krise, vice-president Milton Mfg. Co.; N. Thompson Marsh, president Milton Trust & Safe Deposit Co., Milton; Seth T. McCormick, Jr., Williamsport, Pa.; Arthur Peck, Harper & Turner, Philadelphia; Vandling D. Rose, Scranton, Pa.; W. Walter Wilson, president First National Bank, Milton.

Current manufacturing problems, such as labor conservation, excessive competition, overproduction and shrinking profits, will be discussed at the sixteenth annual meeting of the Chamber of Commerce of the United States to be held in Washington, May 7 to 11.

Neville Island Blast Furnace to Be Operated by Sharpsville Furnace Co.

The Sharpsville Furnace Co., with offices in the Oliver Building, Pittsburgh, and operating a merchant blast furnace at Sharpsville, Pa., has purchased from the United States Steel Corporation the Neville furnace, on Neville Island, Pittsburgh. This furnace, owned by the American Steel & Wire Co., long has been under lease to the Carnegie Steel Co. It has not been operated much since it was relined in 1925 and when last in blast was used in making ferromanganese. Included in the purchase is a considerable area of land, which will be utilized as a site for a by-product coke plant and cement works. A coke plant on this location will have the advantage of low freight waterborne coal. The Sharpsville company some years ago considered the building of a by-product coke plant at Sharpsville, but abandoned the idea because of high freight rates on coal and the lack of an adequate market for the gas.

Close relations exist between the owners of the Sharpsville Furnace Co. and those in control of the Koppers Co., and the latter will build the by-product coke plant, the coke from which will go to the Neville and Sharpsville furnaces, while the gas is to be used in burning cement.

An interesting phase of the deal is the fact that it means a merchant blast furnace for Pittsburgh and probably a further limiting of the movement of merchant iron from the Valley furnaces to the Pittsburgh district, since the freight charges from Neville Island to representative Pittsburgh district consuming points are 63c. to $1.13 per gross ton, compared with $1.76 from Valley furnaces. For some time, Valley furnaces have not been able to get into the Pittsburgh district with basic iron on account of more favorable freight rates to consuming destinations enjoyed by Pittsburgh district steel companies having surplus iron production. The Neville furnace will make Bessemer and foundry grades as well as basic iron and having a rated capacity of 600 tons a day is bound to be a factor in the Pittsburgh merchant iron market.

The Neville furnace was built in 1900-01 and blown in July 3, 1901. It was last relined in 1925 and having had little use since is said to be in condition for immediate resumption. The other furnace of the Sharpsville company was originally built in 1847 and was rebuilt and enlarged in 1923; it has a rated capacity of 400 tons a day.

Czechoslovakian Works Refuse to Pay Cartel Fines

WASHINGTON, April 30.—The Skoda Steel Works and the Poldi Steel Works of Czechoslovakia are reported to have refused to pay a share of the overproduction fines assessed against the Central European Steel Cartel by the International Steel Cartel for exceeding their quotas during the past year, according to a report received by the Department of Commerce from Prague.

Both companies have produced considerably more steel than the tonnages assigned them under the cartel agreement, it is stated, but, as they use practically all of their steel production for further manufacture in their own plants, their production, although statistically included in the Czechoslovakian national quota, is claimed by them to be exempt from the provisions of the cartel agreement. The Central European Steel Cartel applies to ingots, shapes, bars and plates. In determining the capacity of Czechoslovakian steel plants, the Skoda and Poldi works were included in spite of the fact that they produce almost none of this material. It is pointed out that they have been considered as part of the cartel, although they were never actually members.

As a result of their refusal to pay fines, the report says, it is assumed that Czechoslovakia's steel quota will be reduced by the amount of the allotments assigned to those plants. A further reason advanced for the action of the Skoda and Poldi companies is that they prefer not to make public their steel production figures as is required by members of the cartel.

German Wire Mills Establish Experimental Plant

HAMBURG, GERMANY, April 15.—German wire mills have established an experimental plant through the wire makers' association. Under the registered name of "Weka," the plant, owned in common by the members of the association, will make a wide range of wire products, including nails, barbed and fencing wire, both plain and galvanized. Experiments will be made to improve the quality of the product, to reduce labor costs, to better manufacturing methods, distribution, etc.

This is the first plant of this type to be established in Germany, and all results will be for the use of numerous small wire mills, which make up the membership of the association.

Purchasing Agents to Meet in Kansas City

Preliminary announcement has been made of the thirteenth annual convention and Inform-a-Show to be held in Kansas City, May 28 to 31, by the National Association of Purchasing Agents. The sessions and the exhibition will be held in the American Royal Building. The arrangements will be such that those attending the sessions will pass through the exhibit to reach the meeting rooms. G. A. Renard, 11 Park Place, New York, is secretary-treasurer.

Market for Road Machinery in Czechoslovakia

An American export house recently established an agency in Prague, Czechoslovakia, to represent 14 American manufacturers of road-building and construction machinery, according to a report received by the Department of Commerce, Washington, from the assistant trade commissioner at Prague. The report says that larger American units, such as steam-rollers or large power shovels, find no market in Czechoslovakia, but that prospects for specialized American equipment have improved.

Industrial Stocks of Coal Slowly Decreasing

Stocks of coal on hand in industries of the United States and Canada are estimated as of April 1 by the National Association of Purchasing Agents at 45,744,000 net tons. This compares with 47,388,000 tons on March 1. There has been a slow decline from the 60,154,000 tons on Oct. 1 last. Industrial consumption in March is estimated at 38,268,000 tons—the largest for any month in a year. It compares with 36,301,000 tons in February.

The supply of coal in industry is estimated at 24 days for steel mills, 36 days for by-product coke plants, 38 days for railroads, 57 days for electric and gas utilities, and 36 days for other industries.

Germany Seeks Newfoundland Ore

HAMBURG, GERMANY, April 15.—As a result of a protracted strike at the Swedish iron mines, shipments to Germany have decreased from 1,000,000 tons of iron ore a month to about 345,000 tons in March. A further decrease for April is expected, as stocks of ore at Narwik and other Swedish ports are almost gone.

The reduction in the available Swedish supply of iron ore has influenced a few steel makers in Germany to seek to contract for almost the entire output of Newfoundland mines. Newfoundland ores have a lower iron content than the Swedish, but their higher silicon and phosphorus content make them quite suitable for use in Bessemer steel production and their smaller manganese content is an advantage. The steel makers in question hope to be able to secure from 85 to 90 per cent of the Newfoundland exports of iron ore this year.

This Issue in Brief

Eliminates defective castings by "single-heat" annealing. Annealing cycle of malleable castings is based on an anlysis of the iron in each heat. Close control of temperature has reduced average combined carbon to 0.03 per cent.—Page 1209.

Doubts whether pearlitic iron castings will be produced to any great extent in this country. To avoid confusion, pearlitic castings must be produced in separate building, which would necessitate providing new capacity, Dr. Moldenke says.—Page 1241.

When you weld high-chromium alloys be sure the joint is clean. The flame should be strictly neutral and of minimum dimensions. Rustless irons require annealing after welding, to soften and toughen the metal at the joints. But rustless chrome-nickel irons, being non-air-hardening, need not be annealed.—Page 1242.

Business in metal trades shows improvement over last year. Forty-eight per cent of National Metal Trades Association members report business as "excellent" or "good," while 52 per cent find it "fair" or "poor."—Page 1246.

Reduces process inventory more than 50 per cent by paying foremen a bonus based on work in process. If the foreman succeeds in keeping the work in process in his department within the limit of the budget he gets a bonus of 10 per cent of his salary.—Page 1289.

Unemployment due to mechanization is as yet an economic myth, says chief of Industrial Conference Board. Mechanization of industry is a relatively slow process, and usually allows sufficient time for readjustment. Slack is taken up by non-industrial occupations.—Page 1246.

Pay your foremen a bonus and increase your profits. One manufacturer bases foremen's bonus on relation of actual operating expense to shipments. Another calculates it on bonuses earned by the men in the foreman's department. — Page 1289.

American manufacturers of machinery, iron and steel are increasingly successful in foreign markets. March shipments of machinery were highest in seven years, and iron and steel were largest in four years.—Pages 1294 and 1296.

Eliminates rats and pin holes in castings by using a special vent board. Venting pins of varying heights pierce the mold, allowing steam and gas to escape. The pins are so fixed that they conform to the configuration of the cavity.—Page 1212.

Permanent mold process produces gray iron castings as heavy as 25 lb. Castings with and without cores are made by the Holley sandless process. Pouring is done on an automatic turntable carrying 12 molds.—Page 1214.

No cupola trouble in more than two years. Holley foundry follows usual cupola practice in production foundry. No alloys or special fluxes are used.—Page 1216.

Profits from manufacturing are steadily increasing, says economist. Average profit has risen from 6 per cent in 1880 to 10.5 per cent in last six years. He doubts that 40 per cent of industrial corporations are non-profit-making, declaring that defunct corporations are included in income tax lists.—Page 1246.

Expert manipulation is necessary to get satisfactory results in making pearlitic iron castings. Silicon content must be low and molds must be hot. Extra care is required with pattern equipment, gates and risers.—Page 1241.

"Accident proneness" and low intelligence do not always go together. Though investigations have revealed that a material percentage of workers has a high accident liability rate, as yet no test has been devised which will enable an employer to detect those workers.—Page 1264.

Get best results by developing their own welders. Shop men of good character and more than average ability are put through a period of training. Apprentice is considered to have "graduated" when he can make butt welds which can be consistently bent 180 deg. around a pin five times the thickness of the plate.—Page 1244.

Believes profits can be estimated a year in advance. Walworth Co. is able to forecast its financial, labor and material requirements by means of a budget, and now believes that profits and the trend of prices can be reliably plotted in advance.—Page 1290.

American manufacturers should not relax their efforts toward building export business, says James A. Farrell. For that would delay rather than hasten the recovery of Europe. Tremendous strides made in transportation and communication facilities portend a great growth in world trade.—Page 1257.

Business and Economic Outlook

AT the end of the first third of 1928 we are able to get a fair comparison with the forecasts offered on the eve of the new year. These appear to have been generally sound and it looks like 1928 turning out about as expected. Much of the recession in business that came in the latter part of 1927 has been recovered. Automobile manufacturing has revived. Transactions in the stock market have swelled to unparalleled volume. About the only thing unexpected has been a large degree of unemployment, and that has been rather an awakening to a realization of it than a sudden development. The political issue that will be in the forefront this year is not one calculated to upset business.

Thus general conditions remain about the same: Steadily increasing population. Great activity in the creation of consumption goods. Profitless prosperity in all of the old over-equipped industries, wherein there is consequently intense competition. Great profits in new industries that furnish what the people want and that have not yet become over-equipped. Plethora of means for doing new things, both financial and material. Low interest rate. Low rate of yield from investments. The outlook is that all of these conditions will continue about the same.

Such excesses as there are in the stock market will of course be corrected. The gamblers who buy things with the hope that they will go up 10 or 20 points in a day or two will receive a shock. This may not be very far ahead. When the yield of securities, actual or prospective or both, falls below the interest rate it is bad business to borrow money to buy stocks. Such a correction will not spell a general or major decline.

Many stocks have not risen at all. Some have declined. It has been a selective market, truly reflecting the difference between great industrial profits and profitless prosperity.

Stocks of goods have not accumulated. There is no such thing as frozen credits in sight. Loans on securities are high, but that is a kind of credit that never freezes. We have not locked up capital in enterprises that have been unfruitful or mistaken. We are increasing our claims upon European industry.

Our most dangerous symptom is political, as evidenced by desires of Congress for a Muscle Shoals adventure, a Boulder Dam favor to local interests, a recklessly planned Mississippi River flood control, a price-fixing farmer relief bill, and a rejection of the well-considered Treasury plan for tax reduction. President Coolidge alone stands in the way of such perpetrations. It is not surprising that he is tired of politicians winning their way to Congress under the gonfalon of Coolidge prosperity and then contemptuously disregarding his leadership. It is a bad symptom that politicians should want to do such things. With a president of less intelligence and courage, with perhaps a revival of the policy of harassing business, bad times might readily be produced. The association between economics and politics is always close.

Indexes That Do Not Index

THAT the many "indexes" of business conditions need to be interpreted with care is emphasized by the data regularly published on the use of electricity. One journal collects statistics of electrical consumption from about 3000 large manufacturing plants in various industries, scattered throughout the nation, and derives a curve which is taken to indicate general business activity in the United States. The data are also segregated for various industries. We quote from the comment on the steel industry.

> The rate of operations in the rolling mills and steel plants was quite significant, standing at 6.8 per cent under February. . . . A decreased rate of operations was normal during March, but the drop this year was more than was to be expected.

While we do not doubt that the plants canvassed actually have used less electricity in March than in February for the last few years, it is a mistake to conclude that the peak of winter operations in the steel industry is reached in February, for statistics of both pig iron and ingot production show that the peaks were reached in March or April in 1924, 1925, 1926 and 1927. As for 1928, rather than the 6.8 per cent decrease reported above, the real tonnage is as follows (daily rates):

	Pig Iron, Gross Tons	Steel Ingots, Gross Tons
February, 1928....	100,004	161,812
March, 1928.......	103,215	166,945
Increase	3.2 per cent	3.2 per cent

The question will naturally be asked how far the discrepancy between a supposed 6.8 per cent reduction and an actual 3.2 per cent increase is due to the fact that the nights were getting shorter and the electric light bill was getting smaller.

What Is Yankee Ingenuity?

A UNIQUE problem faces the Worcester Polytechnic Institute. Henry J. Fuller, of the institute's class of 1895, has endowed a scholarship, the deed of gift specifying that it shall be awarded to the entering freshman who has exhibited the greatest amount of "Yankee ingenuity." It is a worth while scholarship, for it will be enough to pay college tuition and other fees for the course and give the recipient an additional sum for other expenses. But what is "Yankee ingenuity," and what test shall be given the applicants to determine which is most worthy of the award?

The institute authorities were puzzled and decided to seek counsel among engineers and executives. A group of 50 such men was selected and each was requested to submit a definition of "Yankee ingenuity" and to suggest a basis upon which candidates for the scholarship should be judged. The answers will be turned over to the committee entrusted with the award, consisting of Frederick H. Payne, president of the Greenfield Tap & Die Co., Edmund C. Mayo, president of the Gorham Mfg. Co., and Ralph E. Thompson, vice-president of the Gillette Safety Razor Co. Here are some of the definitions or excerpts from definitions as submitted to the institute:

Owen D. Young, chairman of the board of the General Electric Co., sends this as the best reply received from the members of his staff to whom he submitted the question:

> Ingenuity, according to modern usage, suggests an inventive power which is at once nimble and effective; a readiness in apprehending or devising new and effective means for the accomplishment of any given purpose.

Dr. Michael Pupin of Columbia University:

> Performance of an old stunt in a new and remarkably simplified way.

John F. Stevens, past president of American Society of Civil Engineers:

> It is merely the application of good, old-fashioned common sense to the ordinary affairs of life and the most important factor in the correct solution.

Joseph W. Powell, formerly president of the United States Shipping Board Emergency Fleet Corporation:

> It is closely allied to common or "horse" sense. A boy with common sense will find the simplest and the quickest way of accomplishing his purpose with the least expenditure of time and energy.

Henry D. Sharpe, treasurer of the Brown & Sharpe Mfg. Co., and Prof. A. D. Meade of Brown University got together on the question and evolved "gumption" as the answer.

Homer L. Ferguson, president of the Newport News Shipbuilding & Dry Dock Co:

> Yankee ingenuity is that quality of mind which enables the possessor to grasp a problem and to solve it in a manner at once simple, direct and practical as well as frequently surprising. Imagination, wit and common sense applied to the solution of problems mechanical or otherwise. The knack of solving difficulties.

George A. Perry, mechanical engineer of the Jones & Lamson Machine Co:

> I suppose that Yankee ingenuity is, after all, just plain ingenuity, or, we might say, the quintessence of ingenuity. Probably a good definition of ingenuity is cleverness and originality in designing something or in making something to fit the needs from the material one has.

Frederick W. Shibley, vice-president of the Bankers Trust Co., New York:

> Yankee ingenuity implies the inherent ability of solving a knotty problem in a simple and ingenious way, of accomplishing a difficult mechanical job without employing the customary tools. It implies cleverness rather than trained skill.

Frederick H. Payne, of the committee:

> Ability to succeed under trying circumstances. (As a method of award he suggests the careful selection of a list of boys to whom a set of questions would be submitted. The boy who is finally selected must be full of ambition.)

Steel Earnings and Tonnage

INCREASE in earnings of steel companies in the March quarter, over the December quarter, were due almost entirely to an increased volume of shipments, and that fact should be emphasized. It is true the producers were all seeking higher prices, having begun to announce advances in November of last year; but substantial results did not accrue even in March. It has always taken time for market advances to work out in actual invoices and the recent period has been no exception.

From the December to the March quarter the Steel Corporation's earnings increased 31 per cent, and such estimates as can be made would indicate that its shipments increased by more than 31 per cent. If so, there would be no inference that invoice prices on identical products decreased at any point.

The Bethlehem Steel Corporation makes a definite statement to the effect that its average billing prices rose 34 cents a ton, and presumably the computation was made by comparing identical materials. Bethlehem's net earnings, after interest, depletion, depreciation and federal taxes, increased by 43 per cent, but that is not comparable with the Steel Corporation's increase, which is before interest (except subsidiary company interest), depletion and depreciation.

First quarter earnings of the steel industry were not even fair despite the increase; and that is not all, seeing that the increase was due to tonnage, for first quarters normally run above the average in tonnage. In the past three years first quarter steel production has been 10 per cent above the year average and 14 per cent above the average of the other three quarters.

Fully integrated steel companies have not been averaging earnings much above $10 per gross ton, before payment of interest and allowances for depletion and depreciation. In no year since the war has even the United States Steel Corporation averaged as much as $15, with a computation based on assigning all its earnings to the steel products it ships, making no allowance for earnings otherwise accruing.

Various styles are followed in computing or estimating earnings per ton of steel shipped. It is manifestly unfair to consider a dollar earned when there must still be deducted from it an allowance for depreciation, let alone depletion. That is very strongly the case with the steel industry as now conducted, for there is energetic competition in the making of improvements calculated to reduce cost. Depreciation is not an allowance to maintain the *status quo* of the equipment. The design wears out as well as the physical entity, and facilities must be maintained up to the general state of the industry, which is constantly advancing. Earnings have not really been made until all such depreciation has been allowed.

On that basis the integrated steel companies have not been earning more than about $10 per gross ton if as much. The Steel Corporation's depletion and depreciation reserves of subsidiary companies last year amounted to $3.64 per ton of steel products shipped.

French Primacy in Steel Exports

IT was the common judgment that France could not take a position in world trade in iron and steel at all commensurate with the primacy in iron ore resources given her by the Versailles treaty. It was said, and the record bears it out, that the French steel makers had shown no such capacity for developing outer markets as had put their British and German competitors in command of so large a share of this trade. The statistics of the first few years after the war further supported the legend. But the past few years have witnessed a steady gain in French exports. In 1926 they were not far behind those of Germany and 1927 was signalized by the advance of France, for the first time in history, to the position of leadership in the iron and steel trade of the world.

The compilation of the National Federation of Iron and Steel Manufacturers, London, gives the total of iron and steel exports from France in 1927 as 5,602,500 tons, or nearly a million tons above that for the nearest competitor, Belgium-Luxemburg, and nearly 1,500,000 tons more than France exported in 1926. Thus there is a complete recasting of the positions of the six nations which do most of the world's international trade in iron and steel. Before the war Germany was first and Great Britain second, their exports being 6,207,600 tons and 4,969,200 tons respectively in 1913. France, with a total of only 619,200 tons in that year, has climbed from the bottom of the ladder, and with her advance to first place last year, Germany is further displaced by Belgium-Luxemburg. Thus the order, after France, becomes: Belgium-Luxemburg, 4,606,900 tons; Germany 4,230,300 tons; Great Britain, 4,199,700 tons; United States, 1,942,700 tons.

It is noteworthy that France has not made headway against Germany, Great Britain and the United States in the Orient or in South America or Africa. Her gains have been largely in exports to Great Britain, Germany and Belgium, which together take over 60 per cent of French steel exports, the largest item being steel in semi-finished form.

Detecting Accident Proneness

MANUFACTURERS who have studied the accident record of their employees seem to agree that "accident proneness" is a definite mental characteristic of a material percentage of the workers. It is believed, moreover, that this tendency to make industrial occupation more hazardous to one individual than to another is not always heedlessness and carelessness, but in many cases is a form of temperamental instability associated with other traits in an employee. Among these latter are the habit of "reporting sick," under the urge of hypochondria or with the intention to malinger, and inefficiency as an industrial unit. In other words, the kind of man who is not mindful of known hazard and whose brain is slow to react in unexpected danger is also apt to remain away from work unnecessarily, and when at work produces below the standard for his task.

This mental combination has been given much attention by the British Industrial Fatigue Research Board. The investigators of the board are seeking a means of sifting out these undesirables from those seeking employment. Experiments on groups of workers have included tests of reasoning ability, which seemed to show that the man of high intelligence may meet with accidents as readily as the man of low intelligence. Capacity to coordinate was shown to be a factor of large importance.

A series of three tests demonstrated that those who failed to pass them satisfactorily had an accident rate 50 per cent higher than those who passed. Yet the board in a recent report frankly admits that tests so far devised are inadequate and impracticable for everyday use. The hope is expressed, however, that eventually a formula will be worked out enabling employers to separate between the safe man and the unsafe.

With the experience at hand, it would be difficult to convince those who conduct employment offices of American industrial plants, and others having intimate contact with the average run of shop workers, that any cut and dried mental examination could be effectively applied to applicants, with their widely ranging intelligence, different nationalities, and all varieties of temperament from the ultra-phlegmatic to the emotional. Dependence on compulsory physical examination is now very general, and it has proved invaluable as a preventive of accidents, because it insures that no person be put to work where the nature of the job couples with a physical weakness that increases the hazard. Employment managers greatly desire to find an equally reliable psychological test which would show the absence or presence of temperamental instability, meaning thereby inherited or acquired tendencies affecting a person's emotional reactions in a way that would make him more liable to accident. Those closest to labor are skeptical that any such test can be worked out.

Moderate Gain in April Iron Output

Estimates, Collected by Wire, Make the Daily Rate 2815 Tons or 2.6 Per Cent More Than March—Net Loss of One Furnace

WITH nearly all producers estimating the April pig iron output, data gathered by wire on May 1 show that the month's production made a gain over that of April amounting to 2815 tons per day or 2.6 per cent. The output of coke pig iron last month was approximately 3,180,900 gross tons, or 106,030 tons per day for the 30 days. This compares with an actual production in March of 3,199,674 tons, or 103,215 tons per day. This increase of 2.6 per cent in April contrasts with one of 3.2 per cent in March and with one of 8 per cent in February.

According to these preliminary returns there were six furnaces blown in and seven shut down—a net loss of one furnace for the month. The number operating on May 1 was 196, as against 197 on April 1. The Steel Corporation blew in three furnaces and shut down two during April, while independent steel companies put in two furnaces and shut down three. One merchant furnace was blown in and two were blown out in April. There was therefore no loss or gain in steel-making furnaces, but a net loss of one merchant furnace.

Actual data for the April pig iron production will be published in THE IRON AGE, May 10. The table gives the estimated production by districts for April and the actual output for the three preceding months.

Pig Iron Production by Districts, Gross Tons

	April (30 days)	March (31 days)	Feb. (29 days)	Jan. (31 days)

Personalities in Organizing Meeting of the American Foundrymen's Association

IN meeting again in Philadelphia (May 14-18), interest in personalities of the American Foundrymen's Association is aroused, particularly in respect to those who took part in the momentous convention which was held in Philadelphia in 1896, May 12, 13 and 14, and out of which immediately came the American Foundrymen's Association. That the situation was ripe for a national institution of the sort was proved by the several hundred foundry executives who attended that 1896 meeting from widely scattered sections of the country. The foundry industry had already assumed large proportions, as outlined by the presiding officer, Francis Schumann, of Philadelphia, who became the association's first president. There were nearly 4000 separate establishments, said he, "with an aggregate capital invested of about $115,000,000, employing about 120,000 persons, whose annual wages amount to nearly $63,000,000. Some 2,600,000 tons of castings are produced annually, requiring some 430,000 tons of coal and coke. The total annual disbursements for material and labor amount to $114,000,000."

Of the participants in the first convention, there are now thirteen living who have served the association in an official capacity. Portraits of eleven of these are reproduced on page 1218, those missing from the group being Robert Taylor, Pittsburgh, and John W. Burr, Brooklyn.

Howard Evans represented J. W. Paxson & Co. at the organizing meeting, served as temporary secretary and then was elected treasurer, which post he kept until 1900. He had been for some years before 1896, as he was for many years after, the main motive power of the Foundrymen's Association, Philadelphia.

W. S. Mosher, Mosher Foundry & Machine Co., Dallas, Tex., was one of the eight vice-presidents elected at the Philadelphia meeting, he representing the Southwestern States.

I. W. Frank, then representing the Frank Kneeland Machine Co., Pittsburgh, and later long the head of the United Engineering & Foundry Co., was elected to the vice-presidency of the association in 1897.

A. I. Findley, in 1896 editor of *Iron Trade Review* and since 1905 editor of THE IRON AGE, was elected a vice-president in 1902.

Jesse Jones, now a director of the association, and long identified with the Westinghouse Electric & Mfg. Co., was with the William Cramp & Son Ship & Engine Building Co., Philadelphia, at the time of the organizing meeting.

S. D. Sleeth, now living at Cambridge Springs, Pa., was of the Westinghouse Air Brake Co., then with headquarters at Pittsburgh.

Stanley G. Flagg, the eleventh president of the association, and engaged throughout the 32 years since the association began in the business of Stanley G. Flagg & Co., was chairman of the committee which nominated the first slate of officers.

S. T. Johnston was with the Whiting Foundry & Equipment Co. in the association's early days, though for years has been synonymous with the S. Obermayer Co., Chicago and Cincinnati.

John A. Penton attended the first meeting as the publisher of *Foundry*, of Detroit. He was the association's first secretary and worked prodigiously for the association's expansion.

Walter Wood was in 1896, as he is still, the dominating factor in R. D. Wood & Co., Philadelphia.

A. W. Walker, then as now of the Walker & Pratt Mfg. Co., Boston, was the association's sixth president.

Robert Taylor, who came to the first meeting for Taylor, Wilson & Co., Ltd., Pittsburgh, and now lives in that city, was the vice-president elected then to represent the Middle States.

John W. Burr, who later became a vice-president, was at the Philadelphia convention for the Burr, Houston Co., Brooklyn.

Iron and Steel Markets

Volume of Consumption Holds

Short-Range Orders Make Mill Scheduling More Uncertain But Total Demand Keeps Up Surprisingly Well—Prices Weaker—Pig Iron Output Gains

THE sustained volume of demand, in view of developments in prices and production, is the most impressive feature of the steel market. Steel ingot output in the first third of the year probably established a new four-month record; finished steel prices are no longer advancing and in some lines are weakening, and buying is increasingly cautious. Individual tonnages placed are growing smaller, and at Pittsburgh some mills are dependent on day-to-day releases to complete their rolling schedules.

Yet the total volume of orders and specifications keeps up surprisingly well, supporting mill operations at a virtually unchanged rate. In spite of the fact that buying is at much shorter range, it is estimated that daily releases for rolling at Pittsburgh district mills are within 5 per cent of the average for the first three months of the year.

Much of this steel represents past commitments, and, while strictly new orders are on a diminishing scale, the amount of tonnage on which deliveries are asked—a better gage of consumption—shows little change. In the East, steel sales in April, including specifications against contracts, ran considerably ahead of the March tonnage. At Chicago there has been a recovery in new business and aggregate daily bookings are almost on a par with shipments. Ingot output in the Chicago district remains at 95 per cent of capacity, and in the Greater Pittsburgh district, at 80 per cent.

Pig iron production in April, estimated from telegraphic returns to THE IRON AGE, was 3,180,900 tons, or 106,030 tons per day, compared with 3,199,674 tons, or 103,215 tons daily, in March. The gain in the daily rate was 2815 tons, or 2.6 per cent. In both 1926 and 1927 April output of pig iron was at the highest rate of the year, coming one month later than peak production of steel, and it is likely that this year will follow that precedent.

While this relationship between pig iron and steel production appears to have been maintained, pig iron contrasts sharply with steel in aggregate output. Steel furnaces have been breaking records, but the daily rate of pig iron production last month was the smallest for any April since 1922, in that respect repeating the performance of January, February and March. This decline indicates a larger use of scrap in open-hearth charges.

The automobile industry is placing large specifications for bars, sheets and strip steel for May shipment, and it is believed that the seasonal slowing down in motor car manufacture will come at least a month later than last year. Two leading automobile builders are reducing production, one of them for a change in models, but the very slowness with which the Ford organization is getting geared up for large-scale output points to a compensating gain in its operations when other companies are expected to curtail.

The seasonal decline in farm equipment production also promises to be less marked than ordinarily. Tractor plants have such large back orders that they will probably not reduce operations at all. Early demand for harvesting machinery is unusually heavy.

In railroad equipment, the inquiries of the Erie for 1000 freight cars and 35 passenger cars, together with the fact that this road will repair 2485 cars in its own shops, comprise the most important activity.

Sheet prices have shown further weakness, and are now back to the low levels of last year. As is frequently the case in a soft market, Valley producers, in some instances, are quoting prices f.o.b. mill that are as low or lower than ruling market quotations on a Pittsburgh base. Galvanized sheets have declined to 3.60c., or $3 a ton below the last advance.

Hot-rolled strip has also given ground. On material 6 to 12 in. wide 1.80c., Pittsburgh, a reduction of $2 a ton, has become a fairly representative price, while 3 to 6-in. strip is selling at 2.05c., Pittsburgh, a cut of $1 a ton. Fender stock, affected by the reduction in automobile body sheets, is now quoted at 4.10c. to 4.15c., as compared with a recent price of 4.20c. At Chicago, prices on hot strip in narrow widths have been marked down $2 a ton.

Wire nails are being more freely sold at $2.55 per keg, Pittsburgh or Cleveland, a drop of $2 a ton.

English low phosphorus pig iron will soon penetrate to points as far inland as Chicago, the iron to come on boats built in England of a size to go through the Welland Canal. About 1000 tons of the English iron has been sold at Milwaukee, and it is being offered in Chicago and other Lake consuming centers at $26, delivered, duty paid. Except for a decline of 50c. a ton on Valley basic iron, prices for pig iron in principal producing districts remain steady. The change in the Valley brings basic to the lowest figure since November, 1915.

The British iron and steel trade, according to cabled reports, is agog over proposals looking to large scale amalgamation under the auspices of a new finance company of Great Britain and the United States.

A reduction in Valley basic iron has caused THE IRON AGE composite price for pig iron to decline to $17.59 from $17.67 last week. The finished steel composite price remains at 2.355c. for a second week.

On export business there are frequent variations from the above prices. Also, in domestic business, there is at times a range of prices on various products, as shown in our market reports on other pages.

Pittsburgh

Steel Volume Continues Fairly High, But Prices Lack Strength

PITTSBURGH, May 1.—Viewed strictly from the standpoint of volume of business, the steel market still is making a good showing. There is a constant flow of small orders, and while there is doubt each day as to mill schedules, the business necessary to complete them usually is in before the day is over. Demand for steel is not tapering off as rapidly as might be assumed from some observations. Indeed, if the volume of ordering was about 5 per cent greater than it is, steel purchases now would make a favorable comparison with those of the first three months of the year. In most finished products mills have orders sufficient to maintain rolling operations for at least another month.

Ingot production usually moves up or down in advance of changes in the rate of rolling mill engagement. That is the case now, as there continues to be some tapering in ingot output in the face of sustained activity of finishing mills. In this and nearby districts ingot output is barely 80 per cent of capacity, but except for bar and strip mills there has been little decline as yet in rolling mill operations.

The price situation is a source of discontent among producers and even that is not as bad as it might have been if the steel trade had made no effort to advance the market in the early part of the year. Even if prices recede to the low levels of late last year, and that appears to be the tendency, steel manufacturers at least have had some benefit from the difference between quoted and invoice prices, to say nothing of the savings that have been effected through relatively full engagement of capacity. There is little strength in steel prices, and in most products the explanation seems to be in the fact that steel makers do not seem to be guided by known consumption in gaging production.

Few believe that the automotive industry will continue to take as much steel in the next 90 days as in the past four months, and the attitude of the railroads toward purchases is illustrated by the fact that one large Eastern system in April ordered about 20 per cent in value of its purchases of the same month last year. No strong hopes are held of a recovery in the oil industry.

Valley basic iron is down 50c. a ton from its recent nominal level. Scrap prices are more inclined to go down than up. Continued depression is noted in coal and coke.

Pig Iron.—The Valley basic iron market is definitely lower. It develops that on the recent sale of this grade to the American Steel Foundries for its Alliance, Ohio, plant that, while the iron was sold by a furnace outside the Valley having a lower freight rate to Alliance than any of the Valley furnaces, there was a quotation from at least one of the latter of $16.50, furnace. Furthermore, this price still is available, and in light of recent developments the lower price became effective more than a week ago. The price of Valley basic iron in the "Comparison of Prices" table under date of April 24 therefore should have read $16.50 instead of $17. A definite offer of iron by a producer establishes a price quite as fully as a transaction at a stated price. The pig iron market as a whole presents little of interest. Consumers under contract are not much concerned about additional supplies, because they are not using iron as freely as they had expected to and the buying is entirely from the spot tonnage buyers, who are paying recent prices on foundry, malleable and Bessemer grades. The Claire furnace of the Reliance Coke & Furnace Co. was blown in May 1 following a five months' period of inactivity. W. P. Snyder & Co. make the April average prices of Valley Bessemer and basic iron $17.50 and $16.70 respectively, compared with $17.50 and $17 respectively in March.

Prices per gross ton, f.o.b. Valley furnace:

Basic	$16.50
Bessemer	17.50
Gray forge	16.75
No. 2 foundry	17.25
No. 3 foundry	16.75
Malleable	17.25
Low phosphorus, copper free	27.00

Freight rate to the Pittsburgh or Cleveland district, $1.76.

Bolts, Nuts and Rivets.—The market in these products is more remarkable for its firmness than its activity. Rivets still reflect in demand the liberal specifications in advance of the higher prices effective April 1.

Ferroalloys.—Shipments on contracts reflect a little less urgency, in keeping with slightly lower steel works operations, but there has not been much decline in the volume. There has been some talk of an advance of $5 a ton for ferromanganese on last half contracts, but doubt is expressed that steel market conditions will support higher prices in this or any of the other primary materials.

Semi-Finished Steel.—Makers of billets, slabs and sheet bars still report a good movement to regular customers at unchanged prices. Open market activity is practically nil. Tin mills are well engaged, but a decline in sheet and strip mill operations points to some tapering off in the demand for steel for those mills. Users of wire rods are too well supplied or have sufficient tonnage still due them on old orders to be much interested in fresh supplies at present prices.

Alloy Steel Bars.—Makers comment favorably on the fact that for the first time in several years the market shows some stability and that this is the first quarter in a long time in which they have not had to take business at less than the prices of the previous quarter. The movement to the motor car builders is good, but is not expanding as it was six or eight weeks ago.

Bars, Plates and Shapes.—Buying and specifying are at extremely short range, but aside from the worry over mill schedules, manufacturers still find the volume of business fairly satisfactory. What is wanted is usually wanted promptly, and there are instances where promises of delivery of bars in a week have not been good enough to meet the requirement. The mills still have much structural steel to ship, but are less well provided with backlogs in plates, which is the quietest of the three lines, owing to the light demand for railroad cars and for large diameter pipe. Mills here have not been able to do better than 1.85c., base, except for very small lots or otherwise undesirable specifications. But except for tonnage moving on old contracts less than 1.85c. is not being done. Fabricated steel inquiry is not especially active, and few of the shops in this area have as much business as could be handled.

Rails and Track Supplies.—Current business is very quiet and the movement from the mills, though good, is at the expense of order books. Small spikes are especially slow and light-section rails drag, owing to the unfavorable coal situation. Prices are steady.

Wire Products.—Not much complaint is heard as to the movement of wire products from the mills, but it is chiefly against old and low-priced contracts, because of the large specifications accepted on first quarter contracts. There are not enough new requirements to seriously test present prices, and irregularity and weakness in some districts are the result of efforts by manufacturers to win orders from buyers already well supplied or covered.

Tubular Goods.—Fairly good movement of standard-weight pipe hardly makes up for a very light demand for oil country goods, and total pipe mill operations are not more than 60 per cent of capacity. There is much talk of large gas pipe line orders, but they do not appear to be working toward the mills. The best movement in tubing is to the automobile builders.

Sheets.—Business as a whole is quieter than it has been, and in some quarters this is ascribed to the weakness of prices, a condition that usually makes buyers timid. Black sheets are definitely as low as 2.75c., base, and while some mills still hold to 2.90c., there has not been much recent business at more than 2.85c., and contracts are being revised to the new level. There is still a quotation of 3.75c., base, on galvanized, but with some makers taking business at 3.60c. and even less on preferential accounts the higher price becomes more of an asking than a sales basis. The market on all grades is back to the low levels of last year and it is doubtful if the mills have profited at all from the advances that have been announced, since they were well filled up when the advances were made and by contract price revisions they now lose any advantage they may have had through bookings at the higher prices. It is said that sheet consumption averages between 75 and 80 per cent of productive capacity, but as mill scheduling seemingly does not recognize such limitations, recurrent price weakness is easily understood.

Tin Plate.—Demand for tin plate holds up well, and the American Sheet & Tin Plate Co. found it necessary last week to put on additional mills to get tonnage out as fast as it is required. Its operations last week were 94 per cent of capacity, against 92 per cent the week before. Several of the independent makers still are operating full.

Cold-Finished Steel Bars and Shafting.—Orders are coming in steadily and business is regarded as satisfactory, although the individual releases are for smaller tonnages than they were recently. Prices are firm at 2.20c., base Pittsburgh.

Hot-Rolled Flats.—Prices appear to be more steadily maintained on the narrow than on wide stock. The

Chrome Nickel Vanadium		4.15
Carbon Vanadium		3.60

Above prices are for hot-rolled steel bars, forging quality. The ordinary differential for cold-drawn bars is 1c. per lb. higher. For billets 4 x 4 to 10 x 10 in., the price for a gross ton is the net price for bars of the same analysis. For billets under 4 x 4 in. down to and including 2½ in. squares, the price is $5 a gross ton above the 4 x 4 billet price.

Slabs with sectional area of 16 in. or over carry the billet price; slabs with sectional area of 12 in. to 16 in. carry a $5 extra above the billet price and slabs with a sectional area under 12 in. carry the bar price.

Band sizes are 40c. per 100 lb. higher.

Rails

	Per Gross Ton
Standard, f.o.b. mill	$43.00
Light (from billets), f.o.b. mill	36.00
Light (from rail steel), f.o.b. mill	34.00
Light (from billets), f.o.b. Ch'go mill	36.00

Track Equipment

	Base Per 100 *Lb.*
Spikes, $\frac{9}{16}$ in. and larger	$2.80
Spikes, ½ in. and smaller	2.80
Spikes, boat and barge	3.00
Tie plates, steel	2.15
Angle bars	2.75
Track bolts, to steam railroads	$3.80 to 4.00
Track bolts, to jobbers, all sizes, per 100 count	70 per cent off list

Welded Pipe

Carbon, 0.30% to 0.40%, base	50

Plus differentials for lengths over 18 ft. and for commercial exact lengths. Warehouse discounts on small lots are less than the above.

latter usually is in competition with other flat products, and the present is no exception. Some consumers take both wide and narrow stock and usually find some mills willing to make an average price that is below the regular market on the narrow widths. The outside prices quoted refer chiefly to small lots of high carbon steel.

Cold-Rolled Strips.—Tonnage buyers are not finding it hard to get accommodation at 2.75c. for lots of 3 tons or more and 2.90c. is chiefly a price to small buyers.

Warehouse Business.—Demand is somewhat sporadic, but sales are averaging fairly large, although most merchants find them to be running a little behind those at this time last year. The weakness in mill prices of sheets has led to an abandonment of resale quotations predicated on 2.90c., base, for black and 3.75c., base, for galvanized. The regular price schedule is well maintained on cold-finished steel bars, spikes and bolts, nuts and rivets, but warehouses find it hard to get full quotations on nails owing to jobber competition.

Coke and Coal.—The market continues dull and easy, except in slack coal, which is not being produced very heavily on account of a limited demand for screened coal and is bringing good prices because of its scarcity. A Valley blast furnace which resumed today is running on by-product oven coke furnished by a Youngstown district steel company. The market for beehive oven furnace coke is very limited, and such demand as there is comes from other than pig iron producers. Prices are weak at last week's levels. Spot foundry coke goes at as low as $3.50 per net ton at ovens for machine-pushed coke, but hand-drawn coke still is bringing $3.75 to $4.25 for good brands, and as much as $4.75 for the so-called premium brands. The coal market is very slow, and the prospect of improvement is dimmed by uncertainty as to whether the Southern or Northern fields are to get the bulk of the Lake business. Southern shippers are in doubt about the permanence of the rate reduction and are inserting in contracts a clause which provides for the payment of the extra 20c. a ton by buyers in case the Supreme Court upsets the lower court's decision.

Old Material.—Interest in the market still centers around heavy melting steel, which in recent weeks has fluctuated more widely in price than other grades of scrap. One good-sized sale into consumption was made in the week at about $15.75, but on small lots melters generally are not offering more than $15.25 and are getting some material at that price, although $15.50 has been paid by dealers having short orders at $16. The ruling price at most points of delivery in the district is $15.25. Nervousness among dealers has subsided, and lower prices seem likely on the railroad scrap lists this month. This month's Baltimore & Ohio list has 17,860 tons, and the Pennsylvania Railroad list has more than double that amount. Compressed sheet scrap still is scarce, with dealers offering $15 on short orders, but mills are not able to buy under $15.50.

Prices per gross ton delivered consumers' yards in Pittsburgh and points taking the Pittsburgh district freight rate:

Basic Open-Hearth Furnace Grades:	
No. 1 heavy melting steel	$15.25 to $15.75
Scrap rails	15.00 to 15.25
Compressed sheet steel	15.00 to 15.50
Bundled sheets, sides and ends	14.00 to 14.50
Cast iron carwheels	14.50 to 15.00
Sheet bar crops, ordinary	15.50 to 16.00
Heavy breakable cast	13.00 to 13.50
No. 2 railroad wrought	15.50 to 16.00

Result of Operation of New Blast Furnace

After something more than a year's operation, results for six recent months on the Betty furnace of the Central Alloy Steel Corporation have been tabulated by Freyn Engineering Co., Chicago, designer of the furnace. Over that period the average daily production of iron has been 725 gross tons.

For each ton of iron the charge has included an average of 3372 lb. of ore, 396 lb. of scrap and 405 lb. of sinter. The yield on the entire charge is reported at 52.01 per cent. Coke was 1752 lb. gross and 1734 lb. net, per ton of iron. The blast was at an average rate of 45,000 cu. ft. a minute. Five-eighths of the ore charged came from the Mesabi Range, the remainder being Old Range ore.

About 1050 lb. of slag was made for each ton of iron, and 867 lb. of limestone was used. Lime in the slag averaged 40.98 per cent, with silica 37.18 per cent and alumina 12.63 per cent.

Blast temperature is carried usually at 1200 deg. Fahr., being regulated by Leeds-Northrup heat control. It can be run up to 1700 deg. if required. Stoves are changed every 2 hr., being on gas 6 hr. and on blast 2 hr. The upper limit on exit temperature is set at 600 deg., at which point gas is shut off.

As the big bell is interlocked with two stock-line recorders, the height of stock in the furnace is gaged every time the bell is lowered.

Three mixer-type Treadwell ladles, 150 tons each, are used to carry the iron to the steel plant. These require relining after handling about 50,000 tons. As there is no mixer at the steel plant, off-heats and surplus iron above open-hearth requirements are poured in the pig machine.

Nicholas & Miller, McCormick Building, Chicago, dealers in pig iron and ferroalloys, have been appointed Chicago sales representatives, succeeding David Evans, for the products of the Sloss-Sheffield Steel & Iron Co., Birmingham.

	Per Gross Ton
Rerolling, 4-in. and over	$33.00
Rerolling, under 4-in. to and including 1¾-in.	$33.50 to 34.00
Forging, ordinary	38.00
Forging, guaranteed	43.00

Sheet Bars

	Per Gross Ton
Open-hearth or Bessemer	$34.00

Slabs

	Per Gross Ton
8 in. x 2 in. and larger	$33.00
Smaller than 8 in. x 2 in.	34.00

Skelp

	Per Lb.
Grooved	1.85c. to 1.90c.
Sheared	1.85c. to 1.90c.
Universal	1.85c. to 1.90c.

Wire Rods

	Per Gross Ton
*Common soft, base	$44.00
Screw stock	$5.00 per ton over base

---

*Chicago mill base is $45. Cleveland mill base, $44.

Prices of Raw Material

Ores

Lake Superior Ores, Delivered Lower Lake Ports

	Per Gross Ton
Old range Bessemer, 51.50% iron	$4.55
Old range non-Bessemer, 51.50% iron	4.40
Mesabi Bessemer, 51.50% iron	4.40
Mesabi non-Bessemer, 51.50% iron	4.25
High phosphorus, 51.50% iron	4.15

Foreign Ore, c.i.f. Philadelphia or Baltimore

	Per Unit
Iron ore, low phos., copper free, 55 to 58% iron in dry Spanish or Algeria	10.00c.
Iron ore, Swedish, average 66% iron	9.25c. to 9.50c.
Manganese ore, washed, 52% manganese, from the Caucasus	39c.
Manganese ore, Brazilian, African or Indian, basis 50%	38c. to 39c.
Tungsten ore, high grade, per unit, in 60% concentrates	$10.50 to $10.75
	Per Gross Ton
Chrome ore, 45 to 50% Cr_2O_3, crude, c.i.f. Atlantic seaboard	$22.00 to $24.00
	Per Lb.
Molybdenum ore, 85% concentrates of MoS_2, delivered	50c. to 55c.

Coke

	Per Net Ton
Furnace, f.o.b. Connellsville prompt	$2.60 to $2.75
Foundry, f.o.b. Connellsville prompt	3.50 to 4.25
Foundry, by-product, Ch'go ovens	9.00
Foundry, by-product, New England, del'd	11.00
Foundry, by-product, Newark or Jersey City, delivered	9.00 to 9.40
Foundry, Birmingham	5.00
Foundry, by-product, St. Louis	9.75

Coal

	Per Net Ton
Mine run steam coal, f.o.b. W. Pa. mines	$1.40 to $1.80
Mine run coking coal, f.o.b. W. Pa. mines	1.50 to 1.75
Gas coal, ¾-in., f.o.b. Pa. mines	2.00 to 2.10
Mine run gas coal, f.o.b. Pa. mines	1.75 to 1.90
Steam slack, f.o.b. W. Pa. mines	1.15 to 1.20
Gas slack, f.o.b. W. Pa. mines	1.20 to 1.35

Ferromanganese

	Per Gross Ton
Domestic, 80%, furnace or seab'd	$100.00

Upset hex. head cap screws, U.S.S. thread	85 and 5
Upset hex. cap screws, S.A.E. thread	85 and 5
Upset set screws	80, 10 and 10
Milled studs	70 and 5

Chicago

Steel Volume Holds Though Orders Are Smaller—Ingot Output at 95 Per Cent

CHICAGO, May 1.—Although steel buyers are showing greater caution and are ordering in smaller quantities to keep stocks at a point close to immediate needs, the total volume is again running into a large tonnage. Sales and specifications in the last few days have made a sharp recovery, and purchases have been only a shade under shipments. However, most of the current orders are for lots smaller than were being ordered a month or so ago.

In production, this district continues to give account of itself, the average rate of operation at the beginning of May being 95 per cent of ingot capacity. Some mills are sufficiently well scheduled so that deliveries in less than four to six weeks are not being promised. The leading producer has 20 blast furnaces in operation, and the total number of active furnaces in the district is 28 out of 36. A merchant furnace was blown out on April 26.

A continued high rate of activity among some of the manufacturing lines which draw heavily upon Chicago steel mills for materials is indicated by latest reports. Road machinery and excavating equipment manufacturers are busy, tractor plants are behind on orders, assuring capacity production for some time to come, and an unusually early start in the demand for harvesting machinery promises to hold farm machinery production above the seasonal drop that is generally expected by the end of May. In addition to the demands from these sources, the production of standard-section rails is steady and large, while the same holds true of track supplies, makers finding it difficult to meet the shipping requirements in the latter products.

Pig Iron.—Plans are under way to blow out a merchant stack in the next 10 days. This unit is in need of repairs and improvements will be made while it is down. For several months local producers have held production below shipments, affording an opportunity to liquidate stocks. The fact that this stack is going out does not reflect a lower melt, because stocks will be drawn on more liberally to meet the demand, which is steady. More interest is being shown in third quarter iron, and a fair portion of current buying is for delivery overlapping the second and third quarters. A Milwaukee user is in the market for 1500 tons of Northern foundry iron. A melter in this district will take 700 tons of 14 per cent silvery iron. Northern iron is steady at $18.50 per gross ton, Chicago. The first cargo of Buffalo iron to come by water is expected by the end of next week. No change is noted in the silvery iron market.

Prices per gross ton at Chicago:

Northern No. 2 foundry, sil. 1.75 to 2.25	$18.50
N'th'n No. 1 fdy., sil. 2.25 to 2.75	19.00
Malleable, not over 2.25 sil.	18.50
High phosphorus	18.50
Lake Superior charcoal, averaging. sil. 1.50	27.04
Southern No. 2 fdy. (all rail)	22.01
Southern No. 2 (barge and rail)	21.18
Low phos., sil. 1 to 2 per cent, copper free	$28.50 to 29.00
Silvery, sil. 8 per cent	29.79
Bessemer ferrosilicon, 14 to 15 per cent	46.79

Prices are delivered consumers' yards except on Northern foundry, high phosphorus and malleable, which are f.o.b. local furnace, not including an average switching charge of 61c. per gross ton.

Ferroalloys.—This market is quiet except for occasional inquiries for small lots for immediate delivery. Prices are steady.

Prices delivered Chicago: 80 per cent ferromanganese, $107.56; 50 per cent ferrosilicon, $83.50 to $87.50; spiegeleisen, 19 to 21 per cent, $38.76 to $39.76.

Plates.—Demand for plate mill products in this district is steady, and prices in and near Chicago are unchanged at 2c. Although car building shops are not engaged at capacity, specifications issued by them reach mills in a fairly uniform flow, helping toward more satisfactory rolling schedules in view of the fact that many small consumers are buying at extremely close range and in small lots. The outlook for new business in railroad cars is not promising for the immediate future, but it is reported that several sizable inquiries are in the making. The Rock Island has ordered 500 underframes from the Pennsylvania Car Co. for delivery at its Armourdale, Kan., shops. The only other purchase of note was 250 underframes by the St. Louis-San Francisco from the Virginia Bridge & Iron Co. There is little new inquiry. For several weeks oil storage tank makers have held out of the market and there is nothing in sight from them at this time. Reports are current that consumption of petroleum and its by-products is catching up with output, thus bringing to the fore the impression in some directions that new tank construction has already passed the peak. Specifications for plates, bolstered by a substantial flow of business from the general manufacturing trade, are about equal to shipments.

Mill prices on plates per lb.: 2.00c., base Chicago.

Structural Material.—This market is quiet in the immediate Chicago territory. Local fabricators are now being offered an opportunity to bid on a number of small tonnage jobs, which, if placed, will round out shop schedules. No change is noted in prices for fabricated steel, the general level being somewhere near the low point of the year. It is reported that the Foshay Tower Building, Minneapolis, Minn., requiring 2000 tons, has been awarded to the Minneapolis Steel & Machinery Co. The Rochester Bridge Co. has taken 3500 tons for additions to several of the Deere & Co. plants. Optimism prevails in Milwaukee, where it is reported that the largest building program in 10 years is getting under way. Close to 6000 tons will be required for a court house in that city.

Mill prices on plain material per lb.: 2.00c., base, Chicago.

Bars.—Reversing market tendencies of a week ago, sales in mild steel bars have turned up sharply, the total for the week being a shade higher than shipments in the same period. The demand is well diversified as to classification of consumers. It is noticeable, however, that buyers are using greater caution in placing orders, and it is evident that there is an undercurrent of doubt as to consumptive requirements in the near future. Specifications from agricultural machinery manufacturers are steady. Tractor plants report that there will be no seasonal letdown in production for the reason that they cannot hope to catch up with back orders. A note of encouragement comes from harvesting machinery builders, who find an unusually large and early demand for their products. Mild steel bar prices are steady at 2c., Chicago. Producers of iron bars have the largest backlogs in over a year. Shipments are a trifle heavier and prices are firm at 2c., Chicago. Although there has been some readjustment of production in several automobile manufacturing plants, the general level of steel demand by that industry has changed but little and alloy bar mills report an undiminished volume of specifications and steady output. New orders and specifications for hard steel bars are a shade heavier than production, but the margin is not wide enough so that the hours of double-turn operations of the Chicago Heights mills can be lengthened. April hard steel bar shipments topped those in March, and producers continue to reduce stocks on hand. Barn equipment manufacturers have satisfied the bulk of spring customers, and operations are pointing downward in that industry. Prices of rail steel bars are steady at 1.85c., Chicago Heights.

Mill prices per lb.: Soft steel bars, 2.00c. base, Chicago; common bar iron, 2.00c., base, Chicago; rail steel bars, 1.85c., base, Chicago Heights mill.

Wire Products.—Little change is noted in the wire market. Jobbers in the Northwest report an active business, and shipments for the first four months of 1928 are equal to the first eight months of last year. Orders from the South are in good volume, but there is a decided slackening in the jobbing trade in the central Mississippi River Valley. Mill shipments of nails are small. Nails are quoted $2.75, base, per keg in Chicago, while in outlying district $2.50 is still a common quotation. Mill output stands between 65 and 70 per cent of capacity.

Rails and Track Supplies.—From the viewpoint of new business, this market is quiet. Several small Western railroads are now inquiring for standard-section rails, the total being close to 4000 tons. Mill bookings in track supplies total 3500 tons, but fresh inquiry in these commodities is lacking. Sales of light rails are in carload lots. Rail mills in this district are operating at 90 per cent of capacity, and accessory units are producing on a proportionate basis.

Prices f.o.b. mill, per gross ton: Standard-section open-hearth and Bessemer rails, $43; light rails, rolled from billets, $36. *Per lb.:* Standard railroad spikes, 2.80c.; track bolts with square nuts, 3.80c.; steel tie plates, 2.25c.; angle bars, 2.75c.

Sheets.—Disturbances in prices noted a week ago are still troubling the sheet market in practically all outlying territory. Competitors in districts eastward are freely taking business at lower prices than have been quoted by local producers, and there is now the added intimation that cold-rolled strip will offer keener competition to producers of blue annealed sheets. Local mills are operating on a hand-to-mouth basis, and output will not average above 70 per cent of capacity. Orders on hand at mills afford schedules that often are not more than four days in advance. Orders from the Northwest are disappointingly small. Buyers, realizing that sales pressure is being exerted by producers, are inclined to await changes in prices that may come. Individual orders are small and for prompt shipment.

Base prices per lb., delivered from mill in Chicago: No. 24 black, 2.90c. to 3.05c.; No. 24 galvanized, 3.75c. to 3.90c.; No. 10 blue annealed, 2.20c. to 2.35c. Delivered prices at other Western points are equal to the freight from Gary plus the mill prices, which are 5c. per 100 lb. lower than the Chicago delivered prices.

Cold-Rolled Strip.—Specifications for this commodity are equal to production and prices are steady.

Hot-Rolled Strip.—Demand for hot-rolled strip eased off late last week, but has more recently improved somewhat. Prices in the narrow widths have dropped to lower levels. Quotations are as follows: Narrower than 3-in., 2.30c. to 2.40c. per lb., base; 3 to 6-in. wide, 2.10c. to 2.20c.

Cast Iron Pipe.—Demand for cast iron pipe is sluggish in this district. The general feeling in the trade is that preparatory plans for pipe-laying programs are not as far advanced as is usually the case at this time of the year. Public utilities are taking only small quantities, and the railroads and contractors are buying little. It is reported that Detroit has taken no action on its recent inquiry. The low bid entered there is on 3000 tons of foreign-made pipe, and the price is about $1 per ton below that of the nearest bid by an American pipe manufacturer. Royal Oak, Mich., has awarded 200 tons of 6-in. pipe to the Detroit Lead & Pipe Co. at $36.42, delivered. The freight from Birmingham is $7.92. The National Cast Iron Pipe Co. has taken 200 tons of cast iron pipe for Kirkland, Ill.

Prices per net ton, delivered Chicago: Water pipe, 6-in. and over, $36.20 to $39.20; 4-in., $40.20 to $43.20; Class A and gas pipe, $4 extra.

Reinforcing Bars.—Large tonnage awards of hard steel and billet steel bars are about equal. For many weeks the rail steel commodity has led by a comfortable margin. Close to 500 tons of soft steel reinforcing bars have been purchased for the Woolworth Building, Chicago, and 400 tons of rail steel bars have been taken for a local engraving plant. Evidence is at hand that awards may soon run heavier. Outdoor construction weather is now more favorable and buyers are offered the additional inducement that prices are at the low point of the spring months. Shop operations are holding steady, principally because of a good run of contracts for less than 100 tons each. Recent awards and fresh inquiry are shown on page 1284.

Coke.—Shipments of this commodity in April were a trifle heavier than in March, confirming the finding of pig iron producers that the melt of foundry iron in this district is slowly expanding. All ovens are lighted. The price is steady at $9.50, delivered in the Chicago switching district.

Bolts, Nuts and Rivets.—Specifications are being issued at a steady rate. Shipments in April were about equal to those in March, and bolt, nut and rivet manufacturers have held operations at a uniform rate. Prices for small rivets are steady at 70 and 10 to 70 per cent off list.

Old Material.—Prices in the Chicago scrap market are holding at the recent advances. Shipments of heavy melting steel are steady and consumption seems to be well balanced with production. The Gary mills are consistent buyers in small tonnages. The bulk of this grade that is moving to that point is in long pieces and prepared only so that it is ready for shearing at the mill. Dealers are getting $12.50 to $12.75 per gross ton, delivered, for heavy melting steel of that kind. The freight rate from Chicago to Gary is $1. Mill inspections are rigid and fully 50 per cent of the heavy melting steel that is gathered from miscellaneous yards is being rejected. There is a fair demand for specialties.

Prices delivered consumers' yards, Chicago:

Per Gross Ton	
Basic Open-Hearth Grades:	
Heavy melting steel	$13.00 to $13.50
Shoveling steel	13.00 to 13.50
Frogs, switches and guards, cut apart, and miscellaneous rails	13.50 to 14.00
Hydraulic compressed sheets	11.50 to 12.00
Drop forge flashings	9.50 to 10.00
Forged, cast and rolled steel carwheels	15.50 to 16.00
Railroad tires, charging box size	16.75 to 17.25
Railroad leaf springs, cut apart	16.75 to 17.25
Acid Open-Hearth Grades:	
Steel couplers and knckles	14.50 to 15.00
Coil springs	17.00 to 17.50
Electric Furnace Grades:	
Axle turnings	13.00 to 13.50
Low phosphorus punchings	14.00 to 14.50
Low phosphorus plate, 12 in. and under	14.25 to 14.75
Blast Furnace Grades:	
Axle turnings	10.00 to 10.50
Cast iron borings	9.25 to 9.75
Short shoveling turnings	9.25 to 9.75
Machine shop turnings	7.00 to 7.50
Rolling Mill Grades:	
Iron rails	14.00 to 14.50
Rerolling rails	14.00 to 14.50
Cupola Grades:	
Steel rails less than 3 ft.	15.00 to 15.50
Angle bars, steel	14.25 to 14.75
Cast iron carwheels	13.50 to 14.00
Malleable Grades:	
Railroad	13.00 to 13.50
Agricultural	12.00 to 12.50
Miscellaneous:	
*Relaying rails, 56 to 60 lb.	23.00 to 25.00
*Relaying rails, 65 lb. and heavier	26.00 to 31.00
Per Net Ton	
Rolling Mill Grades:	
Iron angles and splice bars	14.00 to 14.50
Iron arch bars and transoms	19.00 to 19.50
Iron car axles	21.50 to 22.00
Steel car axles	16.00 to 16.50
No. 1 railroad wrought	11.50 to 12.00
No. 2 railroad wrought	11.25 to 11.75
No. 1 busheling	10.00 to 10.50
No. 2 busheling	5.75 to 6.25
Locomotive tires, smooth	12.50 to 13.00
Pipes and flues	8.00 to 8.50
Cupola Grades:	
No. 1 machinery cast	14.00 to 14.50
No. 1 railroad cast	12.75 to 13.25
No. 1 agricultural cast	12.50 to 13.00
Stove plate	11.25 to 11.75
Grate bars	11.25 to 11.75
Brake shoes	11.00 to 11.50

Philadelphia

Bids of 1.85c. and 1.90c., Mill, on Plates, Shapes and Bars for Railroad

PHILADELPHIA, May 1.—Although eastern Pennsylvania mills shipped more steel in April than in any of the preceding months this year, the amount of new business booked in the past month was exceedingly small. Most of the current orders for plates, shapes and bars are almost of warehouse proportions. On such small lots the usual quotations are 2.05c., Coatesville, for plates; 2.05c., Bethlehem, for shapes, and 1.90c., Pittsburgh, for bars, but on more desirable orders $1 a ton lower is freely quoted. Quotations on shapes are quite generally on the basis of 2c., Bethlehem, even on small lots.

Opening of bids April 26 by the Pennsylvania Railroad for its second quarter requirements, consisting of 15,000 tons of plates, shapes and bars and smaller tonnages of blue annealed sheets and other products, brought out prices of 1.85c. to 1.90c., f.o.b. mill, on plates, shapes and bars. On blue annealed sheet 2.10c., Eastern mill, was quoted.

Pig Iron.—Foundries are taking full shipments against contracts, but there is almost no new business. Furnaces are maintaining $20, base. It is conceded, however, that should a fair-sized tonnage be offered, it might bring out a slight recession in price. Only occasional sales of low phosphorus are reported.

Prices per gross ton at Philadelphia:

East. Pa. No. 2 plain, 1.75 to 2.25 sil.	$20.76
East. Pa. No. 2X, 2.25 to 2.75 sil.	21.26
East. Pa. No. 1X	21.76
Basic (delivered eastern Pa.)	$19.50 to 20.00
Gray forge	19.75 to 20.25
Malleable	21.00 to 21.50
Standard low phos. (f.o.b. New York State furnace)	22.00 to 23.00
Copper bearing low phos. (f.o.b. furnace)	23.50 to 24.00
Virginia No. 2 plain, 1.75 to 2.25 sil.	24.54 to 25.04
Virginia No. 2X, 2.25 to 2.75 sil.	25.04 to 25.54

Prices, except as specified otherwise, are delivered Philadelphia. Freight rates: 76c. to $1.64 from eastern Pennsylvania furnaces; $4.54 from Virginia furnaces.

Billets.—The market is quiet and prices unchanged at $33, Pittsburgh, for rerolling billets and $38 per ton, Pittsburgh, for forging quality.

Bars.—A fair tonnage is moving on contracts, but new buying is decidedly limited. For new business, quotations range from 1.85c. to 1.90c. per lb., Pittsburgh, or 2.17c. to 2.22c., delivered Philadelphia, the higher price applying only on small lots for prompt shipment. On the Pennsylvania Railroad list of second quarter requirements totaling several thousand tons, 1.85c., f.o.b. mill, was quoted by the Bethlehem Steel Co., Donner Steel Co., Republic Iron & Steel Co. and Youngstown Sheet & Tube Co. Pittsburgh district mills quoted 1.90c., base mill, and Chicago mills, 2c., base mill.

Warehouse Prices, f.o.b. Philadelphia

	Base per Lb.
Plates, ¼-in. and heavier	2.50c. to 2.60c.
Plates, 3/16-in.	2.80c. to 3.00c.
Structural shapes	2.40c. to 2.60c.
Soft steel bars, small shapes and iron bars (except bands)	2.50c.
Round-edge iron	3.50c.
Round-edge steel, iron finished 1½ x 1½ in.	3.50c.
Round-edge steel, planished	4.30c.
Reinforcing steel bars, square, twisted and deformed	2.50c. to 3.00c.
Cold-finished steel, rounds and hexagons	3.35c.
Cold-finished steel, squares and flats	3.85c.
Steel hoops	3.60c.
Steel bands, No. 12 gage to 3/16-in., inclusive	3.35c.
Spring steel	5.00c.
*Black sheets (No. 24)	4.00c.
†Galvanized sheets (No. 24)	4.75c.
Blue annealed sheets (No. 10)	3.15c.
Diamond pattern floor plates—	
¼-in.	5.30c.
3/16-in.	5.50c.
Rails	3.20c.
Swedish iron bars	6.60c.

*For 50 bundles or more; 10 to 49 bundles, 4.25c. base; 1 to 9 bundles, 4.50c. base.

†For 50 bundles or more; 10 to 49 bundles, 5.10c. base; 1 to 9 bundles, 5.45c. base.

Plates.—New business is limited to small lots of plates not much larger than usually go to warehouses. Quotations range from 2c. to 2.05c. per lb., Coatesville, or 2.10c. to 2.15c., delivered Philadelphia. On the Pennsylvania Railroad opening of bids on second quarter requirements for Altoona, which included about 10,000 tons of plates, quotations were 1.85c. per lb., f.o.b. mill, by eastern Pennsylvania producers; 1.90c.. mill, by Pittsburgh district mills and 2c., mill, by Chicago producers. The Baldwin Locomotive Works has booked 10 more locomotives for the Southern Pacific Co., bringing the total of purchases by this railroad to 13 locomotives.

Shapes.—Quotations seem to have settled to 2c., Bethlehem, or 2.13c., delivered Philadelphia, which is the price at which deliveries are being made on second quarter contracts. On the Pennsylvania Railroad opening of bids for second quarter requirements, two eastern Pennsylvania mills quoted 2.005c. per lb., delivered Altoona, and a third 1.80c., f.o.b. mill. Pittsburgh mills bid 1.90c. per lb., mill, and Chicago producers 2c., mill. Not many projected buildings are reported for this district.

Sheets.—Prices are decidedly unsteady. Consumers of blue annealed sheets are pressing for downward revision of prices on their 2.10c. contracts. Current quotations are 2.05c., Pittsburgh, on general business, and in the case of automobile body builders, 2c., Pittsburgh. On the Pennsylvania Railroad second quarter requirements, eastern Pennsylvania mills quoted 2.10c., f.o.b. mill. Black sheets are quiet, with quotations of 2.75c. per lb., Pittsburgh, and galvanized sheets range from 3.60c. to 3.70c., Pittsburgh, the bulk of current business being done at the lower level.

Warehouse Business.—Prices continue firm, although business is only fair. Quantity differentials on steel bars and bar sized shapes and the recently adopted quantity bases for black and galvanized sheets are being extended to the entire Philadelphia district, instead of being confined to sales in Philadelphia and Camden.

Imports.—In the week ended April 28 ore arrivals totaled 235 tons, of which 200 tons was chrome ore from Turkey and 35 tons was manganese ore from Germany. Pig iron arrivals consisted of 749 tons from India and 51 tons from Italy. Steel imports were as follows: France, 502 tons of blooms; Germany, 58 tons of structural shapes; Belgium, 136 tons of structural shapes, 85 tons of bands and 10 tons of iron bars.

Old Material.—Prices of all grades are substantially unchanged, but only a small total of business is being transacted with eastern Pennsylvania consumers. One mill in this district, which recently tried to buy machine shop turnings at $10 per ton, delivered, later purchased some small tonnages at $10.50 and $10.75 per ton, and brokers are now asking $11 per ton, delivered, for a substantial tonnage. A consumer of specification pipe at Columbia, Pa., recently bought at $12 per ton, delivered, and about a week ago closed on a small lot of pipe at $12.50 per ton, delivered. No. 1 heavy melting steel is quiet and prices are unchanged.

Prices per gross ton delivered consumers' yards, Philadelphia district:

No. 1 heavy melting steel	$13.50 to $14.00
Scrap T rails	13.00 to 13.50
No. 2 heavy melting steel	11.00 to 11.50
No. 1 railroad wrought	14.50 to 15.00
Bundled sheets (for steel works)	10.50
Machine shop turnings (for steel works)	10.50 to 10.75
Heavy axle turnings (or equivalent)	12.00 to 12.50
Cast borings (for steel works and rolling mill)	10.50 to 11.00
Heavy breakable cast (for steel works)	15.50 to 16.00
Railroad grate bars	12.00 to 12.50
Stove plate (for steel works)	12.00
No. 1 low phos., heavy, 0.04 per cent and under	17.50 to 18.00
Couplers and knuckles	15.50 to 16.00
Rolled steel wheels	15.50 to 16.00
No. 1 blast furnace scrap	10.50 to 11.00
Machine shop turnings (for rolling mill)	11.00 to 11.25
Wrought iron and soft steel pipes and tubes (new specifications)	12.00 to 12.50
Shafting	17.50 to 18.00
Steel axles	19.00 to 20.00
No. 1 forge fire	11.00 to 11.50
Steel rails for rolling	14.75 to 15.25
Cast iron carwheels	15.50 to 16.00
No. 1 cast	16.00 to 16.50
Cast borings (for chemical plant)	14.50 to 15.00

New York

Weakness in Plates, Sheets and Strips—Pig Iron Sales 7500 Tons

New York, May 1.—With competition keen and with no improvement in prices in sight, pig iron producers are giving increased attention to the use of waterways. Pig iron shipments by barge canal from Buffalo totaled 25,000 to 30,000 tons in 1927, and it is expected that this amount can be doubled this year. During the spring, when there is a heavy movement of grain through the State canal, barge rates are usually rather firm, but producers expect to obtain more attractive rates during the summer lull in canal traffic. One important Buffalo interest is reported to be negotiating for storage space for barge iron at Jersey City, N. J. At present, public docks with fixed handling charges are used for transferring iron from barge to car for shipment to inland points in New Jersey. Melters are showing little interest in pig iron for third quarter delivery, but inquiries for that period are expected late this month and in June. Current sales are made up largely of relatively small tonnages for fill-in purposes. Total bookings of local sellers, at about 7500 tons, fell 2000 tons short of sales for the previous week. The Crane Co., Bridgeport, Conn., is inquiring for 1000 tons of foundry, the Worthington Pump & Machinery Corporation wants 275 tons for Harrison, N. J., and the Moore Brothers Co., Elizabeth, N. J., is in the market for 100 tons of No. 3 foundry. The E. & G. Brooke Iron Co. expects to blow out its furnace at Birdsboro, Pa., this week for relining. The Standish, N. Y., stack of the Chateaugay Ore & Iron Co. will also probably go out in the current week.

Prices per gross ton, delivered New York district:

Buffalo No. 2 fdy., sil. 1.75 to 2.25	$20.91 to $21.91
East. Pa. No. 2 fdy., sil. 1.75 to 2.25	20.39 to 22.52
East. Pa. No. 2X fdy., sil. 2.25 to 2.75	20.89 to 23.02
East. Pa. No. 1X fdy., sil. 2.75 to 3.25	21.39 to 23.52

Freight rates: $4.91 from Buffalo, $1.39 to $2.52 from eastern Pennsylvania.

Reinforcing Bars.—The Truscon Steel Co. will furnish 500 tons of bars for a section of the subway in Queens and 480 tons for a loft building in Manhattan. A bridge over the Raritan River at New Brunswick, N. J., requiring 2400 tons, is expected to be closed this week; foreign steel has been a strong competitor, but the job will probably go to a distributer of domestic bars. Except for these fairly large projects, the market is not active and the first four months of the year have not been equal in business to the like period in 1927 for most companies. Prices are unchanged, with a strengthening tendency on small projects.

Finished Steel.—Steel sales, including specifications against contracts, by local offices during April ran considerably ahead of the March tonnage, but the amount of new business was small, and some mills are now in the position of seeking tonnage for prompt delivery to round out rolling schedules. This has tended toward further weakness in prices, notwithstanding the generally high average of mill operations. Weakness has become more general in sheets, and has also extended to new business in plates and hot-rolled and cold-rolled strip steel. Wire nails are not strong, but there has been very little business to test prices. The plate price has weakened to the extent of at least $1 a ton on orders of a carload or more, sales having been made at 2.12½c. per lb., delivered New York district, or 1.95c., Coatesville, the freight rate from Coatesville being 17½c. per 100 lb. For Pittsburgh mills, this price is equivalent to 1.80½c. at that point. An Eastern mill has quoted a railroad 1.85c., delivered Cleveland, on plates. Hot-rolled strip steel in widths of 6 in. or more is quite generally obtainable at 1.85c., Pittsburgh or Cleveland, while cold-rolled strip steel is now on a base price of 3c., Pittsburgh or Cleveland, for lots under 3 tons, making the larger lot price 2.75c. Sheet prices have settled to 2.75c. or 2.80c. for black, with an occasional report of 2.70c.; the range on galvanized is 3.60c. to 3.65c. and on blue annealed 2c. to 2.10c., Pittsburgh base. Structural steel lettings include two jobs of fair size—5500 tons for a Pennsylvania Railroad bridge over Newark Bay, taken by the Bethlehem Steel Co., and 4800 tons for additional work in connection with the Hudson River bridge, awarded to the McClintic-Marshal Co. In railroad equipment, the inquiries of the Erie for 1000 freight cars and 35 passenger cars comprise the only prospective business of size.

Mill prices per lb., delivered New York: Soft steel bars, 2.19c. to 2.24c.; plates, 2.12½c. to 2.22½c.; structural shapes, 2.14½c. to 2.19½c.; bar iron, 2.14c.

Cast Iron Pipe.—Although there is only a moderate volume of activity in pressure pipe, there is a generally firmer tone to prices, and Birmingham foundries have advanced their quotations to $31 to $32 per ton, base, Birmingham, which apparently eliminates them from competition in the North, as nearby makers are quoting on a basis of $37.60 to $38.60 per net ton, delivered New York. The Department of Purchase, New York, will open bids May 10 on a total of 2754 tons of pipe and fittings, of which 1025 tons is 12-in., 1490 tons,

Warehouse Prices, f.o.b. New York

	Base per Lb.
Plates and structural shapes	3.30c.
Soft steel bars and small shapes	3.25c.
Iron bars	3.24c.
Iron bars, Swedish charcoal	7.00c. to 7.25c.
Cold-finished shafting and screw stock—	
Rounds and hexagons	3.40c.
Flats and squares	3.90c.
Cold-rolled strip, soft and quarter hard,	5.15c. to 5.40c.
Hoops	4.50c.
Bands	4.00c.
Blue annealed sheets (No. 10 gage)	3.90c.
Long terne sheets (No. 24)	5.80c.
Standard tool steel	12.00c.
Wire, black annealed	4.50c.
Wire, galvanized annealed	5.15c.
Tire steel, 1½ x ½ in. and larger	3.30c.
Smooth finish, 1 to 2½ x ¼ in. and larger	3.65c.
Open-hearth spring steel, bases	4.50c. to 7.00c.

Machine bolts, cut thread:	Per Cent Off List
¾ x 6 in. and smaller	55 to 60
1 x 30 in. and smaller	50 to 50 and 10
Carriage bolts, cut thread:	
½ x 6 in. and smaller	55 to 60
¾ x 20 in. and smaller	50 to 50 and 10
Coach screws:	
½ x 6 in. and smaller	55 to 60
1 x 16 in. and smaller	50 to 50 and 10

Boiler Tubes—	Per 100 Ft.
Lap welded steel, 2-in	$17.33
Seamless steel, 2-in	20.24
Charcoal iron, 2-in	25.00
Charcoal iron, 4-in	67.00

Discounts on Welded Pipe

Standard Steel—	Black	Galv.

*No. 28 and lighter, 36 in. wide, 20c. higher per 100 lb.

8-in. and 130 tons, 6-in. pipe and 109 tons is fittings. Contractors' bids were opened today by the Department of Water Supply, Gas and Electricity, New York, on 810 tons of 6, 12 and 20-in. pipe. The General Fire Extinguisher Co., Providence, R. I., is inquiring for about 4000 tons of small-sized pipe. East Bridgewater, Mass., has opened bids on about 100 tons of 6-in. water pipe.

Prices per net ton, delivered New York: Water pipe 6-in. and larger, $37.60 to $38.60; 4-in. and 5-in., $42.60 to $43.60; 3-in., $52.60 to $53.60; Class A and gas pipe, $4 to $5 extra.

Warehouse Business.—The past month compared favorably with March in the volume of business taken by most warehouses in this district. On plates, shapes and bars, however, mills are reported to be appearing as competitors for small tonnages, on which they offer fairly prompt deliveries. The quantity differentials recently adopted are being maintained, except for the 50c. charge on each order of 249 lb. or less, which has been dropped. Higher quotations on black and galvanized sheets, which have prevailed for several weeks in the local New Jersey market have been eliminated and jobbers are quoting the lower price of 4c. per lb., base, for black sheets and 4.70c. per lb., base, for galvanized sheets. Occasionally concessions are reported from this level, and galvanized sheets have been offered at several dollars a ton less.

Coke.—Buying is still limited. Prices are unchanged. Standard furnace grade is quoted at about $2.75 per ton, Connellsville. Delivered prices on special brands of foundry coke are: To northern New Jersey, Jersey City and Newark, $8.71 to $8.81 per net ton; to New York and Brooklyn, $9.59 to $9.69 per net ton. By-product coke ranges from $9 to $9.40 per net ton, Newark or Jersey City, N. J., and from $10.06 to $10.29 per ton, New York or Brooklyn.

Old Material.—Except for a few grades of scrap, which are slightly lower on dealers' offers, the market is unchanged. Brokers with contracts in eastern Pennsylvania are unwilling to pay more than $15.50 per ton for steel car axles. A Bound Brook, N. J., consumer of chemical borings has purchased at $13.25 per ton, delivered on a $2 per ton freight rate from New York. Machine shop turnings are quoted at $10 to $10.25 per ton, delivered eastern Pennsylvania. Specification pipe prices range from $11.50 to $12 per ton, delivered to users at Lebanon and Columbia, Pa. No. 1 heavy melting steel continues inactive, with purchases by brokers at $13.50 per ton, delivered, eastern Pennsylvania.

Dealers' buying prices per gross ton f.o.b. New York:

No. 1 heavy melting steel	$10.00 to $10.85
Heavy melting steel (yard)	6.75 to 7.25
No. 1 heavy breakable cast	11.25 to 12.00
Stove plate (steel works)	7.75 to 8.00
Locomotive grate bars	8.00 to 8.50
Machine shop turnings	6.50 to 7.25
Short shoveling turnings	6.50 to 7.25
Cast borings (blast furnace or steel works)	6.25 to 7.25
Mixed borings and turnings	6.50 to 7.25
Steel car axles	15.00 to 15.50
Iron car axles	23.75 to 24.75
Iron and steel pipe (1 in. dia., not under 2 ft. long)	7.75 to 8.25
Forge fire	6.75 to 7.00
No. 1 railroad wrought	10.00 to 10.50
No. 1 yard wrought, long	8.50 to 9.00
Rails for rolling	10.00 to 10.50
Cast iron carwheels	10.75 to 11.25
Stove plate (foundry)	8.50 to 8.75
Malleable cast (railroad)	10.00
Cast borings (chemical)	10.75 to 11.25

Prices per gross ton, delivered local foundries:

No. 1 machinery cast	$13.75 to $14.25
No. 1 heavy cast (columns, building materials, etc.), cupola size	11.75 to 12.25
No. 2 cast (radiators, cast boilers, etc.)	11.25 to 11.75

Warehouse Prices, f.o.b. Cleveland

	Base per Lb.
Plates and structural shapes	3.00c.
Soft steel bars	3.00c.
Reinforcing steel bars	2.25c. to 2.75c.
Cold-finished rounds and hexagons	3.65c.
Cold-finished flats and squares	4.15c.
Hoops and bands	3.65c.
Cold-finished strip	*5.95c.
Black sheets (No. 24)	3.75c.
Galvanized sheets (No. 24)	4.40c. to 4.60c.
Blue annealed sheets (No. 10)	3.25c.
No. 9 annealed wire, per 100 lb.	$2.90
No. 9 galvanized wire, per 100 lb.	3.35
Common wire nails, base per keg	2.90

*Net base, including boxing and cutting to length.

Cleveland

May Steel Specifications for Automobile Industry Heavy—Sheets Weaker

CLEVELAND, May 1.—Specifications for steel bars, plates and structural material were light the past week, April ending differently in that respect from March, which closed with a rush of orders against expiring first quarter contracts. Not much new business is being placed, most buyers being under contract. April business declined fully 25 per cent compared with the previous month. This, however, is not indicative of any falling off in consumption, but it is because buyers are now using up steel ordered in March, which is apparently being consumed at the recent rate. With heavy shipments against old orders, many consumers are not specifying full monthly quotas against second quarter contracts. Some of the mills report that these specifications in April were only 75 per cent of the buyers' quotas. In spite of the falling off, April specifications ran ahead of the same month last year.

Specifications from the automotive industry for steel sheets and strip steel for May shipment are heavy, and it is expected that the seasonal slowing down of this industry will not materialize until a month later than last year, although two leading car builders are reducing production, one for a change of models. Little new inquiry is coming from the building field for fabricated steel. The Nickel Plate Railroad has exercised its option to take 6000 tons of rails in addition to its recent definite purchase for its 1928 requirements. The additional tonnage will be divided among the four mills that took the original orders.

On steel bars, plates and structural material, the market is firm at 1.85c., only less than car lots going at 1.90c. Cleveland mills quote steel bars at 1.85c., mill.

Pig Iron.—Third quarter buying has started in a limited way at the prevailing second quarter Lake furnace prices. One producer made a few sales for the quarter during the week and others appear willing to sell for that delivery at current prices, although none has started to solicit orders. Sales by Cleveland interests the past week aggregated 21,000 tons, or about the same as during the previous week. An Erie, Pa., foundry purchased 1000 tons, mostly for the third quarter. Some sellers report an increase in sales for early shipment. Prices on foundry and malleable grades show no change. Local furnaces quote $16.75 to $17 for outside shipment, but still seem willing to go to $16.50 in highly competitive territories. In Michigan the market is steady at $18. On the recent inquiry for a round lot of basic iron for shipment to Alliance, Ohio, a Valley producer quoted $16.50, and that is now regarded as the top of the market for basic. A northern Ohio foundry has purchased 500 tons of low phosphorus iron from a Valley producer at $26.50 and higher quotations on that grade have disappeared. English low phosphorus iron is being offered at $26, delivered Chicago, and other Lake ports to be shipped as ballast in boats for the new Welland canal that are being built in England for the Great Lakes trade. Pig iron shipments by Cleveland interests held up in good volume during April, being about the same as in March, and some of the automobile foundries have issued specifications for as much iron in May as during April. However, shipments to some industries outside of the automotive field are slow, some of the foundries not yet having taken all their first quarter iron.

Prices per gross ton at Cleveland:

N'th'n No. 2 fdy., sil. 1.75 to 2.25	$18.50
Southern fdy., sil. 1.75 to 2.25	22.00
Malleable	18.50
Ohio silvery, 8 per cent	28.00
Basic, Valley furnace	16.50
Standard low phos., Valley furnace	26.50

Prices, except on basic and low phosphorus, are delivered Cleveland. Freight rates: 50c. from local furnaces; $3 from Jackson, Ohio; $6 from Birmingham.

Sheets.—Mills supplying the automotive industry continue to get good specifications from that source, but the demand from other consumers is light, and the eagerness of some mills to take orders has led to further weakening in prices of about $2 a ton, except on auto body sheets, which are holding firm at 4c., Pittsburgh. With keener competition, the Valley district has again become a rather common basing point. On black sheets, 2.75c., Pittsburgh, is commonly quoted, but this has been shaded to 2.75c., Valley, and there are reports of a 2.70c., Valley, price. On blue annealed sheets, 1.90c., Pittsburgh, and 2c., Valley mill, are being named. However, some mills are holding firmly to 2c., Pittsburgh. Galvanized sheets have weakened to 3.55c., Valley, ranging from that price to 3.65c., Pittsburgh.

Strip Steel.—Mills are still getting a good volume of orders for hot-rolled strip and some have fair backlogs. However, prices are weak. Fairly representative quotations are 1.80c., Pittsburgh, for material 6-in. to 12-in. wide, and 2.05c. on 3-in. to 6-in. strip. On wider material competition of blue annealed sheets is causing price irregularities. Cold-rolled strip is 2.75c., Cleveland, for 3 tons and over. The reduction on auto body sheets has affected fender stock, which is now quoted at 4.10c. to 4.15c., compared with the recent 4.20c. price.

Wire Products.—Mills continue to quote nails at $2.65 per keg, Cleveland, for this immediate territory, but not much business is being placed at that price. In central and southern Ohio, $2.55 is commonly quoted by more than one producer. Plain wire is firm at 2.50c. per lb., Cleveland.

Warehouse Business.—Steel bars, plates and structural material are moving in fair volume, and prices are firm. The demand for galvanized sheets is below the seasonal average. Prices are somewhat irregular, being shaded $1 to $2 a ton.

Semi-Finished Steel. — Specifications are keeping close to recent volume, but there is very little new business. Prices are steady at $33, Cleveland, for sheet bars, billets and slabs.

Reinforcing Bars.—New demand is dull for this season of the year. Work for which the Cleveland Union Terminals Co. has an inquiry out will require 2500 tons. This was reported last week as an unstated tonnage. Rail steel bars are unchanged at 1.75c., mill.

Old Material.—Activity is still confined to small-lot purchases by dealers against old orders. Mills continue to restrict shipments. Prices show neither an upward nor downward tendency. Small lots of heavy melting steel are moving at the quoted prices. While some blast furnace scrap has been sold at $9.25, most of the business is going at $9.50. Considerable scrap is being shipped from Detroit to Cleveland by boat, and it is understood that much of the scrap recently offered by the Michigan automobile companies for May shipment will go to Pittsburgh district mills.

Prices per gross ton, delivered consumers' yards:

Basic Open-Hearth Grades	
No. 1 heavy melting steel	$13.50 to $13.75
No. 2 heavy melting steel	12.75 to 13.00
Compressed sheet steel	12.50 to 12.75
Light bundled sheet stampings	11.50 to 11.75
Drop forge flashings	12.00 to 12.50
Machine shop turnings	7.00 to 7.50
No. 1 railroad wrought	11.50 to 12.00
No. 2 railroad wrought	13.50 to 14.00
No. 1 busheling	11.00 to 11.25
Pipes and flues	9.00 to 9.50
Steel axle turnings	12.50 to 13.00
Acid Open-Hearth Grades	
Low phosphorus forging crops	16.50 to 17.00
Low phosphorus, billet, bloom and slab crops	17.00 to 17.50
Low phosphorus sheet bar crops	16.50 to 17.00
Low phosphorus plate scrap	16.00 to 16.50
Blast Furnace Grades	
Cast iron borings	9.25 to 9.50
Mixed borings and short turnings	9.25 to 9.50
No. 2 busheling	9.25 to 9.50
Cupola Grades	
No. 1 cast	16.50 to 17.00
Railroad grate bars	11.00 to 12.00
Stove plate	12.00 to 12.50
Rails under 3 ft	18.00 to 18.50
Miscellaneous	
Railroad malleable	15.00 to 15.50
Rails for rolling	16.25 to 16.50

Iron Ore.—A steel interest in the Buffalo territory has arranged for 1928 requirements by the purchase of a round block of ore at the regular market price and by a trade deal on the terms of which it will exchange ore from its own mines for other grades. Something over 200,000 tons was involved in the transaction, the greater part being covered by the exchange arrangement. The market does not show much activity, although a few small-lot sales are reported. Some of the open market buyers are covering only for three or four months' requirements and expect to come in the market again during the latter part of the season. Ore shipments will probably start late this week.

Bolts, Nuts and Rivets.—Specifications for bolts and nuts are fair, but the volume of April business fell slightly below that of March. Rivet specifications last month also fell below those of March, this being accounted for by large orders placed late in March against first quarter contracts carrying a lower price than now prevailing.

Coke.—Foundry grades are in fair demand. The April prices of $7.75, Painesville, and $6, Connellsville, for Ashland coke for by-product foundry grades have been re-established for May. Connellsville foundry coke is unchanged at $3.75 to $5.10, ovens.

LESS AUSTRIAN MAGNESITE

Exports in 1927 Were 21 Per Cent Below 1913 —Half Goes to United States

EXPORTS of burned magnesite from Austria decreased to 97,000 metric tons in 1927, against 123,000 tons in 1913, according to a report received by the Department of Commerce, Washington, from John Hurley, consul at Vienna. The drop in exports of this important trade item of Austria, which contributes more than $4,000,000 toward that country's large trade deficit, is attributed to developments that took place during the war. Some of the nations to which this supply was no longer accessible introduced the use of substitutes, and a few succeeded in discovering workable deposits within their own territory. Although sales to the United States declined during the past year, it is still the most important market for Austrian magnesite.

Working at full capacity, the report says, the Austrian industry is able to furnish 70 per cent of an estimated world requirement of 300,000 tons of burned magnesite, Austria having been given 74 per cent of the deposits belonging to the dual monarchy and Czechoslovakia the remainder. More than 90 per cent of the burned magnesite and magnesite manufactures produced in Austria during recent years has been exported, and the industry is much less dependent on economic conditions at home than in its most important foreign markets.

The increase of the American import duty on magnesite in 1922 affected sales, and the English coal strike in 1926, which caused reduced iron and steel operations, had an unfavorable effect on exports to Great Britain. On the other hand, the German industrial boom in 1927 is declared to have been responsible to a considerable extent for the increased output of magnesite in Austria that year. In 1927 the production of raw magnesite amounted to 356,000 tons, as compared with 237,000 in 1926 and 290,000 tons in 1925. The output of dead burned magnesite in 1927 totaled 125,000 tons. Of the 59,886 tons of dead burned magnesite exported during the first nine months of 1927, the United States took 28,517 tons; Germany, 11,542; and Great Britain, 7786 tons.

It is the policy to quote higher prices in the domestic market and for exports to Germany and Spain, which are more or less dependent on the Austrian and Czechoslovakian product, than on business with the United States and Great Britain, in consideration of the competition of American producers. Present prices of dead burned magnesite to the most important markets, at the plant in Styria, range from $14.38 a metric ton for the United States to $18.50 for the domestic market.

Use of the word "steel" as a brand or label for tools made entirely or partly of metals other than steel is prohibited in a recent stipulation agreement between the Federal Trade Commission and a seller of hardware. The company, according to the commission, agreed to discontinue use of the word "steel" in its advertising.

San Francisco

Award of 8000 Tons of Steel for Aqueducts Expected Soon

SAN FRANCISCO, April 28 (*By Air Mail*).—Interest is centered in the aqueducts for the East Bay Municipal Utility District at Oakland, calling for more than 8000 tons of plates, and an award is expected within the next week or 10 days. Demand generally has eased off somewhat and bookings this week were by no means heavy.

Pig Iron.—Movement of foundry iron continues light. Little or no improvement is noticed in the rate of foundry operations. A shipment of Indian iron, about 1400 tons, is due next week. Part of this will be unloaded at Los Angeles and the rest will be taken by bay district users. Prices are unchanged.

Prices per gross ton at San Francisco:

*Utah basic	$25.00 to	$26.00
*Utah foundry, sil. 2.75 to 3.25	25.00 to	26.00
**Indian foundry, sil. 2.75 to 3.25	24.00 to	25.00
**German foundry, sil. 2.75 to 3.25		24.25

*Delivered San Francisco.
**Duty paid, f.o.b. cars San Francisco.

Bars.—Out-of-stock prices on reinforcing steel bars in the San Francisco district are exceptionally low, and lower than 2c. has recently been quoted. When it is considered that plates and shapes are holding firm at 2.30c. to 2.35c., c.i.f. respectively, the extent of the weakness in bar prices is clearly seen. Only one or two projects calling for more than 100 tons were reported placed this week, the bulk of the current business involving small lots. The largest new industry calls for 155 tons for piers for the West Waterway bridge in Seattle.

Plates.—Twohy Brothers & Shea, Inc., was low bidder on the Wildcat and Sequoia aqueducts combined on the basis of electrically welded steel pipe. The Lock Joint Pipe Co., Ampere, N. J., was low bidder on the Wildcat aqueduct for steel lined concrete pipe. Bids were taken also on class C cast iron pipe. The Steel Tank & Pipe Co., bidding through Twohy Brothers & Shea, Inc., was low on the fabrication of the steel pipe. The Pacific Car & Foundry Co., Seattle, was awarded 1500 tons of plates and shapes for 250 underframes for the Chicago, Milwaukee, St. Paul & Pacific Railroad. Exclusive of the Oakland aqueducts, pending business is confined to one or two projects. Tacoma has come into the market for 115 tons of 48-in. riveted pipe.

Shapes.—Although about 8000 tons of structural material is up for figures or pending, only four awards of importance have been made in the week. The Moore Dry Dock Co. took 100 tons for the mine of Clinton West Co. at Bodie, Cal. The Union Iron Works booked 160 tons for a hotel in Los Angeles and the Portland Bridge Co. took 220 tons for a bridge at Coburg, Ore. The California Steel Co. was low bidder on 380 tons for a warehouse for the Oakland Port Commission, at about $97 a ton erected.

Cast Iron Pipe.—Inquiries for cast iron pipe were limited to one or two projects. Livingston, Cal., has come into the market again for 364 tons of 2 to 10-in. class B or 150, having rescinded the contract recently awarded to Robert McNair of Oakland. Bids will be opened May 14. The United States Cast Iron Pipe & Foundry Co. booked 8744 tons of 4 to 30-in. centrifugal pipe for Long Beach, Cal. Oak Harbor, Wash., placed with unnamed interest 132 tons of 4 and 6-in. class B pipe. Bert Noble of San Diego took 210 tons of 6 and 8-in. class C for San Diego. An unnamed company took 127 tons of 6-in. class B for Riverside, Cal. Prices continue around $35 to $36 a ton, delivered, on 6-in. class B and larger.

Standard Pipe.—Movement of standard pipe and oil country goods, with few exceptions, is limited to unimportant orders. The Kelly Pipe & Machinery Co., Los Angeles, was awarded 155 tons of 4 to 6-in. steel casing for the Rialto, Cal. The Steel Plate Construction Co., Portland, took 100 tons of 1¼-in. galvanized pipe for a refrigerator cooling plant for the Terminal Ice & Cold Storage Co., Salem, Ore. No action has yet been taken on the 700 tons of 4 to 20-in. lapwelded pipe for Monrovia, Cal.

Coke.—This market reflects the quiet condition noted in the foundry pig iron market. Both sales and inquiries are confined to unimportant lots.

Warehouse Prices, f.o.b. San Francisco

	Base per Lb.
Plates and structural shapes	3.15c.
Soft steel bars	3.15c.
Small angles, $\frac{3}{16}$-in. and over	3.15c.
Small angles, under $\frac{3}{16}$-in.	3.55c.
Small channels and tees, ¾-in. to 2¾-in.	3.75c.
Spring steel, ¼-in. and thicker	5.00c.
Black sheets (No. 24)	4.95c.
Blue annealed sheets (No. 10)	3.90c.
Galvanized sheets (No. 24)	5.50c.
Structural rivets, ½-in. and larger	5.65c.
Common wire nails, base per keg	$3.40
Cement coated nails, 100-lb. keg	3.40

Birmingham

Pig Iron Sales in Small Lots—Finished Steel Firm

BIRMINGHAM, May 1.—Sales of pig iron are confined almost entirely to small lots, which is in line with conditions for the past several weeks. Previous bookings are largely responsible for the lack of activity at present. Two of the merchant producers in the district report shipments in good volume and close to make, while the third has found shipments light since the early part of April. Foundry iron sales are still on a $16 base. The number of active furnaces has not changed during the past three weeks, 17 being in blast. Of this number, 10 are on foundry, five on basic, one on recarburizing iron and one on ferromanganese.

Prices per gross ton, f.o.b. Birmingham district furnaces:

No. 2 foundry, 1.75 to 2.25 sil	$16.00
No. 1 foundry, 2.25 to 2.75 sil	16.50
Basic	15.00

Finished Steel.—The market developed a slightly firmer tone during the past week. New business continues to come in at a steady rate, and the outlook for the next few weeks is considered by sales officials to be fair. New business with structural steel and reinforcing bar manufacturers is still light. The Southern Steel Works Co. has an order for 200 tons for the Crawford Auto Shop. Open-hearth operations have not changed during the past week. The Tennessee company has seven in operation at Ensley and four at Fairfield, while the Gulf States Steel Co. continues with four at Alabama City.

Cast Iron Pipe.—New business with the pressure pipe manufacturers is moderate, consisting chiefly of small orders. Several good-sized projects are pending, and orders will probably be placed within the next two or three weeks. Prices are firmer, with the base still at $29 to $31.

Coke.—Spot sales of foundry coke are holding up to a fair average. Shipments are going forward in good volume. Quotations remain at $5.

Old Material.—Demand in some lines is considerably stronger, but prices are unchanged. More No. 1 machinery cast was sold last week than in some time. Steel scrap trading is fair. Sales in other lines continue low.

Prices per gross ton, delivered Birmingham district consumers' yards:

Heavy melting steel	$9.50 to	$10.00
Scrap steel rails	11.00 to	11.50
Short shoveling turnings	8.00 to	8.50
Cast iron borings		8.00
Stove plate		14.50
Steel axles	19.00 to	20.00
Iron axles	20.00 to	21.00
No. 1 railroad wrought	10.00 to	10.50
Rails for rolling		13.00
No. 1 cast		14.50
Tramcar wheels	12.50 to	13.50
Cast iron carwheels	12.00 to	13.00
Cast iron borings, chemical	13.50 to	14.00

Canada

Foundry and Malleable Pig Iron in Good Demand—Structural Steel Active

TORONTO, ONT., May 1.—A steady demand for foundry and malleable pig iron continues to feature business in the Canadian markets. Spot sales are mostly in small lots, but the total volume is satisfactory. Shipping orders against contracts are responsible for a good movement of iron from furnaces. Consumption of pig iron in this country shows considerable gain over that of a year ago, but production has not kept pace. This is chiefly because of increased competition from United States and British sources of production, which has affected the Canadian market, especially as most of this imported iron is selling at prices under Canadian quotations, despite the fact that the latter have been reduced in order to meet the competition. Canadian prices are unchanged.

Prices per gross ton:

Delivered Toronto	
No. 1 foundry, sil. 2.25 to 2.75	$23.10 to $23.60
No. 2 foundry, sil. 1.75 to 2.25	23.10 to 23.60
Malleable	23.10 to 23.60
Delivered Montreal	
No. 1 foundry, sil. 2.25 to 2.75	24.50 to 25.00
No. 2 foundry, sil. 1.75 to 2.25	24.50 to 25.00
Malleable	24.50 to 25.00
Basic	24.00
Imported Iron at Montreal Warehouse	
Summerlee	33.50
Carron	33.00

Finished Steel.—Structural steel and reinforcing bar sales continue to show improvement, and at the present time are among the most active of the various lines of iron and steel materials. The Dominion Bridge Co. and the McGregor & McIntyre Structural Steel Co. shared a contract for 2800 tons of structural and 1000 tons of reinforcing bars for the Robert Simpson Co. addition in Toronto. Proposed bridge construction is having a stimulating effect in structural and reinforcing steel. Two or three International bridges are proposed which will involve the use of upward of 25,000 tons of steel. About 3000 tons of steel will be required for the Ville Lasalle, Que., bridge. A bridge at Carlton Place, Ont., will take 300 tons. Approximately 1000 tons of structural and 500 tons of reinforcing steel will be purchased for Hanson Brothers office building in Montreal.

Old Material.—Current sales are mostly small tonnages, but are fairly numerous. Consumers in Ontario and Quebec continue to adhere to the hand-to-mouth method of buying. Prices are unchanged but are not strong.

Dealers' buying prices:

Per Gross Ton	Toronto	Montreal
Heavy melting steel	$9.00	$8.00
Rails, scrap	10.00	10.00
No. 1 wrought	9.00	11.00
Machine shop turnings	7.00	6.00
Boiler plate	7.00	7.00
Heavy axle turnings	7.50	7.50
Cast borings	7.50	6.00
Steel turnings	7.00	6.50
Wrought pipe	5.00	6.00
Steel axles	14.00	19.00
Axles, wrought iron	16.00	21.00
No. 1 machinery cast	....	16.00
Stove plate	....	12.00
Standard carwheels	....	14.50
Malleable	....	13.00
Per Net Ton		
No. 1 machinery cast	15.00	....
Stove plate	9.00	....
Standard carwheels	13.00	....
Malleable scrap	13.00	....

Warehouse Prices, f.o.b. Buffalo

	Base per Lb.
Plates and structural shapes	3.40c.
Soft steel bars	3.30c.
Reinforcing bars	2.75c.
Cold-finished flats, squares and hexagons	4.45c.
Rounds	3.95c.
Cold-rolled strip steel	5.85c.
Black sheets (No. 24)	4.30c.
Galvanized sheets (No. 24)	5.15c.
Blue annealed sheets (No. 10)	3.80c.
Common wire nails, base per keg	$3.65
Black wire, base per 100 lb	3.90

Buffalo

Pig Iron Market Is Quiet—Steel Operating Rate Continues High

BUFFALO, May 1.—The pig iron market has been quiet during the past week. Inquiry is light. The Eastern Malleable Iron Co. placed part of the 2500 tons for which it inquired with a Buffalo furnace. An Erie, Pa., consumer ordered 1000 tons of 2X, the major portion going to the Perry furnace. A downstate inquiry is for 500 tons of foundry, and several inquiries of from 100 to 300 tons of foundry and malleable have been converted into orders. Shipping directions are continuing in fair volume.

Prices per gross ton, f.o.b. furnace:

No. 2 plain fdy., sil. 1.75 to 2.25	$17.00
No. 2 foundry, sil. 2.25 to 2.75	17.50
No. 1X foundry, sil. 2.75 to 3.25	18.50
Malleable, sil. up to 2.25	17.50
Basic	$16.50 to 17.00
Lake Superior charcoal	27.28

Finished Iron and Steel.—Inquiry for bars and shapes is fair. Sheet mill operation remains at 85 to 90 per cent. Reinforcing bar projects placed during the week included one mill addition of 100 tons and a high school stadium of 200 tons. Bids are asked on 100 tons for a warehouse and 300 tons for a school. Business in welded fabric and fence wire is reported good. The Wickwire-Spencer plant is running at 75 per cent in the open-hearth department. The Donner Steel Co. is operating five of its nine open-hearth furnaces and Bethlehem's Lackawanna plant 21 of its 24. About 90 per cent operation is being maintained by the Buffalo Bolt Co. April has been the heaviest month of the year in warehouse sales.

Old Material.—A consumer is reported to have purchased No. 1 heavy melting steel, about 1000 tons, at $14.75. Machine shop turnings were sold at Niagara Falls, N. Y., at $9.50 to $9.75, and some stove plate is reported to have been sold at around $13.50. A small tonnage of No. 1 machinery cast was sold at slightly less than $15. Dealers are buying actively against old orders.

Prices per gross ton, f.o.b. Buffalo consumers' plants:

Basic Open-Hearth Grades	
No. 1 heavy melting steel	$14.50 to $15.00
No. 2 heavy melting steel	12.75 to 13.25
Scrap rails	13.75 to 14.25
Hydraulic compressed sheets	13.00 to 13.50
Hand bundled sheets	9.00 to 9.50
Drop forge flashings	12.00 to 12.50
No. 1 busheling	13.25 to 13.75
Heavy steel axle turnings	12.50 to 12.75
Machine shop turnings	8.25 to 8.75
Acid Open-Hearth Grades	
Railroad knuckles and couplers	15.50 to 16.00
Railroad coil and leaf springs	15.50 to 16.00
Rolled steel wheels	15.50 to 16.00
Low phosphorus billet and bloom ends	17.00 to 17.50
Electric Furnace Grades	
Heavy steel axle turnings	12.75 to 13.25
Short shoveling steel turnings	10.75 to 11.25
Blast Furnace Grades	
Short shoveling steel turnings	10.50 to 11.00
Short mixed borings and turnings	9.50 to 10.00
Cast iron borings	9.75 to 10.25
No. 2 busheling	9.00 to 9.50
Rolling Mill Grades	
Steel car axles	17.00 to 17.50
Iron axles	22.00 to 23.00
No. 1 railroad wrought	12.50 to 13.00
Cupola Grades	
No. 1 machinery cast	14.50 to 15.00
Stove plate	13.50 to 13.75
Locomotive grate bars	12.00 to 12.50
Steel rails, 3 ft. and under	16.50 to 17.00
Cast iron carwheels	13.00 to 13.50
Malleable Grades	
Railroad	15.00 to 15.25
Agricultural	15.00 to 15.25
Industrial	15.00 to 15.25

Shipments of iron and steel products down the Ohio River in 1927 totaled 1,036,621 tons, compared with 575,462 tons in the previous year, an increase of almost 100 per cent. About one-fourth of the iron and steel tonnage traveled the full length of the river and then down the Mississippi River to Memphis and New Orleans. The average haul of all classes of commerce transported last year increased from 56 to 60 miles, with a total ton-mileage increase of 10 per cent.

Youngstown

Steel Shipments Exceed Incoming Business—Sheets Continue Weak

YOUNGSTOWN, May 1.—While steel ingot production in this district is holding up fairly well to its recent rate of about 80 per cent of capacity, signs point strongly to a recession soon, since shipments generally are exceeding incoming business. No slackening of sheet mill operations is observed, but scheduling is becoming more difficult, owing to the weaker tendency of prices, which tends to make consumers more conservative in releasing tonnage. Much sheet tonnage is moving to the automotive industry, but at prices lower than those at which the business was written, it having been necessary for local mills to revise prices to competitive levels to obtain specifications.

On automobile body sheets, 4c., base, is the current price. On black sheets, 2.80c., base, is the ruling level and while makers have encountered 2.75c., they say this usually is on special finishes based on the price of black sheets and carrying large enough extras to permit of some shading of base prices. Galvanized sheets commonly are quoted at 3.65c., base, but as low as 3.55c. has been reported from some districts. Mills here are trying to get 2c. to 2.10c., base, for blue annealed, but the higher figure is becoming exceptional and even less than 2c. is reported to general sales office from district offices, notably Detroit. These prices are lower than those quoted at the close of last year.

Standard-weight pipe business still is fairly active, but in oil country goods no improvement is noticed, and while makers are hopeful that the much-mentioned pipe line orders will soon be placed, they do not yet see any signs of definite action. There is good demand for tin plate and a good engagement of productive capacity in this area. The complaint of strip steel producers is not with volume but with the prices that are being obtained.

St. Louis

Pig Iron Sales Off—Scarcity in Fabricated Steel Orders

ST. LOUIS, May 1.—The pig iron market was quiet during the last week, sales of the St. Louis Gas & Coke Corporation totaling 1650 tons, while the leading Southern interest sold about 250 tons. The local maker's sales included 300 tons each to a district company and an Iowa melter and 200 tons to another Iowa company, with most shipments for second quarter and some into third quarter. The local furnace is accepting third quarter business on its present price of $19 per ton, f.o.b. Granite City. Southern makers, however, have not opened their books for third quarter, their price of $16, Birmingham, continuing for this quarter. Shipments for April by the local furnace exceed those for the corresponding month in 1927. Stove foundries are beginning to slow down, but the larger job foundries report good business.

Prices per gross ton at St. Louis:

No. 2 fdy., sil. 1.75 to 2.25, f.o.b. Granite City, Ill.	$19.00
Northern No. 2 fdy., delivered St. Louis	20.66
Southern No. 2 fdy., delivered	20.42
Northern malleable, delivered	20.66
Northern basic, delivered	20.66

Freight rates: 81c. from Granite City to St. Louis; $2.16 from Chicago; $4.42 from Birmingham.

Coke.—The coke market is slow. Dealers have shown no interest in domestic grades. Nearly all foundry coke is being sold by local by-product ovens in small lots.

Finished Iron and Steel.—Fabricators of structural steel continue to complain of the scarcity of orders, the total volume for the week being less than 500 tons, including 150 tons for a municipal market. Demand for reinforcing bars is considerably better, with a far greater volume in sight. The principal business of the week was 475 tons for a hotel to Laclede Steel Co. Galvanized and lighter blue annealed sheets are in good demand. Warehouse business is slightly better.

Old Material.—The purchase of a fairly large tonnage of melting rails and specialties by an East Side mill, together with the inability of dealers to get sufficient melting and shoveling steel at last week's prices, has caused advances in these items. Heavy melting steel, heavy shoveling steel, rails for rolling and railroad malleable have advanced 25c. a ton, while miscellaneous rails, railroad springs, machine shop turnings, steel angle bars are up 50c. a ton, and No. 2 railroad wrought is 75c. higher. Railroad lists: Pennsylvania lines, 45,800 tons; Missouri Pacific, 400 tons; Frisco, 2000 tons; Chicago, Milwaukee & St. Paul, 1000 tons; Chicago & Alton, 700 tons of 80-lb. relaying rails.

Prices per gross ton, f.o.b. dealers' yards and delivered St. Louis district consumers' works:

Heavy melting steel	$11.50 to $12.00
No. 1 locomotive tires	12.00 to 12.50
Heavy shoveling steel	11.50 to 12.00
Miscellaneous standard-section rails, including frogs, switches and guards, cut apart	12.50 to 13.00
Railroad springs	13.50 to 14.00
Bundled sheets	8.75 to 9.25
No. 2 railroad wrought	11.50 to 12.00
No. 1 busheling	9.50 to 10.00
Cast iron borings	8.75 to 9.25
Iron rails	13.00 to 13.50
Rails for rolling	13.00 to 13.50
Machine shop turnings	7.00 to 7.50
Steel car axles	17.50 to 18.00
Iron car axles	23.50 to 24.00
Wrought iron bars and transoms	21.00 to 21.50
No. 1 railroad wrought	10.00 to 10.50
Steel rails, less than 3 ft.	15.00 to 15.50
Steel angle bars	12.00 to 12.50
Cast iron carwheels	13.00 to 13.50
No. 1 machinery cast	13.00 to 13.50
Railroad malleable	11.00 to 11.50
No. 1 railroad cast	13.00 to 13.50
Stove plate	12.00 to 12.50
Agricultural malleable	12.00 to 12.50
Relaying rails, 60 lb. and under	20.50 to 23.50
Relaying rails, 70 lb. and over	26.50 to 29.00

Warehouse Prices, f.o.b. St. Louis

Seamless steel boiler tubes, 2-in.	19.00
4-in.	39.00

Cincinnati

Pig Iron Buyers Show Little Interest —Steel Specifications Decline

CINCINNATI, May 1.—With enough pig iron on hand or contracted for to take care of second quarter requirements, consumers are showing practically no interest in buying for future needs. Aside from 1000 tons of Northern foundry for a Michigan melter and a like amount of charcoal iron also for Michigan delivery, sales have been confined to lots of 100 tons or single carloads. Southern Ohio foundry iron is quoted at $19, base Ironton, but that price is almost prohibitive, except in a limited area near the furnaces. Producers in northern Ohio are asking $16.50 to $17, base Cleveland, while Tennessee and Alabama irons are selling at $16, base Birmingham. Jackson County silvery iron is firm at $25, base furnace, for 8 per cent.

Prices per gross ton, delivered Cincinnati:

So. Ohio fdy., sil. 1.75 to 2.25	$20.89
So. Ohio malleable	$20.14 to 20.89
Alabama fdy., sil. 1.75 to 2.25	19.69
Alabama fdy., sil. 2.25 to 2.75	20.19
Tennessee fdy., sil. 1.75 to 2.25	19.69
Southern Ohio silvery, 8 per cent	26.89

Freight rates, $1.89 from Ironton and Jackson, Ohio; $3.69 from Birmingham.

Coke.—There has been a further recession in specifications for by-product foundry coke from companies allied with the automobile industry. Domestic grades, on the other hand, have been moving fairly well on account of the low prices which have encouraged dealers to build up stocks. Quotations of by-product foundry coke will remain at $7 per net ton, f.o.b. ovens, during May, while domestic coke also will be unchanged at $4.50, ovens, for egg, $3.50 for walnut and $3 for No. 2 nut. At Detroit, by-product foundry coke is selling at $8.50, Detroit ovens, for outside delivery and at $9, delivered in Detroit. Demand for beehive foundry coke from the Wise County and New River districts is light.

Foundry coke prices per net ton, delivered Cincinnati: By-product coke, $9.02; Wise County coke, $7.09 to $7.59; New River coke, $9.09 to $9.59. Freight rates, $2.14 from Ashland, Ky.; $2.59 from Wise County and New River ovens.

Finished Material.—The amount of business placed with mills in the past week has been only fair, both specifications and fresh orders having declined somewhat. Structural steel is quiet, and new jobs are coming out more slowly than expected. Some small fabricators have a liberal volume of work on hand, but many large operators are in need of orders to keep their plants running on a normal basis. Bars, structural shapes and plates are selling generally at 1.85c., base Pittsburgh, to contract customers and at 1.90c. to occasional buyers. There is a noticeable tendency, however, to accept single carloads at 1.85c. In the sheet market the situation is much the same as a week ago. Orders for second quarter delivery are being placed at a good rate and the tonnage is well diversified. Specifications from automobile manufacturers are holding up satisfactorily, while the demand from the jobbing trade and from users of electrical sheets has been brisk. Mills are in position to supply the average run of material in from two to three weeks. Operations of district sheet manufacturers have continued close to full capacity with the same producing schedule holding over for the next week. Although there has been no strengthening of prices, quotations apparently are scraping bottom, and some large consumers are reported to be ready to put out inquiries for third quarter, hoping to take advantage of the present low prices to cover their needs up to Oct. 1. Blue annealed sheets range from 2c. to 2.10c., base Pittsburgh, with an occasional dip in the case of preferred customers. Galvanized stock remains at 3.65c. to 3.75c., base Pittsburgh, black sheets at 2.75c. to 2.85c. and automobile body sheets at 4c. Sales of common wire nails continue to reveal price irregularities, particularly at consuming points which can be reached from Ironton by barge down the Ohio River. Quotations are said to be from $2.50 to $2.55, base Ironton.

Warehouse Business.—Sales in April were fairly good in volume, but the tonnage in the aggregate was less than normal. There has been no change in prices.

Reinforcing Bars.—New billet bars are priced at 1.85c. to 1.90c., base Pittsburgh, and rail steel bars at 1.80c., base mill.

Old Material.—Heavy melting steel has dropped 50c. a ton, while sheet clips and bundled sheets are off 25c. Consumers are buying only in small quantities to cover immediate needs. Little scrap is coming onto the market. Steel plants are accepting moderate tonnages on contracts.

Dealers' buying prices per gross ton f.o.b. cars, Cincinnati:

Heavy melting steel	$11.00 to $11.50
Scrap rails for melting	11.25 to 11.75
Loose sheet clippings	8.25 to 8.75
Bundled sheets	9.25 to 9.75
Cast iron borings	8.00 to 8.50
Machine shop turnings	7.50 to 8.00
No. 1 busheling	10.00 to 10.50
No. 2 busheling	7.00 to 7.50
Rails for rolling	12.50 to 13.00
No. 1 locomotive tires	12.75 to 13.25
No. 1 railroad wrought	10.00 to 10.50
Short rails	15.75 to 16.25
Cast iron carwheels	12.25 to 12.75
No. 1 machinery cast	15.50 to 16.00
No. 1 railroad cast	13.00 to 13.50
Burnt cast	7.50 to 8.00
Stove plate	8.25 to 8.75
Brake shoes	9.50 to 10.25
Railroad malleable	12.00 to 12.50
Agricultural malleable	11.50 to 12.00

Boston

Pig Iron Dull—Sales for Week 4000 Tons—Machinery Cast Scrap Higher

BOSTON, May 1.—May opens with comparatively little pig iron business in sight. The foundries which have been sounding out the market have not as yet given indications that they will buy soon. Current activity centers largely in rounding up scattered third quarter orders. New England sales the past week slightly exceeded 4000 tons, the Mystic Iron Works taking almost half, with eastern New York State, Buffalo and other irons making up the remainder. One of the largest sales was 500 tons of No. 2X to a Massachusetts machinery maker at a price reported as not more than $20.15 a ton, delivered.

Prices of foundry iron per gross ton, delivered to most New England points:

Buffalo, sil. 1.75 to 2.25	$20.91 to $21.91
Buffalo, sil. 2.25 to 2.75	21.41 to 22.41
East. Penn., sil. 1.75 to 2.25	23.15 to 23.65
East. Penn., sil. 2.25 to 2.75	23.65 to 24.15
Virginia, sil. 1.75 to 2.25	25.71
Virginia, sil. 2.25 to 2.75	26.21
Alabama, sil. 1.75 to 2.25	22.91 to 24.77
Alabama, sil. 2.25 to 2.75	23.41 to 25.27

Freight rates: $4.91 from Buffalo, $3.65 from eastern Pennsylvania, $5.21 all rail from Virginia, $6.91 to $8.77 from Alabama.

Warehouse Prices, f.o.b. Boston

	Base per Lb.
Plates	3.365c.
Structural shapes—	
Angles and beams	3.365c.
Tees	3.365c.
Zees	3.465c.
Soft steel bars and small shapes	3.265c.
Flats, hot-rolled	4.15c.
Reinforcing bars	3.265c. to 3.54c.
Iron bars—	
Refined	3.265c.
Best refined	4.60c.
Norway, rounds	6.60c.
Norway, squares and flats	7.10c.
Spring steel—	
Open-hearth	5.00c. to 10.00c.
Crucible	12.00c.
Tire steel	4.50c. to 4.75c.
Bands	4.015c. to 5.00c.
Hoop steel	5.50c. to 6.00c.
Cold rolled steel—	
Rounds and hexagons	*3.45c. to 5.45c.
Squares and flats	*3.95c. to 6.95c.
Toe calk steel	6.00c.
Rivets, structural or boiler	4.50c.

	Per Cent Off List
Machine bolts	50 and 5
Carriage bolts	50 and 5
Lag screws	50 and 5
Hot-pressed nuts	50 and 5
Cold-punched nuts	50 and 5
Stove bolts	70 and 10

*Including quantity differentials.

Coke.—The New England Coal & Coke Co. and the Providence Gas Co. have announced that the May price of by-product foundry coke will remain at $11 a ton, delivered within a $3.10 freight rate zone, the same as in April. The reduction in New England fuel last month failed to stimulate foundry buying to any appreciable extent. Makers of coke outside of New England are pressing sales here at prices about equivalent to $11 a ton, delivered.

Cold-Rolled Strip.—Although the market is not active, there is increased buying of cold-rolled strip. Demand is on a hand-to-mouth basis, but broader owing to the fact that runover deliveries from the first quarter have been pretty well cleaned up. There has been some shading in prices. The American Steel & Wire Co. continues to quote 3.15c. to 3.30c., base Worcester, Mass., on 1 to 3-ton lots.

Warehouse Business.—Average April warehouse sales in this territory were 10 to 20 per cent larger than those for April, 1927, but 5 to 8 per cent smaller than those for March, this year. Stocks are comparatively small and more or less broken. Competition for business remains keen, yet prices are steady.

Old Material.—Exporters who sold heavy melting steel scrap for export to Danzig are having difficulty in filling their orders at the prices paid, namely, $7.50 and $7.75, delivered on dock. Owing to the fact that automobile rims and other objectionable material have been shipped, rejections have been made freely. One shipper reports that nine of 13 cars shipped were rejected. This, together with the fact that some of the eastern Pennsylvania steel plants are holding back shipments of steel scrap, has weakened the market here. Sales of heavy melting steel were made in the past week at $9 and $9.10 on cars, shipping point, indicating a little softness. No. 1 machinery cast, which is scarce, is held at slightly higher prices. Textile cast, on the other hand, is plentiful.

Buying prices per gross ton f.o.b. Boston rate shipping points:

No. 1 heavy melting steel	$9.00 to $9.50
Scrap T rails	8.50 to 9.00
Scrap girder rails	7.50 to 8.00
No. 1 railroad wrought	10.00 to 10.25
No. 1 yard wrought	7.50 to 8.00
Machine shop turnings	5.50 to 5.75
Cast iron borings (steel works and rolling mill)	6.00 to 6.25
Bundled skeleton, long	5.75 to 6.25
Forge flashings	6.60 to 7.25
Blast furnace borings and turnings	5.75 to 6.25
Forge scrap	6.00 to 6.50
Shafting	13.00 to 13.50
Steel car axles	15.50 to 16.00
Wrought pipe (1 in. in diameter, over 2 ft. long)	7.50 to 8.00
Rails for rolling	10.00 to 10.25
Cast iron borings, chemical	9.50 to 10.00

Prices per gross ton delivered consumers' yards:

Textile cast	$13.50 to $14.00
No. 1 machinery cast	15.25 to 15.50
No. 2 machinery cast	13.50 to 14.00
Stove plate	10.00 to 10.50
Railroad malleable	13.00 to 13.50

To Investigate Cost of Tungsten Output

WASHINGTON, May 1.—The metals section of the Tariff Commission will begin field work soon in connection with an investigation concerning the differences in costs of production of tungsten in the United States and China. The study was directed by a resolution introduced by Senator Oddie of Nevada and passed last week. China was named as the chief competing country. The investigation is to be made under Section 315 (flexible provision) of the tariff act. Costs concerning production in China will be ascertained from invoices and other documents, and no representative of the commission will be sent to that country.

Average cargo analyses of Lake Superior ores shipped during 1927 are shown in an annual analysis book issued by the Lake Superior Iron Ore Association, Union Trust Building, Cleveland. Analyses are given for all mines from which shipments were made and include the percentage of iron (both dried and natural), phosphorus, silica, manganese, sulphur and other components, and the percentage of moisture in the natural ore.

Bethlehem Plants Better Previous Safety Records

Marked improvement in accident prevention was effected by the employees of the Bethlehem Steel Corporation during the first quarter of this year, according to the corporation's safety report. The corporation as a whole improved its best previous record by 17.8 per cent. The steel plants alone bettered their safety record by 44 per cent.

This was the first quarter of the 1928 accident prevention contest for gold money awards to Bethlehem employees, announced on Jan. 3 by President E. G. Grace. In this contest three prizes of $1,000, $500 and $250 in gold are awarded each quarter to the three groups of employees which make the greatest reduction in lost time due to accidents. For purposes of the contest the 70,000 employees are divided into 11 groups.

In the first quarter the Maryland plant group won first prize of $1,000 with an improvement in its safety record of 70.3 per cent, the Steelton plant group won the second prize with a 62.4 per cent improvement and the Bethlehem plant group won third prize, bettering its safety record by 59.8 per cent.

Chamber of Commerce of United States to Meet May 7 to 11

WASHINGTON, May 1.—The Chamber of Commerce of the United States will hold its annual meeting in Washington May 7 to 11. Commercial aviation, commercial arbitration, agriculture, the Federal Trade Commission, foreign trade, highways, immigration, merchant marine, taxation, trust legislation, water power and the World Court will be discussed. At a meeting of the department of manufacture of the chamber in the large ballroom of the New Willard Hotel on May 9 the following addresses will be given: "Teamwork for Profits in a Consumers' Market," E. J. Mehren, vice-president McGraw-Hill Publishing Co., Inc.; "Forecasting and Planning—Vital to Industrial Prosperity," Donald Brown, vice-president General Motors Corporation, and "Labor Conservation—Teamwork for Lower Costs of Production," C. S. Ching, president American Management Association. There will be discussion of the addresses, and resolutions will be adopted. The meeting will be preceded by luncheon at 1 o'clock.

Will Study Marketing and Distribution Methods

National marketing and distribution methods and related problems are to be studied, with cooperation from large manufacturers and distributers, under the direction of the bureau of foreign and domestic commerce, Department of Commerce, Washington. The nation-wide survey, which will fit in with regional surveys now under way and to be taken up, has been ordered by Julius Klein, director of the bureau, and the work will be in charge of John M. Hager, who during the period of organization has been director of market survey of the department's domestic commerce division. Mr. Hager will begin his work in New York, extending his operations to other parts of the country later. It is expected the greater part of the current year will be occupied by the task.

The Interstate Commerce Commission has set May 10 as the date for hearing on the application of the Pittsburgh, Lisbon & Western Railroad for authority to build a new line which would traverse Mahoning and Columbiana counties in Ohio and Beaver County in Pennsylvania and connect the Youngstown district with the Ohio River.

Directors of the Sheffield Steel Corporation, Kansas City, Mo., have declared a 33⅓ per cent stock dividend, payable July 1, to stock of record June 15.

NON-FERROUS METAL MARKETS

The Week's Prices

Cents per Pound for Early Delivery

	May 1	Apr. 30	Apr. 28	Apr. 27	Apr. 26	Apr. 25
Lake copper, New York	14.25	14.25	14.25	14.25	14.25	14.25
Electrolytic copper, N. Y.*	14.00	14.12½	14.12½	14.12½	14.12½	14.12½
Straits tin, spot, N. Y.	51.12½	51.00	....	52.12½	51.87½	52.25
Lead, New York	6.10	6.10	6.10	6.10	6.10	6.10
Lead, St. Louis	6.00	6.00	6.00	6.00	6.00	6.00
Zinc, New York	6.20	6.15	6.15	6.15	6.15	6.15
Zinc, St. Louis	5.85	5.80	5.80	5.80	5.80	5.80

*Refinery quotation; delivered price ¼c. higher

NEW YORK, May 1.—All the markets are devoid of features. Buying of copper is very light, but prices are firmer. A fair business in tin is reported at a lower price level. Lead is unchanged both as to demand and quotations, but zinc values are tending higher.

Copper.—Very little buying by domestic consumers is reported and not much metal is any longer available at a concession from the quotation of 14.25c., delivered in the Connecticut Valley, which practically all electrolytic producers are firmly adhering to. Sales for export have been fairly large the past week, running as high as about 5000 tons on one day. The quotation of Copper Exporters, Inc., is still unchanged at 14.50c., c.i.f. European ports. It is believed that domestic consumers are fairly well covered for May, but that foreign users must still buy considerable for that position. Consumption throughout April was very heavy and keeps up, mills still being urged for deliveries. Opinion is expressed that statistics for April will show a large increase in consumption and a decrease in stocks. Lake copper continues moderately active and firm at 14.25c., delivered, as the minimum.

Copper Averages.—The average price for Lake copper for the month of April, based on daily quotations in THE IRON AGE, was 14.26c., delivered. The average price of electrolytic copper was 14.25c., delivered.

Tin.—Sales for the week have been light at about 1000 tons, dealers being the principal buyers for May-June delivery. In the last week more interest in the July position was in evidence. Yesterday, Monday, the market was quite active, with 400 to 500 tons changing hands, dealers again being the principal buyers. For the most part consumers show little interest. A shortage in May, which was mentioned a week ago as possible, has been to some extent eliminated because more metal is being shipped than was expected. A steamer is due on May 21, bearing 1070 tons, which will probably all be delivered into consumption this month. Statistics for April show that deliveries into consumption in the United States in April were 7010 tons, with 1973 tons in stock and landing on April 30. Shipments from the Straits in April were 6774 tons and the May shipments are estimated at about 7250 tons. The decrease in the visible supply for April was 585 tons, or less than expectations, which placed it at nearer 1000 tons. The visible supply on May 1 is placed at 15,001 tons. The market today was only moderately active, with Straits tin quoted at 51.12½c., New York. Prices in London today were about £3 to £4 per ton less than a week ago, with spot standard quoted at £229 15s., future standard at £230 2s. 6d. and spot Straits at £234 5s. The Singapore price today was £233 5s.

Lead.—Just enough business is being done each day to maintain firmly the prices which have prevailed for about a month both here and in the West. The leading interest continues to maintain its quotation at 6.10c., New York, as the contract price, and in the outside market 6c., East St. Louis, prevails.

Zinc.—Hardly enough business is reported to establish a market, and opinions as to the price at which prime Western zinc can be bought vary considerably. For most of the week the quotation has been 5.80c. to 5.82½c., East St. Louis, but today the metal can probably not be bought for less than 5.85c. The fact that the price for ore at $38 per ton, Joplin, does not permit of a profit at present quotations for the metal causes producers to be extremely backward in making sales. About 9000 tons of ore was sold last week, with production at about 10,000 tons.

Metals from New York Warehouse

Delivered Prices Per Lb.

Tin, Straits pig	53.50c. to 54.50c.
Tin, bar	56.00c. to 57.00c.

Brass	25.12½c.
Copper	26.00c.
Brazed Brass Tubes	26.75c.
Brass Rods	16.50c.

Nickel.—Wholesale lots of ingot nickel are quoted unchanged at 35c., with shot nickel at 36c. and electrolytic nickel at 37c. per lb.

Antimony.—Buying by dealers has been quite active and Chinese metal for all positions is quoted a little higher at 10.50c., New York, duty paid.

Aluminum.—Virgin metal, 98 to 99 per cent pure, is quoted at 23.90c. per lb., delivered.

Non-Ferrous Metals at Chicago

CHICAGO, May 1.—In a market characterized by light and spotty buying, prices for copper have advanced, while quotations for tin, lead and zinc have dropped to lower levels. The old metal market was moderately active early in the week, but since that time it has been quiet.

Prices, per lb., in carload lots: Lake copper, 14.37½c.; tin, 52.75c.; lead, 6.10c.; zinc, 5.90c.; in less-than-carload lots, antimony, 11.75c. On old metals we quote copper wire, crucible shapes and copper clips, 10.50c.; copper bottoms, 9.50c.; red brass, 9.25c.; yellow brass, 7c.; lead pipe, 4.75c.; zinc, 3.25c.; pewter, No. 1, 30c.; tin foil, 36c.; block tin, 45c.; aluminum, 11.75c.; all being dealers' prices for less-than-carload lots.

RAILROAD EQUIPMENT

Erie Inquires for 1000 Freight Cars—500 Refrigerator Cars Bought

FEATURING the equipment market this week were inquiries by the Erie for 1000 freight and 35 passenger cars and an order from the Northwestern Refrigerator Line for 500 refrigerator cars and 100 underframes. The Erie will also make repairs to 2485 box cars. Locomotive purchases included 10 for the Southern Pacific, in addition to those mentioned last week. Details of the week's business follow:

Northwestern Refrigerator Line has purchased 500 40-ton refrigerator cars and 100 refrigerator car underframes from American Car & Foundry Co.

Chicago, Rock Island & Pacific has ordered 500 box car underframes from Pennsylvania Car Co.

Tampagna Sugar Development Co., Philippine Islands, has ordered two Mogul-type locomotives from Baldwin Locomotive Works.

Erie Railroad has made inquiry for 25 passenger coaches, three combination baggage and mail cars, five express and two dining cars. This road is also inquiring for 500 40-ton box cars, 400 40½-ft. automobile furniture cars, 100 50-ft. automobile furniture cars and five 100-ton depressed flat cars. Repairs will also be made to 2485 box cars.

Chicago, Milwaukee, St. Paul & Pacific is inquiring for two flat cars instead of five as reported last week.

Chicago, South Shore & South Bend has made inquiry for 10 motor coaches, with option on five additional, and five trailers.

Delaware, Lackawanna & Western has ordered one combination baggage and mail car from American Car & Foundry Co.

United Sugar Co. of Mexico is inquiring for 10 cane cars.

St. Louis-San Francisco has purchased 250 underframes from Virginia Bridge & Iron Co., and will buy two underframes and superstructures for automobile cars.

Southern Cotton Oil Co., Savannah, Ga., will purchase 20 tank cars.

Southern Pacific has purchased 10 locomotives from Baldwin Locomotive Works, in addition to those mentioned last week, and is inquiring for 50 caboose, six dining and 10 street cars.

Consolidated Coal Co. has ordered 150 coal cars from Bethlehem Steel Co.

Great Northern has purchased two electric locomotives from Baldwin Locomotive Works.

Old Metals, Per Lb., New York

The buying prices represent what large dealers are paying for miscellaneous lots from the smaller accumulators and the selling prices are those charged consumers after the metal has been properly prepared for their uses.

	Dealers' Buying Prices	Dealers' Selling Prices
Copper, heavy crucible	12.00c.	13.50c.
Copper, heavy and wire	11.75c.	12.875c.
Copper, light and bottoms	10.25c.	11.375c.
Brass, heavy	7.00c.	8.50c.
Brass, light	6.00c.	7.50c.
Heavy machine composition	9.50c.	10.625c.
No. 1 yellow brass turnings	7.75c.	9.00c.
No. 1 red brass or composition turnings	8.75c.	9.75c.

REINFORCING STEEL

Awards of 8500 Tons—Only 1250 Tons in New Projects

AWARDS of 8500 tons reported to THE IRON AGE during the week, the largest of which were 1000 tons each for a bridge at Allentown, Pa., and an office building in Chicago. New projects amounted to only 1250 tons, the lowest total of the year thus far. Awards follow:

NEW YORK, 500 tons, section of subway; from Corson Construction Co., general contractor, to Truscon Steel Co.

NEW YORK, 480 tons, loft building at Varick and Dominick Streets, to Truscon Steel Co.

HACKENSACK, N. J., 175 tons, sewer project, to Concrete Steel Co.

PHILADELPHIA, 900 tons, Pennsylvania Railroad cold storage warehouse, to A. Taylor & Co., local.

ALLENTOWN, PA., 1000 tons, Tilghman Street bridge, to Concrete Steel Co.

BUFFALO, 100 tons, addition to plant of Eastern States Milling Co., to a local maker.

BUFFALO, 200 tons, high school stadium, to local maker.

GARY, IND., 100 tons, building for Illinois Bell Telephone Co., to Concrete Steel Co.

CHICAGO, 400 tons of rail steel bars, building for Nu-Art Engraving Co., to Inland Steel Co.

CHICAGO, 100 tons, building for Borland Mfg. Co., to Barton Spiderweb System.

CHICAGO, 500 tons, Woolworth Building, to Kalman Steel Co.

CHICAGO, 170 tons, temporary building for Board of Trade.

CHICAGO, 1000 tons, *Daily News* building, to an unnamed bidder.

CHICAGO, 700 tons of rail steel, apartment building; Wahl Construction Co., builder, to an unnamed bidder.

AURORA, ILL., 350 tons, reservoir, to an unnamed bidder.

STATE OF ILLINOIS, 700 tons of rail steel bars for road work; 200 tons to Calumet Steel Co., 200 tons to Olney J. Dean Co. and 300 tons to Concrete Engineering Co.

STATE OF ILLINOIS, 900 tons, highway bridges; five to A. C. Wood, Rockford, Ill., one to Hansell-Elcock Co., Chicago, and two to Continental Bridge Co., Chicago.

ST. LOUIS, 475 tons, Lennox Hotel at Ninth and Washington Avenues, to Laclede Steel Co.

SEATTLE, 100 tons, addition to Virginia Hospital, to Pacific Coast Steel Co.

SALT LAKE CITY, 155 tons, paving Mount Carmel highway, to unnamed company.

Reinforcing Bars Pending

Inquiries for reinforcing steel bars include the following:

NEW YORK, 500 tons, abutments for Hudson River bridge; Arthur McMillen Co., general contractor.

BUFFALO, 100 tons, extension to express building of New York Central Railroad; bids asked.

BUFFALO, 300 tons, school No. 81; being figured.

CHICAGO, tonnage being estimated, 11-story garage building, for Glen E. Holmes, Inc.

CHICAGO, tonnage not stated, building for Illinois Bell Telephone Co.

CHICAGO, 800 tons, approaches to Crawford Avenue bridge; Underground Construction Co., general contractor.

ST. LOUIS, 200 tons, Knights of Pythias building, Grand and Delmar Boulevards.

SEATTLE, 155 tons, piers for West Waterway bridge; bids May 18.

FABRICATED STRUCTURAL STEEL

Two Bridge Projects Take 10,300 Tons—Milwaukee Court House Will Require 6000 Tons

INCLUDING 5500 tons for a railroad bridge at Newark, N. J., 4800 tons for additional work on the Hudson River bridge at New York and 3500 tons for plant additions at Moline, Ill., and Waterloo, Iowa, structural awards amounted to 29,000 tons. New projects totaled 14,000 tons, the largest being a court house at Milwaukee requiring 6000 tons. Awards follow:

State of Vermont, 553 tons, bridges at North Enosburg, East Highgate, North Sheldon and Sheldon Springs, to Lackawanna Steel Construction Co., Buffalo.

Middlesex, Vt., 366 tons, four bridges, to Palmer Steel Co.

Waterbury, Vt., 150 tons, bridges, to Bethlehem Steel Co.

Boston, 160 tons additional, Sears, Roebuck & Co., to New England Structural Co.

State of New Hampshire, 400 tons, three bridges, to American Bridge Co.

Boston & Maine Railroad, 300 tons, two bridges, to Boston Bridge Works, Inc.

New York, 1500 tons, loft building on East Forty-fifth Street, to Harris Structural Steel Co.

New York, 4800 tons, Hudson River bridge, in connection with wire cable work to be done by John Roebling's Sons Co.

State of New York, 286 tons, highway bridges; 125 tons to Bethlehem Steel Co., and 161 tons to McClintic-Marshall Co.

Newark, N. J., 5500 tons, bridge over Newark Bay for Pennsylvania Railroad, to Bethlehem Steel Co.

West End, N. J., 1000 tons, H. T. Parson residence, to Hedden Iron Construction Co.

Philadelphia, 350 tons, mill building for Edward Russ, to Belmont Iron Works.

Philadelphia 2500 tons, apartment building on Spruce Street, to Bethlehem Steel Co.

Baltimore, 318 tons, plates for 80,000-gal. tank for American Oil Co. at Curtis Bay, to Riter-Conley Co.

Waterville, N. C., 800 tons, hydroelectric station, to Virginia Bridge & Iron Co.

Charleston, W. Va., 120 tons, Montgomery Ward & Co. building, to Massillon Bridge & Structural Co.

Birmingham, 200 tons, Crawford Auto Shop, to Southern Steel Works.

Pittsburgh, 100 tons, slag brick plant for Duquesne Slag Products Co., to Jones & Laughlin Steel Corporation.

Pittsburgh, 450 tons, mill building, Crucible Steel Co. of America, to Fort Pitt Bridge Works.

East Liverpool, Ohio, 230 tons, foundry building, to unnamed fabricator.

Dayton, Ohio, 150 tons, W. T. Grant residence, to Massillon Bridge & Structural Co.

State of Michigan, 190 tons, road work, to Massillon Bridge & Structural Co.

Stickney, Ill., 200 tons, building for Sanitary District, to Midland Structural Steel Co., Chicago.

Chicago, 700 tons, Temple Sholem, to Midland Structural Steel Co., local.

Chicago, 300 tons, church and school, to A. Bolter's Sons.

Minneapolis, 2000 tons, Foshay Tower, to Minneapolis Steel & Machinery Co.

Minneapolis, 1100 tons, building for Northern States Power Co., to Minneapolis Steel & Machinery Co.

Moline, Ill., and Waterloo, Iowa, 3500 tons, additions to plants of Deere & Co., to Rochester Bridge Co., Rochester, Ind.

St. Louis Southwestern Railway, 200 tons, bridge at Garland City, Ark., to unnamed fabricator.

Bellingham, Wash., 100 tons, standpipe, to Chicago Bridge & Iron Works.

Coburg, Ore., 220 tons, bridge over McKenzie River, to Portland Bridge Co.

Bodie, Cal., 100 tons, headframe for Clinton West Co., to Moore Dry Dock Co.

Los Angeles, 158 tons, hotel, Lake and Eighth Streets, to Union Iron Works.

Structural Projects Pending

Inquiries for fabricated steel work include the following:

Boston & Maine Railroad, 1000 tons, two highway bridges.

State of New York, 250 tons, highway bridge.

Jersey City, 250 tons, St. Francis Hospital.

Dover, N. J., 200 tons, United States Government building at Piccatinny Arsenal.

Pennsylvania Railroad, 1000 tons, bridges.

Wilmington, Del., 850 tons, bridge; Fredrich Snare Corporation, general contractor; Phoenix Bridge Works, low bidder on steel erected.

Baltimore, 800 tons, highway bridge.

Memphis, 625 tons, six sand barges for Mississippi River Commission.

Cleveland, 400 tons, two junior high schools.

Cleveland Heights, 100 tons, Canterbury School.

Detroit, 150 tons, office and service building for White Motor Co.

Erie, Pa., 275 tons, Erie County bridges; bids taken.

Joliet, Ill., 250 tons, store.

Chicago, 200 tons, building at Ohio and North Michigan Boulevards; Phillip Maher, architect.

Chicago, 250 tons, store at 226 South Wabash Avenue.

Chicago, 200 tons, store at 234 South Wabash Avenue.

Chicago, 250 tons, building for Link-Belt Co.

Milwaukee, 6000 tons, Court House.

St. Louis, 150 tons, Soulard market for Board of Public Service.

Tacoma, Wash., 115 tons, plates for 48-in. riveted pipe; bids April 30.

Oakland, Cal., 4830 tons, plates, Wildcat aqueduct, East Bay Municipal Utility District; Steel Tank & Pipe Co., low bidder.

Oakland, 3668 tons, plates, Sequoia aqueduct, East Bay Municipal Utility District; Steel Tank & Pipe Co., low bidder.

Oakland, 400 tons, Twentieth Century Market; bids being taken.

Oakland, 380 tons, warehouse, foot of Fourteenth Street; Herrick Iron Works, low bidder.

Richmond, Cal., 300 tons, warehouse for Parr Terminal Co.; bids received.

San Francisco, 120 tons, addition to warehouse, Vermont and Fifteenth Streets; bids being taken.

OBITUARY

Nicolay Nelson, founder of the Nelson Machine Works, Waukegan, Ill., died, April 17. He was born in Norway. He and his son founded the Nelson Machine Works 22 years ago.

—

William U. Dennison, superintendent of construction for the Carnegie Steel Co. in the Youngstown district and builder of the McDonald plant of the company at McDonald, Ohio, died suddenly, April 21, aged 64 years. He had been with the Carnegie company for 27 years.

—

William F. Lane, general superintendent of the Girard works, A. M. Byers Co., Girard, Ohio, died suddenly April 21, in a Youngstown hospital, aged 58 years. He had been connected with the Girard plant of the Byers company since 1909, for the first five years as superintendent of the furnace department and since 1914 as superintendent of the property.

—

John A. Kittilsen, vice-president K. I. Willis Corporation, Moline, Ill., died at his home in that city on April 16, following a year's illness. He was 68 years of age and was identified for 29 years with the Moline Scale Co. before becoming one of the organizers of the Willis organization.

—

James C. Armstrong, proprietor of the former Armstrong Machine Works, Peoria, Ill., and a pioneer in foundry work in central Illinois, died on April 20. He was 82 years of age and had retired from active business several years ago.

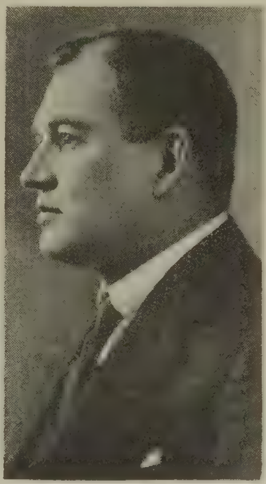
—

C. Lee Cook, head of the C. Lee Cook Co., Louisville, Ky., manufacturer of metallic steam packing and steam specialties, died on April 25 of pneumonia. He was 57 years of age and had been physically incapacitated since infancy. He was widely known as an inventor and was also prominently identified in civic and artistic circles of Louisville.

PERSONAL

John E. Woods, assistant general manager of sales Carnegie Steel Co., has retired after almost 41 years' association with the company. His successor is Joseph C. Shields, who has been his assistant. Mr. Woods started in the steel business in August, 1887, as a time clerk at the Homestead steel works. He was manager of sales in Cincinnati prior to his appointment as assistant general manager of sales. He was born in Washington, Pa., Dec. 17, 1867, and is a graduate of Washington and Jefferson College. Mr. Shields' entire business career has been in the steel business and with the Carnegie Steel Co., with which he started as an office boy in the order and shipping department Sept. 15, 1897. Later he became shape schedule clerk, then chief clerk with the general sales department, and in December, 1917, he was made assistant to Mr. Woods.

JOHN E. WOODS



JOSEPH C. SHIELDS

James E. Lose has been appointed assistant general superintendent Homestead works, Carnegie Steel Co., succeeding Ralph H. Watson, recently advanced to the general superintendency of that works. Mr. Lose has been identified with the company since 1910, continuously at the Carrie furnaces, which supply pig iron to the Homestead works. He was born in Kansas, but attended the grade and high schools in Pittsburgh, where he also took a year's course in special mathematics at Pittsburgh Academy and four years' mechanical engineering course at the Carnegie Institute of Technology. He started as a tracer in the drawing room at Carrie furnaces and successively served as draftsman, stock house foreman, superintendent of construction, assistant superintendent of blast furnaces, and finally as superintendent of blast furnaces, assuming the latter position in September, 1924. He presented a paper, "Operation of Large Hearth Furnaces," at the 1927 spring meeting of the American Iron and Steel Institute. He is a member of this institute and also of the Eastern States Blast Furnace and Coke Oven Association.

Homer D. Williams, president Pittsburgh Steel Co., Pittsburgh, accompanied by his bride, has gone to California for a month's visit.

B. E. Kibbee, who has been general manager of sales for the Sharon Steel Hoop Co., Sharon, Pa., has been made vice-president of the company, succeeding H. T. Gilbert, recently elected vice-president Republic Iron & Steel Co. Mr. Kibbee will be succeeded by A. S. Booth, who has been assistant general manager of sales for the Sharon company.

Arthur H. Hawkins, recently district representative at Memphis, Tenn., for the Granite City Steel Co., Granite City, Ill., has been transferred to Dallas, Tex., where he will serve the company in a similar capacity. Before going with the Granite City company he was associated with the various subsidiary companies of the United States Steel Corporation at Denver, Colo. Richard W. Orthwein, who has been connected with the Granite City company for a number of years, will succeed Mr. Hawkins as Memphis representative.

Allen E. Hall, manager of the sawmill machinery department, Allis-Chalmers Mfg. Co., Milwaukee, has been appointed a member of the National Committee on Wood Utilization of the Department of Commerce by Secretary Hoover, chairman. He represents the American Society of Mechanical Engineers. The endeavor of the committee is to reduce waste in the production and manufacture of lumber.

A. C. Perrin, formerly associated with Joseph T. Ryerson & Son, Inc., Chicago, has joined the sales organization of the Stocker-Rumely-Wachs Co., 117 North Jefferson Street, Chicago, dealer in machine tools.

B. M. Houston, foundry engineer of the International Nickel Co., was the principal speaker at the April 25 meeting of the Fort Wayne, Ind., group of the American Society for Steel Treating. His subject was "Extending the Limitations of Cast Iron Through the Use of Nickel and Chromium."

Salvador Moreira, research engineer American Steel & Wire Co., was the guest of the Worcester Society of Civil Engineers at their meeting on April 25. Mr. Moreira, a native of Honduras, gave an outline of business and political conditions in Central America.

H. J. Griffing, grinding machine engineer Norton Co., Worcester, Mass., on May 2 presented the film, "The Thirtieth Part of a Hair," before the Employers' Association of Eastern Massachusetts.

La Roy M. Sherwin has been made foundry superintendent of the Brown & Sharpe Mfg. Co., Providence. He was associated with the Providence concern several years ago, but resigned to take up work in other sections of the country.

Charles F. Abbott, executive director American Institute of Steel Construction, Inc., New York, will be the principal speaker at a meeting of the Gray Iron Institute to be held in Philadelphia on May 18 in the convention hall of the Philadelphia Commercial Museum. The meeting will be devoted principally to a discussion of organization problems.

Harry H. Leathers, 80 Federal Street, Boston, has been appointed New England agent for the American Fluid Motors Co., Philadelphia, manufacturer of high-pressure hydraulic pumps and hydraulic motors. R. L. Sittinger will be associated with Mr. Leathers in sales work.

E. F. Doty, formerly chief engineer of the Buffalo Steam Pump Co., Buffalo, has resigned to organize the E. F. Doty Pump Co., 401 Ellicott Square, Buffalo, which will engage in the manufacture of specialized lines of pumping machinery and handle sales in that territory for the American Well Works, Aurora, Ill.

C. P. Potter, engineer in charge of the large motor and transformer divisions of the Wagner Electric Corporation, St. Louis, has been elected chairman St. Louis section, American Institute of Electrical Engineers. He has been a member of the organization since his graduation from the University of Illinois in 1909, having served on various committees and last year as vice-chairman of the section.

L. E. L. Thomas, from 1920 until 1927 chief engineer Indiana Harbor, Ind., works, Inland Steel Co., Chicago, has been appointed vice-president Freyn Engineering Co., Chicago, and will devote himself particularly to work in progress for foreign clients. He is a graduate of McGill University, Toronto, and after a varied experience in the iron and steel industry, was made chief draftsman of the Youngstown Sheet &

Tube Co. In 1916 he was made chief engineer of the Gary Tube Co., Gary, Ind., his work having to do with the construction of a plant to include docks, blast furnaces, steel making capacity, rolling mills and tube mills. With the suspension of that work on account of the war he was made chief engineer of the ordnance department, United States Steel Corporation, which was beginning the construction of a munitions plant. When that project was abandoned at the close of the war he returned to the Gary company, where he remained until 1920.

Theodore Beran, commercial vice-president General Electric Co., in charge of the New York district, has resigned. He had been manager of the company's New York district since 1903 and vice-president since 1926. He was born at Springfield, Mass., in 1862 and received his college training at the College of the City of New York.

Thomas S. Stephens, for the last 25 years associated with the machinery sales activities of Manning, Maxwell & Moore, Inc., New York, most recently as manager of railroad machinery sales, has resigned.

H. VAN ZANDT

H. vanZandt, who has been identified with the Illinois and Carnegie steel company sales departments since 1910, has been appointed assistant general manager of sales for the Illinois Steel Co., in charge of sales of structural shapes, plates, axles and coke oven by-products. He was born at Blawenburg, N. J., in 1882 and attended the Lawrenceville School, Lawrenceville, N. J., and Princeton University, having been graduated from the latter institution in 1905. From 1905 until 1907 he served in the Gautier rolling mill department, Cambria Steel Co., Johnstown, Pa. He then went with the Carnegie Steel Co., where he was employed for a few months in the plate mill department at Homestead before being transferred to the general sales department in May, 1907. He went to the Carnegie Chicago office in February, 1910.

F. C. Turner, 116 Broad Street, New York, has been appointed export representative for the Beamer Handle Co., Manor, Pa.

J. C. Goodnight has joined the Detroit sales organization of the Black & Decker Mfg. Co., Towson, Md., and will specialize in automotive work. He succeeds Henry Fox, who has gone into business for himself. Leon A. Hardy has replaced Jack Caffrey in the company's New York office, Mr. Caffrey having entered another line of business.

Stanley W. Parker has been appointed district manager at Chicago for Wheelock, Lovejoy & Co., Inc., Cambridge, Mass., with headquarters in the Pure Oil Building, 31 East Wacker Drive. He was graduated from the Massachusetts Institute of Technology, and after four years in the metallurgical department of the Pennsylvania Steel Co., Steelton, Pa., became associated with Wheelock, Lovejoy & Co. He has been metallurgist and sales engineer in the Cambridge office for 12 years.

L. A. Bassett, president Hendrick Mfg. Co., Carbondale, Pa., manufacturer of perforated metal screens, elevator buckets and interlocked steel grating, has returned to his office after an absence of four months in California.

Thomas G. Nee has been elected president of the Acme Wire Co., New Haven, Conn., following the retirement of Victor M. Tyler. James W. Hook, president Geometric Tool Co., New Haven, has been elected chairman of the executive committee, and Mr. Nee and William G. Redfield have been elected to the board of directors, succeeding James T. Moran and James E. Wheeler. The new president was graduated from the University of Wisconsin in 1900 and from 1905 to 1917 was vice-president and chief engineer of the Mexican Telephone & Telegraph Co. From 1917 until 1927 he was associated with the Allied Machinery Co., New York, a subsidiary of the American International Corporation, having served as president of its Japanese subsidiary, the Horne Co., Ltd.

William E. Emmett, for the last four years contracting manager in the structural steel department of the Moore Drydock Co., Oakland, Cal., has been appointed field engineer in District No. 10 of the American Institute of Steel Construction, and will have headquarters in the Russ Building, San Francisco. He is a graduate of the University of Kansas and before going with the Moore company was for 11 years identified with the Kansas City Structural Steel Co., Kansas City, Mo.

Ralph Simpson has been appointed to handle sales in Maine, New Hampshire, Rhode Island and eastern Massachusetts for the Geometric Tool Co., New Haven, Conn. Before joining the Geometric company he was sales manager of the Stockbridge Machine Co., Stockbridge, Mass., and previously was connected with the Potter & Johnson Machine Co., Pawtucket, R. I.

B. J. Osborne, for six years identified with the structural sales department of the Moore Drydock Co., Oakland, Cal., has been appointed contracting manager of that department, succeeding William E. Emmett.

J. B. Green, president Fusion Welding Corporation, Chicago, spoke recently on welding at a meeting of managers of railroad, tramway, petroleum and related companies in Mexico City, Mexico. The meeting was arranged by La Consolidada, Mexico City, manufacturer of acetylene welding wire and steel work for welding, and at the invitation of the company, J. J. Sacks, service engineer for the Fusion corporation, has gone to Mexico City, where he will spend several weeks in the interest of Mexican welding developments.

J. E. Montgomery, vice-president in charge of operations for the Wheeling Steel Corporation, Wheeling, W. Va., has been elected a director to succeed the late Edward Hazlett. Mr. Montgomery has been identified with the corporation for 18 years.

B. L. Sommer, who has been president Keystone Steel & Wire Co., Peoria, Ill., has been elected chairman of the board, a newly created position. W. H. Sommer, recently vice-president and general superintendent, has been made president, and has been succeeded by D. P. Sommer. Henry G. and R. E. Sommer have been made vice-presidents, the latter in charge of sales.

John C. Brill, for many years district sales manager at New Orleans for the Inland Steel Co., Chicago, has resigned to become associated in a similar capacity with the Newport Rolling Mill Co., Newport, Ky.

John F. Braam, Paul Renshaw and Frank W. Moffett were elected vice-presidents and directors of the General Railway Signal Co., Rochester, N. Y., at a recent meeting of the board. Mr. Braam, who is also secretary and assistant treasurer of the company, was identified with the Taylor Signal Co., Buffalo, prior to its merger with the General company in 1904 and has been associated with the latter company since that time. Mr. Renshaw has been assistant to the president, in charge of sales, and will continue in charge of the sales department. He was formerly with the Federal Signal Co., having come to the Rochester company following the merger of the two organizations in 1924. Mr. Moffett has been assistant to the general manager, in charge of factory operations.

Graham H. Anthony, for the last 11 years vice-president and secretary of the Allen Mfg. Co., Hartford, Conn., has resigned to become vice-president in charge of manufacturing for Veeder-Root, Inc., recently formed by a consolidation of the Veeder Mfg. Co., Hartford, and the Root Co., Bristol, Conn. Before becoming associated with the Allen company Mr. Anthony was identified with the Gilbert Clock Co., Winsted, Conn.

A. C. Howell, president American Shovel & Tool Co., Boston, has resigned.

L. J. Griffiths, assistant general manager of the iron and steel works of the Broken Hill Proprietary Co., Newcastle, N. S. W., and Mr. Young, of the same organization, are now in the United States on a tour of iron and steel production centers. They will sail for Australia about the middle of June.

J. W. Davis, for the past 10 years attached to the Chicago district office McClintic-Marshall Co., Pittsburgh, has been placed in charge of a St. Louis office, which has just been opened in the Telephone Building, that city.

Thomas J. Bray, who recently was succeeded as president of the Republic Iron & Steel Co. by Elmer T. McCleary, has been elected a director of the Youngstown Sheet & Tube Co. and will be associated in the operating management of the Sheet & Tube company plant. The board of directors of the Sheet & Tube company was reduced from 14 to 11 members; the others are James A. Campbell, Frank Purnell, A. E. Adams, H. G. Dalton, Harry Coulby, John W. Ford, John Tod, Richard Garlick, C. H. Booth and J. L. Severance.

R. S. Dutton, manager of sales, Pickands, Brown & Co., Chicago, left April 26 for a two months' vacation in Europe.

George F. Davie, vice-president and treasurer Interstate Iron & Steel Co., Chicago, has returned from a two months' visit to northern Africa.

Steel Co. of Canada to Equip for Ore and Coal Unloading from Boats

At the annual meeting of the Steel Co. of Canada, held in Hamilton, Ont., April 25, President Ross H. McMaster in his address to the shareholders said: "In connection with future plant improvements, you will understand that, with the opening of the new Welland Canal, it will be possible to arrange delivery of supplies of ore and coal by means of water transportation. It is proposed to establish on the waterfront at Hamilton, adjacent to the steel plant, a modern unloading and storage dock where the large Lake freighters can dock. This has been anticipated for some years and the new plant will involve a substantial expenditure. The installation, however, should prove a valuable addition in normal times, and will also facilitate plant operations. It is also planned to improve equipment for the generation of steam power as well as to centralize pumping facilities and to increase the consumption and efficiency in the use of waste gases. A point should be reached where consideration should be given to the installation of improved and more modern facilities, looking toward the replacement of certain rolling mill equipment. This will involve corresponding changes in steel producing units and blooming mill. Looking further ahead, blast furnace A will require to be modernized and entirely rebuilt when the market demand for pig iron justifies doing so."

Vanadium Corporation Personnel Changes

WARD A. MILLER

Ward A. Miller, most recently New York sales manager for the Midvale Co., Philadelphia, has been appointed vice-president of the Vanadium Corporation of America, 120 Broadway, New York, and will have general supervision over all commercial affairs of the corporation. He entered the steel business with Joseph T. Ryerson & Son, Inc., Chicago, having also served in the company's New York and Pittsburgh offices. At the beginning of the war he was Pittsburgh district manager for the Ryerson company, but left that position to serve as a captain in the Army Ordnance Corps. At the close of the war he became associated with the Midvale Steel & Ordnance Co., Johnstown, Pa., serving first as manager of the distributers' division of general sales and later as Chicago district sales manager. He has been New York sales manager of the Midvale Co. since the Steel & Ordnance company was absorbed by the Bethlehem Steel Corporation, and in that capacity has been in charge of sales in New York, New England and Canada. He is a member of the American Iron and Steel Institute, the American Electrochemical Society and the American Society for Steel Treating.

N. Petinot, general manager of sales of the Vanadium corporation, has been appointed assistant to the president, and will devote his time to technical activities in this country and abroad. J. A. Miller, Jr., who has been assistant general manager of sales, succeeds Mr. Petinot, and has been succeeded in turn by Gustav Laub, recently assistant secretary. P. J. Gibbons, assistant treasurer, will assume Mr. Laub's former duties.

Jerome Strauss, material engineer in the United States Naval Gun Factory, Washington, has been engaged by the Vanadium corporation for special engineering and metallurgical work. He was graduated in mechanical engineering from the Stevens Institute of Technology, Hoboken, N. J., in 1913, and entered the steel industry in the metallurgical department of the Illinois Steel Co., South Chicago. He severed this connection to engage in metallurgical work in drop forging manufacture and was thus occupied until the outbreak of the war, when, as a first lieutenant, he was detailed on general inspection work of ordnance materials. Upon leaving the army in 1919 he was made a captain in the Ordnance Reserve. He joined the naval gun factory in that year as assistant chief chemist and metallurgist, later becoming chief chemist and then material engineer. He holds the rank of Lieutenant Commander in the United States Naval Reserve.

River Shipments of Steel Increase

Inland river movement of iron and steel products continues to make a very favorable showing. According to the report for March of the Pittsburgh office, United States Engineers, iron and steel shipments on the Allegheny River were 725 net tons, compared with 600 tons in March, last year; 77,908 tons on the Monongahela, against 36,112 tons in March, last year, and 77,945 tons on the Ohio River compared with 29,016 tons in March, last year. The total shipments for the first three months of this year compare with those of the same period last year as follows:

	Allegheny	Monongahela	Ohio
1928..........	1,440	227,337	235,330
1927..........	600	93,541	84,636

Opposes Anti-Injunction Bill

(*Continued from page* 1247)

take just as much interest in the figures as does the manager or superintendent.

"Now as to the wage incentive plan for foremen that is in operation in our plant: We have devoted not a little time to the study of the different methods of extra compensation; particularly some means of reducing investment in material, both raw and finished; also, for reducing the amount of work in process. The expense budget was carefully made up and the problem of holding it within a certain amount or lowering it if possible, was one of the chief considerations.

Savings on Budgeted Expenses Distributed Among Foremen

"In previous years, we had never been able to work to a certain budget; in fact, we had never been given a stipulated amount at which we might aim. After a careful analysis of previous performances, we established a certain amount for actual operating expenses, based on productive labor and shipments. This budget was fixed on the basis of normal operation employing a productive payroll required for shipments. If the actual expense is kept within this figure, a bonus amounting to 10 per cent of basic salary is paid. If the productive payroll required for shipments is reduced or increased, the budget expense is reduced or increased a proportionate amount. In addition to the initial bonus of 10 per cent, one-half of the amount saved on actual expense, under adjusted budget, is distributed pro-rata to the foremen. We feel that this part of our bonus plan has helped wonderfully, and aided in keeping expenses at a minimum; in fact, relatively lower than they had ever been before.

"Another part of the plan affects the investment in materials. A budget was established for the amount of material in process for normal shipments. An increase or decrease in the volume of business will change the budget in proportion to the change in budgeted productive pay. If the amount of work in process is kept within the limits of the budget, a bonus amounting to 10 per cent of basic salary is paid. This part of our plan has helped to reduce the investment in materials in process at least 50 per cent.

"Foremen's bonuses, to obtain the maximum good from them, are not as simple to design as one might imagine. The results desired should be well thought out, and the system designed so that money is paid for what is wanted and not paid so as to encourage what is not desired.

"Naturally when the foremen's wages depend on the volume of business, and average efficiency of the productive and non-productive workers, a spirit of cooperation is immediately built up throughout the entire organization, and better results come quickly.

"Every manufacturer likes to feel that his key men are pulling together intelligently. Some achieve that satisfaction. Foremen know the mechanics of their own jobs, but they have rarely been trained in modern team work and in the principles of modern production methods. That is a matter for your foremen training or conference groups."

Men Paid According to What They Produce

The Morkrum-Kleinschmidt Corporation, Chicago, has used an incentive system for wage payment for 10 years. In his paper Mr. Heding of that company said the system has proved highly satisfactory to men and management. Under this plan the men are paid according to what they produce. The original system was one of individual bonuses but this later was changed to the group plan, primarily to simplify the clerical work, eliminate checking elapsed time on operations, simplify the time and cost system and reduce the number of job tickets. All operations on a part performed by a group are combined into one group operation—a group in this sense being a number of workers doing the same class of work and pooling their entire output.

The company has found that there is greater cooperation under this method, since everything that will aid in the completion of the work will mean more money for the group and hence for each man, and the individual is willing to help his fellow workers whenever necessary. In a group, one man will set aside his personal feelings because by so doing he is helping to increase his own earnings as well as those of the other men. The older men realize that the sooner they break in the new man the sooner they will get the full advantage of his efforts, while the fact that his fellow workers are so much interested in his success is a spur to the new man to put forth his best efforts.

Under the individual plan of payment, Mr. Heding pointed out, the employees were sometimes inclined to resent the dismissal of a fellow employee for incompetence or laziness, but under the group plan they are glad to see the incompetent or lazy man discharged because they know that he has been holding down the earnings of the group.

Foremen Participate in Same Proportion as Other Workers

Supervisors, such as general foremen, department foremen and job foremen, also participate in the same proportion as the workers they supervise.

Mr. Heding said that a plant of the type of the Morkrum-Kleinschmidt plant, manufacturing products requiring 20,000 different machine parts made in varying quantities, is usually not considered the ideal shop for any kind of an incentive plan of wage payment; nevertheless, the company believes that an incentive plan built on the proper foundation of time and motion studies, detailed operation instructions carefully planned, machine set-up data, including determined speeds and feeds, teaching workers to perform operations according to methods determined by careful study of experts, and with standard time rates, which include fatigue and other necessary allowances, will reduce costs in any manufacturing plant. While there is a larger plant overhead expense, this is offset many times by the lower unit costs in the manufacturing department.

The company's system is a modified Halsey "50-50" plan. Standard time is determined by adding to the time study allowances for fatigue, power feed machine, hand feed machine, or all hand work, as the case may be. The incentive is based on paying a group of workers working at normal speed a bonus of 20 per cent of their straight hourly rates, provided the group has not wasted any of the time incentive time allowance.

The bonus plan of the company was explained as follows:

Bonuses Are Paid Every Week

"Bonus periods are of one week in order to fit in with the regular payroll period and also to pay the bonus without unnecessary delay. A group is given credit for all "inspected and passed" work that clears through during the week. The total amount of work finished by a group in one week multiplied by the standard time rates gives the total standard output hours for the week. From the 'in and out' time clock records is obtained the total group actual hours for the week. Total standard, or output hours, divided by the total actual hours gives the efficiency of the group in percentage. From this efficiency figure the bonus percentage is readily obtained and applied to the payroll.

"Standard time rates are subject to change only when there has been a change in methods, tooling, design, machine tool, or in other words, only when there is a change not due to the direct efforts of the workers. Rates in force one year without change are re-time studied in order to make sure that no overlooked change in method of operation had been made.

"Standard time rates are in decimal hours, and while it is not possible for a group to readily figure exactly what their bonus earnings will be, a glance at the standard time rate indicated on the job ticket, along with a mental shift of the decimal point allows a conversion of the decimal hour rate to one of time per 10, 100 or 1000 units. This allows the operator, also the supervisor, to know the relative speed at which the job is progressing. Maintaining this speed in the group makes possible a close approximation of the bonus earnings.

"Paying bonuses on a pecentage basis from standard time rates eliminates the necessity of changing rates to compensate for fluctuating prevailing wage rates. It also properly takes care of the skilled and semi-skilled workers in a group by paying the skilled worker a larger bonus than is paid the semi-skilled one, due to the difference in regular day rate pay. For example, in a group being paid a 20 per cent bonus, the skilled worker with an hourly rate of 75c. receives 15c. per hr. additional compensation, whereas the lower class worker with an hourly rate of 45c. receives 9c. per hr. additional.

"A general foreman is given the average of the percentages of the departments over which he is supervisor. A general foreman being paid a salary higher than anyone under his supervision consequently receives an additional compensation proportionately greater.

"The foreman of a department split into two or more groups is given a percentage representing the average of the percentages of the groups. A group leader or a foreman of a department small enough to be handled as one group is paid the same bonus percentage as his workers.

"Another advantage of the percentage plan is that, whether computing bonus for workmen or supervisors, it all fits in with the same general scheme and without undue additional clerical expense.

"Quality of work is taken care of by proper inspection. A job not meeting the requirements of the blueprint, gages, or other specification is returned to the department that turned out the job. Time spent in bringing the job to the proper requirements adds to the number of actual hours of working time in the group. This of course tends to lower the efficiency figure with a consequent lowering of additional compensation. Therefore, from supervision down to the lowest worker, there is a constant guarding against doing work improperly.

"In handling the clerical details of our incentive plan, so much of it fits in with the regular clerical routine of timekeeping, payroll, accounting, etc., that very few additional entry forms are necessary.

"An incentive plan to be successful requires from the employer a knowledge of the best methods of performing various operations and duties, and proper instruction and training so that the employee may reach the required proficiency; a continuous study of and search for improved methods; the maintenance of favorable working conditions, and in general, a sincere sympathy with and clear appreciation of the employee's needs and desires."

Foreman Training by the Blackboard Route

GEORGE SEYLER of the Lunkenheimer Co., Cincinnati, conducted an interesting class in foremanship training at the opening of the Thursday session. He directed 20 of the members and with their aid demonstrated the advantages of the blackboard method of training foremen as against the lecture method. By the blackboard method, he said, the men themselves are more inclined to air their own opinions and grievances, and as they participate actively in the discussions rather than being mere listeners, they are not only more interested, but greater good comes out of such meetings, Mr. Seyler said.

The twenty manufacturers volunteering were asked to put themselves in the position of managers and suggest answers to the following question: What are some of the things that management expects of foremen? The qualifications agreed upon were as follows, in part:

Be a leader
Cooperation
Low costs and expected quality
Be an organizer
Loyalty
A square deal
Discipline
Make his own schedule and plan in his work
Expect him to have knowledge of work in his department

Then reversing the situation, Mr. Seyler asked the members to put themselves in the position of foremen and to suggest answers to this question: What are some of the things foremen expect from management?

Similarly, about twenty such items were finally listed on the board, all to illustrate how a group of foremen can have their thinking quickly directed to the problems at hand. Incidentally the demonstration proved highly amusing as well as informing.

Industrial Budgeting Recommended by Howard Coonley

Howard Coonley, president Walworth Co., Boston, discussed the industrial budgeting plan in operation in the Walworth business. The most recent phase of this work, which has been conducted for more than 10 years, is forecasting by means of plotted curves. Mr. Coonley said that the forecasting chart is first made up by a theorist, and then discussed at a meeting of all heads of departments, and when finally agreed upon is made the basis for all of the company's activities—manufacturing, sales, purchasing and financing—for the period for which the forecast is made. Account is taken of the state of the inventory and seasonal fluctuations in the company's business, but so far as possible the calculations form the groundwork for the budget made up in advance. Mr. Coonley said that it was necessary from time to time to make adjustments in the budget because of conditions arising that could not be forecast, but in the main the budget comes within 5 per cent or so of actual performance.

Among the results which have followed the budgeting plan Mr. Coonley mentioned these: If demands for the company's products do not require full production throughout the year, an effort is made to have the letdown come in the summer, when men can more easily obtain outside jobs and when their financial obligations are lighter. The company is able to estimate more closely its financial requirements for a year in advance and to avoid the pitfalls of ordering new equipment and not having the money for it when it comes in. The greatest advantage, he said, is that management's eyes are turned forward instead of backward. Also, the budget gives something with which actual performance can be compared, thus determining the factors which may deflect actual results as compared with the results forecast. The budget plan enables a company to estimate its work in advance so that a certain portion of its help can be given employment throughout the year, thereby keeping the indispensable men better satisfied. It also enables the company to frame its expense account in keeping with sales possibilities. A disadvantage, Mr. Coonley said, is the feeling of too much security, especially when a high rate of business activity has been predicted. Mr. Coonley said he now believed it was possible to use the forecast to estimate profits a year in advance, and even the trend of prices can be reliably plotted in advance.

Mr. Coonley predicted that the next great step in industry is to be the scientific study of merchandising. This, he said, has already been done to some extent by such organizations as the General Motors Corporation and the National Cash Register Co., but he believed that progress in this direction will be as great in the coming years as the development of improved manufacturing methods in the past decade.

Bituminous coal raised in the week ended April 21 is placed at 7,883,000 net tons by the United States Bureau of Mines. This is a sharp increase from the 7,415,000 tons of the preceding week and 7,158,000 tons of the week ended April 7. For the calendar year through April 21 output has been 151,970,000 tons, against 194,003,000 tons for the same period last year.

European Prices Continue Strong

German Market Active in Expectation of Higher Prices—Britain's Proposed Tax Reduction May Decrease Steel Costs

(By Cable)

London, England, April 30.

CLEVELAND pig iron is more active for export and domestic consumers are more interested in buying, but disinclined to place large contracts for forward delivery. Hematite is in better demand, but stocks are still large and one hematite furnace on the East Coast has transferred its production to foundry pig iron. On the West Coast, the North Lonsdale Iron & Steel Co. is starting two hematite furnaces. Foreign ore is firm as a result of the continuance of the Swedish miners' strike.

Finished iron and steel is slightly more active with improved demand from home engineering plants and some rail business recently booked. Export business, however, is quiet and conditions are less favorable in the shipbuilding industry.

Tin plate is very firm and demand continues heavy. Further heavy tonnages have been booked for delivery to the end of the year so that many makers are now full until August and can book but little for delivery before October. On forward contracts 18s. 4¼d. ($4.49) has been paid. Stock and prompt tin plate is scarce at 18s. 6d. ($4.51). Shipments continue on a large scale.

Galvanized sheets are inactive and most works are prepared to accept the official minimum prices. Business has been moderate in the heavier gages of black sheets and Japan is buying some fair tonnages of light gages.

In April, 19 vessels aggregating 28,400 tons were launched on the Clyde, compared with 21 vessels aggregating 33,700 tons in April, 1927.

The Government's budget proposals include 75 per cent reduction of local tax rates on industrial plants and certain remissions in the local rates on railroads, the total of which it is estimated will result in an average reduction of steel costs by 5s. 6d. ($1.34) per ton. Severe criticism has been evoked by a clause that first relief is to be granted only after 18 months.

Arrival here of Charles M. Schwab is awaited with interest in connection with proposals said to have been made for the amalgamation of British iron and steel companies under the auspices of a new finance company of Great Britain and the United States.

Continental material is fairly firm, except pig iron, which is subject to keen British competition. Better steel demand is reported in Germany based on the possible price advance because of the proposed increase in coal miners' wages and railroad freight rates.

German Buyers Active—Expecting Price Increase

(By Radio)

Berlin, Germany, April 30.

DOMESTIC prices for May are unchanged. The market for semi-finished material and rolled products has become suddenly active with a heavy demand for bars and structural shapes. The cause is the expectation of consumers that the proposed advance in Ruhr coal prices as a result of the 8 per cent increase in miners' wages will make steel costs higher.

Employment reports show a decided improvement in the steel, engineering and electrical industries. Foreign orders for heavy iron and steel are coming in satisfactorily and mills are making efforts to increase export trade.

The unfilled tonnage of the United Steel Works, Düsseldorf, is reported at the same level as December, 1927, but the proportion of foreign orders has increased.

BELGIAN PRICES STEADY

Still Show Tendency to Advance—Competition of British Iron Is Severe

ANTWERP, BELGIUM, April 11.—Despite the limited volume of business which is attributed partly to the recent Easter holidays, mills are maintaining prices fair-

British and Continental European prices per gross ton, except where otherwise stated, f.o.b. makers' works, with American equivalent figured at $4.87 per £ as follows:

Durham coke, del'd.	£0 17¾s.		$4.33	
Bilbao Rubio ore*..	1 2½		5.48	
Cleveland No. 1 fdy.	3 8½		16.56	
Cleveland No. 3 fdy.	3 6		16.07	
Cleveland No. 4 fdy.	3 5		15.83	
Cleveland No. 4 forge	3 4½		15.71	
Cleveland basic (nom.)	3 15	to 3 15½	18.27	to 18.39
East Coast mixed...	3 9	to 3 10	16.81	to 17.05
East Coast hematite.	3 10½		17.17	
Rails, 60 lb. and up.	7 15	to 8 0	37.75	to 38.96
Billets	6 0	to 6 10	29.22	to 31.66

(a) Nominal.

ly well. Producers claim to be well booked with orders for the present and are not inclined to offer concessions. The French domestic market has improved considerably, so that French mills are not so active in export business, and this is aiding Belgian mills to maintain an independent position on prices. In a few cases there have been slight increases in prices, but these have not yet been tested by actual transactions. Exporters who have accepted foreign orders and have not yet placed the business with mills are still seeking lower prices, but without success.

Pig Iron.—There is a good demand for foundry iron from domestic users, and prices are being maintained at about $16.25 per ton, f.o.b. furnace, for No. 3 phosphoric foundry. British competition in hematite has curtailed export business in this grade, which is quoted at £3 2s. 6d. ($15.40) per ton, f.o.b. Antwerp. As a result of the foreign competition, Bessemer hematite iron is quoted at not more than 650 fr. ($18) per ton, f.o.b. furnace.

Semi-Finished Material.—Following a perod of weakness in prices, semi-finished products have recovered and current quotations for export are £4 3s. to £4 9s. ($20.35 to $21.80) per metric ton on blooms, £4 10s. to £4 11s. 6d. ($22.05 to $22.40) per ton on billets and about £4 13s. ($22.80) per ton on sheet bars, all f.o.b. Antwerp.

Finished Material.—Mills continue to show a firm attitude in the face of efforts by buyers to secure lower prices. The total of orders, however, is small, but makers are still booked with enough business to carry them for some time. Exporters with orders for foreign delivery that they have not yet placed with mills are beginning to show an inclination to meet the price ideas of producers. Prices on steel bars are firm and show a slight tendency to increase. Considerable business could have been done with British consumers and in Far Eastern markets at £5 3s. per ton (1.14c. per lb.), but makers are offering no concessions and are maintaining prices at £5 5s. to £5 6s. per metric ton (1.16c. to 1.17c. per lb.), f.o.b. Antwerp. Prices on beams are stronger at £4 15s. per ton (1.05c. per lb.), but the hoop market still shows some weakness in prices, as production is rather heavy and demand decidedly small. Hoops are quoted at about £6 per ton (1.33c. per lb.), f.o.b. Antwerp. Corrugated bars have been sold at £5 10s. per ton (1.22c. per lb.).

AUSTRALIAN STEEL MERGER

Open-Hearth, Blast Furnaces, Electric Rolling Mills and Centrifugal Pipe Plant Projected

WASHINGTON, May 1.—Recent organization of the Australian Iron & Steel Co., Ltd., capitalized at £5,000,000, is spoken of in Australia as the largest undertaking of the kind in the history of that country, according to a report received by the Department of Commerce from the vice-consul at Sydney. The companies concerned in the merger are Dorman, Long & Co., Ltd., and Baldwin's, Ltd., both of England, Howard Smith, Ltd., Melbourne, and the Hoskins Iron & Steel Co., Ltd. The latter firm has for some years been engaged in manufacture at Brisbane, Queensland, and Sydney and Lithgow, New South Wales. Recently interests were acquired at Port Kembla, New South Wales, which will be the headquarters of the new organization. The products of the new company include a general line of iron and steel.

The Commonwealth Minister for Customs is quoted by an Australian paper as saying that a new blast furnace at Port Kembla will be completed in June and that it is intended to proceed immediately with the erection of steel furnaces, electric power plants, engineering shops and rolling mills. Electrically driven rolling mills will make the new plant one of the most modern in the British Empire. In addition, the minister is quoted as saying that a plant will be established for the manufacture of centrifugal cast iron pipe by the De Lavaud process. The minister, according to press reports, said that the organization of the iron and steel companies into one unit was a direct result of his recent visit to London and of favorable tariff legislation giving additional protection to the iron and steel industry of Australia. The legislation has passed the Australian House of Representatives and now is before the Senate.

The directors of the new company will be Cecil H. Hoskins, chairman of the board Hoskins Iron & Steel Co., chairman; Sir Arthur Dorman, chairman of the board Dorman, Long & Co.; Sir W. Charles Wright, chairman of the board Baldwin's, Ltd.; H. B. Howard Smith, chairman of the board Howard Smith, Ltd.; Arnold S. Taylor, chairman of the board Southern Portland Cement, Ltd., and Lawrence Ennis, A. Sidney Hoskins and Edwin H. Flack, directors of various companies included in the merger.

FRENCH EXPORT PRICES FIRMER

Foreign Bar Orders Go to German Mills—Output Increases—British Pig Iron Competitive

PARIS, FRANCE, April 20.—The domestic market continues firm, and export prices, which had developed some weakness prior to the Easter holidays, are stronger. On the whole, the price situation is satisfactory, but a steady increase in output may result in surplus tonnage in the near future. Among consumers of steel and with a few finishing mills business is slack and full operation has not been possible. This seems to be generally considered as a temporary condition brought about by the elections. Shares of iron and steel companies quoted in the stock market have shown considerable advances in price during the past few weeks, in some cases rising as much as 36 per cent.

Pig Iron.—In the export field, British competition is keen. Foundry iron is quoted at £3 2s. to £3 2s. 6d. ($15.10 to $15.22) per ton, f.o.b. Antwerp. Basic ranges from £2 15s. to £2 16s. ($13.40 to $13.64) per ton. It is reported that concessions from the prices set by the French-Belgian-Luxemburg pig iron entente are being offered by sellers on the seaboard, where British competition is particularly severe. The inland market is satisfactory, with foundry consumers buying freely. A total of 38,000 tons of foundry iron has been set aside for shipment to domestic users in May. This is the same as the April tonnage. At the same time prices have been reduced by 5 fr. (20c.) per ton for inland delivery except in the North, where prices have been advanced 5 fr. (20c.) per ton. However, prices in the North were recently reduced by about 15 fr. (59c.) per ton, so that the new revision leaves a difference of only 5 fr. per ton in domestic quotations. The tonnage of hematite iron set aside for May is 41,000 tons, compared with 35,000 tons in April. Prices have been advanced 2.50 fr. to 5 fr. (10c. to 20c.) per ton on domestic business.

Semi-Finished Material.—Export demand is light, but prices are slightly firmer. Blooms are quoted at £4 to £4 2s. 6d. ($19.48 to $20.09) per ton for the large and medium sizes. Small blooms, 4 to 5 in., are in good demand and have been sold at as high as £4 9s. to £4 10s. ($21.68 to $21.92) per ton, f.o.b. Antwerp. Billets range from £4 9s. to £4 11s. 6d. ($21.68 to $22.29) per ton. Sheet bars are £4 11s. to £4 12s. 6d. ($22.16 to $22.53) per ton.

Finished Material.—Sizable tonnages of bars were offered to exporters for shipment to the United Kingdom and Japan at £5 3s. per ton (1.14c. per lb.), but with the market growing firmer, exporting houses were not inclined to risk being unable to place the business with mills. Current prices range from £5 4s. 6d. to £5 5s. per ton (1.15c. to 1.16c. per lb.), f.o.b. Antwerp. German mills have sold some important bar tonnages to Holland, the total being reported at about 25,000 tons. The price is understood to have been £5 5s. per ton (1.16c. per lb.), delivered. Beam prices are firmer, with normal specifications at £4 13s. to £4 13s. 6d. per ton (1.02c. to 1.03c. per lb.), f.o.b. Antwerp. Wire rod prices have been fixed by the syndicate at £5 15s. per ton (1.27c. per lb.) for 5 to 5.5 mm. £5 17s. 6d. per ton (1.30c. per lb.) for 6 to 8 mm. and £6 per ton (1.32c. per lb.) for 8.5 to 13 mm. Export sheet prices are firm, with 0.5 mm. black sheets at £10 5s. to £10 10s. per ton (2.26c. to 2.32c. per lb.).

Rails.—The European Rail Makers' Association has agreed to maintain the price of £6 7s. 6d. ($31.05) per ton, f.o.b. shipping port, as the price for second quarter. The extra for open-hearth rails has been increased from 5s. ($1.22) to 7s. 6d. ($1.83) per ton. There has been a considerable increase in the tonnage of rails and steel ties used by the French railroads. For example, the Compagnie du Chemin de Fer de Paris à Orleans used 1,271,000 steel ties in 1927, compared with 700,000 in the year prior to the war, and 63,400 tons of new rails, compared with 10,000 tons in 1914.

STEEL IMPORTERS MORE ACTIVE

Bidding on Concrete Bars for Mexico—Japanese to Build Galvanizing Plants in India

New York, April 30.—Importers of European steel report slightly greater activity, but prices are still higher than some time ago, and not much tonnage has been placed by consumers in the United States. There is considerable interest in hoops and bands, however, and business in these products is fairly steady. A number of inquiries for reinforcing bars are outstanding, but they are not regarded as promising prospects by sellers of the foreign product except in the case of about 2500 to 3000 tons of reinforcing bars wanted by the Ambursen Construction Co., Grand Central Terminal, New York, which has a contract in Mexico.

Export business with the Far East is only moderately active. Most of the current buying of light-gage black sheets by Japanese consumers is being done in Great Britain at less than the American market price. The Kioto Oil Co. in Japan, which inquired for about 15,000 base boxes of tin plate, has closed on about 10,000 boxes. These were divided between two large Japanese export houses, which awarded the business to four different American mills.

Tokio municipality has placed 6 miles of 91-lb. high T-rails and is in the market for 2 miles of 100-lb. girder rails and 1 mile of 94-lb. grooved rails, bids on which will open April 29. Nagoya municipality has placed about 430 tons of 91-lb. high T-rails with a Japanese export house for execution by "Columeta" in Belgium.

Recent Japanese purchases of wire rods have been rather large, being estimated by some sellers at close to 6000 tons, of which about half went to the leading American interest and half to the leading Canadian maker. The American prices on this business are understood to have been about $36 per ton, c.i.f. Japan, on the low-carbon rods (0.06 to 0.12 per cent carbon) and about $43 per ton, c.i.f., on the high-carbon rods (0.55 to 0.65 per cent carbon). The Canadian quotations were in most cases about 25c. to 50c. per ton less, but later the Canadian seller withdrew from the market.

The market on wood screws in Japan is reported to be rather unsettled, and an increasing quantity of European screws is replacing the American product. With about 15 brands of American and European screws being offered, competition is keen. Among the American brands bought in Japan are "Amesco," "Reed & Prince," "Marui," "Olbin" and "Bridgeport." European brands in the Japanese market are "A.B.C.," "Arrow Brand," "Stemman," "Woodholm" and "Austria."

Under normal conditions Japanese galvanizing plants export a sizable tonnage of sheets to India. Recently, sheet interests in Japan have been investigating the possibility of establishing galvanzing plants in India, which would be operated with Indian labor at lower costs than in Japan.

German Exports of Aircraft Increasing Rapidly

Hamburg, Germany, April 15.—Exports of aircraft are increasing rapidly, although the total number of machines shipped is still small. In 1925 only 11 airplanes were exported from Germany; in 1926 a total of 24 was shipped, and in 1927 the total was 54. In the first quarter of this year 28 airplanes were exported, so that it is expected that shipments for this year will be considerably in excess of any other year. The figures do not include the machines shipped on reparations account to Italy, Jugoslavia, France, Belgium and other countries, and no account is taken of the airplanes built for the Deutsche Lufthansa in its air service with Russia, Scandinavian countries, Switzerland, Spain, France, Turkey, Persia and the Near East. Of the exports last year, Colombia received six, Japan three, Argentina four and Brazil four machines. All exports were of large air service machines for six to 18 passengers each.

Rails of Electric Furnace Steel Used in Austria

Hamburg, Germany, April 15.—A new type of rail, brought out by the Alpin Montangesellschaft in Austria and now being used by the Austrian railroads, is rolled from electric furnace steel of high manganese and silicon content. While the new rails are higher in price than the open-hearth product, tests by the Austrian railroads are said to have shown that they have better wearing quality and in the mountainous districts have about double the life of ordinary rails.

Qualifications for Welders

(*Concluded from page* 1244)

several welded pressure vessels which are to be studied and tested to destruction at the Bureau of Standards. These tests will supplement those made on smaller tanks, 24 in. in diameter, several years ago, and it is hoped that the results will be convincing enough so the Unfired Pressure Vessel Code of the American Society of Mechanical Engineers may be amended to allow a more liberal use of this new method of construction.

Another committee on structural steel welding, of which J. H. Edwards, American Brdge Co., is chairman, has under way an extensive series of tests to determine safe working stresses of various types of joints in structural steel. An exploratory series has already been tested, and has given much information on the types of joints which should be more intensively studied. This program is so large and requires so many cooperating firms that the committee has drawn up detailed specifications covering methods of testing welders, equipment, welding technique, details of test bars, inspection and tests. This represents the best procedure control for structural welding, either arc-welding or oxwelding, known in the present state of the art, and on publication should be available for a control in many welding shops where important work is being done.

Officers for 1928

New officers elected Thursday, April 26, are as follows:

President: Fred T. Llewellyn, United States Steel Corporation, New York.

Senior vice-president: A. E. Gaynor, John A. Roebling's Sons Co., New York.

Vice-president, Western division: Ernest Lunn, Pullman Car & Mfg. Corporation, Chicago.

Vice-president, Eastern division: W. J. Meadowcroft, Edward G. Budd Mfg. Co., Philadelphia.

Vice-president, New England: H. P. Peabody, John A. Roebling's Sons Co., Boston.

Treasurer: C. A. McCune, American Chain Co., Bridgeport, Conn.

Secretary: Miss M. M. Kelly, New York.

The retiring president, F. M. Farmer, Electrical Testing Laboratories, New York, becomes a member of the board of directors, together with the following new members: A. M. Candy, Westinghouse Electric & Mfg. Co., East Pittsburgh, Pa.; J. H. Deppeler, Metal & Thermit Corporation, Jersey City, N. J.; E. H. Ewertz, consulting engineer, New York, and S. W. Miller, Union Carbide & Carbon Research Laboratory, Long Island City, N. Y.

Large Increase in Steel Exports

Tonnage Greatest in Four Years—Imports Much Larger Than in February, with Pig Iron Showing Considerable Gain

WASHINGTON, April 26.—With exports of iron and steel products from the United States in March aggregating 221,935 gross tons, a gain of 36,020 tons or 19.4 per cent over February, as stated in THE IRON AGE of April 26, the total for the three-month period ended with March amounted to 613,616 tons, or an increase of 60,165 tons over the corresponding period of last year. The March outgoing tonnage was the greatest for any month since January, 1924.

By some this added export movement is attributed to an important degree to the reduction of 20 per cent in the freight rate on iron and steel products which became effective on Jan. 1. The tariffs reducing the rate were filed with this purpose in view and the railroads announced that they were "experimental," intimating that, should the gain in iron and steel exports be substantial, they would be made permanent. The showing so far made lends encouragement to the hope of exporters that the railroads will take such action.

Exports in March, representing an increase of 50,067 tons over the corresponding month of last year, reflected a gain in all but four products—ferromanganese, scrap, wire rope and carwheels and axles—when compared with February. There was an increase in every category of rolled products. For the first quarter there was a gain in the exportation of all but nine products, when compared with the corresponding period of last year. The nine items registering decreases were iron bars, steel bars, galvanized sheets, black steel sheets, black iron sheets, hoops and bands, tin plate, steel rails and boiler tubes and welded pipe.

Imports in March, amounting to 74,128 tons, a gain of 26,500 tons or 55.6 per cent when compared with February, showed increases in most of the important lines, particularly in pig iron, ferromanganese, semi-finished steel, steel bars, hoops and bands, structural shapes and pipe, both cast iron and seamless. For the three months ended with March, however, imports showed an increase of only 5712 tons when compared with the corresponding period of last year, rising to 180,391 tons from 174,679 tons.

Scrap was the largest item of exportation in March, with a total of 26,510 tons, of which 14,058 tons went to Canada, 5895 tons to Japan and 5252 tons to Poland and Danzig. Next came boiler tubes and welded pipe, with a total of 24,068 tons. Black welded pipe exports were 6443 tons, of which 1342 tons went to Venezuela, 965 tons to Mexico, 663 tons to the United Kingdom, 580 tons to Japan and 570 tons to Canada. Casing and oil line pipe exports totaled 11,775 tons, of which 3070 tons went to Colombia, 2534 tons to Venezuela, 2484 tons to Peru and 1072 tons to Argentina. Exports of galvanized pipe amounted to 3191 tons, and were widely scattered in comparatively small lots. Cuba took 433 tons, Brazil 347 tons, and Mexico 345 tons. Of the 22,755 tons of tin plate exported during the month, 4439 tons went to Canada and 2769 tons to Japan.

Steel rail exports for the month were 15,798 tons, Brazil leading as the principal country of consumption,

taking 2514 tons, while Chile took 2409 tons. Canada and Japan, which have been declining as markets for rails and a number of other steel products, took but 699 tons and 1462 tons respectively. Canada took 11,682 tons of the 15,148 tons of plain structural steel exported in March and 10,784 tons of the 12,787 tons of plates exported during that month. Japan took 4978 tons and Canada 6533 tons of the 13,292 tons of black steel sheets exported in March. Of the 3114 tons of hoops and bands exported, Canada took 2676 tons, and of the 2215 tons of cold-rolled strip steel, Canada took 2064 tons.

United States Imports of Iron and Steel Products in March

(In Gross Tons)

Austria	44	United Kingdom	13,801
Belgium	22,110		
Czechoslovakia	676	*Total Europe*	*66,785*
Denmark	70	Canada	3,970
France	13,488	Mexico	31
Germany	10,356	British India	3,338
Italy	63	China	1
Netherlands	2,323	Japan	3
Norway	1,597		
Sweden	2,257	Total	74,128

Total iron and steel exports to Canada in March were 93,537 tons, and for the three months that country took 230,328 tons, or 37.5 per cent of the total of 613,616 tons.

While the import movement of pig iron in March, amounting to 16,155 tons, was not large, it reflected a sharp gain over February's total of 6387 tons. In March 10,748 tons came from the United Kingdom. This has led to speculation as to whether or not that country, which is recouping its foreign markets, is not again likely to be the principal source of pig iron imports, as was the case several years ago. The United Kingdom also was the leading foreign source of supply of ferromanganese in March, furnishing 1971 tons of the 4666 tons imported. Norway sent 1573 tons and Canada 1056 tons.

Belgium was the source of 6825 tons of the 9991 tons of steel bars imported, while 1438 tons came from France and 938 tons from Sweden. Of the 2949 tons of hoops and bands imported, 1707 tons came from Germany and 239 tons from France. There was an unusually large import movement in March of sheets, skelp and saw plate, largely made up of the first and third items, the total being 2708 tons, of which 2067 tons came from Germany. Of the 17,131 tons of shapes imported, Belgium supplied 9002 tons; France, 6146 tons; Germany, 1659 tons.

France furnished 4859 tons of the 6280 tons of cast iron pipe imported, and 1320 tons came from Belgium. "Other pipe" imports were 3504 tons, of which Germany supplied 1968 tons; Czechoslovakia, 561 tons; France, 252 tons; United Kingdom, 202 tons; Canada, 1927 tons; Belgium, 142 tons. Of the 12,786 tons of manganese ore concentrates imported, 10,187 tons came from Brazil and 2584 tons from India.

Belgium was the principal source of the total imports in March, supplying 22,110 tons. The United Kingdom led France by a small margin as the second largest source, supplying 13,801 tons, against 13,488 tons for France.

Pig Iron Imports Increase Heavily

Imports of pig iron in March are reported by the Department of Commerce at 16,155 gross tons. This is more than double the 6387 tons of February and more than double the 7492 tons of March, 1927. Two-thirds of the total imports in March came from the United Kingdom. India and the Netherlands made up the bulk of the remaining tonnage.

For the first quarter the incoming quantity was 33,669 tons. This compares with 21,235 tons a year ago. There have been sharp drops in the tonnage received from Germany and from the Netherlands; that from Germany declined more than 99 per cent, while that from the Netherlands was reduced about one-third. These reductions have been more than compensated for by heavy increases in imports from British India and from the United Kingdom. In the latter case the tonnage was multiplied by more than 11, while India supplied almost three times as much in the recent quarter as a year earlier.

United States Imports of Pig Iron by Countries of Shipment

(In Gross Tons)

	March		Three Months Ended March	
	1928	1927	1928	1927

All others	81	48	265	181
Total	16,155	7,492	33,669	21,235

Increased Production of Malleable Castings

Malleable castings produced in March are reported by the Depatment of Commerce at 63,322 tons. The returns are from 133 plants. The current figure compares with 59,045 tons in February and with 66,372 tons a year ago. With the exception of March, 1927, the total in March was the largest in two years.

Shipments in March were almost exactly the same as production, this being in striking contrast with the five preceding months, in each of which production was much heavier than shipments. Orders booked during the month are reported at 60,697 tons, or about one month's production at current rates. Production is reported to have been at 69.6 per cent of the rated capacity of 91,043 tons.

Sharp Decline in Imports of Foreign Iron Ore

Imports of iron ore in March are reported by the Department of Commerce at 162,654 gross tons. This is a sharp reduction from the 229,578 tons imported in February and the 251,178 tons in January. It compares with 197,455 tons in March of last year and, except for December, is the lowest amount in many months.

For the first quarter of the year imports were 643,410 tons, compared with 623,163 tons in the first quarter of 1927. More than half of the total in each case came from Chile.

SOURCES OF AMERICAN IMPORTS OF IRON ORE

(In Gross Tons)

	March		Three Months Ended March	
	1928	1927	1928	1927
Canada	217	540	38,845	1,366

Total	162,654	197,455	643,410	623,163

Exports of agricultural implements from the United States in March were valued at $9,318,916, or approximately $575,000 more than the exports in March of last year, according to the agricultural implements division, Department of Commerce, Washington. Exports for the first quarter of the present year showed an increase of $6,347,784 over the corresponding period of last year.

The United States has 1075 airport landing fields, according to a list just published by the Aeronautics Branch, Department of Commerce. There are also nearly 4000 others on which planes may land. California, with 115 air fields, leads. Texas is second with 90, and Pennsylvania third with 68.

Heavy Increase in Machine Exports

Largest Value in Seven Years Sent Abroad in March—Imports Higher Than in February

WASHINGTON, April 26.—Making a gain of $6,417,287, exports of machinery of all kinds in March were valued at $42,372,463, against $35,955,176 in February. The movement in March of last year was valued at $38,937,144. For the three months ended with March machinery exports were valued at $114,577,472, compared with $101,968,651 for the first quarter of 1927.

Exports of industrial machinery in March were valued at $19,026,074, according to the classification of the division of statistics, Department of Commerce. This compares with $16,202,582 in February and with $17,729,364 in March of last year. For the three months ended with March the value was $51,489,241, against $49,045,974 for the corresponding period of last year. Power-driven metal-working machinery to the value of $1,960,407 was exported in March, against $1,242,234 in February and $1,325,639 in March of last year. For the first quarter the value was $5,990,096, compared with $3,941,022 for the corresponding period of last year. Exports of power-driven metal-working machinery as listed in THE IRON AGE table represented 740 items in March, valued at $1,103,000, against 686, valued at $1,315,771, in January, and 623, valued at $1,242,234, in February.

Total imports of machinery and vehicles in March were valued at $2,433,564, against $2,668,715 in March of last year. For the first quarter they were valued at $6,550,659, against $6,981,256 for the first three months of 1927. Items listed in THE IRON AGE table of imports of machinery were valued in March at $1,819,672, against $1,714,648 in February and $2,084,261 in March of last year. For the three months of the current year the value was $4,718,486, compared with $4,435,879 for the corresponding period of last year. Imports of industrial, office and printing machinery in March were valued at $1,404,786, against $1,324,521 in February and $1,208,009 in March of last year.

National Machine Tool Exposition to Be Repeated in 1929

The committee on expositions of the National Machine Tool Builders' Association has announced that it is unanimously in favor of holding another national machine tool exposition in 1929. A vote by mail by members of the association disclosed that 52.6 per cent were in favor of another exposition next year, while the remainder of those voting wanted to wait until 1930. Answers to a questionnaire submitted to the members disclosed that a majority was of the opinion that expositions constitute a sound method of merchandising machine tools, an opinion that was fortified by the results of the exposition held in Cleveland last year.

Machinery Markets and News of the Works

APRIL BUSINESS OFF

Machine Tool Volume Last Month Falls Below That of March

Santa Fe Railroad Buys About 20 Machines and Union Pacific Is Also Placing Orders

MACHINE tool sales in April fell below those of March by 25 to 30 per cent for the country as a whole, though in the Cleveland-Detroit district, which has benefited by purchases by the automobile industry, the volume was about equal to that of the previous month.

While the bulk of the spring buying of shop equipment by the automobile companies has been completed, some business is expected from parts manufacturers who have been awarded contracts by the Ford Motor Co. for the making of repair parts for its old model T car, some of this work having been discontinued in the Ford plant. The Logangear Products Co., Detroit, has bought several machines for making pumps for Ford cars, and will buy some additional equipment.

In the railroad field, the principal activity was in Chicago, where the Santa Fe ordered about 20 machines and the Union Pacific has bought about a dozen tools. Small orders have been placed by the Rock Island and Burlington roads. Prospective buyers in the Chicago market are the J. I. Case Threshing Machine Co., Racine, Wis.; the Allis Chalmers Mfg. Co., Milwaukee, and the Nash Motors Co., Kenosha, Wis.

In the East, the principal buyers are the Wright Aeronautical Corporation and the General Electric Co.

New York

NEW YORK, April 30.

THERE is a steady flow of business in single tools, so that April will apparently rank among the good months of the year, although with most sellers, March still stands as the largest month. The General Electric Co. has closed on several tools and the Wright Aeronautical Corporation is making further purchases of equipment. The New York Central Railroad has issued more inquiries for single pieces of equipment, but has not been a buyer recently. The automotive industry is still contributing much of the current business. Lathes are outstanding among sales of the past week. One seller, out of a total of 51 machines closed sold 23 lathes.

Recent sales have included a 16 x 36-in. Pratt & Whitney lathe to a Connecticut company; 20 x 48-in. lathe to a Vermont machine tool builder; two 16 x 60-in., one 16 x 84-in. and one 20 x 72-in. lathes to an Illinois company; 16 x 36-in. lathe to a Wisconsin motor manufacturer; 13 x 48-in. lathe to a Michigan automobile manufacturer; 16 x 36-in. and 20 x 48-in. lathes and 6-in. vertical shaper to an Indianapolis company. A Chicago company has closed on a Pratt & Whitney hob and cutter grinder and another Chicago manufacturer on a 7-in. thread milling cutter grinder; a Cleveland company on a 14-in. vertical surface grinder, and another Cleveland company on a No. 2 jig borer; a Michigan motor company on a 5-in. production hand milling machine and a Detroit company on four 5-in. production hand milling machines; a Baltimore company on a 3-spindle Sigourney drill and a tool and die manufacturer in Rochester on a 14-in. vertical surface grinder. A large electric manufacturer in New York State bought a 12 x 120-in. Pratt & Whitney thread milling machine, a No. 3 universal bench milling machine, a No. 2 jig borer and a 6-in. vertical shaper; a builder of aeroplane engines a 16 x 60-in. Pratt & Whitney lathe. The Pratt & Whitney Aircraft Corporation has closed on a 13 x 30-in. and three 13 x 36-in. Pratt & Whitney lathes, and the Michigan Central Railroad has bought a single spindle centering machine.

Contract has been let by Progressive Table Co., Inc., 372 Newport Street, Brooklyn, to I. Rosenblum & Sons, 1691 Carroll Street, for new two-story plant to cost about $60,000 with equipment. Kessler & Goldsmith, 5008 Church Avenue, are architects.

Junkers Corporation of America, Inc., 342 Madison Avenue, New York, subsidiary of Junkers Co. of Germany, builder of airplane Bremen, is planning establishment of new plant on site in Middle West for manufacture of complete line of Junkers aircraft, comprising parts and assembling and airplane motors. It is understood that a security issue will be sold to provide a fund for expansion.

De Rose & Cavalieri, 370 West 149th Street, New York, architects, have plans for a two-story automobile service, repair and garage building, 110 x 120 ft., to cost close to $100,000 with equipment.

Cities Service Co., 60 Wall Street, New York, operating electric light and power properties, oil refining plant and pipe lines, is disposing of a bond issue of $50,000,000, a portion of proceeds to be used for expansion and improvements.

Purty Boat Works, Bayview Colony, Port Washington, N. Y., N. Purty, president, has plans for a one-story boatbuilding and repair plant, to cost close to $100,000 with equipment.

H. I. Feldman, 415 Lexington Avenue, New York, architect, has filed plans for a six-story automobile service, repair and garage building, to cost approximately $200,000 with equipment.

Continental Can Co., 1 Pershing Square, New York, has purchased Southern Can Co., with main plant on 66-acre tract at Baltimore, with assets of about $3,500,000. Purchasing company will carry out an expansion program at Baltimore and other points in South. Passaic Metal Ware Co., Passaic, N. J., was recently acquired by purchasing company.

Electro Chemical Engraving Co., 52 Vanderbilt Avenue, New York, has awarded general contract to Turner Construction Co., for seven-story plant on Brook Avenue, to cost about $100,000 with equipment. C. B. Comstock, 110 West Fortieth Street, is architect.

Lackawanna Railroad Co., ..0 West Street, New York, has authorized electrification of its suburban lines as far west as Dover, N. J., about 173 miles of track, using direct-volt overhead wire system of power transmission, to cost close to $18,000,000, of which approximately $4,000,000 will be used for electrical and mechanical equipment. A steam-operated electric generating station is being considered on Hackensack River, Kearny, N. J., for exclusive service, to cost more than $2,000,000. Work is scheduled for completion in about 24 months. G. L. Ray is chief engineer, and H. M. Warren, electrical engineer.

Officials of Pilot Electric Mfg. Co., 323 Berry Street, Brooklyn, have organized Nakken Television Corporation, to manufacture transmission equipment and receiving apparatus for broadcasting moving images. It is understood that portion of Pilot plant will be used for initial production.

American Brake Shoe & Foundry Co., 30 Church Street, New York, has authorized purchase of controlling interest in National Bearing Metals Corporation, St. Louis, manufacturer of brass and bronze castings, bearings, etc., and will operate in conjunction with foundries and plants in different parts of country. Acquired company comprises a recent merger of More & Jones Brass & Metal Co., Keystone Bronze Co., Damascus Bronze Co. and Bronze Metal Co.

Cohen & Siegel, 45 West Fifty-seventh Street, New York, architects, have plans for a two-story automobile service, repair and garage building, 100 x 120 ft., to cost about $100,000 with equipment.

Board of Education, Boonton, N. J., is considering installation of manual training equipment in a new four-story high school to cost in excess of $300,000. Hacker & Hacker, Fort Lee Trust Building, Fort Lee, N. J., are architects.

Board of Education, City Hall, Newark, will receive bids until May 9 for equipment for schools, including metal-working machinery, wood-working machinery, work benches, steel cabinets, steel lockers, sharpening tools, iron and steel, electrical supplies, hardware, etc. R. D. Argue is secretary.

Colonial Western Airways, Inc., Hadley Field, near New Brunswick, N. J., contractor for Government air mail service to Boston, has leased a tract of two acres at municipal airport, Port Newark, Newark, for a new landing and operating headquarters. Plans are under way for construction of hangars, repair shops, oil storage and distributing building, and other mechanical structures.

British-American Metals Co., South Second Street, Plainfield, N. J., manufacturer of brass and copper tubing, etc., is arranging early call for bids for rebuilding of portion of plant recently destroyed by fire, with loss upward of $150,000 including equipment.

Betz Brothers, Inc., manufacturer of hollow metal doors and trim, is occupying its new factory at Pleasant Avenue and Ann Street, Clifton, N. J. It maintains sales offices at 20 Vesey Street, New York.

Roller Bearing Co. of America, 141 Frelinghuysen Avenue, Newark, manufacturer of roller bearings, has purchased plant of Mercer Motor Car Co., Trenton, N. J., and will install its present equipment and also purchase new machinery. Plant occupies 11½-acre tract and contains 175,000 sq. ft. of floor space.

New England

BOSTON, April 30.

WITH quite a number of machine tool dealers April was the dullest month experienced in a long time. The contrast between New England and other sections of the country is most marked. A majority of New England machine tool builders, however, are fairly busy, especially makers of grinding equipment and some lines of lathes, and somewhat behind on deliveries of certain machines. The sale of tools to Connecticut River Valley manufacturers was the outstanding feature the past week, and included a lathe to a Vermont plant and five lathes and a radial drill to a Hartford manufacturer. New tool sales otherwise are few. The used tool market is also dull.

Small tool sales in April took a decided spurt in the last half of the month and business is better than it has been in a long time.

The activity of shops in the Connecticut Valley is accounted for in a large measure by work for the Ford Motor Co. and to building of aeroplane engines, the latter being centered at Hartford, Conn. The plant of the Westinghouse Electric & Mfg. Co., East Springfield, Mass., is considerably busier than it was a year ago. Rolls-Royce Co. of America, Inc., East Springfield, is proceeding at an excellent rate on automobiles and army and navy work. The Indian Motorcycle Co., Springfield, is maintaining a practically full night force to keep up with orders, not only for motorcycles, but shock absorbers and other accessories. Springfield drop forging plants are busy with automobile work. The plant of the Underwood Typewriter Co., Hartford, is producing practically two typewriters a minute, a new high record. The Russell Mfg. Co., Middletown, Conn., automotive products division is operating on overtime schedules, and its other departments also are busy. April production of the Fafnir Bearing Co., New Britain, Conn., was approximately 20 to 25 per cent greater than March.

Blackstone Valley Gas & Electric Co., Main Street, Pawtucket, R. I., has started work on a four-story and basement, power house, 20 x 152 ft., for which equipment is still required.

Commonwealth Portland Cement Corporation, North Pownal, Vt., has tentative plans for a cement plant of 1,150,000 bbl. capacity. Bids for plant, machinery and machine tools are to be received by Kennedy-Van Saun Mfg. & Engineering Corporation, 50 Church Street, New York.

Atwater Mfg. Co., Plantsville, Conn., is building an addition to its plant to accommodate several new drop hammers.

Bohn Aluminum & Brass Corporation, Hartford, Conn., has awarded contracts for an extension which will increase its piston capacity 50 per cent.

In connection with expansion program, Boston Ice Co., 110 State Street, has purchased 20,500 sq. ft. at Chelsea, and plans construction of ice-manufacturing plant to cost upward of $100,000 with equipment. C. Leslie Weir, 41 East Forty-second Street, New York, engineer for Knickerbocker Ice Co., associated organization, will prepare plans.

R. H. Rines, Oak Street and Forest Avenue, Portland, Me., has filed plans for two-story automobile service, repair and garage building, 95 x 150 ft., to cost close to $100,000 with equipment.

Silverfill Mfg. Co., Inc., Boston, recently formed by Howard P. Cobb, 383 Belmont Street, Belmont, Mass., and associates, with capital of $100,000, contemplates operation of local plant for manufacture of line of metal products.

Blanchard Mfg. & Canning Co., Eastport, Me., will rebuild portion of plant destroyed by fire April 24, with loss more than $150,000 including equipment.

North Shore Ice Co., 46 Lake Street, Lynn, Mass., will soon begin work on one-story ice-manufacturing plant, 100 x 180 ft., to cost about $175,000 with equipment. Funk & Wilcox, 26 Pemberton Square, Boston, are architects. A. W. Thomas is president.

Board of Education, New Haven, Conn., has authorized installation of manual training department of new two-story school to be erected at County and Henry Streets. Bids have been asked on general contract by Brown & Von Beren, New Haven, architects. Cost is close to $200,000.

Willhite-Squires Mfg. Co., Winsted, Conn., manufacturer of tables, chairs and other furniture, has taken over former local factory of Carter & Hakes Co., and will remodel for expansion.

H. C. Hearne, 1389 Main Street, Springfield, Mass., architect, has revised plans for a three-story automobile service, repair and garage building, 110 x 140 ft., to cost close to $125,000 with equipment.

Henry J. Guild, Cambridge, Mass., formerly connected with Eastern Mfg. Co., Bangor and Lincoln, Me., operating paper mills has acquired plant of Berkshire Paper Co., Adams, Mass., at a public sale. Plans are under way for organization of new company to operate mill for manufacture of writing papers. Improvements will be made in equipment.

New Department Mfg. Co., Bristol, Conn., will make extensions and improvements in ball bearing plant, including dismantling of building No. 51 and erection in new location, with one-story building, 44 x 67 feet.

Steubing Cowan Co., Cincinnati, manufacturer of lift trucks and platforms has moved its plant at Holyoke, Mass., into larger quarters, where it will carry complete line of its standard model trucks for distribution through New England and Eastern territory.

St. Louis

ST. LOUIS, April 30.

CONTRACT has been let by Pillsbury Flour Mills Co., Minneapolis, Minn., to Jones-Hettelsater Co., Mutual Building, Kansas City, Mo., for flour milling plant and elevator, 800,000-bu. capacity, to cost in excess of $600,000 with machinery.

Board of Education, Wichita, Kan., plans installation of manual training equipment in new one, two and three-story and basement high school to cost $750,000, for which bids are being asked on general contract until May 15. Glen H. Thomas, Wheeler-Kelly-Hagny Building, is architect.

International Oil Heating Co., 3939 Magnolia Street, St. Louis, manufacturer of oil-burning equipment, has asked bids on general contract for a two-story storage and distributing building, with shop for assembling, repairs, etc.

Southwest Gas Utilities Corporation, Ada, Okla., recently formed under Delaware laws to take over and operate 32 natural gas plants and systems in Oklahoma, Texas and Louisiana, is disposing of a bond issue of $1,750,000, a portion of the proceeds to be used for expansion and improvements, including pipe line construction.

Waxide Paper Co., Twentieth and Tracy Streets, Kansas City, Mo., has awarded general contract to Fruin-Colnon Construction Co., Merchants Laclede Building, St. Louis, for new one-story mill, to cost approximately $250,000 with equipment. L. Halger, 3844 Utah Place, St. Louis, is architect.

St. Louis Tool & Mfg. Co., St. Louis, recently organized by George D. Hart, 4920 Berthland Road, and associates, plans operation of local plant for manufacture of tools, dies and kindred equipment.

B. & H. Motor Co., 4517 Troost Street, St. Louis, is having plans drawn for a one-story automobile service, repair

The Crane Market

THERE is very little new inquiry for overhead cranes and the locomotive crane field is less active than for several weeks. Business in both electric and hand power hoists continues good. Of the inquiries for overhead cranes that have been pending for some time, the 100-ton crane for the New York Edison Co., New York, is reported to have been closed. The largest outstanding business in locomotive cranes is the list of cranes and steam shovels inquired for by Dwight P. Robinson & Co., New York, for use in Argentina.

Among recent purchases are:

New Jersey Zinc Co., New York, 12-ton, 60-ft. span hand power crane for Palmerton, Pa., from unnamed builder.

International Combustion Engineering Co., New York, 25-ton, 8-wheel, locomotive crane for International Coal Carbonization Co., from Browning Crane Co.

Turner Construction Co., Boston, 3-ton, 26-ft. 6-in. span, single I-beam hand power crane from Ruggles-Klingeman Mfg. Co., Salem, Mass.

Gray's Harbor Railway & Light Corporation, Aberdeen, Wash., 15-ton, 48-ft. 3-in. span, 1-motor overhead crane from Box Crane & Hoist Corporation.

and garage building to cost about $100,000 with equipment. Archer & Gloyd, Orear-Leslie Building, are architects.

Cities Service Co., 60 Wall Street, New York, is said to be planning construction of a pipe line for natural gas transmission from Wichita, Kan., to Kansas City, Mo., connecting with its Panhandle trunk line from Pampa, Tex., to cost more than $500,000.

Underwood Compress Co., Hollis, Okla., is contemplating erection of a new cotton compressing plant, one story, 225 x 600 ft., to cost in excess of $125,000 with equipment.

Missouri Pacific Railroad, Railway Exchange, St. Louis, is in the market for two pneumatic flanging machines, two 18-in. lathes and a small portable pipe-cutting machine.

St. Louis Southwestern Railway Co., St. Louis, is inquiring for a 90-in. lathe for journal turning and quartering and crank pin turning, heavy-duty axle lathe and small belt-driven floor grinder.

Johnson Devices, Inc., 4340 Troost Avenue, Kansas City, Mo., has been organized to manufacture Johnson electromagnetic vaporizer. Manufacturing facilities have been secured at 1404 Agnes Street, Kansas City, and company is in market for No. 15 magnetic wire, 1½-in. brass tubing, fiber washers, double insulated electric cable, ¼-in. steel rods and ⅛-in. black malleable iron pipe fittings.

South Atlantic States

BALTIMORE, April 30.

BIDS will be received by Board of Awards, office of city register, City Hall, Baltimore, until May 9, for Department of Education for equipment for machine shops, electrical and wood-working shops. Specifications at office of director of business management, school board, Madison and Lafayette Avenues.

Officials of Safety Car Heating & Lighting Co., New Haven, Conn., and Davison Chemical Co., Garrett Building, Baltimore, are organizing Safety Refrigeration, Inc., to manufacture refrigerating equipment for railroad cars, with silica gel method of refrigeration, controlled by last-noted organization. C. Wilbur Miller, president of Davison company, will be prominently identified with new company.

M. Rich & Brothers Co., Broad Street, Atlanta, Ga., is planning construction of a two-story automobile service, repair and garage building, 90 x 100 ft., to cost approximately $90,000 with equipment.

Atlas Plywood Corporation, 31 St. James Avenue, Boston, is concluding arrangements for purchase of plant and business of Empire Mfg. Co., Goldsboro, N. C., manufacturer of textile frames and equipment, and will consolidate with organization. New owner plans expansion in southern district for textile mill apparatus.

Virginia Electric & Power Co., Richmond, Va., will issue bonds in amount of $8,000,000, a portion of fund to be used for general expansion and betterments, including acquisition of other properties, power plants and transmission line construction.

Baker County Power Co., Moultrie, Ga., has plans for an auxiliary steam-operated electric power house to supplement its hydroelectric power station at Newton, Ga., to cost close to $100,000 with transmission lines. Company is operated under direction of W. B. Foshay Co., Minneapolis, Minn.

Commissioner of Public Works, Summerville, S. C., is asking bids until May 10 for one 100,000-gal. capacity steel tank on 100-ft. steel tower, for municipal waterworks. Ryan Engineering Co., Arcade Building, Columbia, S. C., is engineer.

Standard Looms, Inc., Spartanburg, S. C., recently formed by Isaac Andrews, 519 East Main Street, and associates, with capital of $750,000, has engaged Lockwood, Greene & Co., Charlotte, N. C., and Boston, to prepare plans for one-story plant for manufacture of textile looms and kindred machinery, consisting of foundry, machine shop and assembling departments, to cost more than $150,000 with equipment. Mr. Andrews will be president; Jonas Northrop is vice-president and general manager.

DeLion Tire & Rubber Corporation, Fifth and Eager Streets, Baltimore, manufacturer of high pressure and balloon tires, etc., will carry out an expansion program with installation of additional equipment.

Board of Trustees, Lutheran Women's College, Rev. J. Henry Harms, 4614 Chester Avenue, Philadelphia, president, has authorized construction of central power house at new institutional buildings on 190-acre tract, vicinity of Silver Spring, Montgomery County, Md., to cost $750,000. Col. P. M. Anderson, Investment Building, Washington, is architect and engineer.

Burge & Stevens, Marietta Building, Atlanta, Ga., architects, will soon begin work on five-story and basement automobile service, repair and garage building, 90 x 135 ft., to cost upward of $250,000 with equipment.

Philadelphia

PHILADELPHIA, April 30.

PLANS have been filed by Silverman & Levy, Elrae Building, Philadelphia, architects, for a three and four-story automobile service, repair and garage building, 93 x 110 ft., to cost close to $150,000 with equipment.

Chevrolet Motor Co., General Motors Building, Detroit, has awarded general contract to H. K. Ferguson Co., Cleveland, for a two-story factory branch and distributing plant, particularly for parts service, on Stokley Street, Philadelphia, to cost more than $90,000 with equipment.

Commercial Poster Co., 6545 Carnegie Avenue, Cleveland, manufacturer of signs, displays, etc., has purchased four factory units on two-acre tract at Philadelphia, heretofore held by Pennsylvania Globe Corporation for $300,000, and will use for new plant. Present business will be removed to acquired site.

York Ice Machinery Corporation, 1238-44 Belmont Avenue, Philadelphia, has revised plans for additions to plant, including improvements in present building, to cost upward of $65,000. Edmund H. Poggi, Equitable Building, is architect.

H. B. Weldon, 1817 Callowhill Street, Philadelphia, architect, has filed plans for a one-story automobile service, repair and garage building to cost about $115,000 with equipment.

Melrath Supply & Gasket Co., Inc., has been formed with capital of $100,000, to take over and expand company of same name with works at 617 Wood Street, manufacturer of gaskets, bolts, nuts, plumbers' supplies, etc. Earle G. Melrath is treasurer of new company.

H. S. Hagert, Inc., 1923 Manning Street, Philadelphia, manufacturer of lighting fixtures and equipment, has plans for an addition, including alterations in present factory. DeArmond, Ashmeade & Bickley, 20 South Fifteenth Street, are architects.

State Board of Education, Trenton, is arranging for establishment of a machine and repair shop at New Jersey School for Deaf, for repair and rebuilding of typewriters and other office machines used by State departments. State Budget Commission is providing fund for shop.

Standard Tank & Seat Co., 341 North Front Street, Camden, N. J., has awarded general contract to Barclay, White & Co., 1713 Sansom Street, Philadelphia, for a three-story addition, 32 x 80 ft., to cost more than $75,000 with equipment.

Camden Rail & Harbor Terminal Corporation, Camden, N. J., has awarded general contract to Cramp & Co., Dencker Building, Philadelphia, for a cold storage and refrigerating plant comprising three units, to cost $800,000 with machinery. Moores & Dunford, 110 East Forty-second Street, New York, are architects and engineers.

John A. Roebling's Sons Co., Roebling, Trenton, N. J., manufacturer of wire and cable, etc., has awarded contract for electrical equipment for mill addition, now in progress, to General Electric Co., to cost about $175,000. Awards for other equipment will soon be made. New unit will represent investment of close to $700,000 with machinery.

Radio Condenser Co., Copewood and Thorn Streets, Camden, N. J., manufacturer of radio equipment and supplies, has filed plans for a one-story addition, 95 x 145 ft., for which general contract has been let to Carl L. Furner, 96 Kendall Boulevard, Oaklyn, to cost about $35,000 with equipment. Ernest L. Ergood, 320 Market Street, is architect.

Ovens, power equipment, conveying and other machinery will be installed in new one and two-story plant to be erected by Heimbach Baking Co., 701 North Ninth Street, Allentown, Pa., to cost $220,000, for which bids will soon be asked on general contract. Jacoby & Everett, Commonwealth Building, are architects.

A State charter has been secured by Reading Casting Co., Inc., Reading, Pa., with capital of $125,000, which plans for early operation of works at Monocacy, Pa., for production of iron and steel castings, forgings and kindred specialties. New company is headed by H. Claude Bell, 941 North Fourth Street, Reading; Lloyd A. Gass and Joseph E. Logan, both of Reading.

Reading Transportation Co., operated by Philadelphia & Reading Railroad, Philadelphia, for motor bus service, has plans for a one-story service, repair, garage and terminal building at Doylestown, Pa., and for similar unit at Pottsville, Pa., to cost upward of $165,000, with equipment.

Board of Education, Media, Pa., is considering installation of manual training equipment in two-story high and grade school addition to cost $200,000, for which bids are being asked on general contract. MacKenzie & Wiley, Bankers' Trust Building, Philadelphia, are architects.

Brown Products Corporation, Scranton, Pa., manufacturer of furniture, will rebuild portion of plant destroyed by fire April 22, with loss in excess of $125,000 with equipment.

Pittsburgh

PITTSBURGH, April 30.

INQUIRIES for machine tools are fairly numerous, but actual business still is light. Most of the orders are for single items and the large number of repair parts sales emphasizes the tendency of buyers to delay as long as possible the placing of new equipment.

Miller Saw Trimmer Co., Point Building, Pittsburgh, will build a new one and two-story plant, 260 x 295 ft., to cost more than $250,000 with equipment. Hunting, Davis & Dunnells, Century Building, are architects and engineers.

Board of Education of George's Township, Fairchance, Pa., will soon take bids on general contract for a one-story manual training shop in connection with new gymnasium building at York Run, Pa., to cost $65,000. E. R. Johnson and C. F. Wilson, Fayette Title & Trust Building, Uniontown, Pa., are architects.

Board of Education, Fulton Building, Pittsburgh, is asking bids until May 15 for equipment for Clifford B. Connelly Trade School, including boilers, stokers, radiators, temperature regulating equipment, shaving exhaust system, unit heaters, etc. Bids for tools and equipment will be called later. George W. Gerwig is secretary.

Hope Natural Gas Co., Clarksburg, W. Va., has awarded general contract to Rust Engineering Co., 311 Ross Street, Pittsburgh, for a two-story automobile service, repair and garage building, 52 x 140 ft., to cost close to $100,000 with equipment.

Borough Clerk, Etna, Pa., will receive bids until May 14 for one 225-hp. horizontal watertube boiler and accessory equipment. J. N. Chester Engineers, Clark Building, Pittsburgh, are engineers.

Bradford Machine Co., Bradford, Pa., recently organized by P. D. Bonner, Bradford, and associates, with capital of $25,000, will operate local plant for manufacture of machine parts, tools and dies. H. A. Cooney, Bradford, will also be one of heads of new company.

Dravo Contracting Co., 302 Penn Avenue, Pittsburgh, operating a boat building and repair yard on Neville Island, is considering erection of one-story addition, 100 x 140 ft., to cost approximately $60,000 with equipment.

Board of Education, Ebensburg, Pa., plans installation of manual training equipment in two-story and basement high school, to cost about $175,000, for which general contract has just been let to J. C. Snyder, Altoona, Pa.

Clark Car Co., Pittsburgh, has removed its general offices to 1310 Clark Building.

Chicago

CHICAGO, April 30.

INCREASED sales in the closing days of April were not sharp enough to bring the month's total volume up to that of March. Fresh inquiry is developing more rapidly and dealers generally are anticipating a good business in May. The Santa Fe has closed for about 20 items against its list and the Union Pacific is making purchases. The Burlington has ordered two 36-in. shapers and the Rock Island has purchased a drill press. The Nash Motors Co., Kenosha, Wis., is interested in grinders and drill presses and Allis-Chalmers Mfg. Co., Milwaukee, is in the market for miscellaneous tools. The J. I. Case Threshing Machine Co., Racine, Wis., is considering new equipment.

Used machinery is moving in fair volume but dealers are having difficulty in obtaining tools that are in good condition.

Glen E. Holmes, Inc., will erect 11-story garage at Dearborn and Lake Street, Chicago, on site 80 x 160-ft., to cost $900,000.

George Evans Corporation, Moline, Ill., manufacturer of tanks, will build an addition. Axel Carlson Construction Co. is general contractor.

Olson Mfg. Co., Albert Lea, Minn., manufacturer of barn equipment, has awarded contract for an addition to cost $20,000.

Sherwood Sanitary Furnace Co., Danville, Ill., has let contract to Modern Machine Shop, Inc., Danville, to manufacture steel parts and assemble furnaces which it will distribute. Wabash Valley Mfg. Co., Perryville, Ind., will furnish the castings.

A. L. Seaman & Co., manufacturers' agents for steel, brass and copper products, have moved from 549 West Washington Street, Chicago, to 222 West Adams Street.

W. C. West Co., sales agent for forged steel and malleable iron products, has moved from 14 East Jackson Boulevard, Chicago, to 435 North Michigan Avenue.

Moore Speed Crane Co., Chicago, has arranged with Manitowoc Engineering Works, Manitowoc, Wis., division of Manitowoc Shipbuilding Corporation, to build and sell Moore speed cranes. Moore company will continue as Chicago sales representative for these cranes and Forsythe Brothers, 30 Church Street, New York, will remain as New York sales agents.

Contract has been let by Ornamental Brass Shops, Inc., Tenth Avenue, Rockford, Ill., to Linden & Son, local, for a one-story addition, to cost about $30,000 with equipment. Peterson & Johnson, Swedish-American Bank Building, are architects.

Iowa Power & Light Co., Des Moines, Iowa, is disposing of a preferred stock issue of $1,000,000, a portion of proceeds to be used for expansion and improvements, including transmission line construction. Company is affiliated with Des Moines Electric Light Co. Clement Studebaker, Jr., is president.

Quaker Oats Co., 80 East Jackson Boulevard, Chicago, has awarded general contract to Leonard Construction Co., 37 South Wabash Avenue, for initial units for new plant at St. Joseph, Mo., to cost in excess of $2,000,000 with machinery. Project will include a boiler house and machine shop.

Common Council, New England, N. D., has authorized extensions and improvements in municipal electric light and power plant, with installation of equipment to double present capacity.

Iowa Soap Co., 816 Valley Street, Burlington, Iowa, has awarded general contract to A. Danielson Co., Burlington, for three-story factory, 100 x 160 ft., adjoining present plant, to cost $100,000 with machinery. Federal Engineering Co., Central Office Building, Davenport, Iowa, is engineer.

Abingdon Sanitary Mfg. Co., Abingdon, Ill., manufacturer of sanitary plumbing ware and equipment, has arranged for bond issue of $500,000, a portion of proceeds to be used for expansion in production.

Municipal Utilities Co., Des Moines, Iowa, is contemplating construction of new steam-operated electric power plant at Emmetsburg, Iowa, to cost about $150,000 with equipment.

Frank Foundry Co., Twenty-first Street, Moline, Ill., contemplates erection of one-story addition, to cost upward of $200,000 with equipment. W. A. C. Hogenbaeck is manager.

Lowry Sign & Advertising Co., 185 North La Salle Street, Chicago, manufacturer of electric signs and displays, has leased property at 428 Milwaukee Avenue, totaling 10,800 sq. ft. floor space, for expansion.

Board of Education, Dixon, Ill., plans installation of manual training equipment in new three-story high school to cost $400,000 for which bids will be asked on general contract about middle of May. Royer, Danely & Smith, 301 West Main Street, Urbana, Ill., are architects.

Chicago Artificial Ice Co., 140 North Dearborn Street, Chicago, is disposing of a bond issue of $1,250,000 and note issue of $850,000, a portion of proceeds to be used for expansion in ice-manufacturing plants.

Buffalo

BUFFALO, April 30.

BIDS have been asked by New York Central Railroad Co., Buffalo, for two one-story shop units at North Yards repair works, to cost more than $65,000 with equipment. F. B. Freeman, 466 Lexington Avenue, New York, is chief engineer.

Board of Education, Genesee Building, Buffalo, is planning installation of manual training equipment in three-story Riverside high school to cost $1,000,000, for which bids are being asked on general contract until May 10. F. J. and W. A. Kidd, 522 Franklin Street, are architects.

LeSuer Oil Corporation, Wellsville, N. Y., has acquired 50 acres of oil lands at Bolivar, N. Y., known as Frazer farm, and plans early installation of producing plant, including pressure pump and other power equipment.

Work will begin about May 15 on new plant unit of Afga-Ansco Mfg. Co., 23 Charles Street, Binghamton, N. Y., manufacturer of cameras, tripods and other photographic equipment, to be two to eight stories, 200 x 700 ft., and to cost more than $1,000,000 with equipment. Otto S. Schlick, 136 Liberty Street, New York, is engineer.

Crouse-Hinds Co., Syracuse, N. Y., manufacturer of electrical products, has plans for a one-story foundry addition, to cost more than $40,000 with equipment. Gaggin & Gaggin, University Building, are architects.

Officials of Rome Brass & Copper Co., Rome, N. Y., have organized Rome Hollow Wire & Tube Co., to take over and expand subsidiary organization of same name. New interest will specialize in iron and steel, brass and other metal products. Howard D. Wolfe, 804 North George Street, is one of principal incorporators.

School District No. 8, Black River, N. Y., is considering installation of manual training equipment in two-story high and grade school to cost about $170,000. Lansing & Green, Sherman Trust Building, Watertown, N. Y., are architects.

Cincinnati

CINCINNATI, April 30.

MACHINE tool sales in April showed a considerable recession from the level attained in March, the decline being estimated at 25 to 30 per cent. There is a fair amount of inquiry before the trade, but buyers are hesitant about placing orders unless the purchase of equipment is imperative. While the automobile industry in the Detroit district is yielding a small volume of business, it is far less than in the first quarter, and buying from this source is likely to be light during the next few months. The Union Pacific Railroad is reported to have closed for about a dozen tools, but otherwise railroads have been inactive in the local market. The Dixie Construction Co., Birmingham, has contracted for a 600-lb. single frame steam hammer.

E. M. Hulse Furniture Co., 153 West Fulton Street, Columbus, Ohio, is completing plans for a three-story factory, 100 x 260 ft., to cost close to $275,000 with equipment. Carmichael & Millspaugh, 7 East Long Street, are architects.

Andrew Jergens Co., Alfred and Spring Grove Avenues, Cincinnati, is having plans drawn for a five-story addition to a soap manufacturing plant, to cost about $200,000 with equipment. Harry Hake, 2400 Gilbert Avenue, is architect.

Tri-State Compress Co., Bankers' Mortgage Building, Huston, Miss., Robert J. Cummings, head, has completed plans for a one-story cotton compressing plant, 260 x 1300 ft., in Hollywood district, Memphis, Tenn., to cost $300,000 with machinery.

Air Corps, Material Division, Wright Field, Dayton, Ohio, will receive bids until May 9 for aluminum alloy rivets, circular 314; streamline tie rods, circular 318; until May 10 for 16 engine gage assemblies, circular 315; 335 aircraft flight indicators, circular 312; 25 two-blade propellers, circular 319; until May 17 for 56 internal bomb rack assemblies, circular 317; and until May 9, for reconditioning Liberty engines in lots of 400 to 1940, circular 310. Air Corps headquarters, Washington, plans appropriation of $300,000 for transfer and establishment of experimental and testing plant to a permanent site at Wright Field.

Van Buren Township Board of Education, Clark Powell, Fairmount High School, Dayton, Ohio, business manager, contemplates installation of manual training equipment in new school to cost $500,000, for which Walker & Norwich, American Building, architects, will prepare plans.

Board of Trustees, Western State Teachers' College, Bowling Green, Ky., has approved plans for a one-story manual arts building to cost about $50,000. Brinton B. Davis, Columbia Building, Louisville, is architect.

Peter Fox & Sons Co., Fulton Market, Chicago, produce, is said to be completing plans for a new ice and cold storage plant at Nashville, Tenn., to cost upward of $300,000 with equipment.

Milwaukee

MILWAUKEE, April 30.

WHILE some machine-tool plants experienced a somewhat larger volume of business this month, compared with March, others did not fare so well. On the average, however, April volume practically equals the previous month's bookings. The outlook is for a moderately active May trade, inquiry this month having been promising. The city of Milwaukee will soon be in the market with a list for the new fire department construction and repair shop, costing $100,000. Local machine shops as a rule are limiting their inquiry to replacement needs, or for one or two items to meet current requirements.

Unit Corporation of America, Fifty-third Avenue and Burnham Street, Milwaukee, is concluding negotiations for acquisition of Universal Power Shovel Co., Detroit, transaction being effected by an exchange of $750,000 of class A stock of Milwaukee company for controlling interest. William Ford, president Detroit company, will retire. Unit Corporation recently acquired Fuller & Sons Co., Kalamazoo, Mich., manufacturer of automotive transmissions, gears, etc. A $175,000 addition will be made to Fuller works, and Universal operation transferred to that point. Original members of Unit company are Obenberger Forge Co., and Dallmann Machine & Mfg. Co., both of Mauwaukee, which have consolidated their operations in the Obenberger works. William H. Schmidt is president.

Menomonee Falls Mfg. Co., Menomonee Falls, Wis., founder and machinist, sustained a loss of about $50,000 by fire on April 21. Plant was opened only recently for manufacture of bottle washing machinery as an addition to its foundry and machine shop business.

Excavation work has been started by Milwaukee department of public works for a new two-story brick and concrete shop, 100 x 200 ft., costing $100,000, adjoining present fire department repair shop. It will be used for manufacture of complete motor fire equipment, which has been carried on in a limited way for two years. Tooling needs are being scheduled but are not yet complete. R. E. Stoelting is commissioner of public works, and C. E. Malig, municipal architect.

Hicks Printing Co., Oshkosh, Wis., publisher of the Oshkosh *Daily Northwestern,* will erect a new printing and publishing plant to cost about $150,000. Architects are now being selected.

R. H. Bierman, 123 Wisconsin Avenue, Milwaukee, has been engaged by unnamed interests to prepare plans for a two-story automotive headquarters building, 75 x 125 ft., in Wauwatosa. It will cost about $75,000 and contain a machine and service shop. Bids will be taken about May 15.

National Plating Co., 43-45 Eighth Street, Milwaukee, has increased its capital stock from $50,000 to $75,000 and is completing plans for enlarging plant and production.

Milwaukee Ornamental Brass & Iron Works, Inc., has been incorporated with $25,000 capital stock and is establishing a plant at 685 Booth Street for production of gas and electric fixtures, lamps, novelties and similar merchandise. Bernard Breuer, 1124 Richards Street, is president.

Appleton Coated Paper Co., 1200 North Meade Street, Appleton, Wis., has plans by Lockwood, Greene & Co., consulting engineers, Chicago, for an addition to cost $125,000. Work will begin about the middle of May.

Arthur Fairbanks, 646 Madison Street, Waukesha, Wis., is erecting a welding shop, 30 x 50 ft., costing about $20,000 with additional equipment.

Milwaukee File & Rasp Co., 389 Tenth Street, Milwaukee, has increased its capital stock from $5,000 to $15,000 for enlargement.

Detroit

DETROIT, April 30.

AN expansion and improvement program has been authorized by Macklin Co., Jackson, Mich., manufacturer of grinding wheels and other abrasive materials, including two one-story units and four new kilns, to triple present output. Work to cost upward of $100,000 with equipment.

Board of Education, Lincoln Park, Mich., plans installation of manual training equipment in new three-story high and grade school to cost $850,000, for which bids will soon be asked on general contract. Vernier, Wilhelm & Molby, Book Building, Detroit, are architects.

White Motor Co., East Seventy-ninth Street, Cleveland, manufacturer of trucks, will soon take bids for one-story factory branch, service and repair building, 185 x 200 ft., at Detroit, to cost approximately $135,000 with equipment. Hadlow, Hughes, Hick & Conrad, Union Mortgage Building, Cleveland, are architects.

Impression Die Co., 3155 East Willis Street, Detroit, has awarded general contract to Max Bartholomai Son & Co., 1574 East Warren Street, for a one-story addition, to cost close to $25,000 with equipment. Pollmar & Ropes, 2539 Woodward Street, are architects.

Collins Ice Co., Grand Rapids, Mich., is planning a two-story addition to cost about $35,000 with equipment.

AC Spark Plug Co., Flint, Mich., has awarded general contract to W. E. Wood Co., Ford Building, Detroit, for a three-story addition, to cost approximately $50,000 with equipment.

Officials of Chrysler Corporation, Highland Park, Detroit, have formed DeSoto Motor Corporation, a subsidiary, to manufacture a new six-cylinder car under name of DeSoto. Initial production will be carried out at main plant.

In connection with an expansion and improvement program to cost about $2,000,000, Grand Trunk Railroad System, 400 East Jefferson Street, Detroit, has authorized immediate erection of new engine house with repair facilities at Ferndale, Mich., to cost upward of $125,000 with equipment.

Grand Rapids Enamel Sign Corporation, 1331 Phillips Avenue, Southwest, Grand Rapids, Mich., has been organized to manufacture baked enamel signs on galvanized steel. Building has been constructed and is fully tooled for operations.

Fecheimer, Frank & Spedden, Inc., Detroit, will be located after May 12 in larger offices at 1224 Maccabee Building.

Gulf States

BIRMINGHAM, April 30.

A COMPANY is being formed by A. S. Anderson, 519 Twenty-eighth Street, West Palm Beach, Fla., and associates to construct and operate a six-story cold storage and refrigerating plant, 100 x 300 ft., to cost close to $225,000 with equipment.

Bayou State Refining Corporation, Rosston, La., has begun construction of new oil refinery for production of lubricating oils, to cost $240,000 with machinery. Company is operated by Bayou State Oil Corporation.

Ovens, power equipment, conveying and other machinery will be installed in new plant to be erected by Brown Cracker & Candy Co., Dallas, Tex., at San Antonio, Tex., to cost approximately $300,000.

Oil Center Tool Co., 1111 East Twenty-first Street, Houston, Tex., manufacturer of oil well equipment and tools, plans a new one-story factory unit, to cost in excess of $30,000 with machinery.

Houston Gulf Gas Co., Houston, Tex., operating natural gas properties, is concluding arrangements for purchase of controlling interest in Houston Gas & Fuel Co., and Houston Gulf Pipe Line Co., Houston; and Southern Gas Co., San Antonio, Tex. A bond issue of $11,000,000 will be sold, a portion of fund to be used for acquiring properties noted and for expansion in pipe lines and system.

Reo Motor Car Co. of Texas, Inc., Dallas, Tex., has plans for a two-story service, repair and sales building, 100 x 200 ft., to cost about $150,000 with equipment. Entire second floor, totaling 20,000 sq. ft., will be equipped for machine shop service. Company also plans for similar works at Houston, Tex., to cost close to like sum.

Dalhart Public Service Co., Dalhart, Tex., has authorized enlargements in power plant and installation of additional equipment. Extensions in transmission lines are contemplated.

Board of Trustees, Drew Endowment Fund, Lake Charles, La., is planning construction of manual training school, to cost in excess of $100,000 with equipment. H. J. Geary, 929 North Division Street, is member of board in charge.

Union Utilities, Inc., El Paso, Tex., recently formed to take over and operate gas-manufacturing and distributing plants at El Paso, Galveston, Waco and Brenham, Tex., has arranged for a bond issue of $1,300,000, a portion of proceeds to be used for purchase of properties and for expansion in gas-generating and distributing facilities. Company will organize three subsidiaries, Texas Cities Gas Co., Galveston Gas Service Co., and Council Bluffs Gas Co.

Alamo Heights School Board, San Antonio, Tex., will install manual training department in new school to cost upward of $175,000, for which plans will be drawn by Harvey P. Smith, National Bank of Commerce Building, architect.

Maverick County Improvement District No. 1, Eagle Pass, Tex., W. L. Rockwell, engineer, has plans for a hydroelectric power house with capacity of 15,000 hp., for use with proposed irrigation system covering about 60,000 acres. Bids for equipment will be asked soon. Entire project will cost approximately $500,000.

Menefee Motor Co., 2111 Burgundy Street, New Orleans, has plans for new two-story service, repair and garage building, to cost close to $90,000 with equipment. James C. Menefee is head. Favrot & Livaudais, Hibernia Bank Building, are architects.

Peoples Utilities Co., Clinton, La., is completing plans for an electric light and power plant and one-story ice-manufacturing plant, adjoining, to cost more than $70,000 with machinery. E. K. Strahan, Pere Marquette Building, New Orleans, La., is engineer.

Linde Air Products Co., 30 East Forty-second Street, New York, manufacturer of industrial oxygen, gas, welding equipment, etc., has asked bids on general contract for first unit of plant at Shreveport, La., to cost close to $45,000 with equipment.

Electrical Equipment & Construction Co., Houston, Tex., has been organized to act as manufacturers' representative, consulting and sales engineer in adjacent territory for electrical products and equipment.

Cleveland

CLEVELAND, April 30.

MACHINE tool business continues fair and the volume of sales during April was equal to, if not a little better, than in March. Some good business from automobile parts manufacturers helped considerably in holding up the April volume. A slight improvement is reported in the Detroit territory. The Logangear Products Co., Detroit, has purchased several machines for making pumps for Ford cars and has some additional equipment to buy. The Ford Motor Co. has placed some contracts with outside shops for the manufacture of repair parts for its old model T cars, discontinuing the making of certain parts in its own plant. Shops getting this Ford work are purchasing some additional equipment. Quite a little activity has developed in turret lathes in the Detroit territory in single tool orders. Locally, the market is rather slow. Railroad inquiries are scarce and are limited to single machines.

Bishop & Babcock Mfg. Co., Cleveland, will move its fan and blower plant from Watertown, Mass., to Cleveland. A building, 120 x 120 ft., will be erected, contract for which has been placed with H. K. Ferguson Co. A 5-ton 40-ft. span traveling crane will be installed.

Entire machinery and equipment of Ohio Body & Blower Co., Cleveland, will be sold at public auction, Wednesday, May 23, by Industrial Plants Corporation, auctioneer. Plant, which formerly had capacity of 100 closed car bodies daily, was operated for only two years prior to July 1, 1927, and contains 300,000 sq. ft. of floor space. Equipment to be sold includes woodworking, sheet metal and machine shop, glass finishing machinery, motors, etc. Sale is not subject to court confirmation.

American Electric Switch Corporation, Minerva, Ohio, has added new building to its plant, providing 26,000 sq. ft. of floor space. It is connected with old plant with runway and electric conveyor and will house switchboard, panelboard, knife switch and shipping departments.

Plans are being arranged by Artcraft Metal Works, Athens, Ohio, operated by J. H. Grayson Mfg. Co., same city, for installation of equipment in new one-story plant, to cost more than $25,000.

Nokarbon Oil Burner Co., Cleveland, recently organized to manufacture a new type of industrial and domestic oil burner, will operate a temporary plant at 8612 Superior Avenue, N. E., to be devoted largely to assembling. It is purposed to establish permanent and larger works in near future. Howard W. White is president.

Thompson Products, Inc., 2196 Clarkwood Road, Cleveland, manufacturer of spring bolts, tie rod bolts and kindred products, with branch plant at Detroit, is disposing of a stock issue totaling $1,050,000, of which approximately $265,000 will be used for additions and equipment.

Elyria Belting & Machine Co., Buckeye Street, Lorain, Ohio, is contemplating a one-story addition, to cost upward of $25,000 with equipment.

Ohio Aero Corporation, Youngstown, Ohio, recently formed by Judd Yoho, 3502 Market Street, and associates, will operate a local plant for aircraft manufacture, initial operations to be given over to assembling airplanes of two and three-passenger types. Warren P. Williamson and Hugh H. Hamilton, both of Youngstown, are interested in new company.

Plans have been completed for a reorganization of Williams Alloy Products Co., Elyria, Ohio. New company has authorized sale of 223,250 shares of stock, portion of proceeds to be used for expansion.

Empire Floor & Wall Tile Co., Zanesville, Ohio, is rebuilding portion of plant recently destroyed by fire, with loss of more than $300,000 including equipment.

Economy Engineering Co., Willoughby, Ohio, manufacturer of automatic bolt and nut machinery, has awarded contract to Frank S. Bones & Son, Willoughby, for one-story addition to increase its floor space 50 per cent.

Indiana

INDIANAPOLIS, April 30.

PLANS are in progress for a steam-operated electric power house for Northern Indiana Public Service Co., Gary, at Michigan City, comprising group of 60,000-kw. turbo-generator units, with boilers and accessories, to cost more than $6,000,000. Extensions will be made in transmission lines.

Evansville Ice & Storage Co., Eighth and Division Streets, Evansville, Ind., will soon ask bids for a two-story and basement ice-manufacturing and cold storage plant, to cost about $65,000 with equipment.

Showers Brothers Mfg. Co., Bloomington, manufacturer of kitchen cabinets, etc., has awarded general contract to H. K. Ferguson Co., Cleveland, for a two-story addition, 60 x 150 ft., to cost about $100,000 with equipment.

Capital Airways, Inc., 705 Fletcher Trust Building, Indianapolis, is planning construction of an airport in vicinity of Broad Ripple district, comprising three hangars, repair shop and oil storage and distributing building, to cost close to $50,000.

Indiana Electric Corporation, Indianapolis, has secured permission to issue preferred stock totaling $2,604,500, a portion of proceeds to be used for expansion and betterments, including transmission line construction.

Montgomery Ward & Co., Chicago, has awarded general contract to M. J. Hoffman Construction Co., Furniture Building, Evansville, for a new three-story and basement storage and distributing plant at Evansville, to cost close to $200,000 with equipment. A. E. Neucks, Old National Bank Building, is architect.

Dudley Township Board of Education, New Lisbon, D. Ellabarger, trustee, is considering installation of manual training equipment in new high school at Straughn, to cost about $130,000. Houck & Smenner, 108 East Washington Street, Muncie, are architects.

Pacific Coast

SAN FRANCISCO, April 25.

PLANS have been approved by Board of Education, Los Angeles, for a one-story addition to manual arts shop at George Washington High School, to cost about $40,000. Dodd & Richards, Architects Building, are architects.

California Co-Operative Producers, Inc., foot of Fourteenth Street, Oakland, Cal., has awarded general contract to Sacramento Industrial Corporation, Sacramento, for a new canning plant on 35-acre tract, including boiler plant, machine shop and other buildings, to cost about $300,000 with equipment.

San Carlos Ice & Cold Storage Co., Coolidge, Ariz., will erect a new one-story ice-manufacturing and cold storage plant to cost about $30,000.

Board of Education, Oakland, Cal., plans manual training shop unit at new high school group, entire project to cost about $500,000. Miller & Warnecke, 1404 Franklin Street, are architects.

Northwestern Pulp & Paper Co., Astoria, Ore., B. T. McBain, Portland, engineer and manager, will begin work in May on local pulp and paper mill, to have initial output of 100 tons per day. Project will include boiler plant and machine shop, and will cost in excess of $1,500,000 with machinery. Contracts for buildings have been let to Austin Co.

Oregon Short Line, Pocatello, Idaho, a division of Union Pacific Railroad System, Omaha, Neb., is planning extensions and improvements in local steam-operated electric power plant, to cost about $100,000 with equipment.

Pacific Petroleum Products Co., recently organized as subsidiary of Petroleum Securities Co., Richmond, Cal., will build a new storage and distributing plant at South San Francisco, to cost about $50,000 with equipment. Company is said to be negotiating for property at San Jose, Cal., for a similar plant.

Burke Packing Co., Astoria, Ore., will rebuild portion of cold storage and refrigerating plant recently destroyed by fire, with loss in excess of $50,000 including equipment.

San Juan Pulp Mfg. Co., Cornwall Avenue and Maple Street, Bellingham, Wash., has filed plans for an addition to digester division, to cost more than $85,000 with equipment.

Pacific Gas & Electric Co., 445 Sutter Street, San Francisco, has increased its capital stock from $240,000,000 to $400,000,000, a portion of proceeds to be used for expansion, including hydroelectric power plant and transmission line construction.

Southern Pacific Railroad Co., San Francisco, is reported planning extensions and improvements in locomotive shops at Sacramento, with installation of considerable additional equipment, to cost in excess of $1,000,000.

Clearwater Timber Co., Lewiston, Idaho, contemplates extensions in its mill and installation of additional equipment to cost about $250,000.

American Fruit Growers, Inc., Yakima, Wash., has plans for a new two-story cold storage plant, 110 x 180 ft., to cost about $150,000.

Brown Instrument Co., Philadelphia, manufacturer of measuring instruments, has secured larger quarters for its Pacific Coast branch at 420 Westinghouse Electric Building, 420 South San Pedro Street, Los Angeles. Stanley F. Godfrey is district manager.

Canada

TORONTO, April 30.

MACHINE tool dealers and builders in this territory report a steady flow of new business mostly in single units. Sales for April compared favorably with those of March and business in May is expected to run into a fairly large volume. While automobile manufacturers have done most of their buying some sales are reported for replacement. Garages and automobile repair plants are constant buyers of single machines. Builders of machinery and tools have a considerable volume of unfilled orders on their books and look for almost capacity operations for some time.

Orders have been closed recently for large newsprint paper machines for International Paper Co.'s plant at Bathurst, N. B., and two for St. Lawrence Paper Co. It is reported that an order for one machine for Price Brothers has been divided between Dominion Engineering Co. and Charles Walmsley (Canada) Ltd. Contracts recently placed represent an expenditure of approximately $1,500,000.

Plant of Ontario Boat & Engine Works, Wallaceburg, Ont., was destroyed by fire April 22, with loss of $150,000.

W. W. Pearse, business administrator and secretary-treasurer Board of Education, 155 College Street, Toronto, is receiving bids until May 14 for equipment for machine shop, wood-working and electrical departments for new Collegiate Institute.

General Motors of Canada, Ltd., Oshawa, Ont., has let contract to Jackson-Lewis Co., Ltd., Federal Building, Toronto, for erection of one-story factory, 68 x 70 ft., to cost $25,000.

Bids are being called by Watt & Blackwell, architects, Bank of Toronto Chambers, for an addition to plant of Richards Wilcox Canadian Co., London, Ont., manufacturer of builders' hardware, fire-doors, etc. It will be one story, 78 x 190 ft., and cost $35,000.

Taylor Electric Mfg. Co., 526 Adelaide Street, London, Ont., has let contract to James Moran & Sons, local, for erection of a $40,000 addition, one story, 75 x 150 ft., for manufacture of electric switches, motor starters, etc. Watt & Blackwell, Bank of Toronto Chambers, London, are architects.

Wells & Gray, Ltd., Confederation Life Building, Toronto, general contractor, has let sub-contracts for new plant for Reid & Brown, Ltd., 63 Esplanade East. Plant will be one story, 70 x 300 ft., and include structural steel shop.

Western Canada

Waterpower site at Ghost Falls, Calgary, Alta., has been leased to the Calgary Power Co. It is understood that a plant will be erected to develop 15,000 hp., and cost $2,000,000. No announcement has been made as to when bids will be called for construction.

Elk River Syndicate, Ltd., Waldo, B. C., is contemplating construction of a power plant and pulp mill at Phillips Canyon on Elk River, to cost approximately $1,000,000.

Plans are being prepared for the construction of an additional power house on Jordan River, Vancouver Island, by British Columbia Electric Railway Co., Vancouver, B. C.

Foreign

PLANS are being prepared by Vitkovice Iron Works, Bredorska 9, Prague, Czechoslovakia, for extensions in plant in Zabreh district, including one-story unit for production of railroad switches, to cost approximately $90,000 exclusive of machinery. Program will provide for expansion in other rolling mills and steel mill, with installation of new furnaces. American Consulate, Prague, K. L. Rankin, assistant trade commissioner, has information regarding project.

Quartermaster General, Washington, is asking bids until May 18, for three 750-hp. Diesel engines with accessories, for installation at Fort Mills, Philippine Islands.

Marconi Wireless Telegraph Co., Chelmsford, England, with local plant for manufacture of radio equipment, is planning establishment of a factory for similar production in Poland for trade in eastern Europe, to cost more than $250,000 with machinery.

A company at Castleton, England, has plans for a new cement mill near that city to cost close to $400,000, with machinery. Information at office of Bureau of Foreign and Domestic Commerce, Washington, reference England No. 65727; also at American Consulate, London, William L. Cooper, commercial attaché.

Brunner Maschinenfabrik, Prague, Czechoslovakia, manufacturer of machinery and mechanical appliances, is planning an expansion and improvement program, including installation of machinery and facilities for additions to line of construction equipment and apparatus for handling cement, concrete, etc. The ceramic machinery division will also be extended. American Consulate, Prague, K. L. Rankin, assistant trade commissioner, has information regarding project.

R. W. Hebard & Co., Inc., 32 Broadway, New York, engineer and contractor, has secured a contract from municipality of Puerto Limon, Republic of Costa Rica, for installation of a waterworks and sanitation system, including pumping machinery, power equipment, filtration equipment, etc., entire project to cost about $600,000.

New Trade Publications

Oil Burner.—Johnston Mfg. Co., 2825 East Hennepin Avenue, Minneapolis. Catalog sheet 550-A of two pages illustrates and describes a new type of oil burner in which complete mixture of oil and air prior to entering the furnace is claimed.

Electric Furnace Fittings.—Globar Corporation, Niagara Falls, N. Y. Bulletin D of 12 pages illustrates and describes heating elements and terminal fittings for them, in connection with electric furnace use. Instructions are given for replacing elements while the furnace is in operation.

THE LAST WORD

(Contributed by the Reader Service Department of the Iron Age Publishing Co.)

WE can hold out no longer. So great has been the pressure brought to bear on us to resume *The Last Word* that it is hereby resumed. Great will be the joy of the thousands who told us that the light of their lives went out when *The Last Word* was withdrawn.

The year is only one-fourth over but we know now who will win the 1928 prize for the most mixed metaphor. We needn't mention names but here is his entry, from page 797, in THE IRON AGE of March 22:

> Nevertheless, it did not take me long, when I got back into the game, *to pick up the threads and to see a hole in the grindstone when the hole was there!*

And let us give a hand, too, to George Rector, famed restaurateur, for the following in the revered *Sat. Eve. Post:*

> "When the United States was in the forging,
> New England was the foundry."

In a moment of weakness a contributor was permitted to use this column for broadcasting the question, *"What is the origin of the word chaplet, as used in the foundry industry?"* A chaplet manufacturer promptly wrote, *"I'll bite. What's the answer?"*

Hopefully your columnist turned to our contributor. He did not know. In a daze, dictionaries, histories, encyclopedias, etc., were consulted without success. Came the thought of referring to a recognized authority on foundry practice. Would he save our record of 100 per cent omniscience? He would, and here's how:

> Chapelet, later chaplet, is a small chapeau, which is French for hat. Another meaning is a small chapel, and drifting into foundry practice, it meant a small bent sheet, in form of a box or simple U laid flat.
>
> Again, another meaning is in connection with the Catholic rosary. Here, again, we have a connection with the molders of olden times, who may have thought of a resemblance between rosary beads and small chaplets.

"How is steel wool made?" we inquired seriously in our own private "Ask Me Another" contest. *"By shearing hydraulic rams,"* a pump manufacturer answers.

Perhaps some disciple of Dr. Freud can tell us why Dun's made the mistake of listing the business of Standart Brothers Hardware Corporation, Detroit, as "Whol Dresses, etc."

We lift our hat to the genius who fashioned the slogan, *"Cutting the price of caskets does not increase the death rate."*

Could the futility of price-cutting (in many kinds of businesses) be more succinctly expressed?

It seems to us that the Anderson Brothers Mfg. Co., Rockford, Ill., strikes the peak of specialization. The product of this firm is Eskimo pie-cutting machinery.

We are fond of this slogan used by Riehle Brothers Testing Machine Co., *"One test is worth a thousand expert opinions,"* and we should like to have a framed copy of it for our office wall.

Having a good slogan, they make good use of it by printing it at the *bottom,* not the top, of their business stationery. They realize that not one man in a hundred reads what is at the top of a letterhead. But the bottom *is read.*

A New Method of Making Joints

Assemblies of Simple Parts, Snugly Fitted, Are Heated in a Hydrogen Atmosphere—Powdered Copper, Painted On, Runs Into Joint, Alloys and Makes Tight Weld

BY E. E. THUM

A NEW automatic method of making gas-tight strong joints in fitted assemblies of smaller steel parts has been developed by the resourceful General Electric organization. In its present form, this method represents the development of several years and the combination of many operations and principles known previously and applied in other ways. To Christian Steenstrup, engineer Mechanical Research Department, is undoubtedly due the credit for visualizing the commercial possibilities, and building equipment large enough to treat composite pieces several feet in diameter.

Steel Joined with Copper

The process may perhaps be most easily understood by making certain comparisons with brazing. As is well known, the latter consists of welding with brass or bronze; fluxed surfaces are joined with a thin layer of alloy. Brazing can be done in several ways—either by dipping the assembly into a pot of molten metal, by sprinkling granular metal ("spelter") in the joint and heating it locally, or by the regular method of oxy-acetylene welding, using brass or bronze welding rod and suitable flux. But in any of these modifications the principle is the same; namely, if the steel or iron is clean and hot, melted brass will run over it in a very thin film, "wetting" the metal and forming a strong alloy with the surfaces in contact.

Pure copper, as a "brazing" material, was known to have extraordinary power to penetrate between finished steel surfaces fitted together. For instance, Dr. W. E. Ruder, when studying coarse-grained silicon steel in the General Electric Co. research laboratory several years ago, plated a specimen by dipping it in

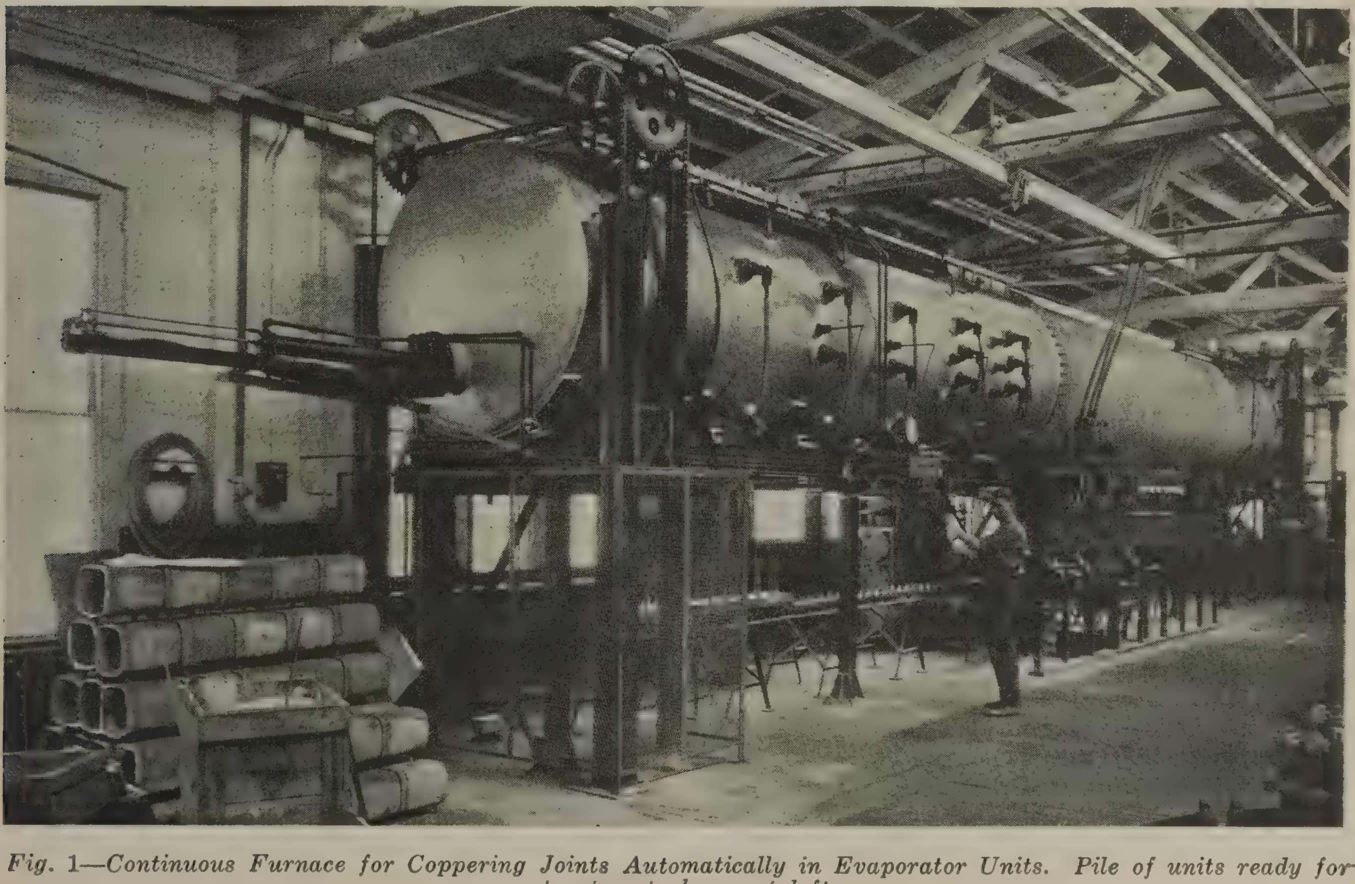

Fig. 1—Continuous Furnace for Coppering Joints Automatically in Evaporator Units. Pile of units ready for treatment shown at left

molten copper, and later found that the copper had penetrated far into the specimen between the metallic crystals, apparently separated from each other by microscopic distances. But hot copper at the melting temperature (unprotected by zinc or tin in alloy) absorbs oxygen from the air very rapidly, with general deterioration. Consequently "brazing" with pure copper would have to be done in an atmosphere containing no oxygen. Very well, fill the furnace with hydrogen, which will not only exclude the air, but will also react with any oxygen in the rust or mill scale on the steel, thus brightening the surfaces and performing the essential function of a flux.

Hydrogen Atmosphere Cleans Steel and Protects Copper

A ready commercial development of this main idea —of "brazing" with copper in an atmosphere of hydrogen—was due to the fact that the General Electric Co. had been annealing quantities of transformer sheets and magnetic irons in hydrogen for some time. Consequently such problems as the production of hydrogen, the prevention of hydrogen fires (hydrogen being a good fuel), the making of tight furnace casings (hot hydrogen leaks through solid steel rapidly), and the proper method of heat production and control had already been solved. How they were adapted to this "coppering" process is well illustrated by a detailed description of a continuous furnace (Fig. 1) designed by the industrial heating and welding engineering department.

The furnace casing is a welded steel shell about 6 ft. in diameter by 60 ft. long, closed at each end with a dished head, the near third being the heating chamber and the remainder a cooling chamber. Work is introduced through a bottom door close to the left end, and removed by similar equipment at the far end.

Fig. 2 gives a view of the charging elevators. The carload of work (two evaporator units made of sheet metal) is about to enter the open door in the very bottom of the furnace shell. When the I-beam cross frame is raised to the limit, the sand seal around the edges of the rectangular door closes against the furnace opening, the rollers on which the car rests are in line with the spool conveyor inside, and the evaporator units are at about the center of the circular casing. At 6 min. intervals the hydraulic ram shown at the end of the furnace pushes all the work in the furnace ahead one car-length, a carload of completed work is then lowered at the far end, rolled away and the empty elevator is raised, the now empty charging platform is lowered, a loaded car is rolled on and re-elevated. These successive operations are interlocked, and one workman attends to the entire routine. Full cars traverse the furnace end to end inside; empty car bodies return on a parallel conveyor near the floor.

Some gas escapes from the furnace when the doors are open. The pressure inside is kept just a little higher than the atmosphere, so a lazy flame plays across the open door, which, being flat, horizontal and pointing downward, gives little opportunity for the light hydrogen to escape. Only one door can be opened at a time, and oxygen which may enter the furnace by this or any other means is promptly burned by the great excess of hot hydrogen existing there, the chemical reaction forming steam. Since the hydrogen in the heating chamber is always far hotter than the kindling temperature, such oxygen is consumed as it may accidentally enter, without any opportunity to build up explosive mixtures.

The combustion hazard due to hydrogen can be mitigated by the introduction of nitrogen. Mixtures as dilute as 15 per cent hydrogen and 85 per cent nitrogen have been found satisfactory for several processes. In utilizing this mixture additional limitations are imposed as to cleanliness of work and absence of water vapor.

In the heated end of the furnace the interior is almost full of insulating materials, except for a rectangular passage down the axis large enough to pass the cars and the work. On the sides of this passage are arranged standard General Electric heating units: ribbons of nickel-chromium looped back and forth around refractory posts. These elements are connected in six circuits to three-phase, 220-volt power; three circuits are arranged in the forward or preheating portion, three more at the hottest region. Each circuit is independently controlled by its own pyrometer, Brown Instrument Co. temperature indicator and regulator, and G. E. contactor bank. This regulating mechanism is mounted on the switchboard shown at the center of the furnace. An operating temperature of 1125 deg. C. is required, since copper, which melts at 1083 deg., must be rendered quite fluid. This would be a rather high temperature for resistor elements in ordinary furnace atmospheres, but the hydrogen atmosphere prevents corrosion entirely. In fact, iron resistor ribbons have been used, but the resistance change with temperature for iron is so great that external resistance or special current control is necessary when starting the furnace cold. A series of manholes on top of the furnace gives access to the narrow heating chamber for such repairs as may be necessary. The view also shows the heavy copper cables for electric energy entering through proper bushings; the slender pipes set midway are pyrometer protection tubes.

The cooling end of the furnace is separated from the hot zone, not by a door but merely by a constriction of the heating passage to the minimum required for clearing the passing work. On passing this bottle neck, the hot metal finds itself traveling down the axis of a large open tank with water-jacketed walls. Time of passage is such that the work has cooled to about 100 deg. C. when it reaches the discharge elevator, and emerges cool enough so the clean copper or bare steel will remain bright. For other applications a certain amount of coloration may be permissible; in such instance the work may be removed a little hotter. If a bright finish is necessary, both the hydrogen and the nitrogen passing slowly through the furnace should be substantially free from oxygen, else the steam formed from combustion will react with the hot metal emerging into the cooling chamber and produce a blued steel surface.

It will be apparent that the furnace described is merely a device for automatically heating and cooling a continuous stream of metal parts in a special atmosphere. Obviously the copper for the welding or "coppering" of the various joints must be placed on the parts before they enter the furnace. How this is done may best be described with the aid of some representative sketches.

Copper Wired or Painted on Joints

Suppose a steel plug must be made of the lightest weight possible. The shaft is too deep for easy cupping, so it is formed of tubing as sketched in Fig. 3. Such a plug requires three pieces: (1) a head, cut from square bar, drilled, and with a round trough cut in one side; (2) a piece of tubing of correct length with internal shoulder at one end; (3) a round disk. The parts are machined to a snug fit; before the disk is placed and crimped down a little shot copper is put inside the tube. A copper wire (about 24 gage) is twisted around the shank close to the head. Such an assembly would be coppered standing on its small end, to make sure that the loose copper shot inside is fairly near the desired joint. During the process the hot hydrogen easily penetrates into the interior, either through the joints or through the metal, and properly deoxidizes all surfaces, so when the copper melts, capillarity will draw it into the joints and up the side of the steel, leaving a suitable fillet at all corners. The condition is sketched in the enlarged view. Excess steel may later be removed from the crimped end, the plug threaded, or any other operation given to it just as though it were a single piece.

When it is inconvenient to place copper wire or shot near the required joint, or when it is desired to copper coat an entire surface, a thick paint made of copper dust suspended in quick-drying pyroxylin may be spread on the article. An instance of this practice, as well as an indication of the complexity of assembly which may be made from simple units automatically and simultaneously, is shown in Fig. 4. All these parts would be gaged to snug fits, and merely pushed together, with the exception of joint C, where an outstanding flange would be rolled over. A copper shot would be placed inside to make joint D, a copper wire would be wound around for A, and perhaps B. All the others, including C, would be painted, which is the simplest and easiest way to get a little copper on a vertical or overhanging surface.

As an instance of the distance that copper will penetrate into such joints, a so-called steam plate may be described. This consists of two pieces of boiler plate with a frame sometimes of 4-in. bars around the edges, and the central portion subdivided by similar bars alternately protruding from opposite sides. This constructs a labyrinth through which the steam must pass. Such an assembly, riveted together on the edges and properly coppered, will be found to possess tight metal-to-metal joints, completely welded, even though the copper must penetrate into contact surfaces 4 in. deep.

Smaller Furnaces for Intermittent Working

While the furnace illustrated in Fig. 1 is a very large one, suitable for mass production of a single piece (14 outlets are coppered simultaneously into each small condenser unit), other types of furnace for intermittent operation are constructed. The simplest is an electric muffle set on stilts, the bottom of which may be lowered away. A complete cycle of operations in furnaces of this type is as follows:

Lower the bottom, load the work, raise the bottom, displace oxygen inside the furnace with hydrogen-nitrogen mixture, raise temperature gradually to coppering heat, shut off heating current, allow furnace to cool, lower bottom, remove completed work. Such a cycle requires many hours, mostly to cool the furnace, for a furnace efficiently insulated for the heating operation is also insulated against the loss of heat for cooling.

To avoid this delay a three-stage furnace has been devised. It consists of a turntable, carrying three furnace bottoms symmetrically placed 120 deg. from each other. One bottom is open to the air for loading and unloading. The next is covered with a bottomless heating muffle. The third is covered with a similar shell, water-cooled. When ready to change loads, the two muffles with their hydrogen-nitrogen atmospheres are slowly raised, the turntable is indexed around 120 degrees, then the muffles are slowly lowered. In this way a fresh load goes to the heating chamber, a hot batch is transferred to the cooling chamber, and a cooled batch is ready for unloading.

Cost Data

Costs of the operation naturally vary with the size and number of pieces to be "coppered." The continuous furnace shown in Fig. 1 operates 24 hr. daily on evaporator units for automatic refrigerators. As noted, each unit has 14 outlets or nipples coppered tightly in the shell at one operation. Each furnace turns out about 500 units daily.

Expense for heat-resisting alloys in ribbons, car bodies and conveyor parts is almost zero, because, as already explained, the hydrogen atmosphere prevents scaling even at full red heat.

Metallurgical Considerations

A cross-section of a coppered joint in steel, as viewed under a microscope, is shown in Fig. 5. The copper has penetrated and alloyed with the surface in exceedingly thin layer; nevertheless this alloyed film is so strong that, when tested to destruction, the fracture will frequently pull the individual iron crystals out of the steel rather than split apart at the junction of copper to iron. As is true of glued, soldered or brazed joints, the closer the original pieces are placed together and the thinner the filling material, the stronger is the resulting coppered union.

Hydrogen at the high temperature of operation has a pronounced decarbonizing tendency; consequently, surface layers of coppered articles will be lower in carbon and softer than at the start. Decarbonizing can be almost entirely prevented by electroplating the surface with copper. The time at high temperature is also sufficient to give a dead soft anneal. This effectually removes any possibility of "season cracking" or failure from internal stresses in parts which have been deep drawn or cold worked nearly to their limit. So-called "hydrogen embrittling," caused by pickling steels in sulphuric acid, is a low-temperature effect of atomic hydrogen existing in what chemists call "nascent" condition; high-temperature heating in hydrogen gas, where the gas is in stable molecules, does not produce a similar effect.

Lastly, the time at high temperature is sufficient to cause considerable grain growth, especially in the higher-carbon steels hardened by cold work. This can be corrected by subsequent reheating to just above the transformation temperature, and desired hardness can be restored by a quick quench.

With these characteristics in mind, however, it is comparatively simple to select mild steels and design most parts so they will be safe when the metal is in the dead soft, most ductile condition. Properties of such steels are little affected by the moderate grain growth that will occur during coppering.

Not all steels respond equally. For instance, it has been found that hot copper will not "wet" and alloy with the surface of cold-drawn bars. During the drawing operation enough of the white lead lubricant used on the dies is caught and squeezed into the steel surface to prevent the copper from alloying with the steel. Furthermore, high-chromium irons and stainless steels do not readily respond—the chromium oxide on the alloy appears to prevent close union with the copper. In general, metals whose oxides do not reduce in hydrogen require an oxide-solvent flux to be used with the hydrogen.

BUSINESS UPS AND DOWNS

Credit, Building and Volume of Manufacture Forecast the Swings

SEVEN major swings in business have occurred in this country since the war, and each has been preceded by a similar movement in credit, in building contracts and in the volume of manufacture, according to Alvan T. Simonds, president Simonds Saw & Steel Co., Fitchburg, Mass., who writes in the May 1 issue of *Looking Ahead*. The major movements are listed as follows:

1. Upswing of 1919 and 1920.
2. Downswing through 1921.
3. Upswing to spring of 1923.
4. Downswing to fall of 1924.
5. Upswing to spring of 1926.
6. Downswing to fall of 1927.
7. Upswing since fall of 1927.

Indications are, the author says, that the present upswing will continue to a next high point in the spring of 1929, although there may be a considerable falling off in the summer of 1928.

Mr. Simond's article is illustrated by graphs showing trend lines for credit, building contracts and volume of manufacture for several of the periods mentioned. For credit he used the reverse of commercial paper rates in New York, as reported in the Federal Reserve Bulletin. The trend lines for building were based on contracts awarded in dollars, as reported by the F. W. Dodge Corporation, New York. The volume of manufacture was ascertained from data published by the Harvard Economic Service, Cambridge, Mass. In each case, the trend lines are made by connecting low and high points of major movements and neglecting minor ups and downs.

Speaking of the general tendency to regard credit as a negligible factor in forecasting business, Mr. Simonds says that one cannot get away from the fact that, since the war, business (from 12 to 18 months later) has followed the movement of money rates reversed, that the lowering cost of credit has stimulated building and manufacture and thus increased general business, and that increasing cost of credit has had the opposite effect. Many reason, he asserts, that decreasing business with less demand for credit brings lower money rates, and increasing business with greater demand for credit brings higher money rates; i.e., that changes in business cause changes in credit rather than the reverse. One is reminded of the question whether the hen or the egg came first. So long as the sequence holds good, however, it is well to be guided by it in business, Mr. Simonds holds.

A simplified practice recommendation for coated abrasive paper and cloth was adopted at a general conference at the Department of Commerce recently. The recommendation adopted corresponds to the original agenda and also conforms to the specifications of the Federal Specifications Board.

The Wisconsin Steel Co., South Chicago, placed in operation in April two new 100-ton open-hearth furnaces. This company now has seven 100-ton furnaces operating.

Investments Abroad Promote Exports

Favorable Balance of Trade Sustained by External Loans and Purchases of Foreign Securities—Larger Exports Call for Greater Imports

BY EUGENE P. THOMAS*

ONE of the most outstanding evidences of the recovery of Europe is the stabilization—either already accomplished or likely to be accomplished in the near future—of the currencies of the principal European nations. While the effect on our foreign commerce of this stabilization of the currencies of nations, which in the aggregate are our best customers, has undoubtedly been beneficial, there are other factors to be considered. One, of prime importance, is the payment of reparations and of international debts incurred for the prosecution of the war and for reconstruction purposes. It is obvious that, in the last analysis, these payments can only be made in the form of European exports of merchandise, and by services rendered, such as, for instance, ocean freight and insurance charges. To the extent that such credits are applied to the payment of reparations or international debts, they cease to be available for payment for American exports.

If, therefore, our exports are to be increased, or even maintained at their present volume, the credits available for payment for them must also be increased, either by increasing the volume of our imports of merchandise or by constantly increasing our purchases of foreign securities and extending additional credits. While this, under certain conditions, may be perfectly safe, and good business, it is plain that it has its limits.

Imports, Including "Invisible" Items, Exceed Exports

In arriving at a correct understanding of what is our real balance of trade, it is necessary to take into consideration what are termed by economists "invisible exports" and "invisible imports." Among the "invisible exports," which serve to pay for imports into this country, are the dividends and interest accruing on American investments abroad, re-payments of loans and credits extended to foreign debtors and buyers of our products, purchases by foreigners of American securities, and deposits by foreign bankers and other foreigners in American banks. On the other side of the account, the "invisible imports," which serve to pay for American exports, include the dividends, interest and repayments accruing to foreign investors in American securities and foreign depositors in our banks, expenditures abroad of American tourists and residents, and the remittances of immigrants from this country to Europe.

After taking into consideration all of these various invisible items on both sides of the account, it is estimated that our total net import balance (i.e., the excess of imports over exports, both visible and invisible) during 1926, was $1,025,000,000, which is accounted for by sales in the United States of foreign securities, which, it is estimated, amounted during the same year, to a total of $1,332,000,000.

During the nine years, 1919 to 1927, the value of our total exports of domestic products was slightly under 47 billions of dollars, and of our imports of merchandise, during the same period, slightly over 35 billions of dollars, a difference of approximately 12 billions of dollars which was undoubtedly offset by new American investments in foreign securities during the same period of nine years, to an approximately equal amount, without which it would have been impossible for the foreign purchasers of our products to have paid us for this excess of exports over imports of merchandise.

It is estimated that the total of our foreign investments now amounts approximately to 15 billions of dollars. For the purpose of comparison, it is estimated that Great Britain's foreign investments now amount to at least 20 billions of dollars, on which there is annually accruing a large revenue. During a period of more than 50 years preceding the outbreak of the World War, Great Britain had constantly what economists call an "adverse balance," that is to say, her imports of merchandise heavily exceeded her exports, but nevertheless her wealth and prosperity continued to expand. During all of this period Great Britain's foreign investments steadily enlarged and were an important factor in increasing her exports of merchandise, but nevertheless the so-called "adverse balance" continued, for the reason that it represented the balance, over and above what was reinvested, of the profits derived from the foreign investments.

The experience of Great Britain unquestionably proves that the normal condition of the foreign trade of a creditor nation, such as ours, is what the economists call an "adverse balance"—i.e., so far as excess of imports over exports is concerned—and that any other condition is abnormal and cannot exist permanently.

As our manufacturing industries continue to develop, foreign markets for constantly increasing quantities of our products will be necessary, and we must accept payment for our exports in the only form which is possible to the foreign nations to which we sell, or continue to balance the differences by liberal loans and generous remittances to Europe for expenditures there. If there is a constant increase of our foreign investments and consequently of the dividends, interest and re-payments accruing from them, our imports of merchandise must continue to increase, not only to the extent necessary to cover the so-called "favorable balance" of merchandise shipments, but also, to enable the transfer to this country of the dividends, interest and other payments accruing on our foreign investments in excess of our new exports of capital. There are, in actual practice, only two alternatives, i.e., increased imports or decreased exports. Last year, notwithstanding that our exports of domestic products increased over 1926 by $46,593,000, our imports decreased, as compared with 1926, by $246,510,000.

The demand of Europe for our meat and raw cotton accounts for an excess of merchandise exports to that continent, by a billion dollars annually. This is practically offset by our net merchandise indebtedness to Asia and South America, leaving as a net balance our excess of manufactured exports to North America and Oceania, amounting to some 400 million dollars per year. As pointed out, this gain is offset by the fact that our foreign investments are now running at the rate of more than a billion dollars a year and are in excess of this so-called "favorable balance of trade," but as our prosperity increases, our demand for foreign

(Concluded on page 1334)

Stoves Molded and Poure

BY F. L. PRENTISS[*]

ADOPTING modern mechanical handling and mass production methods that are very similar to those followed in automobile manufacturing plants, the Peninsular Stove Co., Detroit, recently placed in operation a new plant, including a continuous foundry, manufacturing departments and assembling lines, that represents a marked step forward in the stove making industry. The Peninsular works is an outstanding example of the modern type of factory construction and efficient plant arrangement.

Straight-Line Flow Is a Feature

One feature of this interesting plant is that all the manufacturing departments are so arranged in one complete manufacturing unit as to provide for a steady and largely a straight-line flow, in the proper volume, of work in process, including the castings produced in the continuous foundry and the finished stamped and enameled parts that finally meet on the assembly lines. Thus the foundry operates on a production schedule that synchronizes with the production in the stamping and other departments in which the sheet metal parts for the stoves are made and finished.

All the departments are located in connecting rooms of one single-story manufacturing building 356 x 910 ft. The plant is served by two railroad sidings. One along the back, or east, side delivers pig iron and other material to the cupola stock yard. The second track, along the north side, delivers sheet steel to the stamping department, which adjoins the foundry and extends into a covered shipping room near the front, at the side of the finished stock room. At the front end of the building, adjoining the shipping department, is a covered loading platform for trucks.

Starting from the cupolas at the east end, the molten iron is carried down a center aisle to the pouring stations. The castings move on in a straight line to the cleaning department and, from there, to the stove assembly department, where the streams of castings and stampings meet at the assembly lines. Completed stoves are crated on these lines and pass along into the adjoining finished product storage room.

First Stove Foundry Arranged for Continuous Operations

The foundry is of particular interest because it is said to be the first stove foundry arranged for continuous pouring and molding. In addition to stoves, house heating furnaces are made, the castings being similarly routed in a straight line and the furnaces finally assembled on a conveyor.

The foundry is well provided with conveyors, hoists and other handling equipment, handling, wherever pos-

ontinuously

Straight Line Flow of Materials, Mold Conveyors, Sand Handling and Synchronizing Output of Castings with That of Stampings

sible, being done mechanically. Consequently the amount of man power is cut down and hard foundry labor is reduced to a minimum. The capacity of the foundry is 80 tons of castings per day, and the daily capacity of the plant is 300 gas stoves and 120 furnaces.

Four Continuous Molding Units

The foundry has four continuous molding units, each for a different class of work. Three of these, located in a line at one side of a center aisle, are provided with mold conveyors. Two are used entirely, and the third to a large extent, for making furnace castings. One molding unit, known as the fire pot unit, is used for making fire pots and grates. In the center unit, designated as the main furnace unit, radiator, ash pit and feed section castings are made. The third unit is used for smaller miscellaneous work, including fronts and doors for furnaces and burners and a few other parts for gas stoves. On the opposite side of the foundry, across the center aisle, in a space 24 x 240 ft., stove plate castings and other stove parts are made. The molds for these are hand made.

The three mold conveyors are rectangular in form. The main unit is 150 ft. long, and its platform consists of 28 plates, 36 in. wide on 63-in. centers. The fire pot unit is 156 ft. long and has 34 platforms, 30 in. wide on 54-in. centers. The mold conveyor in the small miscellaneous casting unit is 231 ft. long and has 38 platforms, 33 in. wide on 72-in. centers.

Molds made in the main and fire pot units are transferred to the mold conveyors with air hoists suspended from monorails and are poured on the conveyors. At the end of each conveyor is a jolt-type shakeout, these being located side by side a few feet apart, each serving one unit. The shakeouts have 4 x 5-ft. grating tables, and each is operated by two jolt cylinders, one at each end of the table. The mold is pushed from the conveyor to the shakeout by means of a horizontal, air-operated mold pusher, the bottom plate, which is on a level with the shakeout grate, remaining on the conveyor. After the shaking out, air hoists place the empty flasks, as well as the bottom plates, on gravity roller conveyors, which carry them back to the molding machines. The castings are lifted from the shakeout by means of a porter bar having an electrically controlled lift, so that the work of the operator is confined to steering the castings to a cooling conveyor.

This conveyor is 645 ft. long and consists of an endless chain connecting small trolleys running on a monorail, the trolleys being provided with hooks on which the castings are suspended. The conveyor, starting at the loading end adjoining the shakeout grate, runs up

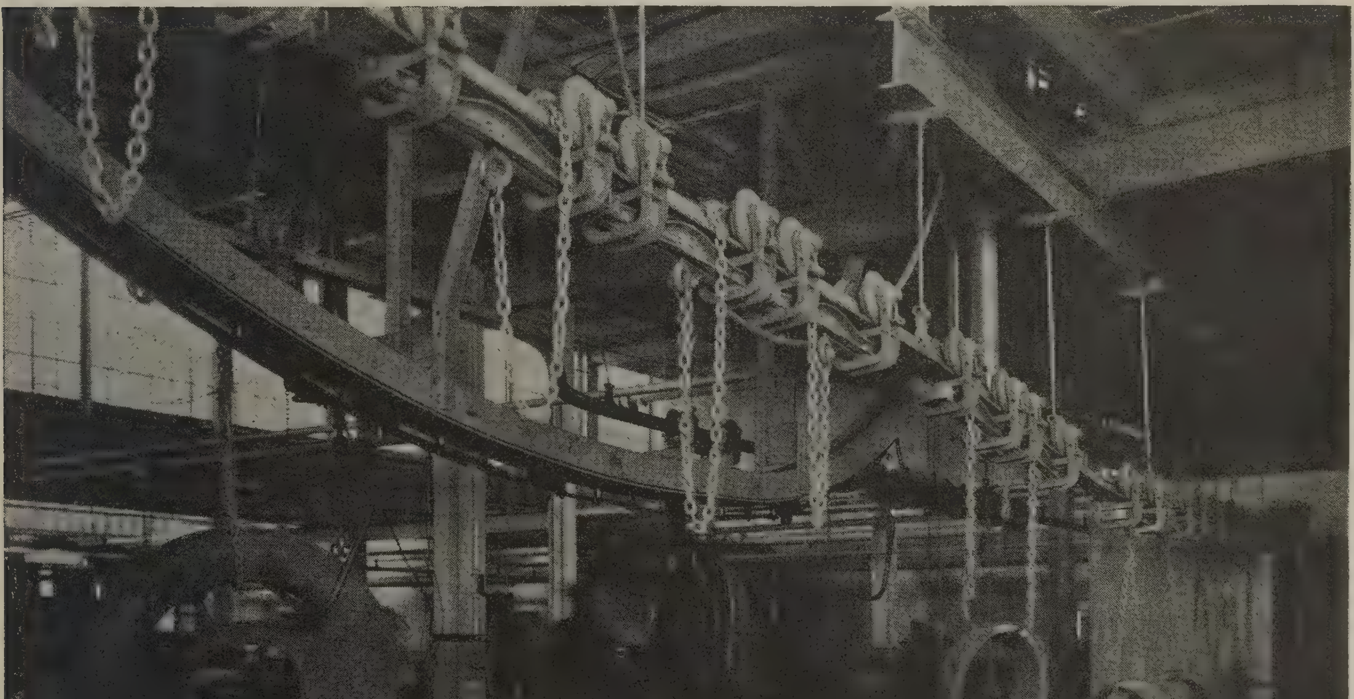
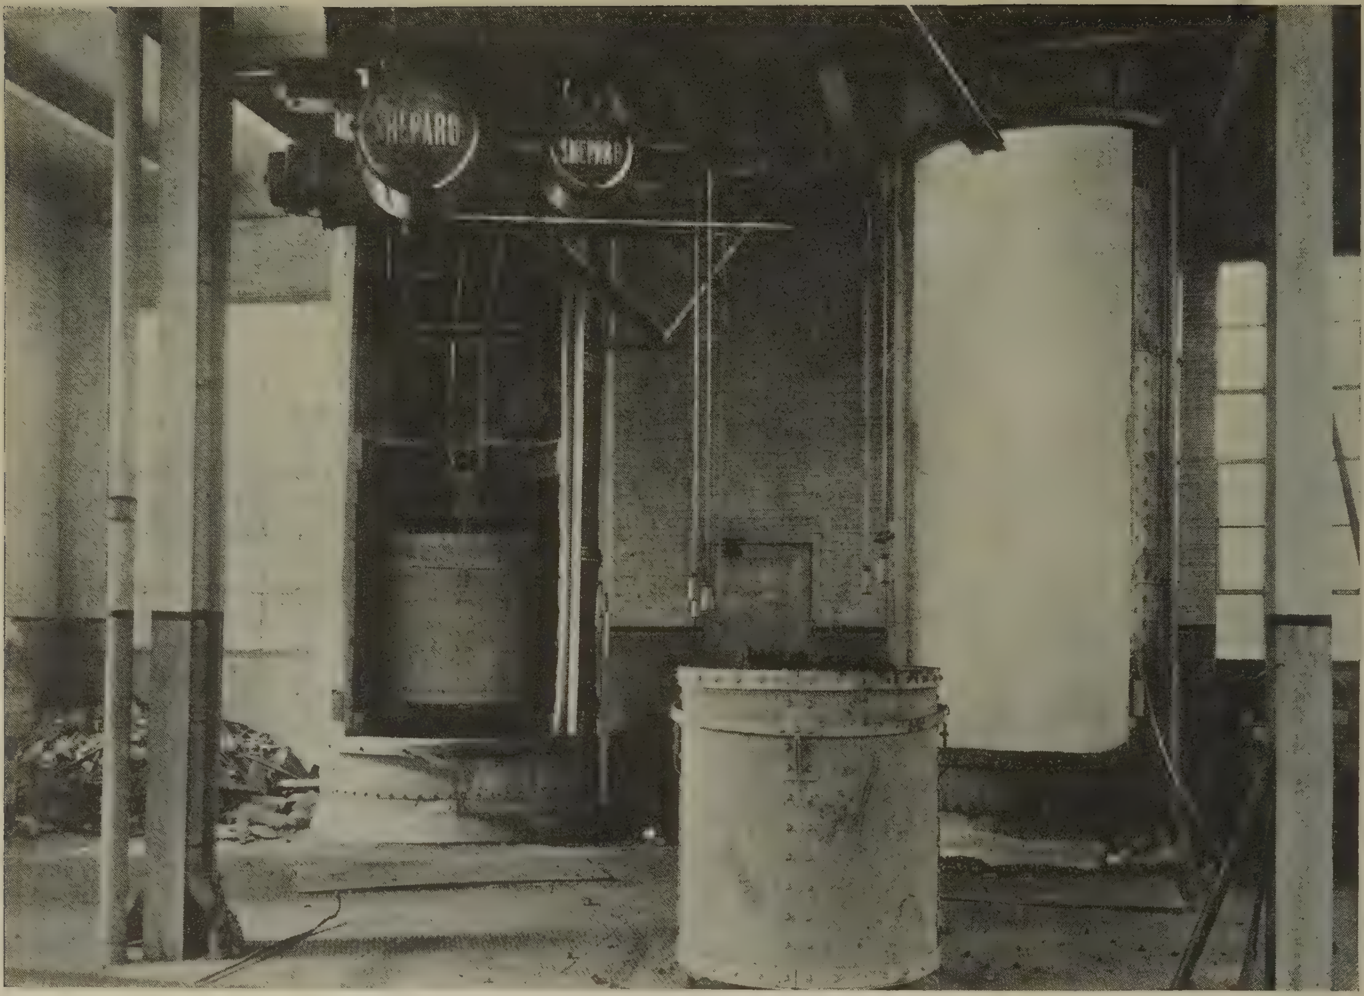
STRAIGHT Line Flow in the Handling of Materials and Castings in the Unique Foundry of the Peninsula Stove Co. Is Clearly Shown by This Plan Drawing

BELOW Is Illustrated Three Types of the Conveying Equipment at One Point in the Foundry. Castings come down from the left on the cooling conveyor (in the curved form), a chain suspended from the adjoining trolley is attached and the forward movement of the cooling conveyor causes the castings to be pulled off the hooks of this conveyor. This is shown at the left. The castings are then pushed on the monorail around to the loading end of the sand blast room shown at the right. Coming out of the discharge end of that room, at the right, they are deposited on the furnace conveyor shown in the lower part of the picture





CUPOLA Charges Are Made Up in Buckets on a Scale Car in a Pit in the Stock Yard and Are Raised to the Cupola Charging Floor by an Electric Crane and Dumped into Either of the Two Cupolas. Only one man is required on the charging floor

a sharp incline to a point above the roof and then down to a sand blast in the furnace assembly department. It takes 105 min. for the casting conveyor to make its circuit.

Mold Conveyors at Variable Speeds

The large molds are made in cast iron flasks, their size being much larger than those usually handled on mold conveyors. The largest flask, that for radiator molds, is approximately 6 ft. in diameter and 20 in. deep. The castings made in this mold weigh about 200 lb. The mold conveyors are operated at variable speed, the speed being regulated to handle molds at the rate required under the production schedule at which the plant is being operated.

No drag molds are used in making feed section, radiator and ash pit molds, these molds being made with a cope and bottom plate. The drag is in effect a green sand core raised above the bottom plate to form an artificial parting. When the mold is pushed off the bottom plate the drag is left on the mold conveyor. Drag molds for radiators and feed sections are made on jolt roll-over pattern-drawing machines, and the copes on jolt stripping machines. Fire pots are made on jolt roll-over pattern-drawing and jolt-squeeze stripping machines.

The third molding unit, used for small miscellaneous castings, has a jolt shakeout at the west end of the molding conveyor, adjoining tumbling mills. The molds are made in snap flasks on two lines of jolt-squeeze machines, one row on each side of the conveyor. The molds are placed on the conveyor by hand.

A Continuous Hand Molding Arrangement

One of the problems that came up in laying out and equipping the foundry was to provide suitable equipment to permit continuous operation of the hand molding department, in which stove parts are made. The bottom board is set on the platform of a specially designed cast iron molding frame on which the mold is made and rammed by hand. The flask is of the usual hinge type used in stove work. When the mold is completed, trunnions are clamped on the flask, which is then turned over with an air hoist. Then, by the operation of a foot treadle, two rollers in the molding frame are raised up, coming in contact with the bottom board and at the same time raising the flask slightly, bringing the bottom board in a horizontal line with an adjoining gravity roller conveyor. The flask is then pushed off the two rollers on to the gravity conveyor without jarring the mold. There are 40 molding stations, each having a gravity mold conveyor. At the side of these conveyors are empty flask gravity conveyors inclined in the opposite direction, one empty flask conveyor being provided for two molders, so that every third gravity conveyor in the line is a return flask conveyor.

The completed molds move down the gravity conveyor to a section of a roller conveyor that moves backward and forward on a 6-ft. wide transfer track extending down the foundry floor between the gravity mold conveyors and a shakeout. When several molds have accumulated at the end of the gravity conveyor, they are poured and pushed over the movable transfer conveyor and dumped on the shakeout grate, which is 30 in. wide and extends the length of the floor molding unit, a distance of 240 ft. Flask and bottom boards are placed on the return conveyor and go back to the molding stations. The castings are loaded in steel boxes mounted on skids, and an electric lift-platform truck takes them to tumbling mills at the end of the molding floor.

Castings are tumbled in eight mills, arranged in two batteries of four each. Five of the units are square mills, four 36 in. square and 56 in. long and one

48 in. square and 60 in. long. The large mills are used for both heavy furnace and stove work, the smaller stove castings being packed in with the larger work. Each mill is provided with a clutch so that it may be operated independently of the others in the unit. The mills were made by the Royersford Foundry & Machine Co., Royersford, Pa. They have "Texrope" drive.

Clam Shell Bucket Handles Coke with Minimum of Crushing

Efficient methods with some new features are provided for handling raw materials to the cupolas. Pig iron and scrap are unloaded from cars with a magnet attached to a 5-ton Shepard crane with a 60-ft. span that serves the raw material storage yard. Coke delivered in hopper bottom cars is dumped into a bin of one carload capacity under the car track in the storage yard. When making up a cupola charge, a specially designed clam shell bucket holding ¼ ton, handled by the yard crane, is let down under a gate at the side of the bin, is filled automatically and is automatically closed when the bucket is lifted. With this handling system, crushing the coke is largely avoided. Sand is stored in one section of the yard in concrete bins having a 20-ton carload capacity.

Charges of iron, coke and limestone are made up on a bucket set on an electrically operated scale car located in a pit about 8 ft. deep, which extends out from beneath the cupola charging floor across the raw material storage yard. The crane delivers the material into the bucket, the top of which stands at about ground level, and the charge is weighed on dial-type scales. The car then moves to the other end of the pit, spotting the bucket beneath a well. Through this opening the bucket is raised to the charging floor by the hoist of a 2-ton Shepard crane.

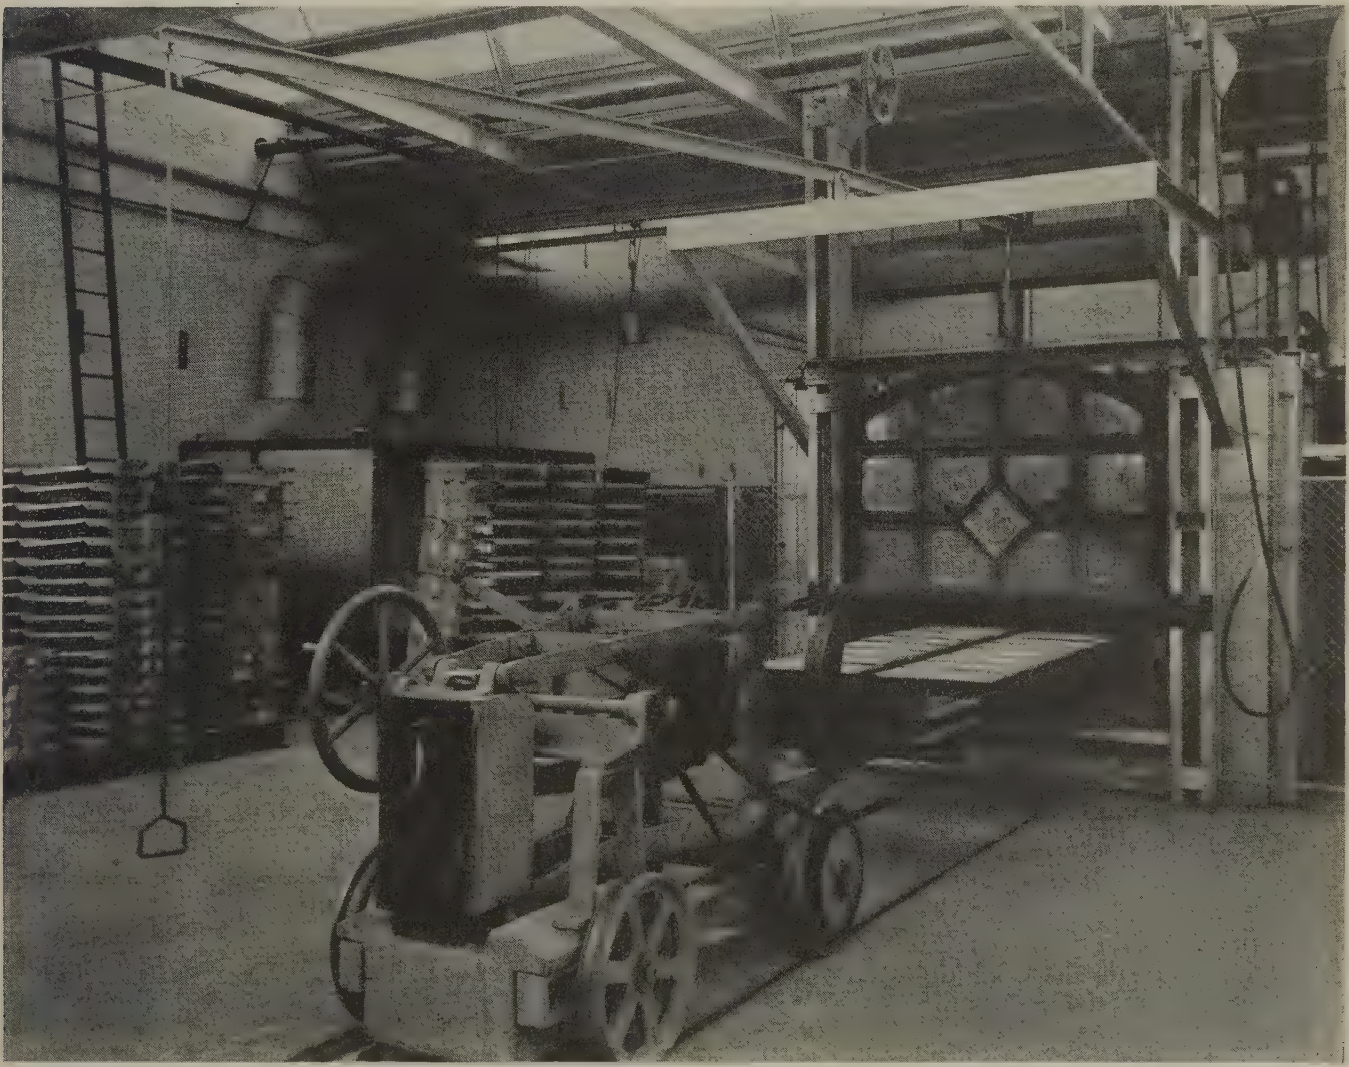
Iron is melted in two cupolas operating on alternate days. The crane, after hoisting the load, delivers the bucket into either cupola through 12-ft. openings, and the charge is dumped from the bottom of the bucket. The bucket is so constructed that, when the empty bucket is drawn from the cupola and set on the floor, the bottom automatically closes. Only one man, the crane operator, is required on the charging floor. The cupolas are 72 in. in diameter, lined down to 52 in. They were built by the Northern Engineering Works, Detroit.

The cupola is tapped with a 1-ton ladle suspended from a monorail crane, hand propelled but having an electric hoist. The molds on the three power conveyor lines are poured directly from the ladle. Iron for the hand floor is conveyed in the ladle to points along the foundry floor where it is poured into hand ladles.

Sand Tempered as It Leaves Shakeout

Three independent sand-handling systems are provided, one for the two large main and fire pot molding units, one for the small miscellaneous unit and a third for the stove plate unit. The sand-preparation plant for the main and fire pot units is located between the two sets of hoppers that serve those units. Sand from the shakeout grates passes to an underground reciprocating conveyor, then up an elevator to an aerator built by the Jeffrey Mfg. Co., Columbus, Ohio. From this the good sand drops on an overhead distributing conveyor, which extends in both directions over the sand hoppers above the molding units. This conveyor is reversible and acts automatically in filling the hoppers. There are eight sand hoppers, four for each unit, seven of 20-ton capacity and the other of 30-ton capacity. Each bin is equipped with one or two clam shell gates and serves one or two molding machines.

A feature of the sand-handling system of these two units is an arrangement for adding water to the sand



ELECTRICALLY Heated Oven for Baking Stampings and Special Machine for Loading the Oven. A similar machine on the opposite side takes out the work after baking as it leaves the shakeout grates, giving the advantage of early tempering of the sand with water before it starts on through the sand-preparation system. The supply of water sprayed on the sand is automatically controlled by the valve that operates the shakeout, so that the amount supplied always depends on the speed at which the molds go to the shakeout.

Sand for the miscellaneous unit is taken from the shakeout through an elevator to a large storage bin. Used sand from this bin and new sand from a smaller bin flow simultaneously and in any desired proportions into a continuous type of sand-treating mill. This mill discharges into an elevator, which delivers the sand to a distributing conveyor that discharges it into 12 bins, each of 6-ton capacity, over the molding machines. Each bin has two clam shell gates and serves two molding machines.

Sand from the shakeout grate of the stove plate unit passes to a belt conveyor, 24 in. wide and 260 ft. long, at the end of which is a magnetic separator pulley. From this the sand makes a right angle turn over a short belt section that delivers it to an elevator from which it is discharged into a sand-treating system similar to that used for the miscellaneous casting unit. A second elevator discharges the sand on to an overhead distributing conveyor, 260 ft. long, which carries it to 40 bins, each of 2-ton capacity, located over the molding positions, the sand being distributed to the bins by plows. Each bin has a clam shell discharge gate control through a hand lever and a swinging spout designed to hold its adjustment in any position.

Mention was made previously of the delivery of furnace castings from the shakeout grates to a casting cooling conveyor. This conveyor, after passing over the roof, extends down to the cleaning department, running alongside a hand-operated trolley that serves a sand blast room. A chain hooked to the trolley on 30-in. centers is hung around the casting, and the movement of the cooling conveyor causes the release of the casting. It is then pushed on the trolley, from which it is now suspended, through the sand blast room. This is a double-chamber unit, one man working on each side of the casting. The sand blast unit was supplied by the New Haven Sand Blast Co., New Haven, Conn.

Castings leaving the sand blast are placed on an assembling table by an air hoist. This table is a flat, continuous moving platform, 30 in. wide and about 125 ft. long. Fins are ground off by a disk grinding wheel located close to the table. Air hoists are provided for lifting the castings off the table for other operations. Practically all the fitting and assembling of the furnace is done on the conveyor.

Special Loading Machine for Enameling Oven

All the presses in the steel stamping department are motor driven. Along the length of one wall are die racks, all numbered. These are wide at the bottom tiers for the larger dies and taper in width toward the top. Stampings to be enameled go to the pickling room and then to the enameling room. Spray enameling booths are located along the sides of this room. Three coats, a slush coat and two white coats of enamel, are applied, each coat being burned on after its application.

Two electric ovens, built by the George J. Hagan Co., Pittsburgh, equipped with Leeds & Northrup pyrometers and registers, are used for baking, one for steel and the other for cast iron. The castings, which are sand blasted before enameling, are kept in the oven 20 min. at a temperature of 1200 deg. Fahr. The steel stampings remain in the oven 2½ min. at a temperature of 1600 deg. The stampings, after enameling, are loaded on forks on the table of a specially designed loading machine and the table is lowered slightly, depositing the work on stationary forks inside of the oven. A similar machine removes the work from the opposite side of the table. With this type of loading equipment the loading forks are not kept in the oven and consequently do not become heated.

There are three assembly lines or mounting tracks, 160 ft. long, for stoves, two for gas units and one for electric stoves. Stove frames and some of the larger pieces are assembled on stands located at the side of the lines. The frames are then placed on the roller conveyors of the assembly lines, located at a convenient working distance above the floor, and on these they are pushed along as the various parts, such as manifolds, linings, heat controls and doors, are put on. When the stoves are assembled, connections are made with gas or electrical lines and they are tested. Then they are inspected, cleaned, wrapped and crated on the assembly line, from which they go to the warehouse.

The pattern shop adjoins the foundry at the east end, and on a mezzanine floor above this is a designing department and sand testing department. A 14-ft. bay on the north side of the foundry, adjoining the large molding units on the side and the pattern shop at one end, is provided for the storage of patterns and flasks along the line of the molding machines.

The building is of steel, brick and glass construction, designed for efficient lighting and ventilation and in other ways providing a comfortable place for men to work. Above the roof are three high and four low monitors. Less than one carload of lumber was used in building the plant. It has a tile slab roof covered with asphalt. In the foundry the flooring is cement except the gangways, for which paving brick was used. There are wood block floors in the assembly department and press shop. The interior walls are painted white except for a strip a few feet up from the foundry floor, which is gray. The entire plant is heated by a forced hot water heating system, water being heated in two 250-hp. boilers. To keep the foundry as free as possible from smoke and dust an exhaust system is provided, with hoods over the shakeout grate.

The plant was designed by Albert Kahn, Inc., Detroit, in collaboration with E. L. Dwyer, vice-president and general manager, and Lon Kimball, general superintendent of the Peninsular company, and with the Osborn Mfg. Co., Cleveland. The Osborn company laid out the entire foundry equipment and designed and built the sand-treating and handling equipment, mold conveyors, casting conveyors, furnace assembly conveyor and molding machines. Tramrail equipment and electric hoists for handling material and castings were supplied by the Cleveland Crane & Engineering Co.

Ten Years of Air Mail

Postmaster General New has done well in designating the week of May 14 as Air Mail Week. He and his department can look with pride on the record of the 10 years since the first regular service, operated with planes and pilots borrowed from the War Department, was started between New York and Washington on May 15, 1918. Between New York and San Francisco the first aim was not at a real air mail service, because no attempt was made to carry a letter on to its destination, but merely to advance it on its journey. Thus, between New York and San Francisco traveling by train at night and plane in daylight hours the old transcontinental mail-time record of 87 hr. was reduced to between 50 and 60 hr. The actual air mail service between the Pacific and Atlantic Coasts began in August, 1923. The best time recorded in the tests of that month with 15 intermediate stops was 26 hr. and 14 min. In July, 1925, came the beginning of an overnight service between New York and Chicago.

In all there are now 22 routes in operation covering a total mileage of 9916. Every day mail pilots fly a distance of 22,110 miles, carrying mail averaging nearly 5700 lb. Three other routes already under contract will add 1705 miles to the system, and four additional routes with a mileage of 2279 have been advertised, with the prospect of contract awards within the year.

Open-Hearth Men Discuss Problems

Furnace Construction and Operation and Methods of Controlling Steel Quality Are Features of Semi-Annual Meeting

REGISTRATION at the seventh semi-annual meeting of the open-hearth committee, functioning under the auspices of the American Institute of Mining and Metallurgical Engineers, was 81. The meeting was held in the Hotel Ohio, Youngstown, under the chairmanship of Leo F. Reinartz, the second meeting under his guidance. At the close of the third technical session Mr. Reinartz was unanimously re-elected as chairman of the committee for the ensuing year. At the same time, C. H. Herty, Jr., United States Bureau of Mines, Pittsburgh, was elected secretary of the committee. Expression was given to the thought that in this capacity Doctor Herty would be able to give the committee more directly the benefits of his researches along the lines on which the committee is working.

In his remarks after calling the assemblage to order, Mr. Reinartz made a plea for promptness in getting into the committee's hands the open-hearth drawings and answers to the open-hearth questionnaire which was set out after the Detroit meeting last fall. Only seven or eight of the companies have responded, so far, in full to the request for data and the point was again emphasized that only those companies which supply such data will be furnished with the accumulation of data from all the sources from which received.

As in previous meetings of this group, great earnestness was displayed in all the topics discussed. This, as before, was carried outside the meeting room. Knots of men in the lobby and in the corridors were "talking shop." They were establishing new contacts, or cementing those already established at earlier meetings, and setting the stage for the inevitable inter-plant correspondence between meetings, which, in the opinion of some of those present, forms one of the most valuable features of the whole affair. Not a few baffling problems have been thus threshed out, with benefits all around.

No Set Papers Read at Meeting

Consideration of topics was taken up in accordance with the preliminary announcement set out before the meeting. The morning session of May 3 was devoted to construction of open-hearth furnaces. The afternoon meeting was devoted to furnace operation, both metallurgical and physical. The morning session of May 4 was concerned with the question of control of quality of steel tapped from the furnace.

During the afternoon of May 4 about half of the men present visited the open-hearth departments of the Republic Iron & Steel Co., and of the Youngstown Sheet & Tube Co. At the Republic plant one of the main features of interest was a stationary furnace tapping 170 tons through a bifurcated spout. R. L. Leventry, superintendent of open-hearth and mills, explained that the two ladles receiving metal from this spout are so evenly divided as to metal contained that they come ordinarily within an ingot of each other. There is provision in the spout, however, for diverting the flow of steel more heavily toward one ladle or the other. This consists of a form of baffle made up of two short stopper rods which can be swung one way or the other. They are, of course, fitted with normal stopper sleeves and heads.

Construction of Open-Hearth Furnaces

IN considering the most desirable hearth area and depth of bath for a furnace tapping 125 gross tons of steel this question was asked: "Is it desirable to have a relatively oversized hearth to melt and refine a charge of very light, bushy scrap?"

Discussion was opened by E. L. Ramsey, superintendent of open-hearth and blooming mills Wisconsin Steel Co., South Chicago. He described his own furnaces as of 100-ton rating, but averaging in 1927 118 tons to the heat. These furnaces have a bath area at the slag line of 620 sq. ft., which figures out about 5¼ ft. to the ton on the heats actually tapped. The depth of this bath on such a heat is 28 in., which was characterized by Mr. Ramsey as about half-way between a deep and a shallow bath. The speaker's preference is for a deep bath. He expressed the opinion that a deep bath is not so fast an operator, but that it usually gives a better quality of steel. It has less surface area to the ton of contents for oxidation by the flame. It cleans up lime better from the bottom.

For acid steel castings the Wisconsin plant has put in two furnaces which are fairly deep. A new furnace for a charge of 100,000 lb. for forging and casting steel has been installed, but it is found that the foundry is satisfied with from 50,000 to 60,000 lb., and consequently the resulting bath is shallow. This at first caused rejected castings to a large amount, sometimes making 75 per cent of scrap. Changes made in this furnace, increasing the depth from 13 in. to somewhat more than 18 in., cut down these rejections materially.

Unusual Tonnage from Deep-Bath Furnace

Further expression of desire for a small hearth, with resulting small slag line to repair, was made by R. L. Leventry, Republic Iron & Steel Co. His plant includes one 100-ton furnace which has been consistently overcharged to such extent that it averaged 136 tons to the heat at its last run. This run persisted through 402 heats, making a total of 54,700 tons of steel in the one campaign. It was under process of rebuilding at the time of the meeting.

This furnace, which uses coke oven gas as a fuel, has a hearth measuring 15 x 40 ft. inside the brick and about 14 x 39 ft. on the slag line. It was reported as giving better steel than the general run of furnaces in the shop, which are tapping about 82 tons on a rated capacity of 60 tons each. These furnaces measure 15 x 34½ ft. and are operated on producer gas. The depth of bath in the large furnace is estimated at 34 in. The charge includes a great deal of light automobile and other scrap. Part of the gain in quality, as compared with steel from the smaller furnaces, was attributed by the speaker to the fact that the coke oven gas was much lower in sulphur than the producer gas.

Furnaces at the Corrigan-McKinney plant have recently been increased in size from 90 to 115 tons. L. E. Yost, open-hearth superintendent at that plant, expressed the belief that the bath should have a depth of 30 in. or so for a 125-ton heat. He made a strong plea, however, for holding the surface of the bath below the sill plate. He characterized as dangerous the common practice of building up a dike of dolomite and permitting the bath to go several inches higher than the sill plate. For 115 tons these furnaces have a hearth area of 630 sq. ft., or 5½ sq. ft. to the ton.

Crane Capacity Sometimes a Governing Feature

Increase in the length of one new furnace, designed originally for 70 tons, was reported by James R. Stuart, open-hearth superintendent of the Colorado Fuel & Iron Co., Pueblo, Colo. This furnace, which originally had a bath measuring 15 x 36 ft., has been lengthened to give a 42 ft. slag line and is at present tapping 80 tons. This is far below its present capacity, however, and it is expected that the charge will be raised so that from 100 to 120 tons may be tapped from the furnace as soon as the crane equipment of the plant is increased to take care of the heavier load. The crane capacity is now the neck of the bottle. The bath is 34 in. deep and the charge includes a large proportion of light scrap. Most of the furnaces in this plant are nominally of 50 tons, but are tapping regularly from 70 to 72 tons.

Limitation of crane capacity was given by J. H. McDonald, open-hearth superintendent Algoma Steel Corporation, Sault Ste. Marie, Canada, as holding his furnaces to 80 tons. His bath measures 14 x 42 in. inside the banks, giving 588 sq. ft. It is only 22 in. deep. The scrap charge is mostly light. He reported tapping 55 tons on a 35-ton furnace by getting the bath up to 13 in. above the sill plate. This gave a depth of 30 in. in the furnace. With this large charge a small furnace takes about the same length of time in making a heat as the 80-ton furnace. Producer gas is the fuel and about 10 per cent of limestone is charged.

Especially Large Furnaces at Weirton

Dimensions of three large furnaces at the plant of the Weirton Steel Co., Weirton, W. Va., were given by Frank A. King, open-hearth superintendent. One furnace, built originally for 100 tons and now tapping 150 tons, has a hearth measuring 16 x 40 ft., with an area of 630 sq. ft., or only 4.2 sq. ft. to the ton. The depth of bath is about 3 ft. This furnace takes 11 to 12 hr. to make a heat. A 200-ton furnace in this plant has a bath measuring 17 x 43 ft. The latest and largest furnace at Weirton is a 300-ton furnace, with a bath measuring 19 x 49 ft. and fully 4 ft. deep. The 200-ton furnace takes 15 or 16 hr. to make a heat, while the big one requires about an hour longer. The quality of steel obtained from these three sizes of large furnaces was reported about the same as from 100-ton furnaces, and they give no more bottom trouble than do the others.

Furnaces at the Lowellville plant of the Sharon Steel Hoop Co. were reported by J. M. Hughes, general superintendent, as having averaged 108 tons to the heat in 1927, against a rating of 91 tons. These furnaces have a bath 34 ft. long and measuring about 14 ft. 9 in. between brickwork and 13 ft. 7 in. on the slag line. This area works out at 501 sq. ft., or 4.65 sq. ft. to the ton. The bath is 2 ft. 9 in. deep. The scrap charge was characterized as "medium light," including a miscellaneous variety of scrap, much of which is decidedly light.

Special Orders Placed With the Deeper Furnaces

At the Donner Steel Co., Buffalo, several furnaces built for 85 tons are tapping 100 tons. Samuel B. Muir, open-hearth superintendent, gave the hearth area as 500 sq. ft. and the depth of bath as 27 in. Two tilting furnaces at this plant, having the same capacity as the others, have hearths of 550 sq. ft. and only 24 in. deep. Mr. Muir explained that very few special heats are made on the tilting furnaces, because it is difficult to get the same grade of steel. There are more inclusions in the steel, although the furnaces are faster working. He attributed this to the fact that the bath was shallower than with the stationary furnaces.

Shallow baths are bad, according to Clem B. Collingwood, superintendent of open-hearth and rolling mill Stanley Works, Bridgeport, Conn. In his plant, which is the old American Tube & Stamping Co. unit, a 75 to 80-ton furnace has a bath measuring 11 x 30 ft., giving 330 sq. ft. of area. It is 30 in. deep. The bath contents are 725 cu. ft., which works out at an average bath depth of 26½ in. He referred to five furnaces measuring 12½ x 42½ ft. on the slag line and only 20 in. deep, in which the limestone was sticking up through the slag during a good portion of the operation. At tapping time these shallow furnaces frequently sent out slag ahead of the steel and the steel quality was expressed as "rotten."

Should All the Scrap Go In at One Time?

Furnaces 34 ft. long and 12½ ft. wide on the slag line were reported by Robert L. Cain, open-hearth superintendent Bourne-Fuller Co., Cleveland. These are tapping 90 tons, the bath being 32 in. deep. The scrap is all light and it is found necessary to put it in on the instalment plan, varying from three to as many as six or seven batches. These are successively partly melted down before there is enough room to get in the next batch.

In the opinion of Kenneth C. McCutcheon, open-hearth superintendent American Rolling Mill Co., Ashland, Ky., it is better to put all the scrap in at once rather than melt in batches, if it is possible to get it into the furnace at one time. Use of an oversize hearth for light scrap, said Mr. Ramsey, results in automatically falling back to a shallow bath. The problem might be met by using a high roof and large doors. This, however, would probably result in a larger fuel consumption. The furnace may be cooled off to a greater degree if all the scrap is charged at once, but when it is charged in instalments the subsequent lots have a tendency to solidify the bath already melted, and thus make it necessary to melt it all over again.

This question was touched on by G. D. Tranter, open-hearth superintendent American Rolling Mill Co., Middletown, Ohio, who explained that his practice is to put in light scrap in from two to five drags. This is with a cold metal charge. He expressed the opinion that there is no difference in the time of making the heat, from variation in the number of drags of scrap, but that there is a greater oxidation loss as the number of drags increases. To offset this it is his practice to charge one buggy of pig iron with the first charge of scrap and get the resultant working.

Larger Furnace Makes More Heats

Improvement in life of furnace was reported by W. F. Davis, open-hearth superintendent Youngstown Sheet & Tube Co., Indiana Harbor, Ind., by increasing the size of the unit. Each end of the furnace pan was lengthened 3 ft., giving a present hearth area of 13 x 39 ft., inside the banks, and a depth of 24 in. From this furnace 106 tons is tapped, with a maximum of 114 tons, against 90 tons before the change. This furnace is now 63 ft. in length, with an addition of 15 ft. for the two dog houses, making 78 ft. over all.

It is using either oil or tar as a fuel. The uptakes, which formerly were 48 in. square, are now 50 x 84 in. Slag pockets are 13 x 14 ft., with a height of 9 ft. to the arch. Regenerators are 25 ft. long and the brick goes 12 ft. above the 4-ft. rider walls. These chambers are 14 ft. wide for air and 8 ft. for gas. The spring of the arch is 19 ft. above the bottom of the chamber. The increase of life on the furnace roof has been from 289 to 430 heats. The backwall is now lasting from 180 to 200 heats, against the previous 60. Slag pockets have gone up from 200 heats to 430 and in one case to 461.

Increasing the length of a furnace from 34 ft. 6 in. to 36 ft. and increasing the charge from 80 tons to 125 tons without changing the regenerators was reported as wholly unsatisfactory, by Howard McClelland, open-hearth superintendent Republic Iron & Steel Co. This furnace operates on producer gas.

Practice on a 40-ton furnace in the plant of the Commonwealth Steel Co., Granite City, Ill., was reported by C. M. Cook. This is a basic furnace making castings. Stone and scrap are charged first and melted in about 2 hr. to a low level. Then the requisite amount of cold pig iron is added. Mr. Cook reported no more melting loss from this practice than when all of the charge was put into the furnace at once. The time of making the heat was reported to be about equal in the two melts. The limestone proportion was 14 to 15 per cent.

Discussion of Regenerator Practice

General discussion of checkers, as to the best type of brick to use and method of laying them up, together with a number of subsidiary topics, was taken up as the second item on the program. Henry A. Young, open-hearth superintendent Allegheny Steel Co., Brackenridge, Pa., opened the discussion by describing his practice as straight 9-in. brick on small regenerator chambers, using natural gas. There are two air chambers at each end of the furnace, with 12,158 sq. ft. of radiating surface. The openings measure 5½ x 6½ in. He expressed the opinion that a deep bank of checkers is better than a shallow one. He favors the use of larger brick with a larger chamber. At the end of a run of 200 to 240 heats he takes out about half the checkers, reclaiming many of those removed. About one-third are lost on each run.

Similar brick was reported by C. R. Henry, open-hearth superintendent Alan Wood Iron & Steel Co., Conshohocken, Pa. In this case the openings are 4½ in. About 65 per cent of the brick are reclaimed after a run. The surface was given as 175 sq. ft. to the ton, with the furnace tapping an average of 78 tons. Coke and tar are the fuels.

Larger brick are used by many of the companies. William C. Kitto, open-hearth superintendent Pittsburgh Steel Co., Monessen, Pa., uses 4½ x 4½ x 10½-in. brick in regenerator chambers measuring about 26 ft. long. These are 7 ft. wide for gas, 10 ft. 9 in. for air, both being 17 ft. 8 in. high to the skewback. There are five rider walls, 21 in. center to center, in the air chamber, measuring 30 in. high and 4½ in. thick. On these are tile 3 x 10 x 21 in. With 29 courses of brick on top, the horizontal opening measures 4½ x 6 in., with 6 x 6 in. vertical opening. There are 21,410 brick in each air chamber. The volume of the air chamber is 5396 cu. ft., or 58 cu. ft. to the ton. The exposed heating surface is 10,734 sq. ft., or 116 to the ton. The volume of the gas chamber, 3565 cu. ft., is about 39 cu. ft. to the ton.

Reclaiming about 42 per cent of the brick for reuse in checkers, with an additional 6 per cent available for bulkheads, makes a total of 48 per cent. The runs are averaging about 300 heats on a 93-ton furnace, using producer gas and having a bath 15 x 35 ft.

This same size of brick is used by the Weirton Steel Co., and about 300 heats are made to the run. Some two-thirds of these brick are reclaimed after a run. The gas chambers of the smaller furnaces in this plant, however, use 9-in. straight brick. Inadequate regenerator capacity, with the use of the 4½ x 4½ x 10½-in. brick, was reported by Robert L. Cain. He stated that it probably would be necessary for him to use smaller brick to obtain the required capacity.

As much as 500 to 600 heats on a run was reported by Major James W. Mills, open-hearth superintendent Granite City Steel Co., Granite City, Ill. This is on 58-ton furnaces using oil as a fuel. From one-third to one-half of the brick are reclaimed after the run. There are 30,000 brick in four chambers, each chamber measuring 8 x 17 ft., with a height of 12 ft. to the arch.

Getting Away from Fire Clay Brick

Silica brick in checker chambers was reported by Ernest A. Smith, open-hearth superintendent Andrews Steel Co., Newport, Ky. One furnace on these brick has run as high as 810 heats. Another one, which is still operating, has reached 550 heats. These brick are 3 x 4½ x 12 in. and there is very little of them left for reclaiming after a run—possibly 25 per cent. Producer gas is the fuel.

Silica brick for the three or four top courses of checkers were reported by Lafe Young, open-hearth superintendent Laclede Steel Co., Alton, Ill. He uses 4 x 4 x 13-in. brick and has 19,640 sq. ft. of surface in the checkers, or 273 sq. ft. to the ton. After a run of 400 to 450 heats he reported a loss of about 10 per cent in brick. The outgoing temperature was given as 1200 deg.

Loftus brick were reported by David G. Baxter, open-hearth superintendent Pittsburgh Crucible Steel Co., Midland, Pa., as being the cleanest he had ever seen in action, even after running for some time. The explanation came from the fact that the sewers were found pretty well clogged up, as the dirt and flue dust were carried from the brick into the sewers. A similar experience was reported by M. A. Smith, general manager Edgewater Steel Co., Pittsburgh. He has 21 courses of Loftus brick on 80-ton furnaces using producer gas and a charge of cold metal. These are in the gas chambers, which measure 16 x 8 ft. 9 in. x 16 ft. high. The time of heat is from 11 to 12½ hr. and waste-heat boilers are used. There appears to be no change in the fuel consumption and about 300 heats are expected from the furnace.

Burners for oil at 95 lb. pressure were described by C. B. Collingwood. The burner tip is set about 8 ft. from the bath. The burner is a home-made one, consisting of a pipe 2½ in. in diameter, reduced successively to 1½ in. and then to 1 in. Inserted in the 2½-in. pipe is a piece of ⅜-in. pipe having on its sides, near the end, four ⅛-in. holes aimed backward into the stream of steam in the larger pipe. Superheated steam is used for atomizing, at 85 lb. pressure for melting and 60 lb. for finishing. The run of the oil and steam mixture to the furnace is about 30 ft. Consumption of oil is about 50 gal. to the ton of ingots on the 40-ton furnaces and 40 gal. on those of 50 tons.

A dry burner with tip about 5 ft. from the bath was reported by H. B. Hubbard, open-hearth superintendent Inland Steel Co., Chicago. The oil is heated to 200 deg. Fahr. and is atomized by using superheated steam at 120 lb. pressure. This pressure is reduced to 90 lb. after the charge is melted. Consumption was reported as averaging 34 gal. to the ton of rail steel.

Variation in oil consumption between 34½ gal. to the ton when running with hot metal and 40 gal. when using cold metal was reported by W. F. Davis. As the Indiana Harbor plant has no mixer, the ladles of metal have to be taken as they come from the blast furnaces.

Oil at 150 lb. pressure, with dry steam at 175 lb. was reported by Frank A. King, Weirton. Oil at 175 lb. and steam at 125 lb. are used by the Laclede Steel Co., as stated by John W. Gething, superintendent. On a cold charge the consumption is 34 gal. to the ton on 80-ton furnaces using 6 per cent of burnt lime.

On a straight suspended roof at the Donner plant Mr. Muir expects to obtain from 450 to 480 heats, there being already 410 heats out on the present run. The time of heats was given as averaging 11 hr.

Special Ports Favored by Several Men

Unlined Blair ports are giving good satisfaction, in the opinion of N. F. Egler, Valley Mold & Iron Corporation. They are easy to install or to change, having fixed dimensions. About 700 heats are being obtained on the gas checker chambers, while the air chambers, after 200 heats, become pretty dirty. For 150 heats the average time has been near 9 hr. each.

Brick-lined Blair ports run dry at the Trumbull Steel Co. were discussed by George D. Cain, open-hearth superintendent. The furnace had 199 heats already out, with an average of 12 hr. each. The checkers appear clean. Coal consumption, using producer gas, has been 448 lb. to the ton of ingots, compared with 510 lb. for unlined Blair ports, water-cooled.

With piped ports, Mr. McClelland stated that the nose of the port stays in very good shape, but that there is a certain amount of cutting away behind the pipe. The original size of these ports was 21 x 30 in., but all of them have since been made smaller.

Speeding Up Furnace Repairs

Steel arch centers, without intermediate support, are used by the Colorado Fuel & Iron Co. in making hot repairs. Mr. Stuart said that no wood is used anywhere in the process. Semicircular steel forms are used in the flues. Two laborers can put in the centers. The masons then work from above them and are not exposed to severe heat at all. After the forms have been used for half the length of a furnace, on a general repair, they are then reversed and used for the other end.

Brick, 4 x 4 in., are put at each end, on the skewback supports, and the center rests on these. When the job has been done, the brick are knocked out from under. The center then drops and is easily pulled out. No one has to go inside the furnace. Use of steel centers was reported, also, by C. R. Henry, of Alan Wood.

Metal forms are used at the Ashland plant of the American Rolling Mill Co. Mr. McCutcheon stated that rail sections are suspended by overhead wires at the two skewbacks to hold the form. The latter is moved along a ring at a time. In general repairs rails are laid across the furnace, resting on brick piers. A steel "flooring" of sheets is placed on the rails and wooden centers then are used above the steel sheets. Complete protection is thus afforded the men and the centers from the residual heat of the bottom.

At the plant of the Sheffield Steel Corporation, Kansas City, no centers are used. T. T. Scott, open-hearth superintendent, reported using a form of hook brick. The roof is laid up with ribs to facilitate the use of this type of brick, each unit of which hooks over the adjoining ring, hanging from the rib. A great deal of hot patching is done here.

Slag Cars as a Time Saver

Use of slag cars in the slag pockets was stated by John E. McCullough, National Malleable & Steel Castings Co., Melrose Park, Ill., to be one of the greatest improvements in open-hearth practice in recent years. In his plant the checkers are directly underneath the furnace, and are accessible from both sides. The car is made of a semicircular steel plate, lined with 4½-in. brick and with sand over the brick. It is on rollers, and is hauled back and forth through use of the crane operating through a snatch block. Steel cable is used on the pit side, but for the connection under the furnace, where great heat is encountered, steel chain of large links is substituted.

This car has capacity for the accumulations of three to five weeks near the beginning of the run, diminishing to two weeks at mid-run and being changed every week (Saturdays) as the end of the run approaches. It takes about 1¾ hr. to take out the car, remove the slag and return the car to its place. The joint is made by 3 x 3-in. angles, with a row of brick laid on them. These are adjusted while the car is outside the heat of the pit. After it is back in place, sand is placed on the brick by means of long-handled spoons, making a sloping surface up to the walls. Mostly liquid slag is gathered here, with some stalactites. The cars are pulled before they get so full as to promise trouble in getting them out.

Blasting Out Recalcitrant Slag

Dynamite is resorted to in many plants to get the slag out. Mr. Stuart stated that in the Colorado plant a water-cooled drill is employed in preparing the hole for the dynamite. When using a long fuse there is the trouble that the dynamite and fuse will both burn up, to no avail in removing slag. Hence a 10-in. fuse is used, by a man familiar with explosives, and no trouble has been experienced with it. By this means four pockets are cleaned out in a day, using eight men.

No damage to the furnace is caused by this method, in the opinion of G. D. Tranter, provided the dynamite is used to undercut the slag. He reported getting into the slag pockets 8 hr. after a furnace goes off, and having them clear in 48 hr. He uses a drill for the holes and shoots the charges from the bottom of the pockets.

Other Methods of Cleaning Slag Pockets

Prying the slag loose is the practice of some of the plants. At the Republic plant air drills are employed to make holes for 8 x 8-in. billets 35 ft. long. A fulcrum is set close to the pocket and then the crane places a ladle or other heavy weight on the outer end of the billet. At the Wisconsin plant the slag is undermined back to the slope. Then the 100-ton crane and a big monkey hook are used to get the slag out. The whole process averages 48 hr. In this case there is a layer of 8 or 10 in. of sand in the bottom of the pocket and the slag volume is 7 or 8 ft. thick.

Tapping out the slag was tried both at the Brier Hill plant and at the Campbell plant of the Youngstown Sheet & Tube Co. At both places it was found too cold to run freely enough to make the attempt a success.

Use of a 12-in. sand bottom and a false wall of loose brick 4 to 6 in. thick and 5 to 6 ft. high was reported by M. A. Smith, Edgewater Steel Co., to facilitate getting the pockets cleaned. The process takes 48 hr., and producer gas is the fuel. Squirting in water while the slag is still hot was recommended by Henry A. Young. This, he said, breaks up the slag and enables him to get it out in 36 to 40 hr. He uses natural gas.

Brick-lined cast iron doors are in use in the Ashland plant of the American Rolling Mill Co. to reduce the time required to break seals in getting at the slag. Some doubt was expressed by several members of the conference as to the ease of opening these doors, but Mr. McCutcheon assured the meeting that they can be opened when required.

Cleaning out flues of checker chambers by means of a vacuum cleaner was reported by Howard McClelland. As this resulted in "putting the flue dust all over the landscape," the practice was discontinued. Then an attempt to clear the flues by blowing them out quickly shut down the furnace. It was found that they had been concentrated at the base of the stack in a pile 8 ft. high.

Furnace Insulation Is Only Partial

Insulation 4 in. thick under the regenerators and 2½ in. thick on the side walls has been installed in connection with the 175-ton furnace at the Republic plant. The flues, also, are lined as far as the stack with 2½ in. of insulation. Coal consumed in the producers feeding the furnace is about 400 to 425 lb. to the ton. There is doubt as to whether the insulation (C3 Sil-o-cel) or the great size of the heat taken from the furnace is responsible for this good fuel showing. The insulation is put on as a sort of Celite concrete, without any inclosing plate.

One furnace of the Pittsburgh Steel Co. at Monessen, said William C. Kitto, open-hearth superintendent, has the regenerators sheathed with ⅜-in. steel plate. Here the outside walls are laid up with 9-in. brick in place of 13½-in. and the division wall between chambers is 22½-in. thick instead of 27 in. Two other furnaces have received a ½-in. coating of Weber's 48 insulating cement, put on while the furnace was hot. This cost about $200 to the furnace, half of which was for the material. Both these methods have stopped a great deal of air infiltration.

Outside the checker chambers at the Inland Steel Co. is a 4½-in. Sil-o-cel brick wall, for insulation. Two new furnaces at the Ashland plant of the American Rolling Mill Co. are insulated from the stacks to the bottom of the uptakes. The flues have received C3 concrete, while the regenerator chambers are covered with 2½-in. of Sil-o-cel "natural," both on sides and roof, being covered with a slurry to avoid air infiltration. Fantails have 4½-in. burned brick (C22) underneath and 2½-in. of the same material on the roofs.

At Portsmouth, Ohio, C. H. Moreland reported, the Wheeling Steel Co. has insulated furnace flues with 2½-in. brick. John W. Gething stated that the Laclede Steel Co. uses insulation over the checker chambers and carries it up to the floor level. Above the floor a silica cement ⅛-in. thick is smeared over the furnace.

NEXT week the two remaining sessions of the conference will be covered: Furnace Operation Problems and Control of Steel Quality.

Locomotive Shipments Drop Again

Total shipments of locomotives from the principal manufacturing plants in the United States are reported for April by the Department of Commerce at 46 units. This is the smallest number in many months. It compares with 70 in March and with 98 in April a year ago. For the first four months the total was 222, against 372 in the first four months of 1927.

Only two of the April shipments were on foreign account, both being steam. This compares with nine in March and with an average of more than 14 a month in 1927. Of the locomotives on domestic account, 38 in April were steam and six electric.

Sales billed by the General Electric Co. in the first three months of 1928 amounted to $71,640,790.40, compared with $72,474,474.03 for the corresponding period last year. Profit available for dividends on common stock was $11,261,842.71 in 1928, compared with $11,028,143.96 for the same three months last year.

The American Rolling Mill Co., Middletown, Ohio, has announced plans for amending its charter to authorize the increase of its capital stock from $30,000,000 to $50,000,000. The new issue will consist of 800,000 shares of $25 par common.

Purge Business of Corruption!

Judge Parker, Addressing National Chamber of Commerce, Demands Turning Out Those Who Flaunt Laws—General Motors Official Describes Forecasting Plan

WITH an estimated attendance of 2000, the sixteenth annual meeting of the Chamber of Commerce of the United States opened in Washington Monday and continues through Thursday, dealing with a wide range of business problems under the general head of "Team Play for Prosperity." The keynote was sounded by Judge Edwin B. Parker, chairman of the Chamber's board of directors, who, in vigorous terms, called upon organized business to cast from its ranks those business men who by their ruthless acts bring discredit upon business as a whole. Judge Parker declared that stockholders of corporations have the duty of publicly repudiating those who misrepresent them by amassing profits through corruption.

"The times demand straight thinking and frank speaking," he said. "They demand that we consider the disturbing evidences of business atavism—of a throwback to a day of unrestrained individualism; a day of the 'public be damned,' when men of great business ability with an eye single to their own selfish interest and immediate returns, and without regard to the future, ruthlessly pursued their predatory lusts in a spirit of 'after me the deluge!' "

Reference was made to recent conspicuous examples of prominent business men becoming involved in transactions tainted with fraud, but, he said, they are not peculiar to this day nor to the profession of business. He demanded to know whether the business community as a whole shall lose the ground it has painstakingly and deservedly gained that a few—a very few in relation to the vast host engaged in American business—"may crash through and demolish the canons of sound business practices." Many Congressional investigations, it was asserted, are of the highest value to the public, including business.

Unless business purge itself of those who flaunt the law and abuse their power, said Judge Parker, the public will "turn loose thunderbolts of wrath which inevitably will bring legislative and governmental regulation of business to a degree that will seriously hamper a legitimate freedom of business initiative."

Addressing the manufacturing group, E. J. Mehren, vice-president McGraw-Hill Publishing Co., New York, presented shrinking profits as one of the most ominous trends in business.

The difficulty was held to have its genesis in overcapacity and to include the craze for volume, overproduction, obsolete equipment and consequently high manufacturing costs, intense competition, a mobile and even fickle buying public, high selling costs, price profiteering by buyers and price cutting by sellers.

"We need, first, to supplant the craze for volume by a reasonable passion for profits," said Mr. Mehren. "And, second, we need to eliminate buyers' profiteering, and the accompanying price cowardice.

"At the very root of our difficulties lies the craze for volume. We'd sooner have volume than profits. A full factory and red ink seems as popular as 60 per cent operation and plenty of black. Craze for volume, swollen sales expense to get the last 20 per cent of business, ruinous prices to fill up the factory; the goal is volume, not profits.

"We fail to realize that the law of diminishing returns cannot be flouted. The nearer we get to perfect performance the smaller the gain for given effort. It can't be escaped. The top business costs more than it is worth and only injects an undesirable color scheme into our balance sheets."

Mr. Mehren declared that the opportunity is present for beneficent propaganda, "for spreading a fire of sound business doctrine the country over; for creating through trade associations and chambers of commerce a country-wide sentiment for restoration of fair profits as our business goal."

The second revolution was held to relate to buyers' profiteering and its accompaniment, "price cowardice." It was declared that they do not exist in every industry or trade, but that a large section of business is suffering from them. The buyer, it was stated, beset by hungry sellers, has the seller on the run and plays one seller against another until the price is down not merely to rock bottom, but "in a hole blasted deep in the rock by the combined dynamite and T. N. T. of buyers' profiteering and price cowardice."

Mr. Mehren wanted to know of the manufacturers if they are practicing on others what they condemn when practiced on them, inquiring if their purchasing agents are profiteers and price clubbers.

"Put your own purchasing right," he said, "and the reformation will have been started. You can, then, with clean hands carry this propaganda into your own circles of influence."

Forecasting Methods of General Motors Corporation

SPEAKING of the experience of the General Motors Corporation, Donaldson Brown, vice-president of that organization, told the manufacturing group that he believed and hoped that some day American business and industry will approach the ideal of stabilization sufficiently to free them from the bogey of the business cycle. He spoke on "Forecasting and Planning Vital to Industrial Prosperity."

"When this is brought about," he said, "it will be very largely due, I am sure, to the closer and more economical control of industrial and merchandising operations that will follow a better appraisal of ultimate consumer demand. And intelligent forecasting and planning—vital to business prosperity—is the mechanism to bring this about and to remove the unnecessary hazards from the course of American business."

Contrary to the view of one group which still regards "the scrawling of the business cycle as almost the handwriting of fate, dictating good business or bad," Mr. Brown said he was in sympathy with the growing tendency to look upon it as an effect rather than a cause. He declared that, with present facilities in the banking structure, there can be no cause for major disturbances of the business cycle except as brought about from conditions of business itself. He expressed the opinion that, while business is subject to the influence of the business cycle, the business cycle itself—to the extent at least that its fluctuations are of any serious consequence—results from lack of knowledge and from errors of judgment on the part of business management. He recited the plan of General Motors in operation for forecasting future consumer demands and for planning and controlling activities in accordance with the indicated expectations. From General Motors' experience with this plan, he said, he believes its results constitute a distinct step toward the stabilization of the automobile industry. Forecasting and planning he declared to be nothing more or less than a system of control whereby production, purchases of materials and the employment of capital are coordinated with sales requirements. Budgetary control was described as an apt phrase except that it is likely to imply a rigidity that must be guarded against. Flexibility, he said, is a prime requisite so that there may be quick response, and thus the possibility of adjustment throughout the system to the requirements of changes of situation that are inevitable. The focal point of the system was said to be the sales output. The flow at this point, said Mr. Brown, must be gaged and every other activity must be coordinated with it. Ultimate consumer demand, it was stated, is the absolutely fundamental factor controlling the continued sale of any product. This was said not to be the demand of the manufacturer who buys from some other producer, but that of the user of the final and completed product.

"Some businesses are more fortunately situated than others as to the opportunity of analyzing the ultimate consumer demand for their product," said Mr. Brown. "Those that are producing and selling products which represent a preliminary stage in the manufacture of a final product that in course of time finds its way into the hands of the ultimate consumer are far removed from such an opportunity. They are nonetheless dependent upon the requirements of the final consumer; and it is poor solace to place the responsibility elsewhere, when an unrecognized state of demand results in a decrease in sales and an enforced curtailment of production."

Effect of Diversification on Employment

The diversification of industry made possible by the economic law of diminishing labor per unit of production, it was said, has a direct bearing upon employment.

"For while regularization of employment in industry depends upon the correct adjustment of supply to consumer demand," Mr. Brown said, "the growth of employment and wages depend upon continuing increase in efficiency and diversification of production as well as upon the growth of consuming power. Unemployment which progressively and in temporary stages may result from efficiency is of constructive benefit in itself. It results adversely only when industry fails to grasp the opportunity thus presented of increasing diversification of production and building additional consuming power by the employment of the labor thus rendered available. A knowledge of consumer needs and adaptability in meeting them is required to take constructive advantage of such an opportunity.

"There is another kind of unemployment that is an unmixed evil from the economic standpoint. It is that which results from a temporary curtailment of production. The labor thus rendered idle is not available for the production of other products which might attract the public fancy, except at the expense of a labor shortage or deficiency in the original line when resumption of activity occurs. Overproduction, due to mistaken appraisal of consumer demand, seasonal fluctuations, style changes, the development of substitutes, or insufficient information regarding accumulated stocks are causes of this sort of forced curtailment and unemployment."

Correct Appraisal of Public's Needs Essential

A theoretically perfect coordination of business was declared to comprehend an exact knowledge in advance of what the public wants and an exact knowledge of how much the public wants. Such a condition, Mr. Brown said, would mean that there no longer would be reason for worrying about the business cycle. The situation in 1921 was cited to illustrate the disastrous economic consequences of wrong appraisal of consumption demands. False values, Mr. Brown stated, were built up by the period of inflation during 1919 and 1920 and exaggerated expectations of future demands were created by the competitive buying of raw materials and semi-finished products by manufacturers of all kinds. A state of overproduction, it was said, existed, but was not recognized. The cause of this situation would not have appeared, it was said, if there had been a way to detect the true state of consumer demand. Mr. Brown said one reason why the automobile industry was the first to recover from the 1921 depression was the fact that the automobile manufacturer has nothing between him and the consumer except a dealer organization, leaving no occasion for accumulation of stocks in the hands of numerous intermediaries, thus differing from some other industries further removed from the ultimate consumer.

The two fundamentals in planning by General Motors are of a statistical and constructive character, as described by Mr. Brown. The former is directed toward ascertaining the statistical facts bearing upon future consumer demand. The constructive efforts are directed toward improving probabilities. Statistical information gathered from dealers gives sales and sales forecasts and other items. The constructive efforts concern "long-term" and "short-term" factors of influence. Among the long-term factors of influence, said Mr. Brown, are those relating to consumer appeal in style, functioning, serviceability, etc., and the engineers and salesmen work hand in hand on this subject. Short-term factors of influence on demand were described, those that may quickly be called into play to offset unfavorable developments. They include special sales stimulus, more intensive advertising, or even temporary under-pricing, whenever these seem called for by a falling off in anticipated and logical demand. Reports are made monthly to cover the ensuing quarter for each division of General Motors and the whole is coordinated into one planning scheme.

Mr. Brown said it was felt the more accurate appraisal of basic requirements and the coordinated control resulting therefrom have formed a distinct step toward the stabilization of the automobile industry. He said that it appears that the stabilization of a multistage industry depends largely upon the proper regulation of commitments in the first stage in accordance with retail demand. After that, he added, with properly applied methods of forecasting and planning, synchronization becomes a matter of one stage keeping in step with another.

A Worcester Museum of Early and Latter-Day Iron Objects

John W. Higgins, president and treasurer Worcester Pressed Steel Co., Worcester, Mass., will found a museum which will be devoted to objects and literature to give the history of iron and steel, particularly sheet iron and steel, from its beginning to the present day. The project has been incorporated in Massachusetts, the incorporators besides Mr. Higgins being his brother, Aldus C. Higgins, treasurer Norton Co.; Paul B. Morgan, president and treasurer Morgan Construction Co., and Harry G. Stoddard, vice-president and treasurer Wyman-Gordon Co. Plans are making for a museum building 50 by 200 ft., and probably four stories, of steel and glass, to be erected next year. There will be a library room as well as the museum proper, which will be arranged to occupy the complete height of a portion of the building.

The collection as planned by Mr. Higgins will combine art with the working and fabrication of iron. Its nucleus will be a large group of medieval armor, together with arms, displaying the craft of the smiths of Italy, Spain, Germany, France and England in the fifteenth and sixteen centuries. Mr. Higgins has been collecting these pieces for years and has brought together a great number of them.

It is the purpose to take the collection back to the beginnings, and by authentic objects, if obtainable, and by plaster cast, or at any rate by illustration and manuscript to trace the evolution to the present time. Objects earlier than the tenth century will be of bronze, since very few earlier iron objects have come down. The museum and library will be furnished with fifteenth and sixteenth century furniture, pennants, portraits of men in armor, and tapestries, to afford a suitable background.

The Hamilton Coke & Iron Co., Hamilton, Ohio, has announced the appointment of Eaton, Rhodes & Co., Cincinnati and Pittsburgh, as exclusive sales agents for its Miami Koppers foundry coke and other coke for industrial purposes.

Cooperation Needed to Help Profits

Metal Branch of National Hardware Association Commends Effort to Obtain Modification of Sherman Anti-Trust Law

THE keynote of the meeting of the Metal Branch of the National Hardware Association in Boston on May 3 and 4 was the need for cooperation to bring adequate profits to manufacturers and distributers. The Metal Branch voted to seek the aid of other organizations, including the American Iron and Steel Institute and the Chamber of Commerce of the United States, in advocating a modification of the Sherman anti-trust law as one step in the bringing about of better business conditions.

George H. Charls, president National Flat Rolled Steel Products Association, Cleveland, pointed out the need for cooperation of steel and affiliated interests in an address, which was in part as follows:

"Today executives require facts and figures on productive capacity, demand, the general and particular trend of business, sales and specifications against contracts, the potential and prospective markets, the inroads of competing commodities, the supply and demand of the material to be purchased, cost comparisons, simplification and standardization of commodities, standardized packing, transportation cost, trade research and sales promotion, labor-saving machinery and its effect upon the cost of manufacture, trade practices and business ethics. It is obvious that such facts must be strictly reliable and up to the minute.

"We must make the sense of frustration which prevails stimulating and useful, by permitting it to lead us to fresh explorations. We must permit a healthy, lawful, decent plan of stabilization extinguish the flicker of sickly, feeble efforts to exist. We must recognize that nothing so quickly destroys confidence and dissolves prosperity as dull vegetation in mindless, senseless, destructive competition.

"Both the mills and the jobbers seem to have been growing unmindful of their dependency, one upon the other, of their obligation to staunchly support each other in a spirit of mutual helpfulness and protection. The average return on steel industry capitalization in 1927 was 5.22 per cent, the lowest in recent years. While production declined less than 8 per cent from the record output of 1926, earnings declined 24 per cent.

Iron and Steel Prices Comparatively Low

"Iron and steel prices are now 38 per cent over the 1913 level; other industrial products about 50 per cent. Iron and steel wages are 125 per cent over the 1913 level, and freight rates are practically double the 1913 basis. American business faces the necessity of collective effort to resist foreign growing trade and business practices, which, though not unethical, are uneconomic.

"It is well known to you and it must be apparent to all who are informed that if the price of sheets and strips is further beaten down, wage reductions may be precipitated. It is possible that if these wage reductions are forced on the manufacturers of steel as they have been forced on the brick and textile industries, they will have a tremendous influence on other industries. This may mean a decrease in purchasing power all over the country. He who flagrantly slashes prices, as well as he who just as flagrantly heckles the seller and breaks them down, cannot deny or ignore his responsibility when the facts show conditions to be as they are today."

While the seriousness of the business situation was stressed throughout the two-day session, many other subjects came up for discussion, such as simplification or standardization, merchandising policies, business relations, direct mill shipments, delivery costs, market channels, etc.

In relation to the question of improving merchandising policies and business relations, Chapin E. Harris, Brown-Wales Co., Boston, maintained the steel mills should take a greater interest in the warehouse and in the distribution of steel and steel products, but he feels that the greatest good can come from cooperation between the jobbers themselves.

Standard Sizes for Steel Roofing Sheets

A report of the sheet steel simplification committee was presented by the chairman of that body, W. L. Latta, Wheeling Steel Corporation, Wheeling, W. Va. It stated that at the October meeting a summary of a survey made by the Division of Simplified Practice, Department of Commerce, contributed by 14 manufacturers was presented and a 51 per cent adherence to roofing sizes and gages was indicated. A similar survey just made by that division disclosed that 18 manufacturers had reported and that adherence had advanced to 55 per cent. The report further stated:

"The importance of sheet steel as a roofing material justifies the publication of standard gages and sizes in a separate simplified practice recommendation; that the title of that recommendation shall be 'sheet steel roofing'; that the present portion of the sheet steel recommendation as applies to roofing and siding be reaffirmed and republished without change; that the following paragraph be added and incorporated in the established standards: 'Standard weight subject to the usual mill tolerances of 2½ per cent plus or minus.'"

In connection with the simplification of sheet steel it developed in discussion that demands in various parts of the country vary. It was shown that No. 29 gage gutter stock is still sold in the South and in some other sections of the country, but has been practically eliminated elsewhere, No. 28 gage being the minimum standard. It also developed that 2½-in. conductor pipe is demanded in certain sections of the country and that rather than lose customers demands are being filled.

Where demands for these now odd sizes are made, orders are treated as specials and an extra charge is made. F. O. Schoedinger, Columbus, chairman of the association, felt that the making of No. 29 gage stock was retroactive and the situation sufficiently serious to warrant the appointing of a committee to make a report on the matter at the next meeting of the association. He appointed the committee.

In connection with this subject, H. R. Colwell, Division of Simplified Practice, Department of Commerce, Washington, quoted from the editorial from THE IRON AGE of April 5, 1928, p. 960, on "Ban the Thin Roofing Sheet."

Address on Continuous Rolling of Sheets

G. F. Ahlbrandt, the American Rolling Mill Co., Middletown, Ohio, gave an address on the process of rolling continuous sheets, and Robert H. Lyon, Lyon, Conklin & Co., Inc., Baltimore, spoke on present conditions concerning mill direct shipments. A. L. Philbrick, Congdon & Carpenter Co., Providence, R. I., and chairman of the overhead expense committee of the National Hardware Association, discussed expenses of the sheet metal distributer as applied to sales.

Subjects that came up for discussion included methods to be employed to increase the use of terne plate, the report of the terne plate simplification board of review, of which L. D. Brueckel, Weirton Steel Co., Weirton, W. Va., is chairman, the justification of free truck delivery of sheet metal as based on margin of profit, and channels for marketing sheet steel seconds.

L. D. Mercer, Central Alloy Steel Corporation, Massillon, Ohio; F. J. McNeive, W. F. Potts, Son & Co., Inc., Philadelphia; John Follansbee, Follansbee Brothers Co., Pittsburgh; G. F. Ahlbrandt, American Rolling Mill Co., and W. T. Ryan, E. P. Sanderson Co., Cambridge, Mass., were re-elected members of the metal committee.

Straight-Line Polishing Machine with Automatic Features

Automatic polishing equipment designated as the Larson straight-line polishing machine, for parts having large flat surfaces such as bumper bars, molding strips, T-squares, etc., is being marketed by the Hanson-Van Winkle-Munning Co., Matawan, N. J.

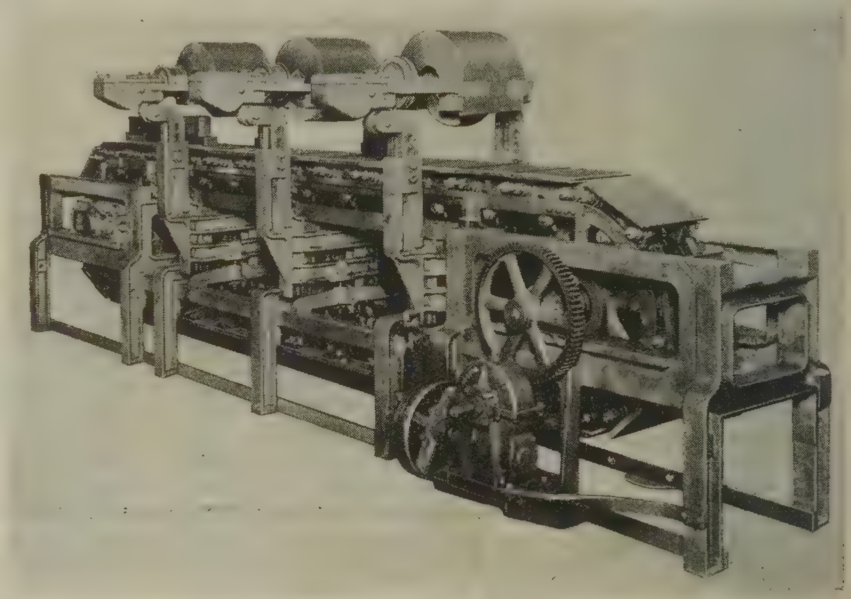
In addition to straight flat polishing, the machine is adapted for a number of special polishing and buffing operations through the use of lifting cams for irregular shapes; positive rotating fixtures for circular work, such as automobile lamps; and automatic spinning fixtures for bolt heads or vanity cases. It is claimed that, because of the flexibility of the spindle adjustment and the rigidity of the work platens, almost any hand operation can be duplicated.

An outstanding feature of the machine is the carrier table, which consists of a series of cast iron platens that interlock to form a solid table on which the work is set. These work platens are machined true and are mounted on adjustable hardened rollers. The adjustment provided is intended to assure proper alinement of the top surface of the platens with each other, and to form an adequate base on which to fasten mechanical fixtures or magnetic chucks for holding the work in place. The rollers in turn are run on a rigid track.

The polishing wheels are carried by heavy steel spindles running in double bearings, which in turn are mounted on heavy yokes controlled by compensating springs. This construction is emphasized as providing proper support for the heavy polishing wheels and permitting uniform pressure of wheels against the work. It is also said to permit longer life of the abrasive and wheels, and prevent excessive spindle bearing wear.

The spindles are adjustable to any pressure and are arranged to oscillate over the work, this combination of balanced spring pressure and continuous to and fro movement of the spindles being intended to provide the constant movement of the wheel over the face of the work that is effected by the skilled polisher. The oscillating motion may be eliminated on the last spindle to straighten the high-light marks. For all cutting operations, the polishing wheels should rotate opposite to the direction the work is taking; but for final finish, the last wheel may be rotated in the opposite direction so that the work goes in the same direction or, "with the wheel to fan" the work. The spindle yokes and wheels may be set at various angles so that each succeeding wheel will polish or buff out the marks left by the preceding wheel by cutting across them. Any number of polishing wheels can be used, the machine being built on a sectional basis, permitting a long or short delivery and feed end to suit conditions.

Movement of the table is controlled by foot levers placed both at the delivery and receiving ends. The table may be brought to a dead stop quickly by pressure of the foot clutch. When the table is started the spindle heads lower the polishing wheels automatically to the work. When the table is stopped the wheels are lifted automatically. When in operation, the work platens carry the parts to be processed under the polishing wheels which are set at predetermined heights. Each wheel takes but a slight cut. By using three or more wheels the total amount of material removed at one handling is multiplied, and production is correspondingly increased. The first wheel may be coated with a coarse abrasive, while the final or finishing wheel can be coated with fine abrasive to produce the best surface for plating or buffing. The polishing wheels may be run dry or greased with tallow and supplied with hoods for connection to exhaust systems, or the work may be lubricated by the use of a coolant oil system with screened reservoir tank.



In Addition to Straight-Line Polishing, the Machine is Adapted for a Number of Special Polishing and Buffing Operations

The polishing wheel may be driven either by motor or by an overhead countershaft. Tex-rope drive, with necessary pulley and motor platform, can be furnished also. The speed of the platens, usually 12 ft. per min., can be altered to suit various conditions. For average polishing, each head requires 3 hp. and the platen drive from 1 to 2 hp. The machine illustrated occupies a floor space of 3½ by 14 ft. and weighs approximately 4500 lb., exclusive of motor, magnetic chucks, or other attachments for special jobs.

Equips Board Drop Hammer with Roller Bearing Heads

Board drop hammers built by the Chambersburg Engineering Co., Chambersburg, Pa., are now available with the rolls mounted in roller bearings, as well as with the plain bearings as heretofore.

With the Roller Bearings, Lubrication Is Assured Over Long Periods and Oil Does Not Reach the Drop Hammer Boards

Savings in power and better maintenance of alinement are claimed for the application of the roller bearings, and also the elimination of interruptions due to oiling and the changing of bushings. It is pointed out that although hammers are usually oiled at least twice daily, the lubrication is not always complete and the oil frequently finds its way to the boards, shortening the life of the boards materially. With the roller bearings, which are packed with lubricant, it is claimed that adequate lubrication is assured over long periods without oil reaching the boards.

Some 343 advisory committees from industry are now cooperating with the Department of Commerce and upward of 1400 conferences with business leaders have been held. The committees feed into the Department of Commerce economic information and views of industry as to Government policy and at the same time take back to industry scientific information and group decisions as the result of group discussions of common problems.

Horizontal Drilling and Tapping Machines for Production Work

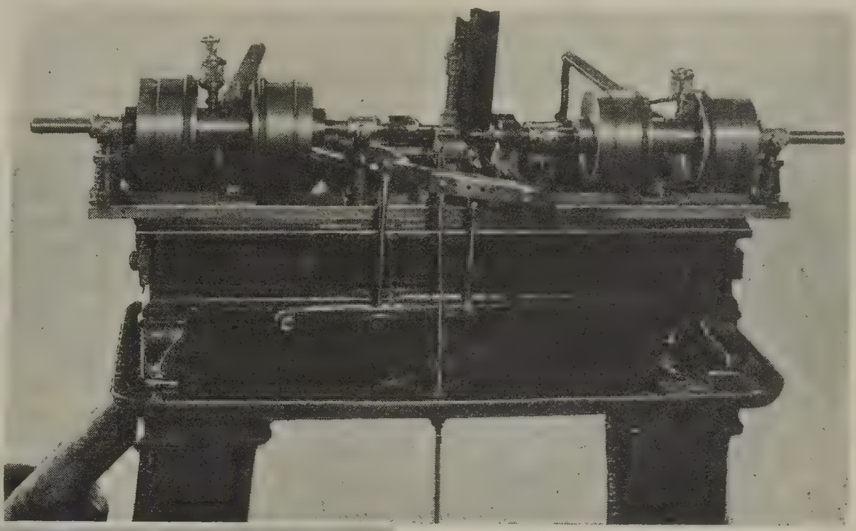
Simplicity of construction and adjustment and high-speed operation are features emphasized in connection with new horizontal combination drilling and tapping machines which have been placed on the market by C. B. Mahan, 162 Longview Terrace, Rochester, N. Y. The machines are available in single or two-spindle, and in bench and floor types. It is claimed that taps have been run on these machines at speeds up to 2000 r.p.m.

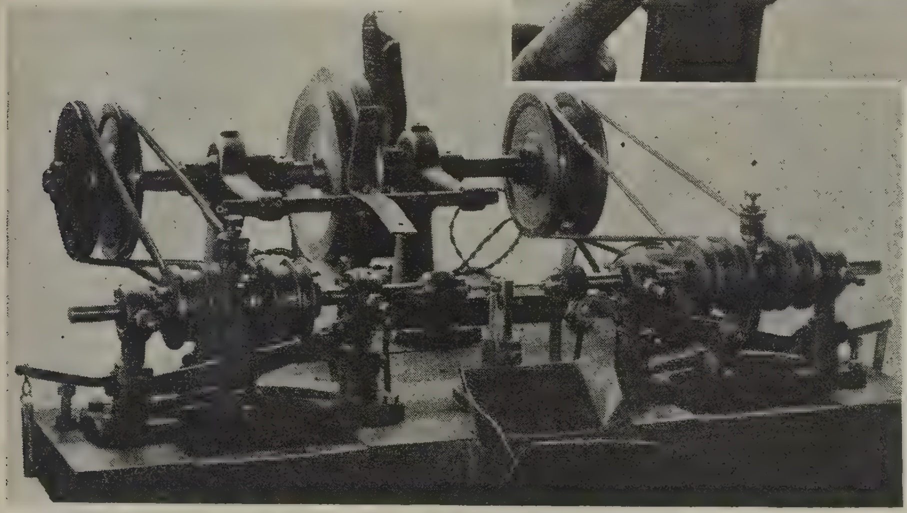
The horizontal design is said to simplify jig construction, obviate trouble from dirt and chips and eliminate the weight and backlash of the spindles. The machines may be set to tap to a definite depth, the tap reversing automatically when it bottoms. Differences in tap leads and cutting speeds are controlled by a spring, the tension of which may be adjusted so that even if the operator should jump on the foot pedal the tap would not be affected.

One of the machines, a floor type combination two-spindle drilling and tapping machine, designated as the model No. 1, is here illustrated. An automatic chucking arrangement is provided and the unit has been used for a wide range of work, including drilling, tapping, threading, counterboring, countersinking, inserting screws, and heading over rivets.

A machine of the same design, arranged for bench mounting and of much higher speed, is also available. One of these machines, using a 4/36 tap, is said to be in daily use, tapping 3400 holes an hour. By shifting the driving belt to the fixed pulley, the machine may be converted into a drilling machine and production up to 4400 holes per hour obtained. By equipping the chuck with a die holder, both ends of a small crank have been threaded at the rate of 1500 pieces per hour. With one side of the machine equipped with a drill and the other side with a tap, production of 1200 drilled and tapped holes is said to be obtained. Another feature stressed is the drilling of two holes very close together in one operation. It is claimed that on one job a ¼-in. hole is drilled and another beside it, leaving a 1/32-in. wall between them.

A third unit, designated as the No. 3 single-spindle drilling and tapping machine, of bench type, is also available. It is in effect just one-half of the regular machine, and can be used for drilling, tapping, cross drilling, and the other operations for which the two-spindle machine may be used.





The Floor-Type Machine, Above, May Be Used for External Threading, Counterboring, Screw Inserting and Rivet Heading, as Well as for High Speed Drilling and Tapping. The bench-type is shown at left

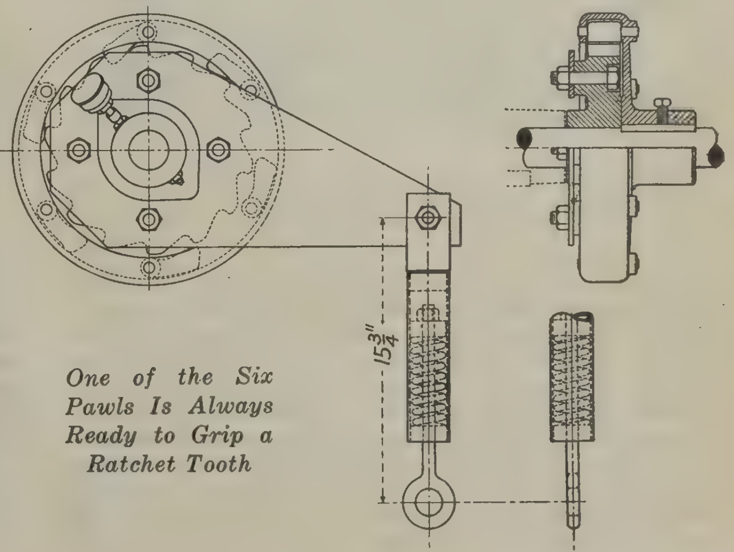
---

Silent Ratchet Safety Lock to Prevent Backward Run of Loads

To prevent a backward run of the equipment with interruption of power, the Jeffrey Mfg. Co., Columbus, Ohio, has developed a silent ratchet safety lock. It is designed for use with large elevators, pivoted bucket carriers, belt conveyors and similar equipment where vertical lifts are carried. This lock provides protection against spilling a loaded vertical or inclined elevator where an unexpected interruption of power occurs.

As the drawing shows, one of the six pawls grouped around the ratchet is always in position to grip a ratchet tooth. The housing itself is bolted to the countershaft and turns with it when the power is on. The pawls are spaced around the ratchet teeth so that the maximum backward motion of the ratchet is no more than one-third of the distance between the teeth (less than 1 in., even on the largest stone elevator).

Another feature of the safety lock is the spring attachment which takes the jar out of the operation of the mechanism. This spring acts as a snubber on the arm bolted to the ratchet. When the load descends on the pawls the spiral spring takes most of the force of the blow. This safety lock can be fitted on elevators and inclined conveyors now in use, as well as on new installations.

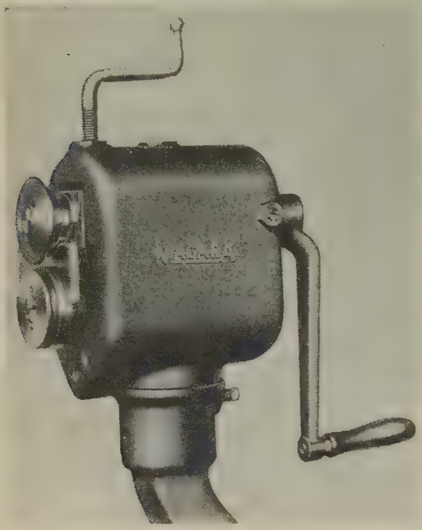


One of the Six Pawls Is Always Ready to Grip a Ratchet Tooth

Bench Machine for Turning, Wiring or Burring Soft Steel up to 18 Gage

A new combination bench machine for turning, wiring and burring operations on 18 gage, and lighter, soft steel has been made available by the Niagara Machine & Tool Works, Buffalo.

This machine, designated as the No. 147-C, is intended for use in the manufacture of sheet metal products and in industrial maintenance work. It is equipped with back gearing and has a one-piece inclosed frame, which construction is emphasized as providing safety of operation and long life in service. The faces are of steel, hardened and polished, and may be interchanged conveniently for the various operations for which the machine is intended. Regular equipment includes one pair of burring faces for each operation, burring, turning and wiring; gage; wrench; and heavy bench stand. The machine may also be furnished as a single-purpose unit with only one pair of rolls for the particular operation required.

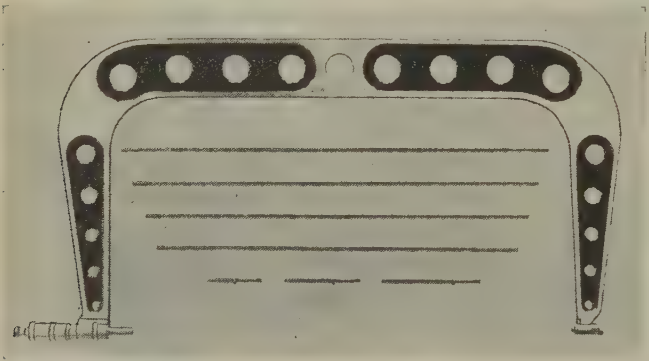


Turning, Wiring, and Burring Faces May Be Interchanged Conveniently

Micrometer Calipers with 4-In. Range

Three new micrometer calipers, the combined measuring capacity of which is equal to that of 12 ordinary micrometers of 1 in. range, have been added to the line of the Brown & Sharpe Mfg. Co., Providence.

The smallest of the three micrometers, designated as the No. 90, has a range from 12 to 16 in. The range of the next size, the No. 91, is from 16 to 20 in. and of the largest, the No. 92, from 20 to 24 in., by thousandths. The range of measurements of each tool is obtained by four interchangeable anvils of different lengths. The anvils may be changed conveniently and are held in place positively by a knurled nut. The anvil cannot revolve but remains in one position in accurate alinement with the spindle. Each anvil has means of adjustment for wear. Clamp rings are furnished for the micrometers, which are available also with metric graduations.



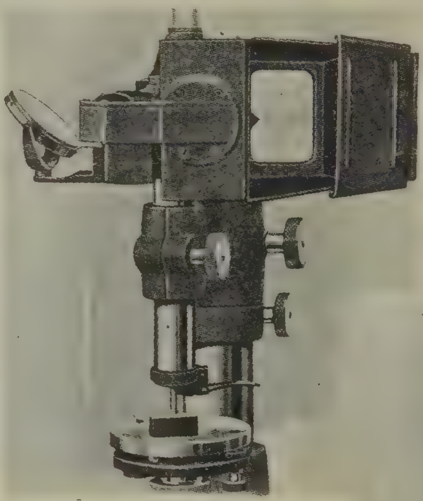
Anvils May Be Changed Conveniently and Have Adjustment for Wear. They are held in place positively by a knurled nut

New Optimeter Arranged to Facilitate Reading of Measurements

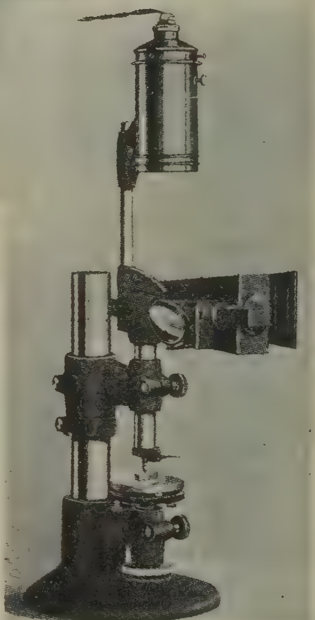
Means for reading the scale by both eyes, instead of through a microscope, is the principal feature of a projection Optimeter recently added to the Carl Zeiss line of optical measuring instruments, which are marketed in the United States by the George Scherr Co., 142 Liberty Street, New York. In this instrument the optical tube has been changed to permit a lamp holder and a screen attachment to be fitted to it. The image of the scale as it is formed in the ocular is projected through a set of prisms on to the screen, as shown in the accompanying illustration.

Reading of the measurements from the screen facilities using the instrument, and without impairing its accuracy in any way, because transfer of the image to the screen is obtained purely by optical means. Because of the greater convenience in reading the measurements the instrument is more adapted to mass inspection work than the previous model of the Optimeter. Application of the Optimeter tube to special fixtures may be made as conveniently as before, the tube and projector being a self-contained unit. Readings on the screen may now be conveniently observed by two or more persons at the same time.

Other improvements embodied in the new design are a table with a serrated instead of a solid surface, and increased range scale to plus and minus 0.005 in. The scale is graduated to 0.00005 in. as heretofore. The projector is also available for horizontal and inside Optimeters.



The Measurement-Reading Screen Is Shown at Left



The Scale May Now Be Read by Both Eyes Instead of Through a Microscope, as Before

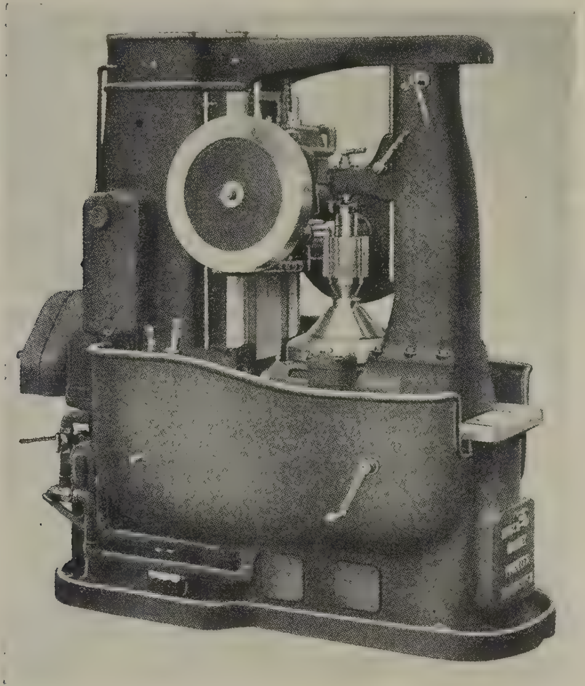
---

A large increase in the number of foreman training courses in practically all lines of industry is shown in a survey report issued by the Department of Manufacture of the Chamber of Commerce of the United States. The number of foremanship courses, the bulletin shows, has grown from 105 in 1925 to 933 in 1927. Most of the growth in foremanship courses last year was in the larger industrial States, the outstanding increases for the year having been Connecticut, Michigan and West Virginia. The machinery group, not including transportation equipment, has the largest number of courses, the survey shows. On the basis of the number of workers employed, however, the rubber products and chemicals and allied products groups are far in the lead.

Hobbing Machine for Manufacturing Operations

A hobbing machine designed and built by the Hermann Pfauter Co., Chemnitz, Germany, for high production work in automotive and other manufacturing plants, has been placed on the American market by the O. Zernickow Co., 15 Park Row, New York. The machine has capacity for chrome-nickel and other steel spur gears up to 12 in. in diameter, 5 diametral pitch. The maximum hobbing width is 8 in.

The general arrangement of the machine may be noted from the accompanying illustration. The main drive is by a directly coupled 8-hp. 1500-r.p.m. motor which is mounted on a bracket on the bed of the machine and is started and stopped from the operator's position. The hob drive is through spur and bevel gearing and a spline shaft to the hob saddle. An internal-tooth gear cut in one of the flywheels serves to drive the hob spindle. Hob speeds of 62, 89, 125 and 175 r.p.m. are obtainable through change gears.



Convenience of Operation Is a Feature: The machine is intended for quantity production of spur gears up to 12 in. in diameter

The hobbing head carries the adjustable hob spindle and the hob driving spindle, which are located one above the other. Each of these spindles carries a large flywheel at its outer end to equalize the torque on the hob spindle. The hobbing head is arranged to swivel 5 deg. each side of horizontal to suit the lead angle of the hob. The hobbing saddle slides on V-ways on the upright and is provided with taper strips for adjustment. The weight of the hobbing saddle is balanced by a counterweight, and the driving shaft is in tension. The dividing gear drive runs in an oil bath. It consists of a worm wheel and a worm which is adjustable both axially and radially.

Gears to be hobbed are mounted on a vertical arbor, which is supported by a horizontal arm and by the bed of the machine as shown, this inclosed rectangular construction being said to withstand stresses without distortion. The horizontal arm of the work support has a movable center. Interchangeable work arbors are provided so that one arbor may be loaded with gear blanks while another lot of blanks is being hobbed.

A number of feed changes, ranging in rate from 0.028 to 0.236 in., are obtainable, and changes may be made by means of a single lever while the machine is in operation. At the end of the cut the hobbing saddle is returned automatically at rapid rate to the starting position by means of a separate motor. Reversing positions for this saddle are set by movable stops. Rapid traverse of the saddle may also be effected by hand. A coolant system is provided.

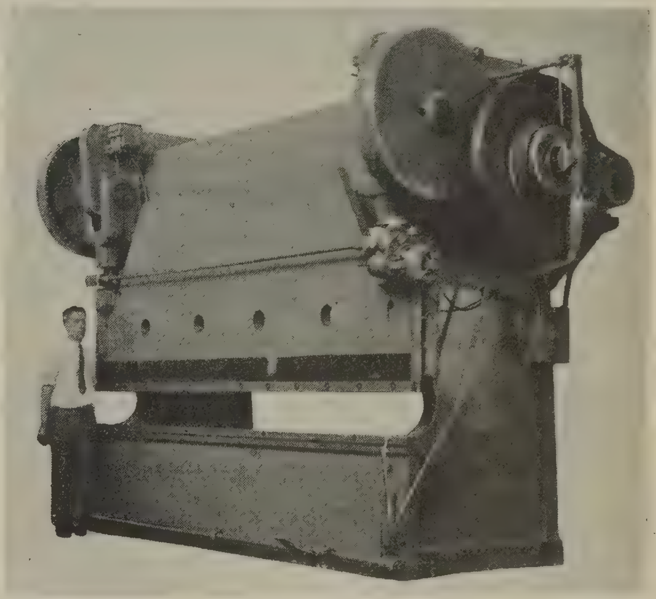
Simplicity of operation is a feature emphasized by the makers. Controls are within easy reach of the operator. After the stops for automatic travel of the hobbing saddle are set and the table is set for correct depth of tooth, the table carriage is locked in position on the bed by means of a single lever. Main shafts of the machine have ring oiling bearings, other important points being lubricated from a central source by means of a pump from which oil is pumped to a distributer which circulates oil through piping to various parts of the machine. The floor space occupied by the machine is 28 in. by 60 in., and the net weight is 5300 lb.

All-Steel Press Brakes With 4¼-In. Single-Plate Housings

Use of a single plate, 4¼-in. thick, for the housings, instead of the double-plate box construction previously employed, is a feature of a new series of all-steel press brakes placed on the market recently by the Cincinnati Shaper Co., Cincinnati.

One of the new machines, which are designated as the No. 120 series, is shown herewith. This unit has capacity for making right-angle bends at one stroke in steel plate ⅜ in. thick and 8 ft. long, over a 3-in. die opening, or in steel plate ¼ in. thick and 12 ft. long, over a 2-in. die opening, without overload.

It is stated that in previous models of these machines it was necessary to use two 2-in. plates, welded and riveted together, because of the difficulty in getting plates of the required size and thickness rolled flat enough for this type of construction. Perfectly flat plates up to 6-in. in thickness now being regularly available are said to have made possible the press brake with the single-plate 4¼-in. housings.



The Method of Mounting the Bed and the Use of a Divided Connecting Rod Are Features

The bed and ram plates are 3 in. thick. The bed extends below the floor line from 18 to 28 in., depending upon the length of the machine. Because of the method of mounting the bed, and the divided connecting rod, a patented feature, the loads are said to be carried directly up and down the center line of the housings, and to this is attributed practical elimination of deflection and greater capacity with the same factors of safety. Other features include automatic oiling, anti-friction bearings on high-speed shafts and in the mounting of the flywheel, disk clutch of special design, over-size brake drum, liberal depth of bed and ram plates, and screws of high carbon and high nickel steel, cut with buttress thread. A dovetail slot is planed along the length of the bed, both front and back, to receive gages or other fixturees. The ram is raised and lowered by means of an independent motor drive, which is standard equipment.

The machines are arranged for motor drive, and the motor is connected by Texrope drive to the flywheel. Standard lengths furnished in this series range from 6 ft. 6 in. between the housings, with a die surface of 8 ft., to 12 ft. 6 in. between the housings, with a die surface of 14 ft.

PROTEST REDUCED RATES

Pittsburgh District Steel Makers Object to Proposed Decrease in Chicago—New Orleans Freight Schedules

WASHINGTON, May 8.—A strong protest has been filed with the Interstate Commerce Commission by Pittsburgh district steel manufacturers, the Pittsburgh Chamber of Commerce, the Eastern Trunk Line railroads, the Baltimore Association of Commerce and other interests in the East, asking that the commission suspend tariffs filed by the Illinois Central Railroad establishing reduced rates, effective May 31, on iron and steel products from the Chicago district by way of New Orleans and the Redwood Line steamers to Pacific Coast ports. The proposed rates range from 56c. to 86c. per 100 lb., and would be a reduction of 8.5c. per 100 lb. By the schedules it is the plan of the Illinois Central to reduce its rate on this traffic from Chicago to New Orleans from 39.5c. to 31c.

The protestants declare that the schedules would set up discrimination against Eastern steel producers who ship to the Pacific Coast through Eastern seaboard ports by way of the Panama Canal and would deprive them of Pacific Coast business. It is also contended that the proposed rates would take traffic from the Eastern lines and put into effect a set of low rates over the Illinois Central that are not justified. Intimation is made that, should the reduced rates be allowed to become effective, reduced rates from the Pittsburgh and other Eastern districts would be demanded and a rate war for the steel business of the Pacific Coast be declared.

Reductions for Many Products

An idea of the proposed rates on various steel products is given in the following list, stated in cents per 100 lb. and covering carload shipments, mixed or straight, of 40,000 lb. per car, except in the instance of raw and semi-finished steel, which would be allowed a maximum of 50,000 lb.:

A rate of 56c.; tin and terne plate.

A rate of 61c.; ingots, billets, blooms, muck bars, wire rods in coils, band, bar and hoop steel, rods, slabs up to 6 in., strip steel, plates (not ship or boiler), plain or punched shapes and bars, boiler flues, pipes and tubes not over 12 in. in diameter and 35 ft. in length and plates and sheets No. 16 gage or thicker.

A rate of 66c.; bolts, nuts, rivets, washers, turnbuckles, chaplets, dowel pins, hoops and wire, spikes, staples, barbed, galvanized and painted wire, pipe fittings, couplings and valves.

A rate of 71c.; plates and sheets No. 17 gage or lighter.

A rate of 86c.; wire and wire goods in bundles, wire bands, fence steel, fencing wire and netting wire.

The Pacific ports of destination are Alameda, Los Angeles, Oakland and San Francisco.

The purpose of the Illinois Central schedules is declared to be to equalize Chicago with Pittsburgh and other Eastern points in rates on iron and steel to the Pacific Coast ports, although the schedules embrace other products as well. The proposed 31c. rate from Chicago to New Orleans is identical with the rate from Pittsburgh to Baltimore, while the rates from Pittsburgh to Philadelphia and New York are 32c. and 34c., respectively.

Pittsburgh Makers' Demands

The Pittsburgh Steel Co., in its protest, says that it feels that the Chicago-New Orleans rate should not be less than the domestic rate of 55c., pointing out that the Pittsburgh producers have to pay domestic rates to Atlantic Seaboard ports. The Pittsburgh-Des Moines Steel Co., Pittsburgh, after asking withdrawal of the proposed Illinois Central rates, declares that if this is not accomplished the rates from Pittsburgh, Youngstown and Cleveland to Baltimore should be reduced to a relative amount, that is on the basis of the same rate of 31c. from Chicago to New York, with the Pittsburgh rate 60 per cent of that rate. 18.5c., and the usual differentials under to Philadelphia and Baltimore of 2c. and 3c., respectively.

The Central Tube Co., Pittsburgh, opposed the tariff as being "vicious," and asked that it be suspended indefinitely. This company said that the proposed adjustment appeared to be a decided discrimination and a deliberate attempt to divert Pacific Coast business from the Pittsburgh district to other sections not so favorably situated. Similar protests were made by the Union Drawn Steel Co., the Page Steel & Wire Co. and other producers.

Position of Carriers

The Eastern Trunk Line carriers said that the proposed and similar rates, as made applicable from Chicago, are also to be applied as maxima at Ohio River crossings of the Illinois Central Railroad, under the recognized rate relationship policy of the Southern carriers, and will undoubtedly be made applicable also from Ohio River crossings as far east as Cincinnati, thereby unbalancing the relationship of commodities in Eastern territory to the serious embarrassment of the carriers serving them.

"The establishment of any rate from Chicago and other Illinois points by the use of subnormal or special rates to New Orleans as the basis for the inland proportion would force more easterly producers to demand protection by relative proportional rates from their shipping points to the North Atlantic seaboard in order to restore the now existing rail relationship of rates to the respective ports made with respect to rail distances," said the carriers' protest. "The necessity for protecting communities is most pressing, and disastrous and wholly unnecessary rate reductions would undoubtedly follow the effectiveness of the proposed rates, transferring to joint rail-and-water routes thus created the chaotic rate conditions which have for a long time characterized the intercoastal steamship port-to-port rate situation."

The Baltimore Association of Commerce declared that the establishment of the proposed rates would tend to attract traffic from Eastern seaboard points and from the routes through the port of Baltimore and thus injuriously affect the shipping of that port. Any appreciable loss of tonnage, it was said, would affect the prosperity of the intercoastal lines operating from Baltimore, contrary to the intent of the transportation act.

A point made generally by the railroads and other protestants also was that the Chicago-New Orleans rate now is lower, mileage considered, than the rates from Pittsburgh to Eastern ports. The distance from Pittsburgh to Baltimore is 312 miles, while from Chicago to New Orleans it is 921 miles.

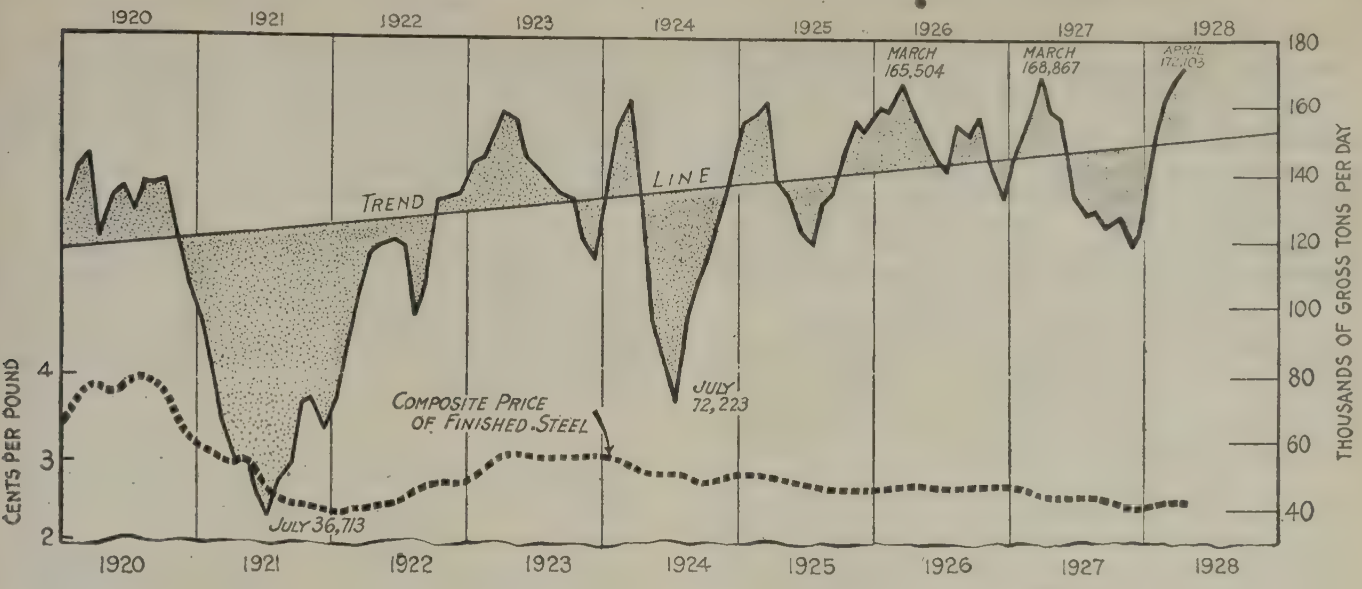
British Tin Plate Industry 200 Years Old

On April 26 the British tin plate industry celebrated its 200th anniversary. It was on that date 200 years ago that a method of rolling plates out of iron was discovered at Pontypool, South Wales. Prior to 1728 they had been beaten out with tilt-hammers, a very slow and laborious process which did not produce the smooth plates obtained by rolling. By 1776 works in Wales were exporting tin plates all over the world. Napoleon offered a prize in 1800 for a method of preserving food, and this was won by M. Appert.

Twelve years later Peter Durand, a London merchant, took out a patent for preserving food in tin "cannisters," which laid the foundation of the canning industry. It is estimated that 50,000,000 cans of food are consumed daily throughout the world.

To Push Intensively on Steel Frame House

The Steel Frame House Co., a subsidiary of the McClintic-Marshall Co., Pittsburgh, plans to distribute through its own representatives, who are to be located in the principal cities of the country. While there will be close cooperation with the branch offices of the parent company, the representatives of the subsidiary are to devote their entire time to the sale of the steel frame for housing and other uses to which it is adapted. Edward Moore, with offices at 39 Broadway, is New York representative of the company.



With a New High Daily Record for April, the Four Months Ingot Production This Year Is Nearly 600,000 Tons Ahead of the Same Period Last Year. Prices were slightly lower than in March

Record Ingot Production in April

Daily Output 2½ Per Cent Ahead of Previous High—The Four Months Period 3½ Per Cent in Excess of That of 1927

PRODUCTION of open-hearth and Bessemer steel ingots in the United States in April was at a new high rate, being 172,103 tons a day (allowing 25 full working days in the month). In March, 1927, with 27 working days, the daily output, revised for the open-hearth and Bessemer and not including either crucible or electric steel ingots, was 167,973 tons. Thus the new figure tops the previous record by 2½ per cent. The original estimate for March, 1927, in which crucible and electric steel ingots were included, was 168,867 tons a day, as shown on the diagram.

So far this year, or through April, the output amounted to 16,847,000 tons, or 3½ per cent more than the production of the corresponding four months of 1927. The total for April was not so large as that for March, which had 27 working days, nor so large as March, 1927, which stands as the highest monthly output.

The compilations are based on returns from companies which, in 1927, produced 94.68 per cent of all the ingots made by the open-hearth and Bessemer processes.

Estimating production in April of electric and crucible steel ingots (no longer covered in the institute's monthly figures) at 1400 tons a day, the total April ingot output would appear to have been at the rate of about 173,500 tons for each working day. Details of the past 16 months are shown in the table.

Production of Steel Ingots*

(Gross Tons)

	Reported by Companies Which Made 94.68 Per Cent of the Steel Ingots in 1927		Calculated Monthly Output All Companies	Approximate Daily Output All Companies

Lake Superior Ore Shipments Small in April

Iron ore shipments from Lake Superior ports in April, this year, were only 5946 gross tons. The record this and last year has been as follows in gross tons:

Port	April, 1928	April, 1927
Escanaba	5,946	148,122
Marquette	....	59,831
Ashland	....	128,044
Superior	....	518,055
Duluth	....	546,506
Two Harbors	....	159,528
Total	5,946	1,560,086

The decrease in April, this year, has been 1,554,140 tons from April, 1927.

Decrease in Slab Zinc Output in 1927

WASHINGTON, May 8.—Production of slab zinc at zinc reduction plants in the United States in 1927 amounted to 635,300 net tons, valued at $81,439,000, the output decreasing 23,921 tons or nearly 4 per cent compared with 1926, according to the United States Bureau of Mines. The 1927 production consisted of 576,960 tons of primary metal made from domestic ore; 15,556 tons of primary metal made from Mexican ore and 42,784 tons of redistilled secondary metal. The States having the largest output of primary metal were: Oklahoma, 120,801 tons; Montana, 112,629 tons; Pennsylvania, 106,099 tons, and Illinois, 102,768 tons. The apparent consumption of primary zinc in 1927 amounted to 516,371 tons, a decrease of nearly 41,000 tons from that in 1926.

Having received a sufficient number of written acceptances of the recently revised "Simplified Practice Recommendation No. 51, Die Head Chasers" (for self-opening and adjustable die heads), the division of simplified practice of the Department of Commerce announces that the project is now in effect, as of April 1, subject to annual revision or reaffirmation by the industry.

Presents Bessemer Gold Medal to Charles M. Schwab

LONDON, ENGLAND, May 3.—In accepting the Bessemer Gold Medal presented today to him by the Iron and Steel Institute for distinguished merit in promoting the metallurgy of iron and steel, Charles M. Schwab, chairman of the board of the Bethlehem Steel Corporation, said he started his own career as a workman in the steel mills of Pittsburgh in 1879—the same year, curiously enough, in which the Royal Society admitted Sir Henry Bessemer as a Fellow, and the Government of Great Britain honored him with a knighthood.

"May I mention another coincidence," said he, "in connection with the Bessemer medal. The first American to receive this distinction was the famous Peter Cooper, one of the pioneers of American industry. And, oddly enough, you awarded the Bessemer medal to Peter Cooper in the year 1879.

"You have conferred this distinction upon four other great Americans—Abram S. Hewitt, John Fritz, Henry Marion Howe and Andrew Carnegie. I am proud beyond words to be the next to follow Mr. Carnegie among the Americans to be added to the distinguished British, French and other names which you have honored in this unique manner.

"It is interesting also to reflect that you conferred this distinction upon Mr. Carnegie in the same year, 1904, in which you also honored in the same manner Sir Robert Hadfield, whose name we know so well in America and who is still so intimately identified with the progress of the steel business."

[To the above names of Americans mentioned by Mr. Schwab as recipients of the Bessemer medal are to be added those of Alexander Lyman Holley, 1882, and Albert Sauveur, 1924.—EDITOR THE IRON AGE.]

National Machine Shop Meeting in September

A national machine shop practice meeting is to be held in Cincinnati, Sept. 24 to 27, by the machine shop division of the American Society of Mechanical Engineers. Tentative plans announced by L. C. Morrow, chairman of the division, are as follows: Members and guests will embark on a river steamer at noon on Monday, Sept. 24. The afternoon will be spent socially on the boat and after dinner the first technical session will be held. Sleeping accommodations will be provided on the boat. Tuesday morning will be spent in Ashland, Ky., inspecting the continuous sheet-rolling mill of the Armco plant. Tuesday afternoon will be spent socially on the boat. The second technical session will be held after dinner on the boat and passengers will arrive in Cincinnati on Wednesday morning. They will then adjourn to the Engineers Club or some other suitable headquarters, where the third technical session will be held. Wednesday afternoon will be devoted to plant visits in Cincinnati. A dinner will be held Wednesday night. All of Thursday will be devoted to plant visits around Cincinnati.

Two Years' Extension of Mechanical Puddling Experiments

The A. M. Byers Co., Pittsburgh, has secured a two-year extension of its option to buy the plant of the American Puddled Iron Co., Warren, Ohio. The original option was secured as of Nov. 1, 1926. At this plant the company has been developing the commercial possibilities of the Aston process of making wrought iron.

The Bridgeport Safety Emery Wheel Co., whose name was omitted from the list of companies published in the May 3 issue of THE IRON AGE which will exhibit at the convention of the American Foundrymen's Association in Philadelphia the week of May 14, will occupy booth No. 118 and will show its line of foundry grinders and sectional grinding wheels. The exhibit will be in charge of I. L. Burritt and W. M. Hyde.

Electrochemists to Discuss Corrosion of Lead Cable Sheath

At the spring meeting of the New York section of the American Electrochemical Society, to be held at the Chemists' Club, New York, on Friday evening, May 18, "The Corrosion of Lead Cable Sheath" will be the subject of a round table discussion. Dr. R. M. Burns, Bell Telephone Laboratories, will open the discussion with a talk on the characteristics of electrolytic, stray current and chemical corrosion of lead cable sheath and the resulting problems in underground cable maintenance. A general discussion will follow, probably participated in by representatives of the principal users and manufacturers of lead and lead alloy covered cables. The New York section invites all those interested in the subject to attend.

Technical Program for Steel Institute's May Meeting

For the thirty-third general meeting of the American Iron and Steel Institute, to be held at the Hotel Commodore, New York, Friday, May 25, the following technical program has been arranged:

"Basic Open-hearth Steel Practice," by Dr. G. B. Waterhouse, professor of metallurgy Massachusetts Institute of Technology, and consulting engineer and metallurgist, Cambridge, Mass.

"The Effect of Coal Segregation, Mixing and Heating upon the Quality of Metallurgical Coke," by F. F. Marquard, assistant general superintendent Carnegie Steel Co., Clairton, Pa.

"The Manufacture of Alloy Steels," by E. C. Smith, Central Alloy Steel Corporation, Massillon, Ohio.

"The First Iron Works in America—1645," by Howard Corning, Baker Library, Harvard University, Cambridge, Mass.

"Waste Heat Boilers," by R. H. Stevens, chief engineer Cambria Plant, Bethlehem Steel Corporation, Johnstown, Pa.

"The Trend in Ingot Mold Design," by R. H. Watson, general superintendent Homestead Works, Carnegie Steel Co., Munhall, Pa.

"A Modern Steel Works Power and Blowing Plant," by Wilfred Sykes, assistant general manager Inland Steel Co., Chicago.

These papers will be presented at the morning and afternoon sessions as usual, followed by the banquet in the evening.

National Oil and Gas Power Meeting in Mid-June

The first national meeting of the oil and gas power division of the American Society of Mechanical Engineers will be held June 14, 15 and 16 at State College, Pa., in conjunction with the second annual oil power conference of Pennsylvania State College. There will be an exhibition of engines and accessories, a banquet on the evening of June 15, at which Charles M. Schwab, who is a trustee of Pennsylvania State College, and George Heath, of Carels Diesel & Steam Engines, Ltd., London, will speak and a technical program including papers on the following subjects:

Economic field for small and medium-size Diesel engines, by R. M. Reagle, vice-president Bessemer Gas Engine Co. Economic field for large Diesel engines, by E. B. Pollister, general manager Busch-Sulzer Brothers Diesel Engine Co. Diesel fuel oil, by G. H. Michler, Standard Oil Co. of New York.

Better teamwork among all classes of business as the most effective means of maintaining local and national prosperity will be the central theme of the sixteenth annual meeting of the Chamber of Commerce of the United States to be held in Washington, May 7 to 11.

The semi-annual meeting of the American Gear Manufacturers Association will be held Oct. 11, 12, and 13, at the Statler Hotel, Buffalo, N. Y. T. W. Owen, 3608 Euclid Avenue, Cleveland, is secretary.

German Coal Strike in Prospect

Consumers Replenish Stocks Expecting Suspension—Other European Markets Active—Welsh Tin Plate Mills Well Booked

(*By Cable*)

LONDON, ENGLAND, May 7.

PIG iron is quiet but the Cleveland furnace output is being absorbed by current demand. Makers are still unable to regain their export markets, but the domestic market, especially Scottish, is now more in their hands. Hematite is dull, but output has been restricted and stocks are diminishing gradually.

Ferromanganese has been advanced 5s. ($1.22) per ton to domestic consumers, although demand is still slack. Foreign ore is dull, but the Bilbao Rubio price is firm as a result of the continuance of the Swedish strike.

Finished steel business is quiet, except for domestic construction and engineering material. Export trade is quiet in plates and heavy steel.

Welsh sheet bar makers have sold heavily and advanced prices 2s. 6d. (61c.) per ton. Tin plate demand is exceptionally heavy with all quarters buying and inquiring and mills well sold at normal capacity. Prices are strong especially for prompt shipment, which is difficult to obtain at 18s. 7½d. ($4.54) per base box, f.o.b. works port. Forward sales have been recorded at 18s. 6d. ($4.51) per base box. It is reported that American and German interests are negotiating for the regulation of export markets and prices and that probably Welsh mills will be invited to join.

Galvanized sheets continue dull. Japan has bought some small lots of thin-gage black sheets but the market is otherwise quiet.

The Continental iron and steel market is strong and prices are advancing. Large sales of merchant bars to Japan and Argentina are reported by Continental sellers, but little business is passing through the hands of British traders.

Belgium is reported to be asking for an increased production quota at the next meeting of the International Steel Cartel. French production in March was 856,000 tons of pig iron, a record, and 804,000 tons of steel ingots. At the end of March there were 149 furnaces in blast.

GERMANY FACES COAL STRIKE

Coal Operators Claim Losses Even at Present Wage Scale—Steel Mills Protest Higher Coal Prices

BERLIN, GERMANY, April 20.—The immediate future of the iron and steel industry in Germany depends to a great extent on the result of a dispute over wages, working hours and prices in the Ruhr coal mines. A week ago, following arbitration, a decision was rendered that all wages in the coal industry were to be increased 8 per cent. The working day, both for underground workers and surface labor, was fixed at 8 hr. This compares with the present working day for underground workers of 7 hr., to which is added an extra hour of overtime. The miners had demanded a wage increase of 1.50 m. per shift.

The coal operators rejected the decision of the arbitration board, claiming that it would increase the cost of production by about 0.75 m. per ton, and threatened to suspend operation at many mines if the Government sought to enforce the decision. At the same time an official commission, headed by Professor Schmalenbach, which had been investigating the financial condition of the German coal industry, reported that the average cost of coal production is 15.62 m. ($3.67) per ton, while the average yield from sales of coal by the producers is only 14.37 m. ($3.44) per ton. A minority report of the commission, submitted by Professor Bade, estimates the loss per ton at only 0.36 m. (8.6c.). The difference of opinion was the result of different methods of figuring depreciation and other costs. When the profits from production of coal by-products are deducted from the losses on coal, the final loss, according to the majority report, is only 0.27 m. (6.4c.) per ton. On the other hand, the minority re-

port indicates a final profit of 0.62 m. (14.8c.) per ton.

Even from the viewpoint of the minority report, which shows some profit for the producers, the coal situation is unsatisfactory. Competition from Great Britain, Poland and even Holland is growing more severe, and the losses from competing with these foreign producers must be borne by the small profits in other markets. Sales of coal in the non-competitive districts of Germany (sections where foreign coal cannot compete) are steadily declining. The average daily sales of the coal syndicate have declined from 271,000 tons in January to 255,000 tons in March, and the average selling price per ton has also decreased.

The Ruhr coal mines have requested permission to increase domestic prices, but the request was rejected by the Federal Coal Council and the Ministry of Industry. It has been calculated that if the unprofitable export trade is to be maintained at the present level the coal syndicate must increase its assessment on members from 1.38 m. (33c.) per ton to 1.80 m. (43c.). The other alternative is to decrease sales by about 4,000,000 tons a year.

The steel industry has protested against the proposal to advance domestic coal prices and the decision calling for higher wages. It is declared by the steel producers that higher coal prices would increase costs of rolled materials by about 2 m. (48c.) per ton and, in the present condition of keen competition, might result in suspension of operations by many steel plants. Should the wage decision not be enforced, a general coal strike is expected.

GERMAN STEEL OUTPUT HIGH

Production in Excess of Last Year—Prices Firm —Steel Makers Seek Higher Tariff

Berlin, Germany, April 20.—Production of both pig iron and steel continues large. In the first three months of the year output exceeded the large total of the corresponding period in 1927. In the first quarter of this year 3,473,436 metric tons of pig iron and 4,212,940 tons of steel were produced, compared with 3,115,800 tons of pig iron and 3,958,227 tons of steel in the first quarter of 1927.

At the meetings of the Stahlwerksverband, the A-Products Syndicate (semi-finished and railroad materials) and the Steel Bar Syndicate, it was reported that specifications were coming out freely, but that the Railroads Corporation was still rather inactive in purchasing this year's requirements. The building trades are improving slowly, largely because of credit difficulties.

Most mills are booked with sufficient business for the next two or three months and are seeking to increase their exports. Efforts to advance export prices, so as to reduce the present wide margin between the domestic and foreign quotations, have not been very successful. Business in steel bars for export has been active, and foreign demand for other products shows considerable improvement.

The subject of tariff protection is being discussed by various industries and recently Doctor Reichert, secretary-general of the Iron and Steel Industries Association, stated that he strongly favored retention of the present duties. He described the present combination of tariff protection and cartels as the only means by which the German domestic market can be protected from foreign competition. There is opposition to protection in the metal-consuming industries, and "Avi," the association of these consumers, has made a declaration against the protective policy. It points out that, at best, a higher tariff could only slightly increase the domestic sales of iron and steel, including machinery, whereas it would result in a serious loss of export business through foreign reprisals. The association contends that the greater part of present export business in finished iron and steel products would be threatened. Throughout its report the association stands firmly for realization of the lower tariff resolutions of the Geneva conference of 1927. The same view is expressed by the association of consumers of sheets and tin plate.

There has been further discussion of the possibility of establishing a syndicate to control the domestic thin sheet market. Several of the larger sheet mills, however, are opposed to such a move, and price concessions continue numerous. The Bandeisen Vereinigung (band syndicate) has established a study corporation, similar to the company created by the wire industry for experimental production.

A corporation has been formed for the purpose of resuming mining operations in the Saxon-Erzegebirge. These ore deposits cover about 100 sq. km., and recent prospecting indicates that a small section of the area contains about 7,000,000 tons of magnetic iron ore and a large quantity of zinc. It is planned to erect an electric smelting plant.

JAPANESE MARKET IMPROVING

Banking Problems Still Unsolved—Black Sheet Imports Larger—Semi-Finished Capacity Increased

GENERAL business conditions in Japan during March showed a distinct improvement over February, and April returns are expected to show further improvement, says the latest monthly report of A. Cameron & Co., importers, Kobe. The report calls attention to the growing dissatisfaction of labor and says that certain legislative reforms are absolutely necessary.

Referring to the financial situation, the report says: "The Minister of Finance is still grappling seriously with the bank situation, insisting that any closed bank which is to be merged with other banks must write off all bad and doubtful debts and therefore merge in a solvent state. It has been pointed out before that there is an opinion that there are far too many small banks, which are usually managed or controlled by inexperienced young men. The five chief banks have deposits exceeding the total amount of all other commercial banks together. Such commercial banks number 1276. At the close of 1927, all commercial banks had, according to official statistics, deposits of yen 5,461,000,000, of which the larger banks, to the number of 13, held yen 4,403,000,000, or about 80 per cent of the total of all clearing house banks."

Black Sheet Imports Increase

Imports of black sheets during February at Kobe, Osaka and Yokohama totaled 11,745 tons, a gain of 1800 tons over the previous month and an increase of 2672 tons over February, 1927. Arrivals by countries were as follows: Great Britain, 8350 tons; United States, 2446 tons; Germany, 878 tons; Belgium, 48 tons; all others, 23 tons. These shipments were mostly to speculators who had purchased late last year in anticipation of an increase in the tariff, which, however, did not materialize. Consequently, there is an excessive stock in the market, which is preventing any advance in price. Prices of light-gage black sheets during February were unchanged at 72 sen (34.06c.) per sheet for British material, 73 sen (35.50c.) for American and 70½ to 71 sen (33.35c. to 33.59c.) for Kawasaki dockyard sheets. Consumption of sheets is fairly active and, as warmer weather approaches, inquiries from China are increasing, and it is expected that a good demand from China for galvanized sheets will stimulate the black sheet market.

Kawasaki Buys Mill Equipment

The Kawasaki Dockyard Co. is reported to have bought yen 800,000 ($378,480) worth of machinery from Friedrich Krupp A. G., Essen, Germany, for rolling sheet bars. According to the report, the new machinery will produce 200,000 tons of bars annually, and the installation will be completed by November of this year. This additional capacity will bring the total for the works to 320,000 tons of sheet bars a year.

Statistics compiled by A. Cameron & Co. show a total Japanese capacity in black sheets of 253,000 tons, of which the Kawasaki Dockyard Co. has capacity for 200,000 tons of Nos. 20 to 30½ gage, the Osaka Teppan Seizo Kaisha, Ltd., Tokuyama, 42,000 tons of Nos. 16 to 30½ gage and the Nihon Kogyo Setetsu Kaisha, Yatsuya, 10,000 tons of Nos. 16 to 30½ gage. Of the total capacity, Nos. 10 to 13 gage are estimated at 170,000 tons.

Output of tin plate by the Yawata Steel Works in February declined considerably, resulting in an improvement of the tin plate market in March. It seems to be the consensus of opinion that the demand for tin plate will steadily increase during the next few months and the market will be quite active. Tin plate prices have been about yen 12.80 ($6.05) per 100-lb. base box for American material and yen 12 ($5.68) per 100-lb. base box for British.

LOW PRICES ON COTTON TIES

Orders Taken Here at 12c. a Bundle Under Domestic Market—Japanese Rail Orders Go to Germany

NEW YORK, May 8.—Importers of European steel report an advance of about 50c. per ton in prices during the past week, so that Thomas grade steel bars are quoted at about 1.75c. per lb., base. There is a moderate demand for structural material, but most of the business being closed is in sales for prompt delivery from arriving steamer.

With the opening of the cotton tie market by American mills at $1.25 per bundle, importers of German, Belgian and British cotton ties found that they had been selling at an unnecessarily low level, most orders for imported ties having been closed at about $1.13 per bundle, except for the British product, said to have been offered by the Barrow Hematite Steel Co., Ltd., which was about 7c. a bundle higher. Belgian ties sold at prices ranging from as low as $1.05 to as high as $1.10 per bundle. Importers estimate that 200,000 to 300,000 ties have been sold for delivery from Europe this season.

Far Eastern business continues rather inactive. Recent orders for rails placed by Japanese railroads have gone to European mills. Two miles of 100-lb. girder rails and one mile of 94-lb. grooved rails were awarded to a German export agency in Japan for execution by the Vereinigte Stahlwerke A.G., Düsseldorf, the leading German steel producer.

Japanese purchases of light-gage black sheets are still being made from British mills or the principal domestic maker, the Kawasaki Dockyard Co. The latest British quotation is understood to be about £14 18s. ($72.57) per ton, c.i.f. Japan, and the price of the Kawasaki Dockyard Co. is equivalent to about $73.25 per ton, c.i.f. Japanese port.

On a tonnage of 7 miles of 30-lb. rails inquired for by the South Manchuria Railway Co., the total German quotation per mile, including accessories, is understood to have been yen 3545 ($1,677.14), which was yen 490 ($231.82) per mile lower than the lowest American bid. The German bid per ton, including accessories, was $33.11, c.i.f. Japanese port.

Production of Steel Ingots and Castings in 1927

THE compilations of production of steel ingots and castings for 1927 have been issued by the American Iron and Steel Institute and are covered in the accompanying tables.

The total output of ingots and castings showed a falling off of 6.95 per cent from 1926. The drop in ingots was 6.73 per cent and that in castings, 14.7 per cent.

The production of electric steel ingots and castings made a new record, being 666,087 tons, compared with the previous high in 1926 of 651,723. There was a decided jump in the output of electric steel ingots and a sharp drop in the output of electric steel castings, but the total, as stated, was a record. The tonnage of castings still remained the highest for any year, except the record of 1926, from which it showed a drop of 9.5 per cent. While there was an increase in the output of electric steel ingots over 1926, the record output of electric steel ingots was in 1918.

The falling off in the production of alloy castings and ingots was in ingots. The reduction was 8 per cent. In the case of castings alone, the production of 145,844 tons in 1927 was only 257 tons less than the output of 1926.

The production of duplex ingots and castings showed a sharp drop of nearly 22.5 per cent from the output of 1926. The figure of 1927 (2,184,674 tons), compares with 2,666,110 tons, the average of the preceding four years.

Production of Steel Ingots and Castings by Processes

Years	Open-hearth			Bessemer	Crucible	Electric	Miscellaneous	Total Gross Tons
	Basic	Acid	Total

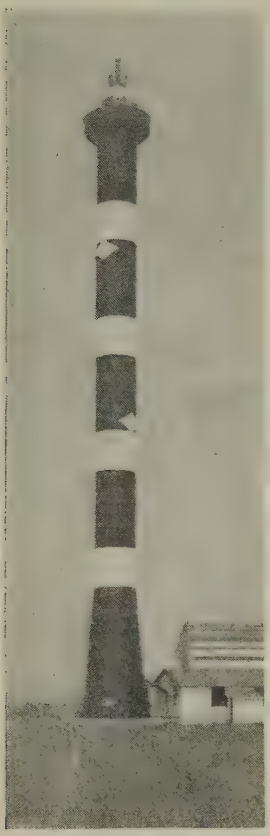
STEEL MOORING MAST

Sheathed in Sheet Steel and Equipped with Electric Elevator



THE United States Army Air Corps has constructed at Scott Field, nine miles from Belleville, Ill.; a mooring tower for dirigibles which is the first one of its kind in this country. It is made of sheet steel and an angle iron frame and is approximately 168 ft. high. At the base it is 18 ft. in diameter, but tapers within a short distance from the bottom to 11 ft. Near the top of the tower is an observation platform 25 ft. in diameter.

The tower is anchored to a concrete foundation by 24 anchor bolts. The top of the tower may sway 3 to 4 in., as when under wind pressure or the pull of the dirigible.

Within the tower is a Warner geared two-speed alternating current switch controlled elevator, manufactured and installed by the Warner Elevator Mfg. Co., Cincinnati. The elevator travels a distance of 134 ft. and has a capacity of 2000 lb. at 250 ft. per min. The elevator is used for numerous purposes, such as transporting repair parts and crews to dirigibles and carrying the light tender, who takes care of the obstacle lights on the tower. These lights are placed approximately every 25 ft. on the four sides of the tower. For servicing the lights, the elevator cab has a special hinged door in the rear.

In a small frame building at the foot of the tower is a windlass from which a cable passes up through the center of the tower into a tubing leading to a metal cup. It is into the metal cup that the metal nose of the dirigible fits when it is moored.

Within a short time the new tower is to be tested and if it proves as satisfactory as anticipated, other towers will be built at various points throughout the country. The tower was fabricated and erected by the Pittsburgh-Des Moines Steel Co.

Aluminum Output Expanded in 1927 —Imports Declined

WASHINGTON, May 8.—Despite curtailed production of automobiles in 1927, the use of aluminum and high-strength aluminum alloys was large, particularly for pistons and reciprocating parts of automotive engines, according to a statement prepared by J. M. Hill, United States Bureau of Mines, who places the value of new aluminum produced in the United States last year at $39,266,000, an increase of 4 per cent as compared with 1926. The principal producing plant is at Massena, N. Y., where approximately half of the metal made in the United States was recovered. Other works are at Niagara Falls, N. Y.; Alcoa, Tenn., and Badin (Whitey), N. C. Control dams on the Yadkin and Little Tennessee rivers in North Carolina were completed, thus assuring continuous power for the Badin and Alcoa plants of the Aluminum Co. of America.

Use of aluminum for collapsible tubes for pastes, greases, etc., according to the statement, is relatively new but growing. More aluminum is being used in other lines, such as in the manufacture of furniture, airplanes, railroad and street cars, and motor buses.

Imports of aluminum metal, scrap and alloys in 1927 were 4 per cent less in quantity than in 1926. They amounted to 72,188,518 lb. in metal, scrap and alloys; 400,322 lb. in plates, sheets, bars, etc., and 142,453 lb. in hollow ware.

Exports of aluminum ingots, scrap and alloys in 1927 increased 501 per cent in quantity over 1926, amounting to 3,535,085 lb. as against 586,749 lb.; exports of plates, sheets, bars, strips and rods increased 56 per cent to 10,997,475 lb., compared with 7,047,422 lb.; exports of tubes, moldings, castings and other shapes decreased 28 per cent to 1,529,615 lb. as against 2,115,274 lb. in 1926.

Coal and Coke Production in April

Output of bituminous coal in April is estimated by the United States Bureau of Mines at 32,200,000 net tons. This is a sharp reduction from the March output of 43,955,000 tons, and is below the figure of April, 1927, at 34,674,000 tons. Anthracite production, on the other hand, at 6,940,000 tons in April, showed a marked increase over the March output of 5,497,000 tons. It was, however, below that of April, 1927, which was 7,127,000 tons.

Beehive coke production has fallen to a very low figure. The April output is placed at 337,000 tons, against 449,000 tons in March. In April, 1927, it was 779,000 tons. It should be noted that April, 1928, had one working day less than April, 1927, and about two days less than March, 1928.

Investments Abroad Promote Exports

(*Concluded from page* 1309)

raw materials is certain to grow, and similar increases may reasonably be expected in the expenditures of our tourists and foreign residents and in immigrant remittances.

Balancing Exports and Imports

We arrive, therefore, at this analysis: Our export trade must be encouraged and increased in every practical way up to the point where we do not invite reprisals from our foreign competitors in both our domestic and our logical export markets, at excessively low prices, based on their starvation wages. We must consider, in many lines, our higher costs, despite the counterbalance of greater efficiency through expert methods and mass production.

On the other hand, if there occurs any serious diminution in the export of American investment capital, we must continue more largely to import, to whatever extent may be necessary, articles of luxury, raw materials and other necessities for our American industry, to the end that the aggregate may counterbalance our increased exports of merchandise. Irrespective of the problematical ultimate payment of all the war debts and adjustment of reparations, we must continue for some time generously to loan our surplus investment funds abroad, in order to complete the resuscitation of Europe and expansion of industry alike for our competitors and customers there, that their prosperity may increase, and that Europe in turn may resume its investments in the consuming countries to the same extent as before the war. This combined investment of the surplus wealth of the major countries can only produce an ever increasing exchange of exports to and imports from the minor nations, whose assets will continue to expand and whose earnings will provide the means to pay the interest on their liabilities.

Mining and industrial electric locomotives shipped in the first quarter of 1928 numbered 188, valued at $843,011, according to the Department of Commerce. This value was the lowest in two years, and the number was less than the 173, valued at $866,106, shipped in the last quarter of 1927. In the first quarter of 1927 shipments included 283 units, valued at $1,372,225.

FABRICATED STRUCTURAL STEEL

Awards of 24,700 Tons—25,200 Tons in New Work

FALLING below the average of recent weeks, fabricated structural awards reported during the last seven days amounted to slightly less than 24,700 tons. Of this total, 3000 tons was for a bridge for the Missouri Pacific Railroad and 9000 tons for miscellaneous jobs in New York. New projects amounted to 25,200 tons, the largest being a court house at Denver, Colo., which will require 3600 tons. Awards follow:

Boston, 200 tons, Thompson Spa building, to Palmer Steel Co.

East Boston, 250 tons, theater, to A. L. Smith Iron Works.

Fall River, Mass., 475 tons, office building, to Providence Steel & Iron Co.

Leominster, Mass., 150 tons, theater, to Eastern Bridge & Structural Co.

Pawtucket, R. I., 250 tons, power house for Blackstone Valley Gas & Electric Co., to New England Structural Co.

New York, 10,500 tons, reported to the Structural Steel Board of Trade; 9000 tons in the following awards not previously reported: Storage warehouse on White Plains Avenue, subway station on Myrtle Avenue, Brooklyn, Cox Bakery in Jamaica and Eleto warehouse at Thirty-eighth Street and First Avenue, to McClintic-Marshall Co.; column cores for building at 305 East Forty-sixth Street, warehouse for New York Dock Co. at Furman and Joralemon Streets, Brooklyn, and Film Center building at Ninth Avenue, Forty-fourth and Forty-fifth Streets, to Levering & Garrigues Co.; garage and service station at Hempstead, L. I., to Lehigh Structural Steel Co.; recreation building for Temple Emanu-El at Port Richmond, S. I., to Eidlitz & Ross; Explorers' Club at 544 Cathedral Parkway, Flatbush Boys' Club at 2241 Bedford Avenue, Brooklyn, and Tilden Theater at Flatbush and Tilden Avenues, Brooklyn, to Hedden Iron Construction Co.; 10-story loft building at 149th Street and Park Avenue, commercial building at 241st Street and Broadway, 15-story loft building at 253 West Twenty-seventh Street, gymnasium for Hebrew Orphan Asylum at 138th Street and Amsterdam Avenue and Queensborough Library, Jamaica, to Harris Structural Steel Co.

New York, 475 tons, apartment building at 417 East Fifty-first Street, to Easton Structural Steel Co.

Albany, N. Y., 1000 tons, eight scows for New York Division of Canals and Waterways, to Midland Barge Co., Midland, Pa.

Elmira, N. Y., 590 tons including 120-ton junior beams, Mark Twain Hotel, to Jones & Laughlin Steel Corporation.

Philadelphia, 200 tons, bridge arch centers; awarded by Vare Construction Co., to Belmont Iron Works.

Reading Railroad, 175 tons, bridge, to Shoemaker Bridge Co.

Wilmington, Del., 850 tons, North Market Street bridge, to Phoenix Bridge Co.

Pittsburgh, 1000 tons, Allegheny Steam Heating Co. unit, to Jones & Laughlin Steel Corporation.

Pittsburgh, 465 tons, Irene Kaufmann Settlement House extension, to American Bridge Co.

Dayton, Ohio, 150 tons, Y. M. C. A. building, to Massillon Bridge & Structural Co.

Defiance, Ohio, 100 tons, high school, to Massillon Bridge & Structural Co.

Cincinnati, 260 tons, St. Gregory's Seminary, to L. Schreiber & Sons Co.

Memphis, Tenn., 625 tons, five sand barges for Mississippi River Commission, to American Bridge Co.

Birmingham, 1800 tons, car underframes for St. Louis-San Francisco Railway, to Virginia Bridge & Iron Co.

Birmingham, 110 tons, garage at Ensley for Hyatt Phillips Auto Co., to Ingalls Iron Works Co.

Flomaton, Ala., 120 tons, plant for Roquemore Gravel Co., to Ingalls Iron Works Co.

Montgomery, Ala., 150 tons, McGough garage, to Ingalls Iron Works Co.

Detroit, 175 tons, building for American Brass Co., to Pittsburgh Bridge Co.

Chicago, 700 tons, Temple Sholem, to A. Bolter's Sons, local; previously reported to the Midland Structural Steel Co.

Chicago, 250 tons, building for the Link-Belt Co., to Mississippi Valley Structural Steel Co.

Chicago, 650 tons, approach to Crawford Avenue bridge, to unnamed bidder.

Chicago, 500 tons, two apartment buildings, to Duffin Iron Co., local.

Little Rock, Ark., 3000 tons, bridge for Missouri Pacific Railroad, to American Bridge Co.

Sacramento, Cal., 950 tons, bridge over San Joaquin River at Herndon, to United States Steel Products Co.

Oakland, Cal., 380 tons, warehouse for Port Commission, to California Steel Co.

San Francisco, 110 tons, apartment at Fillmore and Washington Streets, to Golden Gate Iron Works.

Appletree, Wash., 155 tons, motor sheds for Great Northern Railway, to Hofius Steel & Equipment Co.

Structural Projects Pending

Inquiries for fabricated steel work include the following:

State of New Hampshire, 200 tons, highway bridges.

Boston, 1500 tons, Charles H. Tenney Co. office building.

Biddeford, Me., 800 tons, Boston & Maine railroad bridge.

Lowell, Mass., 700 tons, Boston & Maine railroad bridge.

Holyoke, Mass., 400 tons, Boston & Maine railroad bridge.

Bristol, N. H., 140 tons, bridge.

Piedmont, N. Y., 500 tons, Standard Trap Rock Co. plant.

New York Central Railroad, 2000 tons, bridges.

State of New York, 200 tons, bridges for State Highway Commission; bids May 12.

Newark, N. J., 400 tons, manufacturing building; Walter Kidde & Co., engineers.

Philadelphia, 2000 tons, Y. M. C. A. building.

Chesapeake & Ohio Railway, 300 tons, bridges.

Mansfield, Ohio, 400 tons, Farmers National Bank building.

Dayton, Ohio, 725 tons, four hangars at Wright flying field.

Big Four Railroad, 260 tons, bridges.

Michigan Central Railroad, 450 tons, bridges.

Flint, Mich., 500 tons, store building for Kresge Co.

State of Michigan, 200 tons, bridge work for State Highway Department.

South Bend, Ind., 1000 tons, New York Central station.

Chicago, 5000 tons, reconstruction of Fine Arts Building; previously reported as 2000 tons.

Glenview, Ill., 2500 tons, race track grandstand.

Portage, Wis., 160 tons, Dewitt Street bridge; bids May 15.

Milwaukee, 300 tons, new Kinnickinnic River span at Lincoln Avenue; bids May 15.

St. Louis, 1000 tons, building for Swift & Co.

Memphis, Tenn., 250 tons, two snag barges for United States Engineering Corps; Dravo Contracting Co., low bidder.

Hastings, Neb., 400 tons, Masonic Temple.

Denver, Colo., 3600 tons, court house.

Astoria, Ore., 1500 tons, pulp plant; bids at once.

Kettle Falls, Wash., 1125 tons, bridge over Columbia River; J. H. Tillman, Santa Cruz, Cal., low bidder on general contract.

Cherry, Wash., 200 tons, school; bids being taken.

Seattle, 800 to 1000 tons, West Waterway bridge; bids soon.

Los Angeles, 250 tons, apartment at Kenmore & Wilshire Boulevards; bids being taken.

San Francisco, 125 tons, office building at Pine and Leisdorrf Streets; bids in.

Oakland, Cal., 140 tons, office building at Fourteenth and Webster Streets; bids in.

Oakland, Cal., 160 tons, hotel at Seventeenth and Jefferson Streets; bids being taken.

Screw Machine Products Association Meets Next Week

A general meeting of the screw machine products association will be held Thursday, May 17, at the Great Northern Hotel, Chicago. Dr. Arthur E. Swanson, consulting economic engineer, will speak on "some dangers in the present business situation." Malcolm Baird is field secretary of the association.

The Director of Supplies, United States Shipping Board Emergency Fleet Corporation, will receive bids up to May 21 for the sale of steel rails, switches, frogs, etc., of the railroad tracks at Hog Island, Pa. The rails include approximately the following tonnages: 6353 gross tons of 85-lb., 261 tons of 67½-lb. and small lots of 60 lb., 30 lb. and guard rails.

A tow of six barges loaded with pig iron is now en route from the furnaces of the Sheffield Steel & Iron Corporation, Sheffield, Ala., via the Tennessee and Ohio Rivers. This is said to be the largest tow of pig iron ever moved on these rivers. The pig iron will be loaded on cars at Joffa, Brookport and Metropolis, and transported by rail to melters in the St. Louis and Chicago territories.

This Issue in Brief

Supplant the craze for volume with a reasonable passion for profits, urges editor. Unreasoning drive for the last 20 per cent of business is an important contributing cause for shrinking earnings. Many manufacturers seem to prefer full operation with red ink than part operation with black.—Page 1320.

Stove plant takes a leaf from automotive industry's experience and adopts mass production methods with noteworthy success. All manufacturing departments form one complete manufacturing unit, to provide for a straight-line flow.—Page 1310.

New joint of great strength, and gas tight, is formed by painting steel parts with powdered copper and heating in hydrogen atmosphere. The copper melts and penetrates deeply into the steel. Destruction tests frequently reveal that the individual iron crystals will be pulled apart while the junction of copper and iron holds.—Page 1305.

Business upswing will continue until a high point is reached in spring of 1929, A. T. Simonds predicts. Business is now, he says, in the seventh major movement since the war, an upward movement that started in the fall of 1927.—Page 1308.

You will stabilize your business and free yourself from the bogey of the business cycle by finding a way to appraise ultimate consumer demand, says General Motors official. With that fundamental factor determined, it is not difficult to coordinate it with production, purchases and employment of capital.—Page 1322.

Saves time by dumping slag directly into cars in slag pockets under open-hearth furnaces. Cars are of steel plate, brick lined. They are mounted on rollers, and are pulled out by means of a steel cable.—Page 1320.

Wage reductions may be precipitated if price of sheets and strips is further beaten down, says head of producers' association. Wage cuts might have a tremendous influence on other industries, he declares, and might decrease purchasing power all over the country.—Page 1323.

New high record in steel output. April daily rate of ingot production was 172,103 tons, which was 2.5 per cent above the previous high rate of 167,973 tons, established in March, 1927. —Page 1329.

If we want a growing export business, we must continue to buy more from abroad, says E. P. Thomas. Europe must sell *to* us if she is to have money to buy *from* us. If imports are not adequate the difference may be balanced by liberal foreign loans, but, of course, these have their limits.—Page 1309.

Foundry avoids crushing coke by using a special clam shell bucket. When making up a cupola charge the bucket is let down into coke bin, is filled automatically and automatically closed when the bucket is lifted. —Page 1315.

Deep bath produces better steel, open-hearth man declares. Though a shallow bath is quicker, the deep bath has less surface area to the ton of contents for oxidation by the flame, and cleans up the lime better.—Page 1317.

Business trend follows the movement of money rates, says manufacturer. Lowering cost of credit stimulates manufacture and construction, improving business in general. Raising the cost of credit has the opposite effect.—Page 1308.

Many manufacturers who could benefit by adopting budgetary control are afraid of it because they believe it implies rigidity, says General Motors executive. This is a totally wrong conception, for flexibility is a prime requisite. There must be a quick response when changing conditions necessitate adjustment.—Page 1322.

Cooling conveyor for castings is 645 ft. long. It consists of an endless chain and a monorail. Stove castings are suspended from small trolleys. The conveyor runs up to a point above the roof and then down to the sand blast, the circuit taking 105 min.—Page 1314.

Over-capacity competition is causing depletion of our resources of metal ores. Production is being pushed as if resources were boundless and as if realization must be hurried. Prices crumble under competition and the marginal producers ought to quit.—Page 1338.

Steel buyers are increasing their demands for quality—at a low price. Steel is no longer just "steel." Producers need to raise the number of classifications as to quality, which will require increasing cooperation between sales department and the mill.—Page 1339.

Over-Capacity Competition

IN almost every old industry in the United States there is an excess of producing capacity and also an excess of personnel. The desire to use as much as is possible of both develops keen competition and contraction, even extinguishment, of margin and profit. The economic theory is that this condition should reduce prices to the level of the marginal producer and should lead to the survival of the fittest only. The difference between theory and practice pertains to what is the cost of production and the margin of profit.

This is the most difficult determination in the case of production out of natural resources, especially the minerals, that are wasting assets. The producers of petroleum, copper, lead and zinc are particularly confused by this problem. In principle iron and coal are in the same position, but owing to the greater extent of the known resources of both there is less immediate concern about them.

We may point out also, as we have done heretofore, a difference as regards petroleum, in that it is a migratory substance and our American land system compels land owners to be hasty in getting of it what they can, having no assurance that, like the ores, it will remain stationary where nature put it.

The development of the natural resources of the non-ferrous metals is seldom very far ahead; i. e., broadly thinking. The porphyry copper mines as a group can probably maintain their present rate of production for 50 to 60 years; but the rest of the world's copper is derived from mines that are hardly to be expected to live for more than 20 years. The lead and zinc mines that are now producing are on the whole even less assured. Nevertheless production is pushed as if their resources were boundless and as if realization must be hurried. Prices crumble under competition and the marginal producers ought to quit; but generally they do not know that they are marginal producers until they have become insolvent.

Once an enterprise has been capitalized it must generally be kept going, and the law of the survival of the fittest may be very slow in its operation. The economic corrective is delayed until such time as there is no inducement to adventurers to invest in the class of enterprise that has become unprofitable. Adversity thus operates rather through the check to new capitalization than through curtailment of immediate production.

Of course, it is not necessary to rush metal production and *ipso facto* impair profits. The copper producers have learned this, and without any collusion among themselves the major interests in that metal deem it wisest to gage production according to market requirements at a reasonable price, figuring that it is better business to sell 80 or 90 pounds at a moderate profit than 100 pounds at no profit at all. Their intelligence and temperance put them in a sound industrial position; on the other hand, the great medley of the zinc industry is in bad. It is in petroleum, however, that the ravages of a rush to squander natural resources is to be seen at the worst.

Welded Steel—Gains and Losses

THIS growing vogue of welding is causing mixed feelings in the iron and steel industry. Foundrymen may view with concern the supplanting of a sizable quantity of gray iron or large steel castings with built up pieces made of rolled steel; at the same time sellers of the latter product may hail it for bringing them a new outlet. Drop forgers may worry when a forged brake lever is redesigned into a piece of tubing and two end fittings, but the makers of seamless tubes of all sorts regard the rise of the art of welding as a leading factor in the later expansion of their business. Sheet steel has been used in much additional tonnage for automobile bodies and parts, tankage, furniture and architectural details solely because the welded joint has made it adaptable for those purposes. (Nor has the end been reached yet. Elsewhere in this issue is described a new method of automatic welding which is calculated to extend further the field of stampings and screw machine parts.)

It is a case of gains offsetting losses; for welding has enabled steel to invade fields formerly held exclusively by other materials of construction, notably wood. Testimony to the same effect was given at the American Welding Society's meeting, just past—that it would help regain some of that large market lost to reinforced concrete.

Before an audience containing many engineers and fabricators, G. A. Caldwell, vice-president Mississippi Valley Structural Steel Co., said that welded structural steel was enabling his company to compete far more successfully with reinforced concrete in that intermediate zone where the advantages of the two systems overlap. He believes that welding, especially when specialized automatic machinery shall have been developed, will so lower the costs of shop fabrication that this midway zone will be pushed over considerably toward the concrete side, with a corresponding improvement in the economic position of those structural shops which specialize in medium heavy buildings.

This development would be gratifying to many branches of the steel trade, though it may bring regret to those who now make and sell steel reinforcement. But here again the net result would be an expansion in steel consumption, since a welded steel structure, even though it may contain somewhat less metal than a riveted equivalent, still uses many times as much steel as the concrete reinforcement in a substitute building.

Quality and Price in Steel

FREQUENTLY steel makers are disposed to complain of customers who, after crowding for the lowest price by the last dollar or even fifty cents per ton, thereupon proceed to make exacting demands as to quality, demands which the producer is disposed to feel place the steel quite in a class by itself. With the passage of time such complaints seem to grow more numerous rather than less.

These controversies, if they may be called such, as to quality are not by the march of events destined to die out. Rather the natural tendency is for them to increase unless something specific and definite is done about it, and indeed a great many things. For consider that in the old days nearly all the steel made was simply "steel" and once made it passed as well into one line of consumption as another. Year by year steel has been growing more specialized. With new conditions new problems are presented and new practices must be adopted.

The buyer, having agreed to pay certain money, naturally wants to secure all he can for that money. He has an advantage, unfortunate for the seller, in that he deals successively with two distinct parties. First he makes his bargain with the salesman and later he has dealings with the mill, as to quality, tolerances, rejections, etc. The desideratum is to increase cooperation between the sales department and the mill.

The steel industry needs to increase the number of its classifications as to quality, not at this one time or at another, but continuously, for improvement, specialization or adaptation is growing continually. The procedure by which the seller is placed at a disadvantage is insidious. Users of steel are in competition and are trying to succeed just as hard as are other people. Little by little they change their practices, subjecting the steel to harder and harder usage.

Reflection shows that standardization may be in some respects a hindrance rather than a help in this matter. It is easy to be deluded by standards, which may seem to define much more than they do. It is simple to call one steel "deep drawing" and another steel "extra deep drawing," for instance, but these are practically mill standards, the buyer seeking to get all he can from the first class, to avoid buying the second.

The various standards in steel quality are set up according to processes. An extra process involves an extra price, but with the same process costs differ according to the assiduity of the buyer. These variations require that the mill and sales department work closer and closer together, for competition between producers does not end with the sales department. The whole transaction is to be considered in the light of satisfaction to the customer. The seller has not really bested his competitor if he secures a slightly higher price but in the end delivers a considerably better quality.

Teapot Dome By-Products

AS the exposure of the oil scandal has become practically complete we may now try to summarize it, at least the Teapot Dome part of it, in a way that is different from that of the cartoonists, the paragraphers and the politicians. That stern sleuth-hound, Senator Walsh, thought he was following the scent of a political stink-pot, and was regaining for the American people a valuable natural resource. He scented something, to be sure, but it turned out to be a sordid commercial affair, quite unpolitical, and it is a wonder that the senatorial committee continued to think of it as any of its business. Nevertheless it must be said that, even if Senator Walsh failed to make capital for his political party, or to render a real service to the American people, he did indeed work well for those of them who are stockholders in the Sinclair Consolidated Oil Co.

H. F. Sinclair believed the Teapot Dome to have oil sands that would be productive and profitable and secured a lease of it through Secretary Fall. He transferred this lease to the Mammoth Oil Co. that he organized; then he sold an interest in that company to the Sinclair Consolidated Oil Co. for 250,000 shares of the common stock of the Sinclair company and an arrangement whereby it was to build at Portsmouth, N. H., certain tankage required by the terms of the lease from the Government. Mr. Sinclair was then the chairman of the board of the Sinclair company. At the time of this transaction its common shares were selling in the thirties, so that the value of 250,000 of them ran well into the millions.

The Sinclair company was also led to build, through a subsidiary, a pipe line to Wyoming that cost about 27 million dollars.

The Teapot Dome turned out to be less productive than was expected; and up to the time when Senator Walsh stepped in the stock of the Mammoth Oil Co. looked like a bad investment for the Sinclair company. However, its pipe line proved useful for the conveyance of other Wyoming oil.

The United States Supreme Court decided that the lease made by Secretary Fall to Mr. Sinclair was fraudulent and cancelled it. This had nothing to do with the considerations that the terms of the lease were fair to the Government and better than the conventional; or to the prospect that the oil of the dome might be drained off by others, leaving the Government with only the shell. It does not look like the Government regaining an asset of immense value that had been stolen from it. It looks more like the Government losing its royalty oil, but perhaps getting $1,340,000 worth of steel tankage at Portsmouth at the expense of the Sinclair stockholders, who have been, of course, quite innocent. However, the lease was fraudulent and was consequently cancelled, and that was that.

So this has naturally raised the question in the Sinclair board how it stands after having given up 250,000 of its common shares and built more than a million dollars' worth of tankage in a Government navy yard in consideration of property rights that the Supreme Court has said the vendor did not own. Conversations on the matter between the board and the other parties are going on.

The Continental bond issue that has so much exercised the senators was quite a different affair. They had an idea that it was the cloak for a political corruption fund of first-class magnitude, but it proved to be merely a shield under which certain oil magnates bought a large quantity of crude petroleum and immediately resold it to their own companies at a profit. Their trips to regions remote from Washington and their refusals to answer questions were quite explainable. The truth as to this was deduced by business men long before the senators became aware of it. When finally the disclosure was made, two of these magnates turned their shares into the Sinclair Crude Oil Purchasing Co., which is jointly owned by Sinclair Consolidated and Standard Oil of Indiana.

Sinclair Consolidated is a very big and very successful company, whose shares are widely distributed among the public. Thanks to Senator Walsh it has obtained restitution of a lot of cash, and perhaps it may come to enjoy some other adjustments.

Changes in the Finished Steel Line-Up

SOME interesting changes occurred in the distribution of steel last year among the different finished products, but they were not large. Changes in the forms of steel have not been so great in recent years as they used to be. There appears to be less occasion than formerly for the steel company making diversified products to maintain a substantial excess of steel finishing over steel making capacity.

The statistics of last year's production, given elsewhere in this issue of THE IRON AGE, show that from 1926 rails, bars and plates had the larger decreases while shapes, tubular goods and tin plate had the smaller decreases. This is not in line with the attitude of some of the trades during the year, for pipe was regarded as having a decidedly off year and tin plate a very substantial decline. Yet while production of rails decreased 12.8 per cent, of plates 11.4 per cent and of bars 11.0 per cent, tubular goods lost only 4.7 per cent and tin plate only 6.1 per cent.

Department of Commerce statistics showed an increase in fabricated structural steel lettings of 6.0 per cent, from 2,890,800 net tons in 1926 to 3,063,500 net tons in 1927. According to the figures of *Railway Age* the number of freight cars built in the United States and Canada decreased 27.9 per cent, from 93,278 in 1926 to 67,328 in 1927. These are important consuming lines for shapes and plates and now we find that shape production decreased 4.3 per cent while plate production decreased 11.4 per cent.

It is rather surprising to find that the total production of tubular goods decreased only 4.7 per cent, when there was so much talk of dullness. Welded decreased 8.4 per cent, while seamless increased 11.5 per cent. Welded lost 290,064 tons but seamless gained 88,811 tons. Of the total loss in welded nearly one-third was to seamless, which is likely to make further gain in view of the number of seamless mills recently built or now building.

Wire rod production actually made a gain, though of less than 1 per cent, and in face of the fact that wire nail production decreased by 3.2 per cent. By the long range comparison, however, rod production was light last year, as there were six better years.

As the strip industry has been growing rapidly it is interesting to observe how sheets and strips fared. Sheets, not including black plates for tinning, decreased 6.9 per cent while hot rolled strips increased 7.9 per cent. The two combined lost 3.8 per cent. A portion of the sheet loss was to strips, but not a large proportion.

Pig Iron at Over 1000 Tons a Day

BLAST furnaces producing more than 1000 tons of pig iron a day are getting into the news columns of THE IRON AGE. Not so long ago such an accomplishment was regarded as an iridescent dream. Large outputs, even at the rate of 700 tons a day, had been looked upon as possible only by the use of large scrap charges. But both in the United States and in Germany over 1100 tons has been produced from normal charges of ore, limestone and coke, scrap percentages being small. One American furnace has recently made close to 30,000 tons in a 31-day month, with outputs of single days running from 1075 to nearly 1200 tons. A German furnace is reported to have produced 1150 tons in one day.

Two important factors are represented in these records: the use of larger volumes of air and improved methods of charging. Furnaces into which formerly 50,000 cubic feet of air per minute was blown are now taking up to 75,000 to 80,000 cubic feet. In charging, coarse ore is being segregated from fine and introduced separately, thus minimizing channeling. These changes as well as an increase in the size of the hearths are revolutionizing furnace outputs.

With the capacity of older furnaces increased by the use of larger hearths and augmented blowing equipment, and with new stacks built on expansive lines, greater production with still fewer furnaces may be looked for. This has been the steady trend of the American industry in quite recent years. However, it will take time to determine whether the 1000-ton furnace can be considered as other than extraordinary—the exception that proves the rule.

CORRESPONDENCE

Non-Ferrous Alloys and Their Names

To the Editor: It is the opinion of the writer that attempts to name nickel silver by such a designation as coppernick, as suggested in your editorial of April 5, or a similar abbreviated form should be discouraged.

Fundamentally so-called nickel silver is nothing more nor less than a yellow brass to which nickel has been added. It would appear that the name "nickel brass" would be most informative to the trade at large and would be in keeping with the present-day practice of eliminating brand and proprietary names in designating engineering materials. By the use of the term nickel brass, the prefix giving the percentage is usually recognized as the percentage of the special alloy added to the brass, i.e., "15 per cent nickel brass" indicates at a glance that it is a nickel-bearing copper-zinc alloy containing 15 per cent of nickel.

P. E. McKinney.

Superintendent forge and foundry division,
United States Naval Gun Factory, Washington.

—

To the Editor: Your thought of applying the general scheme of the Society of Automotive Engineers numbering system for steels to the non-ferrous alloys is a reasonable one. However, before this could be done, standard and better recognized non-ferrous compositions should be promulgated by some specification-writing body. The combinations that can be made of the various elements entering into commercial alloys are infinite. This leads to an unnecessary and, moreover, a costly and uneconomic procedure when applied to both the purchase of non-ferrous materials and their use in the foundry. Several years ago the American Society for Testing Materials published a list of approximately 1500 different non-ferrous compositions known to the trade. This large number of alloys is a product of inventive genius, a desire for novelty, both from the sales promotion and patent protection standpoints, but is not necessarily an economic necessity. The facility of manufacture and physical and other properties of the alloy should be the determining factors.

Referring to the Society of Automotive Engineers specifications for non-ferrous alloys (which, incidentally, are not numbered in accordance with their system for steels), one finds 13 alloys covering brass and bronze compositions. This seems rather reasonable. Of course, considerable work has been done by this society and other specification-writing bodies to narrow down the compositions of non-ferrous alloys, but considerably more work can be done with the aim of greater standardization. A simple, comprehensive numbering system would be a further incentive to specify and use standard compositions.

In the non-ferrous products there is a general tendency to add a little more of this or a little less of that element when trouble is experienced, either in the foundry or machine shops, with the hope that the unknown reason for the trouble will be eliminated. It is a very easy thing to increase or decrease the zinc 2 per cent in a red brass. It will still be a red brass, and, if the difficulties experienced with the previous mixture vanish, we have then another composition to swear by or swear at, depending on what the future holds forth. An example of this is the old standard gun metal formula, 88-10-2, and its step-child, 88-8-4.

The red brass composition of 85-5-5-5 is almost a standard, with the exception that the producer of ingots is called upon to supply numerous varieties of it differing only a little in composition.

Referring particularly to the nickel-copper and nickel-copper-zinc series, there is a large variety of compositions. I believe that the rolled nickel-silver compositions are fairly well standardized, basing the various compositions on nickel content. On the other hand, the varieties of cast alloys are extensive. A perusal of the patents issued covering cast nickel-silver compositions gives one occasion to wonder whether the patenting of an alloy has any value whatsoever. The compositions overlap and even are similar for various patents for all practical applications.

In conclusion, I will say that an effort on the part of specification-writing bodies to establish a limited number of compositions for the various alloy series and to number them in a logical, orderly manner, similar to the S.A.E. steel nomenclature, would be most desirable. The use of these standard alloys, identified in such a manner, would eventually make for a great saving in the operations of both consumers and producers.

W. F. Graham.

Technical division, Ohio Brass Co.,
Mansfield, Ohio.

Service—A Protest

To the Editor: You hear a lot nowadays about service. The term is probably as much abused as any expression we have, and the fault may quite generally be laid at the door of those organizations that in a desperate effort to embellish the advantages of ownership of a product stress the point that with ownership there accrues an obligation out of all proportion to the product itself.

True service, as it should apply to merchandising, should be a guarantee of satisfaction in the stipulated performance of the product, and should not, in its appeal, be directed along the lines of least resistance to an extent that the customer expects an everlasting attendance to the details of operation. Whether an organization sells sewing machines, tractors, automobiles or electric light and power, an overemphasis on the service that may be expected from the day of purchase or installation until every complex human desire is satisfied can only arouse suspicion as to the basic merits of the product or the organization behind the product.

True service consists in the maintaining of certain standards of value. To exaggerate those values with promises of unreasonable after-sales service has an inevitable reaction of dissatisfaction in the public consciousness.

Hugo E. Jung.

Kerman, Cal.

Veeder-Root Directorate Selected

Incident to the organization of Veeder-Root, Inc., Hartford, Conn., which is being formed as a merger of the Veeder Mfg. Co., Hartford, and the Root Co., Bristol, Conn., as a manufacturer of calculating machines and kindred equipment, the following directors have been chosen: John T. Chidsey, recently president and treasurer Root Co., who will be president of the new company; Graham H. Anthony, formerly vice-president and secretary Allen Mfg. Co., Hartford, who will be vice-president in charge of manufacturing for the new organization; Ralph C. Coxhead, who has been president Ralph C. Coxhead Corporation, New York, and will be vice-president in charge of sales for Veeder-Root, Inc.; Curtis H. Veeder, recently president Veeder Mfg. Co.; David J. Post, who has been treasurer Veeder Mfg. Co.; Fuller F. Barnes, president of the Wallace Barnes Co., the Associated Spring Corporation and Barnes-Gibson-Raymond, Inc., and formerly vice-president Root Co.; Frederick S. Chase, president of the Chase Cos., Inc., Waterbury, Conn.; Henry H. Conland, publisher of the Hartford *Courant;* Charles B. Cook, vice-president Royal Typewriter Co., Brooks Leavitt, a member of Paine, Webber & Co., New York investment bankers; V. Russell Leavitt, manager of the Hartford office of Paine, Webber & Co.; Charles D. Rice, factory manager of the Underwood-Elliott Fisher Co.; Charles T. Treadway, chairman of the Bristol National Bank and the American Trust Co., and Frank E. Wolcott, president Frank E. Wolcott Mfg. Co. Another director will be elected.

"Spray Coating—its Hazards and Safeguards" is the title of a booklet recently issued by the Hartford Accident & Indemnity Co., Hartford, Conn., which contains the results of a comprehensive investigation into the health and property hazards connected with the use of spray lacquers.

April Iron Output Gains Moderately

Actual Data Show That Daily Rate Gained 2968 Tons or 2.9 Per Cent Over March—Net Loss of Two Furnaces

ACTUAL data of the April production of pig iron, reported by practically all companies, show that the estimates, made by the companies a week ago and published last week, were very close to the real output. The April production was 106,183 tons per day, according to the final returns, or only 153 tons more than the estimate of 106,030 tons published a week ago.

Total April coke pig iron output was 3,185,504 gross tons or 106,183 tons per day for the 30 days, as compared with 3,199,674 tons, or 103,215 tons per day, for the 31 days in March. This is a gain for April of 2968 tons, or 2.88 per cent. This compares with a gain in March of 3.2 per cent over February. The April production last year was 3,422,226 tons, or 114,074 tons per day—a gain of about 7.4 per cent over April this year. Production last month was the smallest for that month since 1922, which was also true of January, February and March. It was, however, the largest thus far this year.

Production for the first four months of this year has been 12,155,065 tons, as compared with 12,950,087 tons for the same four months in 1927.

Net Loss of Two Furnaces

Eight furnaces were shut down and six were blown in during April—a net loss of two. Three of the furnaces blown in were Steel Corporation stacks and two were independent steel company furnaces. One merchant stack was lighted. Of the furnaces blown out three were merchant, three were independent steel company stacks, and two belong to the Steel Corporation. Thus there was no gain or loss in steel making furnaces, the net loss for the month being merchant stacks.

Possibly Active Furnaces Reduced

Two of the Lackawanna furnaces of the Bethlehem Steel Corporation at Lackawanna, N. Y., have been abandoned and will soon be dismantled. The Lebanon furnace of the Lavino Furnace Co. in the Lebanon Valley has also been dismantled and the Princess stack

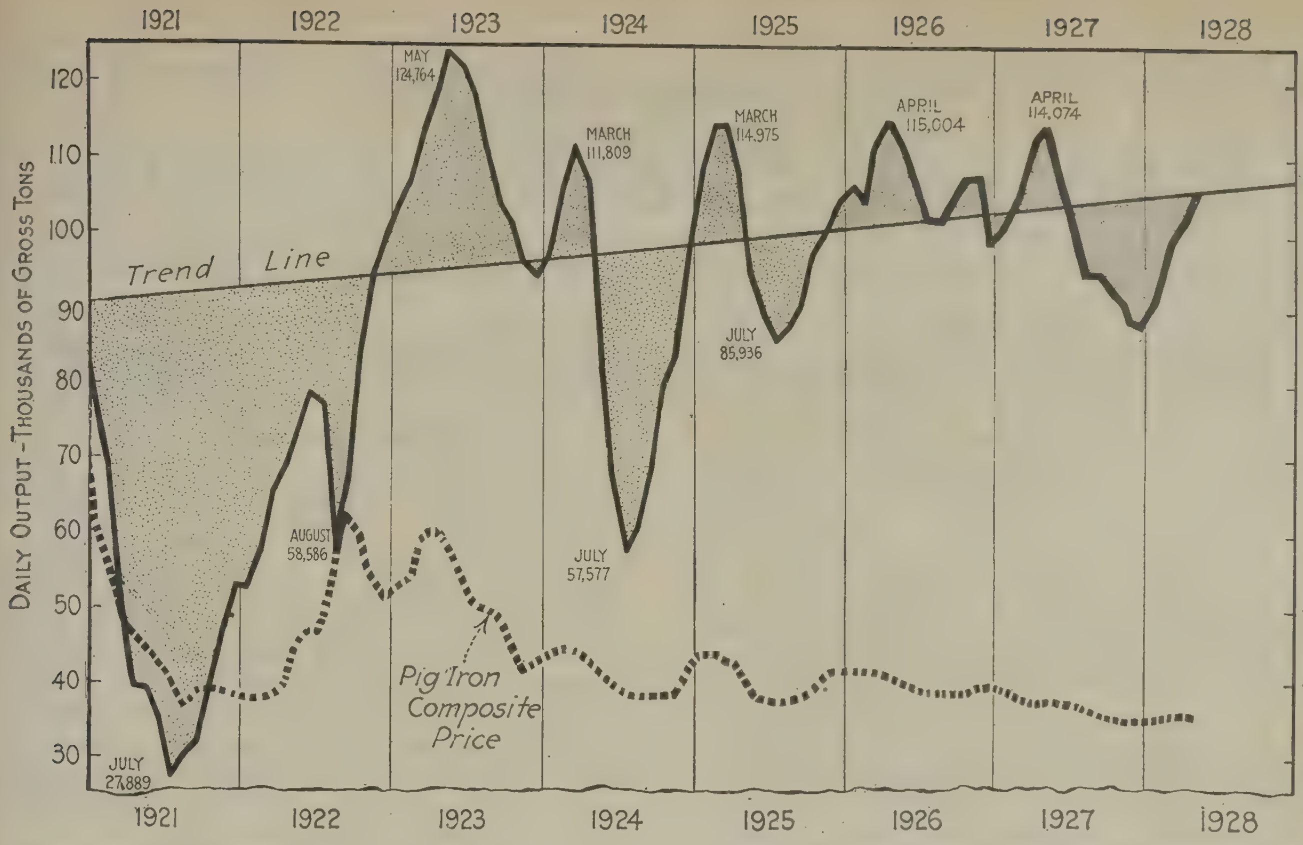
*These totals do not include charcoal pig iron. The 1926 production of this iron was 163,880 tons.



Daily Pig Iron Output in April Was 2.9 Per Cent More Than in March; Composite Price Decreases Slightly

Inclined line represents the gradually increasing theoretical needs of the country, and shows that production is now substantially normal. Dotted line represents THE IRON AGE *composite price*

of the Princess Iron Corporation at Glen Wilton, Va., which was recently sold at public auction, will not be operated again. This reduces the number of possibly active furnaces in the United States from 347 to 343.

Capacity Active on May 1

The operating rate of the 195 furnaces active on May 1 is estimated at 104,015 tons per day, as compared with an operating rate of 104,650 tons per day for the 197 furnaces on April 1.

Manganese Alloy Output

Production of ferromanganese in April was 18,405 tons, or the smallest this year. Two companies made spiegeleisen in April, but the data cannot be made public.

Furnaces Blown in and Out

During April the following furnaces were blown in: one Carrie and one Clairton furnace of the Carnegie Steel Co. in the Pittsburgh district; the Claire furnace in the Shenango Valley; one Cambria furnace of the Bethlehem Steel Corporation in western Pennsylvania; one Haselton furnace of the Republic Iron & Steel Co. in the Mahoning Valley, and one Gary furnace of the Illinois Steel Co. in the Chicago district.

Furnaces blown out or banked during April were as follows: The Brooke furnace in the Schuylkill Valley; one Edgar Thomson furnace of the Carnegie Steel Co. in the Pittsburgh district; the Colonial furnace in western Pennsylvania; one Sparrows Point furnace of the Bethlehem Steel Corporation in Maryland; one La Belle furnace of the Wheeling Steel Corporation in the Wheeling district; one Gary furnace of the Illinois Steel Co. and one Indiana Harbor furnace of the Youngstown Sheet & Tube Co. in the Chicago district, and one Woodward furnace of the Woodward Iron Co. in Alabama.

American Management Association to Hold Conference

The 1928 production executives' conference of the American Management Association will be held at the Hotel Statler, Buffalo, June 6, 7 and 8. Group bonuses will be the subject at the morning session on the first days, the principal speakers being Walter N. Polakov, consulting engineer, New York; R. F. Whisler, head of rate and time study department, National Cash Register Co., Dayton, Ohio, and Brooks Shepard, secretary Eberhard Mfg. Co., Cleveland. At the luncheon meeting on that day Ernest G. Draper, treasurer Hills Brothers Co., New York, will discuss unemployment.

A further discussion of bonuses will occupy the next two sessions of the meeting, while the remainder of the conference will be given over to the subject of apprentice and other employee training methods. Among the speakers on this subject will be A. B. Gates, assistant manager of industrial relations for the Commonwealth Edison Co., Chicago; Dr. J. A. Randall, president Rochester Mechanics Institute, Rochester, N. Y.; Russell N. Keppel, personnel manager Standard Oil Co. of New Jersey, Bayonne, N. J.; George F. Kent, manager of industrial relations for the Bucyrus-Erie Co., South Milwaukee, and E. W. Kempton, educational director American Steel & Wire Co.

Iron and Steel Markets

Record Four-Month Steel Output

Daily Rate Reaches New Peak in April—Steel Bookings Show Slight Recession—Sheets Weaker—Price Reductions in Pig Iron

STEEL ingot production in the first third of the year, as forecast by THE IRON AGE last week, established a new four-month record. Output so far in May has shown surprisingly little recession. Chicago mills remain on a 95 per cent basis, and average operations in the Greater Pittsburgh district, despite a decline at Youngstown, are holding at 80 per cent.

Mill bookings, including specifications against contracts, are not materially smaller than for the first third of April. In fact, at Cleveland, plates, shapes and bars are moving in somewhat better volume.

Aside from further weakness in some finishes of sheets and reductions in basic pig iron in eastern Pennsylvania and foundry iron at Birmingham, prices have shown little change.

The nearest approach to the ingot output of 16,846,729 tons in the first four months of this year was a production of 16,521,904 tons in February, March, April and May of 1927. The high operations of the industry in the first third of 1928 may owe something to the price advances that began late in December, although there is little evidence of accumulated stocks in buyers' hands save in a few isolated lines like wire nails. On the contrary, Pittsburgh reports instances of pressure by buyers for prompt deliveries, indicating an underestimating of requirements.

The large four-month output is testimony to the volume of steel going into widely ramifying uses and suggests that evidence furnished by the staple barometers of steel consumption is less conclusive than formerly.

Building activity was fully in keeping with steel production, but automobile output, although virtually equal to that of the first third of last year, fell considerably short of the totals for the corresponding periods in 1926 and 1924.

Depression in the oil fields has been reflected in subnormal purchases of steel, and railroad equipment buying has been in meager volume. Rail bookings during the entire winter buying movement, which began late last fall, showed a gain of possibly 10 per cent over commitments a year previous.

There was a similar gain in purchases by the farm implement industry, which, however, is one of the minor consuming lines, taking a relatively small percentage of the total production of finished steel.

Steel ingot output in April exceeded expectations. While mill operations tapered toward the end of the month, production, at 4,302,573 tons, was the fourth highest monthly total, and the daily average, at 172,103 tons, established a new record.

Estimates that ingot production this month will fall 5 per cent from the rate for April would still make the output for May with its two extra working days in excess of 4,400,000 tons.

The slower pace of steel buying is being met with the contention among makers that price reductions will not develop business and that stabilization of both volume and price will be the record of the next few weeks.

Further weakness, however, has occurred in certain products. Black sheets are more generally available at 2.70c., Pittsburgh, a decline of $1 a ton. On galvanized sheets, prices as low as 3.55c. and 3.50c., Pittsburgh, have appeared, compared with a recent minimum of 3.60c. Invasion of the Chicago district by more easterly mills has adversely affected Western sheet production and has resulted in concessions from the Chicago price of 2c. on plates, shapes and bars, particularly in outlying territories.

Prices on cotton ties announced for 1928 take a different form in that they are on a quantity basis. On mill shipments in carloads the price is $1.27 per 45-lb. bundle, f.o.b. Atlantic or Gulf ports; in lots of 2000 bundles, $1.25, and in larger lots, $1.23. Last year's prices were $1.20 at Atlantic ports and $1.21 at Gulf ports.

While rail mill operations continue at a high rate, one large road has canceled its May quota of rails and another has failed to exercise an option on 100,000 tons in addition to its winter purchase of 200,000 tons.

Structural steel awards, at about 25,000 tons, were below the average of recent weeks, but considerable business is pending. At Chicago about 100,000 tons, including 50,000 tons for the Mercantile Mart, is in prospect for early action.

A reduction of 50c. a ton on Southern foundry iron and a like decline on basic pig iron in eastern Pennsylvania, where two steel companies have purchased a total of about 30,000 tons, reflect the growing competition for business. Cleveland iron, moved by boat to Chicago, is being offered for prompt shipment at $18 dock, or 50c. a ton below the quotations of Chicago merchant furnaces. An effect of the competition of English low phosphorus iron at Great Lakes ports, where it is being offered at $26, duty paid, is a reduction of 50c. a ton on this grade of iron at Valley furnace.

Both of the THE IRON AGE composite prices have dropped this week, that for pig iron reaching a new low point for the year at $17.50 a ton, compared with a previous low of $17.54 early in January. The finished steel composite has declined to 2.348c. a lb., but is still 1½ per cent above the year's low, in January, of 2.314c.

On export business there are frequent variations from the above prices. Also, in domestic business, there is at times a range of prices on various products, as shown in our market reports on other pages.

Pittsburgh

Steel Demand Steady, But Buyers Are More Insistent on Quick Deliveries

PITTSBURGH, May 8.—Demand for steel products still is remarkable for persistency rather than volume. Seemingly, consumption is holding up well in most directions. Besides a fairly steady flow of specifications on old orders, new business is not materially behind that of the first week or 10 days of last month. Some indication of underestimating of requirements still is seen in the insistence of buyers for prompt deliveries, and cases are fairly numerous where the best promise of delivery won the order.

Scheduling of mills still is at short range, but as yet no great difficulty has been experienced in filling them. The trend of ingot production is down, but against some slipping in the Youngstown district, there is virtually full production in the Wheeling district. In the Pittsburgh district the rate is not below 80 per cent, which is a fair estimate of the combined areas of the Greater Pittsburgh district.

Prices still show irregularity, and in the case of sheets and the wider strips they are weak. Viewed as a general proposition, the market reflects merely the anxiety there always is on the part of some steel mills for orders when buyers are conservative, as they usually are at this time of the year, when sales rather than production problems are uppermost.

Jobbers are heavily stocked with wire nails as a result of unusually large shipments against orders placed last December and for first quarter at prices well under those now quoted. A mill that might want to sell now would in many instances find jobbers thinking in terms of the cost of present stocks and unwilling to add to them at any higher price. It is this condition that has brought out quotations of less than $2.65, base, per keg, Pittsburgh, which most makers still regard as the market.

There is no life to the pig iron market, which is becoming nominal as to prices in the absence of the test of large inquiries. Activity in scrap is on the part of dealers rather than the mills. The coal and coke market is in the doldrums.

Pig Iron.—The market is dull to the point of stagnation, with sales few and only occasionally of more than a carload lot. Prices are where they were a week ago, but are being supported solely by carload sales. Valley basic iron seems to have steadied at $16.50, but doubt exists that this price can be done except in the immediate vicinity of the furnaces, as the most recent sales have demonstrated that $16 is all that could possibly be obtained on business in competitive territory either toward Pittsburgh or north of the Valleys. The Central Alloy Steel Corporation reports that it did not sell the iron recently purchased by the American Steel Foundries at Alliance, Ohio. Since it is well established that the iron is moving from Canton to Alliance, the assumption is that it was some owned by middlemen. Carload lots of Bessemer iron are moving at the full quotation, which represents a differential of $1 a ton over basic iron, as against 50c. recently.

Low phosphorus iron is offered at $26.50, Valley furnace, a drop of 50c. a ton.

Prices per gross ton, f.o.b. Valley furnace:

Basic	$16.50
Bessemer	17.50
Gray forge	16.75
No. 2 foundry	17.25
No. 3 foundry	16.75
Malleable	17.25
Low phosphorus, copper free	26.50

Freight rate to the Pittsburgh or Cleveland district, $1.76.

Ferroalloys.—Regular users of spiegeleisen have quite generally signed contracts covering their requirements over the last half of the year, paying the same prices as on first half commitments. There has not been enough of a recession in steel ingot production to affect seriously the specifications for the commonly used ferroalloys. No attempt yet is being made to negotiate last half contracts for ferromanganese, and most consumers of high content ferrosilicon are covered for the entire year.

Bars, Plates and Shapes.—Rolling of these products are maintained by releases against contracts and a generous sprinkling of new orders, but order books are gradually becoming slimmer, and a little more anxiety for business on the part of the mills is seen in the fact that spot sales are more frequent at the contract price of 1.85c. base, Pittsburgh, and there is a willingness to accept that price on small lots on which 1.90c. recently would have been asked. Plate makers are encouraged by the inquiries of the Erie Railroad for 1000 box cars and the Virginian Railway for 1000 50-ton hopper cars; also by the fact that there continues to be a good demand for river barges and towboats. Fabricated steel business is lighter than it has been and inquiries are fewer. Demand for bars is declining, since makers of cold-finished bars are taking fewer, and the orders for bolts and nuts have fallen off about 10 per cent from the recent peak. Reinforcing bar prices are irregular and on the worthwhile jobs price competition is rather sharp.

Wire Products.—Makers here still insist that the market on wire nails is $2.65, base, per keg, Pittsburgh, and report specifications against second quarter contract carrying that price. Specifications reflect the fact that jobbers stocked up pretty heavily during the early part of the year, and the movement into consumption not having been in keeping, they still have sizable inventories. First quarter contracts having been completed last month, some makers seem to need orders and have offered concessions amounting to as much as 10c. per keg, but mills still holding to $2.65 say that lower prices are concessions rather than outright reductions. The market is undergoing a test which should determine whether the price of $2.65 is to stand or fall. Plain wire is moving well.

Semi-Finished Steel.—There is still a fairly heavy movement of billets, slabs and sheet bars on contracts, but an almost complete dearth of open market activity. Mills here and in Youngstown still are quoting $33 for large billets and slabs and $34 for sheet bars and small billets and slabs. Forging quality billets still are held at $5 a ton higher than ordinary billets. A few specifications are being received against second quarter wire rod contracts carrying a price of $44, base, Pittsburgh. The movement is not yet heavy, as a good many consumers still have lower-priced stocks upon which to draw.

Cotton Ties.—Prices have been announced for the 1928 season and take somewhat different form than those of the past few years in that they are placed upon a quantity basis. Prices are the same whether delivered at Atlantic or Gulf ports. On mill shipments in car lots the price is $1.27 per bundle of 45 lb., in lots of 2000 bundles, $1.25, and in larger lots, $1.23. Last year the price was $1.20, f.o.b. Atlantic ports, and $1.21, f.o.b. Gulf ports, and the year before $1.20, f.o.b. Gulf ports, and $1.22, f.o.b. Atlantic ports. Quoting cotton ties f.o.b. port, came into vogue in 1924, partly in recognition of the abolition of Pittsburgh as a sole price basing point on steel, and partly to conform to quotations on imported ties. Previously, prices were quoted f.o.b. Pittsburgh.

Tubular Goods.—Movement of building and construction pipe still is satisfactory, but no improvement in the demand for oil country goods can be chronicled. It begins to look as if inquiries for the gas pipe line to run from Monroe, La., to Memphis and St. Louis may soon reach the mills, as the same interests are behind that project as sponsored the Amarillo-Denver line, which now is nearing completion.

Sheets.—The market is generally weak on the common finishes, but particularly so on galvanized sheets, which are not hard to get at 3.60c., base, and in some instances have been sold at that price subject to a commission of $2 a ton to the jobber, or 3.50c. net to maker. Observance of No. 28 as the lightest gage of galvanized sheets to be rolled for roofing and siding is on the part of the few rather than the many. It seems that in the South and Southwest, where the demand is heaviest for these purposes, price rather than service has the strongest appeal and, to meet the situation, material running 72 to 73 lb. per square is being produced, as against 77 lb., the weight of a square of No. 28 gage steel. Generally, 3.65c. measures the top of the market, although some companies have not formally abandoned 3.75c. On black sheets 2.75c., base, is regarded as the minimum, although lower prices are reported. Blue annealed sheets commonly are 2c., base. New demands are light. Automobile body sheets still are moving well and at maintained prices.

Tin Plate.—Mill operations continue at substantially full physical capacity, as specifications on contracts are large. Unseasonable weather has probably caused some delay in putting in packing crops, but does not appear to have hurt the prospects for orchard fruits and there is a fair degree of optimism as to this year's

THE IRON AGE Composite Prices

Finished Steel

May 8, 1928, 2.348c. a Lb.

One week ago	2.355c.
One month ago	2.362c.
One year ago	2.353c.
10-year pre-war average	1.689c.

Based on steel bars, beams, tank plates, wire, rails, black pipe and black sheets. These products constitute 87 per cent of the United States output of finished steel.

Wire Products

(To jobbers in car lots, f.o.b. Pittsburgh and Cleveland)

	Base Per Keg
Wire nails	$2.55 to $2.65
Galvanized nails	4.55 to 4.65
Galvanized staples	3.25 to 3.35
Polished staples	3.00 to 3.10
Cement coated nails	2.55 to 2.65

	Base Per 100 *Lb.*
Bright plain wire, No. 9 gage	$2.50
Annealed fence wire	2.65
Spring wire	3.50
Galv'd wire, No. 9	3.10
Barbed wire, galv'd	3.35
Barbed wire, painted	3.10

Chicago district mill and delivered Chicago prices are $1 per ton above the foregoing. Birmingham mill prices $3 a ton higher; Worcester, Mass., (wire) mill $3 a ton higher on production of that plant; Duluth, Minn., mill $2 a ton higher; Anderson, Ind., $1 higher.

Woven Wire Fence

	Base to Retailers Per Net Ton
F.o.b. Pittsburgh	$65.00
F.o.b. Cleveland	65.00
F.o.b. Anderson, Ind.	66.00
F.o.b. Chicago district mills	67.00
F.o.b. Duluth	68.00
F.o.b. Birmingham	68.00

Sheets

Blue Annealed

	Base Per Lb.
Nos. 9 and 10, f.o.b. P'gh	2.00c. to 2.10c.

Long Ternes

No. 24, 8-lb. coating, f.o.b. mill primes	4.10c.

Tin Plate

	Per Base Box
Standard cokes, f.o.b. P'gh district mills	$5.25
Standard cokes, f.o.b. Gary	5.35

Terne Plate

(*F.o.b. Morgantown or Pittsburgh*)

(Per package, 20 x 28 in.)

8-lb. coating I.C.	$11.20	25-lb. coating I.C.	$16.70
15-lb. coating I.C.	14.00	30-lb. coating I.C.	17.75
20-lb. coating I.C.	15.30	40-lb. coating I.C.	19.85

Alloy Steel Bars

(F.o.b. maker's mill.)

S.A.E. Series Numbers		*Per* 100 *Lb.*
2000	(½% Nickel)	$2.90
2100	(1½% Nickel)	3.20
2300	(3½% Nickel)	4.15
2500	(5% Nickel)	4.90
3100	Nickel Chromium	3.20
3200	Nickel Chromium	3.65
3300	Nickel Chromium	6.45
3400	Nickel Chromium	5.85
4100	Chromium Molybdenum (0.15 to 0.25 Molybdenum)	3.15
4100	Chromium Molybdenum (0.25 to 0.40 Molybdenum)	3.35
4600	Nickel Molybdenum (0.20 to 0.30 Molybdenum, 1.25 to 1.75 Nickel)	3.70
5100	Chromium Steel (0.60 to 0.90 Chrome)	3.00
5100	Chromium Steel (0.80 to 1.10 Chrome)	3.10
5100	Chromium Spring Steel	2.85
6100	Chromium Vanadium Bars	3.85
6100	Chromium Vanadium Spring Steel	3.60
9250	Silicon Manganese Spring Steel	2.90
Chrome Nickel Vanadium		4.15
Carbon Vanadium		3.60

Above prices are for hot-rolled steel bars, forging quality. The ordinary differential for cold-drawn bars is 1c. per lb. higher. For billets 4 x 4 to 10 x 10 in., the price for a gross ton is the net price for bars of the same analysis. For billets under 4 x 4 in. down to and including 2½ in. squares, the price is $5 a gross ton above the 4 x 4 billet price.

Slabs with sectional area of 16 in. or over carry the billet price; slabs with sectional area of 12 in. to 16 in. carry a $5 extra above the billet price and slabs with a sectional area under 12 in. carry the bar price.

Band sizes are 40c. per 100 lb. higher.

Rails

	Per Gross Ton
Standard, f.o.b. mill	$43.00
Light (from billets), f.o.b. mill	36.00
Light (from rail steel), f.o.b. mill	34.00
Light (from billets), f.o.b. Ch'go mill	36.00

Track Equipment

	Base Per 100 *Lb.*
Spikes, $\frac{9}{16}$ in. and larger	$2.80
Spikes, ½ in. and smaller	2.80
Spikes, boat and barge	3.00
Tie plates, steel	2.15
Angle bars	2.75
Track bolts, to steam railroads	$3.80 to 4.00
Track bolts, to jobbers, all sizes, per 100 count	70 per cent off list

Welded Pipe

Base Discounts, f.o.b. Pittsburgh District and Lorain, Ohio, Mills

Butt Weld

Steel			*Iron*

2½ to 4	57	46½	2½ to 4	29	15
4½ to 6	56	45½	4½ to 6	28	14
7 to 8	52	39½	7 to 8	21	7
9 and 10	45	32½	9 to 12	16	2
11 and 12	44	31½			

On carloads the above discounts on steel pipe are increased on black by one point, with supplementary discount of 5%, and on galvanized by 1½ points, with supplementary discount of 5%. On iron pipe, both black and galvanized, the above discounts are increased to jobbers by one point with supplementary discounts of 5 and 2½%.

Note.—Chicago district mills have a base two points less than the above discounts. Chicago delivered base is 2½ points less. Freight is figured from Pittsburgh, Lorain, Ohio, and Chicago district mills, the billing being from the point producing the lowest price to destination.

Boiler Tubes

Base Discounts, f.o.b. Pittsburgh

Lap Welded Steel		*Charcoal Iron*	
2 to 2¼ in.	27	1½ in.	+18
2½ to 2¾ in.	37	1¾ to 1⅞ in.	+ 8
3 in.	40	2 to 2¼ in.	— 2
3¼ to 3¾ in.	42½	2½ to 3 in.	— 7
4 to 13 in.	46	3¼ to 4½ in.	— 9

Beyond the above discounts, 7 fives extra are given on lap welded steel tubes and 2 tens to 2 tens and 1 five on charcoal iron tubes.

Standard Commercial Seamless Boiler Tubes

Cold Drawn

1 in.	60	3 in.	45
1¼ to 1½ in.	52	3¼ to 3½ in.	47
1¾ in.	36	4 in.	50
2 to 2¼ in.	31	4½, 5 and 6 in.	45
2½ to 2¾ in.	39		

Hot Rolled

2 and 2¼ in.	37	3¼ and 3½ in.	53
2½ and 2¾ in.	45	4 in.	56
3 in.	51	4½, 5 and 6 in.	51

Less carloads, 4 points less. Add $8 per net ton for more than four gages heavier than standard. No extra for lengths up to and including 24 ft. Sizes smaller than 1 in. and lighter than standard gage to be held at mechanical tubes list and discount. Intermediate sizes and gages not listed take price of next larger outside diameter and heavier gage.

Seamless Mechanical Tubing

	Per Cent Off List
Carbon, 0.10% to 0.30%, base	55
Carbon, 0.30% to 0.40%, base	50

Plus differentials for lengths over 18 ft. and for commercial exact lengths. Warehouse discounts on small lots are less than the above.

pack. The common estimate is that tin plate production this year will run between that of 1926 and 1927, or, figuring 1926 as 100 per cent, at 95 per cent.

Cold-Finished Steel Bars.—Orders and specifications individually are smaller than they were a month or six weeks ago, but are numerous enough to provide a fairly satisfactory volume and are still coming in steadily. The price is steady at 2.20c., base Pittsburgh.

Bolts, Nuts and Rivets.—Bolt and nut business has tapered off about 10 per cent from its recent rate, which was sufficient to provide engagement of about 60 to 65 per cent of productive capacity. Prices are firm. Rivets also are firmly held.

Hot-Rolled Strips.—Most makers are well sold up on widths of 3-in. and less and are not much interested in additional business except at the full quotation of 2.20c., base Pittsburgh, but on wider stock the prices vary with the individual maker. While business is being booked at 2.10c., base, for the 3 to 6-in. bracket, it is not claimed that this is minimum. Similarly with 6 to 12-in. strips, 1.90c. is being done, but is not as low as has been reported. On 12-in. and wider strip, prices are very irregular and reflect the weakness of blue annealed sheets. The movement on old business is reported good, but local mills have noticed some tapering in new business so far this month compared with the same period last month.

Cold-Rolled Strips.—On the small tonnages 2.90c. for 3 tons or more is being done, but the tonnage buyers generally are finding accommodation at 2.75c. The market has failed to make its advance, primarily because competition for orders has been sharp, but the break in full finished sheets which forced strip fender stock lower has been an important contributing factor, since it has rarely happened that the general line has stayed up in price when fender stock was going the other way.

Coke and Coal.—The market is dull, soft and featureless, except that slack coal no longer is showing a price tendency contrary to the general market. The Southern fields are producing and shipping a good deal of screened coal to the Lakes as a result of the restoration of the former differential between rail rates on Northern and Southern coal. The production of slack consequently is heavy in the South, which is supplying a demand that recently was coming to this district. While the local supply still is light, sales are possible only at a recession of 10c. a ton from last week's prices. Foundries seem to be specifying a little more freely against contracts for foundry coke, but there is no improvement in the demand for spot tonnages of that or furnace coke. Buyers are able to dictate prices on spot coke, both furnace and foundry.

Warehouse Prices, f.o.b. Pittsburgh

	Base per Lb.
Plates	3.00c.
Structural shapes	3.00c.
Soft steel bars and small shapes	2.90c.
Reinforcing steel bars	2.75c.

Nuts, all styles, per 100 count	60 per cent off list
Large rivets, base per 100 lb.	$3.50
Wire, black soft annealed, base per 100 lb.	$3.00 to 3.10
Wire, galvanized soft, base per 100 lb.	3.00 to 3.10
Common wire nails, per keg	3.00
Cement coated nails, per keg	3.05

Old Material.—A few small lots of heavy melting steel shipped without orders have been taken in at $15 at one point in the district, but $15.25 is as low as dealers are obliged to go on direct inquiry. The offerings of this grade in the May list of the Pennsylvania Railroad were sold to dealers at around $15.50, some going to three points in the Pittsburgh district. The railroad scrap is applied against orders carrying from $15.75 to $16; it is doubtful if less could be done today on sizable lots. Most of the tonnage sold during the week was at $15.50. Scrap prices generally show no important change. Compressed sheets still are hard to obtain at less than $15.50. The May list of the Norfolk & Western, closing May 10, contains 5030 gross tons.

Prices per gross ton delivered consumers' yards in Pittsburgh and points taking the Pittsburgh district freight rate:

Basic Open-Hearth Furnace Grades:	
No. 1 heavy melting steel	$15.00 to $15.75
Scrap rails	15.00 to 15.25
Compressed sheet steel	15.00 to 15.50
Bundled sheets, sides and ends	14.00 to 14.50
Cast iron carwheels	14.50 to 15.00
Sheet bar crops, ordinary	15.50 to 16.00
Heavy breakable cast	13.00 to 13.50
No. 2 railroad wrought	15.50 to 16.00
Heavy steel axle turnings	13.00 to 13.50
Machine shop turnings	10.25 to 10.50
Acid Open-Hearth Furnace Grades:	
Railroad knuckles and couplers	16.50 to 17.00
Railroad coil and leaf springs	16.50 to 17.00
Rolled steel wheels	16.50 to 17.00
Low phosphorus billet and bloom ends	18.50 to 19.00
Low phosphorus, mill plate	17.50 to 18.00
Low phosphorus, light grade	16.50 to 17.00
Low phosphorus sheet bar crops	17.50 to 18.00
Heavy steel axle turnings	13.00 to 13.50
Electric Furnace Grades:	
Low phosphorus punchings	16.50 to 17.00
Heavy steel axle turnings	13.00 to 13.50
Blast Furnace Grades:	
Short shoveling steel turnings	11.00 to 11.25
Short mixed borings and turnings	11.00 to 11.25
Cast iron borings	11.00 to 11.25
No. 2 busheling	10.50 to 11.00
Rolling Mill Grades:	
Steel car axles	18.00 to 19.00
No. 1 railroad wrought	11.00 to 11.50
Sheet bar crops	17.00 to 17.50
Cupola Grades:	
No. 1 cast	14.50 to 15.00
Rails 3 ft. and under	15.50 to 16.00
Malleable Grades:	
Railroad	15.00 to 15.75
Industrial	14.50 to 15.25
Agricultural	14.00 to 14.75

Steel Cargoes to Move on Great Lakes

A Chicago dock company has arranged to unload a boat of reinforcing bars bound from Buffalo to Milwaukee. A boat load of rails has been assembled at Chicago for water shipment to Port William, Ont., on Lake Superior. The National Terminals Corporation, East Chicago, plans to have three boats of 3000 tons each in operation between Chicago and Buffalo.

The Newton Steel Co., Youngstown, is offering an issue of new 6 per cent preferred stock to replace the present 7 per cent issue and to provide funds for plant improvements. The present outstanding preferred, in par amount of $538,500, is to be retired July 1. The financial statement shows that the company has total assets of $6,704,373 and net tangible assets of $5,974,857 applicable to the preferred stock.

"Power Capacity and Production in the United States" is the title of Water Supply Paper 579, issued by the United States Geological Survey. It covers 210 pages dealing with water-power and power produced by fuels. The data are given in great profusion, with numerous diagrams. Some of the figures go back almost 80 years.

Construction volume in April showed a considerable improvement over the earlier months of the year, according to figures of the Associated General Contractors of America. The index is given as 164, compared with 137 in March and with 166 in April, 1927.

Semi-Finished Steel, Raw Materials, Bolts and Rivets

Mill Prices of Semi-Finished Steel

F.o.b. Pittsburgh or Youngstown

Billets and Blooms

	Per Gross Ton
Rerolling, 4-in. and over	$33.00
Rerolling, under 4-in. to and including 1¾-in.	$33.50 to 34.00
Forging, ordinary	38.00
Forging, guaranteed	43.00

Sheet Bars

	Per Gross Ton
Open-hearth or Bessemer	$34.00

Slabs

	Per Gross Ton
8 in. x 2 in. and larger	$33.00
Smaller than 8 in. x 2 in.	34.00

Skelp

	Per Lb.
Grooved	1.85c. to 1.90c.
Sheared	1.85c. to 1.90c.
Universal	1.85c. to 1.90c.

Wire Rods

	Per Gross Ton
*Common soft, base	$42.00 to $44.00
Screw stock	$5.00 per ton over base

---

*Chicago mill base is $45. Cleveland mill base, $44.

Prices of Raw Material

Ores

Lake Superior Ores. Delivered Lower Lake Ports

	Per Gross Ton
Old range Bessemer, 51.50% iron	$4.55
Old range non-Bessemer, 51.50% iron	4.40
Mesabi Bessemer, 51.50% iron	4.40
Mesabi non-Bessemer, 51.50% iron	4.25
High phosphorus, 51.50% iron	4.15

Foreign Ore, c.i.f. Philadelphia or Baltimore

	Per Unit
Iron ore, low phos., copper free, 55 to 58% iron in dry Spanish or Algeria	10.00c.
Iron ore, Swedish, average 66% iron,	9.25c. to 9.50c.
Manganese ore, washed, 52% manganese, from the Caucasus	39c.
Manganese ore, Brazilian, African or Indian, basis 50%	38c. to 39c.
Tungsten ore, high grade, per unit, in 60% concentrates	$10.50 to $10.75

	Per Gross Ton
Chrome ore, 45 to 50% Cr_2O_3, crude, c.i.f. Atlantic seaboard	$22.00 to $24.00

	Per Lb.
Molybdenum ore, 85% concentrates of MoS_2, delivered	50c. to 55c.

Coke

	Per Net Ton
Furnace, f.o.b. Connellsville prompt	$2.60 to $2.75
Foundry, f.o.b. Connellsville prompt	3.50 to 4.25
Foundry, by-product, Ch'go ovens	9.00
Foundry, by-product, New England, del'd	11.00
Foundry, by-product, Newark or Jersey City, delivered	9.00 to 9.40
Foundry, Birmingham	5.00
Foundry, by-product, St. Louis	9.75

Coal

	Per Net Ton
Mine run steam coal, f.o.b. W. Pa. mines	$1.40 to $1.80
Mine run coking coal, f.o.b. W. Pa. mines	1.50 to 1.75
Gas coal, ¾-in., f.o.b. Pa. mines	2.00 to 2.10
Mine run gas coal, f.o.b. Pa. mines	1.75 to 1.90
Steam slack, f.o.b. W. Pa. mines	1.05 to 1.10
Gas slack, f.o.b. W. Pa. mines	1.10 to 1.25

Ferromanganese

	Per Gross Ton
Domestic, 80%, furnace or seab'd	$100.00
Foreign, 80%, Atlantic or Gulf port, duty paid	100.00

Spiegeleisen

	Per Gross Ton Furnace
Domestic, 19 to 21%	$31.00 to $32.00
Domestic, 16 to 19%	29.00

Electric Ferrosilicon

	Per Gross Ton Delivered
50%	$83.50 to $88.50
75%	130.00 to 140.00

	Per Gross Ton Furnace		*Per Gross Ton Furnace*
10%	$35.00	12%	$39.00
11%	37.00	14 to 16%	45.00

Bessemer Ferrosilicon

F.o.b. Jackson County, Ohio, Furnace

	Per Gross Ton		*Per Gross Ton*
10%	$30.00	12%	$34.00
11%	32.00		

Silvery Iron

7%	24.00	11%	30.00
8%	25.00	12%	32.00
9%	26.00		

Other Ferroalloys

Ferrotungsten, per lb. contained metal, del'd	92c. to 95c.
Ferrochromium, 4 to 6% carbon and up, 65 to 70% Cr., per lb. contained Cr. delivered, in carloads	11.00c.
Ferrovanadium, per lb. contained vanadium, f.o.b. furnace	$3.15 to $3.65
Ferrocarbontitanium, 15 to 18%, per net ton, f.o.b. furnace, in carloads	$200.00
Ferrophosphorus, electric or blast furnace material, in carloads, 18%, Rockdale, Tenn., base, per gross ton	$91.00
Ferrophosphorus, electric, 24%, f.o.b. Anniston, Ala., per gross ton	$122.50

Fluxes and Refractories

Fluorspar

	Per Net Ton
Domestic, 85% and over calcium fluoride, not over 5% silica, gravel, f.o.b. Illinois and Kentucky mines	$16.00
No. 2 lump, Illinois and Kentucky mines	$20.00
Foreign, 85% calcium fluoride, not over 5% silica, c.i.f. Atlantic port, duty paid	$16.00
Domestic, No. 1 ground bulk, 95 to 98% calcium fluoride, not over 2½% silica, f.o.b. Illinois and Kentucky mines	$32.50

Fire Clay

Per 1000 *f.o.b. Works*

	First Quality	Second Quality
Pennsylvania	$43.00 to $46.00	$35.00 to $38.00
Maryland	43.00 to 46.00	35.00 to 38.00
New Jersey	50.00 to 65.00	—
Ohio	43.00 to 46.00	35.00 to 38.00
Kentucky	43.00 to 46.00	35.00 to 38.00
Missouri	43.00 to 46.00	35.00 to 38.00
Illinois	48.00 to 46.00	35.00 to 38.00
Ground fire clay, per ton	7.00	

Silica Brick

	Per 1000 *f.o.b. Works*
Pennsylvania	$43.00
Chicago	52.00
Birmingham	50.00
Silica clay, per ton	$8.50 to 10.00

Magnesite Brick

	Per Net Ton
Standard sizes, f.o.b. Baltimore and Chester, Pa.	$65.00
Grain magnesite, f.o.b. Baltimore and Chester, Pa.	40.00

Chrome Brick

	Per Net Ton
Standard size	$45.00

Mill Prices of Bolts, Nuts, Rivets and Set Screws

Bolts and Nuts

Per 100 Pieces

(F.o.b. Pittsburgh, Cleveland, Birmingham or Chicago)

	Per Cent Off List
†Machine bolts	70
†Carriage bolts	70
Lag bolts	70
Plow bolts, Nos. 1, 2, 3 and 7 heads	70
Hot-pressed nuts, blank or tapped, square	70
Hot-pressed nuts, blank or tapped, hexagons	70
C.p.c. and t. square or hex. nuts, blank or tapped	70
Washers*	6.75c. to 6.50c. per lb. off list

---

*F.o.b. Chicago, New York and Pittsburgh.

†Bolts with rolled thread up to and including ⅝ in. x 6 in. take 10 per cent lower list prices.

Bolts and Nuts

	Per Cent Off List
Semi-finished hexagon nuts	70
Semi-finished hexagon castellated nuts, S.A.E.	70
Stove bolts in packages, Pittsburgh	80, 10 and 2½
Stove bolts in packages, Chicago	75, 20, 10 and 5

F.o.b. Chicago	70 and 10 to 70

Cap and Set Screws

(Freight allowed up to but not exceeding 50c. per 100 lb. on lots of 200 lb. or more)

	Per Cent Off List
Milled cap screws	80, 10 and 10
Milled standard set screws, case hardened,	80 and 10
Milled headless set screws, cut thread	80
Upset hex. head cap screws, U.S.S. thread,	85 and 5
Upset hex. cap screws, S.A.E. thread	85 and 5
Upset set screws	80, 10 and 10
Milled studs	70 and 5

Chicago

Steel Demand Continues Heavy—100,000 Tons of Structural Projects Pending

CHICAGO, May 8.—Sustained demand continues to hold production of steel at Chicago district mills at 95 per cent of ingot capacity. The outlook is encouraging, particularly in structural steel in which there are active projects totaling 100,000 tons, including 50,000 tons for the Chicago Mercantile Mart.

Steel sales are being made at a remarkably steady rate, although in some instances at prices below 2c., Chicago, for bars, shapes and plates. The lower quotations have not greatly affected the immediate Chicago territory, being most common in outlying sections. Chicago producers are hopeful that third quarter prices will hold at the second quarter level.

Evidence is at hand that a number of large users who normally carry 8000 to 15,000 tons of finished steel in stock have allowed steel on hand to become low, and inquiries now before the trade indicate an interest in the building up of stocks.

Three gas line projects, one to Omaha, another to Kansas City and a third to St. Louis, are still in the stage of being financed, but a tentative agreement is said to have been reached with a Western maker for the steel pipe needed for one of the lines. The Missouri Pacific has placed 3000 tons of steel for a bridge at Little Rock, Ark.

Pig Iron.—A Federal furnace was blown out May 8. Merchant stacks now in blast are one Federal, two Iroquois and the furnace at Duluth. The change this week was made necessary by needed repairs and plant improvements. Furnace stocks, which are unusually heavy, will act as a balance against demand during the coming months. Shipments this month continue at the April rate, but new sales are declining in volume. A Milwaukee melter has taken 1500 tons of Northern iron, and several fresh inquiries for lots of about 500 tons each are before the trade. A 2000-ton cargo of iron brought from Cleveland by boat has been unloaded at Chicago and another boat is expected here this week. Mixed cargoes of pig iron and steel are scheduled to arrive here from Buffalo at the rate of one a week. Iron brought by boat brings $18, Chicago, on contract, while spot sales from that source and iron made locally are steady at $18.50. The 700-ton inquiry for silvery iron reported a week ago has been withdrawn. The trend of prices for this commodity is still somewhat uncertain. Southern iron, marked off 50c. a ton in some sections, is still being sold in this district on the basis of $16, Birmingham.

Prices per gross ton at Chicago:

Northern No. 2 foundry, sil. 1.75 to 2.25	$18.50
N'th'n No. 1 fdy., sil. 2.25 to 2.75	19.00
Malleable, not over 2.25 sil.	18.50
High phosphorus	18.50
Lake Superior charcoal, averaging sil. 1.50	27.04
Southern No. 2 fdy. (all rail)	22.01
Southern No. 2 (barge and rail)	21.18
Low phos., sil. 1 to 2 per cent, copper free	$28.50 to 29.00
Silvery, sil. 8 per cent	29.79
Bessemer ferrosilicon, 14 to 15 per cent	46.79

Prices are delivered consumers' yards except on Northern foundry, high phosphorus and malleable, which are f.o.b. local furnace, not including an average switching charge of 61c. per gross ton.

Ferroalloys.—From the viewpoint of actual sales, this market is quiet, but specifications are large. Users of ferromanganese are taking increased quantities, probably as a result of reports that prices for the third quarter will be advanced.

Prices delivered Chicago: 80 per cent ferromanganese, $107.56; 50 per cent ferrosilicon, $83.50 to $87.50; spiegeleisen, 19 to 21 per cent, $38.76 to $39.76.

Plates.—Reports of the last few weeks that oil consumption is keeping pace with production are reflected in the scarcity of plate orders for tank construction. A purchase by a west Texas producer is for 1000 tons, but other users are finding need only for miscellaneous small tonnages. The only railroad car business of note this week is an order for 300 gondola cars placed with the Siems-Stembel Co. by the Chicago, Minneapolis, St. Paul & Omaha. This railroad will buy 450 additional cars, of which 250 will be stock cars. Reports are persistent here that both the New York Central and the Pennsylvania will be ready to inquire for large numbers of cars before July 1. Heavy specifications against recent railroad equipment orders are nearing an end, car builders having already made known not less than 75 per cent of their requirements necessary to build the cars for the St. Paul. Miscellaneous business in plates continues to run heavy, and local producers are engaged at close to 95 per cent of capacity. Deliveries range from four to six weeks, a condition unchanged for over a month. Shipping schedules are heaviest on the narrow width of universal mill products. Users are finding that prices are somewhat unstable, particularly in the extreme eastern portion of this district and in the Southwest, also to some extent in central and southern Illinois. Business, attractive from the viewpoints of tonnage or rolling mill schedules, has been taken in these districts at $1 below the prices that are being maintained in and near Chicago.

Mill prices on plates per lb.: 2.00c., base Chicago.

Structural Material.—Fresh inquiry shows a decided turn for the better, although as yet shops are not free from schedule troubles resulting from an inadequate number of small fill-in jobs. Large shops in this district are operating at close to capacity, while those of smaller output will not average above 70 per cent. To the west, in such centers as Omaha, fabricators are busy, but prices obtained are low. Of special note is an announcement that the project formerly known as the Marshall Field & Co. warehouse has been renamed the Mercantile Mart, and in the redesigning the building has been greatly enlarged. Local interests believe that the steel requirements will be well in excess of 50,000 tons. Reconstruction of the Fine Arts Building, Chicago, will take 5000 tons, or about double the figure previously reported. Other large inquiries include 3600 tons for a court house at Denver, Colo.; 1000 tons for a railroad station at South Bend, Ind.; 1000 tons for a meat packing building at St. Louis, and 2500 tons for a race track pavilion at Glenview, Ill. Among recent awards in Chicago are two apartment buildings taking 500 tons of steel. Structural mills are well engaged, and deliveries are not better than four weeks in most sizes of structural shapes.

Mill prices on plain material per lb.: 2.00c., base, Chicago.

Bars.—Users of soft steel bars are entering liberal specifications, and local mills are engaged at close to capacity. Producers of cold-drawn bars are taking large quantities and reinforcing bar warehouses are drawing out larger tonnages. Demand by farm implement manufacturers is steady, but lighter shipments to that industry are expected by the end of the month, when all but the tractor plants that are far behind on orders will close down for a seven to 10-day inventory period. Reports from farm districts indicate that dealers' stocks of farm machinery are low and manufacturers expect to forge ahead at close to top speed by the third week in June. Some unsteadiness in soft steel bar prices is found in outlying territory. In and near Chicago 2c. is the ruling quotation. Railroads continue to enter liberal orders for iron bars, and mill output is the heaviest in months. Prices are unchanged at 2c., Chicago. Demand for alloy steel bars is active, and specifications entered at mills by users are keeping schedules well filled. Specifications for rail steel bars have fallen below shipments, forestalling for the present at least a lengthening of mill operating hours. Shipments last month were the largest for any April since 1920. New business is widely scattered and comes to mills in small lots, so indications are that the May demand will not compare favorably with that in the preceding month. Reinforcing bars now represent a large part of present output. Deliveries are reasonably prompt, ranging from 10 days to two weeks, and prices are steady at 1.85c., Chicago Heights.

Mill prices per lb.: Soft steel bars, 2.00c. base, Chicago; common bar iron, 2.00c., base, Chicago; rail steel bars, 1.85c., base, Chicago Heights mill.

Rails and Track Supplies.—The local rail market is quiet from the viewpoint of new sales. Shipments, however, are steady. In some quarters it is believed that the secondary buying movement may come short of the volume placed a year ago for the reason that last fall railroads were less hesitant to take options than has been the case in recent years. Miscellaneous orders for track accessories total 4000 tons. New inquiry, which is not large, includes one lot of 2000 kegs of track bolts. Prices for tie plates are steady at $43 a net ton.

Prices f.o.b. mill, per gross ton: Standard-section open-hearth and Bessemer rails, $43; light rails, rolled from billets, $36. *Per lb.:* Standard railroad spikes, 2.80c.; track bolts with square nuts, 3.80c.; steel tie plates, 2.25c.; angle bars, 2.75c.

Sheets.—This market continues unsettled. One group of hot mills was shut down Friday of last week and did not resume operations until Tuesday of this week, and then only with a schedule arranged for four days. Specifications against contracts are a trifle more liberal, but new buying, even at lower prices, is slow. Jobbers are reducing stocks and are sending only small orders to mills.

Base prices per lb., delivered from mill in Chicago: No. 24 black, 2.90c. to 3.05c.; No. 24 galvanized, 3.75c. to 3.90c.; No. 10 blue annealed, 2.20c. to 2.35c. Delivered prices at other Western points are equal to the freight from Gary plus the mill prices, which are 5c. per 100 lb. lower than the Chicago delivered prices.

Cast Iron Pipe.—Detroit has awarded 12,000 tons of pipe to five bidders. The United States Cast Iron Pipe & Foundry Co. took 5750 tons at $38.65 a ton, delivered, or $30.73, Birmingham; 3000 tons will be furnished by French makers at $29; other successful bidders were the American Cast Iron Pipe Co., 1000 tons at $30.08, Birmingham; National Cast Iron Pipe Co., 750 tons, and James B. Clow & Sons, 1500 tons. The United States company has been awarded 2800 tons of 24-in. and 48-in. pipe by Milwaukee, and the National Cast Iron Pipe Co. has taken 550 tons of 6 to 24-in. pipe for Royal Oak, Mich. The price of the latter award was $30.30, Birmingham. John A. McDace & Co., contractors at Detroit, have been awarded 28,000 ft. of pipe by Dearborn, Mich. Recent awards indicate a stiffening in prices. Sizable tonnages have been taken in this district as high as $33, Birmingham, while prices paid at Detroit show that minimum quotations for American-made pipe are now above $30. Several orders have been placed by railroads and public utilities.

Prices per net ton, delivered Chicago: Water pipe, 6-in. and over, $38.20 to $41.20; 4-in., $42.20 to $45.20; Class A and gas pipe, $4 extra.

Reinforcing Bars.—Awards for the week bulk large, and a round tonnage of active projects is before the trade. The Truscon Steel Co. has taken 800 tons of billet steel reinforcing bars for a sewer job and a rail steel mill has taken two orders that total 800 tons. Shops in this district are engaged at 80 per cent of capacity or better, a little less favorable position than they occupied at this time a year ago. A new hotel in Chicago will take 1000 tons and the Chicago Motor Club Building calls for 400 tons. Recent awards have been keenly contested as to price, billet bar quotations having dipped to 2.10c. a lb., Chicago warehouses. Prices for the hard steel bar commodity are steady at 1.85c., Chicago Heights. Awards and inquiries are shown on page 1363.

Wire Products.—As a whole, this market is steady and mills continue to produce at close to 70 per cent of capacity. Jobbers in the Northwest are finding business brisk, and sales in Texas and the lower Mississippi Valley are in good volume. Nails are moving slowly, and prices are not more stable than a week ago. Mill stocks of nails are large for this time of the year. The movement of woven wire fencing has been heavy against orders taken in the late winter, and producers' stocks are not large. A secondary buying movement is under way, pointing to a demand that will carry into the early summer months. Manufacturers' wire is moving at a steady rate. Prices for wire and wire products are given on page 1347.

Warehouse Prices, f.o.b. Chicago

	Base per Lb.
Plates and structural shapes	3.10c.
Soft steel bars	3.00c.
Reinforcing bars, billet steel	2.15c. to 2.40c.
Cold-finished steel bars and shafting—	
Rounds and hexagons	3.60c.
Flats and squares	4.10c.
Bands	3.65c.
Hoops	4.15c.
Black sheets (No. 24)	3.95c.
Galvanized sheets (No. 24)	4.80c.
Blue annealed sheets (No. 10)	3.50c.
Spikes, standard railroad	3.55c.
Track bolts	4.55c.
Rivets, structural	3.60c.
Rivets, boiler	3.60c.
	Per Cent Off List
Machine bolts	60
Carriage bolts	60
Coach or lag screws	60
Hot-pressed nuts, squares, tapped or blank	60
Hot-pressed nuts, hexagons, tapped or blank	60
No. 8 black annealed wire, per 100 lb	$3.30
Common wire nails, base per keg	3.10
Cement coated nails, base per keg	3.10

Bolts, Nuts and Rivets.—Specifications have dropped in volume as a result of lighter requirements by farm implement manufacturing plants, which, with exception of those making tractors, will close about June 1 for inventories. Prices on large rivets are steady at $3, Chicago.

Coke.—Specifications against contracts are in good volume and prices are steady. All by-product coke ovens in this district are lighted.

Old Materials.—An undertone of weakness is making itself apparent in the local scrap market. A steel mill has taken 2000 tons of heavy melting steel at $13 a gross ton and a consumer has purchased 2500 tons of rerolling rails at $14.50. Three thousand tons of railroad malleable has been sold at $13.50 a gross ton. Rejections of melting steel are numerous and dealers have been forced to pay as high as $14 a ton to meet obligations. A disturbing condition in this market is that large users more frequently purchase direct from producers of scrap. The Santa Fe and the Chicago & North Western have sold lists totaling 6000 tons.

Prices delivered consumers' yards, Chicago:

Per Gross Ton		
Basic Open-Hearth Grades:		
Heavy melting steel	$13.00 to	$13.50
Shoveling steel	13.00 to	13.50
Frogs, switches and guards, cut apart, and miscellaneous rails	13.50 to	14.00
Hydraulic compressed sheets	11.50 to	12.00
Drop forge flashings	9.50 to	10.00
Forged, cast and rolled steel carwheels	15.50 to	16.00
Railroad tires, charging box size	16.75 to	17.25
Railroad leaf springs, cut apart	16.75 to	17.25
Acid Open-Hearth Grades:		
Steel couplers and knuckles	14.50 to	15.00
Coil springs	17.00 to	17.50
Electric Furnace Grades:		
Axle turnings	13.00 to	13.50
Low phosphorus punchings	14.00 to	14.50
Low phosphorus plate, 12 in. and under	14.25 to	14.75
Blast Furnace Grades:		
Axle turnings	10.00 to	10.50
Cast iron borings	9.25 to	9.75
Short shoveling turnings	9.25 to	9.75
Machine shop turnings	7.00 to	7.50
Rolling Mill Grades:		
Iron rails	14.00 to	14.50
Rerolling rails	14.00 to	14.50
Cupola Grades:		
Steel rails less than 3 ft	15.00 to	15.50
Angle bars, steel	14.25 to	14.75
Cast iron carwheels	13.50 to	14.00
Malleable Grades:		
Railroad	13.00 to	13.50
Agricultural	12.00 to	12.50
Miscellaneous:		
*Relaying rails, 56 to 60 lb	23.00 to	25.00
*Relaying rails, 65 lb. and heavier	26.00 to	31.00
Per Net Ton		
Rolling Mill Grades:		
Iron angles and splice bars	14.00 to	14.50
Iron arch bars and transoms	19.00 to	19.50
Iron car axles	21.50 to	22.00
Steel car axles	16.00 to	16.50
No. 1 railroad wrought	11.50 to	12.00
No. 2 railroad wrought	11.25 to	11.75
No. 1 busheling	10.00 to	10.50
No. 2 busheling	5.75 to	6.25
Locomotive tires, smooth	12.50 to	13.00
Pipes and flues	8.00 to	8.50
Cupola Grades:		
No. 1 machinery cast	14.00 to	14.50
No. 1 railroad cast	12.75 to	13.25
No. 1 agricultural cast	12.50 to	13.00
Stove plate	11.25 to	11.75
Grate bars	11.25 to	11.75
Brake shoes	11.00 to	11.50

---

*Relaying rails, including angle bars to match, are quoted f.o.b. dealers' yards.

Philadelphia

Shape Prices Recede Slightly—Basic Iron Lower on Recent Large Sale

PHILADELPHIA, May 8.—Producers of plates, shapes and bars are receding slightly from the firm stand they have recently taken on prices. Structural shapes are now quite generally quoted at 2c., Bethlehem, or 2.13c., delivered Philadelphia, instead of 2.05c., which was named for second quarter. A nearby producer of shapes has quoted delivered prices as low as 2.06c., Philadelphia, and this has been met on the more desirable tonnages by other eastern Pennsylvania mills. On plates, 2.05c., Coatesville, is still the asking price, but competition for business brings out 2c. quotations frequently. Steel bars range from 1.85c. to 1.90c., Pittsburgh, but there is a disposition on the part of mills to accept 1.85c. on some orders that would recently have been unattractive at less than 1.90c.

Producers of blue annealed sheets are still quoting 2.10c., Pittsburgh, on the average run of orders, but buyers have been able to get quotations of 2c. and 2.05c. on the more attractive lots. Black sheets range from 2.70c. to 2.75c. and galvanized from 3.60c. to 3.70c., Pittsburgh.

Basic pig iron is 50c. a ton lower in this market on sales of close to 30,000 tons to two Eastern steel makers. It is now quoted at $19 to $19.50, delivered.

Pig Iron.—Foundry grades are fairly firm at $20, base furnace. Business is limited to occasional carload lots. Basic iron, on recent sales of 6000 to 7000 tons to one steel company and 20,000 to 25,000 tons to another, is quotable at $19 to $19.50 per ton, delivered, a decline of 50c. a ton. The tonnage taken by the latter was divided among three eastern Pennsylvania furnaces. Low phosphorus buying is confined to small lots, on which the published market prices apply, although sales to consumers in western Pennsylvania and other districts have been made at concessions. Buffalo foundry iron bought for delivery by barge is being shipped to consumers in this district; the total sold is estimated at from 20,000 to 30,000 tons.

Prices per gross ton at Philadelphia:

East. Pa. No. 2 plain, 1.75 to 2.25 sil.		$20.76
East. Pa. No. 2X, 2.25 to 2.75 sil.		21.26
East. Pa. No. 1X		21.76
Basic (delivered eastern Pa.)	$19.00 to	19.50
Gray forge	19.75 to	20.25
Malleable	21.00 to	21.50
Standard low phos. (f.o.b. New York State furnace)	22.00 to	23.00
Copper bearing low phos. (f.o.b. furnace)	23.50 to	24.00
Virginia No. 2 plain, 1.75 to 2.25 sil.	24.54 to	25.04
Virginia No. 2X, 2.25 to 2.75 sil.	25.04 to	25.54

Prices, except as specified otherwise, are delivered Philadelphia. Freight rates: 76c. to $1.64 from eastern Pennsylvania furnaces; $4.54 from Virginia furnaces.

Warehouse Prices, f.o.b. Philadelphia

	Base per Lb.
Plates, ¼-in. and heavier	2.50c. to 2.60c.
Plates, $\frac{3}{16}$-in.	2.80c. to 3.00c.
Structural shapes	2.40c. to 2.60c.
Soft steel bars, small shapes and iron bars (except bands)	2.50c.
Round-edge iron	3.50c.
Round-edge steel, iron finished 1½ x 1½ in.	3.50c.
Round-edge steel, planished	4.30c.
Reinforcing steel bars, square, twisted and deformed	2.50c. to 3.00c.
Cold-finished steel, rounds and hexagons	3.35c.
Cold-finished steel, squares and flats	3.85c.
Steel hoops	3.60c.
Steel bands, No. 12 gage to $\frac{3}{16}$-in., inclusive	3.35c.
Spring steel	5.00c.
*Black sheets (No. 24)	4.00c.

$\frac{3}{16}$-in.	5.50c.
Rails	3.20c.
Swedish iron bars	6.60c.

*For 50 bundles or more; 10 to 49 bundles, 4.25c. base; 1 to 9 bundles, 4.50c. base.

†For 50 bundles or more; 10 to 49 bundles, 5.10c. base; 1 to 9 bundles, 5.45c. base.

Ferromanganese.—Quotations are unchanged at $100 per ton, seaboard. Current business is confined largely to shipments against contracts. Apparently neither domestic nor foreign sellers are desirous of quoting for the second half, and thus far consumers have shown little interest in further contracting.

Bars.—The current market is quotable at 1.85c. to 1.90c. per lb., base Pittsburgh, or 2.17c. to 2.22c. per lb., Philadelphia. New orders are limited both in number and in size, but there is a fair tonnage moving on second quarter contracts.

Shapes.—Mills are fairly well booked with business in the smaller sizes, but on larger specifications, where the competition of special beams rolled by two companies is encountered, there is a tendency to shade prices. On small sizes and limited tonnages, 2.05c. per lb., Bethlehem, or 2.18c. per lb., Philadelphia, is still obtained by some mills, but on medium-sized and large lots, 2c., Bethlehem, or 2.13c., Philadelphia, usually applies. One producer is reported to be quoting delivered prices on shapes as low as 2.06c. per lb., Philadelphia, or 2c., f.o.b. mill, and this competition has been met by other eastern Pennsylvania producers. Fabricators are moderately well booked with business, and there is a fair volume of small projects in the market.

Plates.—Prices on plates are 2.05c., Coatesville, or 2.15c., Philadelphia, on small orders and 2c., Coatesville, or 2.10c., Philadelphia, on the more desirable business. Shipments on second quarter contracts are good, but new business is limited.

Sheets.—There is only a small tonnage of new business in the market. Prices on blue annealed, black and galvanized sheets continue irregular. Eastern Pennsylvania mills are still endeavoring to maintain the blue annealed sheet market at 2.10c. per lb., base Pittsburgh, notwithstanding sales to automobile body builders and other large users at 2c. and 2.05c., Pittsburgh. Black sheets range from 2.70c. to 2.75c., Pittsburgh, and galvanized from 3.60c. to 3.70c.

Old Material.—Prices of all grades are unchanged. Only a moderate tonnage is moving to consumers. No. 1 heavy melting steel is being shipped from the Baltimore district to Steelton, Pa., at $13.50 per ton, delivered, which nets the seller considerably less than on the Sparrows Point, Md., contract at the same price. Shipments to the latter mill, however, have been suspended. A consumer at Phoenixville, Pa., is offering $11.50 per ton for stove plate and $10.50 per ton for machine shop turnings, but no contracts are reported at these prices, dealers quoting 50c. per ton higher. Brokers are showing increasing interest in export shipments of steel, in the belief that if more scrap is sold abroad there will be less surplus available to depress the market here.

Prices per gross ton delivered consumers' yards, Philadelphia district:

No. 1 heavy melting steel	$13.50 to	$14.00
Scrap T rails	13.00 to	13.50
No. 2 heavy melting steel	11.00 to	11.50
No. 1 railroad wrought	14.50 to	15.00
Bundled sheets (for steel works)		10.50
Machine shop turnings (for steel works)	10.50 to	10.75
Heavy axle turnings (or equivalent)	12.00 to	12.50
Cast borings (for steel works and rolling mill)	10.50 to	11.00
Heavy breakable cast (for steel works)	15.50 to	16.00
Railroad grate bars	12.00 to	12.50
Stove plate (for steel works)		12.00
No. 1 low phos., heavy, 0.04 per cent and under	17.50 to	18.00
Couplers and knuckles	15.50 to	16.00
Rolled steel wheels	15.50 to	16.00
No. 1 blast furnace scrap	10.50 to	11.00
Machine shop turnings (for rolling mill)	11.00 to	11.25
Wrought iron and soft steel pipes and tubes (new specifications)	12.00 to	12.50
Shafting	17.50 to	18.00
Steel axles	19.00 to	20.00
No. 1 forge fire	11.00 to	11.50
Steel rails for rolling	14.75 to	15.25
Cast iron carwheels	15.50 to	16.00
No. 1 cast	16.00 to	16.50
Cast borings (for chemical plant)	14.50 to	15.00

Warehouse Business.—There is a moderate demand for structural material, but competition among jobbers is keen and as low as 2.35c. per lb., base, is occasionally quoted. As a result, the application of quantity differentials on structural steel and plates as well as steel bars, small shapes and cold rolled steel is being considered. The quantity bases on black and galvanized

CARNEGIE LIBRARY OF ATLANTA

sheets are being maintained, although business is small.

Imports.—In the week ended May 5, 2565 tons of chrome ore arrived at this port from Portuguese Africa. No pig iron came in. Steel imports consisted of 52 tons of steel skelp, 16 tons of steel bars and 168 tons of structural shapes from Belgium; 31 tons of steel bands, 35 tons of bars and 6 tons of shapes from France.

New York

Pig Iron Inquiries for Third Quarter—Sheet Prices Weaker

NEW YORK, May 8.—Pig iron sales are confined mainly to scattered small tonnages for relatively early shipment. Total bookings by local sellers, at 7000 tons, were nearly as large as in the previous week. Outstanding purchases were 1000 tons of foundry, bought by Crane Co., Bridgeport, Conn., and 275 tons, placed by the Worthington Pump & Machinery Corporation, for its Harrison, N. J., works. The Moore Brothers Co., Elizabeth, N. J., closed against its inquiry for 100 tons of No. 3 foundry. Operations among foundries are spotty, but total melt shows little change. Some of the more active plants are finding that they underestimated their second quarter requirements. The Thatcher Co., Garwood, N. J., has entered the market for 2000 tons of No. 2 plain for delivery this quarter. The first important inquiries for third quarter have made their appearance. A New Jersey melter wants 1000 to 2000 tons of No. 1X for second and third quarter delivery, and the A. P. Smith Mfg. Co., Bloomfield, N. J., is asking for 600 tons of No. 2 plain and No. 2X for third quarter. New York State foundry iron continues to sell at $16 to $16.50, base Buffalo. Eastern Pennsylvania producers are still quoting $20, base furnace, without taking much business in this section.

Prices per gross ton, delivered New York district:

Buffalo No. 2 fdy., sil. 1.75 to 2.25	$20.91 to $21.91
East. Pa. No. 2 fdy., sil. 1.75 to 2.25	20.39 to 22.52
East. Pa. No. 2X fdy., sil. 2.25 to 2.75	20.89 to 23.02
East. Pa. No. 1X fdy., sil. 2.75 to 3.25	21.39 to 23.52

Freight rates: $4.91 from Buffalo, $1.39 to $2.52 from eastern Pennsylvania.

Reinforcing Bars.—The Kalman Steel Co. will furnish 2400 tons of bars for a highway bridge at New Brunswick, N. J., and 500 tons of rail steel for the piers of the Hudson River bridge will be supplied by the Truscon Steel Co. Business as a whole, however, has shown little improvement over previous weeks. A number of jobbers in this district are placing considerable tonnages of foreign steel, usually in small lots, but bulking rather large in the aggregate. This steel is offered at prices which distributers of the domestic product seldom attempt to meet and the situation has not led to any material price weakness. Some business is being placed at 2c., Pittsburgh mill, but 1.95c. may be had on attractive tonnages, and in the absence of much activity in the market the entire price structure lacks definite strength. The Youngstown warehouse price is unchanged at 2.20c., or 2.57½c. on cars at New York, and out of New York warehouse the general quotations are 2.80c. for lots of 5 tons or more, 2.95c. for lots of 2 to 5 tons and 3.24c. for less than 2 tons, all delivered at job.

Finished Steel.—Further weakness in prices of sheets and a declining volume of demand for nearly all steel products are the major developments in this market. Black sheets have been sold at 2.65c. and 2.70c., Pittsburgh, and 2.75c., which was recently the low, is now regarded as the top of the market. Galvanized sheets are being commonly sold at 3.60c., Pittsburgh, but a few sales have been made at 3.55c. On blue annealed sheets, quotations of 2c. have become quite general. On plates, little effort is now being made to obtain higher than 2c., Coatesville, except on lots of warehouse size. Concessions from 2c., Coatesville, or 2.17½c. delivered New York, apparently have not been given in more than a few instances. The smallness of current plate orders accounts in some measure for the fairly steady prices. Shapes are obtainable on the basis of 2c., Bethlehem, while on steel bars quotations of 1.90c., Pittsburgh, are less frequent in view of the willingness of some mills to book average-size orders for early rolling at 1.85c. Although reports are uniformly of a good rate of operations in consuming industries, the volume of steel business, taking specifications against contracts and new orders together, is falling somewhat below the daily rate in April. This situation is taken to mean that consumers are using up stocks and awaiting price developments. The declining volume of structural steel business in the New York district is reflected by the total of 28,200 tons booked in April by members of the Structural Steel Board of Trade compared with 32,200 in March and 59,000 tons in April, 1927.

Mill prices per lb., delivered New York: Soft steel bars, 2.19c. to 2.24c.; plates, 2.12½c. to 2.22½c.; structural shapes, 2.14½c. to 2.19½c.; bar iron, 2.14c.

Warehouse Prices, f.o.b. New York

	Base per Lb.
Plates and structural shapes	3.30c.

---

*No. 28 and lighter, 36 in. wide, 20c. higher per 100 lb.

Warehouse Business.—Activity is fairly well distributed to all products, but there is some irregularity in the size of tonnages and in prices. Concessions on blue annealed sheets seldom exceed about $1 per ton, but both black and galvanized sheet sales have been made at reductions of 20c. and 25c. per 100 lb. for small lots, which usually take the full base price and size extras. Jobbers handling structural material report continued competition from imported steel and increasing encroachment on small tonnage business by mills, which are willing to offer prompt shipment.

Cast Iron Pipe.—Makers in the North report sufficient tonnage on their books to carry them, in most cases, for 60 days or more and, as a result, are showing greater firmness on prices. New orders, however, are limited, coming for the most part from private users of pipe. Birmingham foundries are maintaining their price level at $30 and $31 per ton, base Birmingham, which is too high to compete with the present quotations of Northern foundries. The inquiry of the city of New York for 2754 tons of pipe is about the only municipal project of consequence, but there are some sizable private purchases in prospect.

Prices per net ton, delivered New York: Water pipe 6-in. and larger, $37.60 to $38.60; 4-in. and 5-in., $42.60 to $43.60; 3-in., $52.60 to $53.60; Class A and gas pipe, $4 to $5 extra.

Coke.—The market is quiet and prices of all grades unchanged. Furnace coke continues at about $2.75 per ton, Connellsville, and standard Connellsville furnace coke at about $3.75 per ton. Delivered prices on special brands of foundry coke are: To northern New Jersey, Jersey City and Newark, $8.71 to $8.81 per net ton; to New York and Brooklyn, $9.59 to $9.69 per net ton. By-product coke ranges from $9 to $9.40 per net ton, Newark or Jersey City, N. J., and from $10.06 to $10.29 per ton, New York or Brooklyn.

Old Material.—Prices of a few grades show a slight decline in a quiet market. No. 1 heavy melting steel is unchanged at $13.50 per ton, delivered eastern Pennsylvania. Yard grade buying prices range from $10.50 to $11 per ton, delivered, with shipments going to Pottsville, Steelton and Conshohocken. Brokers show continued interest in export business and some small tonnages of heavy melting steel are being shipped to Japan, Italy and Germany.

Dealers' buying prices per gross ton f.o.b. New York:

No. 1 heavy melting steel	$10.00 to $10.85
Heavy melting steel (yard)	6.75 to 7.25
No. 1 heavy breakable cast	11.25 to 12.00
Stove plate (steel works)	7.25 to 7.75
Locomotive grate bars	8.00 to 8.50
Machine shop turnings	6.50 to 7.25
Short shoveling turnings	6.50 to 7.25
Cast borings (blast furnace or steel works)	6.25 to 7.25
Mixed borings and turnings	6.50 to 7.25
Steel car axles	15.00 to 15.50
Iron car axles	23.75 to 24.75
Iron and steel pipe (1 in. dia., not under 2 ft. long)	7.75 to 8.25
Forge fire	6.75 to 7.00
No. 1 railroad wrought	10.00 to 10.50
No. 1 yard wrought, long	8.50 to 9.00
Rails for rolling	10.00 to 10.50
Cast iron carwheels	10.75 to 11.25
Stove plate (foundry)	8.50 to 9.00
Malleable cast (railroad)	10.00
Cast borings (chemical)	10.75 to 11.00

Prices per gross ton, delivered local foundries:

No. 1 machinery cast	$13.75 to $14.25
No. 1 heavy cast (columns, building materials, etc.), cupola size	11.75 to 12.25
No. 2 cast (radiators, cast boilers, etc.)	11.25 to 11.75

Warehouse Prices, f.o.b. Cleveland

	Base per Lb.
Plates and structural shapes	3.00c.

No. 9 galvanized wire, per 100 lb.	3.35
Common wire nails, base per keg	2.90

*Net base, including boxing and cutting to length.

Cleveland

Specifications from Automobile Industry Still Heavy—Sheets Continue Weak

CLEVELAND, May 8.—May has started out with a somewhat better volume of orders for steel bars, plates and structural material than the first week in April. However, early April orders were light because of the heavy specifications of late March. The demand is quite irregular, orders some days being fair and other days light. Consumers are ordering in small lots and nearly all business is in specifications against contracts. Orders for hot-rolled strip show a gain in this territory, as consumers are getting near the end of their stocks ordered at the end of the first quarter.

Specifications for steel bars, sheets and strip steel from the automotive industry continue at the recent good volume, but it is scarcely expected that the present demand from this source will be maintained many weeks longer, as there will probably be a seasonal slowing down of the automotive industry starting not later than July 1. Automobile manufacturers are not carrying large stocks, and consequently may not make much reduction in shipping orders before they cut down production schedules. With Ford production still rather low, other makers of low-priced cars may be able to maintain operations at a good rate through the summer.

Consuming industries in this territory outside of the automotive field show a slight gain in average operations over last month. In the building field, structural lettings are still rather light. With no large boats in prospect, the output for the lake shipbuilding industry this season is not very promising.

The price situation shows little change. Sheets and hot-rolled strip continue weak. Steel bars, plates and structural material are firm at 1.85c., Pittsburgh. Small undesirable lots are bringing 1.90c. Cleveland mills quote steel bars at 1.85c., mill.

Pig Iron.—Producers continue to sell a fair tonnage of foundry and malleable iron for early shipment or for the remainder of the quarter. The only noticeable change in the buying situation recently is an increase in small-lot orders. These are coming out not only from small consumers, but from some of the large-lot buyers who are following a hand-to-mouth buying policy. Only a few third quarter sales have been made. Lake furnace prices are well stabilized at recent levels, with a range of $16.50 to $17 for foundry and malleable iron, the lower price being rather common for delivery to competitive points. However, at least one Lake furnace is holding to a $16.75 minimum. For Cleveland delivery and in Michigan, the price is unchanged at $18, furnace. Valley furnaces appear to be holding to $16.50 for basic iron. The offer of English low phosphorus iron at $26, delivered Lake Erie ports, in direct water shipments from England has raised a question as to whether the anti-dumping clause of the tariff could not be invoked against bringing in this foreign iron. However, the delivered price of $26, duty paid, is said to be about equivalent to the $23 price at which this iron has been offered delivered on the Eastern seaboard, the additional $3 a ton charge covering the additional Lake and canal transportation charges.

Prices per gross ton at Cleveland:

N'th'n No. 2 fdy., sil. 1.75 to 2.25	$18.50
Southern fdy., sil. 1.75 to 2.25	22.00
Malleable	18.50
Ohio silvery, 8 per cent	28.00
Basic, Valley furnace	16.50
Standard low phos., Valley furnace	26.50

Prices, except on basic and low phosphorus, are delivered Cleveland. Freight rates: 50c. from local furnaces; $3 from Jackson, Ohio; $6 from Birmingham.

Iron Ore.—First ore cargoes of the season are on the way down the Lakes, and it is expected that a good start will be made in shipments before the end of the week. However, some of the ore firms are in no hurry to get all their boats going and May shipments will probably be rather light. Only one cargo was shipped during April, this being 5946 tons sent from Escanaba to a nearby Michigan port. During April last year over 1,500,000 tons of ore was shipped. There is very little activity in the ore market and no inquiries for large lots are pending.

Sheets.—While sheet prices do not appear to have gone any lower than those reported a week ago, the minimum quotations have become more general, indicating a somewhat weaker market situation. A Valley basing point is being freely used, giving buyers an additional advantage that in Cleveland amounts to about $2 a ton. Black sheets are plentiful at 2.75c., Valley mill. On blue annealed sheets, 1.90c., Pittsburgh, and 2c., Valley, seem to be the minimum prices, with 2.05c., Valley, rather common. Galvanized sheets are available at 3.55c., Valley mill. Present minimum sheet prices are about $2 a ton lower than those prevailing late last year, except on auto body sheets, which are holding steady to 4c., Pittsburgh. Specifications are fair against contracts, but new business is rather slow.

Strip Steel.—The hot-rolled strip market continues highly competitive on wide material, and some of the mills do not appear to be adhering to a regular base, the price being gaged by the amount of extras. On wide material, 1.80c., Pittsburgh, seems to be about the average price, with some quotations $1 a ton higher and lower. Cold-rolled strip is unchanged at a minimum of 2.75c., Cleveland, for 3 tons and over. Some small-lot buyers are still paying 2.90c. to irregular sources of supply.

Wire Products.—The nail market shows a firmer tone in central Ohio, where $2.60 per keg has become the more common quotation, or an advance of $1 a keg. In northern Ohio, large buyers are still able to get concessions from $2.65.

Reinforcing Bars.—The Cleveland Union Terminals Co. has placed 2500 tons and has another inquiry out estimated at 800 to 1000 tons. Small lots are in good demand. Rail steel bars are holding to 1.75c., mill.

Warehouse Business.—Sales are not holding up to recent volume. The demand for steel bars, plates and structural material is well scattered among consuming industries, but only moderate from any of them. Prices are firm. Galvanized sheets are moving better than recently, but the seasonal spring demand is not as good as expected. A leading jobber has reduced galvanized sheets $2 a ton.

Old Material.—The market has a weak tone. Dealers anxious to move scrap sold No. 1 heavy melting steel at $13.40 during the week, and a price above $13.50 has about disappeared. Considerable scrap is backing up on dealers' books, and more material is coming on the market than mills are taking in. Drop forge flashings have declined 25c. a ton. Other prices are unchanged.

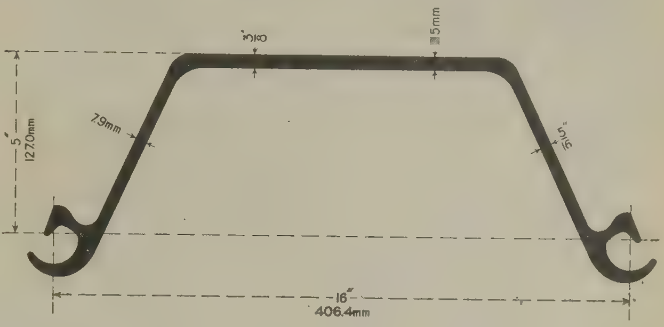
Prices per gross ton, delivered consumers' yards:

Basic Open-Hearth Grades	
No. 1 heavy melting steel	$13.50 to $13.75
No. 2 heavy melting steel	12.75 to 13.00
Compressed sheet steel	12.50 to 12.75
Light bundled sheet stampings	11.50 to 11.75
Drop forge flashings	11.75 to 12.25
Machine shop turnings	7.00 to 7.50
No. 1 railroad wrought	11.50 to 12.00
No. 2 railroad wrought	13.50 to 13.75
No. 1 busheling	11.00 to 11.25
Pipes and flues	9.00 to 9.50
Steel axle turnings	12.50 to 13.00
Acid Open-Hearth Grades	
Low phosphorus forging crops	16.50 to 17.00
Low phosphorus, billet, bloom and slab crops	17.00 to 17.50
Low phosphorus sheet bar crops	16.50 to 17.00
Low phosphorus plate scrap	16.00 to 16.50
Blast Furnace Grades	
Cast iron borings	9.25 to 9.50
Mixed borings and short turnings	9.25 to 9.50
No. 2 busheling	9.25 to 9.50
Cupola Grades	
No. 1 cast	16.50 to 17.00
Railroad grate bars	11.00 to 12.00
Stove plate	12.00 to 12.50
Rails under 3 ft.	18.00 to 18.50
Miscellaneous	
Railroad malleable	15.00 to 15.50
Rails for rolling	16.25 to 16.50

Bolts, Nuts and Rivets.—The demand for bolts and nuts is fairly good, the volume of orders being about the same as last month. Rivet specifications are moderate, and manufacturers are disappointed that there is no improvement in current orders, which are scarce.

New Section of Lackawanna Piling

Bethlehem Steel Co. has added a deep-arch type section to its line of Lackawanna steel sheet piling. This form, designated as Section DP165, is characterized by the depth and shape of its arch construction. The chief particulars of the new section are: Nominal width, 16 in.; depth, 5 in.; thickness of web, ⅜ in.; weight per foot of pile, 33.3 lb.; weight per square foot of wall, 25 lb.; section modulus per foot of wall, single, 10.07; interlocked, 16.14.



Depth of Arch Construction Characterizes New Lackawanna Sheet Steel Piling

This new section is adapted for general use in types of construction where strength and light weight are of importance, and where the piling is to be used permanently, such as in the case of bulkheads, docks, retaining walls, wharves and similar structures. The interlock is of the double-lock type, already a feature of Lackawanna piling.

Early Rolling of Sheets

At the meeting of the metal branch of the National Hardware Association at Boston last week, C. F. Ahlbrandt, general manager of sales American Rolling Mill Co., Middletown, Ohio, discussed the rolling of sheets. The following is taken from his paper:

The first mention of rolling sheets seems to be in the work of Christopher Polhem, a Swedish mechanical genius, whose book, printed in 1761, ten years after his death, speaks of mills rolling both plates and bar iron. In chapter 14 he says: "Much time and labor can be saved by good rolling mills, because the rolling mill can produce 10 to 20 and still more bars in the same time required to upset one bar with a hammer."

After mentioning the economic difficulties which prevented him from using his mill, Mr. Polhem concluded: "Yet I willingly grant to others who will perhaps live during more happy times, what I have not had the opportunity to use myself." Concurrently, practical developments were being made in Wales. It was about 1750 that the Welsh tin plate business developed into a real industry, and rolling became the standard method of sheet manufacture.

You frequently hear the statement that the sheet rolling process is antiquated and has not been improved in the past 150 years. Before the opening of the present century, black and galvanized sheets and tin plate constituted practically the entire production of the world's sheet mills. How different it is today, with furniture sheets, electrical sheets, enameling sheets—products with surface refinements, drawing properties, analysis and performance possibilities undreamed of only a few decades ago. The production of all of these has meant tremendous pioneering effort in the manufacturing processes.

Now comes the continuous method of rolling, which worked an entire revolution in the old system. Though public attention was not focused on this development until last year, the Ashland, Ky., unit of the American Rolling Mill Co. has been producing sheets by the continuous process since 1923.

The nature of the work made a small experimental unit impossible. Millions of dollars had to be put into the plant before it could be definitely determined whether the principles were sound and practicable.

San Francisco

Reinforcing Steel Awards Large—Prices Firm Except on Sheets

SAN FRANCISCO, May 5, (*By Air Mail*).—Movement of iron and steel products on the Pacific Coast during the past week showed little improvement over the previous week. The most active commodity was reinforcing steel, and several fair-sized awards were reported. Cast iron pipe inquiries have increased, but business booked did not exceed 1000 tons. The price structure is on a fairly firm basis in most lines, although low quotations continue on reinforcing bars out-of-stock in the San Francisco district.

Pig Iron.—During the past week more than 1400 tons of Indian foundry iron were imported. Most of it was taken by San Francisco and Los Angeles users, but several hundred tons went to Seattle and Portland. The next shipment, 1500 tons, is scheduled to arrive on the Coast in early June and will be distributed among Los Angeles and San Francisco melters. Prices are unchanged.

Prices per gross ton at San Francisco:

*Utah basic	$25.00 to $26.00
*Utah foundry, sil. 2.75 to 3.25	25.00 to 26.00
**Indian foundry, sil. 2.75 to 3.25	24.00 to 25.00
**German foundry, sil. 2.75 to 3.25	24.25

*Delivered San Francisco.
**Duty paid, f.o.b. cars San Francisco.

Bars.—Reinforcing steel bar awards reported this week included 2000 tons for the Bon Marche Store at Seattle, divided between the Pacific Coast Steel Co. and the Northwest Steel Rolling Mills; 400 tons for the Kezar Stadium in San Francisco, placed with Gunn, Carle & Co., and 400 tons for foundations for the Capwell Store, Oakland, awarded to a San Francisco jobber. Pending business involves lots of less than 100 tons each. In the Bay district less than 2c. per lb. continues to be quoted in many instances.

Plates.—Plate business this week was in small lots. No action has yet been taken on 8000 tons for the Sequoia and Wildcat aqueducts, but a definite decision regarding the type of pipe to be used will no doubt be announced within a few days. Bids are in on 700 tons for a car float for the Santa Fe, and the Western Pacific will come into the market shortly for a similar float. Bids have been opened on a pipe line at Tacoma, calling for 120 tons. An inquiry is before plate mill representatives for 500 tons of 3/16 and ¼-in. material. The price is firm at 2.30c., c.i.f.

Shapes.—While structural shape awards were not numerous this week, totaling less than 1600 tons, new and pending inquiries call for close to 16,000 tons. The California Steel Co. took 380 tons for a warehouse in Oakland for the Port Commission. A bridge over the San Joaquin River at Herndon, Cal., calling for 1000 tons, went to the United States Steel Products Co. Bids were opened on 1125 tons for a bridge over the Columbia River at Kettle Falls, Wash. Other inquiries include 800 to 1000 tons for the West Waterway bridge in Seattle, 1500 tons for a pulp plant at Astoria, Ore., and 250 tons for an apartment building in Los Angeles. Plain material continues firm at 2.35c., c.i.f.

Cast Iron Pipe.—Improvement in demand for cast iron pipe is noted. Awards include 234 tons of 4 and 8-in. class B for the Miller Cattle Co., Phoenix, Ariz., booked by O. F. Fisher of the same city, and 111 tons of 6 and 12-in. class B for a sewer project at Long Beach, Cal., awarded to C. Anill Co., Huntington Park, Cal. Bids were opened this week on 152 tons of 2 to 8-in. class B for Camas, Wash. On May 14, Lovelock, Nev., will open bids on 887 tons of 10 to 14-in. class 150. Los Angeles will open bids on May 11 for 1665 tons of 6-in. class B, and Pasadena, Cal., will receive bids on May 12 for 417 tons of 6 and 8-in. classes C and B. South Vancouver, B. C., has opened bids on 113 tons of 4 to 8-in. class B. Bids will be opened on May 21 for 131 tons of 10 and 14-in. class B pipe for a sewer project in Pacific Beach, San Diego, Cal.

Warehouse Prices, f.o.b. San Francisco

	Base per Lb.
Plates and structural shapes	3.15c.
Soft steel bars	3.15c.
Small angles, $\frac{3}{16}$-in. and over	3.15c.
Small angles under $\frac{3}{16}$-in.	3.55c.
Small channels and tees, ¾-in. to 2¾-in.	3.75c.
Spring steel, ¼-in. and thicker	5.00c.
Black sheets (No. 24)	4.95c.
Blue annealed sheets (No. 10)	3.90c.
Galvanized sheets (No. 24)	5.50c.
Structural rivets, ½-in. and larger	5.65c.
Common wire nails, base per keg	$3.40
Cement coated nails, 100-lb. keg	3.40

Sheets.—Prices on black and galvanized sheets have weakened somewhat, reflecting the softness in Eastern centers. Demand is limited to unimportant tonnages. The Kittle Mfg. Co., Los Angeles, has been awarded the contract for the Texas license plates for 1929, requiring about 400 tons of black sheets.

Coke.—A shipment of 4500 tons of English byproduct and beehive foundry coke has arrived on the Coast and part of the cargo is now being unloaded at Los Angeles, the rest to be delivered to San Francisco melters. Prices are unchanged.

St. Louis

Expansion in Pig Iron Sales—Higher Prices on Some Scrap Items

ST. LOUIS, May 8.—Pig iron sales showed considerable improvement over the preceding week. The St. Louis Gas & Coke Corporation sold about 4500 tons, some for shipment into third quarter, including lots of 500 and 300 tons to two Iowa melters, 200 tons to a St. Louis stove foundry, and the remainder in scattered lots of a carload up to 200 tons. A leading Southern interest sold 1050 tons for May and June delivery. Shipments of the Granite City producer for April equaled March shipments, and were slightly better than those in April, 1927. The melt in the district is improving, but the stove plants report business is quiet. Prices are unchanged.

Prices per gross ton at St. Louis:

No. 2 fdy., sil. 1.75 to 2.25, f.o.b. Granite City, Ill.	$19.00
Northern No. 2 fdy., delivered St. Louis	20.66
Southern No. 2 fdy., delivered	$19.92 to 20.42
Northern malleable, delivered	20.66
Northern basic, delivered	**20.66**

Freight rates: 81c. from Granite City to St. Louis; $2.16 from Chicago; $4.42 from Birmingham.

Coke.—Business in domestic coke during April was fairly good, dealers taking in heavier stocks than had been expected. Buying of foundry grades is quiet.

Finished Iron and Steel.—Blue annealed sheets are in good demand; tank plate buying is heavy, with prices improving, and there is a good demand for tin plate, according to the Granite City Steel Co. However, the situation as to galvanized sheets is not so good, buying from the agricultural districts not being up to expectations, and there is some price cutting. April warehouse business is about the same as in the preceding month, but about 10 per cent less than in April, 1927; the greatest loss comes from the oil-producing sections, buying in the St. Louis industrial district proper being

Warehouse Prices, f.o.b. St. Louis

	Base per Lb.
Plates and structural shapes	3.25c.
Bars, soft steel or iron	3.15c.
Cold-finished rounds, shafting and screw stock	3.75c.
Black sheets (No. 24)	4.45c.
Galvanized sheets (No. 24)	5.25c.
Blue annealed sheets (No. 10)	3.60c.
Black corrugated sheets (No. 24)	4.50c.
Galvanized corrugated sheets	5.30c.
Structural rivets	3.75c.
Boiler rivets	3.75c.

	Per Cent Off List
Tank rivets, $\frac{7}{16}$-in. and smaller, 100 lb. or more	70
Less than 100 lb.	65
Machine bolts	60
Carriage bolts	60
Lag screws	60
Hot-pressed nuts, squares, blank or tapped, 200 lb. or more	60
Less than 200 lb.	50
Hot-pressed nuts, hexagons, blank or tapped, 200 lb. or more	60
Less than 200 lb.	50

fairly good. Business is extremely dull with fabricators of structural steel, and there is complaint that prices are too low on the little trade that is available. About 600 tons of reinforcing steel was bought during the week.

Old Material.—Miscellaneous standard-section rails, railroad springs and cast iron borings were 25c. a ton higher, and cast iron car wheels were 50c. higher during the week, dealers paying more to obtain material to cover contracts. A higher market is expected on No. 1 busheling, as the result of more exacting specifications issued by the leading consumer in the district. It is expected that this also will cause higher prices to rule for shoveling steel. Railroad lists: Wabash, 2900 tons; Southern Pacific, 2800 tons; Kansas City Southern, 2400 tons; Chicago & Eastern Illinois, 450 tons.

Prices per gross ton, f.o.b. dealers' yards and delivered St. Louis district consumers' works:

Heavy melting steel	$11.50 to $12.00
No. 1 locomotive tires	12.00 to 12.50
Heavy shoveling steel	11.50 to 12.00
Miscellaneous standard-section rails, including frogs, switches and guards, cut apart	12.75 to 13.25
Railroad springs	13.75 to 14.25
Bundled sheets	8.75 to 9.25
No. 2 railroad wrought	11.50 to 12.00
No. 1 busheling	9.50 to 10.00
Cast iron borings	9.00 to 9.25
Iron rails	13.00 to 13.50
Rails for rolling	13.00 to 13.50
Machine shop turnings	7.00 to 7.50
Steel car axles	17.50 to 18.00
Iron car axles	23.50 to 24.00
Wrought iron bars and transoms	21.00 to 21.50
No. 1 railroad wrought	10.00 to 10.50
Steel rails, less than 3 ft	15.00 to 15.50
Steel angle bars	12.00 to 12.50
Cast iron carwheels	13.50 to 14.00
No. 1 machinery cast	13.00 to 13.50
Railroad malleable	11.00 to 11.50
No. 1 railroad cast	13.50 to 14.00
Stove plate	12.00 to 12.50
Agricultural malleable	12.00 to 12.50
Relaying rails, 60 lb. and under	20.50 to 23.50
Relaying rails, 70 lb. and over	26.50 to 29.00

Canada

Steel Mill Operations Continue at High Rate—Pig Iron Weak

TORONTO, ONT., May 8.—The near-capacity operations that have featured activities of Canadian steel mills and various iron and steel consuming lines show no signs of declining. Most companies have a large volume of unfilled orders on their books and report a steady flow of new business. The Canadian National Railways have distributed the following orders among Canadian companies: To Canadian Car & Foundry Co., five cafe-parlor cars, two library observation buffet cars, 60 Hart-Otis ballast cars, and 30 colonist cars; to National Steel Car Corporation, Ltd., 12 box baggage cars, and 20 colonist cars; Eastern Car Co., 200 Hart-Otis ballast cars, and 12 steel drop-nose snow plows.

Pig Iron.—Conditions and activities in the market remain practically unchanged for the week. While no forward buying of importance is reported, a steady flow of shipping orders against contracts is appearing, which, together with the current demand on spot delivery account, is responsible for a large movement of foundry and malleable iron. Present sales are being made to hand-to-mouth consumers, who prefer to buy in this way rather than lay in large yard stocks. Spot sales of the week averaged between 50 and 200 tons. A couple of inquiries are out for as high as 500 tons, and these tonnages are to be delivered over water routes. Now that Great Lakes and St. Lawrence navigation has opened, pig iron interests look for larger tonnage placements by melters who are advantageously situated for water delivery. Prices are unchanged.

Prices per gross ton:

Delivered Toronto	
No. 1 foundry, sil. 2.25 to 2.75	$23.10 to $23.60
No. 2 foundry, sil. 1.75 to 2.25	23.10 to 23.60
Malleable	23.10 to 23.60
Delivered Montreal	
No. 1 foundry, sil. 2.25 to 2.75	24.50 to 25.00
No. 2 foundry, sil. 1.75 to 2.25	24.50 to 25.00
Malleable	24.50 to 25.00
Basic	24.00
Imported Iron at Montreal Warehouse	
Summerlee	33.50
Carron	33.00

Old Material.—While general business is without special feature, current sales are reported at a good level. The market is spotty in some respects, showing general improvement for a couple of days in the week when several consumers came into the market for supplies for immediate needs. Advance buying is not an issue in the present market. Prices are unchanged.

Dealers' buying prices:

	Toronto	Montreal
Per Gross Ton		
Heavy melting steel	$9.00	$8.00
Rails, scrap	10.00	10.00

Standard carwheels	13.00	....
Malleable scrap	13.00	....

Birmingham

Plates, Shapes and Bars in Good Demand—Pig Iron Quiet

BIRMINGHAM, May 8.—The quiet selling under way for the past several weeks is still the outstanding characteristic of the pig iron market. Purchases are largely for immediate needs and a considerable portion of June iron is yet to be sold. Books have not been opened for third quarter. Foundries are taking shipments against contracts at a steady rate, and very little iron is being stocked. On some of the larger lots of foundry iron recently sold, furnaces have gone to $15.50, a reduction of 50c. a ton, but the usual quotation on small lots is $16, base. Seventeen furnaces continue in operation, 10 on foundry, five on basic, one on recarburizing iron and one on ferromanganese.

Prices per gross ton, f.o.b. Birmingham district furnaces:

No. 2 foundry, 1.75 to 2.25 sil.	$15.50 to $16.00
No. 1 foundry, 2.25 to 2.75 sil.	16.00 to 16.50
Basic	15.00

Finished Steel.—Orders and inquiries for bars, plates and shapes continue to hold close to the recent volume. Prices are substantially unchanged, though some variations from present quotations are made from time to time on the larger orders. New business in sheets is in reduced volume. Railroads have placed a fair volume of new business recently. New business with the structural steel fabricators shows improvement. The Virginia Bridge & Iron Co. has an order for 1800 tons for underframes for the Frisco System. The Ingalls Iron Works has received three orders totaling 380 tons. Reinforcing bar manufacturers are receiving sufficient tonnage to round out shop schedules. The Connors Steel Co. booked a 350-ton order for a Government building at Fort Bennings, Ga. Open-hearth operations have been the same during the past two weeks with the Tennessee company operating seven at Ensley and four at Fairfield, and the Gulf States Steel Co. four at Alabama City.

Cast Iron Pipe.—Pressure pipe manufacturers obtained a moderate amount of new business in small orders during the week. Public utility buying has not developed to the extent expected. Local plants hope to share in a few of the orders to be placed by municipalities. Bids are to be opened this week on good-sized tonnages for Knoxville, Tenn., Greer, S. C., and Summerville, S. C. Inquiries show marked increase. Prices have advanced $2 a ton, and quotations are now being made at $31 to $33. Soil pipe makers are finding business fair. Shipments have increased slightly.

Coke.—Sales have been on a spot basis for some time owing to previous purchases by all of the important consumers. No change in the volume of current business is noted. Shipments of foundry coke on second quarter contracts are being made at fair rate. Quotations remain at $5.

Old Material.—The recent improvement in No. 1 machinery cast and steel scrap trading failed to carry forward into the past week. Both sales and demand are low in all lines. The quotation on above plate has dropped to $13.50. Other prices are the same.

Prices per gross ton, delivered Birmingham district consumers' yards:

Heavy melting steel	$9.50 to	$10.00
Scrap steel rails	11.00 to	11.50
Short shoveling turnings	8.00 to	8.50
Cast iron borings		8.00
Stove plate		13.50
Steel axles	19.00 to	20.00
Iron axles	20.00 to	21.00
No. 1 railroad wrought	10.00 to	10.50
Rails for rolling		13.00
No. 1 cast		14.50
Tramcar wheels	12.50 to	13.50
Cast iron carwheels	12.00 to	13.00
Cast iron borings, chemical	13.50 to	14.00

Boston

Pig Iron Sales 8000 Tons, Mostly at $16, Buffalo—Scrap Prices Easier

BOSTON, May 8.—Pig iron sales the past week were nearly twice as large as in the previous week, running close to 8000 tons, including 4500 tons of Mystic iron and 1200 tons of Buffalo iron and some from Alabama, eastern New York and western Pennsylvania. Mystic sales included one lot of 3000 tons, and a Buffalo furnace sold 800 tons of No. 2X. A small amount of Indian iron, mostly No. 2X, at $21.75 and $22 on dock here, duty paid, was sold. Some sales were for prompt shipment, but most of them were for deliveries running into third quarter. Prices remain low, with Mystic, eastern New York State and Buffalo irons selling on a basis of $16 a ton, base Buffalo. Foundries with iron contracted for are taking it on schedule, and a few instances are cited where shipments are taken ahead of time. Indications are that buying for third quarter will be larger than expected a month ago. The New England melt increased quite noticeably during April and so far this month has shown a further gain.

Prices of foundry iron per gross ton, delivered to most New England points:

Buffalo, sil. 1.75 to 2.25	$20.91 to	$21.91
Buffalo, sil. 2.25 to 2.75	21.41 to	22.41
East. Penn., sil. 1.75 to 2.25	23.15 to	23.65
East. Penn., sil. 2.25 to 2.75	23.65 to	24.15
Virginia, sil. 1.75 to 2.25		25.71
Virginia, sil. 2.25 to 2.75		26.21
Alabama, sil. 1.75 to 2.25	22.41 to	24.27
Alabama, sil. 2.25 to 2.75	22.91 to	24.77

Freight rates: $4.91 from Buffalo, $3.65 from eastern Pennsylvania, $5.21 all rail from Virginia, $6.91 to $8.77 from Alabama.

Iron Importations.—April receipts of foreign iron at this port totaled 1322 tons, compared with 558 tons in March, this year, 110 tons in April, 1927, 6332 tons in April, 1926, and 6167 tons in April, 1925. The April importations were made up of 997 tons of Indian iron and 335 tons of Dutch. Importers intimate that receipts of Indian iron from now on will be increased.

Coke.—Not much increase has occurred in the movement of by-product foundry coke from ovens to foundries. The movement, however, is no indication of the iron melt, because foundries are drawing on supplies taken in the last of 1927 and in March, this year. Foundry fuel is selling at $11 a ton, delivered within a $3.10 freight rate zone. Dealers are stocking up heavily with domestic coke; consequently ovens in New England for the first time this year are not increasing their storage piles.

Cold-Rolled Strip.—Little cold-rolled strip steel tonnage is coming into the market. Business is being taken on a basis of 3.15c. to 3.30c., base Worcester, Mass., for 1 to 3 ton lots.

Bars.—Mills report some slackening in buying of bars, but specifications against contracts are liberal. The market for bars is firm at 1.90c. per lb., base Pittsburgh. Orders for reinforcing steel are usually for small tonnages, yet the weekly turnover in New England runs into several thousand tons. The mill price remains at 1.90c. per lb., base Pittsburgh, but out-of-stock prices are irregular.

Old Material.—The old material market has lapsed into dullness. A little heavy melting steel for Pennsylvania delivery was bought in the past week at $9 to $9.25 a ton on cars, shipping point, indicating a slight easing in prices. Car lots of steel turnings, mixed borings and turnings, forged scrap, T rails and miscellaneous other materials have been moved, generally at inside quotations. Most shippers have completed their Pennsylvania orders for textile and machinery cast, and the turnover the past week was smaller than it has been in some time. On May 8 there was an auction sale of surplus materials at the Navy Yard, Boston, including 2,000,000 lb. of ferrous metals, 360,000 lb. of non-ferrous metals, 30,000 lb. of copper wire, 25,000 lb. of cable, and 150,000 lb. of black and galvanized heavy and light iron and steel.

Buying prices per gross ton f.o.b. Boston rate shipping points:

No. 1 heavy melting steel	$9.00 to	$9.25
Scrap T rails	8.50 to	9.00
Scrap girder rails	7.50 to	8.00
No. 1 railroad wrought	10.00 to	10.25
No. 1 yard wrought	7.50 to	8.00
Machine shop turnings	5.50 to	6.00
Cast iron borings (steel works and rolling mill)	6.00 to	6.25
Bundled skeleton, long	5.75 to	6.25
Forge flashings	6.60 to	7.25
Blast furnace borings and turnings	5.75 to	6.25
Forge scrap	6.00 to	6.25
Shafting	13.00 to	13.50
Steel car axles	15.50 to	16.00
Wrought pipe (1 in. in diameter, over 2 ft. long)	7.50 to	8.00
Rails for rolling	10.00 to	10.25
Cast iron borings, chemical	9.50 to	10.00

Prices per gross ton delivered consumers' yards:

Textile cast	$13.50 to	$14.00
No. 1 machinery cast	15.25 to	15.50
No. 2 machinery cast	13.50 to	14.00
Stove plate	10.00 to	10.50
Railroad malleable	13.00 to	13.50

Cincinnati

Southern Iron Off 50c.—Cast and Malleable Scrap Declines

CINCINNATI, May 8.—With substantial tonnages of pig iron on the yards of Southern producers, prices in the South are sagging, with the result that quotations have been made at $15.50, base Birmingham, a drop of 50c. a ton from the previous schedule. This puts Southern iron into Cincinnati at the lowest delivered price since October, 1916. In fact, it gives Southern furnaces a differential of 19c. a ton over northern Ohio interests, figuring quotations of the latter at $16.50, base furnace. Just how important the decrease will be in broadening sales in the district adjacent to and north of the Ohio River depends considerably upon whether Lake Erie producers will see fit to dip under $16.50 to obtain orders at such points as Louisville and Evansville. Undoubtedly Southern makers will have an advantage. Southern Ohio foundry iron remains nominally at $19, base Ironton. A local dealer has sold 7000 tons of foundry iron. The Ford Motor Co. is inquiring for 400 tons of 14 to 16 per cent ferrosilicon and the Andrews Steel Co. is in the market for 100 to 200 tons of ferromanganese.

Prices per gross ton, delivered Cincinnati:

So. Ohio fdy., sil. 1.75 to 2.25	$20.89
So. Ohio malleable	$20.14 to 20.89
Alabama fdy., sil. 1.75 to 2.25	19.19 to 19.69
Alabama fdy., sil. 2.25 to 2.75	19.69 to 20.19
Tennessee fdy., sil. 1.75 to 2.25	19.19 to 19.69
Southern Ohio silvery, 8 per cent	26.89

Freight rates, $1.89 from Ironton and Jackson, Ohio; $3.69 from Birmingham.

Finished Material.—Mills are having difficulty in obtaining orders and specifications in sufficient volume to sustain operations at the current rate. Especially in bars, structural shapes and plates is demand lagging, although these heavy steel products are firm at 1.85c., base Pittsburgh, for contract tonnages and at 1.90c. for small miscellaneous lots. Fabricators report that considerable work is about to come out, but jobs actually being figured are few in number. The only major project calls for 725 tons of steel for four hangars at Wright Flying Field, Dayton, Ohio. Orders for sheets have been received at a moderate rate by district mills, sales having been well distributed among all consuming lines. While there has been a slight letdown in specifications from the automotive industry, bookings from that source still are in impressive proportions. Black sheets are bringing 2.75c. to 2.85c., base Pittsburgh, galvanized stock, 3.65c. to 3.75c., automobile body sheets, 4c., and blue annealed, 2c. to 2.10c. Production of sheet companies in this district has been well sustained in the past week and no change is contemplated in the next week. Wire goods are rather quiet, with interest centering mostly in common wire nails, which are quoted at $2.50 to $2.55 per keg, base Ironton, with a barge rate of 14c. to this city. That there has been considerable irregularity in prices of nails is the report from producers. Makers of standard steel pipe declare that shipments to consumers in this territory have been exceptionally good, while sales of tin plate also have been brisk.

Reinforcing Bars.—New billet bars are firm at 1.85c., base Pittsburgh, and rail steel stock at 1.80c., base mill.

Warehouse Business.—Several important jobbers state that sales in the first week of May showed considerable improvement. Quotations on all items are steady and unchanged.

Coke.—Specifications and orders for by-product foundry coke have been in about the same volume as in the last week of April, while domestic grades still are in moderate demand for dealers' stocks. Shipments of beehive foundry coke from the Wise County and New River districts have been only fair. A central Indiana steel company is expected to buy 8000 tons of by-product furnace coke.

Foundry coke prices per net ton, delivered Cincinnati: By-product coke, $9.02; Wise County coke, $7.09 to $7.59; New River coke, $9.09 to $9.59. Freight rates, $2.14 from Ashland, Ky.; $2.59 from Wise County and New River ovens.

Old Material.—There is perceptible weakness in the scrap market, cast iron and malleable iron grades having declined 25c. to 50c. a ton. Movement of material to district steel plants is slightly lower in volume. Dealers report that they are having less difficulty in buying scrap which some consumers have been holding in the hope of getting higher prices. Railroad lists closing this week are: Louisville & Nashville, Norfolk & Western, Southern and Chesapeake & Ohio.

Dealers' buying prices per gross ton f.o.b. cars, Cincinnati:

Heavy melting steel	$11.00 to $11.50
Scrap rails for melting	11.25 to 11.75
Loose sheet clippings	8.25 to 8.75
Bundled sheets	9.25 to 9.75
Cast iron borings	8.00 to 8.50
Machine shop turnings	7.50 to 8.00
No. 1 busheling	10.00 to 10.50
No. 2 busheling	7.00 to 7.50
Rails for rolling	12.50 to 13.00
No. 1 locomotive tires	12.75 to 13.25
No. 1 railroad wrought	10.00 to 10.50
Short rails	15.75 to 16.25
Cast iron carwheels	12.25 to 12.75
No. 1 machinery cast	15.25 to 15.75
No. 1 railroad cast	12.75 to 13.25
Burnt cast	7.50 to 8.00
Stove plate	8.25 to 8.75
Brake shoes	9.50 to 10.25
Railroad malleable	11.50 to 12.00
Agricultural malleable	11.00 to 11.50

Buffalo

Detroit Scrap Again Moving to Buffalo by Boat—Pig Iron Melt High

BUFFALO, May 8.—Orders for pig iron placed during the week were small in number and tonnage. Practically all of them were 100-ton lots of foundry and malleable, with a few 200-ton lots, and the remainder carloads. Inquiry was light, the one outstanding being that of the Central Foundry Co. for Dundalk, Md., for an indefinite tonnage for the third quarter. The melt throughout the East, according to furnacemen, is increasing; shipments in April were larger than during March.

Prices per gross ton, f.o.b. furnace:

No. 2 plain fdy., sil. 1.75 to 2.25	$17.00
No. 2 foundry, sil. 2.25 to 2.75	17.50
No. 1X foundry, sil. 2.75 to 3.25	18.50
Malleable, sil. up to 2.25	17.50
Basic	$16.50 to 17.00
Lake Superior charcoal	27.28

Finished Iron and Steel.—Operations continue at approximately the same percentage as in recent weeks. Prices for bars, shapes and plates are firm and the demand is fair. Sheet demand continues good, especially for automobile body and metal furniture sheets. Bolt and nut specifications are holding to a high level. Fabricated structural business is exceptionally quiet. Reinforcing bar ordering had an off-week; only small lots were placed.

Old Material.—The market seems to have weaker tendencies. A mill which last week was reported to have taken 1000 tons of No. 1 heavy melting steel at $14.75 is said to have bought an additional lot of about 1000 tons at this figure. The first shipment of scrap from Detroit was made by boat during the week. One of the local mills, which is said to have purchased about 60,000 tons of hydraulic compressed sheets and flashings last year, has received a shipment of between 3500 and 5000 tons of this material. Scrap shipments have been temporarily suspended by one of the prin-

Detroit

High Rate of Automobile Output Assured Until After June 1

DETROIT, May 8.—The feeling in the automotive industry seems to be that there is no apparent letup in the record breaking production schedules attained in the first four months of this year. In any event, present operations will prevail until after June 1. On the whole, production is still climbing, in spite of the fact that March totals in a few instances have not been equaled during the month just closed.

Buick is still running about 800 units per day. Cadillac and La Salle lines combined showed an April production of approximately 3300 units, or 647 better than the same month a year ago. This April figure, however, is 1200 units less than that for the previous month. Production for the first four months of 1928, at 14,184 units, showed an increase of about 46 per cent over that for the same period of 1927. Production is about equally divided between the two cars.

Chevrolet had an April production in excess of 132,000 cars and trucks, or practically the same as for March. April, 1927, production ran only 111,937. The first four months of 1928 show a total of approximately 474,000, against 379,330 for the same period in 1927.

Dodge Brothers turned out 22,533 units during the month just passed, or 8261 better than April, 1927. During the first four months of the year, Dodge production reached 82,943 units, against 60,838 for 1927, or a gain of 22,105 units.

Ford Motor Co. is producing model A cars at the rate of about 2300 per day, or about 300 more per day than reported last month. Edsel Ford states that by advancing production schedules a rate of 5000 units per day by July is aimed at. Thus far approximately 100,000 units have been turned out and unfilled orders run somewhere between 800,000 and 900,000.

During the past week the total production so far this year for Graham-Paige passed the entire total for 1927, which amounted to 28,881 units. The April figure is 8275, showing a gain of 5445 over that of April, 1927. During the first four months of 1928 21,407 units were produced, or nearly two and one-half times the 1927 figure for the same period, which was 8783. The Graham-Paige Motors Corporation has passed an appropriation to increase its capacity by one-third. The added facilities should be completed by July 1.

Hudson-Essex produced better than 28,000 units during April, bringing the total for the first four months to approximately 120,000 units. April figures, approximately 7700, are below those for March, and show a slight daily decline, even when allowance is made for the two extra working days in March. The May schedule has been set in advance of 28,000.

The Hupp Motor Car Co.'s April production of 8082 showed an increase of 3971 units over that for April, 1927. It was also better by 48 units than the figure for March of this year. During the first four months of the current year 24,952 units were produced, an increase of 9037 units over the same period in 1927.

April showed a production of 27,061 for Oakland and Pontiac cars, a decrease of 485 cars from the March production, but an increase of 7135 over April, 1927. Production for the first four months of this year amount to 100,004 units, or nearly twice that for the same period of 1927, which accounted for only 54,653. It is understood that the entire schedule for 1928 contemplates an increase of 40 per cent over 1927.

A new record was established during the past month for the Olds Motor Works, when 11,089 units were completed, contrasted with 9142 for March and 6000 for April a year ago. This company entered May with 7500 unfilled orders, and has tentatively set a schedule of 12,000 units for the current month.

Packard ran six units ahead of March, with an April production of 4434 units, which is better than twice the 1927 figure for the same month. The first quarter production for Packard ran 12,999 units, as against 6250 for 1927.

Reo turned out 5277 units in April, or an increase of 2028 over the previous month, but not equal to the 1927 mark for April, which stands at 5519. Reo had 6430 unfilled orders on the books May 1, and has set a production schedule for May of between 7500 and 8000 units, which if it is attained will far surpass production for May, 1927, which ran 5545.

April showed a total of 14,500 Studebakers completed. This is an increase of 1600 units over April, 1927, but a decrease of 2000 from the March figure of 16,500. During the first four months of this year 50,000 units were produced, while in the same period of 1927 only 43,000 were turned out.

Murray Corporation has booked approximately $7,000,000 worth of orders for Hupp Motor Car Co.

Auto body sheet is firm at 4c., Pittsburgh. Blue annealed is quoted at 2c., Pittsburgh. There is no change in cold finished bars and shafting, and alloy steel bars remain firm. No change is noted in the structural market. Volume holds up and prices of 1.85c. to 1.90c., Pittsburgh, remain unchanged.

Pig iron shipments will be slightly below March figures, owing to the fact that some of the automobile companies are preparing to bring out their new models, which necessitates some changes in patterns.

There have been no changes in prices on old materials in this district during the past two weeks.

Dealers' buying prices per gross ton, f.o.b. cars, Detroit:

Heavy melting and shoveling steel	$11.00 to	$11.50
Borings and short turnings	7.25 to	7.75
Long turnings	6.75 to	7.25
No. 1 machinery cast	14.00 to	15.00
Automobile cast	19.50 to	21.00
Hydraulic compressed sheets	9.75 to	10.25
Stove plate	11.00 to	12.00
No. 1 busheling	8.50 to	9.00
Sheet clippings	6.00 to	7.00
Flashings	9.25 to	9.75

"Unusual Features in the Microstructure of Ferrite" is the title of a pamphlet of 68 pages issued by the Bureau of Standards at Washington as No. 571 of its Scientific Papers. The authors are Henry S. Rawdon, senior metallurgist of the bureau, and Torkel Berglund, research fellow Swedish American Foundation, Stockholm.

The Celite Co., Los Angeles, has purchased the plant and property of the National Magnesia Mfg. Co., Redwood City, Cal., and will continue business of latter company under name of National Magnesia Co. Both companies are manufacturers of diatomaceous earth insulating materials and kindred products.

*Refinery quotation: delivered price ¼c. higher.

NEW YORK, May 8.—Demand is not particularly active in any of the markets; prices are generally strong. Copper is firmer, with a better tone. Tin is steady and moderately active. The lead market is unchanged. Zinc prices are again higher with demand fairly good.

Copper.—A decidedly cheerful tone pervades the market. A fair demand each day is reported for electrolytic copper, with no shading of prices, the quotation being firm at 14.25c., delivered in the Connecticut Valley. Domestic consumers still have considerable metal to buy for May as well as June. The wire makers are again buying more metal and other lines are well booked. Demand from foreign consumers is still good and their needs are not covered for May and June. All producers are still hard pressed to make deliveries on contracts and as a result there is very little prompt metal available. April statistics are expected to show a marked decline in stocks of refined metal and an increase in deliveries into consumption. Lake copper is in good demand at 14.25c. to 14.37½c., delivered, with buying about equally divided between May and June delivery.

Tin.—Sales for the week ended Saturday, May 5, were about 1000 tons, dealers doing practically all the buying. Consumers have been quite indifferent except for small purchases of spot lots. Spot and May metal is held under close control. Generally the market is featureless. Yesterday, Monday, about 100 tons changed hands and today demand was not heavy. Prices have about held their own with spot Straits tin today quoted at 51.37½c., New York. In London quotations today were higher than a week ago with spot standard quoted at £232, future standard at £231 2s. 6d. and spot Straits at £236 10s. The Singapore price today was £233 5s. Arrivals thus far this month have been 2575 tons, with 5675 tons reported afloat.

Lead.—Conditions are unchanged from last week. Only a moderate demand is reported with some good inquiry for June. Prices are evidently firmly entrenched at 6c., East St. Louis, for the outside market and 6.10c., New York, as the contract price of the leading interest.

Zinc.—In sympathy with an advance of $1 per ton in ore last week to $39, Joplin, prime Western zinc is now quoted at 5.95c. to 6c., St. Louis, or 6.30c. to 6.35c., New York. A moderately good business is reported as having been done each day. Producers are not eager sellers and are watching the ore situation keenly. About 15,000 tons was sold last week with production about 10,000 tons, thus reducing the large stocks slightly. Some producers will not sell at less than 6c., St. Louis.

Nickel.—Ingot nickel in wholesale lots is quoted at 35c., with shot nickel at 36c. and electrolytic nickel at 37c. per lb.

Antimony.—The war situation in China is reflected in higher prices in this market where Chinese metal is today quoted at 11.25c. per lb., New York, duty paid.

Aluminum.—Virgin metal, 98 to 99 per cent pure, is quoted at 23.90c. per lb., delivered.

Non-Ferrous Market at Chicago

CHICAGO, May 8.—This market is quiet except in small and scattered sales. Prices for tin are lower

On old metals we quote copper wire, crucible shapes and copper clips, 10.50c.; copper bottoms, 9.50c.; red brass, 9.25c.; yellow brass, 7c.; lead pipe, 4.75c.; zinc, 3.25c.; pewter, No. 1, 30c.; tin foil, 36c.; block tin, 45c.; aluminum, 11.75c.; all being dealers' prices for less-than-carload lots.

OBITUARY

Alexander W. Copland, president Copland Gear Lapping Syndicate, Detroit, died April 23 at his home near Birmingham, Mich., aged 60 years. He had formerly been president of the Detroit Gear & Machine Co., Detroit, and was previously manager of the Cincinnati plant of the National Biscuit Co. In the latter position he developed cake baking equipment that is said to have brought about marked changes in previous methods of baking. He served on the truck standardization committee during the world war. For a number of years Mr. Copland had been active in the affairs of the American Gear Manufacturers Association, having served as first vice-president and having been a member of the executive committee since 1922. He attended the recent meeting of the association in Rochester, N. Y., only three days prior to his death.

A. W. COPLAND

—

Charles D. Jones, superintendent of the Hubbard Pressed Steel Co., Niles, Ohio, died May 5 as a result of injuries sustained when he was struck by an automobile. He was 48 years of age.

—

Norris S. Rathburn, for several years treasurer of the National Acme Co., Cleveland, died suddenly May 6, aged 50 years. He had retired three years ago because of poor health.

—

Ira Hobart Spencer, president of the Spencer Turbine Co., Hartford, Conn., died April 28, at the Hartford Hospital, following a short illness. He was born at Barkhamsted, Conn., 54 years ago. He was considered a leading authority on compressed air machinery and turbines, and during the war served in an advisory capacity for the Government. He was a member of the American Society of Mechanical Engineers.

—

Charles F. Koopman, long identified with the New England Iron Works Co., New Haven, Conn., and its predecessor, the Cunningham Iron Co., died May 1 at his home in West Roxbury, Mass. He was born in Freeport, Me., Oct. 11, 1863.

Old Metals, Per Lb., New York

The buying prices represent what large dealers are paying for miscellaneous lots from the smaller accumulators and the selling prices are those charged consumers after the metal has been properly prepared for their uses.

	Dealers' Buying Prices	Dealers' Selling Prices
Copper, heavy crucible	12.00c.	13.50c.
Copper, heavy and wire	11.75c.	12.875c.
Copper, light and bottoms	10.25c.	11.375c.
Brass, heavy	7.00c.	8.50c.
Brass, light	6.00c.	7.50c.
Heavy machine composition	9.50c.	10.625c.
No. 1 yellow brass turnings	7.75c.	9.00c.
No. 1 red brass or composition turnings	8.75c.	9.75c.
Lead, heavy	5.00c.	5.50c.
Lead, tea	4.00c.	4.50c.
Zinc	3.00c.	3.50c.
Sheet aluminum	12.75c.	14.50c.
Cast aluminum	12.50c.	14.00c.

—

William T. Emmes, vice-president of the Boye & Emmes Machine Tool Co., Cincinnati, died May 1 at Good Samaritan Hospital in that city, following a protracted illness. He was born at Winchester, N. H., in 1863 and went to Cincinnati 35 years ago, entering the employ of the R. K. LeBlond Machine Tool Co. In 1898 he became associated as superintendent with Dietz, Schumacher & Boye, which two years later was reorganized as the Schumacher & Boye Co. In 1912 the company was succeeded by the Boye & Emmes Machine Tool Co., Mr. Emmes at that time becoming vice-president and a member of the firm. For the past three years he had been inactive.

—

John Markey, founder, president and general manager of the National Wrought Iron and Annealing Box Mfg. Co., Washington, Pa., died at his home there May 1. He was born in Wolverhampton, England, 62 years ago. His parents came to this country when he was four years old and located in Indianapolis. Mr. Markey started his company at Anderson, Ind., in 1893, but about 20 years ago it was removed to Washington. In 1902 he patented a tin plate annealing box and four years later, a sheet annealing box, which also was patented in England and Germany. He was a director of the Citizens National Bank, Washington, and a member of the American Steel and Iron Institute and the Foreign Trade Council.

—

Edward C. Chapman, machinery dealer at Rochester, N. Y., and representative in that city for the Harding Co., Chicago, died in Rochester on April 14. He went to Rochester 20 years ago, where he became associated with the Davis Machine Tool Co., remaining with that company until it suspended business.

—

A. M. Campbell, chairman of the board of the Glamorgan Pipe & Foundry Co., Lynchburg, Va., died on May 7. He had been identified with the company for 30 years, having begun as secretary to H. E. McWane, president of the company, and gradually promoted to his late position.

Speedy structural steel erection is reported from Chicago. The skeleton of the new Lawyers Building at 100 North LaSalle Street, comprising 25 stories and basement and requiring 1958 tons of structural steel, was erected in 36 working days. The Gage Structural Steel Co., Chicago, began deliveries of the steel work on Feb. 24 and made the final delivery April 13, and the erection, which was done by the Overland Construction Co., was completed shortly thereafter.

New orders booked during the first quarter of 1928, as reported to the Department of Commerce by 86 manufacturers of electrical goods, were $244,916,615, compared with $239,999,298 for the last quarter of 1927 and $243,651,415 for the first quarter of 1927. The recent figure is the highest since the last quarter of 1926.

RAILROAD EQUIPMENT

Virginian to Buy 1000 Car Bodies—Orders for 600 Freight and 100 Sleeping Cars

ORDERS for 300 gondolas for the Chicago, St. Paul, Minneapolis & Omaha, 200 poultry cars for the North American Car Corporation and 100 sleeping cars for the Pullman Co. featured the week's equipment buying. The Canadian Pacific placed orders for 25 locomotives and 11 snow plows. Among the new inquiries were 1000 hopper bodies for the Virginian Railway and 450 freight cars for the Chicago, St. Paul, Minneapolis & Omaha. Details of the week's business follow:

Chicago, St. Paul, Minneapolis & Omaha has purchased 300 general service gondola cars from Siems-Stemble Co. This road has also made inquiry for 200 50-ton flat cars and is expected to buy 250 additional freight cars.

North American Car Corporation has ordered 200 poultry cars from Standard Steel Car Co.

North Western Refrigerator Line will build 100 refrigerator cars in its own shops.

Chicago Rapid Transit Co. has withdrawn its inquiry for 50 to 100 motor passenger cars and 50 to 100 trailers. Chicago, South Shore & South Bend has also withdrawn its inquiry for passenger equipment.

Canadian Pacific has purchased 25 locomotives from American Locomotive Co., through Montreal Locomotive Works, Ltd. This road will also build 11 snow plows and 40 caboose cars at its Angus shops.

Virginian Railway is inquiring for 1000 hopper car bodies of 57½ tons' capacity.

Chicago, Burlington & Quincy is rebuilding 250 ballast cars at its Galesburg, Ill., shops.

Kansas City, Mexico & Orient is expected to make inquiry for 100 box cars.

Amtorg Trading Corporation, New York, has ordered 16 30-ton flat cars from Magor Car Corporation.

Pullman Co. has ordered 100 sleeping cars from Pullman Car & Mfg. Corporation.

Canadian Pacific has purchased five sleeping car underframes from Canadian Car & Foundry Co. and five from National Steel Car Corporation.

REINFORCING STEEL

Two Large Awards Bring Total to 10,700 Tons —5200 Tons in New Projects

WITH foundation work for the Cleveland Union Terminals Co. taking 2500 tons and a highway bridge at New Brunswick, N. J., 2400 tons, awards reported to The Iron Age in the last week amounted to 10,700 tons. New projects amounted to 5200 tons, including 2000 tons for a cold storage warehouse at Philadelphia and 1000 tons for a Chicago hotel. Awards follow:

New York, 500 tons of rail steel, piers for Hudson River Bridge, to Truscon Steel Co.

New York, 250 tons, Spatz Building; from Turner Construction Co., general contractor, to Jones & Laughlin Steel Corporation.

New Brunswick, N. J., 2400 tons, highway bridge across Raritan River, to Kalman Steel Co.

State of New Jersey, 250 tons, road work; from Joseph F. Burke, general contractor, to Igoe Brothers.

Fort Benning, Ga., 350 tons, United States Army officers' quarters, to Connors Steel Co., Birmingham.

Uniontown, Ala., 100 tons, street paving, to Connors Steel Co.

Cleveland, 2500 tons, foundation and building work for Cleveland Union Terminals Co., to Bourne-Fuller Co.

Chicago, 500 tons, office building at 301 West Jackson Boulevard, to Kalman Steel Co.

Chicago, 400 tons of rail steel, Foreman National Bank Building, to Inland Steel Co.

Chicago, 400 tons of rail steel, building for the Union Carbide & Carbon Corporation, to Inland Steel Co.

Stickney, Ill., 800 tons, sewer for Sanitary District, to Truscon Steel Co.

State of Illinois, 300 tons of rail steel, road work, to Calumet Steel Co.

Aurora, Ill., 100 tons, school, to Concrete Engineering Co.

St. Louis, 500 tons; 350 tons for two retail stores for Sears, Roebuck & Co. and 150 tons for apartment at 4011 Delmar Boulevard, to Laclede Steel Co.

St. Louis, 100 tons, pumping station at City Sanitarium, to Missouri Rolling Mills Corporation.

San Francisco, 400 tons, Kezar Stadium, to Gunn, Carle & Co.

San Francisco, 100 tons, firewall for Union Oil Co., to Pacific Coast Steel Co.

Oakland, Cal., 120 tons, storm sewer, to Badt-Falk Co.

Oakland, Cal., 400 tons, foundation for Capwell store, to an unnamed San Francisco jobber.

Fresno, Cal., 100 tons, Teachers College, to an unnamed San Francisco jobber.

Sacramento, Cal., 100 tons, bridge over San Joaquin River at Herndon, to unnamed San Francisco jobber.

Reinforcing Bars Pending

Inquiries for reinforcing steel bars include the following:

Boston, 600 tons, Charles H. Tenney Co. office building.

Philadelphia, 200 tons, Huntington Street station of Reading Railroad.

Philadelphia, about 2000 tons, cold storage warehouse for Reading Railroad; inquiry not yet issued.

Cleveland, 800 to 1000 tons, station building and viaduct for Cleveland Union Terminals Co.

Chicago, 1000 tons, hotel at Walton Place and Seneca Street; Levy & Klein, architects.

Chicago, tonnage not stated, plant addition for Container Corporation of America.

Chicago, 400 tons, Chicago Motor Club building.

Urbana, Ill., 100 tons, Lincoln Hall for University of Illinois.

New Trade Publications

Dust Precipitation Equipment.—General Electric Co., Schenectady, N. Y. Sixteen-page booklet, G. E. A. 916, describing general principles of Cottrell electrostatic process for cleaning blast furnace gas or other industrial smoke, and the special electric equipment required, such as mechanical rectifiers or vacuum tube kenotrons for transforming alternating current into direct current at from 65,000 to 100,000 volts, transformers, switchboards and protective devices.

Welding Supplies.—Lincoln Electric Co., Cleveland. Four-page pamphlet showing cables, shields, electrodes, holders and other supplies for arc welding.

Good Welding Essentials.—Wilson Welder & Metals Co., Hoboken, N. J. Instruction pamphlet (Bulletin E) showing how to maintain short arc, how to test welds, and notes on the strength of welds made under proper conditions.

Anti-Corrosive Metal.—American Sheet & Tin Plate Co., Pittsburgh. Twenty-page booklet, profusely illustrated, showing performance of steel containing fractional percentages of copper ("Keystone Copper Steel") when built into railroad cars, when used as corrugated sheets on buildings or for culverts and flumes on irrigation projects and when employed for various uses by sheet-metal workers.

Seamless Slip-Joint Pipe.—Otto Kafka, Esperson Building, Houston, Tex. Loose-leaf catalog of 16 pages devoted to "Kaysteel" seamless tubes, which are made by the Mannesmann piercing and pilgering process. The pamphlet deals with the process of manufacture, properties of the material, details of specifications and description of the joint as prepared for welding.

Materials-Handling Equipment.—Revolvator Co., 336 Garfield Avenue, Jersey City, N. J. Bulletin 82 illustrates on one large sheet a variety of equipment for raising and stacking material in warehouses and elsewhere. The raising element may be revolved on its center, operating on ball bearings in a large raceway.

Air Preheater.—Combustion Engineering Corporation, 200 Madison Avenue, New York. Catalog AH-3 of 24 pages, illustrated, describes preheaters for boiler practice and tells of the advantages of heating air to be used for combustion. Illustrations include a number of applications.

Portable Compressors.—Ingersoll-Rand Co., 11 Broadway, New York. Pamphlet of 112 pages illustrating and describing multitudinous uses for portable compressors carried on motor trucks or trailers and employed at various places where compressed air can be utilized to advantage. City streets, mountainous districts, isolated operations of all sorts are included in the examples given.

Pyrometers.—Wilson-Maeulen Co., 383 Concord Avenue, New York. Miniature catalog, reproducing at one-quarter size (4¼ x 5¼ in. page) the firm's regular large catalog of equipment for recording, indicating and automatic control of high temperatures.

PERSONAL

F. A. Ernst has been appointed assistant district sales manager at St. Louis for the Inland Steel Co., Chicago, succeeding W. P. Brumm, who was advanced to the sales managership of the office in August, 1927. Mr. Ernst began his career with the Trumbull Steel Co. in 1914 and has since been associated with the sales departments of a number of companies. Most recently he was in the Chicago office of the American Rolling Mill Co.

F. A. ERNST

George A. Uhlmeyer, industrial engineer Peoples Power Co., Moline, Ill., has been elected chairman of the Tri-City chapter of the American Society for Steel Treating. Other new officers are R. E. McGee, International Harvester Co., Rock Island, Ill., vice-chairman, and Ernest E. Mueller, representative Carpenter Steel Co., secretary-treasurer. The executive committee consists of Earl Taylor, Yellow Sleeve Valve Engine Works, East Moline; E. H. Sohner, International Harvester Co., Rock Island; P. J. Barry, Barry Co., Muscatine, Iowa; Prof. John Fielding, University of Iowa; Fred Turner, Walworth Mfg. Co., Kewanee, Ill.; Hyman Bornstein, Deere & Co., Moline; W. H. Hull, John Deere Harvester Works, East Moline, and E. E. Einfeldt, French & Hecht Co., Davenport, Iowa.

E. B. Whitacre has been appointed superintendent of the Salem, Ohio, works of the American Steel & Wire Co. to succeed the late Robert C. Garrison. Mr. Whitacre has been employed by the company since 1901, having served as machinist and machine shop foreman in the Salem plant until 1915. He then went to the Trenton, N. J., plant as a master mechanic and in 1921 returned to Salem in the same capacity, retaining that position until his promotion to the superintendency.

Ralph C. Coxhead, since 1921 president of the Ralph C. Coxhead Corporation, New York, distributer in the United States and Canada of the Mercedes calculating machine, has been made vice-president in charge of sales of Veeder-Root, Inc., Hartford, Conn., recently formed by a merger of the Veeder Mfg. Co., Hartford, and the Root Co., Bristol, Conn. He was born at Oakland, Cal., in 1892, and began his business career in 1914 in the sales department of the Dalton Adding Machine Co., Cincinnati. Later he organized the Office Appliance Sales Co. and designed an automatic carriage shift for the Marchant calculating machine. Until 1917 he was employed in various capacities by the Burroughs Adding Machine Co. and as consulting engineer to the Marchant company. During the war he was active in the design of shells, fuses and other munitions, serving in both the United States and France. Following the war he was associated with the American International Corporation as assistant to the president of G. Amsinck & Co., a subsidiary.

Arthur C. Hitchcock, New Departure Mfg. Co., Bristol, Conn., has gone to Europe for a several months' vacation.

M. B. Hoffman, chief metallurgist Colonial Steel Co., Pittsburgh, spoke on April 24 at the dinner meeting of the Tri-City chapter of the American Society for Steel Treating. He gave an illustrated discussion of the general metallurgical terms as applied to both carbon and high-speed steels.

Dr. Robert J. Anderson, director of research Fairmont Mfg. Co., Fairmont, W. Va., producer of aluminum sheet and coil, was elected a vice-president of the company at a recent meeting of the board.

Howard W. Dunbar has been promoted from the position of assistant general sales manager of the Norton Co., Worcester, Mass., to that of works manager of the machine division. He succeeds John C. Spence who recently resigned. Mr. Dunbar will have charge of all production and engineering of his division. He joined the company in 1913 as assistant chief engineer of the machine division.

George N. Jeppson has been elected vice-president of the Norton Co., Worcester, Mass., in charge of production. He has been works manager and secretary of the board of directors since 1919, and will retain the duties of both these offices.

Myron C. Summers, president of the Thomas Sheet Steel Co., Niles, Ohio, at the time of its absorption by the Empire Steel Corporation, heads a new organization which has acquired the Pittsburgh Cold-Rolled Steel Co., Verona, Pa. This company is a producer of cold rolled strip steel with an annual capacity of 7000 tons, and recently has been in the hands of a creditors' committee. Mr. Summers has long been active in steel sales, having been sales manager of the DeForest Sheet & Tin Plate Co., acquired about nine years ago by the Republic Iron & Steel Co. Subsequently he became sales manager Superior Sheet Steel Co., Canton, Ohio, having left that position to become president of the Thomas company about six years ago. This company took over the Thomas works from the Youngstown Sheet & Tube Co., which had acquired it in its purchase late in 1922 of the Brier Hill Steel Co. A. H. Dillon, who has been in the steel brokerage business in Youngstown, is associated with Mr. Summers as vice-president, and D. S. Thomas, new secretary-treasurer, was formerly identified with the sheet steel industry in the Youngstown district.

J. I. Andrews, vice-president and general manager of sales for the American Sheet & Tin Plate Co., has resumed his duties after a two months' European trip.

D. W. Wallace, formerly manager of the Minneapolis branch of the American Cast Iron Pipe Co., Birmingham, has been transferred to the Chicago office of that company, succeeding R. R. Banta, resigned.

Wilbur B. Topping continues as general manager of sales Republic Iron & Steel Co., Youngstown, Ohio, and A. E. Walker as assistant general manager of sales in the reorganization of the sales personnel of the company incident to its formal absorption of the Trumbull Steel Co. James E. Holmes, who has been attached to the New York office of the Republic company, has been transferred to the general offices and will have charge of the steel tube division. The strip steel division is headed by F. H. Loomis, who recently was general sales manager Trumbull Steel Co. Frank Rownd, in charge of Republic sheet sales for several years, has similar duties as head of the sheet division; Walter W. Hall, for several years assistant to Mr. Topping, has been placed in charge of the bar and specialties division, and Avery Adams, formerly assistant general manager of sales for the Trumbull company, heads the tin plate division.

R. W. Wales has been appointed factory representative of the Celoron Co., Bridgeport, Pa., division of Diamond State Fiber Co., and will specialize on molding powders and resins.

George W. Mason has been elected president of Copeland Products, Inc., 630 Lycaste Avenue, Detroit, manufacturer of electric refrigeration machines, succeeding William Robert Wilson, who has been made chairman of the board. Mr. Mason was for a number of years works manager for the Chrysler Corporation, Detroit.

—

J. C. Ward, president of the Edgar Allen Steel Co., New York and Chicago, sailed from England for the United States on May 2.

—

Merle W. Pabst has been elected vice-president in charge of sales and purchases for the Mid-State Tools Co., Syracuse, N. Y.

—

Alfred E. Munch, Jr., has been appointed representative in the Chicago-Milwaukee district of the Rollway Bearing Co., Inc., Syracuse, N. Y., and will have headquarters at 544 Railway Exchange Building, Chicago.

—

William J. Serrill, assistant general manager United Gas Improvement Co., Philadelphia, has been elected chairman of the American Engineering Standards Committee, succeeding C. E. Skinner, chief engineer Westinghouse Electric & Mfg. Co., East Pittsburgh, who has held the position for three years. Mr. Serrill has been prominent in the standardizing activities of the gas industry, and, as representative of the American Gas Association, he has been identified with the national standardization movement for several years. Cloyd M. Chapman, consulting engineer, New York, will serve as vice-chairman of the Standards Committee during the coming year.

W. J. SERRILL

—

Will McNamee, for the past three years manager of the Pittsburgh district plant of Briggs & Turivas, Inc., Chicago, at Imperial, Pa., has been placed in charge also of Pittsburgh district sales. He was originally from the company's Chicago organization.

—

Arthur E. Hodgkins, for several years assistant secretary and treasurer in charge of iron ore sales for Witherbee, Sherman & Co., Port Henry, N. Y., has severed his connection with that firm.

—

J. L. Neely, traffic manager American Sheet & Tin Plate Co., Pittsburgh, has retired and Howard H. Smith, assistant traffic manager, has been named to succeed him.

—

C. L. Wood, general manager sales Carnegie Steel Co., is back at his desk after an extended European tour.

—

J. S. Keefe, president American Steel & Wire Co., accompanied by other executives of the company, is making an inspection tour of the company's plants, his first as president of the company. Plants in Cleveland, Farrell, Pa., and the Pittsburgh district will be visited this week.

—

C. B. Gleason has gone with H. T. Gilbert to the Republic Iron & Steel Co. from the Sharon Steel Hoop Co., continuing as Mr. Gilbert's assistant, a position he has held during much of the latter's connection with the iron and steel industry.

—

C. Irving Dwinell, recently a sales engineer at Providence for the General Electric Co., Schenectady, N. Y., has been appointed manager of the Boston branch of the United States Electrical Tool Co., Cincinnati, which is located at 514 Atlantic Avenue.

—

H. S. Braman has resigned as a department superintendent of the Youngstown Sheet & Tube Co., Youngstown, Ohio.

—

Thomas Pritchard has been appointed superintendent of the Girard, Ohio, plant of the A. M. Byers Co., Pittsburgh, succeeding the late William F. Lane. Mr. Pritchard has been with the company 25 years, serving first as chief clerk and later as assistant superintendent.

—

D. B. Burleigh, sales manager Sundstrand Machine Tool Co., Rockford, Ill., sailed from New York May 4 on the steamship France for a two months' stay in Europe.

—

Lieut.-Col. Sir William H. Ellis, a director of John Brown & Co., Ltd. (Atlas Works), Sheffield, England, and a past president of both the Iron and Steel Institute and the Institution of Civil Engineers, is at present on a tour in the United States.

—

H. A. Stamper has been placed in charge of consumer motor sales at New York for the Lincoln Electric Co., Cleveland, and D. F. Titus, recently with the Portland Cement Association, has taken over the direction of welder service for the company in the same city. In the Cincinnati district A. H. Kirkpatrick has succeeded D. W. Carver as manager of welder service, Mr. Carver having been transferred to Cleveland. Consumer motor sales in Cincinnati district have been taken over by H. E. Nelson, formerly associated with the Willys-Overland Co., Toledo, Ohio. At Philadelphia, P. A. Ludwig, recently with Welding Engineers, Inc., has taken over welder service for the Lincoln organization. Forrest Kessler, who has been in the welding time study department at the Lincoln factory, has been transferred to the welder service division at Cleveland. At Chicago, J. R. Rothermel has been placed in charge of welder service, and W. Weaver, of consumer motor sales.

INSTITUTE ELECTIONS

W. L. King Honorary Vice-President and T. M. Girdler and G. M. Verity Directors

Willis L. King, vice-president Jones & Laughlin Steel Corporation, was made honorary vice-president of the American Iron and Steel Institute, at a meeting of the directors, May 7. He resigned as director for the term ending this year, but in his elevation to the honorary position, he retains the privileges of participation in the regular meetings of the directors. He is succeeded as a director by T. M. Girdler, president Jones & Laughlin Steel Corporation.

George M. Verity, president American Rolling Mill Co., was elected a director, taking the place of the late Joseph G. Butler, Jr.

The vacancy caused by the death of Judge Gary was filled at an earlier meeting by E. J. Buffington, president Illinois Steel Co.

The other members of the class of directors whose terms expire this year were reelected for the ensuing three years, namely, E. A. S. Clarke, William H. Donner, William J. Filbert, Samuel Mather, Isaac M. Scott, John A. Topping.

The board voted to increase the number of directors from 24 to 30, so that hereafter there will be three classes with ten in each group, each class serving for three years. It is expected that the additional number of directors will be elected by the board at its meeting prior to the semi-annual meeting in New York on May 25.

Machinery Markets and News of the Works

LARGE LIST AT CHICAGO

Deere & Co. Inquire for $500,000 Worth of Tools for Two Plants

General Business in Machinery Continues at About April Rate—Foreign Sales a Feature at Cincinnati

AN inquiry at Chicago for about $500,000 worth of machine tools for the Moline, Ill., and Waterloo, Iowa, plants of Deere & Co., agricultural machinery manufacturers, is of foremost interest in this week's machine tool developments. Other farm equipment manufacturers who are active buyers of shop equipment are the J. I. Case Threshing Machine Co., Racine, Wis., the International Harvester Co., Chicago, and the Monarch tractor plant of the Allis-Chalmers Mfg. Co., Springfield, Ill.

In the automobile field, buying has tapered off to a considerable extent, yet a fair demand has come within the past week from companies which have contracted to supply parts or accessories for Ford cars. The Logangear Products Co., Detroit, which will make oil pumps for the Ford company, bought about 25 machines from one dealer.

Railroad purchasing has been confined largely to orders of the Santa Fe and Union Pacific against recent inquiries. Small lists have been sent out by the New York Central, Erie, Rock Island and the Oregon Short Line.

In the East, the largest purchases have been made by the General Electric Co. for its Schenectady, N. Y., and Pittsfield, Mass., plants. Some of the textile machinery plants in New England have recently placed fair-sized orders, an interesting development in view of the unsatisfactory conditions which have prevailed in the textile industry.

Foreign sales have been conspicuous in the past few weeks, particularly at Cincinnati, where one company reports that its export bookings in the last 30 days have almost equaled domestic sales. A Cleveland turret lathe manufacturer took an order for four machines to be shipped to France.

The general purchasing officer, Panama Canal, Washington, is asking for bids by May 25 on a number of tools. The Ingersoll Milling Machine Co., Rockford, Ill., is in the market for several machines for a plant addition.

New York

NEW YORK, May 8.

MACHINE tool buying has gradually tapered off since March, but the decline has been gradual. Some New York State dealers did more business in April than in March, but the average was somewhat below the March rate. Since May 1 business has been only fair. Western New York State is quiet, but other sections of the eastern territory are fairly busy. Some good orders have recently come from New England makers of textile machinery. The Erie Railroad has inquired for a half dozen tools, including a 90-in. driving wheel lathe, 20-in. turret lathe, milling machine and a cylinder facing machine. The General Electric Co. has been a fairly large buyer.

Among the week's sales were the following: A Pratt & Whitney No. I A jig borer to an electrical manufacturer in Ohio; No. 2 jig borer to a Cleveland company; 22-in. vertical surface grinder and 16 x 36-in. lathe to an automobile company in Indiana; 13 x 30-in. lathe and 16 x 60-in. lathe to an electrical manufacturer in the East; gear-tooth grinding machine to a company in New Jersey; 4-spindle drum-type milling machine to a motor company in Michigan; 600-lb. steam hammer to a construction company in Birmingham.

Contract has been let by Ramsey Chain Co., Inc., 1031 Broadway, Albany, N. Y., manufacturer of silent chain transmissions, etc., to William Sayles & Son, 266 Hudson Avenue, for a one and two-story plant on Troy Road, to cost in excess of $450,000 with equipment. E. J. Opie is company engineer; Anthony B. Farrell is president.

Liberty Construction Stone Co., New York, care of Sidney F. Oppenheim, 156 East Forty-second Street, architect, has plans for a two-story plant, 100 x 225 ft., on Longfellow Avenue, near East Bay Avenue, for cutting, polishing, finishing, etc., to cost $90,000 with machinery.

Board of Education, Ossining, N. Y., plans installation of manual training equipment in new high school on South Highland Avenue (Albany Post Road), estimated to cost $750,000, in which amount a bond issue has been voted.

Rumidor Corporation, 500 Fifth Avenue, New York, manufacturer of humidors and other containers, is disposing of stock issue to total $144,000, a portion of fund to be used for expansion. Richard D. Zucker is president.

Jacob Mark, 51 Chambers Street, New York, is organizing a company to construct and operate a seven-story automobile service, repair and garage building at Seventh Avenue and Union Street, Brooklyn, to cost more than $400,000 with equipment.

J. Edward Birmingham, 45 Warburton Avenue, Yonkers, N. Y., architect, has taken out permit for a two-story and basement automobile service, repair and garage building, 90 x 100 ft., at 5120 Broadway, New York, to cost $100,000 with equipment.

General Motors Truck Co., has removed to its new seven-story and basement service, repair and sales building at 211-225 West Sixty-first Street, from Fifty-seventh Street and Eleventh Avenue, New York, and will operate motor truck rebuilding and repair plant at new location; each floor totals 20,000 sq. ft. floor space. Divisions will include department for trucks, coachs and cabs, machine shop, unit overhauling department, woodworking division, paint and trim shops, and other mechanical departments. Entire works will represent investment of $1,000,000. E. M. Seymour is general manager of local branch.

New York Steam Corporation, 280 Madison Avenue, New York, operating steam power plants and system for central heating service in different parts of city, has arranged for bond issue of $4,000,000, a portion of fund to be used for expansion. James D. Hurd is president.

Reid Ice Cream Corporation, 524 Waverly Avenue, Brooklyn, has plans under way for three-story automobile service, repair and garage building at Waverly and Atlantic Avenues, to cost about $100,000 with equipment. Kleinert & Klie, 250 Park Avenue, New York, are architects.

Board of Village Trustees, Freeport, L. I., is considering extensions and improvements in municipal power plant, to cost $250,000 with equipment. Special election is being arranged to approve bonds in that sum.

S. Friedman Co., New York, manufacturer of metal novelties, has leased a floor in building at 575 Eighth Avenue, for a local works.

Board of Education, Monroe, N. Y., plans installation of manual training equipment in proposed two-story high school, to cost about $165,000, to replace a structure lately destroyed by fire. F. B. Brooks is president, in charge.

Best Mfg. Co., 1200 Grove Street, Irvington, N. J., manufacturer of electrical products, radio equipment, etc., has awarded general contract to Kiegel & Spieler, Irvington, for a two-story addition, 35 x 130 ft., to cost about $35,000 with equipment. Victor H. Stromback, 1243 Springfield Avenue, is architect.

Board of Education, Oradel, N. J., is considering installation of manual training equipment in three-story junior high school, estimated to cost $385,000, for which plans will be drawn by Coffin & Coffin, 522 Fifth Avenue, New York, architects.

Gates-Day Aircraft Corporation, Paterson, N. J., recently organized, has leased factory property at 909-29 Twenty-third Street, and will establish plant for manufacture of airplanes and parts. Initial works are reported to cost in excess of $60,000. Company has also leased property at Teterboro, near Paterson, for flying field. Assets of former Standard Aeronautical Works, Elizabeth, N. J., have also been secured, and will be consolidated with new company. Ivan R. Gates is president; Charles H. Day, formerly chief engineer of Standard Works, vice-president; and Reuben Reiffin, president, West Paterson Bank, treasurer.

Shenken & Bristel, Newark, have leased a portion of factory at 39 South Sixth Street, and will install a machine shop for production of special automatic machinery and parts.

Board of Education, Summit, N. J., John D. Morgan, president, will receive bids until May 21, for machinery and equipment for woodworking and general shops in junior high school, steel lockers, and other equipment.

H. E. Salzberg Co., Inc., 54 Brook Street, Jersey City, N. J., manufacturer of electrical machinery and parts, has filed plans for new one-story plant, 50 x 215 ft., at Water and Clark Streets, to cost about $50,000 with equipment.

Quartermaster Department, United States Army, Washington, is arranging for early construction of a group of buildings at Picatinny Arsenal, near Dover, N. J., to replace structures destroyed by an explosion a number of months ago, reported to cost more than $850,000.

Modern Heating & Engineering Co., 170 Monmouth Street, Red Bank, N. J., has been organized to deal in product of Petroleum Heat & Power Co. Company has machine shop facilities and purchases materials other than Petro equipment in open market.

National Flue Cleaner Co., Inc., Groveville, N. J., manufacturer of soot blowers for return tubular and Scotch marine boilers has appointed following representatives: Walter G. Heacock Co., 30 Union Arcade, Cleveland, and 413 Penobscot Building, Detroit; Jack Deerwester Co., 1621 University Avenue, St. Paul, Minn.; Charles Zinram, P. O. Box 487, Erie, Pa., and Laib Co., Louisville, Ky.

National Oven Co., has removed its general offices from Grand Central Terminal, New York, to factory at Glenham, N. Y.

Atkinson & Utech, Inc., New York, dealer in iron and steel products including forgings and castings, has removed its offices to 117 Liberty Street.

Philadelphia Porcelain Co., Woodlynne, N. J., has been reorganized and plant will be completely revamped within short time. R. A. Weaver is president and R. A. Nelson, secretary and general manager. New furnace and special handling equipment will be installed immediately.

St. Louis

ST. LOUIS, May 8.

THE Missouri-Kansas-Texas Railway, Railway Exchange Building, St. Louis, is in the market for a 90-in. lathe for journal turning and quartering and crank pin turning. The St. Louis-Southwestern Railway, Buder Building, St. Louis, has purchased from Manning, Maxwell & Moore, a Putnam 90-in. lathe for journal turning and quartering, a Putnam heavy-duty axle lathe, and a Bridgeport floor grinder.

American Yard-O-Meter Corporation, has been organized at St. Louis, to manufacture a fabric-measuring and cost-computing device for retail dry goods stores. Company has authorized capitalization of 1250 shares of preferred stock, $100 each, and 1250 shares of common no par value stock. Principals in new company are officers of the American Fixture & Show Case Mfg. Co. Manufacturing plant is at 810 North Tenth Street.

New company is being organized by Frederick E. Kern, Syndicate Trust Building, St. Louis, and associates, to construct and operate new plant on Clayton Road, where site has been secured, for manufacture of special insulating brick, fire brick and other refractories, reported to cost more than $150,000 with machinery.

Anheuser-Busch, Inc., Ninth Street, St. Louis, is having plans drawn for an addition to power plant at its bottling works, including remodeling of present station and installation of new machinery, reported to cost about $200,000. Ophuls & Hill, 112 West Forty-second Street, New York, are engineers.

General Airplane Co., Wichita, Kan., M. L. Howe, president, is reported planning establishment of new plant at Muskogee, Okla., for assembling service, to cost more than $30,000 with equipment.

Shellabarger Mill & Elevator Co., Salina, Kan., has approved plans for new grain elevator with capacity of 1,000,000 bu., reported to cost more than $350,000, with elevating, conveying and other mechanical equipment. Horner & Wyatt, Board of Trade Building, Kansas City, Mo., are consulting engineers.

Airmotor Corporation, Ponca City, Okla., is considering a new one-story plant for manufacture of aircraft equipment, reported to cost close to $32,000 with machinery.

Union Electric Light & Power Co., Twelfth and Locust Streets, St. Louis, has filed plans for one and two-story automatic power substation at 1408 Clark Street, to cost approximately $50,000 with equipment.

Seamon-Dunning Corporation, West Fourth Street, Pine Bluff, Ark., manufacturer of automobile bodies, is planning a one-story addition to cost in excess of $35,000 with equipment.

Swift & Co., Union Stock Yards, Chicago, will install cold storage and refrigerating machinery, and other power equipment, including mechanical handling equipment, in a new meat-packing plant at South Vandeventer and Papin Streets, St. Louis, consisting of three six-story units, to cost approximately $650,000. John H. Hall is local manager.

Board of Trustees, Kemper Military School, Boonville, Mo., is having plans drawn for one-story addition to power plant, including installation of engine-generator unit, and will soon take bids. Henrici-Lowry Engineering Co., Security Building, Kansas City, Mo., is engineer.

Griffin Brothers, El Dorado, Ark., are planning one-story automobile service, repair and garage building on South Jefferson Avenue, 120 x 300 ft., to cost about $65,000 with equipment.

Board of Education, Brookfield, Mo., is considering installation of manual training equipment in proposed new high school, estimated to cost $200,000, for which plans will be drawn by H. D. Pampel, Finance Building, Kansas City, Mo., architect.

City Council, Perryville, Mo., plans installation of pumping machinery and other power equipment in connection with proposed extensions and improvements in municipal waterworks. Bond issue of $120,000, has been approved for project. Burns & McDonnell Engineering Co., Interstate Building, Kansas City, Mo., is engineer.

Central West Public Service Co., Albion, Neb., has secured permission to issue bonds for $400,000, a portion of fund to be used for expansion and improvements, including transmission line construction.

Ingersoll-Rand Drill Co., 314 North Broadway, St. Louis, has been succeeded by Ingersoll-Rand, Inc., and has opened a new branch at 226 West A Street, Picher, Okla.

New England

BOSTON, May 8.

NEW ENGLAND machine tool dealers report that business is quieter than during the closing days of April. Inquiries have fallen off, but dealers say they have a large number of quotations out.

The Pneumatic Drop Hammer Co., Boston, is busy. It installed this week four 250-lb. and 300-lb. hammers in a leading Rhode Island jewelry manufacturing plant; has just booked a 900-lb. hammer for an Indiana plant; a cimilar hammer for a Utica, N. Y., manufacturer; two large hammers for an Eastern silverware maker; eight 200-lb. and 300-lb. hammers for Meriden, Conn., manufacturer and has a repeat order for a large hammer from a Providence, R. I., shop.

Some small tool houses did the largest business in April of any month this year, and at least one did more than in any month in more than a year. May, to date, is running far ahead of April.

The Crane Market

THERE is very little new inquiry for either overhead or locomotive cranes. About to close are six ¾-cu. yd. bucket handling overhead cranes for the Brooklyn Ash Removal Co., 186 Remsen Street, Brooklyn. The Franklin Lumber Co., Newark, N. J., is taking bids on a 10-ton crawl tread locomotive crane and has not yet placed two 15-ton overhead cranes for lumber handling.

In the Pittsburgh district the market is showing much activity. Carnegie Steel Co. will close soon for four cranes for its McDonald, Ohio, works. An order for a 20-ton 66-ft. span crane for Lorain Steel Co., Johnstown, Pa., is pending, and the Diamond Alkali Co. is expected to close soon for a 15-ton, 2 motor, 37-ft. span crane, and for a 1-motor crane for its Alkali, Ohio, works. American Rolling Mill Co. later in the year will want seven or eight cranes in connection with changes at its Butler, Pa., works. Appropriation has been granted for a new skelp mill at National works, National Tube Co., McKeesport, Pa., for which a few cranes will be required. Deere & Co., Moline, Ill., and Waterloo, Iowa, will purchase several overhead electric cranes. Williams, White & Co., Moline, Ill., is in the market for five overhead electric traveling cranes.

Among recent purchases are:

Interstate Palisade Park Commission, Bear Mountain, N. Y., two truck cranes from Browning Crane Co.

J. J. McGarry, Edgewater, N. J., one truck crane from Browning Crane Co.

G. W. Corson & Sons, New York, one truck crane from Browning Crane Co.

New Jersey Zinc Co., New York, 1¾ cu. yd. bucket handling crane from Western builder.

H. J. Heinz Co., Pittsburgh, two 2-ton 2-motor trolleys and one 2-ton 3-motor crane from Northern Engineering Works.

Bethlehem Steel Co., two 150-ton ingot stripper cranes, one each for Cambria works and Lackawanna works from Morgan Engineering Co.

A. M. Byers Co., Warren, Ohio, two 10-ton gantry cranes from Wellman-Seaver-Morgan Co.

Pittsburgh Coal Washer Co., one 50-ton, 77-ft. span crane from Morgan Engineering Co.

Interest in the crane market centers largely in the Boston & Maine Railroad Co. announcement that maintenance headquarters for work and wrecking equipment, as well as rail motor car equipment, are to be established at Keene, N. H. The car shops there are being enlarged and improved. New hoists of large capacity are to be installed, and the machine shop is to be re-equipped with new tools and appliances. Gasoline rail cars, wrecking cranes, coal cranes, locomotive hoists, ditchers, rail unloaders, ballast spreaders and pile drivers will be repaired there. The company has under consideration a number of wrecking and coal cranes as well as locomotive hoists.

Billings & Spencer Co., Hartford, Conn., tools and machinery, is operating at 100 per cent of capacity. Raw and finished stock on hand are not excessive. Customers are ordering conservatively, but often.

Sullivan Machinery Co., Claremont, N. H., reports its plants in excellent condition and in a position to take care of additional business without additional expenditures for machine tools and other equipment. Invoices for the first quarter of this year were 10 per cent less than for the corresponding period of 1927, but orders on books increased approximately 30 per cent.

New England Fuel & Transportation Co., 250 Stuart Street, Boston, contemplates additions to its Everett, Mass., coke-making equipment.

Taunton-New Bedford Copper Co., North Front Street, New Bedford, Mass., has started a one-story, 20 x 24 ft. plant addition.

W. A. Stone, State purchasing agent has plans for a repair shop and military equipment storage plant at Concord, N. H., State Camp Grounds. William M. Butterfield Co., 801 Beach Street, Manchester, N. H., are the architects.

Plans are in progress for a four-story sales and service plant addition on Commonwealth Avenue and Melvin Street, Boston, for the Packard Motor Car Co. Alvin Macaulay, 1530 East Grand Boulevard, Detroit, will make the award for construction and equipment.

Baird Machine Co., Stratford Avenue, Stratford, Conn., manufacturer of machine tools, will soon ask bids on general contract for one-story addition, 100 x 150 ft., to be equipped primarily as extension to machine shop, estimated to cost $75,000. Fletcher-Thompson, Inc., 542 Fairfield Avenue, Bridgeport, Conn., is architect and engineer.

Charles Street Garage Corporation, 252 Cambridge Street, Boston, has plans nearing completion for three-story addition to service, repair and garage building, 80 x 100 ft., reported to cost in excess of $100,000 with equipment. Lockwood, Greene & Co., 24 Federal Street, are architects and engineers.

Colonial Can Co., 26-28 Pittsburgh Street, South Boston, plans early rebuilding of portion of plant destroyed by fire, April 28, with loss reported at $50,000, including equipment.

D. M. Watkins Co., Inc., Pine and Foster Streets, Providence, R. I., manufacturer of screw machine products, has filed plans for two-story addition, reported to cost in excess of $25,000 with equipment. William R. Walker & Son, Providence, are architects.

Connecticut Light & Power Co., Hartford, Conn., will soon begin work on two-story equipment storage and distributing plant on Curtis Street with mechanical repair and parts department, and one-story service and garage building for company trucks and cars, adjoining, estimated to cost $200,000 with equipment.

Perry, Buxton, Doane Co., 216 West First Street, Boston, operating a scrap iron and metal business, has acquired plant and equipment of Tremont Nail Co., Wareham, Mass., exclusive of real estate. The machinery will be dismantled and sold.

United Illuminating Co., New Haven, Conn., is asking bids on general contract for superstructure of its proposed new steam-operated electric generating plant on Grand Avenue. Entire project is reported to cost in excess of $750,000, with machinery. Westcott & Mapes, New Haven, are engineers. Company has filed plans for one-story automatic power substation on Jackson Avenue, Bridgeport, Conn., to cost more than $100,000.

Machinery, equipment and real estate of Vermont Machine Co., Inc., Bellows Falls, Vt., will be offered at a public sale on premises, May 17 and 18.

Boston & Albany Railroad Co., South Station, Boston, has filed plans for a new coaling station at 140 Cambridge Street, to cost about $50,000 with equipment.

South Atlantic States

BALTIMORE, MAY 8.

CONTRACT has been let by Bethlehem Shipbuilding Corporation, Key Highway, Baltimore, a subsidiary of Bethlehem Steel Corporation, Bethlehem, Pa., to Consolidated Engineering Co., 20 East Franklin Street, for second unit of shipyard addition, to be one and two-story, reported to cost in excess of $400,000, with equipment. Wilson & Tomlinson, 201 Devonshire Street, Boston, are engineers. J. M. Willis is manager.

Baltimore Coach Co., 2 St. Paul Street, Baltimore, has plans for one-story machine and repair shop at 120 West Fayette Street, reported to cost close to $20,000.

American Chatillon Corporation, 393 Seventh Avenue, New York, recently formed with capital of $10,000,000, plans installation of power house and machine shop, with other mechanical units, at proposed rayon mill at Rome, Ga. Entire project will cost in excess of $3,500,000. Lockwood, Greene & Co., 100 East Forty-second Street, New York, are architects and engineers.

General purchasing officer, Panama Canal, Washington, is asking bids until May 25, for turret lathe, screw-cutting lathes, milling machines, drill presses, grinding machines, electric welding machine, hacksaws, wire rope, concrete mixers, etc., Panama schedule 1876.

Ruberoid Co., 95 Madison Avenue, New York, manufacturer of roofing, with main plant at Bound Brook, N. J., has perfected plans for merger with Continental Roofing & Mfg. Co., 1200 South Sixteenth Street, Baltimore, with branch factory at Mobile, Ala.; and P. F. Watson Co., Erie, Pa., manufacturer of kindred products. All present plants will be continued and general expansion program arranged. Each division of consolidated company will maintain identity as in past.

City Council, Florence, S. C., has authorized purchase of tract of 140 acres of land for establishment of municipal airport, and plans early construction of hangars, repair shops, oil storage and distributing building, and other structures. H. K. Gilbert, mayor, in charge.

Starke Foundry & Mfg. Co., Richmond, Va., recently organized by Allen J. Saville, Electric Building, and associates, with capital of $25,000, is planning operation of local foundry.

Columbus Electric & Power Co., Columbus, Ga., has authorized a note issue of $2,500,000, a portion of proceeds to be used for expansion, including transmission line construction.

General Public Service Corporation, Citizens' National Bank Building, Baltimore, Clarence B. Love, secretary, recently organized, is asking bids on general contract until May 15, for one-story fertilizer-manufacturing plant, 80 x 120 ft., reported to cost about $23,000, with machinery. Howard Borden, Catonsville, Baltimore, is architect.

United States Bureau of Standards, Connecticut Avenue, N. W., Washington, has asked appropriation of $350,000, for new four-story hydraulic laboratory, with equipment.

Hiner Supply & Mfg. Co., Raleigh, N. C., manufacturer of iron castings, etc., plans rebuilding of portion of foundry recently destroyed by fire with loss reported at $22,000, including equipment. C. N. Hiner is head.

Arrington Cold Storage Corporation, Arrington, Va., has approved plans for new one-story cold storage and refrigerating plant, reported to cost in excess of $50,000, with machinery. Ballinger Co., Twelfth and Chestnut Streets, Philadelphia, is architect and engineer. John W. Wheeler is secretary.

Spear Engineers, Inc., Bankers' Trust Building, Norfolk, Va., H. B. Spear, president, is said to be planning a shipbuilding and repair yard on 15-acre tract of land at West Norfolk, to cost in excess of $100,000, with equipment.

Forsyth Street Garage Corporation, Atlanta, Ga., care of Pringle & Smith, Norris Building, architects, has asked bids on general contract for two-story and basement service, repair and garage building at Forsyth and Hunter Streets, reported to cost about $85,000, with equipment.

Nitrate Agencies Co., Wilmington, N. C., operated by W. R. Grace & Co., Murchinson Building, is planning rebuilding of portion of fertilizer plant destroyed by fire, April 30, with loss of about $150,000, in machinery and supplies, exclusive of building, which was owned by Atlantic Coast Line.

United States Engineer office, Savannah, Ga., will receive bids until May 16, for one 2-cylinder internal combustion engine, circular 132.

City Council, Warrenton, Ga., is asking bids until May 17, for deep-well pumping machinery and auxiliary equipment, steel water tank on elevated steel tower, and accessories, for municipal waterworks. J. B. McCrary Engineering Corporation, Atlanta, Ga., is engineer.

Public Improvement Commission, Baltimore, has authorized Board of Education, Madison and Lafayette Avenues, to purchase 11-acre tract of land on Barrington Road, near Garrison Boulevard, as site for proposed Forest Park high school, to include manual training department. Estimated cost is $1,000,000. Plans will be prepared under direction of Dr. David E. Weglein, superintendent.

Duke Power Co., Charlotte, N. C., has secured franchise for 100,000-volt transmission line to Marion, N. C., estimated to cost close to $160,000. W. D. Lee is engineer.

Philadelphia

PHILADELPHIA, May 7.

Contract has been let by Edward H. Reuss, Jr., Thirtieth and Race Streets, Philadelphia, manufacturer of pipe, heating equipment, etc., to Wark Co., 1600 Walnut Street, for one and two-story pipe-bending and fabricating plant at Forty-ninth Street and Gray's Ferry Avenue, to cost close to $150,000, with equipment. Philip H. Johnson, Widener Building, is architect.

Reading Railroad, Reading Terminal, Philadelphia, has acquired 12-acre tract of land at Nineteenth and Rockland Streets, and Germantown Avenue, for new shop and storage terminal for electric trains, to include repair and reconditioning departments and other mechanical shops. Work will be carried out in connection with electrification program on suburban lines, estimated to cost $20,000,000.

Simon Scullin, operating an iron foundry at Cambria and American Streets, Philadelphia, has awarded general contract to Knox Landers Co., 1132 Vine Street, for rebuilding of two-story plant, recently damaged by fire.

Sentman Motor Co., Fifty-eighth and Walnut Streets, Philadelphia, has leased a two-story building, 70 x 130 ft., to be erected on Chestnut Street, near Fifty-seventh Street, for a new service, repair and garage building, estimated to cost close to $100,000 with equipment. Eugene A. Stopper, 10 South Eighteenth Street, is architect.

Philadelphia Rapid Transit Co., 810 Dauphin Street, Philadelphia, has awarded general contract to Henry E. Baton, Inc., 1713 Sansom Street, for a one-story motor bus repair shop, 282 x 406 ft., at Third Street and Hunting Park Avenue, consisting of machine shop, parts department, woodworking department, reconditioning division and other mechanical departments, to cost approximately $300,000, with equipment.

South Jersey Port Commission, Harold Bennett, 317 Market Street, Camden, N. J., representative, in co-operation with City Council, Camden, has preliminary plans for new marine terminal on Delaware River, between Clinton and State Streets, to cost approximately $2,000,000, with unloading, elevating, conveying and other equipment. Charles W. Staniford, 50 Church Street, New York, is engineer for commission.

Public Service Electric & Gas Co., Public Service Terminal, Newark, N. J., has filed plans for a one-story power substation on Thirty-second Street, Camden, N. J., to cost close to $500,000, with equipment.

Board of Education, Elizabethtown, Pa., plans installation of manual training equipment in new two-story senior and junior high school on West High Street, estimated to cost $125,000, for which bids on general contract will be received on May 14. C. E. Urban, Woolworth Building, Lancaster, Pa., is architect.

Harrisburg Airport Corporation, Harrisburg, Pa., has been chartered by George R. Bailey, Harrisburg, and associates, with capital of $25,000, to construct and operate local airport, for which site has been acquired. Work will soon begin on hangars, repair shop, oil storage and distributing building, and other structures. Harry T. Neale, Harrisburg, is also interested in new company.

Pennsylvania Power & Light Co., Allentown, Pa., is concluding arrangements for purchase of Harrisburg Light & Power Co., Harrisburg, Pa., and will operate as unit of its organization. Expansion will be carried out in Harrisburg district, including transmission line construction.

Bridgeport Iron Works, Inc., care of W. R. Browne, Powell Street, Bridgeport, Pa., has awarded general contract to Friend-Reiff Co., Norristown Trust Building, Norristown, Pa., for a one-story foundry, 95 x 200 ft., at Church Road and Crooked Lane, Upper Merion, Pa., to cost about $65,000, with equipment.

Central Railroad of New Jersey, 143 Liberty Street, New York, has work nearing completion on a number of units at its new engine terminal and shops at Bethlehem, Pa., including machine shop, forge shop, wheel works, and other structures. Entire project will cost about $225,000.

Officials of International Cement Corporation, 342 Madison Avenue, New York, have organized a new subsidiary under Pennsylvania laws, to be known as Lone Star Cement Co., to take over and operate plant of Phoenix Portland Cement Co., Nazareth, Pa., recently acquired. New owner plans expansion in output. International company has also concluded negotiations for purchase of plant and property of Warrior Cement Corporation, Demopolis, Ala., and will operate as a unit of mills in different parts of country, totaling 13. H. Struckmann is president.

Marmon-Philadelphia Co., 847 North Broad Street, Philadelphia, local representative for Marmon automobile, has plans for extensions and improvements in service, repair and garage building at 661-69 North Broad Street, to cost about $35,000. Clarence E. Wunder, 1520 Locust Street, is architect.

Gill-Virden Co., Inc., Amber and Venango Streets, Philadelphia, manufacturer of illuminating glassware, is closing the plant of former Virden Co., 6103 Longfellow Avenue, S. E., Cleveland, manufacturer of brass and bronze lighting fixtures, recently acquired, and will consolidate the metal-working branch at Philadelphia works, where increased production will be carried out.

Waiskette Mfg. Co., 3240 North Thirteenth Street, Philadelphia, has been organized to manufacture steel wool brush for cleaning and polishing aluminum and other metals. It is in market for steel wool and will also purchase cutters, stitchers and other machinery.

Pittsburgh

PITTSBURGH, May 7.

MACHINERY dealers still are finding business slow, and some report inquiries to be fewer than they were recently. Sales run chiefly to single tools and repair parts. In cranes and heavy machinery business is fairly active and the prospect is bright, with several cranes likely to be placed soon. National Tube Co. has been granted an appropriation for a new skelp mill at its National Works, McKeesport, Pa. Crucible Steel Co. of America has bought a mill to roll alloy sheets at its Park works, Pittsburgh.

Pittsburgh Airways, Inc., 800 Union Trust Building, Pittsburgh, recently organized, has applied for permission to establish and operate local airport, to include hangars, repair shop and other mechanical buildings. It is purposed to operate an airline for passenger and freight service. John D. Shaner is representative.

Weil-McLain Co., Erie, Pa., manufacturer of heating and plumbing equipment, with branch plants at Chicago, and Michigan City, Ind., is disposing of a note issue of $1,000,000, a portion of proceeds to be used for expansion. Company has recently been making additions to plants.

Board of Education, Altoona, Pa., is planning installation in new West Side junior high school, at Thirteenth Street and Nineteenth Avenue, four-story, estimated to cost $750,000, for which bids will soon be asked on general contract by Hersh & Shellar, Commerce Building, architects.

Town Council, Romney, W. Va., is asking bids until May 17, for motor-driven pumping machinery and auxiliary equipment for municipal waterworks.

United States Engineer office, Huntington, W. Va., will receive bids until May 14 for iron and steel castings, including cast iron quoins, cast iron bearings and cast steel quoin locks, circular 197. Also, until May 15, for chain wheel and ¾-in chain, circular 198.

A. M. Byers Co., 235 Water Street, Pittsburgh, manufacturer of wrought iron pipe, etc., is arranging for sale of 125,000 shares of additional stock, to net from $11,000,000 to $13,000,000, a portion of fund to be used for expansion and development. Arrangements have been made for renewal of lease and option to purchase plant of American Puddled Iron Co., Youngstown, Ohio, now being operated, from Nov. 1, 1928 to Jan 1, 1930.

Kosmos Carbon Co., Union Building, Charleston, W. Va., is perfecting plans for two new carbon black producing plants in vicinity of Stinett and Sanford, Tex., each of 3-unit type, comprising 18 buildings, reported to cost in excess of $225,000, with machinery. Purchases will be under direction of C. A. Urban, company headquarters.

Rust Engineering Co., Rust Construction Co. and Bolivar Clay Products Co., Pittsburgh, have removed their offices to American Bank Building, Sixth Avenue and Grant Street.

Cincinnati

CINCINNATI, May 7.

THE first week of May brought a fair amount of business to machine tool builders, and inquiries indicate that sales this month will be in about the same volume as in April. Most orders are for single tools, and current demand is representative of all parts of the country. The Santa Fe and the Union Pacific have been active buyers in the past 10 days, and several other railroads are expected to purchase small lots of equipment. The New York Central, Southern Pacific and Kansas City Terminal Railroad each is in the market for an engine lathe, while the Boston & Maine is taking bids on two engine lathes. An important manufacturer reports that foreign sales in the past 30 days have been almost as large as domestic bookings. In the Detroit district, automobile makers have bought sparingly, although several orders have been placed by companies having Ford contracts. The Reynolds Engineering Co., Rock Island, Ill., has contracted for a 60-in. duplex control borer.

Contract has been let by Fremont Foundry Co., Fremont, Ohio, to Steinle & Wolfe Co., Crogan Street, for one-story foundry addition on Dickinson Street, reported to cost about $22,000 with equipment.

American Aggregates Corporation, Greenville, Ohio, recently organized to take over Greenville Gravel Co. and other properties, to specialize in production and distribution of concrete aggregates; manufacture gravel plant machinery and equipment, road maintenance trucks, etc., is disposing of bond issue of $2,000,000 a portion of proceeds to be used for expansion. F. D. Coppock is president.

Air Corps, Material Division, Wright Field, Dayton, Ohio, will receive bids until May 14, for 35 fuel pressure gages; 100 pressure thermometer gages; 40 oil-pressure gages; 1000 thermometer nuts; and 1000 tachometer shaft washers, circular 324; at same time, for 70 straight-side wheel assemblies, circular 323.

Common Council, Cookeville, Tenn., is considering a bond issue of $150,000, for extensions and improvements in municipal hydroelectric power plant on Falling Water River.

Edward J. Bosler, Tyler Hotel, Louisville, will take bids at once for proposed three-story and basement automobile service, repair and garage building, 165 x 200 ft., at Third and Guthrie Streets, to cost about $300,000 with equipment. Company is being organized to carry out project. E. T. Hutchings, 418 South Fifth Street, is architect.

Purchasing and contracting office, quartermaster department, Fort Hayes, Columbus, Ohio, is asking bids until May 21, for two boilers, with accessories, circular 53.

Southern Cities Power Co., Provident Building, Chattanooga, Tenn., is arranging for a bond issue of $3,500,000, a portion of fund to be used for purchase of interest in Southern Cities Utilities Co., and for expansion and improvements, including transmission line construction.

American Rolling Mill Co., Middletown, Ohio, has made application for permission to construct and operate a terminal wharf for handling materials at its West Works, Ashland, Ky., to include installation of crane runway and 10-ton electric traveling crane, and other elevating and conveying equipment. Facilities will be provided to handle about 20,000 tons per month.

Board of Public Works, Springfield, Ohio, is having plans drawn for extensions and improvements in municipal pumping plant for water service, to include installation of additional equipment. Eastman & Budke, Springfield, are architects.

Standard Ice Co., Knoxville, Tenn., has filed plans for a one-story ice-manufacturing plant, 86 x 115 ft., reported to cost more than $150,000, including equipment.

State Board of Education, Nashville, Tenn., has rejected bids recently received for new power plant, in conjunction with science building, at school at Cookeville, Tenn., and will have revised plans drawn and call for new bids, reported to cost in excess of $175,000.

Common Council, Centerville, Tenn., plans installation of pumping machinery and power equipment in connection with proposed extensions and improvements in municipal waterworks. A special election has been called for May 24 to vote bonds for $75,000.

The Fountain-Way Corporation, Cincinnati, with a capitalization of $300,000, has been incorporated to manufacture a new type of washing machine and will erect a one-story brick and concrete factory having 17,000 sq. ft. of manufacturing space at Mariemont Avenue and Trade Street, Westover, a suburb of Cincinnati. Expansion plans of the company call eventually for a two-story building with 160,000 sq. ft. of production area. Gregory T. Desjardins is vice-president and general manager.

Cleveland

CLEVELAND, May 8.

THE demand for machinery in Detroit from shops that have taken orders for parts for Ford cars continues fairly active. A Cleveland manufacturer of turret lathes during the week took single orders in Detroit for six machines for making Ford parts. The business placed by the Logangear Products Co., Detroit, for making oil pumps for Ford cars included about 25 machines bought from one dealer. Locally, the market is rather dull. Most of the business in this territory is coming from manufacturers of automobile parts. A Cleveland manufacturer during the week took an export order for four turret lathes for shipment to Paris, France. The New York Central Railroad is inquiring for a 24-in. lathe, a turret lathe and shaper. Small lists have been issued by the Santa Fe, Rock Island and Oregan Short Line Railroad.

American Electric Switch Corporation, Minerva, Ohio, is in the market for euipment for the manufacture of pressed steel threadless conduit fittings. Requirements include cadmium plating equipment; power presses for manufacture of collars and hubs; and automatic butt welding machines for joining the hubs to the bodies. Also automatic tapping and threading machinery for the collars and nuts, and automatic surface grinders for the completed fittings.

Air-O-Lator Corporation, Cleveland, has been organized to manufacture ventilating fans. Contracts for motors and frames have been made for one year at which time company will announce future plans which may include building of assembly plant.

C. & G. Cooper Co., Mount Vernon, Ohio, manufacturer of engines and power equipment, has awarded contract for construction of machine and tool building to H. K. Ferguson Co., Cleveland. New building will cost $60,000 and will replace two former structures.

Group of Warren, Ohio, interests is organizing a $200,000 company to manufacture steel stampings and pressed steel parts.

General Pressed Steel Co., which is building a plant at Newton Falls, Ohio, expects to get into operation within the next 45 days. Equipment has been purchased.

Chapman-Stein Furnace Co. and Chapman Engineering Co., Mount Vernon, Ohio, have been merged as Chapman-

Stein Co. and will continue in combustion engineering field, giving special attention to sale of gas producers, industrial furnaces and allied equipment. Personnel of old companies is practically unchanged.

Plans have been filed by Patterson Foundry & Machine Co., East Liverpool, Ohio, manufacturer of iron and steel products, ceramic machinery, etc., for a one-story addition to East End plant, 110 x 300 ft., reported to cost in excess of $100,000 with machinery. Richard L. Cawood is president.

W. H. Marlatt, receiver for McGraw-Tire & Rubber Co., East Palestine, Ohio, is arranging for sale of plant and property of company at public auction.

Henry & Murphy, Second National Bank Building, Akron, Ohio, architects, have plans for a two-story automobile service, repair and garage building on South High Street, to cost close to $90,000 with equipment.

Board of Education, Cleveland, is planning installation of manual training equipment in two new junior high schools, each three-story, on sites at Benham Street and East Boulevard, and at Bosworth Street and Parkhurst Drive, respectively, estimated to cost $700,000, for which bids are being asked on general contract until May 14.

Kilgore Mfg. Co., Uhrichsville, Ohio, manufacturer of cap pistols and kindred specialties, plans rebuilding of portion of plant destroyed by fire, May 2, with loss reported at close to $30,000, including equipment. Building was owned by Uhrichsville Board of Trade and occupied under lease.

Ohio Water Service Co., Massillon, Ohio, is disposing of bond issue of $3,000,000, and preferred stock in amount of $1,173,000, a portion of proceeds to be used for expansion in plants and systems, including acquisition of additional properties.

Fire, May 3, destroyed a portion of grain mill and elevator of Carey Mill & Elevator Co., Carey, Ohio, with loss reported at $100,000, including elevating, conveying and other mechanical equipment. It is planned to rebuild. D. C. Henry is general manager.

Scott & Fetzer Co., 11401 Locust Avenue, Cleveland, manufacturer of vacuum cleaners, etc., has taken out a permit for two-story addition, 43 x 60 ft., for which general contract recently was let to Webber Co., 1609 West Twenty-fifth Street. It will cost about $45,000 with equipment. A. G. Wolf, Swetland Building, is architect.

Chicago

CHICAGO, May 7.

OF foremost interest in this market is a list for more than $500,000 worth of machine tools for the Moline, Ill., and Waterloo, Iowa, plants of Deere & Co. J. I. Case Threshing Machine Co., Racine, Wis., and the International Harvester Co. are still actively engaged in making purchases. Allis-Chalmers Mfg. Co. has closed for a number of items for its Monarch tractor plant, Springfield, Ill., and is contemplating adding more equipment at an early date. The Ingersoll Milling Machine Co., Rockford, Ill., is in the market for tools for a plant addition. Dealers are receiving orders against the Union Pacific list; otherwise railroad buying is unusually quiet. Taken as a whole, this market is steady and prospects are that May sales will compare well with those of April.

Bids have been asked on general contract by Illinois Copper & Iron Co., 217 Maplewood Avenue, Chicago, manufacturer of kettles, expansion joints, etc., for a one-story addition, 48 x 100 ft., to cost about $25,000 with equipment. E. J. Patelski, 179 North Wells Street, is architect.

Combustioneer, Inc., Chicago, recently organized to manufacture automatic coal burners, has leased a one-story factory at 1829-39 South Fifty-fifth Avenue, totaling about 18,000 sq. ft., and will equip for new plant.

Illinois Power & Light Corporation, 231 South La Salle Street, Chicago, is disposing of a preferred stock issue to total $36,474,000, a portion of proceeds to be used for extensions in power plants and transmission lines. Clement Studebaker, Jr., is president.

Nimmons, Carr & Wright, 122 South Michigan Avenue, Chicago, architects, have plans under way for a 10-story automobile service, repair and garage building in Chicago Beach district, reported to cost in excess of $400,000 with equipment.

Minnesota Power & Light Co., Duluth, Minn., has arranged a fund of $1,120,400, for extensions and improvements in power plants, power substations and transmission lines during 1928. Additional equipment will be installed in Thomson generating station at Duluth.

Great Northern Railway Co., St. Paul, Minn., has plans under way for a new engine house and repair shops at Grand Forks, N. D., to cost about $140,000 with equipment. T. D. McMahon, Great Northern Railway Building, St. Paul, is company architect.

Board of Public Works, Cedar Rapids, Iowa, plans installation of pumping machinery and other power equipment in connection with extensions and improvements in municipal waterworks, for which a fund of about $500,000, is being arranged. Alvord, Burdick & Howson, Hartford Building, Chicago, are consulting engineers.

Maytag Co., Newton, Iowa, manufacturer of electric-operated clothes washing machines, is disposing of a preferred stock issue to total $13,250,000, a portion of proceeds to be used for expansion. E. H. Maytag is president.

Lapham-Hickey Co., 1625 West Pershing Road, Chicago, steel products, has acquired property, 160 x 175 ft., at South Turner Avenue and Forty-seventh Place, and plans early erection of a one-story and basement storage and distributing plant, totaling 25,000 sq. ft. floor space, reported to cost in excess of $50,000 with equipment.

Container Corporation of America, Inc., 111 West Washington Street, Chicago, manufacturer of corrugated paper boxes and containers, will have plans drawn for a new mill on Ogden Avenue, for manufacture of paperboard, to cost in excess of $400,000 with equipment. Walter P. Paepcke is president.

Coleman Lamp & Stove Co., Wichita, Kan., has sold a stock issue in amount of $1,710,000, a portion of fund to be used for expansion. W. C. Coleman is president.

Belsky Motor Co., Iowa Avenue and Eighth Street, Dubuque, Iowa, has plans for a one-story service, repair and garage building to cost about $40,000 with equipment. C. I. Krajewski, 730 Main Street, is architect.

Great Lakes Paper Co., operated by Backus-Brooks Co., Builders' Exchange, Minneapolis, Minn., has disposed of a bond issue of $10,000,000, a considerable portion of fund to be used in connection with a new newsprint mill at Fort William, Ont. Initial unit is now nearing completion and work will soon proceed with a second unit, to be ready for service in about 12 months. A sulphite mill is being built.

American Signs Corporation, Kalamazoo, Mich., has completed installation of porcelain enameling department. Enameling furnace is operated electrically and installation was designed by Ferro Enamel Supply Co., Cleveland.

Cribben & Sexton Co., Chicago, is installing new Alundum "V" bottom furnace, with special hanging rack equipment, supplied by Ferro Enamel Supply Co., Cleveland.

Black Hawk Brass & Aluminum Foundry, Westfield Avenue, Waterloo, Iowa, has been opened by E. E. and C. P. Foster and will engage in brass, aluminum and bronze foundry work, specializing in new acid resisting metal invented by E. E. Foster.

Arthur L. Stevens Corporation Chicago, has removed from 28 East Jackson Street to Engineering Building, 205 West Wacker Drive.

Chicago office of David Lupton's Sons Co., manufacturer of steel windows, has been removed from Steger Building to larger quarters at 333 North Michigan Avenue. Roy A. Sanborn is district manager.

O. E. Szekeley Corporation has purchased the factory and foundry of the Burke Engineering Company, Seventh Street, Holland, Mich., and already has begun operations. New equipment has been added to the foundry which includes provision for making brass and aluminum castings.

Link-Belt Co., 329 West Pershing Road, Chicago, will build a one-story factory, 120 x 220 ft., to cost $60,000.

Hannifin Mfg. Co., 621 South Kolmar Avenue, Chicago, manufacturer of air chucks, will build a two-story factory addition, 75 x 116 ft., to cost $35,000.

Servel Corporation, Evansville, Ind., manufacturer of electrical refrigeration units, will build a factory addition to cost $15,000.

Buffalo

BUFFALO, May 7.

Bids have been asked on general contract by U. S. Hoffman Machinery Corporation, 329 Temple Street, Syracuse, N. Y., manufacturer of clothes-pressing machines, parts, etc., for three-story addition, estimated to cost $70,000, with equipment. Portion of unit will be used as a foundry. Lockwood, Greene & Co., 100 East Forty-second Street, New York, are architects and engineers.

Eastern States Milling Co., Ontario Street and Cloverdale Road, Buffalo, has awarded contract to Monarch Engineering Co., Chamber of Commerce Building, for three-story addition to mill and elevator, estimated to cost $200,000; installation will include mechanical cleaning, packing and other machinery. C. B. Lee is secretary and general manager.

Consolidated Water Co., Utica, N. Y., is disposing of a bond issue of $4,000,000, a portion of proceeds to be used for extensions and improvements in plants and system. Waterworks are operated at Frankfort, New Hartford, Whitesboro, Deerfield and other points. Franklyn C. Hopkins is president.

Utica Ramp Parking Co., Mayer Building, Utica, has plans under way for multi-story service, repair and garage building at Washington and Oriskany Streets, estimated to cost $275,000, with equipment. R. S. Westbrook, Utica Bank Building, is architect; C. Kiehm, Gardner Building, is engineer.

Buffalo Foundry & Machine Co., 1543 Fillmore Avenue, Buffalo, manufacturer of vacuum drying machinery, evaporators, etc., has taken over plant and property of Chemical & Vacuum Machinery Co., 1608 Main Street, manufacturer of kindred equipment, and will consolidate with its organization. Expansion in output is being arranged, including production of additional machinery, comprising new design of vacuum rotary dryer, spray film feed, etc. Charles O. Lavett and H. E. Neubauer, heretofore general manager and chief engineer, respectively, of purchased company, will continue with Buffalo Foundry Company.

Rochester Gas & Electric Co., Rochester, N. Y., has filed application with Public Service Commission for permission to use additional property on Geneseo River for proposed extensions in hydroelectric power facilities.

Board of Education, Binghamton, N. Y., is planning installation of manual training equipment in proposed junior high school at Helen and Highland Avenues, estimated to cost $750,000. T. I. Lacey & Son, Press Building, are architects.

Board of Education, Canandaigua, N. Y., is asking bids on general contract until May 22, for one-story manual arts shop, in conjunction with gymnasium at Canandaigua Free Academy, West Main Street, estimated to cost $200,000, with equipment. Wilson Potter, 22 East Seventeenth Street, New York, is architect.

Detroit

DETROIT, May 8.

PLANS have been completed by Chevrolet Motor Co., 3044 West Grand Boulevard, Detroit, for a one-story addition to power plant at local works, reported to cost in excess of $85,000 with equipment. Albert Kahn, Marquette Building, is architect.

George Bachman, Flint P. Smith Building, Flint, Mich., architect, has plans under way for a three-story automobile service, repair and garage building at North Saginaw and Wood Streets, to cost about $130,000 with equipment.

Monroe Auto Equipment Co., Monroe, Mich., is arranging for immediate construction of new one-story plant unit to cost close to $150,000, and will equip for production of hydraulic shock absorbers, on basis of 500,000 sets per annum. Manufacture will also be increased for self-oiling tire pumps and automobile heater units. C. S. McIntyre is president and general manager.

Board of County Supervisors, Menominee, Mich., has authorized purchase of tract of 100 acres of land north of city for establishment of municipal airport, and will soon have plans drawn for hangars, repair shop, oil storage and distributing building, and other mechanical units.

Copeland Products, Inc., 630 Lycaste Street, Detroit, manufacturer of electric refrigerating equipment, has leased property adjoining plant, and will arrange for additional facilities to double the present capacity, reported to cost in excess of $100,000. W. D. McElhinny is vice-president.

Victor Body Co., Lansing, Mich., recently organized by H. Jay Hayes and associates, is establishing a local plant for manufacture of automobile bodies and will begin operations at an early date. H. B. Nelson, formerly connected with Hayes-Hunt Co., at Elizabeth, N. J., will be chief engineer.

Universal Products Co., 6455 Kingsley Avenue, Detroit, will make extensions in machine shop for production of small parts for automobiles, reported to cost about $40,000, with equipment.

In connection with expansion program at Lansing, Mich., plant, Durant Motors, Inc., 250 West Fifty-seventh Street, New York, will build an addition to power plant, with installation of additional equipment. Superstructure will soon begin on one-story factory unit, 62 x 500 ft., with wing extension 490 ft., and second wing, 400 ft. New structure will provide about 225,000 sq. ft. floor space, and will develop local plant to production of 1000 cars per day. It will cost more than $700,000 with equipment.

Plans are under way for a merger of Marvel Carburetor Co., Flint, Mich.; Borg & Beck Co., 310 South Michigan Avenue, Chicago, manufacturer of automobile clutches and kindred products, with main plants at Clearing and Moline, Ill.; and Mechanics Machine Co., Rockford, Ill., manufacturer of automotive equipment. It is purposed to continue all present plants in operation and carry out expansion program for increased manufacture.

Line-O-Scribe, Inc., Adrian, Mich., manufacturer of window-card writing machines, is planning for early removal of plant to larger factory, where capacity will be increased. Company has been leasing portion of local plant of Bond Steel Post Co., which has now been sold to Evans Auto Loading Co., which will occupy entire structure.

Motor Camshaft & Parts Corporation, 244 Houseman Building, Grand Rapids, Mich., has been organized to manufacture camshafts and pistons. Company owns Yassenoff welded camshaft patents and Stungo non-ring piston patents. Automobile companies are being licensed to make camshafts under company's patents and within year shafts will be furnished by maker.

Fleckenstein Pump Co., 326 Bond Avenue, Grand Rapids, Mich., has been organized to succeed Fleckenstein Visible Gasometer Co. and is manufacturing visible gasoline pumps for filling stations. Company has its own equipment, does its own machine work and purchases raw materials locally and in Chicago market. Company also does jobbing business in other items used by oil and gasoline distributers.

Milwaukee

MILWAUKEE, May 7.

BUSINESS in machine tools during the past week showed some signs of hesitancy as compared with several previous weeks, but inquiry was well maintained and a moderate number of orders for one or two machines was booked. Automotive industries are now doing little beyond the making of necessary replacements or changes, although in one or two instances plans call for the purchase of additional tools on a fairly large scale. The power farm machinery industry is still active, although its needs appear largely filled for the present. Payrolls and production schedules of most tool shops continue at the recent peak.

International Harvester Co., 784 Park Street, Milwaukee, has placed general contract with Worden-Allen Co. for construction of brick and steel boiler room building, 65 x 140 ft. Equipment contracts remain to be placed. Paul F. Schryer is general superintendent.

Olsen Mfg. Co., Kenosha, Wis., has been organized by Hans P. Olsen, 501 Cherry Street, Milwaukee, to engage in production of tools, dies, jigs, fixtures and special machinery in plant of former Winther Motor Co., Kenosha, which was acquired recently. Some additions are being made to equipment purchased with factory buildings, and considerable replacement work will also be done. Lester L. Olsen is vice-president and general manager, and Robert E. Bussian, works manager.

Highway Trailer Co., Edgerton, Wis., is making additions to its equipment to facilitate execution of several large orders just booked. American Telephone & Telegraph Co. has placed order for $600,000 worth of trailers; City of Chicago, $500,000 for 85 units for rubbish hauling, and City of Cincinnati, garbage trailers valued at $65,000.

Members of Philip Orth Co., 202 Florida Street, maker of bakery equipment and supplies, have formed Beat-All Corporation, to manufacture similar machinery. Production at first will be centered on variable speed cake-mixing machine with 1½ hp. Century electric motor. Philip Orth, Jr., is vice-president and general manager.

Madison Gas & Electric Co., Madison, Wis., which is at work on $500,000 addition to its steam generating capacity, has placed order for 15,000 kw. turbine condenser with the Allis-Chalmers Mfg. Co., Milwaukee. Project is in charge of Mead & Seastone, consulting engineers, Madison.

Drott Tractor Co., 123 Wisconsin Avenue, Milwaukee, territorial distributer of caterpillar tractors and equipment, has plans by M. Tullgren & Sons, local architects, for $125,000 headquarters building for sales and service on Wisconsin Avenue, near Thirty-seventh Street.

Production of steel stanchions, stalls and pens, litter carriers and other steel bran and dairy equipment has been started by Fitzgerald Mfg. Co., in a new plant at Merrill, Wis. Manufacture of hardware specialties for wholesale trade is planned during slack seasons in its regular lines. Edward Fitzgerald is general superintendent.

Milwaukee Board of School Directors will close bids May 31 on enlargement and re-equipment of boiler house of Twentieth Street school, estimated to cost $40,000. Frank M. Harbach is business manager.

Modine Mfg. Co., Racine, Wis., manufacturer of automobile, truck, tractor and industrial gas engine cooling systems, is considering erection of plant additions costing $100,000 to increase its capacity about 25 per cent. An architect will be selected shortly. A. B. Modine is president and general manager.

Common Council, Randolph, Wis., is about to request bids for the reconstruction and repair of the municipal steam generating plant at an estimated cost of $58,000, for which appropriation has just been made. New boilers, two new generators, switchboard and other equipment is specified. B. C. Keeley is superintendent.

Hawthorne Building Corporation, 1 South Pinckney Street, Madison, Wis., has engaged Fred L. Kronenberg, local architect, to design an automotive sales, service and storage building on University Avenue, to cost $125,000. Perry Sletteland is president.

Wisconsin Power & Light Co., Madison, Wis., has acquired the dam site and property of the former Necedah Mill Co. at Necedah, Wis., and plans the erection of a new hydroelectric generating plant to cost about $100,000.

Badger Meter Mfg. Co., 841 Thirtieth Street, Milwaukee, water meters, has placed general contract with R. L. Reisinger & Co., 484 Oakland Avenue, local, for erecting foundry and carpenter shop addition, 60 x 120 ft., costing about $65,000 with equipment. C. W. Wright is president and general manager.

Belle City Malleable & Wrought Iron Co., Racine, Wis., has started work on the construction of a plant addition, 60 x 118 ft., at its works at Forest Avenue and Kewaunee Street. Investment will total about $40,000. Nelson Co., Racine, is general contractor.

Indiana

INDIANAPOLIS, May 8.

BIDS will be received by Common Council, Edinburg, Ind., until May 21, for power house for municipal service, reported to cost about $23,000. Donald Graham, Hume-Mansur Building, Indianapolis, is architect and engineer.

Indiana Truck Corporation, Marion, Ind., recently merged with Brockway Motor Truck Corporation, Cortland, N. Y., is reported planning a new assembling plant at Atlanta, Ga., to cost in excess of $100,000, with equipment. Another plant of same character is also projected for Southern district, on site to be selected. Both works are scheduled for completion before close of year.

George J. Mayer Co., Market and Liberty Street, Indianapolis, manufacturer of aluminum and brass plates for automobiles, small metal stampings, etc., has plans for a new addition, designed to double present output, two-story, reported to cost more than $100,000 with equipment.

Southeastern Indiana Power Co., recently organized to take over electric power business of Indianapolis & Cincinnati Traction Co., Indianapolis, lately secured at a public sale, is arranging for extensions and improvements to cost more than $100,000, including transmission line construction. Headquarters will be at Indianapolis. Company will acquire Milroy Light & Power Co., Milroy, Ind., Atwood-Burkett Light & Power Co.; Battle Ground Light & Power Co., and other utilities, and will carry out expansion program.

Davis Industries, Inc., Kokomo, Ind., manufacturer of radio equipment, cabinets, etc., has disposed of a preferred stock issue to total $341,000, a portion of proceeds to be used for expansion.

Department of Water, Evansville, Ind., will soon take bids for one-story and basement equipment storage and distributing plant at Water and Pine Streets, 70 x 150 ft., with pipe and repair department, garage and service facilities, to cost close to $40,000, with equipment. John C. Males, City Hall, is secretary. Frank J. Schlotter, Dickman Building, is architect.

Gulf States

BIRMINGHAM, May 8.

GULF STATES UTILITIES CO., Beaumont, Tex., operating electric light and power plants, and ice-manufacturing plants, is disposing of preferred stock issue of $2,940,000, a portion of proceeds to be used for expansion, including installation of additional equipment. George H. Clifford is president.

Mississippi Steel & Iron Co., Inc., High and Monroe Streets, Jackson, Miss., plans new plant unit for production of ornamental iron and structural steel products, with output of about 200 tons per month. Equipment purchases will soon be made.

Inland Utilities Co., Kansas City, Mo., has secured a franchise at Blue Mountain, Miss., and plans construction of electric light and power plant, reported to cost in excess of $80,000 with equipment.

Gulf, Colorado & Santa Fe Railway Co., Galveston, Tex., has approved plans for a new engine house with repair facilities at San Angelo, Tex., in connection with freight terminal. Entire project will cost about $350,000.

Southern States Power Co., Marianna, Fla., is arranging an expansion and improvement program to cost about $100,000, including new steam-operated electric power plant on Jefferson Street.

Planters' Cotton Oil Co., Yazoo City, Miss., has authorized plans for complete electrification of its plant, and will soon begin installation of equipment.

Texas Cities Gas Co., El Paso, Tex., recently organized as a subsidiary of Union Utilities, Inc., to operate gas-manufacturing properties, is disposing of a note issue of $2,500,000, a portion of proceeds to be used for purchase of existing gas generating stations and installation of additional plants. H. G. Scott is president.

Board of Education, Panhandle, Tex., plans installation of manual training equipment in new two-story high school, estimated to cost $140,000. Butler Co., Hersh Building, Oklahoma City, Okla., is architect.

West Texas Gas Co., Amarillo, Tex., operating natural gas properties, is said to be planning additions in pipe lines to total close to 100 miles for service at Tahoka, Lamesa, Stanton, and vicinity, reported to cost more than $325,000 with equipment.

Florida Power Corporation, St. Petersburg, Fla., is considering a new steam-operated electric power plant on Monroe Street, Mayo, Fla., with Diesel engine installation, reported to cost more than $65,000. An ice-manufacturing plant is also planned at same place.

Board of Education, Fairfield, Ala., plans installation of manual training equipment in new three-story high school, estimated to cost $200,000, for which bids are being asked on general contract until May 16. Denham & Denham, Comer Building, Birmingham, Ala., are architects.

Board of Public Works, Baton Rouge, La., will take bids early in June for new pumping plant in connection with extensions in sewage system; project will cost about $180,000.

Chadwick Machinery Co., 125 Blue Star Street, San Antonio, Tex., has been organized to deal in machinery, supplies and construction equipment and is handling accounts of Barber-Greene Co., Aurora, Ill.; Chain Belt Co., Milwaukee; Northwest Engineering Co., Green Bay, Wis., and Sullivan Machinery Co., Chicago.

Pacific Coast

SAN FRANCISCO, May 5.

WORK has begun on two one-story additions to plant of Moreland Truck Co., Burbank, Cal., 30 x 100 ft., and 60 x 75 ft., reported to cost about $50,000. T. E. Young is superintendent in charge of erection.

Great Western Power Co., 530 Bush Street, San Francisco, has concluded arrangements with county for closing of certain streets in Hunter's Point section, to provide site for its proposed steam-operated electric power plant. Initial unit is estimated to cost $4,000,000, and ultimate station, $15,000,000, including transmission lines.

Puget Sound Power & Light Co., Seattle, has arranged for sale of block of preferred stock to total about $10,560,000, a portion of proceeds to be used for extensions and improvements in power plants and system. Company is reported planning increase in present hydroelectric power facilities.

Northwestern Air Lines Co., 515 Puyallup Avenue, Tacoma, Wash., A. O. Berg, head, plans development of airport on 90-acre tract of land at Parkland, vicinity of Tacoma, including hangars, machine repair shop, oil storage and distributing plant and other mechanical buildings, reported to cost in excess of $50,000.

San Diego Consolidated Gas & Electric Co., San Diego, Cal., has begun expansion program at power station B, to increase capacity from 35,000 kw. to 63,000 kw., reported to cost more than $1,000,000 including machinery and transmission line extensions. Company is under direction of Byllesby Engineering & Management Corporation, 231 South La Salle Street, Chicago.

Oregon-Washington Railroad & Navigation Co., Portland, has authorized fund of $133,000 for extensions and improvements in car and locomotive shops on different points of line; also, an appropriation of $1,430,000 for new equipment, including rolling stock.

Merger of the Grays Harbor Iron & Machine Works, Aberdeen, Wash., with Lamb Machine Works, Hoquiam, Wash., has been announced. Fred H. Lamb, head of the latter company, acquired the controlling interest in the Aberdeen plant. Officers of the consolidation are: Frank H. Lamb, president; I. W. Johnson, vice-president; M. T. Thorpe, treasurer, and George E. Lamb, secretary.

The H. J. Armstrong Co. of Oregon has been succeeded by the Pacific Equipment Corporation, capitalized at $199,000. Offices are in the Board of Trade Building. E. M. Ricker, formerly owner of the Ricker Machinery Co. of San Francisco, is president of the new company; Z. A. Toye is vice-president and general manager, and H. J. Armstrong, Seattle, is secretary. The company will specialize in purchase and sale of all kinds of equipment for construction and logging industries.

R. L. Balzer Machinery Co., Portland, Ore., has taken office and warehouse space at East Sixth and Market Streets, that city. Mr. Balzer was formerly manager of the Clyde Equipment Co. In his new business he will handle the Gardner-Denver line of road machinery and Ohio locomotive cranes.

Canada

TORONTO, ONT., May 8.

LINK-BELT, LTD., Eastern Avenue, Toronto, Ont., has had plans prepared by Ewart, Armer & Bam, Excelsior Life Building, Toronto, for a $10,000 addition to its foundry at Elmira, Ont.

Simmons, Ltd., 400 St. Ambrose Street, Montreal, Que., manufacturer of beds, etc., will build an addition to its plant and is calling for bids.

F. Robb, 1111 Beaver Hall Hill, Montreal, Que., has prepared plans for a factory on Smith Street, for Henderson & Barwick, 5 Olier Street, manufacturers of elevator buckets, coal chutes, etc.

Standard Brick Co., Ltd., Greenwood Avenue, Toronto, Ont., is having plans prepared by E. G. Wilson, 42 Langley Avenue, for the erection of boiler room, engine house and dry kiln.

Toronto, Hamilton & Buffalo Railroad will spend $1,000,000 on a development scheme at Hamilton, Ont., according to H. T. Malcolmson, general manager. Modern engine terminal will replace the present one, and a substantial share of the expenditure will go into the purchase of machinery and other equipment. A 25-ft. stall roundhouse, 110 ft. deep, with a serving turntable of 100 ft. is planned. Buildings to be erected include a roundhouse, power house, coaling plant, locomotive repair shop, brick storehouse and a huge water tank.

The Kitchener Ornamental Iron Co., Kitchener, Ont., has purchased a site of five acres on Guelph Street, and will start work immediately on the erection of a foundry to cost $75,000. Equipment for the plant will cost $65,000, bringing the total expenditure up to $140,000. The company which will manufacture ornamental iron including bank fixtures, stairways, and building equipment, expects to be operating within three months. Those interested in the new company include: A. W. Law, Detroit, W. G. Weichel and August Frank, Kitchener.

Western Canada

Bids will be received by J. W. Johnston, secretary-treasurer, Dauphin, Man., until May 19, for equipment for power plant including water tube boilers, turbo alternator, condenser and complete electrical equipment. Consulting engineer, N. M. Hall, Engineering Building, Sherbrooke and Portage Avenue, Winnipeg, Man.

Business men of Vancouver, B. C., have subscribed $100,000 towards the project of Senator Charles G. Heifner of Seattle, Wash., whose present address is Devonshire Apartments, Vancouver, to establish a pulp mill on Poplar Island, B. C. Charles Maravec, 2535 Seventh Avenue West, Vancouver, is also interested in the project, which will cost approximately $450,000.

Foreign

BOND issue of $4,000,000, is being sold by Ruhr Chemical Corporation, (Ruhrchemie Aktiengesellschaft), Berlin, Germany, considerable portion to be used for new plant in Ruhr district for production of ammonia, nitric acid, fertilizer, etc., reported to cost close to $5,000,000 with machinery. Initial unit scheduled for completion early next spring. Dr. Fritz Mueller is head.

Ulen & Co., 120 Broadway, New York, in cooperation with Holtzman, Beger and Siemens interests, Berlin, Germany, have contracted with Persian Government for construction of a railroad from Bender Abbas, on Persian Gulf, to a port on Caspian Sea, including locomotive and car repair shops, rolling stock, etc.; entire project is estimated to require from seven to eight years for completion, and will cost $100,000,000.

Power company in England is arranging for construction of a new electric light and power plant, with transmission system, on Island of Jersey, estimated to cost $1,200,000. Information at office of Bureau of Foreign and Domestic Commerce, Washington, reference England No. 66028; also, at American Consulate, London, England, William L. Cooper, commercial attaché.

American & Foreign Power Co., operated by Electric Bond & Share Co., 2 Rector Street, New York, has secured a controlling interest in Mexican Utilities Co., and its subsidiaries, Central Mexico Light & Power Co., and Guanajuato Power & Electric Co., operating in central part of Mexico. New owner plans expansion and improvement program, including increase in power facilities and transmission lines.

THE LAST WORD

(Contributed by the Reader Service Department of the Iron Age Publishing Co.)

A COLORED preacher was describing the wonders of the hereafter. "You all is seen molten iron runnin' out fum a furnace, ain't you?" he asked.

The congregation silently assented.

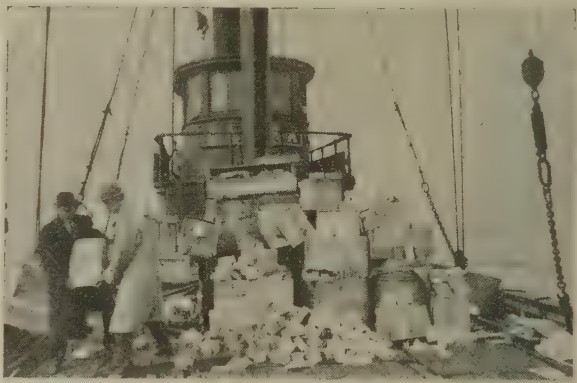
"Well," continued the preacher, "in de place what I'm talkin' 'bout dey uses dat stuff fo' ice cream."

For the business long jump contest our entry is A. F. Hartranft, who has been with the Reading Iron Co. for a great many years. He recently resigned to engage in the manufacture of *men's handkerchiefs.*

Are automatic machinery and highly specialized jobs slowly exterminating the old-time machinist, who raised his trade to the status of a profession? The fact that of 427 members of the National Metal Trades Association, 88 or more than 20 per cent reported a shortage of skilled machinists strikes us as significant.

Apparently boys are not being raised to be machinists. When the law of supply and demand begins to exact its toll, those far-sighted youths who have elected to learn the secrets of the "mike" will be high-hatting their bond-selling brothers.

No, Waldo, the spark plugs these gentlemen are tossing into the ocean, used and recommended by Lindbergh for transatlantic flying, are not for the new model electric eels. They are discarded spark plugs, purchased from service stations, refurbished, and sold again under the original brand names, as "reconditioned."



The manufacturers of "AC" and "Champion" plugs brought suit against the ingenious gentlemen who conceived the idea. And the judge told the i. g. that they could sell the plugs but that they would have to remove the brand names. "But then we couldn't sell them," he was naively told. Did the judge burst into tears over the plight of the defendants? No, instead he suggested coldly that they go into an honest business.

Write your own moral.

A manufacturer whose letterhead bears the legend, "Cinderella Kiddy Clothes—Children's Dresses, Boys' Suits, and Creepers," writes for a copy of THE IRON AGE. He may be thinking of putting on a sideline of children's armor for sale in certain of our large cities.

Who is the oldest Iron Age subscriber? H. L. Green, Chicago steel merchant, writes, "I wish you would look up and see if we are not just about the oldest continuous subscriber you have in these parts. Before coming to Chicago in 1882 we were taking THE IRON AGE in Milwaukee under the name of Starkweather & Co."

Since 1855 our headquarters have been moved several times, and our old circulation lists are not complete. *How long have you been a reader?* Our address is 239 West Thirty-ninth Street, New York.

Efficiency Without Volume

Inventory Control, Reduction of Waste and Intelligent Adaptation of Materials-Handling Equipment Are Features of Stutz Plant

BY BURNHAM FINNEY*

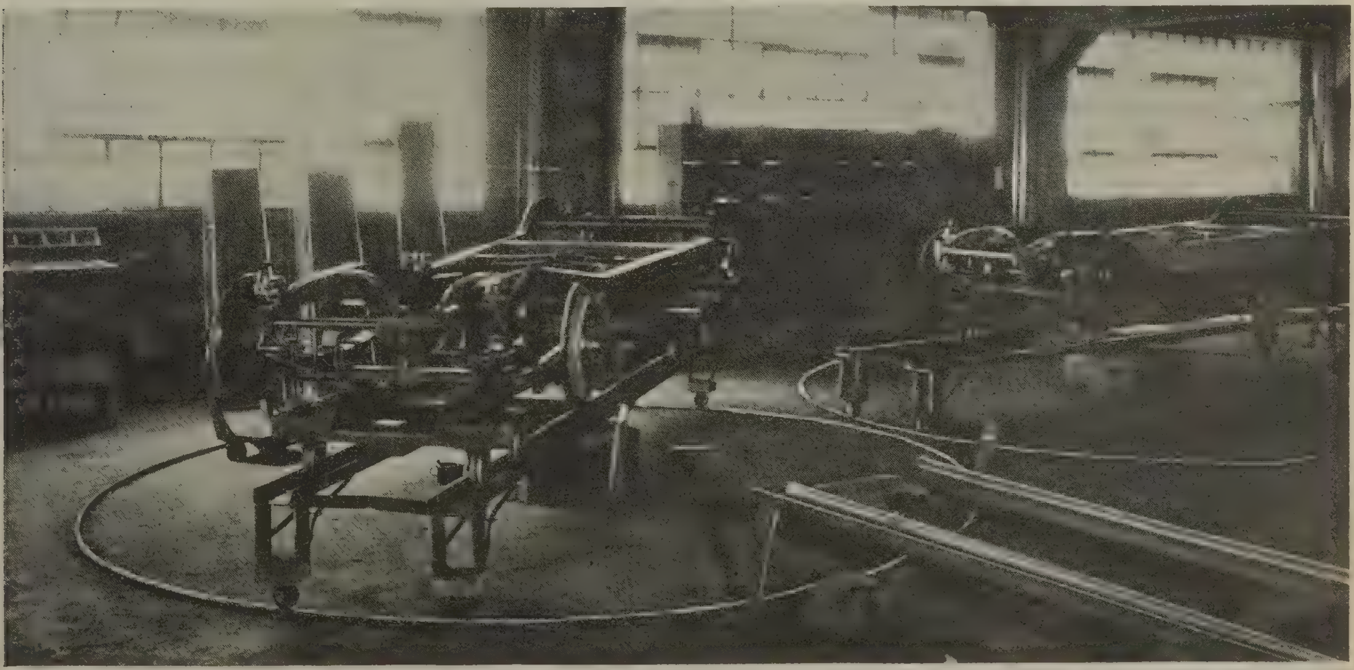
IN a period when automobiles are being manufactured by the thousands on the basis of mass production, it is uncommon to find a company that has as its slogan, "No two cars alike." Yet this is the policy on which the Stutz Motor Car Co. of America, Inc., Indianapolis, has built a substantial business.

The fact that its manufacturing process calls for individuality, rather than standardization, in turning out what might well be termed a custom-made car, does not imply that the company overlooks opportunities for introducing production economies. Its methods of controlling inventory, of reducing wastage, of handling materials mechanically, of inspecting all parts minutely and of machining castings by special operations have been responsible for the attainment of a high degree of efficiency.

Stock Turned Over 18 Times a Year

By closely watching its manufacturing schedules, the company has been able to turn over its stock 18 times a year. The entire plant has only one stockroom, which is adjacent to the receiving department, and all departments call upon this source of supply when in need of small parts. The larger units, such as bodies and frames, do not pass through the receiving department, but instead are delivered directly to the point where work is first begun on them. The flow of material into the factory is regulated so that the stockroom is not crowded beyond its normal capacity and so that the number of larger units passing into the plant never exceeds the current demand, all unnecessary storing thereby being eliminated.

The amount of stock on hand at any time can be computed from a master file in the office of the receiving clerk. The stock record consists of a yellow card, 6 x 9 in., on which the part name and the part number are put down. At the left side is a place for information about the purchase of the part, while the receiving, inspection and stores record occupies the center of the card. Data regarding the issuance of parts to the production department or to the service department are set down in a space at the right side. In connection with the purchase record, there is a column in which the number of parts returned to the maker can be en-



In the Assembly Line, Turntables Are Used to Make Rectangular Transfers of the Automobile Frames tered. In addition, a record is kept of the quantity rejected and salvaged.

---

*Resident editor at Cincinnati for THE IRON AGE.

Whenever parts are issued from the stockroom, the amount taken is subtracted from the total previously on hand, so that the clerk has before him the exact number of all parts that are in stock. For example, he can turn to the card showing the record of part No. 20,911, which is a "stop and back up light switch." By looking at the column at the right marked "on hand," he can determine the number of stop and back up light switches in stock. Furthermore, by going through the file and ascertaining from each card the same information, he can tabulate in a short time the inventory of the entire factory. Aside from the receiving clerk's office, the only other place in the plant having these data is the purchasing department. This simplified plan does away with the annoyance of having numerous departments cluttered up with records duplicating those which are available at all times in the office of the receiving clerk.

Payment of wages is based on a group plan. Workmen are formed into small gangs of not more than 25 men and a wage rate is established for each man, but the amount of wages is determined by the number of units turned out by the gang. For instance, each operator working along the motor assembly line has a wage rate based on the degree of skill and the kind of work he does. He is paid, however, according to the number of motors which come off the assembly line rather than on the individual operations he performs. Incidentally, this rule has some exceptions in that some men on special work are paid by the piece.

Inspection Charged to Production

Inspection of materials and of parts is so precise that wherever 100 per cent inspection is specified the expense of the inspectors' wages is charged to production instead of overhead expenses. Generally, in such cases, inspectors are concentrating their attention on one type of work. An example of this method of charging costs is found in the receiving inspection department, where time for the thorough examination of 28 parts is applied to manufacturing costs rather than to standard burden.

Among the instruments used in the receiving inspection department are a Brinell machine for ascertaining the toughness and hardness of certain parts, such as connecting rods and other forgings in which great strength is required, a Rockwell hardness tester, and a scleroscope, which determines the hardness of camshafts, piston pins, connecting rod bolts and other parts. Other inspections include the weighing of valve springs, the comparison of all front-end drive chains with a master chain, the checking of all camshafts with a master shaft on the comparator and the testing of chassis springs for equalization.

Since the company is on a basis of quality output rather than mass production, the employment of workmen whose versatility is above the average is imperative. In many departments each operator is called

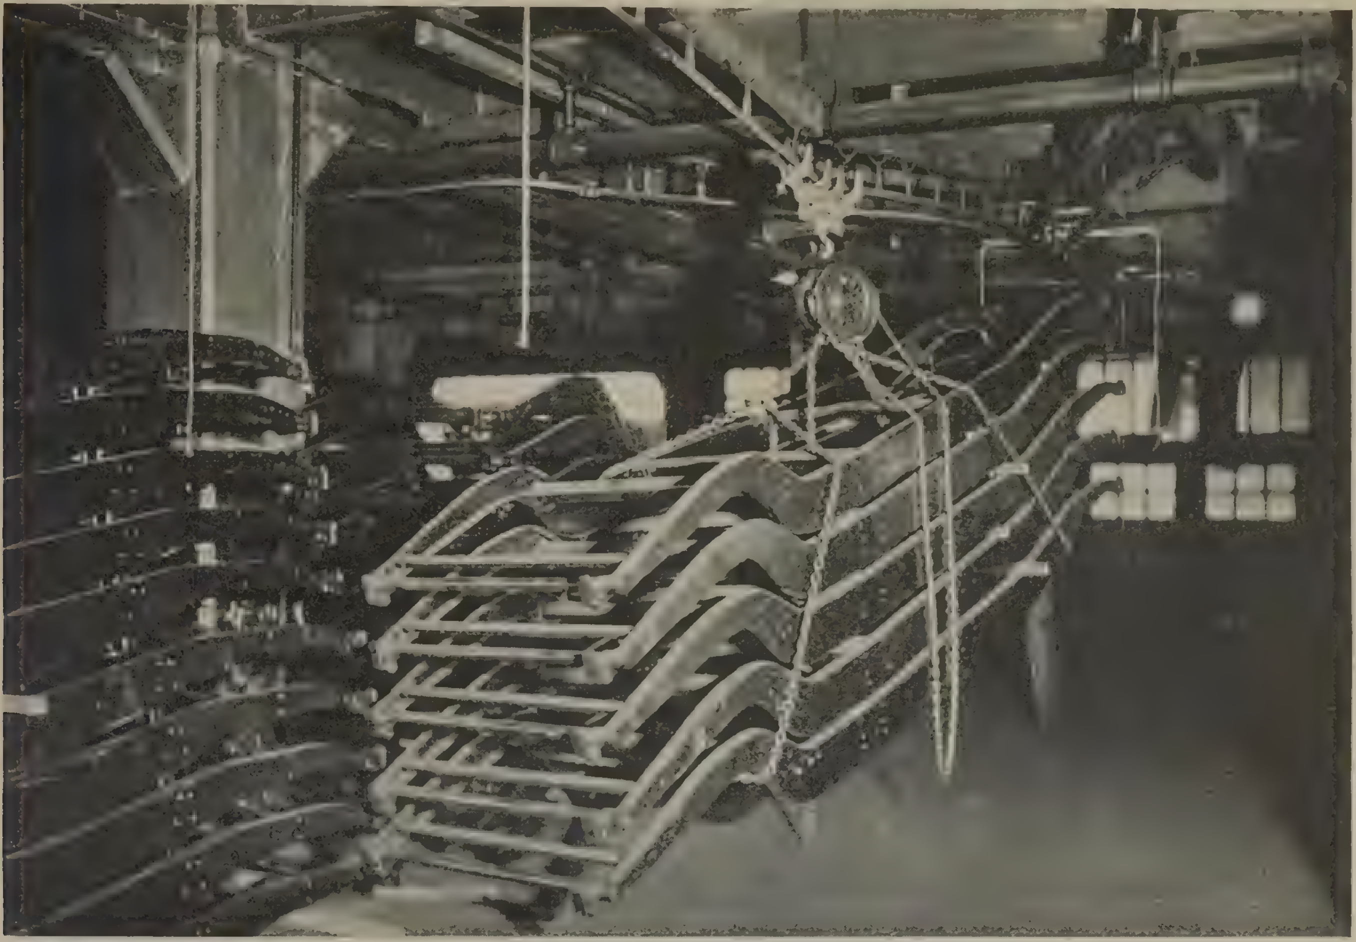
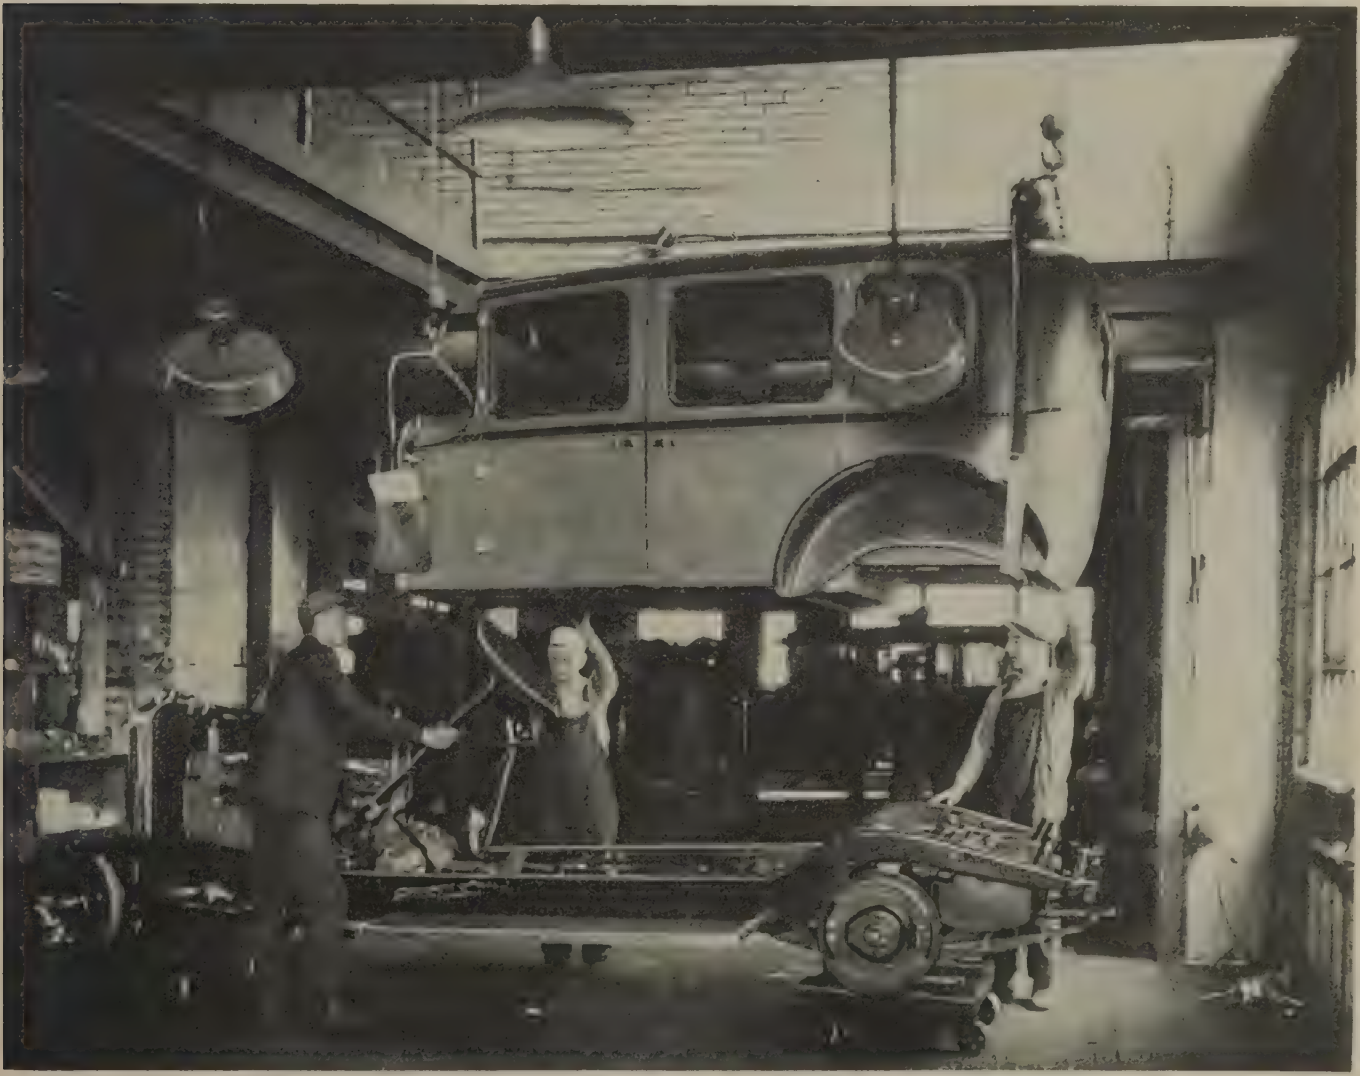
TOTAL SAVINGS OR LOSS FOR YEAR TO DATE

EACH Foreman Is Assigned a Weekly Budget of Controllable Manufacturing Expenses. The budget and actual performance figures, and the difference between them (either savings or loss) are entered on the smaller of the two forms shown. The larger form is for a recapitulation of the figures received from all the foremen



(Above) Frames Are Handled in Quantities by Overhead Monorail. (Below) When the chassis has been assembled, save for mounting wheels and tires, the body is lowered through a well from the floor above



upon to do several things requiring unusual skill. Especially during periods when the factory is running at less than capacity and the number of workmen is below normal is the versatility of each operator brought into play, for often one man must divide his time between the work to which he is accustomed and a job ordinarily done by another man.

Each large division of the plant, such as the machine shop, is in charge of a foreman. Under him are various gang leaders, each of whom may be supervising gangs in two or three departments. This arrangement makes for the concentration of responsibility and gives to the foremen authority generally lodged in the superintendent in the average metal-working plant.

Budget Plan Cuts Down Waste

Wastage in all departments has declined to a marked extent through the successful operation of a budget plan recently devised. The plan calls for a yearly budget that allows each department a stated amount each month for wastage and other losses. Each foreman receives a "weekly budget performance" of controllable manufacturing expenses on a form sheet, 8½ x 11-in. On this sheet are listed the following items: Re-operations account, material shortages, salvage expense, material losses, uncontrollable labor losses, salvaging vendor defects, idle time, day rate guaranty, waste and wiping rags, oils and greases, gasoline and kerosene, perishable tools and abrasives, electrical supplies and general shop supplies. There are some items not included which the foreman must fill in to complete the record for his department. For example, the foreman of the machine shop would add setting-up time, tool grinding and sweepers and janitors.

Next to the names of the items is a column for the weekly budget basis, in which the units for the week and the rate are to be listed. The unit of the budget is based on each $100 of the payroll for the department. The second major division of the sheet gives the figures of the performance for the week. Here there is a column in which the budget is put down, a second column for the actual performance figures, and a third for either the savings or the losses. The third major division details the performance for the month, while at the bottom of the sheet at the right the total savings or losses for the year to date are listed. In the lower left hand corner are given expenses for maintaining machinery and processing equipment, stock handling and assembling equipment, and dies, jigs and fixtures. A recapitulation of the figures from all of the foremen is put on a separate sheet, which goes to the superintendent of the plant.

Bonuses Given Foremen for Reducing Losses

To create and maintain a spirit of competition among the foremen in cutting down wastage, the foreman making the best showing each month receives from the management a bonus of $25. Bonuses of $20, $15, $10 and $5 also are awarded to the second, third, fourth and fifth positions. Winners are chosen on the basis of the percentage of savings in the departmental expense of indirect labor, material and direct labor losses and manufacturing supplies. To the foreman performing the most outstanding service each month goes an extra bonus of $25. Each of the three operating officials names the foreman who has, in his opinion, contributed the most in the previous month to the efficiency of the organization as a whole. These names are submitted to the foremen, who vote for the man they consider most deserving of recognition, and the man getting the highest number of votes wins.

Every morning the foremen gather in the salvage room, into which, during the previous day, has been brought all material branded as defective. At this meeting the foremen examine each piece to determine whether it can be salvaged, whether it shall go to the scrap pile or whether it should be returned to the maker. Thus, since each man sees his fellow foremen examining the defective work turned out by his department, his pride spurs him in his efforts to increase the efficiency of his men. It is interesting to note, in this regard, that in less than a year the size of the salvage department has been cut 50 per cent, this decrease reflecting a corresponding lowering of waste.

Variety of Materials-Handling Methods Used in Progressive Assembly

Since unusual care is exercised in every activity, from the examination of raw materials as they come into the factory to the final inspection, when the car is ready to be shipped to the dealer, the movement of parts from one operation to the next is necessarily slow. Under the circumstances, a straight-line conveying system, depending for its success upon a continuous flow of materials, would be impractical, because its cost of operation would be excessive in view of the small number of units which would move along it daily. However, this does not mean that the company cannot use mechanical transportation of materials to lower

From Stock Record Cards, Kept in the Receiving Clerk's Office, the Amount of Stock on Hand Can Be Computed at Any Time production costs; it merely signifies that to meet special conditions specially designed equipment has been constructed to take the place of standardized conveyors. But there are several parts of the plant in which standard types of conveying equipment are used.

Automobile frames are taken by hoist from the first floor to the second through an opening in the ceiling, and the same means is used to lower fenders and other enameled stock from the enameling department to the assembly line at the points where they are needed. Frames are carried in lots of five on a Louden overhead monorail conveyor to the various operations in the frame department. Then they are taken by hoist to the next floor to the beginning of the assembly line. Incidentally, the frame is upside down when it reaches the line, so that the front and rear axles, springs, spring shackles and step hangers and brackets can be put on conveniently. When this work is completed, workmen slip a chain around the frame, raise it a few feet with a block and tackle, turn it right side up and place it on small trucks running on a narrow-gage track, a truck being placed under the front axle and another under the rear axle.

As the frame starts down the track, shock absorbers are assembled and the brake, shields, brake tubing, propeller shaft and exhaust muffler are installed. In progressing along the track, the frame is sprayed with lacquer in a booth containing a turntable so that the frame can be moved around quickly for the convenience of the workman. When the frame reaches the corner of the room, it swings about on another turntable and starts away at right angles. Within a short space the running boards, gasoline tank, shock absorbers, battery box, battery, gasoline line, chassis-lubricating oil lines and electric wiring are installed.

Foremen Meet Every Morning and Examine Each Piece of Rejected Material to Determine Whether It Can Be Salvaged

Body Lowered Through Well to Chassis Below

As the chassis moves along the assembly line, the motor is dropped into place, the radiator is put on and the brake system is filled. Next the chassis-lubrication oil reserves, or magazines, are filled, and oil is forced at high pressure through all of the spring bushings. A few feet farther on, the steering gear assembly is installed and the body is mounted on the chassis. The last-named operation is particularly interesting. The assembly line is on the second floor and the body department on the third. Finished bodies are brought to an open shaft directly over the assembly line where the body is to be mounted on the chassis. The body is then lowered by means of a hoist into the proper position on the chassis.

Tires and wheels are brought from the wheel department on the fourth floor to the assembly line by means of a chute just wide enough for a tire to move easily in an upright position, handling costs having been eliminated by this inexpensive method.

In the machine shop a variety of methods is used for handling materials. In two instances roller conveyors are utilized for carrying certain parts a short distance, but this is the exception rather than the rule. For transporting heavy castings from one machine to another a Louden overhead monorail system, with various types of carriers suspended from the monorail, is used.

In some parts of the shop, tools are so compactly arranged that the castings being machined are within reach of the man in charge of the next operation. For interdepartmental hauls electric lift trucks have been found economical. These are particularly satisfactory for conveying small parts from the stockroom to the departments where they are needed.

Nowhere in the plant is greater care taken than in the painting department. Bodies "in the white," or in their raw state, are filed to remove the major rough spots from the metal, and then are sanded to eliminate any minor roughness. An acid bath takes away all dirt, filings and other particles that might cause a rough paint surface or keep the paint from adhering. After priming and filler coats have been applied, the bodies are sent to baking ovens. After the baking process the bodies are again rubbed, from four to eight coats of lacquer are sprayed on and finally a coat of "thinner" is applied. After the polishing, hairline stripes are painted on the molding of the bodies and along the hood louvers. One of the distinctive features is the fact that there are no two cars on which the combination of colors, especially the stripes, is the same.

By means of the methods just described the Stutz Motor Car Co. is manufacturing a car on a plan of stressing quality and individuality. To achieve the best results, principles of mass production have been adopted successfully in some cases, but in other instances special problems have required special treatment. That its means of handling materials, its efforts to prevent wastage, its thorough inspection of parts and its close control of inventory have contributed directly to economical production is the testimony of the management.

Cuts Costs of Laying Cable

Completely automatic, a novel subterranean cable-laying machine, said to have been designed by a German manufacturer, has been in operation in Germany since last October, says a report received by the industrial machinery division, Department of Commerce, from Trade Commissioner Thomas Butts, Berlin. The machine is a combined trench digger, cable layer and trench filler. It is said that the cost of laying cable has been reduced 75 per cent by this device and that, with a crew of only five men, it does the work formerly accomplished by 150 workmen. The entire apparatus is 18 meters (60 ft.) long and three meters (10 ft.) wide and weighs 22 tons. The digging apparatus alone weighs 15.5 tons, and the cable car weighs 6.4 tons.

"Use of Welding in Fabrication," was the subject of a joint paper given by H. V. Putman and C. C. Brinton, Westinghouse Electric & Mfg. Co., at the monthly meeting of the Pittsburgh section, American Welding Society, in the quarters of the Engineers' Society of Western Pennsylvania, William Penn Hotel, Pittsburgh, Wednesday evening, May 2. Mr. Putman talked on design and manufacturing, and Mr. Brinton on the engineering phases of the subject.

Mill to Roll New Carnegie Beams

Bloomer and Three Stands Designed for Huge Tonnage—Automatic Control of Screwdowns a Feature

BY SIDNEY G. KOON*

IN 1925 nine mills of more or less ancient vintage occupied the site to be utilized in the reconstruction of the structural unit at the Homestead Works of the Carnegie Steel Co. To keep these mills running during the construction period was an engineering feat of itself. But by shifting hot beds, and even reversing the direction of travel from the hot beds, all were kept in operation until the first new unit, the standard structural mill, was in service. These old mills consisted of a 40-in. blooming mill and 35-in. structural mill; a 33-in. blooming mill and 23-in. and 33-in. structural mills; 28-in. and 38-in. blooming mills and two old merchant mills, 16-in. and 12-in., which had long been inactive. All have been completely dismantled; the last, the 38-in. blooming mill, went a few months before the Carnegie H-beam mill was put in operation.

Included in the new development are a dual set of mills running parallel to each other, with a large motor room between them, and with soaking pits at the end so interconnected that, although one set nominally serves one mill and the other set the other mill, ingots may be shifted from either set to either mill. There are 26 acres covered under the one roof. Incidentally more than 1000 tons of structural steel to the acre were used in putting up the building, which is reported to have a total of 26,818 tons in it.

One set of mills includes a 44-in. blooming mill, followed by a 36-in. roughing mill and 28/32-in. structural mill rolling standard sections. This was the first installed and it has taken over the work of rolling the sections formerly made in the old, discarded mills. When this unit got into production the remainder of the site was cleared of the older equipment.

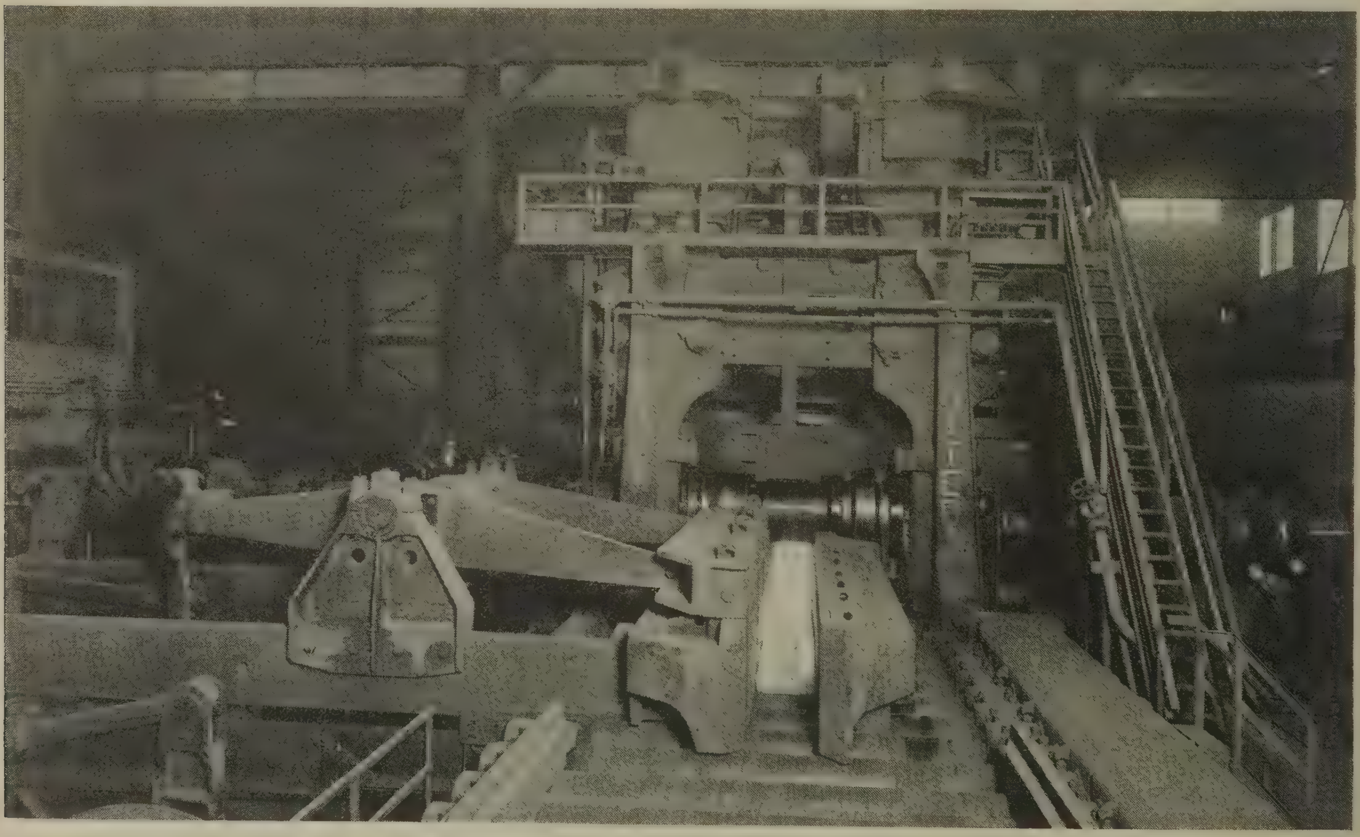
At the north side of the motor room the new mill rolling the Carnegie H-beams was then put in. This consists of a 54-in. blooming mill, the largest and heaviest in the world, and three 52-in. sets—roughing, intermediate and finishing.

This group was designed for a production of 26,000 tons a month, but has actually had a maximum day as high as 2533 tons. The Carnegie beam sections rolled comprise a series of 42 structural shapes in 11 depths ranging from 8 to 30 in. They have flanges of uniform thickness—in other words, parallel—throughout their width, and are designed to cover the range of maximum structural demand for buildings and bridges and provide simple rolled sections where, previously, large tonnages of built-up members were required. Sections are provided within this range suitable for use as beams, girders and columns, with flange widths varying from 6 to 15 in. and in weights from 21 to 425 lb. to the foot.

Clearing of the site of the new mill was started March 6, 1926. The first ingot was rolled in the blooming mill Nov. 10 of that year and the first H-beam in the 52-in. mill on Dec. 30. Trial beams had gone through previously and necessitated slight adjustment of the rolls, until production really got under way, as mentioned, just before the end of the year.

Large Electric Units Required

In conjunction with the new equipment, a 15,000-kw. turbo-generator, with boiler plant and auxiliaries, was installed at the Carrie furnaces across the river. Electric drive is used throughout and the interconnecting control on the electric basis is most elaborate. The roughing and the intermediate sets have two motors



Manipulator Handling Beam Blank for the 54-In. Blooming Mill, Which Appears in Background each, one of 7000 hp. for the main stand and one of 2000 hp. for the edging rolls. These are so controlled in each case that the bar between the sets of rolls (12 ft. apart) driven by these two motors is neither stretched nor forced. In other words, the speeds of the respective rolls are synchronized automatically with each other. Both these stands are reversing, and the motors correspondingly are of the reversing mill type.

---

*Associate editor THE IRON AGE, New York.

The finishing stand is operated by a 5000-hp. induction motor, non-reversing. Only one pass is made on this stand, whereas customarily there are nine passes through the roughing stand and five through the intermediate, making an average total of 15 passes. The blooming mill is driven by an 8000-hp. motor, which has a maximum operating peak rating of 14,400 hp. This also is a reversing unit, the largest of this type ever built.

How the Three Stands of Rolls Work Successively on the Steel. Fig. 1 shows the action in the "edging" rolls preceding the roughing stand and following the intermediate stand. Fig. 2 indicates the action of vertical and horizontal main rolls in roughing and intermediate stands. Fig. 3 shows the straightening and planishing effect of the finishing stand

Edging Stand FIG.1 — Main Stand FIG.2 — Finishing Stand FIG.3

Flexible Control for Soaking Pits

At the west end of the plant are the soaking pit furnaces. There are seven units of four holes each in the north bank, designed for serving the H-beam mill, and a duplicate set in the south bank for serving the structural mill. The stacks are in the middle between the two sets. Tunnels under the pits, providing access to the regenerator chambers and gas-control apparatus, are provided with a considerable amount of automatic equipment. One man on each turn suffices to look after these underground sections.

Special control equipment for the soaking pits permits the pit craneman to open or close the pit covers during charging or drawing of ingots. Each bank of pits is served by two 15-ton low stiff-leg cranes, spanning four pits at once. The lines of pits are located about 40 ft. apart and the contact rails are in sections of 40 ft. to correspond. The ingot car is under the control of either craneman and is set in the most convenient position for loading. While the craneman cannot operate any pit except those opposite the section of contact rail in which he happens to be at the moment, they may be operated from the floor by the usual electric control. Safeguards are provided so that, when the pit cover is being operated from the floor, it cannot be moved by the craneman.

When the ingot has been loaded into the ingot car the craneman starts the loaded car toward the blooming mill. The car is automatically stopped, without further attention from him, and the ingot is dumped upon the waiting transfer car by the transfer car operator. This car operates on a track running at right angle to the approach tables to the 44-in. and the 54-in. blooming mills. One man operates the two transfer cars serving the two mills. He also controls both ingot cars after they have passed into the dumping zone.

The track accommodating the ingot transfer buggies extends far enough beyond the approach tables to the two blooming mills so that either buggy may serve either mill, although in regular operation the north buggy serves the north mill and the south buggy the south mill. This arrangement makes for great flexibility in case of breakdown of either buggy.

Between the 54-in. blooming mill and the 44-in. blooming mill runout tables is a row of three large reheating furnaces, which are used for supplying the 36-in. mill. H-beams, however, are rolled direct from the ingots through the four sets comprising the 54-in.-52-in. units.

Great Length of the H-Beam Mill Layout

Spacing in the new mill, center to center of main rolls, is 299 ft. from the 54-in. blooming mill to the roughing stand. From the roughing stand to the main rolls of the intermediate stand the distance is 190 ft., with 210 ft. from the intermediate to the finishing stand. Beyond the finishing stand is a transfer table to the hot saw, measuring 208 ft. in length. The longitudinal distance from the blooming mill rolls to the hot saw is 917 ft. 6 in.

As the piece enters the roughing mill it meets first a set known as edging rolls. These are not vertical rolls, as the term "edging rolls" customarily indicates. They are rolls with horizontal axes, and receive their name from the fact that they work only on the toe or edge (*A*, in Fig. 1) of the flanges of the embryo H-beam. They serve also as a feeder into the main rolls, even though they do not effect much reduction. The main rolls do not touch the edges which have just been worked on by the edging rolls, but do work across the entire face of the web (*C*, in Fig. 2) and the inside faces (*B*) of the flanges.

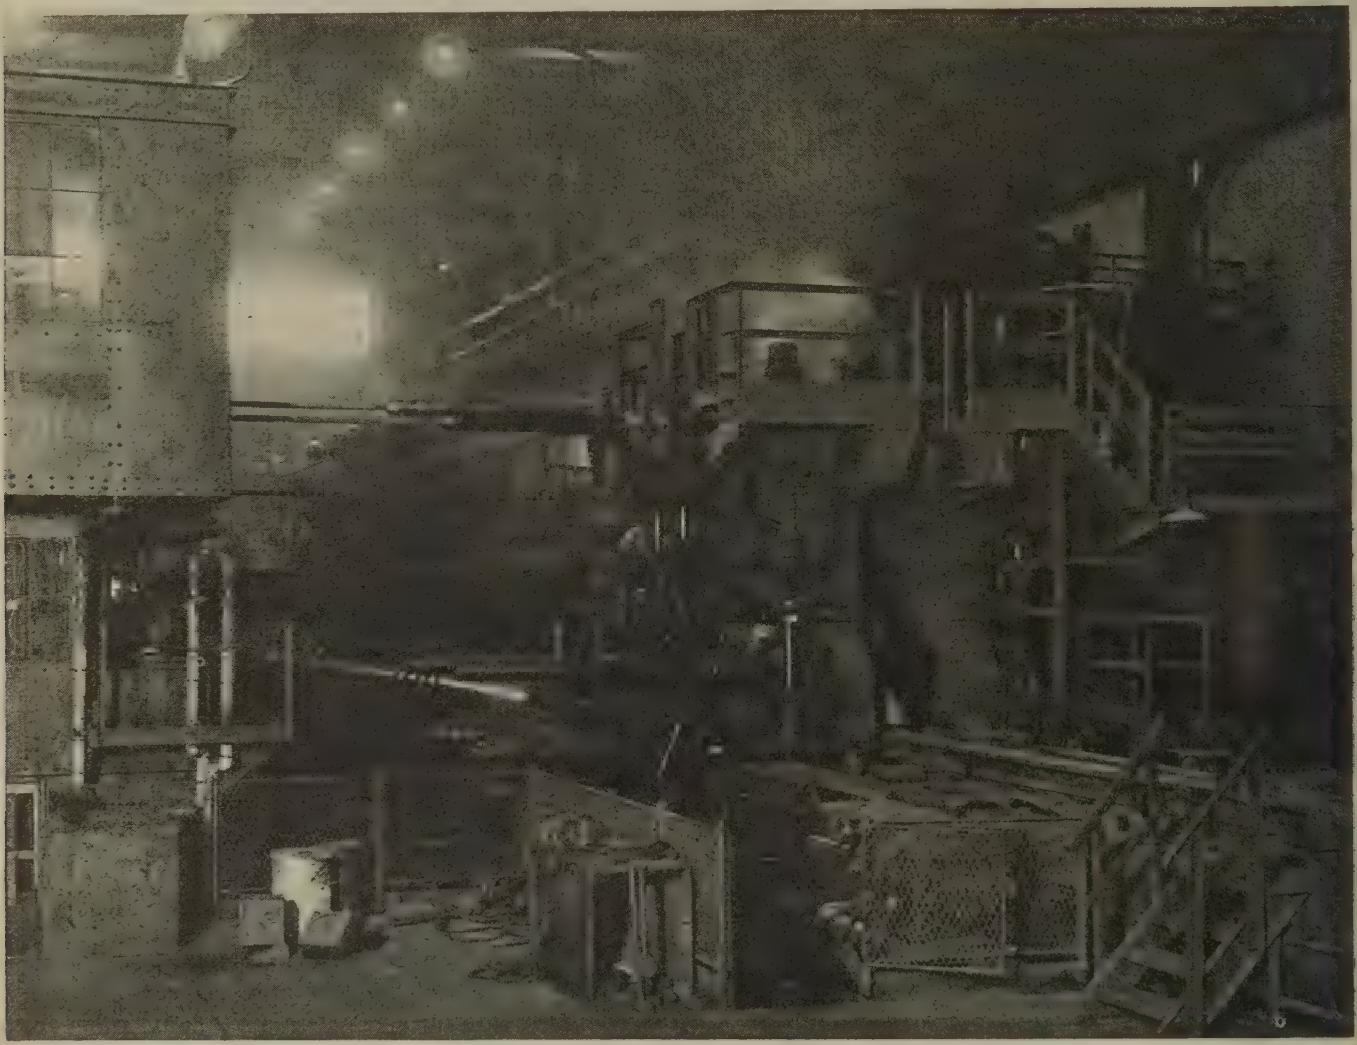
Meantime the rolls with vertical axes, operating on tapered roller bearings, work on the outside of the flange (*D*) over its entire width. In plan view these rolls with vertical axes are in line with the main rolls. They lie between the necks of those rolls, but are not driven. Their rotation is imparted by the steel passing through, but they give to it a definite rolling action nevertheless, through the rigid control over their center distances.

In the intermediate set of rolls this procedure is reversed. The bar by this time has acquired the familiar tongue, so that it may be gripped by the surfaces of the main rolls and pulled through. Here again a set of vertical rolls—idlers—works on the outside of the flange, while the main rolls work on the inside of the flange and clear across the web. In this set the so-called edging rolls come after the main rolls, and give the necessary amount of work on the edges of the flanges. As these edges are not touched in the finishing rolls, it is fitting that they should here be the last to be worked on.

Throughout the preceding process of manufacture the flanges have been flared outward, in accordance with the sketches. This has permitted the operation of the main rolls upon both flange and web, while the idler vertical rolls are shaped accordingly. The sketches exaggerate the angularity, to show the principle. The finishing rolls are primarily merely a straightening and planishing set, including both horizontal and vertical rolls. They overcome the slight angularity of the relation between web and flange, which was greater in the roughing rolls than in the intermediate, and turn out a finished product in which the respective angles are 90 deg. (Fig. 3). Thus it is that the product comes out with parallel-sided flanges.

Stiff Support to the Rolling Members

In the design of the mill it was arranged to have as short a section of unsupported roll between housings as possible. To this end, sets of distance pieces, each set suited to certain sections to be rolled on the mill, are used to space the housings in their relation to each other. That half of the housing which is farthest from the motors and spindles is arranged so that it may be slid, in a direction parallel to the axis of the main rolls, to a position determined by the section to be rolled. Thus, when a 12-in. beam is being rolled, the two halves of the housing are about a foot closer together than when a 24-in. beam is being rolled. All of this means greater stiffness in the equipment and must help uniformity in the product.

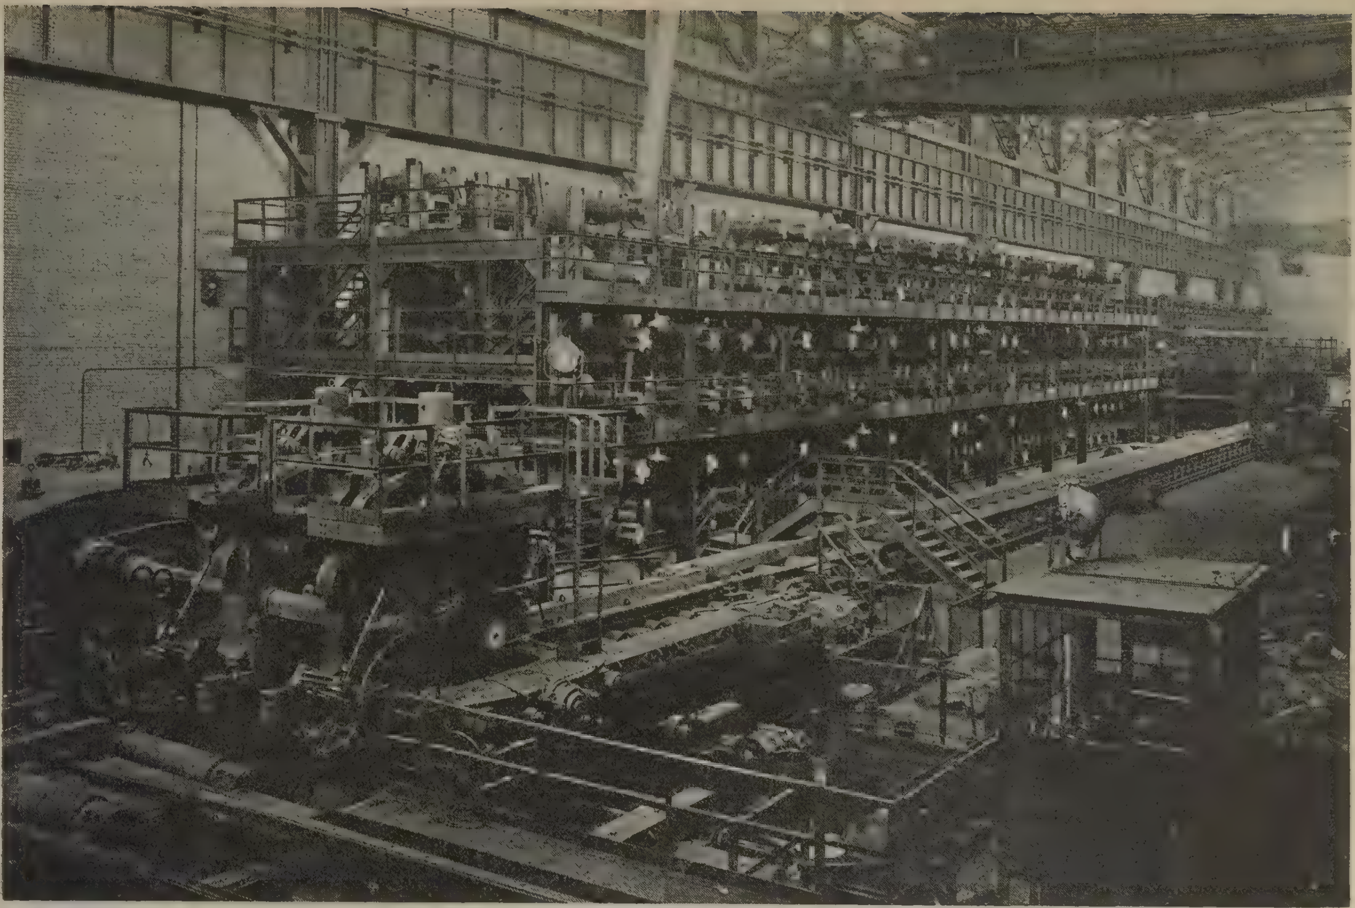


Entering Side of the Intermediate Stand of the H-Beam Mill. At left is the pulpit from which the mill is controlled. A flood light atop the pulpit aids in night work

Pins and other connections used in setting up the mill, on roll changes, are subject to the usual drive fit, thus securing to the highest degree the necessary alinement and accuracy in positioning of the parts.

Spare rolls are stored wholly under cover. Advantage has been taken of the presence of a long, narrow space between the mill tables and the motor room to put in racks where several hundred rolls may be placed. This avoids the rusting rolls get when stored outdoors, and at the same time makes the rolls particularly accessible, as they are under the same crane which is used in placing them in the mill.

Two operators control the main and auxiliary drives in the blooming mill. The roller controls the setting of the rolls and operates front and back mill tables by



Finishing Stand of the 52-In. Beam Mill, in Left Foreground. Near extreme right is the intermediate stand, 210 ft. away. In right foreground is the pulpit for the finishing stand. Against the wall is the roll storage. Back of the wall is the motor room

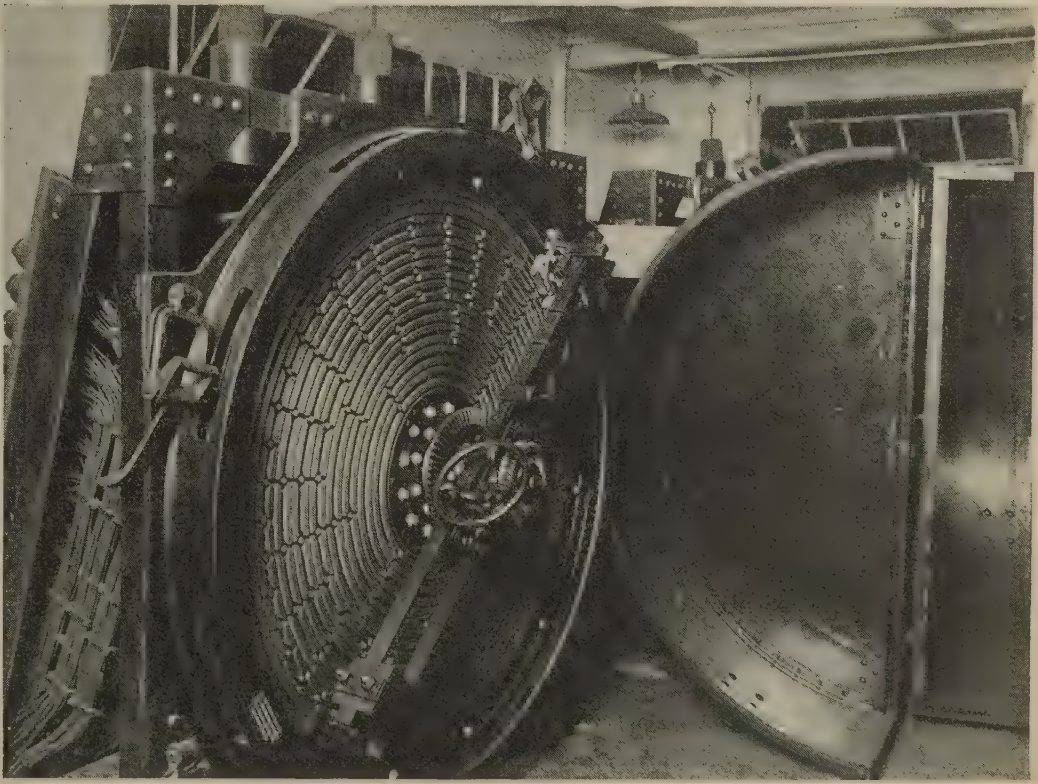
hand master-switches. By means of a foot master-switch he controls the speed and direction of rotation of the reversing motor. The roller's helper operates the approach table for the mill. During the rolling of the ingot, he controls also the electrically-driven manipulators.

Roughing and intermediate mills have automatic screw-down devices. These permit one man, using a single master-switch, to operate the three screw-downs, which automatically stop at predetermined settings by means of a specially designed limit switch. Through similar automatic control, proper speed relations are obtained between the motors driving the main and the edging stands for any conditions of drafting. The standard foot master-switch enables this same man to control the speed and direction of rotation of both mill motors.

Owing to the ease with which this man can set the screw-downs and control the main motors, he is able also to run the approach table and the front and back tables, and to operate the valves controlling the cooling water for the rolls and the steam jets for removing scale. This man controls thirteen operations during the rolling of each beam.

Since the drafting follows a predetermined schedule, and the roll settings are made automatically through an electric limit switch control system, a product is obtained which is free from the internal rolling stresses sometimes caused by irregular drafting. From the time the bloom leaves the bloom shear until the finished

Limit Switch Used in Connection with Automatic Control for the Intermediate Stand of the 52-in. Mill. This is set for the succession of reductions to be made on the mill and thereafter automatically controls the screwdown for both horizontal and vertical rolls



beam is delivered from the finishing pass, all operations are controlled by four men.

Automatic Setting of Screw-Downs

One of the most interesting features of control of the mill lies in the automatic devices for adjusting the position of the rolls for successive passes. There are in the pulpit of the roughing set three large spiral limit switches intricately wired and connected with the various control units. These are set in advance for each section which is to be rolled. They automatically synchronize the movement of the three pairs of rolls in the stand such that the proper drafts are taken in the successive passes. A similar equipment is used in the intermediate set.

As the rolls are worn in use many of them are dressed to take care of sections of less depth. It is reported that there has been a surprising absence of trouble from bearings since this mill was started. None of the roller bearings has had to be changed, largely because they were designed with ample overload capacity.

Automatic forced grease lubrication is applied to all horizontal roll necks, as well as to vertical rolls, and is also widely applied to tables and manipulators. In addition, oil circulating systems supply all mill pinion lubrication, as well as a large portion of the table system.

In THE IRON AGE of June 23, 1927, page 1815, was published a brief account of the new Homestead structural mills, primarily from the electric side. This gave many details of motor speeds, motor-generator flywheel sets, and other particulars it is not necessary to repeat here.

Handling Steel In and from the Mill

In laying out the mill it was found that, in spite of the 2000 ft. of length available for the entire plant, it would not be possible to have a long enough run between stands to permit bars to be rolled back and forth in one and then in the other without interference. Hence, between the roughing set and the intermediate set there is an offset of 11 ft. 3 in., in which bars are transferred sidewise before entering the intermediate stand. The opinion is expressed by the engineers that, although this move was forced by conditions, it was one which would probably be repeated in a subsequent design, even if the conditions did not require it. This is because the narrow transfer does not interfere with rolling in either set and has the advantage of bringing the sets closer to each other.

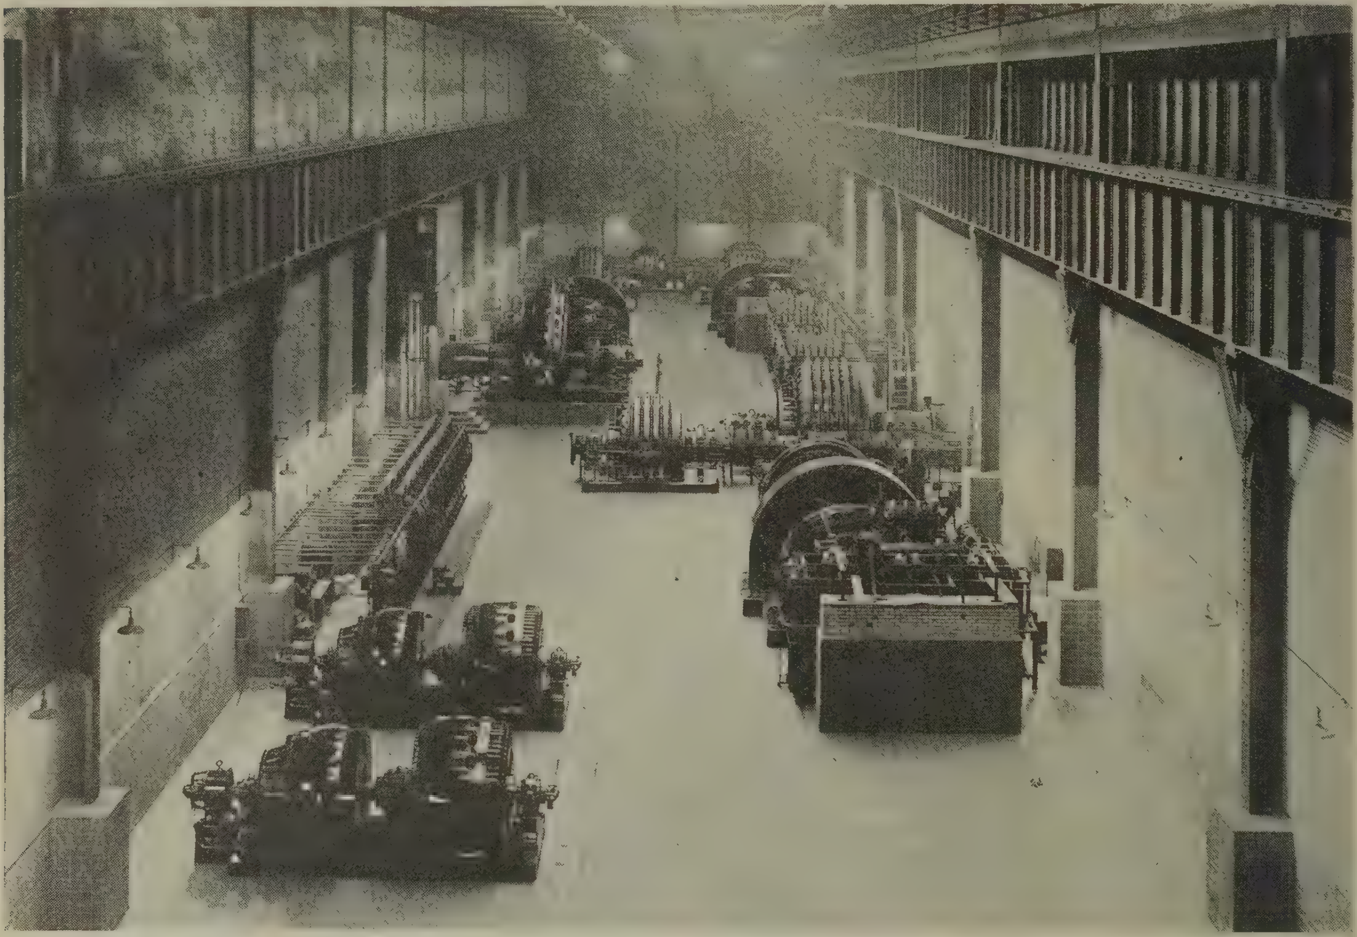
Beyond the long transfer to the hot saw is a hot bed occupying a space about 100 by 250 ft. This is in three independent sections, each some 85 by 100 ft., permitting great flexibility in handling the product. Alongside the hot bed is a roller straightener for the smaller beams and two gag presses for the larger beams. Two cold saws are provided also.

Shipping of the product takes place in a wide bay running at right angle to the length of the mill, and covering also the stripping floor of the new structural mill to the south of the H-beam mill. This bay has three 20-ton cranes of unusual design. Bars come from the mill in an east and west direction. For shipping they have to be turned north and south, or through 90 deg.

Each crane has a turntable on its trolley, which is operated from the cab and which carries a long spreader arm. At each end of the spreader arm is a separate hoist of 10 tons capacity. These may be operated either independently or in unison. For handling the big product of the mill they are operated, of course, in unison. One great incidental advantage of this equipment lies in the fact that the trolley may be run over to one end of the bridge, with the spreader parallel to the bridge, thus making it possible to pick up as much as a 10-ton load in the adjoining bay. The design is so rigid that such a load at one end of the spreader does not upset the equilibrium of the unit.

Storage space for stock is provided in adjoining bays, 3.7 acres being available under cover for this purpose.

Between the blooming mill and the roughing stands is a transfer whereby hot steel may be shunted off to other operations during the time of roll changes in the 52-in. mill. From the transfer the blooms pass upon a pivoted roller table which may be swung through about 30 deg., thus delivering the blooms upon the approach table to a wheel-blank cutting machine. Here rounds



Motor Room for the Standard Beam Mill and the H-Beam Mill. The motors and motor-generator sets for the latter are at the right. At the far end is the blooming mill motor, with the others nearer the reader. The motors at the left are for the standard beam mill up to 15 in. diameter are cut off to such length as may be required for the wheels being made at the Schoen Steel Wheel Works, where these blanks are sent.

Between the pivoted roller table and the cutting machine is a further detour, by means of which slabs rolled in the blooming mill may be taken off and shipped to a plate mill at some distance. For this purpose the slabs have to be reheated, of course.

Within the area of the new mills were several old boiler plants serving these several mills. All of these were dismantled and taken out, to the number of more than 100 boilers. Ten waste-heat boilers were installed in connection with open-hearth plant No. 4, for heating and other purposes around the mill. Power, however, is derived now from the new turbo-generator across the river.

The Homestead works organization was responsible for the remarkable speed with which the entire construction program for all the new mills was carried out, while successfully meeting the requirement that none of the product of the old mills should be lost. The Homestead organization is also to be credited with the complete design of the 52-in. Carnegie H-beam mill and the novel features of roll design used in this mill.

Urges Curb on "Price Hammering"

Chamber of Commerce of United States Adopts Resolution Favoring "Firm Bids"—Wider Knowledge of Production and Distribution Data a Need of Industry

AT the meeting of the manufacturers' group of the Chamber of Commerce of the United States in Washington last week two resolutions were adopted with a view to establishing more "teamwork" in manufacturing and industrial expansion and eliminating "price hammering and price cutting." Both were introduced through L. S. Horner, president Niles-Bement-Pond Co., New York. The first resolution, noting the rapid growth and tremendous development of the nation's industries, accompanied by excessive productive capacity in many lines, called for knowledge of the true cost of production and distribution, based upon uniform cost accounting for a given industry, and the necessity for wide publicity through trade associations of reliable statistics covering current facts on orders, shipments, stocks, etc. Chambers of commerce interested in promoting new industries for their communities were asked to consider such current economic facts before encouraging development of additional capacity in any given industry.

The second resolution, pointing to prevalent "price hammering by buyers and price cutting by sellers," affecting profits and stability of many businesses, declared for a system of firm prices and bids, which, it was stated, would not lessen competition and would be a benefit to the public. Trade associations, chambers of commerce and the business press were urged to use their influence to create a widespread sentiment in favor of such prices and bids, which would not be reduced once they were submitted.

In discussing these resolutions, Mr. Horner declared that there is a "crying need for outstanding leaders to step into the open and lead the way to better, saner and more honorable methods of conducting their business and education of executives not so well informed."

Purchasing agents who engage in the practice of "pounding" down prices were criticized by M. L. Lissberger, president Marks Lissberger & Son, Inc., Long Island City, N. Y. He said that, by beating down prices of products that they purchase, the prices of their own products are reduced and that therefore the practice reacts to the detriment of their own industries. He also urged trade association executives to obtain and distribute more business facts as a means of preventing the hammering down of prices.

Business Statistics Defended

In a spirited reply to one delegate, who objected that trade statistics do not mean anything except time and expense, E. F. DuBrul, general manager National Machine Tool Builders' Association, Cincinnati, stoutly maintained that such facts are absolutely essential to the intelligent conduct of business, but that one difficulty is that some executives do not use them after they are supplied. In discussing price cutting, Mr. DuBrul complained that there is a lack of courage on the part of sellers in maintaining their figures, with the result that profits are brought down. George D. McIlvaine, National Pipe and Suppliers' Association, Pittsburgh, said that the problem of distribution is becoming more intense each day, but that men are getting into distribution who are not qualified by either education or capital.

A paper on "Labor Conservation—Teamwork for Lower Costs of Production," prepared by C. S. Ching, president American Management Association, New York, was read in his absence by W. J. Donald, director of the association. New machinery and improved methods of production were declared to be the one thing which has raised man from a mere existence level to economic independence. Those who would limit or restrict this development, it was said, are fighting against industrial progress and striking at the basic cause of the present high standard of living. Comparative freedom in the United States from opposition to improved methods of production on the part of both employees and management was named as one of the most important factors in the industrial supremacy of this country. The favorable attitude of both workers and executives, their teamwork and confidence in each other, was declared to be a necessary factor which had developed improved methods of production and benefited wage earner, management, stockholders and the general public through greater output of goods and cheaper costs.

An examination of the census of manufactures was said to show conclusively that the per capita income of the wage earner has increased in direct proportion to the per capita value of goods produced. One of the important reasons for the relationship between workers and management was declared to be the lack of class consciousness in the United States.

"Our industrial organization is unusually democratic," it was pointed out. "The wage earner of today is the industrial leader of tomorrow. . . . As a result, management cannot be regarded as set apart from the rest of the organization. It is no super-imposed group. Its ranks are being continually filled from every position within industry."

Denounces Government Muckraking

In an address at a general session of the chamber, William E. Humphrey, chairman of the Federal Trade Commission, strongly denounced Government muckraking investigations based merely upon the hope of finding something scandalous or reprehensible. Mr. Humphrey said that he is utterly opposed to any investigation by the Federal Trade Commission that is not based upon alleged violation of the law. Constructive methods by which the commission is cooperating with business to eliminate abuses and unfair trade practices were outlined by Commissioner Humphrey.

Addressing the foreign commerce group, Dr. Julius Klein, director of the Bureau of Foreign and Domestic Commerce, Department of Commerce, spoke of foreign trade combinations and in the course of his remarks said that the cartel has its distinct limitations and by no means affords the panacea which had been confidently expected of it. The international steel cartel was cited as an example in proof of his statement. He said, however, there is need for collaboration in the furthering of uniform commercial legislation, for the interchange of statistical information along mutually helpful lines, etc., in advancing the standards and possibilities of the world's commerce.

Era of Large Unit in Business Only Begun

The outpouring of restrictive and regulatory laws from American legislatures was subjected to attack by Silas H. Strawn, chairman of the board of Montgomery Ward & Co., Chicago, and president of the American Bar Association, at a general session. He predicted that the era of the big unit in business is only beginning.

"Commencing with the amalgamation of the constituent companies into the United States Steel Corporation, in 1901, the last 25 years may be known as the age of the big unit," said Mr. Strawn. "Competition and economy have made necessary the creation of big units in almost every industry and business. I predict that the age of the big unit has only just begun and that in the future the problem of our Congress and our legislatures should be, and let us hope it may be, not how combinations of capital and labor may be disintegrated and destroyed, but how they should be regulated and controlled so as best to serve the people."

International Trade and Finances Discussed

New problems, national as well as international, confronting the United States as the most productive country of the world were discussed at the annual dinner last Thursday evening, which was attended by some of the country's most distinguished industrialists and business men. Owen D. Young, chairman General Electric Co., presided. Among questions dealt with were how foreign countries are to pay for the growing volume of supplies purchased in America and how the United States is to maintain and control its growing productive energy.

A warning that this country cannot go on indefinitely receiving yearly an increasing amount of interest and sinking fund payments on its loans and investments and maintain its present tariff policy and export trade was given by Dr. Alberto Pierelli, Milan, Italy, president International Chamber of Commerce. He said, however, there would appear to be a number of compensating influences, such as the rising standards of living in this country and throughout the world. Sometimes, also, new scientific discoveries revolutionize the course of economic development, it was pointed out. Nor should the influence incident to the development of new territories be disregarded, Doctor Pierelli said.

Better Control of Increasing Production Urged

Adequate control of the economic thunderbolt of increasing production unloosed by industry was put forward by Lewis E. Pierson, retiring president of the chamber, as the overshadowing problem of business. He said that the nation has a new problem before it and must prove that production is its servant and not its master. It must, he said, demonstrate that it has the will and the skill to control the machine it has created. Closer cooperation on the part of business, labor, agriculture and finance to accomplish this purpose was predicted by Mr. Pierson. He foresaw teamwork on the part of these interests lifting the fear of unemployment and suffering from the minds of those who toil, permitting the wheels of industry to turn with increasing effectiveness "to bring more and more of the comforts and even the luxuries of life to all who contribute to the productive power of America and remove the threat of an unused surplus from the nation that has staked its economic future on the doctrine of increasing production."

Joseph H. Defrees Elected Chairman

Following the conclusion of the convention, the board of directors on Friday elected officers for the ensuing year. Joseph H. Defrees, lawyer and business man of Chicago, was chosen as chairman of the board, succeeding Judge Edward B. Parker. William Butterworth, president Deere & Co., Moline, Ill., was elected president, succeeding Lewis E. Pierson. Other officers elected were: Vice-president Eastern division, Alfred J. Brosseau, New York, president Mack Trucks, Inc.; vice-president South Central division, Robert R. Ellis, Memphis, Tenn., president Hessig-Ellis Drug Co.; vice-president North Central division, Robert P. Lamont, Chicago, president American Steel Foundries; vice-president Western division, Paul Shoup, San Francisco, executive vice-president Southern Pacific Co.. Frederick J. Haynes, Detroit, chairman of the board Dodge Brothers, was reelected a director.

Purge Business of Corruption, Resolution Urges

The outstanding resolution, following the lines of the keynote address of the meeting by Judge Parker, while recognizing the general integrity of business, urged that it be purged of commercial and political corruption and other dishonest practices. It reaffirmed the chamber's principle that "business should render restrictive legislation unnecessary through so conducting itself as to deserve and inspire public confidence." Another resolution opposed government in business that can be successfully undertaken and conducted in public interest by private enterprise. In a resolution concerning the Federal courts, the chamber deplored efforts by the legislative branch to usurp or limit the functions of the judiciary which, it was said, must result in disaster. In passing upon taxation, a resolution urged reduction of the corporate income tax to not more than 10 per cent, the elimination of the war excise taxes on particular business and repeal of the estate tax; another resolution urged greater efficiency in the administration of Federal taxation. Opposition to Government operation of the merchant marine was expressed and approval given of pending legislation for the encouragement of private shipbuilding and operation through loans. Opposition also was reiterated respecting provisions of the Jones-White bill, which authorize the Shipping Board to include in its activities marine underwriting, which was held to constitute an unnecessary and unsound abridgment of private enterprise. Amendment of the national defense act to permit the placing of educational orders with industries was urged.

Collective buying of imported raw materials not available in the United States was sponsored, with advocacy of an amendment to the Webb-Pomerene act to this end. It was held that this would assist in releasing American buyers from the grip of foreign monopolies. Industrial information was recognized as being necessary so that business may be conducted intelligently; the gathering and distribution of such material, bearing upon true costs of production and distribution based upon uniform cost accounting, was approved.

Appreciation and support were given the policies of the Department of Commerce for the promotion of commercial aviation, as giving private initiative encouragement toward building of air commerce upon a sound basis for future expansion.

Furnace Operation; Quality Control

Open-Hearth Men Discuss Their Problems at Youngstown Meeting — Impurities in Scrap Charged Cause Much Trouble

THREE half-day technical sessions of the open-hearth committee of the American Institute of Mining and Metallurgical Engineers were held at the Hotel Ohio, Youngstown, on May 3 and 4. More than 80 open-hearth superintendents and others interested in open-hearth matters were present. Last week, pages 1317 to 1320, the general features of the meeting were covered, including the discussion of the first morning's session, which was devoted to matters relating to the construction of open-hearth furnaces. In the following paragraphs are the discussion of furnace operation, which formed the topic for the afternoon session on May 3, and of quality control in producing steel, which was discussed on the morning of May 4. There were no set papers at any of the sessions. Many men participated on each topic.

Consideration of Furnace Operating Results

AUTOMOBILE scrap and some machinery scrap contains ingredients which may run right through the bottom of the furnace within two or three days, in the opinion of John H. McDonald. It is of such a character that it cuts through the pan. This seems to be the general consensus of opinion as to this type of scrap, which is reaching the mills in great quantities.

Scrap foremen and others handling scrap are given bonuses, in several plants, for all of the brass and lead, nickel, aluminum, babbitt, zinc and other impurities which they separate out from the scrap. As a result of this practice, which gives the foremen as much as $60 to $75 extra a month, Henry A. Young reports very little trouble from dirty scrap at Allegheny Steel Co.

Effect of Impurities in Scrap

Chromium in scrap results in a slag which is hard to shape up, according to J. M. Hughes, Sharon Steel Hoop Co. Nickel does not seem to give trouble, but brass, aluminum and lead do. Brass, babbitt and other impurities have been giving trouble at the Wisconsin Steel Co. in furnace practice, but Mr. Ramsey said that no detriment to the quality of the product had been observed.

Nickel at about 0.1 per cent was reported by R. S. Simmons, research manager Pittsburgh Steel Co., to result in a heavy coating of scale, especially on strip steel. Tin oxidizes in the bath. The foreman of the Pilger mill refuses to accept a heat of this character. It will not pierce and, in one instance, such a heat could not be rolled on the 28-in. mill. The influence of the tin inclusions was such as to raise a 0.14 per cent carbon heat from the normal 48,000 or 52,000 lb. to the square inch to 68,000 lb.

Galvanized sheets are charged on top of the upper layer of scrap at the Edgewater Steel Co., for the purpose of allowing the zinc to burn off. This material has been known to run through the bottom of the furnace and pile up below the tap hole. Babbitt runs through the furnace in a similar way, said Frank B. McKune, open-hearth superintendent Steel Co. of Canada. It is regular practice at that plant to prepare all the scrap before it is put into the furnace. As much as 500 lb. of babbitt has been gleaned from a drag of ten cars of scrap. This material includes about 85 per cent of lead and 8 or 9 per cent of antimony.

How Lead Acts in Bath of Steel

Lead goes at once to the bottom of a furnace because of its greater specific gravity, and lead oxide does the same, according to G. D. Tranter. Brown fumes coming off the furnace bottom are an indication that lead is present there. Journal brasses in the scrap contain some 15 per cent of lead. When this trouble is encountered it becomes necessary to wash about 6 in. off the bottom of the furnace and remake the bottom with fresh magnesite. Nickel, chromium and aluminum cause little of this trouble, but have their effects on the quality of the steel. Any lead above 0.008 per cent in the bath will tend to cause trouble, making small checks show up on bars, and a lot of small scabs. One source of lead is the heavy paint existing on some bridge scrap. Sometimes this lead oxide coating is as much as ¼-in. thick.

High copper content gives much trouble in forging steel, reported C. C. Wales, superintendent open-hearth and blooming mill, Otis Steel Co. For this purpose the copper must be held under 0.04 per cent. He stated that both copper and nickel go out with the metal, while lead and chromium stay in the furnace. Hence, the two groups must be considered separately. T. T. Scott, Sheffield Steel Co., expressed the opinion that nickel and copper do no harm if under 0.20 per cent.

Reclaiming Valuable Non-Ferrous Metals

As the secondary metals under discussion are much more valuable, pound for pound, than the steel scrap, Dr. Thomas T. Read, secretary of the committee, suggested that perhaps an economic solution might come, through the scrap dealer sorting out the non-ferrous items. Selling this at the higher price which it com-

Unusually Broad Participation in Deliberations

MEETINGS of men earnestly debating the means of improving the technique of their work have become common in the United States in recent years. But the semi-annual gatherings of the open-hearth committee are perhaps unique in the extent to which nearly every member gets his day in court. Forty-two different men are quoted in our report of the Youngstown meeting—just two-thirds of the number of active steel works men present. Some of the others spoke, also, but limitations of space have held us to those mentioned. And the way in which differences of opinion were ironed out in the meeting, largely through the leadership of the chairman, holds happy augury for the future work of the committee.

mands would be looked to to compensate for the cost of labor involved. But several speakers stated that the cost of separating some of the metals in that manner would be greater than the selling price of what might be recovered.

Scrap dealers already are worrying about the rejection of scrap carrying large quantities of impurities, Mr. Reinartz said. "What if everybody starts to reject automobile scrap?" Mr. Ramsey suggested that it might be expressed as the sense of the meeting that automobile scrap be rejected in all cases except where it is bought as such. If such a standard specification be made, and everyone would live up to it, this might stop the mixing of automobile scrap with scrap of a cleaner grade. Some one amplified this by suggesting that no one accept automobile scrap except in carload lots. A single piece of such scrap in another kind of scrap, even though some of the scrap had been unloaded and used, should be cause for rejection of the remainder.

Doctor Herty explained that the kind of steel being made has an influence on the effect of the deleterious element. For instance, with steel of 0.60 per cent carbon, as little as 0.03 per cent tin would be likely to cause trouble. But with 0.08 per cent carbon tin may be accepted up to 0.20 per cent, without reason to apprehend trouble.

Regarding copper-bearing steels, the Allegheny Steel Co., which has been making this grade for years, formerly had to add considerable copper. It now has to add only half as much, or even less, due to what the scrap already contains. It is necessary to run a preliminary test, to ascertain how much copper to add, because the residual in the bath varies so much. This is at about 0.10 to 0.15 per cent at present.

Control of Furnace Temperatures

Using a Venturi-type part at the incoming end of the furnace, with a cross section of 900 sq. in., the Steel Co. of Canada makes it a practice to set the damper as experience has dictated and then not to change it during the run. Gas meters are used at each furnace of the Republic plant, so that the flow is known and can be controlled.

With the Isley control method on 115-ton furnaces at the Ashland plant of the American Rolling Mill Co., a pyrometer is placed at each end of the furnace and reversal is made at a predetermined temperature in the flue. There is a Brown instrument set to ring a bell when this temperature is reached. An indicating pressure gage in the downtake measures the stack draft and the pressure of the incoming air. A variable-speed fan is connected with a rheostat set to give the draft and pressure wanted. Using natural gas, the consumption is 80,000 to 85,000 cu. ft. an hour during the melting period, about 60,000 cu. ft. on the lime boil and 55,000 to 60,000 cu. ft. for finishing the heat.

Fuel Savings Shown in Controlled Furnaces

At the Middletown plant of this company pyrometric controls are placed on various parts of the furnace. A fan is used on the air inlet, to know how much is going in. Carbon dioxide in the slag pocket ranges from 17 to 18 per cent, with perhaps 2 per cent of oxygen. Coal consumption is about 600 lb. to the ton of steel. Heats are being made in 12 hr., which is a bit better than the normal run on ingot steel. It is found necessary to keep changing the fan speed throughout the progress of the heat, to obtain perfect combustion conditions. Using producer gas, the air blown in ranges from 4500 to 7000 cu. ft. a minute.

Savings of about 3 gal. of oil to a ton of steel are attributed to pyrometric control on Laclede Steel Co. furnaces, by John W. Gething. Positive pressure is carried on both the uptake and the downtake. This does not result in blowing out at the doors, except for a small amount at the last door near the outgoing end.

Refractories for Various Services

Burnt magnesite is used on the bottoms and a 2-to-1 mixture of dead burnt and raw dolomite on the banks and sides of the Granite City furnaces. Major James W. Mills, open-hearth superintendent, expressed a liking for the domestic grades of magnesite. For a hole, he uses a mixture of ground slag and magnesite.

Patches are made with magnesite at the Pittsburgh Crucible Steel Co., as reported by David G. Baxter, open-hearth superintendent. Different kinds of prepared refractories have been tried for bottom repairs. For washing out high bottoms, Magnifer is used. T. T. Scott, Sheffield Steel Co., stating that his practice is hard on banks and bottoms, uses some magnesite with raw dolomite. On the other hand, C. Foster, open-hearth superintendent American Steel Foundries, East St. Louis, Ill., uses no magnesite except on the Sunday overhauling. Burnt dolomite is used regularly. He considers the domestic magnesite very satisfactory.

Preference was expressed for raw dolomite and magnesite, over the patented materials, by W. T. Kilgore, open-hearth superintendent Erie Forge & Steel Co., "because the cost is less than half as great." He uses as little magnesite as possible, for similar reasons, but closes the taphole with Austrian magnesite.

Each Type of Refractory Has Its Use

Roasting the dolomite in the plant was reported by H. B. Hubbard, Inland Steel Co., and R. L. Leventry, Republic Iron & Steel Co. Mr. Hubbard said that his consumption of dolomite averaged 62 lb. to the ton of steel in 1927, and of (foreign) magnesite, 2 lb. Mr. Leventry uses foreign magnesite for bad holes, and is experimenting with Canadian magnesite. He uses some of the patented materials, believing that each type of refractory has its own use, which it can fill better than other materials.

Austrian magnesite is used for bad holes and Kendolag and Magnifer for slag lines at the Corrigan-McKinney plant. L. E. Yost, open-hearth superintendent, stated that a change from 42 per cent to 65 per cent pig iron in the charge involves a change from 2 per cent to 12 per cent of ore in finishing. And it must be remembered that the higher the metal charge the greater will be the refractory costs.

How Much Do Tapholes Grow?

Considerable discussion was evoked by the statement that the taphole grows as heat after heat is run out through it. W. F. Davis, Youngstown company, Inland Harbor plant, said that a 5-in. hole will take out a 106-ton heat in 8 or 9 min. This time is reduced to 6 min. when the taphole has gone up to 6 or 7 in. in diameter. Frank A. King reported that on the big furnaces at Weirton a 6-in. hole cuts to 7 in.

On the other hand, Mr. Kilgore stated that a taphole laid up with magnesite does not grow. William Herman, superintendent steel plant Keystone Steel & Wire Co., Peoria, Ill., uses a special form of magnesite tile for the taphole when rebuilding a furnace. This gives a hole 6 in. in diameter and 13 in. long, which lasts about 70 heats. Then he relines the hole around a 5-in. pipe. At the Donner Steel Co. a 6-in. pipe on 100-ton heats lasts about 30 heats. At Laclede Steel Co. a 7-in. pipe is used on 80-ton heats, lasting for about 35 heats. With a 5-in. or 6-in. pipe, only 15 to 20 heats are obtained from each pipe by the Andrews Steel Co., E. A. Smith reported.

Low-carbon steel is particularly hard on the taphole, according to several speakers. With the big furnace and bifurcated spout at the Republic plant a large hole is needed. Mr. McCutcheon reported "no luck with tapholes." He uses 6-in. pipe on soft heats. A long discussion followed as to heats breaking out at the taphole and spurting over the top of the ladle when raw dolomite is used for the taphole. Burnt material as a lining, on the metal side, was said to obviate this trouble.

Aids in Bottom-Making Time

Using a Blaw-Knox bottom-making gun, the average time for this process at the Middletown plant was reduced from 49 min. to 31 min. A sloping backwall, according to G. D. Tranter, needs a dolomite gun to keep it in shape. Also, if the slag line begins to cut, near the end of a heat, the dolomite gun is brought up to hold it in place.

A similar view was expressed by Henry A. Young, who believes that the use of the gun keeps the banks in better shape than is possible by hand. This innovation has eliminated the services of many third helpers. At the Bourne-Fuller Co., one man to the furnace has thus been displaced, while the banks are better maintained, and with less material. For a plant of six to eight furnaces, the gun permits the crew to be only two men to the furnace, with four men in the pits, according to Mr. McCutcheon. It simplifies the hard job of bottom making, and does it with the least effort.

Advantages of Sloping Backwalls

Sloping backwalls were characterized by Robert L. Cain as a money saver. After two years of use, he said, no brick have had to be replaced, against a repair job, previously, after every 30 heats or so. Similar results were reported by R. L. Leventry, who stated that he had never had to shut down to make a backwall repair, with sloping backwalls. After a run of some 275 heats the chrome brick at the slag line have to be replaced. He called the slope a "good improvement."

While H. B. Hubbard averred that the sloping backwall is worth while on account of saving delays, Mr. McCutcheon sounded a note of warning. The roof over the slope becomes a problem, he said. It cuts badly near the skewback line, where the roof has been widened from 15 ft. 6 in. to 19 ft. An incidental advantage was cited by G. D. Tranter in connection with the frontwall. An extra 10 to 15 heats may be obtained from it, when a sloping backwall is used, by not repairing the frontwall as a matter of routine when the furnace is off for backwall repairs. On this point, Mr. Cain and Mr. Kitto both said that the sloping backwall has doubled the life of the frontwall.

Speaking on the proper grade of sand to use for the bottom of an acid furnace, R. A. Mercur, Jr., assistant superintendent steel mills John A. Roebling's Sons Co., Roebling, N. J., stated that his company can dig the sand out from under the property. He uses a mixture of two grades, in the proportion of six parts of the white local sand to one of a red sand. Analyses of the two sands were given, as follows:

	White Sand	Red Sand
SiO_2	97.84	84.36
Fe_2O_3	1.70	3.59
Al_2O_3	0.68	8.39

Session on Control of Quality in Steel

CAUSE and cure for blisters in full finished and galvanized sheets was the opening topic of discussion at the third session of the conference, Friday morning, May 4. J. A. Durfee, metallurgist Weirton Steel Co., expressed the opinion that blisters on galvanized sheets are caused mostly in the annealing process. Hydrogen itself does not expand blisters, but moisture which has crept in does. Water vapor expands from water to the extent of 2240 times its original volume, against only two volumes for hydrogen. It is necessary to hold the sheets in the water vat long enough after pickling to be sure of getting the surface clean. Holding them too long, however, is likely to give trouble. It is a question whether sheets should not be dried thoroughly, over a coke fire or otherwise, before galvanizing.

Too Little Top Cut Off the Ingot

Lack of sufficient cropping of the ingot was mentioned by L. E. Yost as a cause to which trouble may be attributed. E. A. Smith made the same observation. He suggested that an increase in the amount of lime in the heat might help this condition, as a slag which is too thin will not give good surface results to the steel. He reported a marked difference in blisters in the surface, between steel which had been made with 12 per cent of limestone in the bath and that which had had only 10 per cent.

Opposed to this large use of limestone, W. F. Davis reported using only 7 or 8 per cent with a charge of 38 to 42 per cent of pig iron. This quantity of stone appears sufficient to give good heavy slags, but, of course, the proportion must be related to the amount of iron charged. Howard McClelland stated that there are more gray sheets resulting from killed than from rimmed steel. Much trouble is experienced in the pickling and some trouble from small blisters. In his practice the limestone is 11 to 12 per cent.

Pickling Process Blamed

Many very fine blisters, reported by the chairman from the Middletown plant, were attributed to taking too long a time in the pickling process. Certain mechanical changes were being made in the pickling department, resulting in the operation stretching out to twice the normal time. When this was speeded up again the blisters were got rid of.

Sheets with the most inclusions are, in his opinion, the ones showing the greatest tendency to blister. With 0.08 to 0.10 per cent carbon rimming steel, there are three or four times as many blisters in the top part of the ingot as elsewhere. Practically none are found in the bottom. Low-temperature annealing, also, seems to have a greater tendency to result in blisters than when the temperature is higher.

Sloppy-Working Furnace a Common Offender

Most of the trouble of this character, according to C. C. Wales, is due to slag inclusions. Somewhat the same idea was expressed by N. F. Egler, who laid the source of the trouble to a sloppy-working furnace. Little such trouble is experienced when the furnace is working sharply. Consequently he believes it good practice, when the bottom gets dirty, to take that furnace off of such particular products as sheet bar. Blisters will be produced if the furnace is ored too close to tapping time. Trouble may be caused by the furnace melting the charge too soft, if there is high-silicon pig iron in the mixer.

Blisters, according to Mr. Egler, come from a sloppy furnace because of slag inclusions. There is a greater amount of oxide present than on faster-working furnaces. There are more cold heats and as a result larger skulls left in the ladles. High-carbon steel can be made satisfactorily on a slow-working furnace, but it is not feasible to make low-carbon steels on such a furnace, if it is nearly ready to go down for general repairs.

Major James W. Mills placed the seat of trouble from blisters squarely in the open-hearth department. It is essential to have a good slag on the bath. There is trouble if the slag is too thin and trouble if it is too thick and lumpy. His plant uses about 8 per cent of limestone, or a corresponding amount of burnt lime, but with only 20 per cent or so of hot metal. He prefers metal with from 1 to 1¼ per cent silicon and 1½ per cent manganese, and states that 16 to 18 per cent silica in the tapping slag makes for good steel.

Feeding ore into the furnace within 45 or 60 min. of tapping was condemned by J. M. Hughes. With rimming steel he recommends a drop of from 2 to 4 in. on the ingot, if trouble is to be avoided.

Placing Responsibility for Seams and Pits

Soft-melting heats are charged with most of the responsibility for surface trouble, by J. D. Walters, assistant open-hearth superintendent, Lukens Steel Co. Such defects as seams, pits, etc., in plates (his company does not make sheets) go up from a normal 5 per cent to as much as 15 per cent under these conditions. Trouble is caused also by low-silicon iron—around 0.7 or 0.75 per cent—because it is difficult to get action in the bath. Above 1 per cent of silicon—or, better, 1¼ per cent—the action is good. He recommends the same 45 to 60 min. leeway, after the last ore addition before tapping, as did Mr. Hughes. He believes that fire-clay in the spouts and ladles is sometimes the cause of trouble, through loosening up and getting into the steel or slag.

Four main sources of trouble from blisters were given by G. D. Tranter. First he mentioned a larger skull in the ladle. Over-oxidized steel was the second item. Too low a manganese was the third, as 0.35 to 0.45 per cent manganese in the steel will give less trouble, with carbon from 0.08 to 0.12 per cent, than if the manganese is below 0.30 per cent. His fourth cause was melting the charge soft and then repigging. If, however, the recarburizing process is carried beyond the immediate need, and then the charge is ored down a bit, less trouble ensues.

Urges Omitting Use of Ore

Avoid the use of ore altogether and thus avoid trouble, was the counsel of F. B. McKune. It is his practice to lower the carbon content through reaction induced by stirring the furnace continuously with rods, from as high as 1.25 per cent carbon down to 0.6 per cent.

Good forging steel of 0.08 to 0.20 per cent carbon can be made on a slow-working furnace, in the opinion of Samuel B. Muir. Charles H. Moreland, however, states that special steels should never be made on a slow-working furnace and that at least 1.35 per cent silicon in the iron should be required for them.

Better results from iron high in phosphorus—1.75 per cent in place of 1.15 or 1.20 per cent—were reported by W. F. Davis. This iron gives a more fluid slag and results in the production of better plates, in which the phosphorus is up to 0.035 to 0.038 per cent. By-product gas gives more of a tendency to the furnace to foam than any other fuel, according to Howard McClelland. He stated that there is no sure cure for foaming. Several palliatives are available, but the condition always comes back.

Improvement of Pouring Practice

Practice seems to be tending toward using as small a nozzle as is practicable to pour the heat. Major Mills recommended opening up the nozzle as easily as possible, to avoid splashing. If there is a tendency to spray, the nozzle should be lengthened. In this connection C. B. Collingwood reported that he had just ordered some new nozzles 15 in. long in place of his standard 12-in. length.

Poor success in pouring small ingots from the top was reported by J. D. Walters. With molds measuring 7 x 14 in. and 9 x 14 in. there was so much splash as to give a bad surface. Hence a section of stove pipe was used, running down to near the bottom of the mold, through which the steel was poured.

Reporting upon the use of a square nozzle opening, in place of the customary round, Kenneth C. McCutcheon stated that the 1½-in. size is ideal for narrow molds. He uses a long nozzle with the sides of the square set parallel to the sides of the mold, and can pour an ingot of 11,500 lb. in 87 seconds. On soft steel, however, this nozzle cuts away quite rapidly, resulting in pouring this size of ingot later in 60 seconds or less.

Pouring with Two Nozzles

Use of two nozzles to the ladle, each with a 1-in. hole and separately controlled, was reported by F. B. McKune. He is getting down to as small a nozzle as he can use. He pours two ingots at once, thus minimizing the time of pouring the heat, and reports getting a better surface with these small nozzles. There is almost no trouble experienced from leaky nozzles or running stoppers. The time of pouring increases from 2 min. at the beginning to 2 min. 35 sec., as the steel gets colder, at the end of the pour. It takes from 47 to 50 min. to pour 80 tons of steel in this manner, with the nozzles at 37-in. centers. He is trying to get away entirely from the nuisance of bottom pouring.

Setting the nozzles straight, so that the stream will not strike the side of the mold, and then getting the nozzle centered over the axis of the mold was recommended by G. D. Tranter. The molds must be clean and warm for best results. Samuel B. Muir reported that nozzles ordinarily cut as much as ¼ to ¾ in. while pouring a heat.

Getting Carbon Analysis on High-Carbon Steels

To avoid adding pig iron, as much as possible, it is the practice in the Donner Steel Co. plant to catch the carbon coming down. Samuel B. Muir reported limiting the anthracite additions to two bags (four points). Consequently, for high-carbon steels, such as 0.90 per cent, the furnace must be tapped at above 0.85 per cent carbon.

Quite a different practice was reported by E. L. Ramsey, who works the bath down to 0.15 or 0.18 per cent carbon and then recarburizes for all steels of under 0.50 per cent carbon. The steel is held for 10 to 25 min. after recarburizing, depending upon the size of the jigger put in. In addition, if silicon in the recarburizer is under 0.90 per cent he adds some 15 per cent silicon pig, to overcome the drop in silicon caused by holding the heat in the furnace.

Quality and Tonnage Viewpoints Differ

From the quality standpoint it is necessary, he believes, to catch some of the steels coming down. From the tonnage standpoint, however, he prefers to recarburize. He uses a 1½-in. nozzle to pour a heat of 118 tons, but has ordered 1¼-in. nozzles for trial. He believes that a higher temperature in the steel is needed if hot tops are used on the molds. For such purpose he recommends 2800 deg. Fahr. for steel of 0.40 to 0.75 per cent carbon.

Rail steel at the Inland plant is worked down to 0.15 or 0.16 per cent carbon and then recarburized. Use of a screwhead for the stopper was recommended both by W. T. Kilgore and Henry A. Young. Both have used them for years and stated that they would not go back to the pin and nut arrangement. This point of view caused disagreement from some other speakers.

Bottom Pouring High-Carbon Steel

Not very good success from bottom pouring of high-carbon steel was reported by J. D. Walters. He stated that a very dirty surface results, because of slag inclusions. Another speaker, referring to long ingots, on which sinkheads are placed, stated that with eight ingots on one bottom plate it takes 5 min. for ingots of 4 tons each and an additional 2 min. to fill in the heads. These ingots including the sinkhead are 115 in. long. Ingots are poured by this means from 13 to 30 in. in diameter, and the steel is at about 2900 deg. Fahr.

All ingots for the Pilger mill at the Pittsburgh Steel Co. are bottom cast, according to R. S. Simmons, research manager. These ingots are very small and are dead killed. The skin forms quickly, and gas is found close to the surface.

Temperature Requirements for 3 Per Cent Nickel Steel

Best results, according to Samuel B. Muir, are obtained with a pyrometer reading of about 2900 deg. Fahr., with steel containing 3¼ to 5 per cent of nickel. The hotter the steel is poured the cleaner it is. Possibly 2850 or 2875 deg. might be satisfactory.

Addition of nickel into the bath should not be too close to time of tapping. There is very little loss of nickel in the bath, as 98 per cent nickel drops only to about 96 per cent. Ingots should be left in the molds (20 x 20 in.) for about 1½ hr. Then they should be put right into a pit immediately after stripping. If they are allowed to get cold, a preliminary or warming pit should be used to bring them to a certain intermediate temperature, before charging them into the soaking pit.

All steel should be worked hot, according to L. E. Yost, so as to aid the oxides to get through the bath into the slag. The pouring temperature can then be adjusted as needed.

Hot tops of sand and a glutrine bond are made on the jarring machine at the Edgewater Steel Co. Mr. Smith reports that these are dried out thoroughly in an oven before being used. The discard from the ingot is about 10 or 11 per cent. Using bottom pour, these sinkheads have cut the pouring time from 7 min. to 5½ min.

In recognition of the efforts of the foremen and safety committeemen at the Joliet, Ill., works of the Illinois Steel Co., that company was host at a banquet, April 26, to 362 of these men, who had achieved a new record in safety measures for 1927. Last year only four lost-time accidents were recorded. Of these, three caused a time loss of more than seven days each. Nine calendar months passed without a single lost-time accident, shattering all the previous records.

Sponge Iron As a Melting Base

Recent Experience in the United States and in Sweden—Superior Workability of Steel Revealed by Tests

BY N. K. G. THOLAND*

IN recent years sponge iron has attracted considerable interest as a melting base for high-grade steels, and has also been a theme for much discussion. While the extent of the application of sponge iron is still uncertain, it has already secured a definite place in some phases of modern steel making.

At one time sponge iron was probably the only iron base in use, because, in the early days of our "iron age," it was impossible to obtain temperatures high enough to melt iron. Therefore, sponge iron—iron reduced from the ore at temperatures below the melting point of iron—undoubtedly was the earliest form in which iron was produced. Later, with the development of blowing engines, following the Catalan forge and shaft furnaces of various types, man developed the modern blast furnace, which is the main producer of iron today.

In various localities, however, interest in iron produced by "direct reduction" from the ore has persisted, and from time to time different methods have been developed and tried. However, the instances where extensive comparative tests have been made, and published, of similar steels, made with and without sponge iron, are few.

Recently sponge iron has been tried along new lines in this country, and it is the object of this article to discuss briefly such figures and generally comparative results that can be made public at this time. The meltings that will be referred to, here and abroad, were made with the sponge iron from the plant of the Hoeganaes-Billesholms Co. of Sweden. This product contains about 97 per cent Fe and a very small amount of detrimental impurities.

Red-Shortness Claimed Reduced

Since the production of sponge iron started at Hoeganaes in 1908 it has been used chiefly in open-hearth and electric steel furnaces, both basic and acid. Very early the product was tried in low and medium-carbon charges with scrap and pig iron in making steels for seamless tubes. In that application it was noticed that the melting and the refining of a heat proceeded very quickly and smoothly as compared with an ordinary, otherwise equally balanced, scrap and pig iron charge. The metal poured with a clear color, fluid and coherent. The steels produced showed marked freedom from red-shortness.

The difficult piercing operation of the tube billets proceeded with greater ease than ordinarily and with very few rejections. The amount of sponge iron used in the charge varied, and, with 7 to 15 per cent of the total iron weight of the charge was common, as little as 4 per cent is used in such steels today. For most steels, 7 to 25 per cent of sponge iron is commonly used for open-hearth charges, with 45 per cent as the maximum, while for electric furnace charges 15 to 30 per cent is not unusual, with 50 per cent usually considered as a maximum. There are steels produced from a 100 per cent sponge iron charge in electric furnaces using coke, electrodes, etc., as carburizers.

Freedom from red-shortness has also manifested itself in the violent operations of forging and piercing to which other steels are subjected while red hot. Sponge iron steels show less cracking than other steels of good quality, and, in this connection, well-known authorities have expressed the opinion that the more elastic cohesion between the iron crystals in sponge iron steels has a definite bearing on the hot and cold working of the metal.

In the production of open-hearth and electric steels where it has been considered necessary to add high-quality muckbars to the charge, a pure sponge iron has supplanted, and may soon entirely supplant, the more expensive stock. In addition to a saving of about 30 per cent of the cost of the raw materials, this "new" material has shown definite advantages, especially in regard to the workability of the steels produced.

While definite testimony as to the superior workability of sponge iron steels is available, few records of actual results can be obtained. There have been fracture tests after heat treatment, however, and, as a result, a greater "safety range" is claimed for sponge iron steels than for other steels of high quality. Straight-carbon tool steels made with and without sponge iron have been quenched at various temperatures, and fractures have been compared. It was noticed that, while steels generally considered as giving excellent performance showed approximately the same fracture from 1420 deg. Fahr. to possibly 1530 deg. Fahr., the sponge iron steels gave corresponding results between 1420 and 1630 deg. Fahr.

As a Melting Base in Making Wire

In recent years sponge iron has been used as a melting base for better grades of wire steels. With an increasing demand for better physical properties in steel wire of various kinds, such as cable wire, spring wire and special wires, the manufacturers have resorted to various processes in order to increase the strength of the wire and improve its torsional and bending properties.

For some purposes alloys have been introduced in the steel to meet difficult specifications, and usually at great expense. Lately, specially made carbon wires have been known to give as good service at a considerably lower cost. Sponge-iron wires are known to respond very well to heat treatment, but at the same time the treatment may vary somewhat from standard practice. Therefore, in order to obtain a desired result, this point should be especially studied.

Cases are known, where cold-drawn, high-tensile wire, made in this country from sponge-iron steel, has shown unusual physical properties. The wire produced carried, in spite of higher raw material cost, a low comparative price, even in large dimensions, evidently on account of cheaper working.

Another example of the improvement of cable or rope wire may be taken from the experience of a manufacturer of wire of established quality. The production was based on carefully selected scrap and a high-grade pig iron. By substituting sponge iron for a certain portion of the charge it was possible to improve the quality from 6 to 20 per cent in torsional properties and from 20 to 35 per cent in bending properties. Certain torsional and bending specifications could formerly be met with a maximum tensile strength of 200,000 lb. per sq. in., but can now be met with a tensile strength of 255,000 lb. per sq. in., using the same equipment and general process of manufacture. Because of increased ductility of the steel, it is claimed that greater reductions per draft are permissible, and it is interesting to note that no higher cost for the final product is reported.

---

*Ekstrand & Tholand, 1 East Forty-second Street, New York, representing the Hoeganaes-Billesholms A.B., near Helsingborg, Sweden.

Manufacturers of fine, cold-rolled steels, such as tempered and untempered spring steel, razor blade steels, etc., have had similar experience with sponge iron.

Better Electric Steels from Sponge Iron

Electric steels in the United States have today reached a high stage of development, using comparatively low grades of raw materials, which are highly refined under a double or single slag, but requiring a considerable amount of power for the refining. There have been cases where the addition of a high-grade sponge iron has decreased the refining necessary with a better product the result. While this especially refers to straight-carbon tool steels, alloy tool steels also are being produced with an addition of sponge iron to the charge. Steels extremely low in carbon have been produced in this country directly from sponge iron in the electric furnace under a basic slag, the product showing little or no red-shortness.

The growing difficulty for the maker of straight-carbon, high-grade tool steels in obtaining melting materials entirely free from alloys, especially nickel, makes the application of sponge iron as a melting base for high-grade electric tool steels an interesting possibility. Recent statements are that the average nickel content of plain-carbon selected scrap today is 0.15 per cent and is increasing, because of the wider application of nickel in various commercial steels.

Some electric tool steel makers, who are very particular as to the quality of their product, are today using other high-grade raw materials such as muck-bars, washed metal and pig iron, in addition to scrap from previous meltings of the same steel. For those manufacturers the application of a high-grade sponge iron, low in detrimental impurities and with a high grade of reduction, is of interest. This is especially true if the manufacturers intend to melt with a single carbide slag.

High-quality sponge iron has been repeatedly mentioned in the foregoing discussion. The term "sponge iron," as generally understood, applies, of course, to all iron reduced from the ore at temperatures below the melting point of iron. The grade of reduction—or the extent to which the iron content in the sponge iron is present as metallic iron or as oxides—and also the amount of detrimental impurities are important points to take into consideration. It is important also to know whether or not the impurities are combined with the iron.

By whatever method the production of sponge iron has been attempted, the principle of reduction is radically different from that of the blast furnace. Sponge iron is produced in a constantly reducing atmosphere, where no violent reactions take place. The factors influencing the process are balanced so as not to introduce any excess of carbon or other materials that have to be removed by refining in subsequent working. Properly made sponge iron gives the steel maker a virgin iron base, never molten and never subjected to reactions which, if not detrimental, are at least not very advantageous.

Some Facts About the Swedish Product and Process

The first plant of the Hoeganaes company at Helsingborg, Sweden, had a capacity of only 4000 gross tons of sponge iron a year, while its present capacity is about 15,000 tons. The Hoeganaes process was designed by E. Sieurin, chief engineer in charge of the various operations of the company's plants. In the original process Sieurin used a tunnel kiln. "Crucibles," with layers of coal and ore, as well as other materials, were placed on cars, which were moved through the tunnel in an opposite direction to that of a gas current used for firing the kiln. The cars passed through three distinctly different zones, a preheating zone, a combustion zone and a cooling zone. The product at the start consisted of comparatively small disks of a well-reduced iron, low in impurities. It gained a market at once as a high-grade melting stock, although its price at that time was very high, on account of the high cost of the handling and of the ore used in the process. Subsequently the method was changed considerably, utilizing labor-saving devices and other methods of charging, but the principle of reduction, by carbon monoxide and coal, is the same.

Magnetites, as well as hematites, are used as raw material. An interesting feature of the process is the comparatively low grade of coal used, both for firing the kiln and for charging with the ore. The Hoeganaes company owns large deposits of such coal, high in sulphur and ash, in the southern part of Sweden, and their desire to utilize these deposits was a vital factor in starting sponge iron production.

In the Sieurin process the ore usually is concentrated before the reduction, but separation from the gangue after the reduction is also successfully accomplished. The method of treatment depends on the ore used and use to which the sponge iron is to be put.

Appearance and Composition of the Iron

The product is graded into several classes according to the impurities, chiefly sulphur. In this article it may be sufficient to discuss the grade ordinarily used for steel-making purposes. It is now delivered in round pigs, 10 to 11 in. in diameter and about 2 to 2½ in. thick. Because of the process of manufacture, it is very light and porous, with a specific gravity of 2. When so desired, it is compressed to nearly solid pieces. The pigs are charged directly into the steel furnaces. The iron content has increased as the method has developed; formerly averaging about 94 per cent, it today averages 97 per cent. The grade of reduction is very high, the material containing less than 4 per cent of FeO.

The quantity of detrimental impurities is low, and, owing to the method of production, they are still in the gangue form. The phosphorus usually runs around 0.010 per cent, with 0.013 per cent the maximum; the sulphur content, as CaS, is in this grade 0.025 per cent maximum. No metallic silicon is found, and manganese runs uniformly around 0.025 per cent. As delivered today, the sponge iron contains vanadium to the extent of 0.13 to 0.15 per cent, probably as V_2O_5.

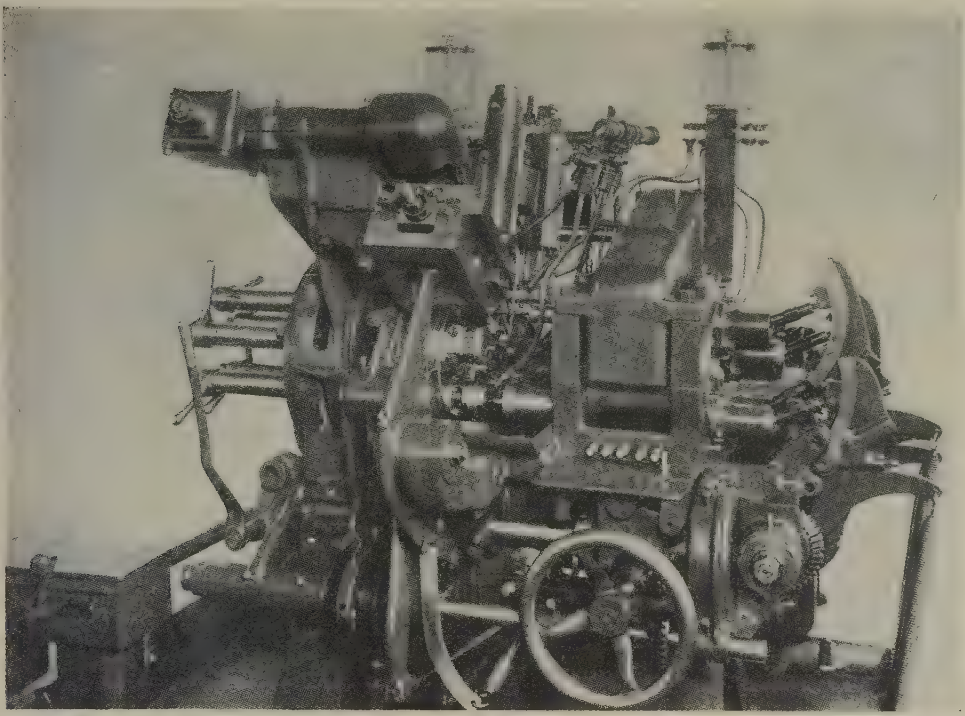
As a residue from the process, carbon is present to 0.03 per cent maximum, while the sponge iron itself is free from carbon, whether as graphite or as combined carbon. The balance is gangue, mainly SiO_2. While one pig may vary somewhat from another, the general analysis given is unusually uniform.

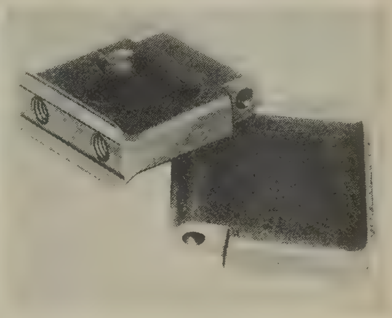
April production of track work for T-rail track of 60 lb. a yard and heavier was 13,511 net tons, according to a report by the American Iron and Steel Institute. This represented a reduction of more than 10 per cent from the March figure of 15,058 tons, but is otherwise the largest monthly total since last June. For the first four months of the year the production has been 49,272 tons, against 62,944 tons last year.

Adapts Automatic Screw Machine for Other Classes of Work

The Davenport Machine Tool Co., Rochester, N. Y., has brought out a "modified" automatic screw machine for work not ordinarily regarded as of screw machine class. The modified machine is adapted for a wide variety of work and increase in production as compared with usual methods is claimed. One application, illustrated herewith, has been the drilling of holes in the male part of an automobile hinge.

The tool mechanism is reversed from that of the regular screw machine, the tools being arranged to revolve while the work is held stationary. The hinge is placed in a fixture in the position usually occupied by the work spindle, and is clamped by one of the five handles shown at the left of the machine. The pin hole is drilled by tools located at the right-hand end of the machine, the first drill being guided by a bushing close to the work and drilling about one-third of the depth. In the succeeding operations the tools in the other positions drill the remainder of the pin hole and in the last position the hole is reamed.





Automatic Screw Machine Adapted for Drilling Holes in the Male Part of the Automobile Hinge Shown Above. The tool mechanism is reversed, the tools being arranged to revolve and the work held stationary

During the pin hole drilling operations the drill spindles, mounted on cross slides, drill the holes for fastening the hinge to the car body. One set of tools drills part of the depth, a second set completes the drilling, and a third set taps the holes. These holes, for fastening the hinge to the car body, are only 1 in. apart, but the drill spindles are arranged so that the driving gears are of fair size and each spindle has independent lengthwise adjustment for the drill.

The method of drilling all the holes at one time is claimed to eliminate errors which might occur by doing the work in several successive fixtures and machines. The longest hole drilled is 1⅜ in. The hinges are drilled and tapped at the rate of 260 to 400 or more per hour, depending upon the carbon content of the material and the speed of the operator. It is also pointed out that this modification of the screw machine permits utilization of one of the advantages of the multiple-spindle automatic, that of dividing long operations into two or more short ones, thereby materially reducing the total time of the machining operations. In common with other of the company's screw machines independent feed is provided for each tool, which permits selection of the proper feeds for the work of each tool.

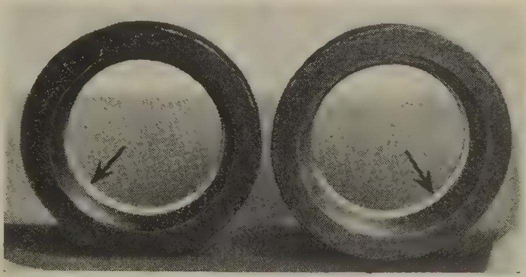
Stellited Carbon Steel Dies Replace Chromium Steel

An improvement in the performance of certain hot-forming dies is noted in the May issue of *Oxy-Acetylene Tips*. It has particular reference to the manufacture of seamless tubing or cylinders by the cupping process. A heat-treated 3 per cent chromium steel ring had been used on the finishing bench (which in this particular instance had a horizontal ram operating through three closely set dies). These dies produced from 30 to 40 pieces each. They were then reground to a larger internal diameter and used in an earlier stage of the process. One difficulty with this type of die was that when deeply ground it became out of round during operation and was difficult to remove from the holder without breakage.

Much better life is now secured from carbon steel rings, having the working surface built up by stellite, welded on by the oxy-acetylene blowpipe. After grinding to correct size, the die is ready for work.

When the die is worn too large or the base metal is reached, the surface is ground, re-stellited and trued up. It is then ready again for use in the same stage. This operation is repeated over and over again. The stellite surface only is exposed to abrasive wear, and, when this is renewed, about the same service is obtained as from the original coating.

Such dies in the first and second stages of the finishing bench will yield as high as 2000 pieces before it is necessary to rebuild them. The last die must be held much closer to dimension, and makes from 200 to 800 pieces before it needs to be replaced.

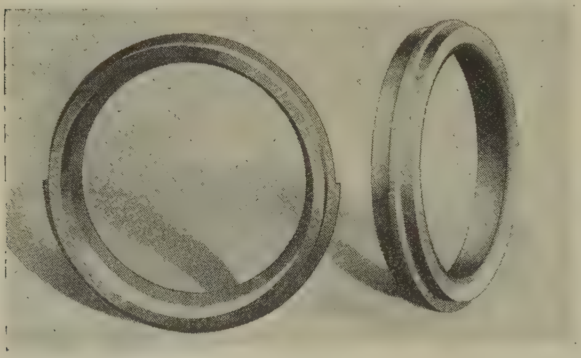


Stellited Rings Used for Dies in Cupping Draw. Left, newly made; right, after 822 draws

Double-Suction Centrifugal Pumps

A new line of general service centrifugal pumps has been placed on the market by the Economy Pumping Machinery Co., 3431 West Forty-eighth Place, Chicago.

These pumps, a re-design of the original Economy double suction line, contain many refinements, both mechanical and hydraulic. The makers claim efficiencies over 80 per cent from pumps of 800 gal. a minute and still higher efficiencies in larger sizes. The new line is designed for standard motor speeds of 1750 r.p.m. at 100 ft. head and 1750 or 3600 r.p.m. for heads up to 200 ft.



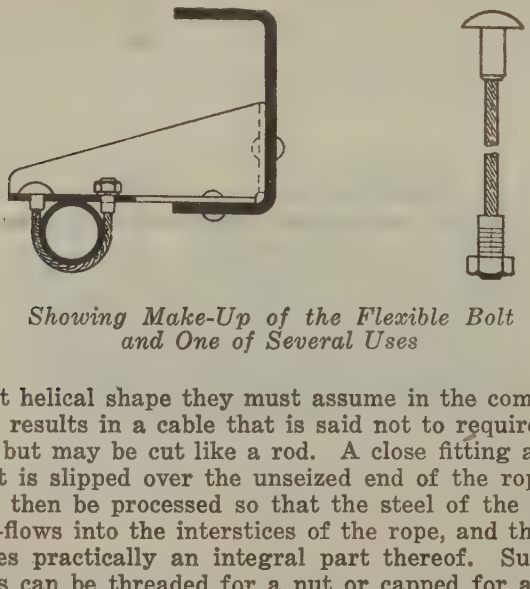
Renewable Bronze Wearing Rings, Showing the Semi-Circular Locking Flange Which Makes a Tongued and Grooved Joint with the Case and Butts Against the Cover, to Prevent Turning

All these single-stage pumps are of the horizontal split-case design, equipped with sealed type ring oiling bearings. Bearing brackets are cast with the case. Renewable bronze wearing rings are designed with a semi-circular male flange which locks them in the case. They are of the ell shape, which takes advantage of the centrifugal action of the water to prevent leakage. Shafts are of alloy steel turned and ground all over. They are protected, where exposed to the liquid, by cast bronze shaft sleeves held in place with nuts.

Flexible Bolt Made from Wire Rope

Designed for places where rigid U-bolts are impracticable, the flexible bolt illustrated has been developed by the American Cable Co., Chicago. It may serve as an auxiliary hanger for power shafts, suspension bracket for overhead steam or water piping, shackle bolt for temporary wall boxes, tanks, etc., for scaffolding and tackle, on various parts of machinery, and in other places where semi-flexible connections are necessary.

This new flexible bolt rests on the preformed type of wire rope. Preforming the wires and strands to the exact helical shape they must assume in the completed rope results in a cable that is said not to require seizing, but may be cut like a rod. A close fitting attachment is slipped over the unseized end of the rope. It may then be processed so that the steel of the fitting cold-flows into the interstices of the rope, and thus becomes practically an integral part thereof. Such fittings can be threaded for a nut or capped for a head. The flexible bolt which has resulted from these developments is available in varying lengths.



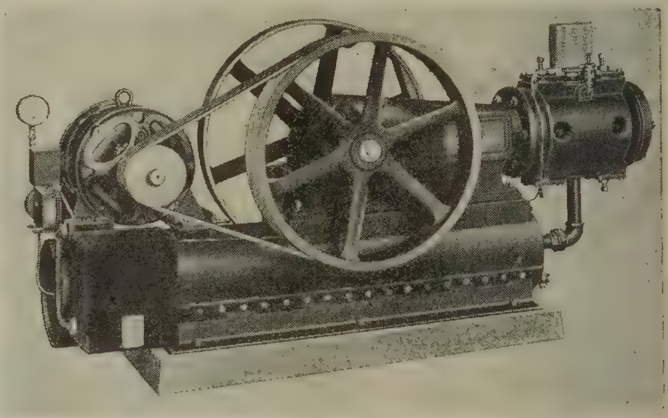
Showing Make-Up of the Flexible Bolt and One of Several Uses

Self-Contained Single-Stage Compressor

For use in small industrial plants and garages where compressed air requirements are comparatively limited, the Pennsylvania Pump & Compressor Co., Easton, Pa., is offering the single-stage double-acting multiple-belt-driven air compressor here illustrated.

The machine is self-contained and semi-portable. The motor, starter, multiple-belt drive, air receiver, air filter, and automatic start-and-stop control are assembled in place, forming a compact unit which occupies floor space of 6 ft. 6 in. by 2 ft. 4 in. A hopper cooling tank can be furnished.

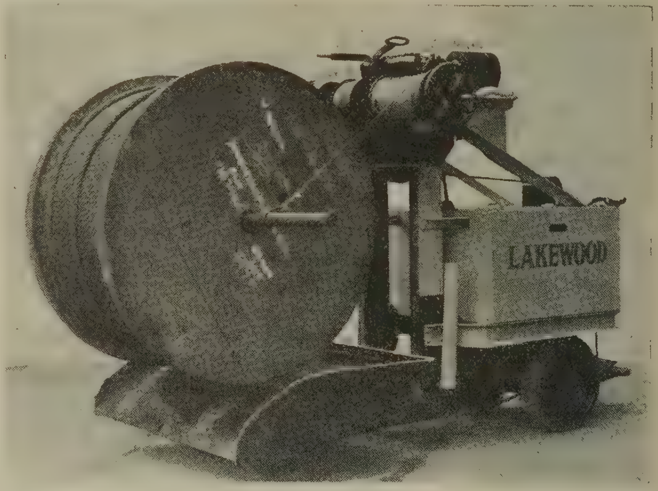
Valves are of the company's air cushioned type. The machine is equipped with a 10-hp. high torque motor which drives the compressor at 400 r.p.m. The piston displacement is 65 cu. ft. of free air per min. and the automatic control is for pressures of 85 and 125 lb. The weight of the machine is 1380 lb.



The Capacity Is 65 Cu. Ft. of Free Air Per Min., Piston Displacement

Lift-Truck for Handling Heavy Reels

A new storage battery lift truck designed especially for handling reels of wire, cable, etc., has been developed by the Lakewood Engineering Co., Cleveland. The truck has a capacity of 6000 lb. and will handle reels up to 60 in. in diameter and 42 in. wide.



Illustrating How the Reel Is Hauled Up the Apron to the Platform

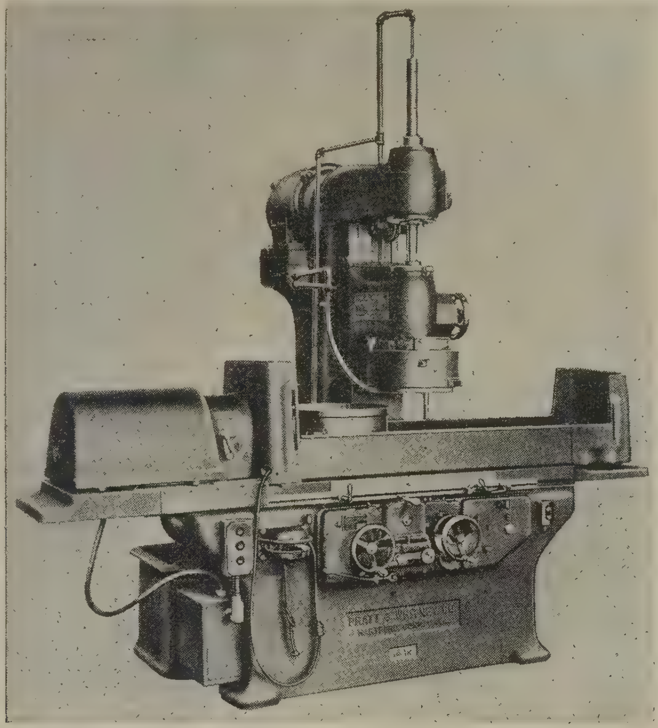
The winches slide upward on the trunnions and wind in at the same time, thus securing a double action. Previously a rather difficult handling problem, the transportation of these heavy reels is now made safe and easy. The sloping apron on the carrying table is shown in the illustration.

Engineering Foundation has issued its annual report for its thirteenth year, which ended Feb. 16. Brief details are given of a considerable number of researches under way, illustrations being shown of some of the apparatus used in the work.

New Rotary Chuck for Pratt & Whitney Vertical Surface Grinder

A separately-driven self-contained rotary chuck has been developed by the Pratt & Whitney Co., Hartford, for use with its 14-in. vertical surface grinder, model B.

The chuck is 16 in. in diameter and may be either of plain or magnetic type. It is arranged for bolting to the left-hand end of the regular table of the machine and is driven by a separate 2-hp. 1200-r.p.m. motor, which is also mounted on the left-hand end of the table. This motor drives the chuck through a two-speed gear box, spiral bevel gears and a worm and worm wheel being used to transmit the power from the gear box to the chuck. The gear box provides chuck speeds of 108 and 154 r.p.m., changes being made by means of a lever on the front of the housing. Operation is further facilitated by a push-button control which includes a jog button. The regular machine controls are used to move the table in and out under the grinding wheel.



The New Rotary Chuck Is Bolted to the Table of the Machine and Driven by a Separate Motor Through a Two-Speed Gear Box. A device for automatically locating the chuck under the wheel is available

The plain rotary chuck has its surface finished smooth for the use of fixtures, which may be held in place with screws tapped into the surface. The new magnetic rotary chuck has greater holding power than previous models. Current is carried to the coils through a new type of collector ring, and the chuck is designed so that water and lubricating oil cannot reach and damage the coils. There is a set screw at the side of either type of chuck to permit tilting it, and in thus providing for a wide range of concave and convex surfacing the usefulness of this type of machine is widened. Lubrication is supplied to all moving parts, except in the motor, from three reservoirs, and all parts are entirely inclosed to protect the gears and bearings from grit and coolant.

Electrical braking is provided for the motor so that the chuck may be stopped quickly when the power is turned off. Solenoid type braking is employed for alternating current motors and dynamic braking for direct current motors.

The new rotary chuck is arranged for tilting 1½ deg. above, or 5 deg. below, horizontal. The distance from the chuck surface to a new wheel is 7¼ in. for the plain chuck, and 4 in. for the magnetic chuck. These distances can be increased with raising blocks if desired. A special device which will automatically locate the rotary chuck under the wheel, in the proper position for grinding, is available for use on the machine. With this device the table of the machine advances to the right under power and is stopped in the correct position without attention from the operator. It is withdrawn from under the wheel to the loading position in the same manner.

Gasoline Driven Excavating Shovel

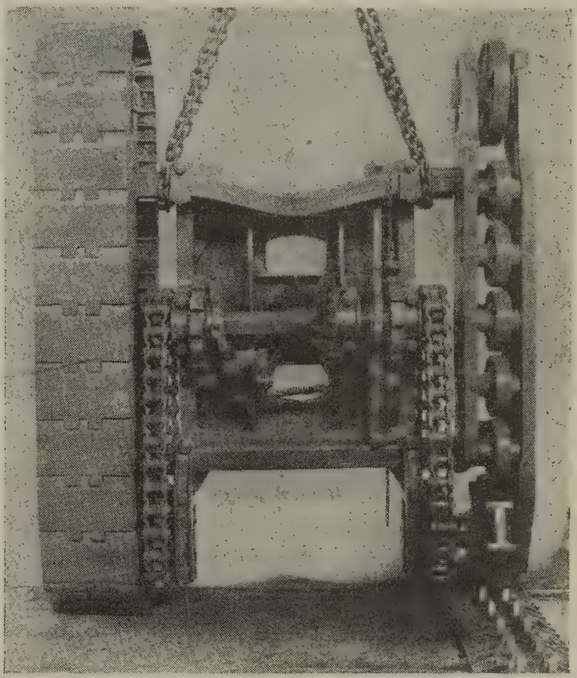
A new gasoline shovel of the full revolving type, and fully convertible to dragline, back hoe, clamshell and crane service, has been placed on the market by the Osgood Co., Marion, Ohio. The unit is mounted on a new and improved continuous-tread truck frame of the double-chain drive type.

As a shovel, the machine carries a minimum length boom of 20 ft. and a handle of 15 ft., with a back hitch type dipper. For crane service it carries a 45-ft. boom of the structural lattice bow-type, with built-in tagline, and with a fairlead for dragline service, self-adjusting to any angle of the boom.

An 80-hp., six-cylinder gasoline motor is mounted at the rear of the machine on the massive unit steel main body frame casting. Heavy unit steel sideframes securely attached to the main body casting support the drum shaft and the reversing shaft. This assures alinement of parts and reduces vibration to the minimum.

A special feature is the combination of cast iron gasoline tank and counterweight, which is set into the deck at the rear of the motor. This arrangement saves space and extra counterweight and at the same time greatly reduces the fire hazard, because of the heavy walls of the gas tank. The tank has capacity of about 75 gal., which is usually enough for a two-day supply.

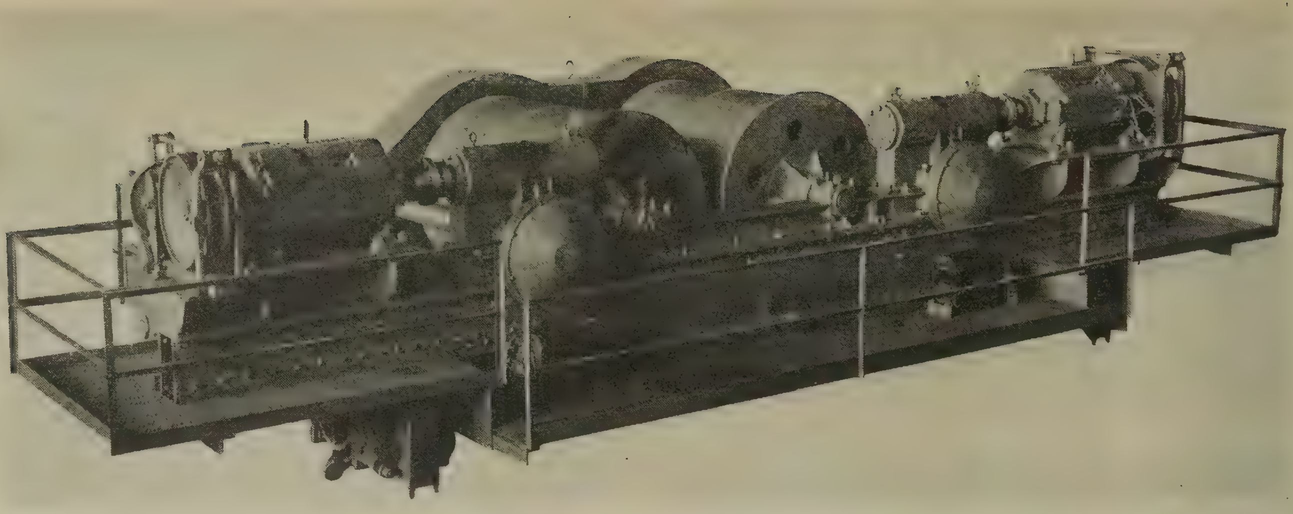
The continuous-tread truck, of the double-chain drive type, is built up of steel castings, with axles and cross-travel shaft of hammered steel. The truck frame is a single massive steel casting. The roller path gear is of cast steel with cut teeth of the outside type. It is securely riveted into place on the truck frame casting, and has a machined shoulder to hold it securely in place. The side frames are large unit castings of box section, bow type construction. Five travel rollers 14 in. in diameter are mounted within each side frame. These rollers operate on stationary shafts and are lubricated by recessed high-pressure gun fittings.



Caterpillar Tread Turned Up on End, to Show the Method of Driving

---

Shipments of electric industrial trucks and tractors in April are reported by the Department of Commerce at 137 units, compared with 131 in March. Except for last June, with 140, the April total is the largest in more than a year. It included six units for export. Of the domestic total, nine were tractors and 122 of other types.



Main Hoist of Morgan Crane for Otis Steel Co.

Crane with Four Girders and Two Trolley Tracks

Designed with various improvements to assure efficient operation, low upkeep, long life and safety, a 200-ton seven-motor, four-girder crane was built recently for the Otis Steel Co., Cleveland, by the Morgan Engineering Co., Alliance, Ohio. One feature of this crane is that the main hoist is worm driven. Besides the main trolley the crane has a 40-ton auxiliary.

Two outside or main girders support the main trolley while the two inside girders support the auxiliary trolley. The design permits full travel of each trolley on its own set of girders; the small trolley may pass underneath the larger one without interference. The bridge of 59-ft. span is carried on double compensating trucks, eight in number, and connected by structural steel equalizers. A total of 16 heat-treated steel wheels 30 in. in diameter supports the load. The bridge is driven by two 85-hp. Crocker-Wheeler mill-type motors. Full magnetic control is used throughout.

The main trolley of 200-ton capacity is supported on four cast steel compensating trucks bearing on eight heat-treated steel wheels 24-in. diameter. The main trolley frames, as shown in the view, are heavy structural steel beams to which are attached cast steel brackets. The main hoisting mechanism consists of two interlocked drums driven by two 110-hp. Crocker-Wheeler mill-type motors through individual trains of worm and spur gearing. Each motor is connected with the driving worm by a flexible coupling, which compensates for any slight misalinement. The worm is an alloy steel forging, carbonized, heat treated and ground, and is carried in roller bearings in the cast steel housing. The worm wheel is a bronze alloy rim with hobbed teeth, bolted to a cast steel center. The entire unit is inclosed in a steel housing and runs in an oil bath. It is stated that the worm reduction unit is highly efficient and makes a quiet and smooth running hoist.

Under normal conditions each hoisting unit takes an equal share of the load, but should the current be cut off from one motor the entire load may be temporarily handled by the active motor. This emergency is taken care of by means of the Morgan patented compensating ratchet device, which temporarily allows one motor to lift the entire load without turning the idle motor. It is stated that where interlocking drums are used the compensating ratchet device is necessary to prevent breakage in the hoisting mechanism.

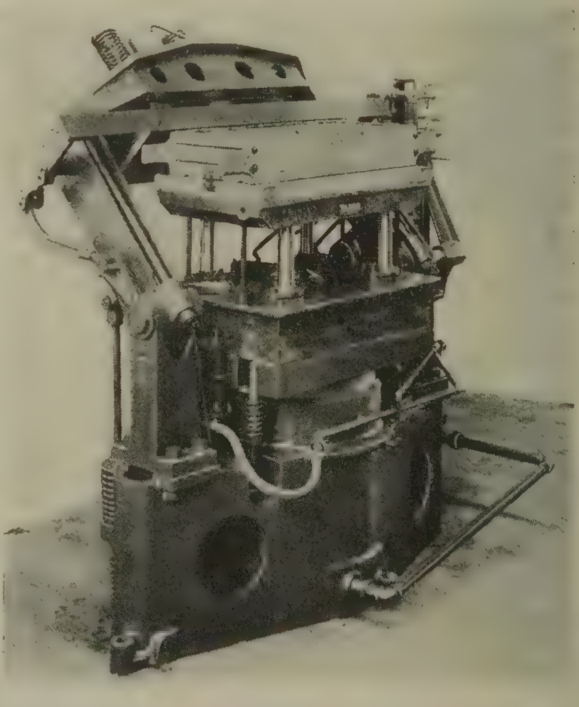
An 85-hp. motor drives the 40-ton auxiliary hoist. This trolley is carried on four 18-in. track wheels. The trolley frame, motor supports and sheave supports of cast steel are cast integral, thus eliminating loose and bolted parts. Sheaves are equipped with Hyatt roller bearings, and the bridge trucks are so arranged that these bearings may be added if desired.

Jarring, Stripping, Squeezing Machine for Automobile Manufacture

Use of the trunnion type yoke in place of the pintle swung yoke is one of the features of a 30-in. jarring, stripping, squeezing, molding machine made by the Tabor Mfg. Co., Philadelphia, for a manufacturer of high-grade automobiles. The machine is of the Tabor flask life type, embodying the company's shockless jarring machine principle. The mold is vented by an air-operated head mounted in the yoke and the automatic strike-off is another special feature.

Circuit Breaker for Heavy Current

An oil circuit breaker adapted for service where a relatively compact unit for heavy alternating current, 2500 volts or less, is required has been developed by Westinghouse Electric & Mfg. Co., East Pittsburgh, Pa. The breaker is self-contained, the pole units, operating mechanism and control panel all being carried on a rigid steel frame arranged to mount on and bolt to the floor. The tanks can be lowered to the floor and removed from either side of the breaker. Current-carrying studs are arranged for direct bolted connection to the buses. The standard arrangement for operating the breaker is by an electric solenoid mechanism.



One Feature of This Machine Lies in the Employment of the Trunnion-Type Yoke. Automatic strike-off is provided

Business Analysis and Forecast

BY DR. LEWIS H. HANEY

DIRECTOR, NEW YORK UNIVERSITY BUREAU OF BUSINESS RESEARCH

Statistical Data Concerning the Chief Consuming Industries Indicate That:

Expansion of activity in chief consuming industries has been halted and further decline may be anticipated.

Car and locomotive buying in April showed a good gain, but surplus cars give little promise of early orders.

Automobile production is clearly expanding and has been a recent leader in upholding steel demand.

Building volume continues large, but expansion may not be sustained; structural sales are declining.

Iron and steel exports have held up well, but are not expected to expand.

It looks very much as though steel production is developing in excess of requirements. Of course, one might draw this conclusion from the mere fact that prices in general are weak. Ordinarily, if production is well in line with requirements, there would be no such prevalence of price concessions and failure to hold announced prices as now exist. However, our statement is based on the statistical fact that in April the average daily rate of steel ingot output rose well above its usual relation to the activity in the chief steel consuming industries. Production in March was moderate in comparison with the composite demand line. In fact, this is true of the whole first quarter. But apparently this condition has stimulated activity in production unduly, causing the ingot output curve to rise with unusual sharpness, considering the season. *The upturn in our adjusted index in April has not been equaled since the same month in* 1923.

Index of Composite Demand is Lower

In March, however, our index of the average activity in the steel consuming industries declined, and present indications are that a further decline will appear in the April figures. Even if there is no decline, the curve of indicated consumption requirements will be below the production curve, which of course means a tendency to over-production. As long as production is above the level indicated by the composite demand line, steel markets will be in an unstable equilibrium, prices will be weak, and ultimately curtailment will inevitably occur.

Production may show only the usual seasonal decline for several months, as was the case at this time in 1923, when the seasonally adjusted curve held steady through July; but the longer curtailment is postponed, the more drastic will probably be the final readjustment. The normal seasonal movement in steel production calls for a 12 per cent reduction in the average daily ingot output between April and July. That is, unless a reduction of that amount occurs, production will become more excessive—assuming that the composite demand line does not rise in the meanwhile.

The decline in the composite demand line in March was due (1) to the failure of railroad freight traffic to show a normal seasonal gain; (2) to a sharp reduction in the rate of building contracts (floor space); (3) to a slight recession in general manufacturing. That the decline was no sharper was due to a slightly more than seasonal gain in automobile production and exports, and a well maintained volume of mining and agricultural requirements. The fact that machine tool orders increased in March may be mentioned, also.

Conditions in Definite Lines

As to the future of the requirements of steel, the following observations seem pertinent:

1.—The demand from *railroads* does not seem likely to show much if any increase. April freight tonnage

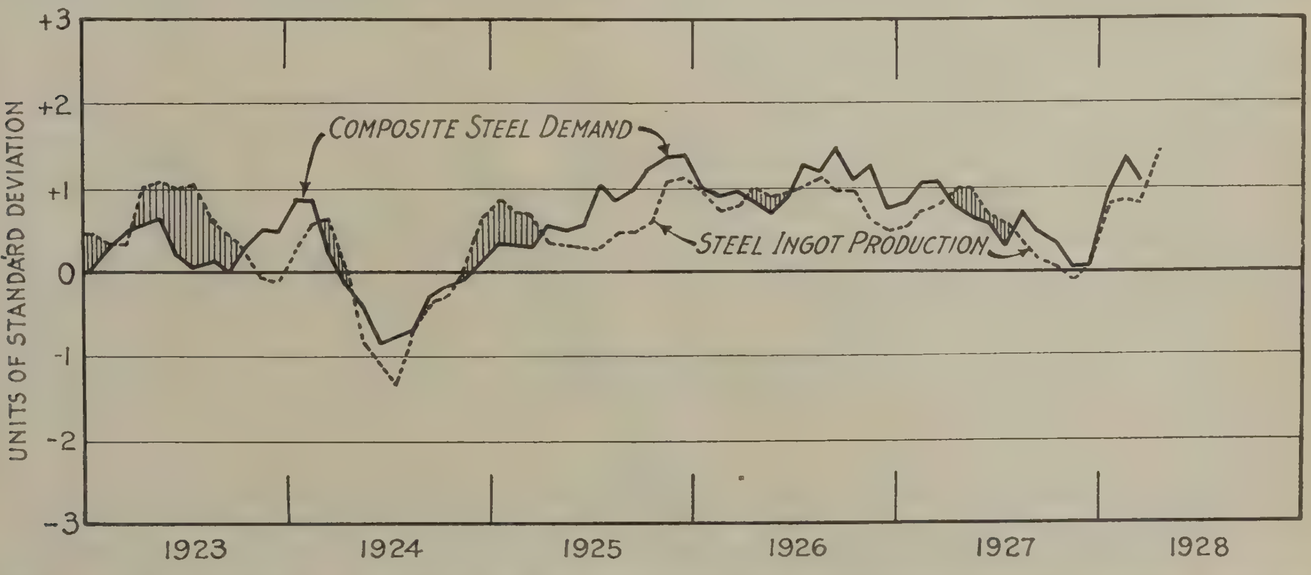


Fig. 1—*Steel Production Has Advanced Still Further Above the High Levels of January to March. But the curve of composite demand declined in March and the outlook for the immediate future is less encouraging*

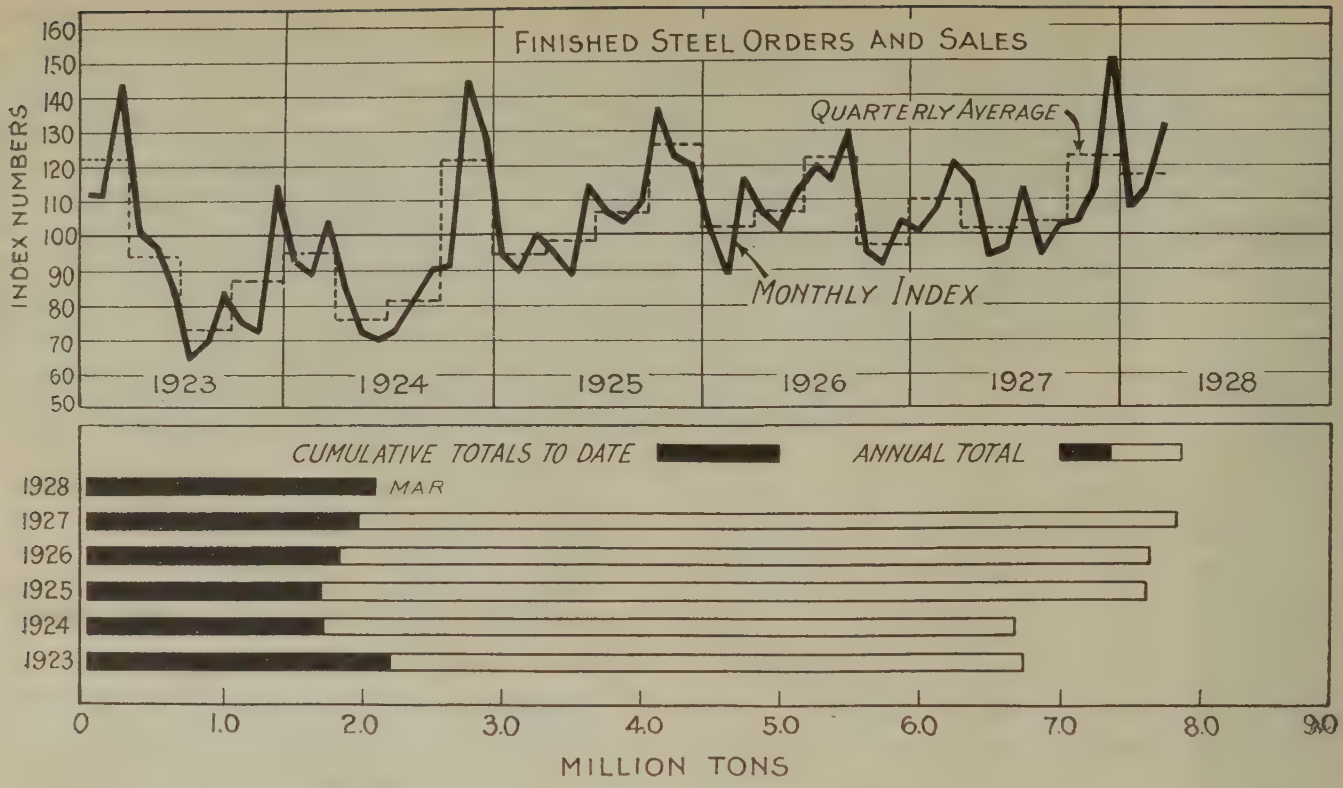

Fig. 2—Buying of Finished Steel Showed a Good Seasonal Increase in March, and the First Quarter Was the Highest First Quarter Since 1923

declined sharply, when allowance is made for seasonal conditions, and our index is only 99.4 per cent of the average for the last seven years, in comparison with 106.3 per cent in March. The trend of railroad gross revenues has been downward and only through drastic economies has net income been maintained fairly well by the carriers. The condition of the coal business and the prospects for a let-up in building activity make the outlook hardly fair, either as to the carriers' needs or as to their ability to pay.

2.—*General manufacturing* activity (excluding the steel and automobile industries) declined a little in March, which is an unfavorable sympton. Our adjusted index has not declined previously in that month since 1924. The prevalence of severe competition and narrow margins of profit is to be noted. There was a sharp decline in retail trade in April, which indicates the effect of unemployment and bad weather. The P-V line has fallen a little lower. It seems doubtful if manufacturing activity will be maintained at present levels much longer.

3.—In view of the upward trend in money rates, speculative *building activity* will probably soon be checked. Already the volume of real estate transfers has declined. But construction contracts made a little recovery in April, increasing more than usual for the season, so that any decline in building is not likely to be sharp. Building permits, however, slumped rather badly in April and, as the trend of such permits generally leads the contracts awarded, it seems probable that some decrease in the actual volume will be seen within a month or two. It will be noted that the awards of structural steel have tapered off during the past four or five weeks. The decrease in residential building may be partly responsible for the situation in the market for nails. Building has been one of the mainstays of the demand for steel this winter and spring, so that any recession here will probably necessitate curtailment in production.

4.—The *automobile industry* has been the largest factor in the increase of steel consumption. Here we find the seasonal peak reached, and early estimates for April indicate that some decline occurred, in spite of the fact that normally an increase was to have been expected. Ford production is gradually expanding and at the same time we see signs of even keener competition. It seems probable that the steel industry has already enjoyed the maximum stimulus from the 1928 automobile program, and that some decrease in orders from that quarter is near at hand.

5.—*Mining* (including the oil industry) continues about steady at a low level, with no prospects of early improvement. The coal industry is depressed and, although the average daily output of bituminous coal turned downward sharply in April, the price situation has not become any more favorable. Oil refining has

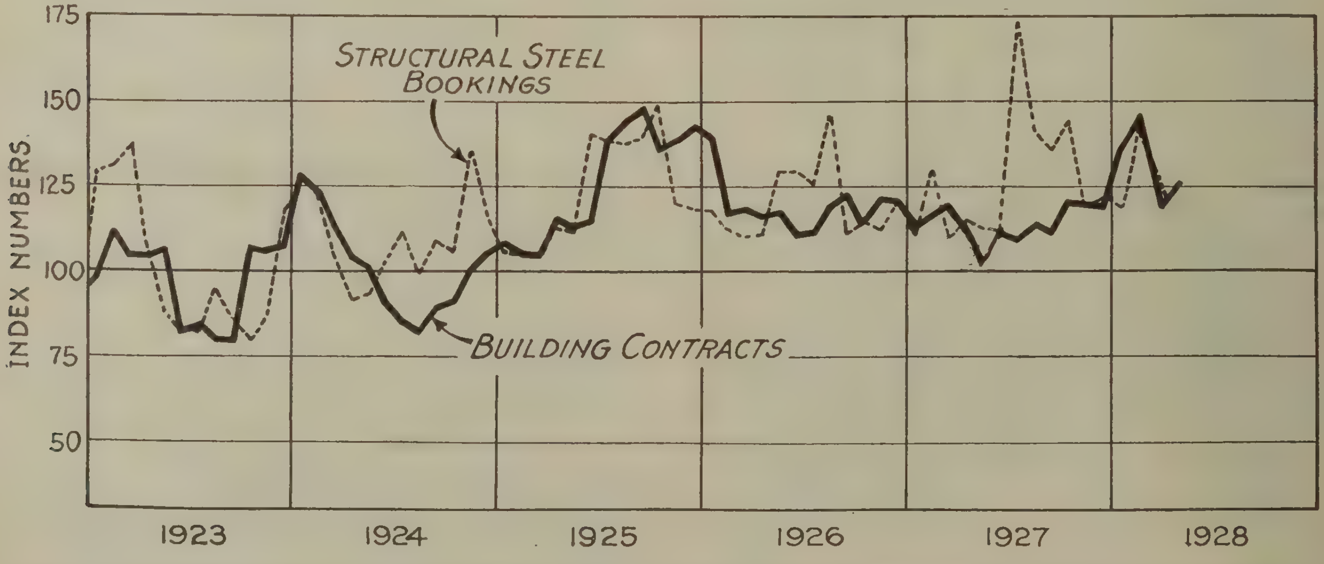

Fig. 3—Building Contracts Have Remained High But Show Signs of Slackening. Structural steel bookings declined in March by more than the usual amount

become a little more profitable during the last month or two, due chiefly to higher gasoline prices. But crude oil production and imports continue excessive, in spite of the low domestic drilling activity. The copper industry is fairly prosperous and prices are firmer, but probably copper markets are maintained largely as a result of a very moderate rate of production, which naturally does not indicate any large consumption of steel.

6.—The demand for *agricultural machinery* has been good for some months and has supplied the steel business with an appreciable volume of orders. Just now a little seasonal let-up is to be expected. As to the situation in the second half of the year, we receive reports that dealers' stocks are small, which would suggest the possibility of renewed activity in the agricultural implement industries. Some food for thought, however, may be seen in the fact that the outlook for some of the staple grain crops and cotton does not seem to be good. The higher the prices for wheat, the smaller the acreage to be harvested is likely to be.

As to steel *exports*, it must be admitted that they have held up very well, in spite of the increase in foreign production. Apparently no early let-up is to be anticipated. Nevertheless, developments in foreign exchange and in the capacity of European steel producers do not lend much support to any hope of further gains.

On the whole, the prospects seem to indicate a gradual decline in the activity of the chief steel consuming industries. Also the narrowness of the margins of profit in most industries does not indicate a strong purchasing power. Nor does it seem likely that any considerable shortages of material or equipment exist. We conclude, therefore, that the composite demand line will show a downward trend, and that the longer steel ingot production moves against the seasonal trend, the more severe will be the ensuing readjustment.

Highest First Quarter Since 1923

OUR second chart shows the trend of orders or sales covering some of the chief items of finished steel. No adjustment for seasonal variation is made in this chart. The finished steel orders curve showed a good seasonal increase in March. The index for that month was the highest to be found in any March since 1923. In fact, the total for the first quarter is larger than any other first quarter since 1923—an unusually small decline from the total in the preceding quarter. This fact is not out of line with the indications as to the industrial requirements of the country, as shown in the composite demand line. It reflects the large increase in automobile production and the high level of building activity.

The outstanding factor in the March gain in orders is found in the large volume of sheet sales. The increase in sales of sheets was not much more than usual for the season, but it carried the March figure to a new record, the 399,400 odd tons of sheets sold in that month comparing with 325,500 tons in March, 1923.

Structural steel bookings were large also, in comparison with February, but decreased more than usual for the season. Nor was the March volume so extraordinarily large in comparison with the same month in recent years as was the case with sheets. Moreover, current reports indicate a decline in structural business during April, in which month there is usually a gain. The average weekly structural awards amounted to only 31,000 tons, against an average of 37,000 tons in March. Fabricated plates made a relatively poor showing, the sales declining in March, as they did last year. The volume was below that of a year ago and far under the level reached in March, 1923. Bookings of steel castings decreased in March also, and were the lowest for the month since March, 1922.

Thus sheet tonnage has been the chief factor in the high first quarter level of orders for finished steel. This confirms the opinion that the automobile industry, not building activity, has been the leader in the recent expansion.

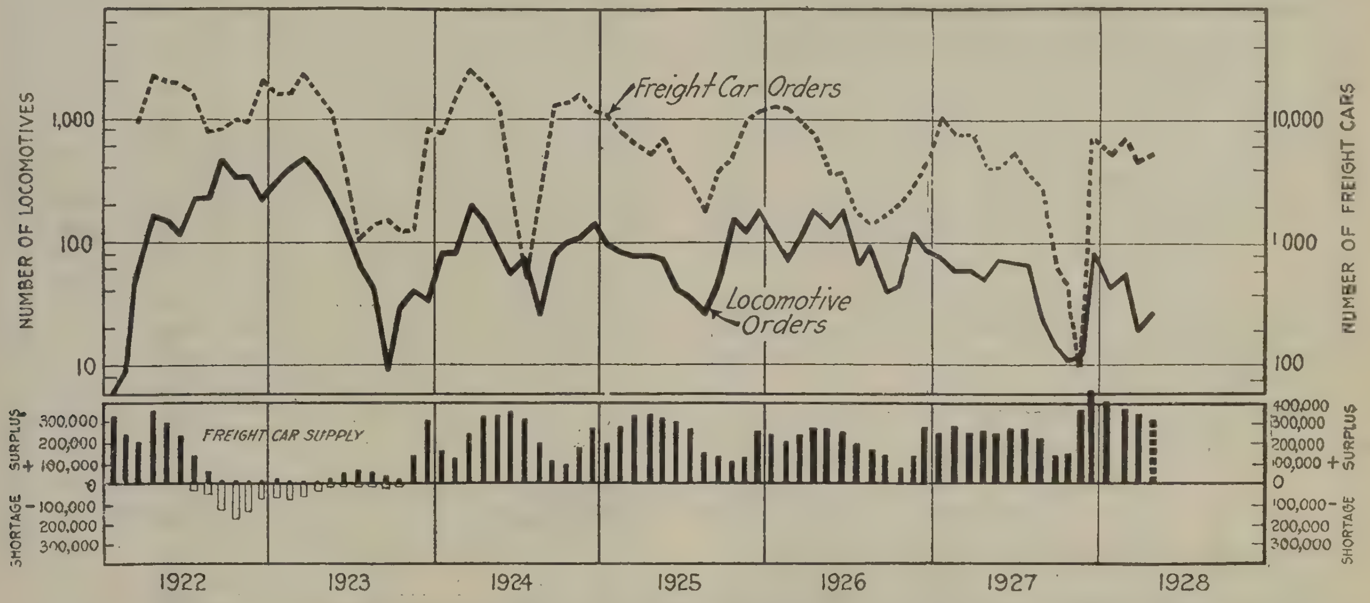

Fig. 4—Locomotive and Railroad Car Orders Were Higher in March. But the large surplus of cars does not indicate immediate need for heavy purchases

Building Less Buoyant Than Reported

ACCORDING to our interpretation, the building data for April do not furnish the basis for so much optimism as has appeared in the press statements. The floor space in contracts awarded certainly made no new record. There is usually and normally an increase in April, and this year the April figures did little more than average in this respect. Allowing for seasonal variation, building is far below the rate that was maintained between July, 1925, and January, 1926, inclusive. Moreover, it is considerably below the rate in January and February of this year. It is true, however, that building contracts continued much above the average of recent years, and that the interruption of the sharp March decline is encouraging. We may look for a good volume of structural steel business, but it is doubtful if there is reason to expect that any sustained expansion is beginning.

Structural steel bookings declined in March, and the

Schedule of the next instalments of the ***Business Analysis and Forecast,*** *by Dr. Lewis H. Haney, Director New York University Bureau of Business Research, follows: May 24—Position of Iron and Steel Producers;* ***June 14****—Activity in Steel Consuming Industries.*

---

decline was greater than usual for the month. This trend followed closely that of building contracts (see Fig. 3). Normally the bookings gain about 7 per cent in April. This year, however, the weekly trade figures indicate a decline in structural steel awards last month. If this indication is correct, we may infer that the increase in building contracts involved a smaller quantity of steel than usual.

Some Recovery in Railroad Orders

RAILROAD equipment orders last month made a fair showing as to trend. Orders for both cars and locomotives were larger than in the preceding month and in the same month last year. According to *Railway Age*, 33 steam locomotives were ordered by domestic companies. Except for last year, this is the lowest volume of April business in a good many years. Moreover, while the total unfilled orders of the locomotive manufacturers increased a little in April, shipments declined to a greater extent, thus indicating that total orders fell off.

Freight car orders in April amounted to 5318, which compares with 4470 in March and 3362 a year ago. These figures, however, are very small when contrasted with the business done in earlier years. Thus, in 1922 April orders amounted to 34,192; in 1923 to 10,420; in 1924 to 11,903.

The plain fact is that railroad traffic is not expanding so much as usual and that the carriers on the whole have neither the need nor the income for large purchases of equipment. As shown in the fourth chart, they have a large surplus of freight cars in good condition.

British Iron and Steel Output Small in April

LONDON, ENGLAND, May 14 (*By Cable*).—Pig iron production in April was 555,000 gross tons and that of steel, castings included, was 644,100 tons. Both are next to the smallest this year.

A comparison of the April output with that of the other three months of the year and with the monthly rate for previous years is as follows in gross tons:

	Pig Iron, Tons	Steel Ingots and Castings, Tons
1913—Average monthly......	855,000	638,600
1920—Average monthly......	669,500	755,600
1922—Average monthly......	408,500	490,100
1923—Average monthly......	620,000	706,800
1924—Average monthly......	609,900	685,100
1925—Average monthly......	519,700	616,400
1926—Average monthly......	203,500	296,700
1927—Average monthly......	607,800	758,200
1928—January	560,600	626,200
1928—February	550,800	764,400
1928—March	592,600	793,300
1928—April	555,000	644,100

April Construction Contracts Broke All Records

Building contracts in the 37 States east of the Rocky Mountains made a new high record in April, according to F. W. Dodge Corporation. The total was $643,137,000, exceeding the previous high mark, in June, 1927, of $632,478,000, by nearly 2 per cent. Only five other months—August, 1925, March and August, 1926, and March and April, 1927—have reached $600,000,000.

For the first four months a new record was made, at $2,128,204,000, a gain of 6 per cent over last year.

April made the highest total ever reached in the Middle Atlantic States and the highest April in both New England and the Central West. It was the second highest April in the Southeastern States. There was a falling off, however, in the Pittsburgh district, in the Northwest and in Texas.

Average weekly earnings in representative factories in March are reported by the New York State Industrial Commissioner at $29.64. Except for the $29.78 of March last year, this is the highest monthly figure ever reported. It represents a gain of 48c. over February, this being about 1.7 per cent.

SHEET SHIPMENTS HEAVY

Slump in Sales Cuts Backlog—Record Four Months' Output

THE interesting feature of the monthly report of the sheet division, National Association of Flat Rolled Steel Manufacturers, 511 Terminal Tower Building, Cleveland, is that the shipments and the production of steel sheets in April were practically the same. The difference was only 235 tons. Shipments exceeded sales for the month by 43,604 tons. Unfilled orders at the end of April amounted to 571,761 tons, a decrease of 103,435 tons, compared with the total at the end of March. The unfilled orders as of March 31, plus the sales of April and minus the shipments, would have produced unfilled orders of 631,592 tons at the end of last month, but the official report gives a total of 59,831 tons lower.

For the first four months of the year production was 1,341,142 tons, which is a record for that period. This record gains further importance from the fact that the most active period in sheets, the report discloses, is in the first quarter of the year and the figures and comparisons include that period. The nearest approach to this year's showing was in 1926, when the production for the first third of the year was 1,297,139 tons. Shipments in the same period this year were 1,259,752 tons, or approximately 27,000 tons more than in the same period in 1926, which stood out as the best year in the history of the sheet industry.

Production and shipment figures for the first four months of the past four years, in net tons, compiled from the monthly reports of the sheet manufacturers' association, make the following comparison:

	Production	Shipments
1928 (four months)......	1,341,142	1,259,752
1927	1,241,467	1,139,725
1926	1,297,139	1,232,893
1925	1,171,104	1,071,336

The April report with comparisons follows:

	April	March	February
Total number of mills..	721	721	718
Capacity per month....	464,422	492,150	461,750
Percentage reporting...	72.2	72.3	72.6
Sales	284,070	399,441	266,210
Production	327,909	366,127	330,565
Shipments	327,674	359,532	298,420
Unfilled orders	571,761	675,196	667,054
Unshipped orders	109,200	110,702	......
Unsold stocks	53,853	53,144	......
Percentages to Capacity			
Sales	84.7	112.4	79.5
Production	97.8	103.0	98.7
Shipments	97.7	101.1	89.1
Unfilled orders	170.4	189.9	199.2
Unshipped orders	32.6	31.1	....
Unsold stocks	16.0	15.0	....

Large Shipments of Galvanized and Enameled Sheet-Metal Ware

WASHINGTON, May 15. — Shipments of enameled sheet-metal ware in March, as reported to the Department of Commerce from 18 manufacturers, comprising approximately 80 per cent of the industry, were 442,689 dozens, valued at $1,665,470, as compared with 372,848 dozens, valued at $1,459,188, in February. The March total, comparing with 440,689 dozens and $1,484,980 in March, 1927, was the largest in considerably more than a year.

March shipments of galvanized sheet-metal ware, as reported to the Department of Commerce by 15 concerns comprising a large proportion of the industry, were 220,677 dozens, valued at $824,143, as compared with 188,487 dozens, valued at $727,257, in February. In March, 1927, the totals were 213,672 dozens, valued at $790,371. Except for April, 1927, the most recent totals were the largest in more than a year.

Index numbers of wholesale prices on the pre-war base, and covering the period from 1890 to 1927, inclusive, have been published by the United States Bureau of Labor Statistics, Washington. The pamphlet is of 52 pages and gives the month-by-month figures for groups of commodities. For 1927 the monthly details are given for the hundreds of individual commodities used in making up the groups.

Fifth Largest Year in Production of Rolled Steel

PRODUCTION of all kinds of finished rolled iron and steel in 1927 is reported by the American Iron and Steel Institute at 32,879,031 gross tons. This is a reduction of 7.37 per cent from the record total of 35,495,892 tons in 1926. It has been exceeded by only three other previous years—1917, 1923 and 1925—each of which made between 33,000,000 and 33,400,000 tons. Of the 1927 total, steel accounted for 32,334,687 tons and iron for 544,344 tons, the latter being only 1.66 per cent of the aggregate. Comparison may here be made with 1921, when the iron tonnage was almost precisely the same as in 1927, whereas the steel tonnage was considerably less than half that of last year. The proportion of iron is dwindling rapidly.

Structural shapes made a tonnage in 1927 second only to the great total of 1926. Plates and sheets, taken as an aggregate, made the largest total ever recorded, with the exception of 1925 and 1926. Steel black plates for tinning were second only to 1926. Concrete bars, showing a slight gain over 1926, made the largest total on record with the exception of 1925, which was less than ½ per cent greater. Skelp made the third largest year's total, having been exceeded only by 1923 and 1926. Galvanized sheets and formed

otal Production of All Kinds of Finished Rolled Iron and Steel, 1891-1927

*Does not include black sheets rolled on sheet mills and used in the manufacture of long terne plates.

products came within ¼ per cent of the record-breaking total of the preceding year. Tin plate made its second largest total, having been exceeded only in 1926 and by less than 7 per cent. Seamless tubes made a new high record, as did also cast iron pipe. The latter exceeded the total of 1926 by less than 2 per cent, but the seamless tubes were almost 12 per cent ahead of the previous record, made in 1926.

Production of Heavy and Light Structural Shapes, Gross Tons, 1916-1927

Small quantities of copper-clad steel wire rods are included.

Production and Shipments of Portland Cement in Close Balance

Production of Portland cement in April is reported by the United States Bureau of Mines at 13,468,000 bbl., representing a seasonal advance from the 10,223,000 bbl. of March. The figure is about 4 per cent under that for April, 1927, at 14,048,000 bbl. Shipments in April were 13,307,000 bbl., being within about 1 per cent of production. As a result, the increase in stocks at the end of the month was very slight, the total having been 27,605,000 bbl. This figure is the highest in considerably more than a year, but should decline seasonally every month until November.

For the first four months of the year production amounted to 42,256,000 bbl. This is a new high record for the first third of a year, having displaced the previous record of 41,133,000 bbl. made in the first four months of 1927.

American Share of the Automobile Industry in 1927

Numerous facts regarding the automobile industry are covered in the 1928 edition of "Facts and Figures of the Automobile Industry," issued by the National Automobile Chamber of Commerce, 306 Madison Avenue, New York. The publication covers 96 pages, including a number of diagrams and a wealth of statistical material.

Among the other pertinent facts brought out, it is shown that at the end of last year there were 23,127,315 motor vehicles in the United States, of which 2,896,886 were trucks. Production in the year is given as 3,573,671 units, of which 487,653 were trucks. Of the passenger cars, 83 per cent, representing 2,555,223 units, were closed cars. The wholesale value of vehicles and parts is given as $4,274,800,743. More than one-third of this total represents replacement parts, accessories and tires. Production figures, including values, are for the United States and Canada. Exports of automobiles from the United States are given as 461,124 units and the value, including parts, accessories and tires, was $449,277,117.

One innovation in the book this year lies in the fact that the heads of tables are expressed in French, Spanish and German, as well as in English. This international feature is emphasized by a two-page table showing the number of passenger cars, buses, trucks and total motor vehicles in about 150 countries and colonies. The total for the world as of Jan. 1, 1928, is given as 29,505,475, of which 78 per cent is in the United States. Our proportion of the passenger cars is rather higher than this, being slightly above 80 per cent. In buses we have less than half the total, with 46 per cent. In trucks we have about 68 per cent of the aggregate.

As to production, the United States in 1927 registered 81.6 per cent of the total. The world aggregate is given as 4,151,449 vehicles, of which trucks and buses accounted for 575,848. Great Britain stands second as a producing nation, with 5.5 per cent, France being third with 4.6 per cent, and Canada fourth with 4.3 per cent. None of the other countries reached 2 per cent of the total.

Declining Stocks of Industrial Coal

Bituminous coal in the hands of commercial consumers in the United States on April 1 is estimated by the Bureau of Mines at 48,300,000 net tons. This represents a decline of 3,200,000 tons, or 6 per cent, from the corresponding figure of Feb. 1. It is the lowest recorded figure since Oct. 1, 1926. A year ago, in anticipation of a coal strike, the stocks had been built up to the unprecedented figure of 75,000,000 tons. Monthly declines from that total have been almost uninterrupted.

Estimates of the National Coal Association place the production of bituminous coal in the week ended May 5 at 8,100,000 net tons. This is about 1 per cent less than the figure for the preceding week, as reported by the United States Bureau of Mines, but is 2½ per cent higher than the total for the week ended April 21.

Employment Conditions Good in Ohio

April employment in the machinery industry of Ohio was the highest since June, 1927, according to the current bulletin of the Bureau of Business Research, Ohio State University. Reports from 182 companies comprising machine tool manufacturers, builders of electrical machinery, foundries and machine shops put the index figure at 102, with an average month in 1923 taken as 100. Dayton with 152, Cincinnati with 106 and Cleveland with 101 were the centers employing the highest percentage of wage earners. In the first four months of 1928, however, employment was 6 per cent less than in the same months last year.

In the iron and steel industry the index fell one point in April, to 101, and the average employment during the first four months of the year was 1 per cent under that in the same period of 1927. Manufacturers of automobiles and parts employed 5 per cent more workers in April than in March, but 13 per cent less than in April, 1927. In the non-ferrous metal group the number of employees in April was 13 per cent greater than in the same month last year. With 569 companies reporting from all industries, manufacturing employment in Ohio during April stood at 102, the same figure as in March.

The Department of Practical Mechanics, Purdue University, Lafayette, Ind., will offer a nine-week course in welding, beginning June 14. Applications will be filed in the order in which they are received, up to the capacity of the laboratories and the equipment.

British Buyers Await Lower Prices

Reduction Expected Soon—Continental Markets Advancing—British Mill Dismantled for Shipment to Australia

(By Cable)

London, England, May 14.

CLEVELAND pig iron is rather more active and makers are anticipating increased export demand with Continental costs increasing. Cleveland output is restricted and prices are being maintained.

Hematite is quiet and selling prices are said to be below cost, but demand is insufficient to enable makers to advance quotations. Foreign ore is dull. Renewed efforts have been made to end the Swedish miners' strike this week.

Finished steel is dull, particularly for export and in the shipbuilding trades. Domestic consumers are moderately busy, but buyers generally are waiting on the steel makers' meeting Wednesday, May 16, when, it is believed, lower prices may be adopted. There is an inquiry from the United States for more than 125,000 tons of welded steel pipe.

Tin plate activity continues and works are heavily sold for several months. Consumers at home and abroad have bought freely and there are important inquiries in the market. Galvanized sheets are dull and black sheets quiet.

Baldwins, Ltd., is dismantling the heavy mill and rolling gear of the Margam works at Port Talbot, erected during the war, and shipping it to Australia for re-erection at the new plant of the Australian Iron & Steel Corporation in which Baldwins, Ltd., and Dorman, Long & Co. are interested.

April exports of pig iron totaled 28,174 tons, of which 50 tons went to the United States. The total exports of iron and steel were 344,333 tons.

Continental iron and steel prices are strong as a result of the advance in German miners' wages, higher priced ore and the stoppage of Rhine traffic. Continental works are reported to be well booked with orders, but little of the business has passed through the hands of traders in this country.

GERMAN EXPORT TRADE BETTER

Domestic Business Also Active as Consumers Increase Stocks—Coal Exports May Be Restricted

Berlin, Germany, April 28.—Business conditions are considerably better, partly because of seasonal activity. The improvement, however, extends to branches of industry in which there is not much seasonal fluctuation in trade. The total number of unemployed had declined by April 15 to 997,000, compared with 1,600,000 Feb. 15. Only 5 per cent of the members of the metals labor unions are reported without employment. There is a growing belief that the business reaction that was expected to develop as a result of the activity in 1926 and 1927 will not prove so serious. While manufacturers of finished products report a smaller volume of business, producers of semi-finished or raw materials in all fields are as well booked as at any time in the past two years. The Institute for Study of Trade Statistics points out that the present satisfactory situation is the result of increasing export orders, which have offset the moderate decline in domestic consumption.

Allowing for the rise in prices, export trade is virtually back to the pre-war level. In March, for the first time since the war, total exports, exclusive of precious metals, were in excess of 1,000,000,000 m., and the monthly average, since Jan. 1, has been 942,000,000 m.

Coal Exports to Be Reduced

The Ruhr coal dispute has not yet been settled. The Ministry of Industry has declared that the decision providing an 8 per cent increase in miners' wages will be enforced. The operators have decided temporarily to reduce exports of coal, on which there is a loss, and this is expected to react to the advantage of Great Britain and Poland. The total amount of the reduction in exports will be decided as soon as the producers ascertain the amount of increase that the Federal Coal Council will permit in domestic prices. Application for an increase

British and Continental European prices per gross ton, except where otherwise stated, f.o.b. makers' works, with American equivalent figured at $4.87 per £ as follows:

Durham coke, del'd.	£0	17½s.				$4.27		
Bilbao Rubio ore*	1	2½				5.48		
Cleveland No. 1 fdy.	3	8½				16.56

Germany	6	1				1.34		

(a) Nominal.

has been made, and some coal operators are urging that they be given entire freedom to fix prices, as prior to the war. They contend that the public has protection in the cartel regulations, which permit the Government to take action in case prices become unduly high, and in the keen international competition, foreign coal entering the country duty free.

The possibility of a coal strike has had the effect of reviving the iron and steel markets. As in December and January, when a lockout in the steel industry was threatened, consumers have been buying heavily to build up stocks before there is an increase in steel prices. Demand for steel bars, structural material, wire rods and sheets is active. In pig iron some producers who blew out furnaces recently, in expectation of a dull period, have more tonnage booked than they can supply at their current rate of operation. The present activity, however, is not expected to last long.

Deny That Export Rebates Are Bounties

A reply to a new American complaint that rebates paid to exporting manufacturers are equivalent to export bounties is published by the Essen *Bergwerks-Zeitung*, a daily publication for the steel industry. The substance of the reply is that Germany exports only at "world market prices," which are determined on the Brussels Metal Exchange, and that on some German products higher prices prevail than on the same products from France, Belgium or Luxemburg.

The recent quarterly report of the Vereinigte Stahlwerke A. G., Düsseldorf, showed that, except for pig iron, production in the first quarter exceeded that of the fourth quarter of last year. Unfilled orders on April 1 were 99.9 per cent of the unfilled tonnage on Jan. 1, but a larger percentage of the orders was for export shipment. The number of workmen employed April 1 was 182,014, compared with 182,235 on Jan. 1. Steel ingot output was 1,842,187 metric tons, compared with 1,831,538 metric tons in the final quarter of 1927, and pig iron production was 1,703,105 tons, compared with 1,725,719 tons in the last quarter of last year.

The Mannesmann Buizen Handels Matschappy has been established by the Mannesmann interests at Rotterdam to handle sales of pipe and tubing. The Linke-Hofmann Co., Breslau, the Sachsen Waggon Fabrik, Bautzen, and the Waggon Fabrik Busch, Bautzen, have negotiated a merger. With the exception of the Gorlitzer Waggonwerke, all the leading railroad car building companies of Saxony and Silesia have been consolidated.

FRENCH EXPORT PRICES FIRM

Mills Well Booked with Orders—British Pig Iron Still Offers Keen Competition

PARIS, FRANCE, May 4.—The export market, which during recent weeks was rather irregular, is again firm, and at the Brussels Bourse, April 25, the previous minimum quotations were not obtainable. On May 2, the price situation was even firmer. However, some foreign consumers, particularly those in the Far East, are unwilling to pay the prices now being asked, and it is reported that British and Continental exporters are, in a few cases, accepting orders speculatively at lower prices.

In some quarters it is believed that there will be a continuation of the present firmness in prices, and stress is laid upon the fact that, although the steel output of the first quarter of this year exceeded the allotments to all members of the International Steel Cartel by about 1,200,000 metric tons, prices are strong with an upward tendency. Another favorable factor in the present market is the tonnage of rail orders being executed by French mills. The domestic market has been quiet, probably as a result of the election, but prices continue firm.

Pig Iron.—Export prices show irregularity because of keen British competition, and as low as £3 7s. ($16.32), f.o.b. Antwerp, is reported to have been done on an order for 3000 tons of Cleveland foundry iron. Domestic foundry is fairly firm at £3 2s. to £3 2s. 6d. ($15.10 to $15.22) per metric ton, f.o.b. Antwerp. March output of pig iron was 858,000 tons, which constitutes a record, the highest previous production for one month, in December, 1926, having been 827,000 metric tons. Of the March production, 671,000 tons was basic, 109,000 tons foundry and 1000 tons forge iron. Included also was 35,000 tons of hematite foundry, 21,000 tons of hematite forge and Bessemer iron and 21,000 tons of ferroalloys. This record output was reached with 149 furnaces in blast, four more than at the beginning of the year and six less than were in operation in December, 1926. Demand for basic iron is increasing, but May purchases of foundry grade are expected to be smaller than in April, as foundries are less active.

Semi-Finished Material.—Prices for export are firm, with blooms at £4 2s. to £4 4s. 6d. ($19.97 to $20.58) per ton for large and medium sizes and £4 10s. to £4 12s. ($21.92 to $22.41) per ton for small sizes. Billets range from £4 11s. to £4 14s. ($22.16 to $22.90) per ton, f.o.b. Antwerp. Sheet bars are quoted at £4 14s. to £4 14s. 6d. ($22.90 to $23.02) per ton.

Finished Material.—Export prices are decidedly firmer and in some cases have advanced. Merchant bars are quoted, f.o.b. Antwerp, at £5 7s. 6d. to £5 8s. 6d. per ton (1.19c. to 1.20c. per lb.), an advance of 3s. (73c.) per ton in a fortnight. Standard beams are quoted at £4 13s. 6d. to £4 14s. (1.03c. to 1.04c. per lb.), an advance of 6d. (12c.) per ton. There has been practically no change in the domestic market situation. Merchants have been rather heavy buyers, but manufacturing consumers are inactive. Some important tonnages of bars and beams for public works are expected to be placed in May. Most mills are well booked with export tonnages of rails and merchant products, but there is some question that the present high level of production can be maintained. Export prices of sheets are firm, especially for the heavy gages.

Rails.—The base price on rails for the French railroads has been increased for second quarter to 820 fr. ($32.23) per ton, f.o.b. Eastern mills. The previous quotation of 755 fr. ($29.67) per ton had been effective since Oct. 1, 1927.

Luxemburg Export Trade Less Active, But Prices Are Firm

LUXEMBURG, April 29.—Foreign trade began to decline in March, and April has been quiet also. Prices, however, show no further downward tendency and are expected to continue unchanged. The French domestic market has been quite active.

British imports of European steel have declined and demand from the United States and from South and Central American markets has been less pressing. Japanese buying continues irregular. Slightly more activity is reported in the Chinese markets. Most Luxemburg producers are fairly well booked with business and are able to maintain an independent position on prices.

On April 1 there were 40 out of 47 furnaces in blast, and production in March totaled 240,234 tons of pig iron, compared with 220,114 tons in February. Steel ingot output was 220,309 tons in March, compared with 205,053 tons in February.

German Aluminum Works to Use New Electrolytic Process

HAMBURG, GERMANY, April 28.—Aluminum production of the Vereinigte Aluminiumwerke Lautawerk, one of the largest German plants, is being converted to a new electrolytic process under the Hagelung patents. This follows about three years of experiment with the Hagelung process, which is said to be as much as $27 per ton cheaper than the present method. As the new process uses clay, of which there are rich deposits in Germany, it will be no longer necessary to import large quantities of bauxite from British Guiana, Jugoslavia, France and Hungary.

BELGIAN MARKET IMPROVES

Steel Prices, Especially Bars, Show Advances—Pig Iron Quiet and Foreign Competition Keen

ANTWERP, BELGIUM, April 27.—Prices have strengthened, and the market is showing greater activity. Producers are well booked with business and are able to adopt an independent attitude. The market is especially firm on steel bars, with only a few mills openly soliciting orders and most of these limiting their quotations to certain sizes to complete rolling schedules. This has resulted in a division of orders among the various mills willing to accept certain sizes. Deliveries are becoming extended, and exporters are beginning to place their orders with mills without seeking concessions. Another favorable factor is the improvement in the French domestic market. German mills have taken some sizable orders in Holland, and export business, generally, is increasing, with foreign buyers seeking early deliveries.

Pig Iron.—Domestic business continues satisfactory and available supplies are limited. Export business is less active, the present quotation on phosphoric foundry of £3 2s. to £3 2s. 6d. ($15.10 to $15.22) per ton, f.o.b. Antwerp, apparently being too high to interest British consumers, who constitute the best available market. Thomas grade is unchanged for export at £2 15s. to £2 16s. ($13.40 to $13.64) per ton, f.o.b. Antwerp. Foreign hematite is still competing with the domestic product, which is quoted at about 650 fr. ($18) per ton, f.o.b. furnace. Iron and steel scrap prices have declined slightly in a quiet market. Heavy melting steel is quoted at 460 fr. ($12.80) per ton.

Semi-Finished Material.—Prices are decidedly strong and show an irregular upward tendency. The smaller specifications are bringing higher prices, with demand heavy and supplies small. Export business is slack. Blooms range from £4 1s. ($19.72) per ton for 8-in. to £4 10s. ($21.92) per ton for 4-in. blooms. Billets are quoted at £4 10s. ($21.92) per ton for 3-in. and £4 12s. ($22.41) per ton for 2-in. billets. Sheet bar prices are stationary at £4 13s. ($22.65) per ton, f.o.b. Antwerp.

Finished Material.—The general tendency of prices seems to be toward still greater strength, especially on steel bars. The further extensions in deliveries being offered by makers indicate that most mills are well booked with business. Exporters, evidently convinced that no immediate recession of prices is in prospect, are seeking to place their requirements. There is a fair demand from foreign markets, with buyers requesting early shipment. Bar prices have advanced to £5 7s. per ton (1.19c. per lb.), f.o.b. Antwerp. Structural rounds are reported no longer available from stock, and the current market is quoted at £5 5s. per ton (1.16c. per lb.). Beams are not so firm as other steel products, but have improved considerably, with the market at about £4 15s. per ton (1.05c. per lb.), f.o.b. Antwerp. Hot-rolled hoops are quoted at £6 per ton (1.32c. per lb.) f.o.b. Antwerp. Sheet prices are firmer, and mills show no inclination to seek heavy tonnage at the present market level.

Spain to Destroy Obsolete Textile Machinery

MADRID, SPAIN, April 28.—In a move to reduce the cost of textiles in Spain, the Spanish Government is reported to have ordered that textile machinery more than 40 years old be destroyed in one year and sold as scrap. To replace this equipment, it is understood that machinery may be imported duty free, provided the prices of the Spanish textile machinery builders are 10 per cent higher than those on imported machines. Under the decision the Government will pay a maximum premium of 1000 pesetas ($167.70) for each textile machine destroyed which was bought between 1890 and 1920, the amount of the premium depending upon the age of the machine. Large imports of textile machinery by Spanish manufacturers are expected as a result of the law.

Germans Actively Developing Welded Steel Construction

HAMBURG, GERMANY, April 28.—There has been considerable interest in the welded steel building of the Westinghouse Electric & Mfg. Co. at Sharon, Pa. The United Steel Works at Düsseldorf and other companies are devoting much time to further improvement of welding methods. In Berlin the Lehr und Versuchswerkstatten für Schweisstechnik, a special training school, has been established, where experiments will be made and engineers and workmen trained in welding procedure.

Japanese Plan 700,000-Ton Increase in Pig Iron Output

WASHINGTON, May 15.—Projected expansion of blast furnace capacity in Japan is calculated to add about 700,000 tons annual capacity, bringing the total for the entire country to about 2,500,000 tons, according to a report to the Department of Commerce from Tokio.

The projected expansion includes the installation of two 500-ton blast furnaces at the Imperial Steel Works plant at Yawata, a 500-ton furnace at the Anzin Steel Works in Manchuria, conversion of two of the three 100-ton blast furnaces at the Wanishi plant of the Japan Steel Works to 200 tons and 160 tons capacity, conversion of a 150-ton furnace at the Tsurumi plant of the Asano Shipbuilding Co. to 300 tons capacity and erection of a 200-ton furnace at the Kamaishi Iron Works.

This program, if executed in full, would meet the pig iron requirements of Japan and obviate the necessity of importing iron. The success of the projected expansion, however, is said to depend upon securing adequate supplies of iron ore. At present Japan is importing pig iron from India, Manchuria and Chosen.

German-Owned Polish Companies Merged

WASHINGTON, May 15.—A further step in the centralization of the Polish iron and steel industry appears in the recent announcement that the Oberschlesische Eisenbahn Bedarfs A. G. of Germany has brought about the amalgamation of the Friedenshuette Works, Baildon Foundry, Ferrum Co. and Graf Balestrom Co., all of Upper Silesia, and all for the most part German-owned, according to a report received from Warsaw by the iron and steel division, Department of Commerce. The new group, it is stated, will be the largest iron and steel organization in Poland, employing about 18,000 workmen and controlling iron ore and coal mines, foundries, rolling mills, by-product coke ovens and electrical power plants.

Immigrants Coming In Average 25,552 Monthly

Immigrant aliens to the number of 26,270 were admitted to the United States in March, an increase of 5382 over the previous month, but 3598 less than the number for March, 1927, according to the Bureau of Immigration. In the first nine months of the current fiscal year, a total of 229,969 immigrants entered the country, a monthly average of 25,552. This compares with 27,369 for the corresponding period of last year.

Of the 229,969 immigrants admitted from July to March last, the Mexican race contributed 42,213 and the German 39,820. The Irish were third in the list with 27,423, followed closely by the English with 26,685, while the Scotch numbered 17,965, French 14,169, Scandinavian 13,634, Italian 13,551 and Hebrew 8878. These nine races constituted 88.9 per cent of the total for the nine months. Skilled laborers admitted during this period totaled 44,582 and common laborers 26,375.

TESTING SOCIETY PROGRAM

Symposium on Wear Testing of Metals and Papers on Magnetic Analysis and Gray Iron Are Features

CONSIDERABLE valuable technical data will be presented at the various sessions of the thirty-first annual meeting of the American Society for Testing Materials at Chalfonte-Haddon Hall, Atlantic City, June 25 to 29.

Following the usual plan the metal sessions are scheduled for the early part of the week, with concrete and other topics left for the later sessions. Monday, June 25, is devoted to committee meetings. On Tuesday, June 26, at 2 p. m., an opening general session is scheduled, at which Prof. H. F. Moore, professor of engineering materials, University of Illinois, Urbana, Ill., will deliver a brief address followed by reports of three committees: E-6 on papers and publications, E-9 on correlation of research and E-5 on standing committees. This will be followed by the announcement of the election of officers for the new year and the transaction of general business. The usual committee reports will be presented. Technical papers will be as follows:

Tuesday, June 26, 3 P. M.

Session on Wrought Iron and Cast Iron:

"A Study of Centrifugally Cast Pipe *versus* Sand Cast Pipe," by F. N. Menefee and A. E. White; report of sectional committee on specifications for cast iron pipe; "The Static and Fatigue Properties of Some Cast Irons," by J. B. Kommers; "Effect of Sulphur on Physical Properties of Gray Iron," by Edwin K. Smith and Fred B. Riggan.

Tuesday, June 26, 8 P. M.

Session on Testing and Wear Testing of Metals:

"Methods of Particle Size Determination," by Lincoln T. Work; "Calibration of Rockwell Hardness Testing Machines," by F. S. Mapes; "The Calibration of Extensometers," by R. L. Templin; "Measurement of Brittleness," by P. L. Irwin; "Wear and Other Properties of Some Railroad Bearing Bronzes at Different Temperatures," by H. J. French; "Wearing Tests of 12 Per Cent Manganese Steel," by J. H. Hall; "The Wearing Qualities of Tire Chains," by W. H. Parker.

Wednesday, June 27, 9.30 A. M.

Session on Steel and Magnetic Testing:

"Ferrous Silicates in Steel," by C. H. Herty, Jr., and G. R. Fitterer; "Tests of Specimens Cut from Different Parts of Structural Steel Shapes," by M. O. Withey; "The Incremental Permeability Method for the Magnetic Analysis of High-Speed Steel," by W. B. Kouwenhoven and Julian D. Tebo; "Endurance of High-Speed Cut-Off Tools in Relation to Magnetic and Other Measurements," by Haakon Styri.

Thursday, June 28, 9.30 A. M.

Session on Metals: Corrosion, Fatigue and Properties at Elevated Temperatures:

"Welding of Corrosion-Resistant Chromium Alloys," by W. B. Miller; "Some Factors Involved in Corrosion and Corrosion-Fatigue of Metals," by D. J. McAdam, Jr.; "Influence of Inhibitors and Accelerators on Corrosion-Fatigue of Metals," by F. N. Speller, I. B. McCorkle and P. F. Mumma; "Long-Time or Flow Tests of Carbon Steels with Particular Reference to Stresses Below the Proportional Limit," by J. J. Kanter and L. W. Spring; "Testing of Materials at Elevated Temperatures," by P. G. McVetty; "The Seizing of Metals at High Temperatures," by N. L. Mochel.

Thursday, June 28, 8 P. M.

Session on Non-Ferrous Metals and Metallography:

"Some Mechanical Properties of Nickel, Manganese-Nickel and Copper-Nickel Alloys," by W. A. Mudge and L. W. Luff; "Tension Tests of Copper with Varying Dimensions of Test Specimen," by C. H. Marshall.

The annual address of the president, Prof. H. F. Moore, and the annual report of the executive committee, will be presented Wednesday evening, June 27. The president's subject is "Hooke's Law of Stress and Strain—An Address Commemorative of the Two Hundred and Fiftieth Anniversary of Its Announcement."

Marburg Lecture and Dudley Medal

The third Edgar Marburg lecture will be delivered by Dr. Frank B. Jewett on "Some Research Problems Involved in Transoceanic Telephony." Doctor Jewett is president of the Bell Telephone Laboratories and vice-president of the American Telephone & Telegraph Co., New York.

The second award of the Charles B. Dudley medal will be bestowed on A. V. de Forest, research engineer American Chain Co., Bridgeport, Conn., for his paper on "A Method of Graphic Representation of Magnetic Characteristics," delivered last year. The award was established for recognition of meritorious papers on research in engineering materials, and was made this year on the unanimous recommendation of the medal committee: Dr. Zay Jeffries, chairman; P. J. Freeman and John H. Hall.

New International Association for Testing Materials

In response to the solicitation for applications for membership in the New International Association for Testing Materials, 82 individuals and 13 companies have applied for membership in the new association. The applications will be forwarded to the secretary of that body, Dr. M. Ros, Leonhardstrasse 27, Zurich, Switzerland, from whom applicants will receive a membership card in due course. The executive committee of the A.S.T.M. has appointed Past-President W. H. Fulweiler, chemical engineer United Gas Improvement Co., Philadelphia, to serve as the American member on the permanent committee of the international association, which is the governing body and consists of one member from each country having at least 20 members in the association. The permanent committee has started work on plans for the next international congress, which will be held in Zurich in 1931.

New England Foundrymen Discuss Gray Iron Institute

The dominating subject at the May meeting of the New England Foundrymen's Association, held Wednesday evening, May 9, at the Exchange Club, Boston, was the Gray Iron Institute. Charles F. Miller, president, introduced as the first speaker of the evening, H. S. Chafee, Builders Iron Foundry, Providence, R. I.

Mr. Chafee was the association's representative at the Pittsburgh and Cleveland meetings of gray iron foundries in connection with the proposal to form the Gray Iron Institute, and he presented to the members a thorough report of the proceedings, as well as an outline of what the institute purposes to be and do, and the cost to membership foundries. E. A. Custer, Jr., foundry engineer, Philadelphia, the guest of the association, went into detail as to the importance of the Gray Iron Institute to the industry. His talk prefaced an informal discussion on some of the recent improvements in gray iron foundries and on the use of permanent molds.

He told of Germans developing pearlitic iron; of their succeeding in interesting English and Danish foundries in it, but their failure to interest Americans, and added that those English and Danish foundries, making the product, have run full since its introduction.

He asked, "Why is it not possible to make a synthetic sand in this country that will eliminate much of our troubles?" Two years ago, he said, an Italian foundry announced it was operating on such sands, and it is known that France has foundries experimenting with them. Experiments also have been conducted at a Bridgeport, Conn., foundry.

Permanent or long-life molds, according to Mr. Custer, who started experiments with them in 1908, will never be a cure-all for foundry troubles, but they will materially help matters. The foundryman starting to use them, according to his own confession, must go through "a period of agony."

Gas Association Establishes a Fellowship to Study Cores

On May 1 the American Gas Association, through its committee on industrial gas research, F. J. Rutledge, chairman, established a fellowship at the University of Michigan, Ann Arbor, Mich., to make an intensive study of the many factors entering into the proper baking of cores. This research will be conducted at the department of engineering research under the supervision of H. L. Campbell, associate professor of shop practice. Prof. A. E. White is director of the department. Every factor affecting the application of heat in core baking will be investigated and fundamental facts established to determine the advantages of properly controlled atmospheres, temperatures and ventilation in core ovens.

Obtaining Clean Steel in the Ingot

British Iron and Steel Institute Studies Segregation—Notable Papers on Blast Furnace Work—Honors Talbot and Schwab

LONDON, ENGLAND, May 4.—Aside from an unusual number of contributions on various phases of blast furnace practice, the annual meeting of the Iron and Steel Institute, held in London yesterday and today, was most interesting to Americans because of signal honors extended to men well known in the United States. Benjamin Talbot, who spent many years in America, was inducted into the office of president of the institute, and Charles M. Schwab was awarded the Bessemer medal.

Mr. Schwab in his acceptance departed from the prepared address (reported in THE IRON AGE last week) and expressed his appreciation quite informally in a way that won the audience completely. Among other things he recalled a former meeting he attended 43 years ago with Captain "Bill" Jones, his friend and associate at Homestead.

"He sat next to your president, the noble Duke; I sat in the front row. The captain was a puddler. He was a native genius. He was a great master of iron and steel. His mixer is used in every steel works of the world. You were discussing at that time the plates for the great Firth of Forth bridge, which was then being built, and the president called upon the greatest American steelmaster then known for an expression of his opinion.

"It was a trying experience for him to speak before this assembly, because you are in your English meetings dignified, conventional and proper. The captain arose quite unperturbed, while I sat trembling in the front row wondering what sort of a speech this great American was going to make. The question was whether the holes for riveting the gusset plates should be drilled or punched. He got up and said just one sentence. He said 'Mr. President, you ask me whether I think these plates should be punched or drilled. All I have got to say is that any man that would punch a steel plate like that ought to have a good swift kick in the pants.' That was the whole of the captain's speech."

Schwab Says Selling Is Biggest Problem

A newly completed plant of the Appleby Iron Co. was described by A. Crooke and T. Thomson. This contains six blast furnaces, each making about 250 tons of pig iron per day from calcined ore. Gas is exploited to the utmost. No coke oven gas is available, but only about 450 lb. of coal per ton of ingots, beyond blast furnace fuel, is required for the entire plant. Three 250-ton and one 300-ton tilting open-hearth furnaces and one 500-ton mixer comprise the steel-making department. Labor is reduced to the minimum; production is 40 tons of ingots per man per week. Ingots weighing from 6 to 20 tons are made, and rolled down in a 42-in. blooming mill, a 120-in. and an 84-in. plate mill, all fully electrified. Mechanical devices at the shears enable three men to handle up to 60 tons per hour of ⅝-in. plate.

Mr. Schwab, in commenting on this plant, said that he did not feel that America deserved the credit it was given for efficiency, which, after all, has been made possible by quantity production. Taking a mill that runs continuously on one size of rods or sheets—if it were not possible to get good costs under those conditions, the designers would be pretty bad engineers. He had been asked about coming things in America. First of all he mentioned very large blast furnaces now being planned for a minimum of 800 tons of pig iron a day. About 1000 tons of pig iron can be obtained from such stacks, and as a result direct labor costs on blast furnaces are cut 35 per cent or more. The next great improvement that had been made is in the size of open-hearth furnaces; they were now making them very much larger than ever before, up to 250 and 300-ton heats, dividing the heats in the ladle and getting great economies. The chief change in the years to come, he said, would be the continuous rolling of sheets. Continuous mills have been able to show an economy of about $10 per ton in the cost of producing sheets.

He was ashamed to say that, with the vast investment of something like six billion dollars, American mills are not making much over 5 per cent on their invested capital. He thought the thing of the future was not the perfecting of costs in manufacture but the perfection of methods of distributing the steel so as to get a better price. A better return would come from some method of selling by which they would be first of all protected in their home markets for the chief consumption, and secondly distribute the surplus collectively in some manner that would comply with the law, and yet enable them to sell at a price that would give a profit on the capital invested. While it was exceedingly interesting to listen to technical discussions his mind, Mr. Schwab said, was constantly running on the matter of where they were going to get a better price for the steel.

Early Development of Continuous Process

In his presidential address, Mr. Talbot recalled that in 1890 he went to America to introduce the manufacture of basic open-hearth steel in the South. In going through various works there he found a great development in open-hearth basic practice going on. In his experiments in 1891-92 on refining iron in Alabama in fixed furnaces he had become interested in the tilting furnace, and had recommended the introduction of a large one to run continuously for desiliconizing the siliceous blast furnace metal by means of a basic slag instead of using an acid Bessemer converter for the purpose. Mr. Talbot selected Wellman's method of rolling forward instead of tilting centrally, as being the better for the purpose. In place of the cylindrical shape of the body of the furnace, as built at the Illinois steel works, they decided on a furnace with sloping sides. As it was decided to have close joints between the tilting sections, movable ports with water-cooled chills were used, capable of being moved backward and forward. The flared sides were for the double purpose of more easily repairing the back wall and slag line, and for holding the side walls (especially on the charging side) more firmly when tilting. The other interesting development in the continuous process was the bringing about, when desired, of the carbonic oxide reaction, in which the carbon in the bath is rapidly oxidized simultaneously with the phosphorus.

Segregation in Ingots

A 170-page report of a special committee studying heterogeneity of steel ingots was presented, describing work done in the two years since its first report. The earlier work was principally on killed carbon steel; more recent studies have been on alloy steels and effervescing steel.

Comparing analyses, sulphur prints and macrostructures of two acid open-hearth steel ingots containing 3 per cent nickel (cast from the same heat, but one nearly four times as large as the other), distinctly greater segregation was found in the bigger ingot. There is also a slight but definite segregation of nickel, following the same general mode of distribution as carbon, sulphur and phosphorus, and comparable with manganese in a well killed steel. Nickel does not appear to have any influence on the degree of segregation, as observed in a similar plain-carbon ingot. The general mode is the same: a comparatively pure zone exists along the axis and toward the bottom; a high concentration at the top subdivides lower down so as to straddle the purer axis.

Two 2-ton ingots (C 0.29; Ni 4.4; Cr. 1.4) were selected from a heat, one poured in 4 min. at 1590 deg. C., and the other in 2 min. at 1550 deg. C. In each is a well defined outer layer of very small crystals. In the hot-poured ingot this merges into a region of columnar crystals, which tapers off toward the top; in the cold-poured ingot this region is lacking. Two important central zones occur in both: uniformly small crystals at the bottom, very large columnar crystals at the top. In the hot-poured ingot the latter exends half way down; in the other hardly a quarter way to the bottom.

Alloy steel ingots weighing 49 and 119 tons were also studied. Segregation is greater in degree in these large ingots. In the biggest one the maximum variation of nickel is about 5 per cent of the mean analysis: chromium varies 30 per cent, molybdenum 70 per cent (no analyses taken in the unsound sink head).

Many illustrations are given of sectioned low-carbon ingots of rising steel, showing the familiar sound skin, the zone of blow-holes just below and the top central unsoundness. The ingots ranged from 3 to 8 tons in weight, and were destined for tubes or plate. All show increased silicon in the lower middle portion. Carbon, sulphur, phosphorus and manganese segregate in the same manner and to about the same degree as in killed steel. All ingots show less distinct V segregates near the central axis; the inverted vee segregates found in piping steel do not show in rising steel but do appear in semi-killed ingots.

A 50-ton heat of basic open-hearth steel destined for free-cutting stock and containing but 0.03 per cent silicon, cast into ingots, had all the characteristics of killed steel as to segregation. No aluminum was used. One hundred and fifty pounds of sulphur and 450 lb. of ferrophosphorus, added to the ladle, effectively prevented gas evolution during solidification.

The report notes that casting temperature, rate of teeming, rate of solidification, and gas evolution during solidification are most important factors in the production of uniform steel. Some of them are modified by the mold design; others by the furnace practice. At present most of the knowledge concerning these matters is empirical rather than capable of scientific analysis and precise statement.

Blast Furnace Operation

From a study of over 120 blast furnace operating results, Edgar C. Evans and F. J. Bailey developed a method of correlating blast furnace data on a common basis. This method shows that, other things being equal, the greater the effective time of contact between the reducing gases and the ore before the hearth is reached, the lower is the fuel consumption. Much more carbon is required for external heat losses in the hearth than has previously been supposed, and therefore slow driving of the furnace is the least economical method of obtaining effective time of contact, since the external heat losses per ton of pig iron produced per unit of time are increased proportionately. External heat losses are inversely proportional to the hearth diameter, so that in furnaces having the same effective time of contact between reducing gases and ore small hearths are less economical than large.

In comment, A. K. Reese doubted the propriety of including data regarding obsolete or quite inefficient practices and attempting to deduce generalizations therefrom applicable equally well to more up-to-date operations. For instance, it would be quite questionable to assume an equal amount of carbon lost in solution before arriving at the tuyeres in all furnaces, as the authors did in deriving one of their formulas. Yet they appeared to have arrived at a number of conclusions which confirmed those which he had many times referred to as being essential if the best results were to be obtained, namely, that the preparation of materials is very important, as is their distribution and the lines of the furnace and coke quality.

D. Sillars commented on the attitude of the authors that certain changes had straight-line relations with one another, whereas operators know that no change in a blast furnace, and particularly in the hearth, has any straight-line relation with another. One change is followed by a change of another kind, generally obeying some sort of "law of diminishing returns."

E. H. Lewis said that one of the author's curves, showing the relation between moisture in the blast and iron production, was confirmed in his experience with excessively dry air. The curve shows that the best operation would not be had with absolutely dry air; some moisture helps the furnace. He believed that it would greatly benefit any blast furnace man to work out his own results in accordance with the author's curve, for it would give him a proper perspective of some of the varying factors in the blast furnace and enable him, through that proper perspective, to look over and find the causes of many of the irregularities which everyone found in blast furnace practice.

Africa's Blast Furnace

For some years an open-hearth plant has been in operation in the Transvaal, making a variety of steel shapes from steel scrap. But the supply of suitable scrap, although it looked large, was rapidly exhausted, and a blast furnace was erected at Newcastle, Natal, to produce necessary pig iron, and also to supply foundry iron to South African industries. J. E. Holgate and R. R. F. Walton described its construction and operation. Ore is hauled 60 miles, coke 50 miles, and flux 180 miles, but sufficient good water could not be secured any closer to the other raw materials. The furnace is 70 ft. high, has a 10-ft. hearth, and is driven to produce 125 tons of pig iron a day. The ore is a carbonate, 50 per cent iron, very low in sulphur, and contains 5 per cent of free carbon disseminated through it. It has been found more economical to charge it raw than roasted. Coke consumption is 1800 lb. per ton of pig iron, the gas is not dusty, it contains 28 per cent CO, and the top is very cold. Costs total to about $20 per ton, plus depreciation, interest and profit, and the furnace is able to meet foreign competition by virtue of the high freight charges into the district and a Government bounty on the iron produced.

Cleaning Blast Furnace Gas

V. Harbord read a paper entitled "A Comparison of the Most Important Methods Employed in the Cleaning of Blast Furnace Gas," in which he analyzed the work done and the costs at 12 different furnace plants employing five different systems. The figures show that, if gas no cleaner than 0.4 gm. per cubic meter is required, the Cottrell electrostatic cleaner is the cheapest. Lower dust contents require either a bag filter (Halberg-Beth) or a spray tower and disintegrator of the Theisen type. Bag filters can clean down to 0.025 gm. per cubic meter, but the labor cost of handling the dry, fine dust and disposing of it is high. With a final spray such gas can be delivered to engines with no more than 0.004 gm. solid per cubic meter. The corresponding figure is 0.025 for spray tower and Theisen washer; costs are highest on account of the large amount of power required for pumping and for driving the washer. Total costs (power, labor, materials and maintenance) range from 0.05c. per 1000 cu. ft. of gas cleaned in the electrostatic system to 0.2c. per 1000 cu. ft. for sprays plus Theisen washers.

Princess Furnace Sold for $21,850

Sale of the property of the Princess Iron Corporation at Glen Wilton, Va., to W. W. Zimmerman, of Clifton Forge, Va., for $21,850 has been confirmed by Judge Henry C. McDowell, United States District Court, Roanoke, Va. The Princess furnace, which had an annual capacity of 36,000 tons of foundry iron, was built in 1883-84 and rebuilt in 1912. The Princess Iron Corporation took over the property in 1918, and the furnace had been idle since October, 1921. J. H. Drewry was appointed receiver of the company in August, 1923. The furnace will probably be scrapped.

Heat-Treating Educational Conference

Metallurgists and Practical Treaters Hear Papers on Carburizers, Stainless Steels and Fatigue at Purdue University

METHODS of steel production and the application of special steels and their heat treatment were discussed at the second annual conference on steel treating held at Purdue University, Lafayette, Ind., May 10 and 11. The purpose of the two-day program was accomplished for it brought together many active plant officials, superintendents, metallurgists and foremen of steel treating departments for a well defined educational conference.

Problems Connected with Carburizers

Practical and theoretical problems were discussed in a paper entitled "Carburizing" presented by H. B. Northrup, metallurgist J. W. Kelly Co., Cleveland. Carburizing compounds should be reasonably free from dust and fines, so that gas circulation through the container will be assured and heating throughout the box will be uniform. Energizers, of which there are commonly three, may be used in any combination, but the amount and kind depend on the characteristics and depth of case desired at given operating temperatures. After usage, compounds should be exposed to the air for about 18 hr. so that the basic oxides formed during the operation may react with the carbon dioxide of the air and thus recarbonate themselves.

Carburization of steel is dependent on three essentials: temperature, time, and gas pressure. Temperatures employed usually run close to 50 deg. Fahr. above the upper critical range of the steel being treated. For any particular temperature chosen and with the use of a selected carburizing compound, there will be generated in the carburizing container a definite partial pressure of carbon monoxide, which will produce a case of definite depth and characteristics in a given time.

Electricity for Heating

It is not wise to overlook the use of electricity as a means of heat supply until it has been given every consideration, for in the final analysis the method of heat application that is most economical cannot be decided until after all factors have been carefully studied. Furnaces should be well insulated and constructed to withstand thermal strains. Uniformly carburized work can be obtained only with uniformity of hearth temperatures, which can be obtained by a survey of temperatures in various parts of the furnace and by manipulation of ports and burners.

Carburizing containers are important for the reason that gas pressure must be kept under control. Containers made principally of iron are inefficient because they warp and scale. Warpage defeats the purpose of fitting covers tightly, and scaling contaminates the compound and is therefore a direct cause of soft spots in carburized steel. Containers, the analysis of which is mainly nickel and chromium, give satisfactory service.

Preventing Carbon Penetration

Prevention of carbon penetration can be effected in five ways: (1) Electroplating in a cyanide bath; (2) electroplating in an acid bath; (3) painting with copper sulphate; (4) painting with prepared clay or kaolin base paints, and (5) daubing with fire clay.

The first two methods are the most commonly used because they are most positive. Soft spots may be caused by "copper migration," which may result from too high a current density in the copper-plating tanks. This results in inclusion of minute portions of the electrolyte, which are not removed by subsequent washing or scrubbing operations. Faulty or insufficient washing of plated articles allows the electrolyte to be carried over into the carburizing boxes, thus contaminating the carburizing compound.

Some New Stainless Alloys

"Stainless and Heat-Resisting Steel" was the subject of a paper by C. B. Callomon, metallurgical engineer Allegheny Steel Co., Brackenridge, Pa. He said that stainless steel usually contains from 12 to 16 per cent chromium, and that the higher the percentage of chromium, the higher the carbon content may be and permit the steel to retain its stainless properties. From the standpoint of commercial use the stainless qualities of iron and steel are among those least desired by users. Stainless iron and steel vary only in the carbon content, stainless iron being in reality a mild steel. Its tensile strength is derived not from carbon but from the chromium-iron combination. Stainless iron can be heat treated to a hardness of 400 Brinell, with a maximum tensile strength of 175,000 lb. per sq. in. Characteristics of this material are its ease of control and the uniform results obtained in heat treatment. At elevated temperatures, say at 1500 deg. Fahr., stainless iron has a tensile strength of 12,000 lb. per sq. in. and also still retains high fatigue values.

New Alloys Developed by Krupp

A new alloy, known as V2A, has recently been developed by the Krupps in Germany, said Mr. Callomon. It contains 17 to 20 per cent of chromium and 7 to 10 per cent of nickel. It cannot be heat treated, but it can be fabricated in almost any manner. It hardens rapidly under cold working and has a tensile strength of 90,000 lb. per sq. in. in the annealed condition. Cold rolling will increase the tensile strength to about 190,000 lb. per sq. in. It is subject to grain growth at higher temperatures, so that annealing must be limited to the range of 1800 to 2200 deg. Fahr. At higher temperatures this material becomes softer by the Brinell test, but the tensile strength remains about the same. When cold drawn, the tensile strength is readily increased from 90,000 lb. per sq. in. to 300,000 lb. per sq. in., but at the higher figure the metal becomes quite brittle. It is non-magnetic.

The Krupps have also recently developed a heat-resisting material containing 8 to 12 per cent nickel and 24 to 26 per cent chromium, the remainder of the mixture being largely iron. The carbon in this alloy is kept low, and its heat-resisting qualities are equal to the nickel-chrome series. When hot rolled, it has a tensile strength of 130,000 lb. per sq. in., and it retains this tensile strength up to about 1700 deg. Fahr. Its thermal conductivity is low, being only about 28 per cent of that of soft iron. It makes an excellent carburizing container when formed in sheets and welded.

Calls Alloy Steels Automotive Steels

Alloy steel output represents about 2 per cent of the annual American production of ingots and steel castings, and fully 75 per cent of the alloy steel made is used by the automotive industry. Much of the remaining 25 per cent can be traced to industries dependent on automotive needs. E. C. Smith, assistant general superintendent Central Alloy Steel Corporation, Massillon, Ohio, in a paper on alloy steels, said that it might be considered fair to discuss alloy steels under the name of automotive steels.

Strictly speaking, he said, all steels are alloyed with something other than the essential ingredients, but common practice designates only those carrying un-

This Issue in Brief

Reduces defective parts 50 per cent in less than a year by introducing waste budget plan. Each department of Stutz plant is allowed a stated amount each month for wastage and other controllable losses. Prizes are given to the foremen making the best showing.—Page 1378.

Era of consolidations is just beginning, says Montgomery Ward & Co. chairman. He predicts a great increase in the number of large units in business, owing to competition and the need for economy.—Page 1386.

Blisters on steel sheets are due to too little lime in the bath, one open-hearth superintendent believes. Others disagree, and give as reasons: too long a time in the pickling process, inclusions in the steel, and a sloppy-working furnace.—Page 1389.

Sees bright future for sponge iron. Already it is being used to advantage as a base for finer steels, such as wire steels, spring steels, razor blade steels, etc. It has superior workability, is free from red shortness, and in some cases reduces the cost of the finished product, sponge iron producer declares.—Page 1391.

Is steel output higher than demand warrants? Dr. Haney thinks so. His demand curve has gone down, while production curve has risen.—Page 1397.

By giving the scrap foreman a bonus, trouble resulting from non-ferrous metals and other impurities getting into open-hearth furnace has been almost wholly eliminated. Steel maker says he now has little difficulty with dirty scrap.—Page 1387.

Fatigue strength of metals may be roughly estimated as 250 times the Brinell number or one-half the tensile strength, says metallurgist. Fatigue failures in moving loads often have their origin in tool marks and other surface irregularities not visible to the naked eye.—Page 1429.

Price cutting is unsound and unethical, says Charles F. Abbott, who tells purchasing agents that if business is to be transacted on a basis of profit, manufacturers must adhere to a one-price policy.—Page 1429.

While population increased only 15 per cent in 10 years, the number of engineers increased 52 per cent. Low income is apparently due to an over-supply. If the unfit could be weeded out before or during their apprentice period, the situation would be remedied.—Page 1414.

You must scrap your old machinery, foreign government tells manufacturers. To reduce production costs, Spanish textile manufacturers are ordered to destroy all machinery more than 40 years old. New replacements may be imported duty free. Also, a premium will be paid for each machine destroyed which was bought before 1920.—Page 1405.

Not reduction of manufacturing costs, but perfection of distribution methods, so as to get a better price, is problem confronting steel makers, C. M. Schwab tells British industrialists. He bemoans the fact that American mills are not making much over 5 per cent on their invested capital.—Page 1407.

To get the best carburizing results, be sure your carburizing compounds are free from dust and fines. Otherwise the gas will not circulate freely through the container and the heating will not be uniform throughout.—Page 1409.

Sharp reduction in defective work is result of daily meeting of foremen for consideration of parts to be salvaged. In automobile plant the foremen meet each morning to examine all material branded as defective and to decide which pieces can be salvaged. Reduction of spoiled goods in his department becomes a matter of personal pride with each foreman.—Page 1378.

Copper content of steel scrap is steadily increasing, says open-hearth man. In making copper-bearing steel he finds that it is now necessary to add only half as much copper as formerly.—Page 1388.

If price-fixing is illegal, why is not selling at no profit equally illegal? association head inquires. Each practice is demoralizing, for public interest is just as seriously affected by one as by the other.—Page 1429.

Sloping back walls of open-hearth furnaces are a money-saver, says steel maker. After two years of use no bricks have had to be replaced, while previously repairs were necessary after approximately every 30 heats.—Page 1389.

Internal rolling stresses, caused by irregular drafting, are prevented by automatic roll settings in new structural steel mill. From the time the bloom leaves the bloom shear until the finished beam is delivered from the finishing pass, all operations are controlled by four men.—Page 1383.

Trends in Non-Ferrous Metals

IN 1927 there was a sharp contraction in the consumption of most of the non-ferrous metals, but especially in copper, lead, tin and zinc. This was associated largely with the decline in automobile manufacturing and also was a reflection of the general recession in industrial activity. Even the manufacture of tin plate diminished and that industry has no close association with automobile manufacturing. Anyway, a consequence of several conditions was sharp declines in the prices for these metals. Copper stood up better than the others.

Recently there has been some revival in the markets. The sentiment in copper is quite good. In zinc there has been some improvement, especially since the producers have evinced the intention to become more restrained in their activity. The European producers at a meeting in Brussels on May 7 arranged a sort of a cartel among themselves. Even silver has been a little stronger owing to increased Chinese demand arising from disturbances in that country, which cause the Chinese to prefer to invest in silver rather than in other things.

A fundamental trouble with several branches of the non-ferrous metal industry of the world, as we have heretofore suggested, is the absence of adequate statistics. Of course, statistical information makes no magic formulas, but is simply a numerical expression of facts—that is, knowledge. The statistical knowledge in respect to copper is much superior, and therefore the copper producers are able to govern themselves more intelligently than others.

Our meaning is that the world's resources of copper, lead, tin and zinc, so far as known at present, will not last for a long period of time. The copper resources are better capable of measurement than are those of lead, tin and zinc, and we know that their present development is more extensive. There is no good reason, however, why copper producers possessing these resources should consider it necessary to liquidate them in the minimum of time, perhaps destroying all profit by excessive competition among themselves. Logical consideration points toward an opposite policy.

It is not necessary to have collusion among producers in order to develop such a policy. In its soundest development it will be a matter of individual action, determined by individual self-interest, but to arrive at such wisdom there must be knowledge.

Theoretically the same ideas should obtain for the other minerals—iron ore, coal, petroleum, etc. Practically, however, the world's resources of iron ore and coal are so great that no one figures upon a diminishing supply, it being left to future generations to worry on that score. In petroleum the condition is still different. The geologists tell us that the world's supply of it is relatively limited and that it will not be many years before its scarcity will become evident. Meanwhile there is a petroleum flood owing to the fear of producers, especially in the United States, that if they do not quickly drain their lands their neighbors will do it for them.

This condition in petroleum leads to a complicated chain of economic events. It gives us cheap gasoline and promotes the automobile industry. That in turn increases the use of all the metals. It adds to railroad income in many ways. And so on. But, on the other hand, it impairs the earning capacity of something like $11,000,000,000 that is estimated to be the American investment in petroleum production. This illustrates how closely is the interlocking of many of our great industries and how futile it is for the human mind to try to adjust and coordinate them as the Marxians have been essaying to do in Russia.

How to Make Things Dear

AS we have pointed out heretofore, no Senate investigation of the situation in bituminous coal mining was needed for the ascertainment of the industrial and economic facts. Any expert could have communicated them offhand in no time worth mentioning. But, of course, that is not the purpose of the senatorial investigation, which is rather to find some excuse for doing what John L. Lewis and his associates want to do; namely, to make coal dear. Consequently the cards are being shuffled preparatory to dealing some sort of proposal for Federal control over bituminous coal mining.

Of the same nature is legislation that in several States is being enacted against chain stores, whose only crime is that, being more efficient and more economical than local merchants, they are able to sell goods relatively cheaply.

We might go further in a review of political complaint against efficiency and obstruction to the public enjoyment thereof, but it is unnecessary. That there should be such an attitude is rather to be expected in the pages of Alice in Wonderland than in those of the *Congressional Record.*

If we stop to think, however, it is an expression of resentment against economic law, or rather against the laws of nature, especially the law of the survival of the fittest, which a great ambit of thought, from philanthropological to socialistic, does its best to counteract. Instead of promoting fitness it leads us to foster the unfit, and as the latter multiply we increase our social problems. In economics and politics the prophets of unfitness preach a leveling down. Let the local grocer live at the expense of his neighbors and banish the chain store and mail order house. Let the superfluous coal mines share the work of the industry, considering that it is better for seven men to work four days a week than for five to work six days and two none at all. And so on.

Let there be no competition among human beings in their bread-winning, even if blackjacks have to be used to prevent it. Let no man or women be compelled to do what he does not desire, such as entering domestic service. This sounds rather like Soviet talk, and is different from the lesson that has been learned by those who have gone further on this line—British labor, for example.

The British labor unions, that erstwhile were socialistic in their thought, have straightened themselves entirely from that leaning, as appears in a recent report by their general federation on the causes and cure of unemployment. In this it is declared very frankly, and with simple good sense, that the cause of hard times cannot be the capitalistic system, as is proved by the fact that the most poverty-stricken country is Russia, where capitalism has been abolished, while the most prosperous country is the United States, "which is the most capitalistic of all." Our senatorial committees might well ponder over this obvious conclusion and at least let things alone, even if they cannot bring themselves to promote industrial efficiency.

Lake Coal Rates Down Again

IT has been "off again, on again" with the freight rate differential between the northern and southern fields on lake coal. For years the differential was 25 cents, being increased to 45 cents on Aug. 10, 1927, by a reduction in the Pittsburgh rate from $1.66 to $1.46, approved by the Interstate Commerce Commission. Then the roads reduced the southern rate from $1.91 to $1.71 to counterbalance; the commission threw out the case; the Richmond injunction of April 14 was secured against the commission; the $1.71 rate was put into force April 20; and now the northern roads have filed 20-cent reductions making the Pittsburgh rate $1.26, to go into effect about June 20.

To the railroads the net result of this jockeying, bordering on a rate war, is a loss of 20 cents a ton revenue on the lake coal, amounting to $6,000,000 or $7,000,000 for a season. Coal shippers maintain the business will still be very profitable to the railroads. It is considered only a remote possibility that the commission will disallow the northern reduction now proposed, since it provides the 45-cent differential the commission approved last year.

Of course the Supreme Court's decision on the appeal from the Richmond injunction, expected late this year, will be of much interest; but there is room for doubt whether it will do much to clarify or interpret the Hoch-Smith resolution. The latter refers to all rates which may be found "unjust, unreasonable, unjustly discriminatory, or unduly preferential, thereby imposing undue burdens, or giving undue advantage," etc. When the Pittsburgh district had lost nearly all its lake coal trade and the ton-mile rates were approximately twice as large on Pittsburgh coal as on southern coal it is hard to see how the matter can be permanently placed outside the scope of the Hoch-Smith resolution.

The Pittsburgh district shipped about 2,500,000 tons of lake coal last year and year before, against 8,000,000 tons as late as 1923 and much more than that years earlier. Its participation in the trade will now increase by several million tons, the amount to be limited more by physical conditions of production than by bare marketing conditions. There will be further confusion as to the coal strike, defunct for several months except that a large number of men are still strikers, sustained in that position by some public sympathy, by misapprehension as to what the Senate investigating committee could or would do, and now by this rate change, which the strike leaders will try to claim should help the operators to pay the absurd wage scale the union continues to demand.

Perhaps with more employment offered there will be a stampede of union miners, or a migration of miners from southern fields to the Pittsburgh district. Affairs in coal have been a succession of surprises and the supply of the latter is probably not exhausted.

Gains in Hot Rolled Flats

BANDS, hoops, strips and sheets are distinct products as to origin and trade usage, but they fall into one general category. No absolute lines can be drawn between them except by making artificial distinctions, such as calling 12 gage and heavier a "band" and 13 gage and lighter a "hoop," while the official statistics do not even follow this distinction when they include cotton ties with bands. It is interesting, therefore, to follow the total tonnage production of the entire group. There was a decrease from 1926 to 1927 of 4.2 per cent in the total of flat products, whereas the decrease in all finished rolled iron and steel was 7.4 per cent.

It was for 1920 that the production of strips was first reported, and from 1920 to 1927 the group gained 36.6 per cent, against an increase of only 1.6 per cent in total rolled iron and steel. Steel ingot production gained 7.1 per cent in that period, but the proportion of rolled steel to ingots decreased and there was a large decrease in rolled iron, and thus the rolling industry as a whole showed little gain.

The detailed comparison between 1920 and 1927 is made below, sheets being divided into 13 gage and lighter and 12 gage and heavier, while tin mill product not tinned, being essentially a sheet product, is included.

Output of Flat Products—Gross Tons

	1920	1927	Change
Bands	388,862	323,129	—65,733
Hoops	333,440	176,300	—157,140
Strips	586,524	1,318,419	+731,895
Sheets, 13 up...	2,519,072	3,557,988	+1,038,916
Sheets, 12 down.	367,329	421,049	+53,720
Tin mill black..	246,816	270,672	+23,856
Total	4,442,043	6,067,557	+1,625,514

This is a case in which percentages are misleading. To say, from the figures, that 1920 to 1927 strips more than doubled—increasing 125 per cent—while sheets increased "only" 36 per cent is correct arithmetically, but is quite misleading as a comparison. When all rolled iron and steel increased only 1.6 per cent sheets did remarkably well to increase as they did. Strips may have gained a little by taking what would otherwise have been sheet tonnage, but they gained also from bands and hoops and they had a great gain by going into new products not previously made.

It is a common remark that the success of the wide strip mill, which is assumed, is likely to put many old sheet mills out of the running, but the 1920 to 1927 comparison does not support such a view. When sheet production has so increased in only seven years there must be a rapidly growing demand, while according to the production figures less than three-fourths of last year's sheet industry was in existence only seven years earlier. By no means is the whole sheet industry old.

Demand for these various classes of flat rolled material may reasonably be expected to continue to grow at the remarkable rate of the past few years. There will be changes, losses and abandonments, but there will be ample room for the great majority to survive.

Too Many Engineers?

COMMENTATORS on latter-day education are inclined to view with alarm the statistics gathered among various engineering alumni showing a pronounced drift to other occupations. A report from Lehigh University shows that five years after graduation 30 per cent of a class have abandoned engineering; in 15 years the figure has grown to 41.5 per cent and after 25 years to 56.5 per cent. This indicates, say they, that engineers have been driven from their profession by starvation wages.

This does not exactly follow. If one bears in mind the fact that any high school graduate has been able to enter some engineering school without any aptitude test other than scholastic, and that more than half of those entering are dropped or change their minds about continuing, before the four years in college are finished, it is rather surprising that as many as 70 per cent of the graduates survive five years' competition in the profession. Or, if we hold to the somewhat old-fashioned notion that advanced education is to broaden a man's mentality, to enable him to solve easier the problems he meets, to make him a better citizen, and to help him to get more satisfaction out of life, then we can be thankful that engineering education has not yet become so highly specialized and so like a trade school that the engineers are unable to turn their hands to other work when they find that engineering does not hold the expected rewards.

Put in other words, part of the men who drift out of engineering are failures as engineers. They ought never to have been admitted to a scientific school. Another part are open-eyed enough to see opportunities in other walks of life and flexible enough in mind and habits to make a change. The first classification should be reduced to the smallest possible figure. The second classification should increase, rather than decrease. It would tone up the body politic.

Much more pertinent data on the status of the engineer can be found in figures comparing salaries of various occupations. In New York City, for instance, the average pay of engineers in municipal departments is less than that of teachers or mechanics, and hardly half that of men in the law. Furthermore, the United States Census shows that from 1910 to 1920, while the population was gaining only 15 per cent, the number of engineers increased 52 per cent. In the same period the legal profession increased only 7 per cent and the building trades *decreased* 23 per cent. No wonder plasterers and bricklayers get the wages!

But even after discounting the figures by the number of low-grade draftsmen and engineering assistants undoubtedly included (even though their duties require no very advanced training), they reinforce the conclusion that engineering societies and schools would do well to follow the lead set by their professional brothers, the doctors and lawyers, and their unionized mechanics —namely, regulation of the number of apprentices. If entering freshmen students could be weeded out by more searching entrance test, both mental and physical, it would save an enormous amount of misspent energy on the part of those foredoomed to failure in engineering.

Such a plan would doubtless be resisted by certain so-called educators. But because it attacks the trouble at its roots it would be the quickest and best solution—far better than the palliative of licensing and of stiff professional qualifications to start out a few elect from a horde of misfit graduates.

Correspondence

To the Editor: I think the able paper of Eugene P. Thomas, in THE IRON AGE of May 10, should go far toward proving to the uninitiated that it is not criminal or un-American to purchase a foreign-made product.

No one can question that we are equipped to produce considerably more than we consume, and a really healthy condition of business, where all who want to work can find employment, cannot be brought about until we find markets abroad to take care of that surplus we cannot utilize.

As Mr. Thomas states, "if we want a growing export business, we must continue to buy from abroad, as Europe must sell to us if she is to have money to buy from us."

I commend the article on this subject on page 1309. Too many of the speakers on public platforms who advocate the discontinuance of purchases of foreign-made goods apparently do not realize the harm they are doing to real prosperity here.

GILBERT J. MACQUARRIE.

Boston, May 10.

P. L. & W. HEARINGS BEGIN

Proposed Extension Would Link Youngstown District with Ohio River

WASHINGTON, May 15.—Hearings were begun yesterday before C. V. Burnside, assistant director of traffic of the Interstate Commerce Commission, on the application of the Pittsburgh, Lisbon & Western Railroad to build two branches, totaling 41 miles, which would connect the Youngstown district with the Ohio River. The hearings also include the application of the Montour Railroad, a subsidiary of the Pittsburgh Coal Co., to acquire the outstanding capital stock of the Pittsburgh, Lisbon & Western. The Pennsylvania, Baltimore & Ohio and Pittsburgh & Lake Erie railroads are opposing the project, while it is being supported by the Youngstown Chamber of Commerce and steel companies in the Youngstown district.

Would Haul Coal from Pennsylvania and Steel from Youngstown

One proposed branch would extend from Smith's Ferry, Pa., on the Ohio River, to the present line of the P. L. & W. at Negley, Ohio, and the other from Mill Rock, Ohio, on the Present P. L. & W. to Youngstown and Struthers, Ohio. H. J. German, president of the Montour Railroad, describing the plans in detail, said it is contemplated to make more effective use of the Government's development of the Ohio River system, including the Allegheny and the Monongahela. It is proposed that the coal of western Pennsylvania will be moved down the river by barge to Smith's Ferry, there transferred to the projected railroad and moved into the steel manufacturing district of Youngstown and vicinity. The same railroad line, he pointed out, would then permit the movement of the steel products of the Youngstown territory back to the river for movement into the South and Southwest. The investment, it was stated, would be about $8,000,000. It was declared that the plan, if consummated, would better enable the steel manufacturers of the affected territory to compete in the markets of the South and Southwest and also allow greater use of the river for Pittsburgh district coal. Also, it was said, the new road would open up the intermediate territory, where there is situated an extensive clay producing district, the present chief market of which is the Youngstown district. Although only 25 miles from Youngstown, it was stated, this district has to ship by a two-line haul in order to reach that city.

Would Greatly Increase Coal Movements

Mr. German said that in the third year it is expected that the P. L. & W., with the new branches, will haul 2,500,000 tons of coal, as against 500,000 tons at present, and that in the fifth year the total will be 3,000,000 tons. It was estimated it would handle 1,000,000 tons of additional traffic, that the average haul would be 37.5 miles and the average rate 60c. per ton. Among large tonnages of coal that would be hauled, aside from shipments by the Pittsburgh Coal Co., it was said, is coal along the Monongahela River belonging to the Youngstown Sheet & Tube Co. The reserves of this company, it was stated, are estimated to be sufficient to last for 40 years. Reserves of the Pittsburgh Coal Co. were estimated to be enough for 50 years. It was stated that the Youngstown Sheet & Tube Co. now uses 1,500,000 tons of coal annually from along the Monongahela River, while the total coal requirements of the Youngstown district were placed at 8,000,000 tons yearly.

Simplified List of Metal Packages

WASHINGTON, May 15.—Five sizes of metal packages and one size of iron drums were approved of a list of 10 determined upon at a simplified practice conference here relating to containers for vegetable containers. The meeting was under the auspices of the Division of Simplified Practice, Department of Commerce, and was attended by manufacturers, distributers and organized users. The conference named Sept. 1, 1928, as the effective date for new production of containers under the approved recommendation, allowing until Jan. 1, 1929, for disposition of present stocks. The approved list follows: Iron drums, 110 lb.; metal packages, 45 lb., 16 lb., 8 lb., 4 lb., and 2 lb.

Second National Fuels Meeting in September

The second national fuels meeting will be held in Cleveland, Sept. 17-20. The fuels division of the American Society of Mechanical Engineers is planning a broad selection of subjects and speakers. Participation is not limited to the membership of the society.

COMING MEETINGS

May

American Foundrymen's Association. May 14 to 18. Annual meeting and exhibition, Commercial Museum, Philadelphia. C. E. Hoyt, 140 South Dearborn Street, Chicago, secretary.

American Steel and Heavy Hardware Association. May 22 to 24. Nineteenth annual convention, Copley-Plaza Hotel, Boston. Benjamin R. Sackett, 503 Arch Street, Philadelphia, secretary.

Associated Machine Tool Dealers. May 23 to 25. Annual meeting, Granville, Ohio. E. P. Essley, E. L. Essley Machinery Co., Chicago, secretary.

American Iron and Steel Institute. May 25. Annual meeting, Hotel Commodore, New York. E. A. S. Clarke, 75 West Street, New York, secretary.

National Association of Purchasing Agents. May 28 to 31. Inform-A-Show and thirteenth annual meeting, Muelenbach Hotel, Kansas City, Mo. George A. Renard, 11 Park Place, New York, secretary.

June

American Association of Engineers. June 4 to 6. Annual meeting, Hotel Hussman, El Paso, Tex. M. E. McIver, 63 East Adams Street, Chicago, secretary.

American Management Association. June 6 to 8. Production executives' conference, Hotel Statler, Buffalo. W. J. Donald, 20 Vesey Street, New York, managing director.

American Society of Mechanical Engineers. June 14 to 16. Oil and gas power division, Pennsylvania State College, State College, Pa. Calvin W. Rice, 29 West Thirty-ninth Street, New York, secretary.

American Railway Association. June 20 to 27. Mechanical division, Million Dollar Pier, Atlantic City, N. J. V. R. Hawthorne, 30 Vesey Street, New York, secretary.

Association of Iron and Steel Electrical Engineers. June 25 to 29. Annual meeting, Stevens Hotel, Chicago. J. F. Kelly, 513 Empire Building, Pittsburgh, secretary.

American Society for Testing Materials. June 25 to 29. Annual meeting, Chalfonte-Haddon Hall, Atlantic City, N. J. C. L. Warwick, 1315 Spruce Street, Philadelphia, secretary.

Society of Automotive Engineers. June 26 to 29. Summer meeting, Chateau Frontenac, Quebec, Canada. C. F. Clarkson, 29 West Thirty-ninth Street, New York, general manager.

Iron and Steel Markets

Steel Buying Again Hand-to-Mouth

New Business Light, But Liberal Specifying Sustains Mill Output—Automobile Production Undiminished —Pig Iron Drops 50c. at Chicago

HAND-TO-MOUTH buying again prevails in the steel industry, following several months during which advancing prices encouraged forward contracting. The April decline of 463,000 tons in the unfilled orders of the Steel Corporation caused little surprise in the trade. It was recognized that strictly new business was light, since the latter part of March brought out heavy specifications, as well as the acceptance of liberal extensions of first quarter contracts.

Unfilled tonnage, to a large extent, measures the willingness of consumers to buy ahead, and, since the current price situation offers no incentive for unusual commitments, further sharp reductions in the total may occur without indicating proportionate declines in consumption. Even with the large drop in April, unfilled orders of the Steel Corporation were still 12 per cent higher than on April 30, 1927, and slightly above the level of two years ago.

The reduction of mill backlogs is commencing to cause some concern, but, to date, shipping orders, consisting principally of specifications against contracts, have sustained production at a virtually unchanged rate. The average for Steel Corporation plants has dipped only slightly under the 90 per cent operations maintained through most of the first third of the year. The rate of the leading Eastern steel company has actually shown a gain since April, now standing at well above 80 per cent of capacity. In the Chicago district, where output remains on a 95 per cent basis, specifications are the best in five weeks and sales, in contrast with reports from other market centers, are equal to shipments. Ingot production in the Greater Pittsburgh area continues at an 80 per cent rate.

New business in finished steel in most markets has been too light to give prices a severe test. Hot-rolled strip steel, particularly the wide material, has shown further weakness, selling as low as 1.75c., Pittsburgh, for 6-in. and wider, or $1 below the recent minimum. Pig iron prices also lack buoyancy, and in the Chicago district have declined 50c. a ton to $18, furnace.

The automotive industry remains a leading outlet for steel, specifying at an undiminished rate. Motor car builders with two or three exceptions have made no reduction in output, and present indications are that there will be no seasonal slowing down of operations before June 15. Some of the automobile companies have placed steel for their July production, and the Ford Motor Co. is taking an increasing tonnage of automobile body sheets, at the same time placing liberal orders for long ternes.

A good movement of metal furniture sheets, especially to builders of electrical refrigerators, emphasizes the support steel production receives from the minor, unclassified consuming lines.

Tin plate production is virtually at capacity, and optimistic expressions by can makers point to a good summer operation of mills. Output for the first half of this year will be much better than had been expected, since container manufacturers lately have added to their original specifications.

A late spring has delayed the movement of wire products into consumption, and distributers are still rather heavily stocked with material shipped by the mills in the first third of the year. Cleveland jobbers have reduced nail prices 10c. per keg for stock shipment and to $2.65, Cleveland, for mill shipment, the latter being the same price that most producers are quoting.

Water delivery of steel is a factor of growing importance on the Great Lakes. A Buffalo steel plant has inaugurated weekly boat shipments to Chicago.

The reduction of 50c. a ton on foundry and malleable pig iron by Chicago producers follows the invasion of that market by Lake Erie iron, shipped by boat and offered at Lake Michigan ports at $18, dock. Two cargoes totaling 3000 tons have already arrived at Chicago, and a third boat is on the way. Shipments will also be made from Buffalo to lower Lake Michigan.

Sales of foundry iron have been fairly large in some markets, totaling 19,000 tons at New York, 14,500 tons at Cleveland and 9000 tons at Cincinnati. In some measure this buying represents the interest of consumers in third quarter requirements. A noteworthy feature is that there is no slowing down in the demand for pig iron from the automobile industry. The American Rolling Mill Co. is inquiring for 25,000 tons of basic iron for its Butler, Pa., works. An unusual transaction was the exchange of 10,000 tons of pig iron by an eastern Pennsylvania maker for New Jersey ore of equivalent value to be furnished by a cast iron pipe company.

Ferromanganese has been advanced $5 a ton to $105, seaboard, by domestic producers and importers of English alloy. The new price applies on business for the remainder of the first half as well as for second half, but there was liberal coverage prior to the advance and it may not become fully effective for some time.

Copper producers have advanced prices ⅛c. per lb. to 14.37½c., delivered, following a week of heavy buying in which consumers took fully 37,500 tons.

THE IRON AGE composite price for pig iron has declined to $17.42 a ton, displacing last week's $17.50 as the year's low figure. The finished steel composite is unchanged at 2.348c. a lb.

*The average switching charge for delivery to foundries in the Chicago district is 61c. per ton.

On export business there are frequent variations from the above prices. Also, in domestic business, there is at times a range of prices on various products, as shown in our market reports on other pages.

Pittsburgh

Steel Backlogs Being Steadily Reduced But Operations Remain High

PITTSBURGH, May 15.—Steel consumers continue to take shipments against old orders very steadily, and, while backlogs are being steadily reduced because new demands are moderate, steel works and rolling mill operations remain well up to the recent rate.

The automotive industry continues the largest single outlet for steel, and the products going into motor vehicles still are making the best showing in mill shipments. The oil industry is providing comparatively little tonnage and disappointment is expressed that railroad demands are not yet showing any measurable increase. The engagement of structural mills is heavier on account of old than new bookings. Tin plate demands are still very heavy and the showing of this product for the first half of the year will be much better than was expected earlier in the year, as in the past three or four weeks can makers have added to their original specifications.

There seems to be very little variation from year to year in the requirements of miscellaneous consuming industries; the fact that the steel industry as a whole is making so favorable a record probably is owing in no small measure to the sustained demand from the unclassified consuming sources, a notable one of which is the electrical refrigerator industry.

Ingot production for this and nearby districts still may be said to approximate 80 per cent of capacity. The steep decline in the unfilled obligations of the Steel Corporation in April occasions little surprise here, since it was pretty well understood that new business was light in April, following the acceptance of much additional business on first quarter contracts, and that the liberal specifications of late March against earlier contracts were responsible for the high rate of plant engagement. The experience of the independent companies has not been much different from that of the Steel Corporation. A lower rate of production seems likely before the end of the month, unless there suddenly develops a demand of size from some source that will change the present condition of shipments being in excess of new orders.

Sheet prices do not seem to have stopped declining, but new buying is so scant that it does not furnish much of a test of prices in general, and the market as a whole is quotable at the levels of a week ago.

The price of ferromanganese has been advanced $5 a ton, but this step appears to have been preceded by acceptance of additional business at the first half price. The effectiveness of the advance is probably delayed until well into the third quarter of the year.

Except for one good-sized inquiry for basic grade, the pig iron market continues lifeless.

Pig Iron.—The American Rolling Mill Co. is taking prices on 25,000 tons of basic iron for shipment to its Butler, Pa., works. Except for this inquiry, the market is as dull as it has been at any time recently. Sales are of one to two carloads, and at the prices that have ruled for some time. The large melters are well covered by contracts; some of them have supplies sufficient to carry them well into the third quarter. Steel foundries serving the railroads have very little business and are very sparing buyers, not only of pig iron but all other raw materials.

Prices per gross ton, f.o.b. Valley furnace:

Basic	$16.50
Bessemer	17.50
Gray forge	16.75
No. 2 foundry	17.25
No. 3 foundry	16.75
Malleable	17.25
Low phosphorus, copper free	26.50

Freight rate to the Pittsburgh or Cleveland district, $1.76.

Ferroalloys.—One producer of ferromanganese announced an advance of $5 a ton effective May 10, applying on new spot business and last half contracts, and other makers have since followed. It is early for a test of the new price, since very few consumers are not under contract until the end of June, and it is believed there was acceptance of additional business at $100, a day or two before the announcement of the advance. Most contracts are upon a requirement basis and, no doubt, specifications for June and July shipment will be heavy. Actual requirements are lighter, in keeping with the fact that ingot production is no longer being pushed to the limit. Users of spiegeleisen are pretty well under contract for the remainder of the year, and the arrangement in high content ferrosilicon is on annual basis.

Semi-Finished Steel.—A northern Ohio producer of sheet bars has taken a firmer attitude on prices for third quarter contracts, but makers here and in Youngstown, not having recognized lower prices made by the former, have no occasion to change their quotations at this time. The open market quotation for some time has been $34, Pittsburgh or Youngstown, and now it is $34, Cleveland, instead of $33, previously. Business no longer is subject to competitive bidding, and the compensation is in the flexibility of the private arrangements both as to duration and prices. It is not believed that much tonnage actually moves at the full public quotations. Tin mill operations are still high and the tin bar requirements are in keeping, but tapering sheet mill operations mean lighter specifications for sheet bars. There is still fairly active specifying for billets and slabs. Most of the movement of wire rods is at prices below what makers now ask, but there are a few releases against $44 contracts.

Bars, Plates and Shapes.—While strictly new business in these products does not amount to much, it is sufficient, with specifications against old orders, to provide a fairly large total and to restrain selling pressure. Little business is being done at more than 1.85c., base Pittsburgh, and that appears to be the top and bottom of the market, since there is very little difference in size between the releases of large users and the purchases of the small-lot consumers. A very fair amount of plate tonnage is appearing in river barge orders. Bar requirements are decreasing, and new fabricated steel business is quiet.

Rails and Track Supplies.—Business is only moderately active, but the action of the Northern railroads in reducing Lake coal freight rates 20c. a ton until Dec. 1 is expected to mean considerable Lake coal business for western Pennsylvania and southern Ohio mines, and probably forecasts heavier operations and a larger demand for light-section rails and small spikes, which have been very quiet in the past few months. Heavy deliveries of standard-section rails contributed to the big decrease in the unfilled orders of the Steel Corporation last month.

Wire Products.—The market is quiet. A late spring has somewhat deferred the movement into consumption and, as there were heavy shipments over the first four months of the year, distributers still are rather heavily stocked. Good weather will probably mean fresh demands upon the mills, but in the meantime prices now quoted, which are $2 a ton higher than those of the first quarter of the year, are largely untested. Larger producers are quoting nails at $2.65 base, per keg, Pittsburgh, and are insisting on that price, but there is considerable resistance to that quotation and producers lacking backlog business are quoting as low as $2.55 to secure orders. Consumers of plain wire in many instances were given permission to specify April and May requirements on first quarter contracts.

Tubular Goods.—The market generally is quiet, even sales of standard-weight pipe having slipped as a result of the fact that jobbers took advantage of the chance to specify for a month's supply before the advance of April 2 became effective and are now fairly heavily stocked. No improvement is noted in the demand for lap-welded pipe for oil country use, and pipe line orders are not reaching the mills in volume.

Sheets.—There is a fairly good volume of business in sheets, but seemingly it is not heavy enough to strengthen prices on the ordinary finishes. On black sheets 2.70c., base Pittsburgh, is fairly common and, while there are occasional sales as high as 2.85c., the small-lot buyer seldom has to go beyond 2.80c. Galvanized sheets generally are bringing 3.60c., but business is reported at above and below that figure. Blue annealed sheets still are quoted at 2c. and 2.10c. Automobile body sheets are firm at 4c., and the movement is good, with the Ford Motor Co. increasing its takings and also buying a good tonnage of long ternes for gasoline tanks. Metal furniture sheets also are moving well, a particularly strong demand being noted from the builders of electrical refrigerator cabinets.

Tin Plate.—Container manufacturers are taking shipments freely, and there are a few cases where they have exceeded their first half contract tonnages. Tin plate output remains substantially at plant capacity, and can makers talk so optimistically of the prospect that a good summer operation of the mills is looked for. No formal announcement of the price for last half tonnages is likely, but large consumers understand that the present price of $5.25 per base box, Pittsburgh, will be continued.

Cold-Finished Steel Bars.—Individual orders are small, but they are numerous and coming in steadily. There is no change in prices.

No. 20, f.o.b. Pittsburgh	4.00c.

Long Ternes

No. 24, 8-lb. coating, f.o.b. mill primes	4.10c.

Tin Plate

	Per Base Box
Standard cokes, f.o.b. P'gh district mills	$5.25
Standard cokes, f.o.b. Gary	5.35

Terne Plate

(F.o.b. Morgantown or Pittsburgh)

(Per package, 20 x 28 in.)

8-lb. coating I.C.	$11.20	25-lb. coating I.C.	$16.70
15-lb. coating I.C.	14.00	30-lb. coating I.C.	17.75
20-lb. coating I.C.	15.30	40-lb. coating I.C.	19.85

Alloy Steel Bars

(F.o.b. maker's mill)

S.A.E. Series Numbers		*Per* 100 *Lb.*
2000	(½% Nickel)	$2.90
2100	(1½% Nickel)	3.20
2300	(3½% Nickel)	4.15
2500	(5% Nickel)	4.90
3100	Nickel Chromium	3.20
3200	Nickel Chromium	3.65
3300	Nickel Chromium	6.45
3400	Nickel Chromium	5.85
4100	Chromium Molybdenum (0.15 to 0.25 Molybdenum)	3.15
4100	Chromium Molybdenum (0.25 to 0.40 Molybdenum)	3.35
4600	Nickel Molybdenum (0.20 to 0.30 Molybdenum, 1.25 to 1.75 Nickel)	3.70
5100	Chromium Steel (0.60 to 0.90 Chrome)	3.00
5100	Chromium Steel (0.80 to 1.10 Chrome)	3.10
5100	Chromium Spring Steel	2.85
6100	Chromium Vanadium Bars	3.85
6100	Chromium Vanadium Spring Steel	3.60
9250	Silicon Manganese Spring Steel	2.90
Chrome Nickel Vanadium		4.15
Carbon Vanadium		3.60

Above prices are for hot-rolled steel bars, forging quality. The ordinary differential for cold-drawn bars is 1c. per lb. higher. For billets 4 x 4 to 10 x 10 in., the price for a gross ton is the net price for bars of the same analysis. For billets under 4 x 4 in. down to and including 2½ in. squares, the price is $5 a gross ton above the 4 x 4 billet price.

Slabs with sectional area of 16 in. or over carry the billet price; slabs with sectional area of 12 in. to 16 in. carry a $5 extra above the billet price and slabs with a sectional area under 12 in. carry the bar price.

Band sizes are 40c. per 100 lb. higher.

Rails

	Per Gross Ton
Standard, f.o.b. mill	$43.00
Light (from billets), f.o.b. mill	36.00
Light (from rail steel), f.o.b. mill	34.00
Light (from billets), f.o.b. Ch'go mill	36.00

Track Equipment

	Base Per 100 *Lb.*
Spikes, $\frac{9}{16}$ in. and larger	$2.80
Spikes ½ in. and smaller	2.80
Spikes, boat and barge	3.00
Tie plates, steel	2.15
Angle bars	2.75
Track bolts, to steam railroads	$3.80 to 4.00
Track bolts, to jobbers, all sizes, per 100 count	70 per cent off list

Welded Pipe

Base Discounts, f.o.b. Pittsburgh District and Lorain, Ohio, Mills

3¼ to 3¾ in.	42½	2½ to 3 in.	— 7
4 to 13 in.	46	3¼ to 4½ in.	— 9

Beyond the above discounts, 7 fives extra are given on lap welded steel tubes and 2 tens to 2 tens and 1 five on charcoal iron tubes.

Standard Commercial Seamless Boiler Tubes

Cold Drawn

1 in.	60	3 in.	45
1¼ to 1½ in.	52	3¼ to 3½ in.	47
1¾ in.	36	4 in.	50
2 to 2¼ in.	31	4½, 5 and 6 in.	45
2½ to 2¾ in.	39		

Hot Rolled

2 and 2¼ in.	37	3¼ and 3½ in.	53
2½ and 2¾ in.	45	4 in.	56
3 in.	51	4½, 5 and 6 in.	51

Less carloads, 4 points less. Add $8 per net ton for more than four gages heavier than standard. No extra for lengths up to and including 24 ft. Sizes smaller than 1 in. and lighter than standard gage to be held at mechanical tubes list and discount. Intermediate sizes and gages not listed take price of next larger outside diameter and heavier gage.

Seamless Mechanical Tubing

	Per Cent Off List
Carbon, 0.10% to 0.30%, base	55
Carbon, 0.30% to 0.40%, base	50

Plus differentials for lengths over 18 ft. and for commercial exact lengths. Warehouse discounts on small lots are less than the above.

Hot-Rolled Flats.—The market is holding very firmly on cooperage stock and is making a good showing as to prices on strips 6 in. and narrower, as most makers are well sold up on narrow material and are not particularly anxious for more business. Some makers find that price weakness exists principally in material wider than 12 in., where sheet and plate competition comes into play. Good releases are coming out against contracts, but strictly new orders are few.

Cold-Rolled Strips.—Specifications against contracts are good, but makers are not being asked to quote on many new inquiries, and order books are beginning to decline. The tonnage buyers are getting shipments at 3c. base (1 to 3 tons), while 3.15c. is the ruling small-lot base price.

Bolts, Nuts and Rivets.—Demand is steady, but is off somewhat in volume from that of last month and the month before. Prices are firm.

Coke and Coal.—Interest centers in the effect upon the coal market of the recently announced voluntary reduction by Northern railroads of 20c. a ton on coal moving to the Lake trade. This rate cut, which will become effective about the middle of June, restores the differential of 45c. between rates on Northern and Southern coal. It is expected to stimulate the market for western Pennsylvania coal and will probably mean more for the non-union mines than those formerly operated under agreements with the union, as it is generally believed that much difficulty would attend the starting of the former union mines. It is also believed that there will be coal enough and no material advance in prices. The market in both coal and coke still is very dull and prices do not show much strength. Spot furnace coke ranges from $2.50 to $2.75, but standard furnace fuel is not selling under $2.65. Spot foundry coke is quoted from $3.50 to $4.85, the latter for so-called premium brands, which recently were priced at $5.10.

Old Material.—Heavy melting steel this week ranges from $15 to $16, and scrap rails also are quotable up to $16. The steel and rails in the May list of the Baltimore & Ohio Railroad went on a direct bid to the same steel company here which took the offerings of those grades from that road's April list. The price was $15.85 to the road, while the buyer had to pay 15c. a ton additional freight from the nearest Baltimore & Ohio point to its plant. The $15 price is based on a good-sized sale to another Pittsburgh district mill, and there have been sales into consumption at another point at $15.25. Compressed sheets appear to be slightly easier, and $15 is all that now can be obtained for them in this district; supplies still are scant, but wants are smaller. The Ford Motor Co. last week sold 3000 tons of this grade at $11.10, Detroit, to a Buffalo melter. Machine shop turnings are a little stronger. There is no life to the demand for foundry grades, but short rails are stronger because of the higher prices ruling for uncut ones.

Prices per gross ton delivered consumers' yards in Pittsburgh and points taking the Pittsburgh district freight rate:

Basic Open-Hearth Furnace Grades:	
Heavy melting steel	$15.00 to $16.00
Scrap rails	15.25 to 16.00
Compressed sheet steel	15.00
Bundled sheets, sides and ends	14.00
Cast iron carwheels	14.50 to 15.00
Sheet bar crops, ordinary	16.00 to 16.50
Heavy breakable cast	13.00
No. 2 railroad wrought	15.50 to 16.00
Heavy steel axle turnings	13.00 to 13.50
Machine shop turnings	10.50 to 10.75
Acid Open-Hearth Furnace Grades:	
Railroad knuckles and couplers	16.50 to 17.00
Railroad coil and leaf springs	16.50 to 17.00
Rolled steel wheels	16.50 to 17.00
Low phosphorus billet and bloom ends	18.50 to 19.00
Low phosphorus, mill plate	17.50 to 18.00
Low phosphorus, light grade	16.50 to 17.00
Low phosphorus sheet bar crops	17.50 to 18.00
Heavy steel axle turnings	13.00 to 13.50
Electric Furnace Grades:	
Low phosphorus punchings	16.50 to 17.00
Heavy steel axle turnings	13.00 to 13.50
Blast Furnace Grades:	
Short shoveling steel turnings	11.00 to 11.25
Short mixed borings and turnings	11.00 to 11.25
Cast iron borings	11.00 to 11.25
No. 2 busheling	10.50 to 11.00
Rolling Mill Grades:	
Steel car axles	18.00 to 19.00
No. 1 railroad wrought	11.00 to 12.00
Sheet bar crops	17.00 to 17.50
Cupola Grades:	
No. 1 cast	14.50 to 15.00
Rails 3 ft. and under	16.00 to 16.50
Malleable Grades:	
Railroad	15.00 to 16.00
Industrial	14.50 to 15.50
Agricultural	14.00 to 15.00

REINFORCING STEEL

Awards of 4000 Tons—1400 Tons in New Projects

AWARDS of only 4000 tons reported in the last week included no jobs of outstanding size. New projects amounted to less than 1400 tons. Awards follow:

STATE OF NEW HAMPSHIRE, 300 tons of road mesh, to American Steel & Wire Co. and Truscon Steel Co.

CHICAGO, 165 tons, Willoughby Tower Building, to Concrete Engineering Co.

CHICAGO, 125 tons of rail steel, packing plant, to Calumet Steel Co.

CHICAGO, 850 tons, approaches to Crawford Avenue Bridge, to Barton Spiderweb System.

CHICAGO, 140 tons of rail steel, Temple Sholem, to Inland Steel Co.

CHICAGO, 700 tons of rail steel, apartment building, from Wahl Construction Co., general contractors, to Inland Steel Co.

CHICAGO, 500 tons, building for General Tire & Rubber Co., to an unnamed bidder.

CHICAGO, 100 tons, Ogden National Bank Building, to Olney J. Dean & Co.

STATE OF ILLINOIS, 300 tons of rail steel, road work, to Calumet Steel Co.

ST. LOUIS, 445 tons, 220 tons for apartment house at 4615 Lindell Boulevard and 225 tons for garage at Seventh and Morgan Streets, to Laclede Steel Co.

NASHVILLE, TENN., 120 tons, Victor Chemical Works plant, to Connors Steel Co.

ELLENSBURG, WASH., 270 tons, Kittitas Division of Yakima Project for United States Bureau of Reclamation, to Pacific Coast Steel Co.

Reinforcing Bars Pending

Inquiries for reinforcing steel bars include the following:

WORCESTER, MASS., 400 tons, telephone building.

NEW YORK, 200 tons, Pier No. 3, North River.

PHILADELPHIA, 125 tons, North Broad Street station for Reading Railroad; bids in.

CHICAGO, tonnage not stated, reconstruction of Fine Arts Building in Jackson Park.

EUGENE, ORE., 450 tons, penstock, dam and power house; bids June 5.

SEATTLE, 200 tons, Stimson Building; bids being taken.

Milled studs	70 and 5

Chicago

Steel Specifications Best in Five Weeks—Foundry Pig Iron Reduced 50c.

CHICAGO, May 15.—Specifications for finished steel products are the best in five weeks and sales in the past seven days are fully equal to shipments and are on a par with the average in the closing weeks of April. Early in the spring the delivery situation and general business conditions led consumers to anticipate requirements beyond what had been their custom, but as the summer months approach there is a growing tendency to order in smaller lots. Steel mill output in practically all departments, sheets being an exception, remains steady. Although backlogs continue to dwindle, it is rather commonly believed by producers that the steel business enters the end of the fifth month in a stronger position than in any like period since 1923. Changes in blast furnace operation are only a matter of readjustment, there still being 28 out of 36 steel company stacks in blast in this district. No. 12 furnace was blown in at Gary on May 9 and No. 7 was taken out of service at South Works on May 12. The leading producer is now operating 11 furnaces at Gary, eight at South Works and one at Joliet. Chicago merchant iron has been reduced 50c. a ton.

Price concessions in finished steel are less common except in narrow plates. Competition for hot mill products is unusually keen, not alone among sheet makers but also with producers of strip sheets.

Pig Iron.—Producers of Northern foundry iron have reduced prices to $18, f.o.b. local furnaces, for the No. 2 grade. This change comes at a time when purchases are slow and iron is moving here by boat from Lake Erie ports. Two cargoes, about 3000 tons, have already been unloaded and a third boat is due to arrive before the end of the week. Shipments from Buffalo also are under way. Deliveries are steady and well ahead of production, which is now confined to three merchant stacks in the immediate Chicago territory. Southern iron sold locally brings $21.51 when shipped by all-rail and $20.68 when delivered by rail and barge. Scattered carload orders for charcoal iron bring $24, furnace, or $27.04, delivered, Chicago. The silvery market is quiet.

Prices per gross ton at Chicago:

Northern No. 2 foundry, sil. 1.75 to 2.25	$18.00
N'th'n No. 1 fdy., sil. 2.25 to 2.75	18.50
Malleable, not over 2.25 sil.	18.00
High phosphorus	18.00
Lake Superior charcoal, averaging sil. 1.50	27.04
Southern No. 2 fdy. (all rail)	21.51
Southern No. 2 (barge and rail)	20.68
Low phos., sil. 1 to 2 per cent, copper free	$28.50 to 29.00
Silvery, sil. 8 per cent	29.79
Bessemer ferrosilicon, 14 to 15 per cent	46.79

Prices are delivered consumers' yards except on Northern foundry, high phosphorus and malleable, which are f.o.b. local furnace, not including an average switching charge of 61c. per gross ton.

Ferroalloys.—The local ferromanganese market has been active both in anticipation of and following an advance in price of $5 a ton. Chicago delivered prices are now $112.56. New prices have no bearing on old contracts, which expire June 30, and new agreements protect buyers against a drop in prices in the second half. A tonnage sale of 19 to 21 per cent spiegeleisen has been made at $30, Hazard, Pa. Small lots bring $32.

Prices delivered Chicago: 80 per cent ferromanganese, $112.56; 50 per cent ferrosilicon, $83.50 to $87.50; spiegeleisen, 19 to 21 per cent, $37.76 to $39.76.

Plates.—Orders for oil storage tankage plates again play an important part in the Chicago market. A Texas producer of petroleum products has purchased 6000 tons to be fabricated in a Chicago shop. Two oil refiners, one in Louisiana and one in Texas, have come into the market for a total of 8000 tons. Bids will be opened June 1 in Denver, Colo., on a water pipe project requiring close to 12,000 tons, and the general contract has been awarded for a similar project at Oklahoma City, Okla., taking about 3000 tons. The railroad equipment market is quiet. Ten gas-electric cars have been placed by the Chicago, Burlington & Quincy. Large producers of plates in this district are well engaged, and as a general rule rolling schedules are satisfactory, but several mills of small capacity, and whose product usually runs to narrow widths, appear to be anxious to take business and are offering concessions in prices. As low as 1.90c., Chicago, has been named on a few scattered lots. However, 2c. is the ruling price, even in territory to the east, which for several weeks has shown unstable tendencies.

Mill prices on plates per lb.: 2.00c., base Chicago.

Structural Material.—At one source it is estimated that fully 100 projects tributary to local mills are pending and will require more than 1000 tons each, the aggregate being close to 200,000 tons. Probably a fair share of this, however, is of a speculative nature, and, if it does eventually go through, rolling and fabrication will be spread over many months. Outstanding among local awards is 1700 tons for a lift bridge across the Chicago River for the Baltimore & Ohio Railroad. Fresh inquiry is moderate in size and is well scattered over the Middle West. Swift & Co. will soon buy 600 tons for an office building at Kansas City, Mo., and the Interstate Iron & Steel Co., Chicago, will take 600 tons for an addition to a billet mill. Keen competition among fabricators continues to hold prices at low levels. On special jobs it is not uncommon for shops to solicit and get aid from steel producers in the form of price concessions. These same fabricators, in buying for stock or against less desirable jobs, commonly pay 2c., Chicago.

Mill prices on plain material per lb.: 2.00c., base, Chicago.

Bars.—Of interest in this market is an acceleration of buying, so that new bookings in mild steel bars are practically equal to shipments. The character of purchases is changing toward smaller lots and for the earliest possible delivery. In some instances it develops that users have fair stocks, and current orders are mostly to round out the sizes of bars on hand. Specifications from cold-drawn bar manufacturers are heavy, and warehouses are taking a larger part of the output. Notwithstanding reports of recessions in automobile manufacturing, this week has witnessed rather a sharp increase in demand for bars from that industry, forgers particularly being in need of additional stock. Farm implement plant requirements are lower, but there is evidence that these manufacturers will not hesitate to round out stocks in anticipation that as soon as the inventory period, about June 1, is over they will swing into near-capacity output. Less uneasiness is noticed in soft steel bar prices, it being evident that competition from the East is less active. The iron bar market is quiet both in sales and specifications. Prices are steady at 2c., Chicago. Alloy bar mills are engaged at close to capacity, and price schedules are holding at the levels recently established. As gaged by orders to Chicago district alloy bar mills, there is little or no change in the rate of automobile output. New sales in rail steel bars have brought a substantial volume of business to local mills; specifications, after lagging for several weeks, have again jumped a trifle ahead of shipments. Reinforcing bar requirements are large, but fair tonnages are also going to barn equipment makers and manufacturers of farm machinery. Prices are steady at 1.85c., Chicago Heights.

Mill prices per lb.: Soft steel bars, 2.00c. base, Chicago; common bar iron, 2.00c., base, Chicago; rail steel bars, 1.85c., base, Chicago Heights mill.

Cast Iron Pipe.—Conditions are somewhat improved in the local cast iron pipe market. Price advances put in effect a week or 10 days ago are holding. In fact, in the last few days a number of small sales have been closed at prices that were well above $33, Birmingham. Large inquiries are not numerous, but there is a more lively interest shown over a wider territory. The National Cast Iron Pipe Co. has taken 600 tons of 6 to 12-in. centrifugal pipe for Dearborn, Mich. Among the larger inquiries are 2500 tons of 6 to 24-in. class C pipe for Roseville, Mich., and 1100 tons 6 to 16-in. pipe for St. Paul, Minn. Chicago will buy a round tonnage of 6 to 12-in. offsets and on May 22 will take bids on 225 tons of 16-in. class C pipe. Milwaukee, Detroit and Durbin, W. Va., are in the market for tonnages that range from 100 to 200 tons each. Contractors in the Chicago area are busy, and the trade expects that fresh inquiry in good volume will soon be forthcoming from that source. Pipe foundries are reported moderately busy. Deliveries range from 30 to 45 days on most sizes.

Prices per net ton, delivered Chicago: Water pipe, 6-in. and over, $38.20 to $41.20; 4-in., $42.20 to $45.20; Class A and gas pipe, $4 extra.

Rails and Track Supplies.—Several miscellaneous lots of standard-section rails have added 3000 tons to makers' books. Reports in this district are mixed as to the extent of or the possibilities of a secondary buying movement. In some quarters doubt is expressed that the railroads as a general rule will even go as far as to specify fully against options taken last fall and winter. Scattered orders for track accessories total 3000 tons. Inquiry is dull. Chicago rail mills continue to produce at close to 90 per cent of capacity, and track supply departments are operating in like proportion. The light rail market is without feature.

Prices f.o.b. mill, per gross ton: Standard-section open-hearth and Bessemer rails, $43; light rails, rolled from billets, $36. *Per lb.:* Standard railroad spikes, 2.80c.; track bolts with square nuts, 3.80c.; steel tie plates, 2.25c.; angle bars, 2.75c.

Sheets.—New business is in small volume. Local mills are operating at about 60 per cent of capacity. Lack of sheet business does not indicate an unusual slackness in industries that use this commodity, as it is evident that stocks are large, though possibly not well rounded out, and that current orders are merely to hold consumers' stocks in a balanced condition. Competition by strip sheet manufacturers is keener in a few gages and widths.

Base prices per lb., delivered from mill in Chicago: No. 24 black, 2.85c. to 2.95c.; No. 24 galvanized, 3.75c. to 3.85c.; No. 10 blue annealed, 2.20c. to 2.30c. Delivered prices at other Western points are equal to the freight from Gary plus the mill prices, which are 5c. per 100 lb. lower than the Chicago delivered prices.

Reinforcing Bars.—Of special interest in this market is the announcement that reinforcing bar warehouses in Chicago will handle rail steel reinforcing bars on a price schedule $6 a ton below that which has been set for the billet bar commodity. Prices for rail steel reinforcing bars for road work will remain at 1.85c., Chicago Heights, and 1.95c. on bridges. On building work the schedule will be 2c. for 18 tons or more, 2.30c. for 5 tons up to 18 tons and 2.70c. for less than 5 tons. Outstanding among new awards are 700 tons of rail steel bars for an apartment building in Chicago and 850 tons of new billet reinforcing bars for the approaches to the Crawford Avenue bridge. Illinois State roadwork awards remain active, the total placed this week being close to 300 tons. Fresh inquiry is a bit more sluggish than a week ago, but there still remains a sizable tonnage of projects against which dealers are bidding. Recent awards and new inquiries are given on page 1420.

Warehouse Prices, f.o.b. Chicago

	Base per Lb.
Plates and structural shapes	3.10c.
Soft steel bars	3.00c.
Reinforcing bars, billet steel	2.15c. to 2.40c.
Cold-finished steel bars and shafting—	
Rounds and hexagons	3.60c.
Flats and squares	4.10c.
Bands	3.65c.
Hoops	4.15c.
Black sheets (No. 24)	3.95c.
Galvanized sheets (No. 24)	4.80c.
Blue annealed sheets (No. 10)	3.50c.
Spikes, standard railroad	3.55c.
Track bolts	4.55c.
Rivets, structural	3.60c.
Rivets, boiler	3.60c.
	Per Cent Off List
Machine bolts	60
Carriage bolts	60
Coach or lag screws	60
Hot-pressed nuts, squares, tapped or blank	60
Hot-pressed nuts, hexagons, tapped or blank	60
No. 8 black annealed wire, per 100 lb.	$3.30
Common wire nails, base per keg	3.10
Cement coated nails, base per keg	3.10

Bolts, Nuts and Rivets.—For the second week specifications have shrunk from the average that was maintained during the early spring. Shipping orders are of fair size. Output is still at close to 60 per cent. Spot sales are in small volume, but are at the full prices.

Wire Products.—Reports from the jobbing trade to the East and in the Missouri River Valley are spotty, but to the South and in the Northwest new business and shipments are steady. A substantial volume of woven wire fencing is moving to dealers. Orders for staples are light because of the fact that steel posts are coming into more common usage. Little is known of the agricultural outlook for 1928 for the reason that in most parts of the country planting has been from 15 to 40 days late. Nails are moving very slowly in this market and there has been little or no business of a character that would test prices. Orders from the manufacturing trade are steady.

Coke.—Shipments of by-product foundry coke are steady and average close to the April rate. Prices are firm at $9, local ovens, and $9.50, delivered in the Chicago switching district.

Old Material.—The scrap market is marking time in all phases except shipments, which are still heavy. Mills are well supplied with heavy melting steel. A mill has taken a tonnage of bundled sheets at a reported delivered price of $11.75 a gross ton. A melter has purchased rolled steel wheels at $16 a gross ton, delivered. Railroad shipments are heavy. There is a tendency among some of the larger rail systems to issue more frequent and smaller lists. The Rock Island will sell 7000 tons.

Prices delivered consumers' yards, Chicago:

Per Gross Ton	
Basic Open-Hearth Grades:	
Heavy melting steel	$13.00 to $13.50
Shoveling steel	13.00 to 13.50
Frogs, switches and guards, cut apart, and miscellaneous rails	13.50 to 14.00
Hydraulic compressed sheets	11.50 to 12.00
Drop forge flashings	9.50 to 10.00
Forged, cast and rolled steel carwheels	15.50 to 16.00
Railroad tires, charging box size	16.75 to 17.25
Railroad leaf springs, cut apart	16.75 to 17.25
Acid Open-Hearth Grades:	
Steel couplers and knuckles	14.50 to 15.00
Coil springs	17.00 to 17.50
Electric Furnace Grades:	
Axle turnings	13.00 to 13.50
Low phosphorus punchings	14.00 to 14.50
Low phosphorus plate, 12 in. and under	14.25 to 14.75
Blast Furnace Grades:	
Axle turnings	10.00 to 10.50
Cast iron borings	9.25 to 9.75
Short shoveling turnings	9.25 to 9.75
Machine shop turnings	7.00 to 7.50
Rolling Mill Grades:	
Iron rails	14.00 to 14.50
Rerolling rails	14.50 to 15.00
Cupola Grades:	
Steel rails less than 3 ft.	15.25 to 15.75
Angle bars, steel	14.50 to 15.00
Cast iron carwheels	13.50 to 14.00
Malleable Grades:	
Railroad	13.00 to 13.50
Agricultural	12.00 to 12.50
Miscellaneous:	
*Relaying rails, 56 to 60 lb.	23.00 to 25.00
*Relaying rails, 65 lb. and heavier	26.00 to 31.00
Per Net Ton	
Rolling Mill Grades:	
Iron angles and splice bars	14.25 to 14.75
Iron arch bars and transoms	19.50 to 20.00
Iron car axles	23.00 to 23.50
Steel car axles	16.00 to 16.50
No. 1 railroad wrought	11.75 to 12.25
No. 2 railroad wrought	11.50 to 12.00
No. 1 busheling	10.00 to 10.50
No. 2 busheling	5.75 to 6.25
Locomotive tires smooth	12.50 to 13.00
Pipes and flues	8.00 to 8.50
Cupola Grades:	
No. 1 machinery cast	14.00 to 14.50
No. 1 railroad cast	12.75 to 13.25
No. 1 agricultural cast	12.50 to 13.00
Stove plate	11.25 to 11.75
Grate bars	11.25 to 11.75
Brake shoes	11.00 to 11.50

---

*Relaying rails, including angle bars to match, are quoted f.o.b. dealers' yards.

Philadelphia

Prices of Shapes and Black Sheets Lower —Pig Iron Exchanged for Ore

PHILADELPHIA, May 15.—Steel prices still show a lack of stability, but in eastern Pennsylvania, except on shapes, recessions have been less decided than in other districts. Transactions in shapes are reported at less than 2c. per lb., delivered Philadelphia, but 2.06c. to 2.13c. per lb., delivered, is the usual range of the market. Plate and bar prices in this district have apparently not gone below 2c., Coatesville, on plates and 1.85c., Pittsburgh, on bars.

While there is still a fair tonnage of fabricated steel business, much of the tonnage being placed is in sizable projects, usually secured by the leading fabricators. Prices on fabricated steel continue to recede, and the small fabricating shops complain that current business represents a loss, despite concessions in plain material prices.

Pig iron is quiet, except for a sizable transaction between a Phillipsburg, N. J., pipe maker and the leading eastern Pennsylvania independent, involving the exchange of about 10,000 tons of foundry iron for an equivalent value in iron ore from the Wharton, N. J., mines. Iron and steel scrap is inactive, and, with a slightly lower rate of mill operations a possibility, dealers look upon price recovery as remote.

Ferromanganese.—The new price of $105 per ton, seaboard, is being quoted by both domestic makers and importers on current small-lot shipments and for third quarter and second half contracts. Thus far, consumers have manifested no interest in contracting for the remainder of the year.

Pig Iron.—Buying is still limited to small lots, in most cases for early delivery, consumers not showing much interest in third quarter commitments. A York, Pa., manufacturer has closed on a small tonnage of No. 2 and No. 2X foundry iron for early delivery from an eastern Pennsylvania furnace. No concession from $20 per ton, base, is reported in the eastern Pennsylvania price. A Phillipsburg, N. J., pipe foundry has closed for about 10,000 tons of foundry iron with the leading eastern Pennsylvania independent producer on a basis of exchange of iron ore of equivalent value from the Wharton, N. J., mines. Pressure pipe producers are fairly well covered for the present, but soil pipe plants have only small stocks of iron and may appear as buyers before long. Low phosphorus is quiet, and, with a fair tonnage on its yard to supply customers for the next few months, Chateaugay furnace is expected to go out of blast about the end of this month or early in June. The recent reduction of 50c. a ton in the price of Birmingham foundry iron is expected to result in a corresponding recession in the Virginia iron price when either of the two Virginia cast iron pipe plants enter the market. Meanwhile, on current small-lot orders the price is unchanged.

Prices per gross ton at Philadelphia:

East. Pa. No. 2 plain, 1.75 to 2.25 sil.		$20.76
East. Pa. No. 2X, 2.25 to 2.75 sil.		21.26
East. Pa. No. 1X		21.76
Basic (delivered eastern Pa.)	$19.00 to	19.50
Gray forge	19.75 to	20.25
Malleable	21.00 to	21.50
Standard low phos. (f.o.b. New York State furnace)	22.00 to	23.00
Copper bearing low phos. (f.o.b. furnace)	23.50 to	24.00
Virginia No. 2 plain, 1.75 to 2.25 sil.	24.54 to	25.04
Virginia No. 2X, 2.25 to 2.75 sil.	25.04 to	25.54

Prices, except as specified otherwise, are delivered Philadelphia. Freight rates: 76c. to $1.64 from eastern Pennsylvania furnaces; $4.54 from Virginia furnaces.

Warehouse Prices, f.o.b. Philadelphia

	Base per Lb.
Plates, ¼-in. and heavier	2.50c. to 2.60c.
Plates, 3/16-in.	2.80c. to 3.00c.
Structural shapes	2.40c. to 2.60c.
Soft steel bars, small shapes and iron bars (except bands)	2.50c.
Round-edge iron	3.50c.
Round-edge steel, iron finished 1½ x 1½ in.	3.50c.
Round-edge steel, planished	4.30c.
Reinforcing steel bars, square, twisted and deformed	2.50c. to 3.00c.
Cold-finished steel, rounds and hexagons	3.35c.
Cold-finished steel, squares and flats	3.85c.
Steel hoops	3.50c.
Steel bands, No. 12 gage to 3/16-in., inclusive	3.25c.
Spring steel	5.00c.
*Black sheets (No. 24)	4.00c.
†Galvanized sheets (No. 24)	4.75c.
Blue annealed sheets (No. 10)	3.15c.
Diamond pattern floor plates—	
¼-in.	5.30c.
3/16-in.	5.50c.
Rails	3.20c.
Swedish iron bars	6.60c.

*For 50 bundles or more; 10 to 49 bundles, 4.25c. base; 1 to 9 bundles, 4.50c. base.

†For 50 bundles or more; 10 to 49 bundles, 5.10c. base; 1 to 9 bundles, 5.45c. base.

Bars.—New business is still rather limited, being confined to small tonnages, on which 1.85c. per lb. and occasionally 1.90c. per lb., Pittsburgh, or 2.17c. to 2.22c., delivered Philadelphia, usually apply. Reinforcing bar projects are in most cases small, usually being tonnages to be used in conjunction with structural steel construction.

Shapes.—Prices continue irregular, with less than 2c. per lb., delivered Philadelphia, reported on desirable specifications, although the current market is quotable at 2.06c. to 2.13c. per lb., delivered, the lower price being on the basis of 2c. per lb., Pencoyd. Fabricated steel prices still show softness, and, even at the present slightly lower level of structural steel prices, fabricators claim that there is little or no profit to be taken from most projects. Only small tonnages are included in the construction reported in this district, except for 1900 tons in a bridge at Sunbury, Pa., and about 3000 tons in a Lake Champlain bridge, both of which have been closed.

Plates.—A moderate volume of small orders is being placed, and on much of this 2.05c., Coatesville, or 2.15c., delivered Philadelphia, is being obtained, with 2c., Coatesville, or 2.10c., Philadelphia, applying on larger lots. Not much interest is shown by consumers in third quarter buying, as second quarter contracts at the present rate of consumption may carry buyers well into July, if extensions are granted. There is some plate tonnage in recent bridge projects, such as the Lake Champlain bridge, which includes about 1000 tons of plates, and the Sunbury, Pa., bridge, which takes a smaller tonnage. Although price concessions have been made in other districts, the minimum quotation of eastern Pennsylvania producers is apparently still 2c., Coatesville.

Sheets.—Local producers of blue annealed sheets are still endeavoring to maintain 2.10c. per lb., Pittsburgh, on blue annealed sheets, and on much of the present business, which seldom exceeds a carload and is often less, this price seems to apply. On more desirable business, however, 2.05c. and 2c. per lb., Pittsburgh, or 2.32c. to 2.37c., delivered Philadelphia, are being done. Black sheets still show a downward tendency, with quotations at 2.70c. to 2.75c., Pittsburgh, or 3.02c. to 3.07c., Philadelphia, and occasional sales reported on a basis of 3.65c., Pittsburgh. Galvanized sheets range from 3.60c. to 3.70c., Pittsburgh. Despite the irregularity of prices, business continues fairly good, although confined to small tonnages.

Warehouse Business.—Quantity differentials, which have been effective on bars and bar-sized shapes, have now been extended by warehouses in this district to include cold-finished steel, hoops and bands. Base prices on cold-finished material continue unchanged at 3.35c. per lb. for rounds and hexagons and 3.85c. per lb. for squares and flats, but hoops have been reduced to 3.50c. per lb., base, and bands to 3.25c. per lb., base. There is a fair volume of business, comparing favorably with the average for April.

Imports.—In the week ended May 12, a total of 2000 tons of chrome ore arrived at this port from Portuguese Africa. Pig iron arrivals totaled 750 tons, of which 447 tons was Indian and 303 tons Dutch iron. There was also ¼ ton of ferrozirconium from the United Kingdom. Steel imports consisted of 55 tons of structural shapes, 27 tons of sheets and 1 ton of hoops and bands from Germany, 62 tons of hoops and bands, 150 tons of steel bars and 299 tons of shapes from Belgium and 503 tons of bars and 65 tons of shapes from France.

Old Material.—Prices of some grades of scrap still show a downward tendency, and, in view of the possibility that the recent high rate of mill operations may not be maintained, an early recovery of prices is not looked for. One large eastern Pennsylvania consumer, which recently bought about 15,000 tons of No. 1 heavy melting steel for Steelton, Pa., at $13.50 per ton, delivered, has closed on about 5000 tons at the same price for delivery to Sparrows Point, Md. About 1000 tons of blast furnace scrap has been bought at $10.50 per ton, delivered Sparrows Point, and the consumer at Bethlehem is not expected to offer more than $10.50, Steelton, or $10, Bethlehem, on future purchases of blast furnace material. A Phoenixville, Pa., mill is taking machine shop turnings at $10.50 per ton and is offering $11 for yard steel and $11.50 for stove plate.

Prices per gross ton delivered consumers' yards, Philadelphia district:

No. 1 heavy melting steel	$13.50 to $14.00
Scrap T rails	13.00 to 13.50
No. 2 heavy melting steel	11.00 to 11.50
No. 1 railroad wrought	14.50 to 15.00
Bundled sheets (for steel works)	10.50
Machine shop turnings (for steel works)	10.50 to 10.75
Heavy axle turnings (or equivalent)	12.00 to 12.50
Cast borings (for steel works and rolling mill)	10.50 to 11.00
Heavy breakable cast (for steel works)	15.50 to 16.00
Railroad grate bars	12.00 to 12.50
Stove plate (for steel works)	11.50 to 12.00
No. 1 low phos., heavy, 0.04 per cent and under	17.50 to 18.00
Couplers and knuckles	15.50 to 16.00
Rolled steel wheels	15.50 to 16.00
No. 1 blast furnace scrap	10.50 to 11.00
Machine shop turnings (for rolling mill)	11.00 to 11.25
Wrought iron and soft steel pipes and tubes (new specifications)	12.00 to 12.50
Shafting	17.50 to 18.00
Steel axles	19.00 to 20.00
No. 1 forge fire	11.00 to 11.50
Steel rails for rolling	14.75 to 15.25
Cast iron carwheels	15.50 to 16.00
No. 1 cast	16.00 to 16.50
Cast borings (for chemical plant)	14.50 to 15.00

New York

Pig Iron Sales of 19,000 Tons—Eastern Steel Mills Operating Well

NEW YORK, May 15.—Sales of pig iron in this district, at 19,000 tons, were the largest in many weeks. A considerable portion of this tonnage was for third quarter delivery, and there is an increasing volume of inquiry for that period. Melters are taking advantage of barge or barge-and-rail shipment to a greater extent than in previous years. A New Jersey melter is reported to have bought Buffalo pig iron at delivered prices ranging from $19.25 to $19.50. Eastern Pennsylvania producers are finding it difficult to reach this section, and their quotations of $20, base furnace, are consequently largely nominal. Buffalo foundry iron continues to range from $16 to $16.50, base furnace. Eastern New York furnaces are meeting Buffalo competition. The Thatcher Co., Garwood, N. J., has placed 2000 tons of No. 2 plain for the current quarter. The Central Foundry Co., New York, has closed for 5000 tons for its Dundalk, Md., plant, of which 3000 tons is understood to have gone to a nearby furnace and 1000 tons each to eastern New York and New England producers. The A. P. Smith Mfg. Co., Bloomfield, N. J., has placed 900 tons of No. 2 plain and No. 2X for third quarter shipment. An inquiry in this district calls for 2000 tons of malleable. A New Jersey melter is still in the market for 1000 to 2000 tons of No. 1X.

Prices per gross ton, delivered New York district:

Buffalo No. 2 fdy., sil. 1.75 to 2.25	$20.91 to $21.91
East. Pa. No. 2 fdy., sil. 1.75 to 2.25	20.39 to 22.52
East. Pa. No. 2X fdy., sil. 2.25 to 2.75	20.89 to 23.02
East. Pa. No. 1X fdy., sil. 2.75 to 3.25	21.39 to 23.52

Freight rates: $4.91 from Buffalo, $1.39 to $2.52 from eastern Pennsylvania.

Reinforcing Bars.—Business has been very quiet in the last week with no sizable jobs reported let. Reconstruction of a pier on the North River will require 200 tons. Prices have shown no further weakness.

Finished Steel.—While specifications and orders for steel products in the first half of May have fallen below the average of April bookings, shipments are holding up at a good rate. Eastern mills are running on the average about as well as in April, and in the case of the leading Eastern steel company operations this month are larger, being above 80 per cent. Weakening prices of sheets have somewhat curtailed the volume of ordering, but business in plates, shapes and bars is fairly active. Current bookings of fabricated structural steel are in reduced volume, so that present mill activity in shapes represents largely the projects that have been placed during recent months. Sheet prices are not materially different from those in effect a week ago, except that sales of black sheets at 2.70c., Pittsburgh, have become more common and there have

Warehouse Prices, f.o.b. New York

---

*No. 28 and lighter, 36 in. wide, 20c. higher per 100 lb.

been further sales of galvanized sheets at 3.55c. However, on the latter grade 3.60c. is more representative of a majority of the transactions. Blue annealed sheets continue at 2c. to 2.10c., Pittsburgh. The leading producers of wire nails are maintaining quotations of $2.65 per keg, base Pittsburgh, but users are having little difficulty in getting nails from some of the smaller producers at $2.55. The American Bridge Co. is low bidder on 3000 tons for a Lake Champlain bridge. The Hay Foundry & Iron Works has been awarded 2000 tons for an apartment building in New York. A Syracuse, N. Y., office building will take 2500 tons.

Mill prices per lb., delivered New York: Soft steel bars, 2.19c. to 2.24c.; plates, 2.12½c. to 2.22½c.; structural shapes, 2.14½c. to 2.19½c.; bar iron, 2.14c.

Warehouse Business.—Orders are small, but in the aggregate represent a fair total, which is expected to compare favorably with last month. There is moderate activity in structural material, but sheet business is small and concessions are not unusual. Black sheets are quoted at 4c. per lb., base, and galvanized at 4.70c., base, but in both cases concessions range from 10c. to 20c. per 100 lb. There is also slight softness in blue annealed sheets, but concessions on this grade seldom exceed 5c. per 100 lb.

Cast Iron Pipe.—Prices continue fairly firm, with Northern makers seldom quoting below $38.60 per net ton, New York, which is sufficiently low to prevent Southern foundries from competing, as the Birmingham base is $31 per ton for sizable lots and $33 per ton for small orders, to which must be added a freight rate of $9.25 per ton to New York. Although $33, base, is generally asked by Southern pipe makers, very little business has been closed on this basis. There is some buying in New York for shipment to projects in other districts and a moderate volume of inquiry from private utility companies. Municipal business continues light, only a few small purchases being reported.

Prices per net ton, delivered New York: Water pipe 6-in. and larger, $37.60 to $38.60; 4-in. and 5-in., $42.60 to $43.60; 3-in., $52.60 to $53.60; Class A and gas pipe, $4 to $5 extra.

Old Material.—Prices show no strength and the market continues quiet. While brokers are apparently unwilling to contract for a substantial tonnage of stove plate at $11.50 per ton, delivered Phoenixville, Pa., carload lots are being shipped on this basis, also yard steel purchased at $10.50 and machine shop turnings at $10 and $10.25 per ton, delivered Phoenixville. Blast furnace scrap is being purchased at $10 per ton, delivered to Bethlehem, Pa., against $10.50 orders, but the consumer there is apparently now unwilling to pay more than $10 per ton. Chemical borings are being shipped to a consumer at Bound Brook, N. J., at $13.25 per ton, delivered. Stove plate to local foundries continues unchanged at $10.50 to $11 a ton, delivered.

Dealers' buying prices per gross ton f.o.b. New York:

No. 1 heavy melting steel	$10.00 to $10.85
Heavy melting steel (yard)	6.75 to 7.25
No. 1 heavy breakable cast	11.25 to 12.00
Stove plate (steel works)	7.25 to 7.50
Locomotive grate bars	7.50 to 8.00
Machine shop turnings	6.50 to 7.25
Short shoveling turnings	6.50 to 7.25
Cast borings (blast furnace or steel works)	6.25 to 7.25
Mixed borings and turnings	6.50 to 7.25
Steel car axles	15.00 to 15.50
Iron car axles	23.75 to 24.75
Iron and steel pipe (1 in. dia., not under 2 ft. long)	8.00 to 8.50
Forge fire	6.75 to 7.00
No. 1 railroad wrought	10.00 to 10.50
No. 1 yard wrought, long	8.50 to 9.00
Rails for rolling	10.00 to 10.50
Cast iron carwheels	11.00 to 11.50
Stove plate (foundry)	8.50 to 9.00
Malleable cast (railroad)	10.00
Cast borings (chemical)	10.75 to 11.25

Prices per gross ton, delivered local foundries:

No. 1 machinery cast	$13.50 to $14.00
No. 1 heavy cast (columns, building materials, etc.), cupola size	11.50 to 12.00
No. 2 cast (radiators, cast boilers, etc.)	11.00 to 11.50

Coke.—There is very little activity in prompt shipment coke and consumers are not yet interested in third quarter and last half contracts. Of the special brands of foundry coke, one, which has been selling at $5.10 per net ton, ovens, has been reduced 25c. per ton to $4.85. Other brands continue at $5 and $5.10 per ton. Delivered prices on special brands of foundry coke are: To northern New Jersey, Jersey City and Newark, $8.56 to $8.81 per net ton; to New York and Brooklyn, $9.44 to $9.59 per net ton. By-product foundry coke ranges from $9 to $9.40 per net ton, Newark or Jersey City, N. J., and from $10.06 to $10.29 per ton, New York or Brooklyn.

Cleveland

Demand for Plates, Shapes and Bars Falls Off—Hot-Rolled Strips Weak

CLEVELAND, May 15.—The steel market showed evidence of slowing down during the past week. The demand for steel bars, plates and structural material fell off. There was very little new business and specifications against contracts were limited to small lots. Plate orders are especially light.

Shipments generally are in excess of orders, and unless the demand takes a turn for the better some of the mills will probably slow down operations before the end of the month. The automotive industry continues the bright spot in an otherwise dull market. Specifications from this industry are holding up to the recent volume, and the motor car builders, with two or three exceptions, have made no curtailment in operations. Some of the automobile companies have placed steel orders for July production. Present indications are that a seasonal slowing down in that industry will not occur before June 15 or later. Most of the mills that serve the automobile industry with alloy steel bars, sheets and strip steel have enough tonnage on their books to maintain present operations for two weeks or longer.

Inquiry in the structural field, while not good, shows slight improvement. Industries outside of the automotive field are maintaining recent operations.

Little change in the price situation developed during the week further than a more pronounced weakness in hot-rolled strip steel. Sheets continue weak, but are not lower than they have been. Steel bars, plates and structural material are firm at 1.85c., Pittsburgh. Local mills are maintaining 1.85c., Cleveland, on steel bars.

Iron Ore.—The market is almost devoid of inquiry. Shippers now have most of their boats in commission and the water movement during the latter half of the month will be fair. On May 1 there was 5,182,388 tons of ore on Lake Erie docks, as compared with 4,703,294 tons on the same date a year ago. Dock shipments are light; they were only 397,246 tons during April, compared with 1,150,507 tons during the same month last year.

Pig Iron.—Sales continue in moderate volume, business being about evenly divided between orders for early shipment and third quarter contracts. Cleveland interests sold 14,500 tons of foundry and malleable iron during the week. The American Rolling Mill Co. has an inquiry out for 25,000 tons of basic iron for its Butler, Pa., plant for the third quarter. This promises a test of the present $16.50 price on basic iron. Not much interest is being shown as yet in foundry and malleable iron for the third quarter. Foundries in the automotive industry are awaiting the development of the business outlook for that industry for the latter part of the year. As yet there has been no slowing down in the demand for pig iron from motor car build-

Warehouse Prices, f.o.b. Cleveland

	Base per Lb.
Plates and structural shapes	3.00c.
Soft steel bars	3.00c.
Reinforcing steel bars	2.25c. to 2.75c.
Cold-finished rounds and hexagons	3.65c.
Cold-finished flats and squares	4.15c.
Hoops and bands	3.65c.
Cold-finished strip	*5.95c.
Black sheets (No. 24)	3.75c.
Galvanized sheets (No. 24)	4.40c. to 4.50c.
Blue annealed sheets (No. 10)	3.25c.
No. 9 annealed wire, per 100 lb	$2.85
No. 9 galvanized wire, per 100 lb	3.30
Common wire nails, base per keg	2.85

---

*Net base, including boxing and cutting to length.

ers and allied foundries, so that May shipments are expected to about equal those of April. Prices show no change, ranging from $16.50 to $17, Lake furnace, for foundry and malleable iron. For Cleveland and Michigan delivery the price is fairly steady at $18.

Prices per gross ton at Cleveland:

N'th'n No. 2 fdy., sil. 1.75 to 2.25	$18.50
Southern fry., sil. 1.75 to 2.25	21.50
Malleable	18.50
Ohio silvery, 8 per cent	28.00
Basic, Valley furnace	16.50
Standard low phos., Valley furnace	26.50

Prices, except on basic and low phosphorus, are delivered Cleveland. Freight rates: 50c. from local furnaces; $3 from Jackson, Ohio; $6 from Birmingham.

Coke.—New demand for foundry coke is light. Prices are steady at $7.75, Painesville, for Ohio by-product coke and $3.75 to $5.10 for Connellsville grades. Small lots of Ohio by-product coke for domestic use are moving at $4.50, Valley ovens, for egg size.

Bolts, Nuts and Rivets.—The demand for bolts and nuts from the automotive industry has started to slow down. Consequently the volume of business is less than last month. Rivets are not very active. Prices are firm.

Semi-Finished Steel.—Some of the sheet mills are not running quite as well as recently, and this is reflected in a slight falling off in the demand for sheet bars. However, the leading local producer is still operating its plant at 100 per cent of capacity. A few buyers have indicated that they are willing to close third quarter contracts for sheet bars at the present price, $33, Cleveland, but mills are not quoting for that delivery and there is some talk of trying to get $1 a ton advance, or $34, for sheet bars and also for slabs and billets.

Sheets.—The demand in this territory has declined somewhat and is light both in new business and in specifications against contracts. While specifications from the automotive industry continue heavy, some of the mills need orders to maintain present operations. The market continues weak, but mills are not inclined to shade the minimum quotations that have appeared in the past two weeks. Black sheets are selling as low as 2.70c. to 2.75c., Valley mill. On galvanized sheets 3.55c., Valley mill, is a rather common quotation. Blue annealed sheets have sold at 2c., Valley, although 2.05c. is the usual minimum quotation by jobbing sheet mills and most producers are holding to 2c., Pittsburgh. While some business has been taken at 1.90c., Pittsburgh, this price, it is claimed, has been for continuous mill products. Auto body sheets are firm at 4c.

Strip Steel.—Mills continue to get a good volume of business from the Detroit territory, but the local market is dull. Prices on hot-rolled strip, particularly in wide material, are weak. Strip 12 in. and wider is selling as low as 1.75c., Pittsburgh, and some of the mills are going to about the same price on 6 to 12-in. material, or $1 a ton lower than the recent minimum prices. Strip 3 in. to 6 in. wide is around 1.95c., and on material narrower than 3 in. there is a range of from 2.10c. to 2.20c. Cold-rolled strip is commonly quoted at 2.75c., Cleveland for 3 tons and over, although some small lots are still bringing 2.90c.

Nails and Wire.—Local jobbers have reduced nail prices 10c. per keg for stock shipment and to $2.65 per keg, Cleveland, for mill shipment, or the same price that mills are quoting to most buyers in this territory. Jobbers have also reduced annealed and galvanized wire $2 per ton. They have good stocks bought before the last price advance, and these are moving rather slowly. Nail prices continue irregular in sections served by Ohio River mills.

Reinforcing Bars.—Little business or inquiry developed during the week. The only round lot pending is 800 tons for the Cleveland Union Terminals Co., which probably will go to a local mill. Rail steel bars are unchanged at 1.75c., mill.

Warehouse Business.—The demand for steel bars, plates and structural material is moderate, holding up to about the April volume. Aside from some irregularity in steel bars in outlying sections, prices are well maintained. Sheets are moving rather slowly.

Old Material.—The market is weak on heavy melting steel scrap, which has declined 25c. a ton. At present $13.25 is the maximum for No. 1 grade and more than is wanted is available at that price. A Cleveland consumer who is restricting shipments has made further curtailments, which is a contributing factor to the weakness on steel-making grades. Another Cleveland consumer, who seldom comes in the open market and whose specifications are exacting, purchased a small tonnage of heavy melting steel at $14, and dealers are paying $13.50 to $13.60 for scrap to meet this customer's requirements. In the Valley district dealers are paying $14.50 for heavy melting steel. Small lots of blast furnace scrap are moving at the quoted prices.

Prices per gross ton, delivered consumers' yards:

Basic Open-Hearth Grades	
No. 1 heavy melting steel	$13.00 to $13.25
No. 2 heavy melting steel	12.50 to 12.75
Compressed sheet steel	12.50 to 12.75
Light bundled sheet stampings	11.50 to 11.75
Drop forge flashings	11.75 to 12.25
Machine shop turnings	7.00 to 7.50
No. 1 railroad wrought	11.50 to 12.00
No. 2 railroad wrought	13.50 to 13.75
No. 1 busheling	11.00 to 11.25
Pipes and flues	9.00 to 9.50
Steel axle turnings	12.50 to 13.00
Acid Open-Hearth Grades	
Low phosphorus forging crops	16.50 to 17.00
Low phosphorus, billet, bloom and slab crops	17.00 to 17.50
Low phosphorus sheet bar crops	16.50 to 17.00
Low phosphorus plate scrap	16.00 to 16.50
Blast Furnace Grades	
Cast iron borings	9.25 to 9.50
Mixed borings and short turnings	9.25 to 9.50
No. 2 busheling	9.25 to 9.50
Cupola Grades	
No. 1 cast	16.50 to 17.00
Railroad grate bars	11.00 to 12.00
Stove plate	12.00 to 12.50
Rails under 3 ft	18.00 to 18.50
Miscellaneous	
Railroad malleable	15.00 to 15.50
Rails for rolling	16.25 to 16.50

Detroit Scrap Market Quiet and Prices Are Unchanged

DETROIT, May 15.—There have been no sales of large tonnages of scrap during the past week. Prices have shown no change.

Dealers' buying prices per gross ton f.o.b. cars, Detroit:

Heavy melting and shoveling steel	$11.00 to $11.50
Borings and short turnings	7.25 to 7.75
Long turnings	6.75 to 7.25
No. 1 machinery cast	14.00 to 15.00
Automobile cast	19.50 to 21.00
Hydraulic compressed sheets	9.75 to 10.25
Stove plate	11.00 to 12.00
No. 1 busheling	8.50 to 9.00
Sheet clippings	6.00 to 7.00
Flashings	9.25 to 9.75

Weirton Steel Co. Starts Another Expansion Program

Work began this week on additions and improvements to the plant of the Weirton Steel Co., Weirton, W. Va., involving an expenditure of $1,350,000. The program calls for a new 250-ton open-hearth furnace with producers; additions to the pit furnaces; a stripper building with one additional row of soaking pits and the necessary equipment; an addition to the slab yard; also changes in the 10-in. and 16-in. mills, adding materially to the productive capacity of these units.

The additional finishing capacity has made necessary the addition to the steel plant, which will bring the annual open-hearth ingot capacity to 1,200,000 gross tons in 1929. It is now 1,050,000 tons, although the March production of 103,576 tons was at an annual rate of 1,193,000 tons. In 1925 the company had a capacity of 570,000 tons annually.

John C. Williams, vice-president and general manager, and C. H. Hunt, chief engineer, have been responsible for all extensions of productive facilities the company has made, and have been the guiding hands in its transition from merely a producer of tin plate to a fully integrated steel company, having its own ore and coal mines, blast furnaces, coke ovens and steel works.

San Francisco

Improvement in Demand for Shapes, Plates and Cast Iron Pipe

San Francisco, May 12 (*By Air Mail*).—Demand for structural shapes, plates and cast iron pipe has increased during the past week or 10 days. Awards include 270 tons of bars for the Kittitas project at Ellensburg, Wash., placed with the Pacific Coast Steel Co., 360 tons of shapes for the Twentieth Century Market, Oakland, taken by Judson-Pacific Co., and 425 tons for the new A. M. Castle Co. steel warehouse in Los Angeles, obtained by the Baker Iron Works.

Pig Iron.—Importations in February were 36,596 tons at the four Pacific ports. San Francisco interests took 36,000 tons of iron ore and concentrates, all from Canada. Pig iron quotations are unchanged.

Prices per gross ton at San Francisco:

*Utah basic	$25.00 to $26.00
*Utah foundry, sil. 2.75 to 3.25	25.00 to 26.00
**Indian foundry, sil. 2.75 to 3.25	24.00 to 25.00
**German foundry, sil. 2.75 to 3.25	24.25

*Delivered San Francisco.
**Duty paid, f.o.b. cars San Francisco.

Bars.—New business placed this week, with one exception, was confined to lots ranging from 30 to 50 tons. Bids are being taken on 200 tons for the Stimson Building at Seattle, and bids have been called for, to be opened on June 4, for 450 tons for a power house and dam at Eugene, Ore. Imports of merchant and reinforcing bars in February totaled 4032 tons, compared with 1612 tons for February, 1927, and 4322 tons for January, this year. Out-of-stock prices in the bay district on reinforcing steel bars remain weak, and 2c. is being quoted.

Plates.—Several new inquiries for plates have come up for figures. The Chicago Bridge & Iron Works took 150 tons for two tanks for the Zellerbach Paper Co. at Port Townsend, Wash., and 100 tons for two tanks for the Grays Harbor Pulp & Paper Co. at Grays Harbor, Wash. Bids are to be opened next week on 1600 tons for a pipe line at Tacoma, Wash. The Birchfield Boiler Co. was low bidder on 115 tons for a pipe line for the same city. No action has yet been taken on the 700-ton inquiry for a car float for the Santa Fe. The Western Pacific is also asking for bids on a 700-ton car float. The Wildcat and Sequoia aqueduct projects, calling for 8000 tons of plates, will most likely be awarded next week. The district engineers, it is reported, are in favor of using steel-lined concrete pipe. Prices on plates are firm at 2.30c., c.i.f. Coast ports.

Shapes.—During February 2996 tons of foreign shapes were imported on the Coast as compared with 1044 tons for February, 1927. Only four awards of over 100 tons were noted this week. The Wallace Bridge & Structural Steel Co. booked 100 tons for the Bon Marche store, Seattle. C. & F. W. Steffgen, San Diego, got the general contract for 260 tons for a bridge on the Benson highway at Phoenix, Ariz. Considerable new and pending work is before the trade for figures, about 15,000 tons being involved. Plain material is firm at 2.35c., c.i.f.

Cast Iron Pipe.—Demand for cast iron pipe is improving, although only one award of over 100 tons was reported this week. Camas, Wash., placed 152 tons of 2 to 8-in. class B pipe with C. A. Knapp of the same city. Los Angeles rejected all bids on 234 tons of 24-in. class B pipe. Bids will be opened May 23 for 1560 tons of 4 to 12-in. class B for street improvements at Oceanside, Cal. Los Angeles opened bids on 1665 tons of 6-in. class B pipe and on 1800 tons of 30 and 36-in. class B pipe for the Venice outfall sewer, the United States Cast Iron Pipe & Foundry Co. being low on the latter project. Long Beach opened bids on 417 tons of 6 and 8-in. class B and C pipe. Puyallup, Wash., will open bids on July 10 for 149 tons of 14-in. class B or centrifugal pipe. San Diego, Cal., will open bids on June 4 for 113 tons of 18-in. class B for a dredging project. Importations during February aggregated 1843 tons, compared with 4583 tons for the same month a year ago.

Standard Pipe.—Importations of tubular products during February totaled 1343 tons, compared with 1503 tons for February, 1927. The only inquiry of importance is for 193 tons of ½ to 4-in. standard pipe for Los Angeles.

Coke.—Demand for coke reflects the quiet condition prevailing in the pig iron market; sales and inquiries appear to be confined entirely to small lots. Prices are unchanged.

Warehouse Prices, f.o.b. San Francisco

	Base per Lb.
Plates and structural shapes	3.15c.
Soft steel bars	3.15c.
Small angles, 3/16-in. and over	3.15c.
Small angles under 3/16-in.	3.55c.
Small channels and tees, ¾-in. to 2¾-in.	3.75c.
Spring steel, ¼-in. and thicker	5.00c.
Black sheets (No. 24)	4.95c.
Blue annealed sheets (No. 10)	3.90c.
Galvanized sheets (No. 24)	5.50c.
Structural rivets, ½-in. and larger	5.65c.
Common wire nails, base per keg	$3.40
Cement coated nails, 100-lb. keg	3.40

St. Louis

Steel Specifications Top Those of April —Weakness in Some Scrap Items

St. Louis, May 15.—The tonnage of pig iron sold during the last week was less than that of the previous week. The sales of the St. Louis Gas & Coke Corporation totaled 3500 tons, including 1000 tons of malleable to an Illinois melter, 500 tons of malleable to a local plant and 800 tons of foundry iron to an implement manufacturer for third quarter shipment; the remainder was in lots up to 150 tons for prompt shipment. The leading Southern interest sold 600 tons for prompt shipment. The only definite inquiry pending is for 250 tons of foundry, but a number of other transactions are pending. The fact that there is considerable iron yet to be bought for third quarter shipment lends strength to the market. Prices are firm and unchanged.

Prices per gross ton at St. Louis:

No. 2 fdy., sil. 1.75 to 2.25, f.o.b. Granite City, Ill.	$19.00
Northern No. 2 fdy., delivered St. Louis	20.66
Southern No. 2 fdy., delivered	$19.92 to 20.42
Northern malleable, delivered	20.66
Northern basic, delivered	20.66

Freight rates: 81c. from Granite City to St. Louis; $2.16 from Chicago; $4.42 from Birmingham.

Coke.—Buying of domestic grades of coke is good, considering the season. Consumers of foundry coke continue to buy of local by-product ovens as the fuel is required.

Finished Iron and Steel.—The Granite City Steel Co. reports that specifications so far this month have been in larger volume than the corresponding period in April. The company is well fortified as regards backlog tonnage in blue annealed and black sheets, tin plate and tank plate. Galvanized sheets continue slow, and prices are lower than they were a week ago, but the indications are that the demand will pick up within the next two or three weeks, when it is believed the agricultural districts will be buying. Fabricators of structural steel continue to complain of poor business.

Warehouse Prices, f.o.b. St. Louis

	Base per Lb.
Plates and structural shapes	3.25c.
Bars, soft steel or iron	3.15c.
Cold-finished rounds, shafting and screw stock	3.75c.
Black sheets (No. 24)	4.45c.
Galvanized sheets (No. 24)	5.25c.
Blue annealed sheets (No. 10)	3.60c.
Black corrugated sheets (No. 24)	4.50c.
Galvanized corrugated sheets	5.30c.
Structural rivets	3.75c.
Boiler rivets	3.75c.
	Per Cent Off List
Tank rivets, 7/16-in. and smaller, 100 lb. or more	70
Less than 100 lb.	65
Machine bolts	60
Carriage bolts	60
Lag screws	60
Hot-pressed nuts, squares, blank or tapped, 200 lb. or more	60
Less than 200 lb.	50
Hot-pressed nuts, hexagons, blank or tapped, 200 lb. or more	60
Less than 200 lb.	50

Track Supplies.—The Missouri Pacific has purchased 1000 kegs of track spikes for its Western lines from the Colorado Fuel & Iron Co. That road is now in the market for 1000 kegs of track bolts.

Old Material.—The market for old material is weaker, and prices for heavy melting steel, heavy shoveling steel and No. 2 railroad wrought are 25c. lower. A leading East Side mill was in the market for specialties, but the prices offered were lower than dealers had expected, and the tonnages purchased were small. Some dealers believe that most of the consumers will be in the market again within the next 10 days or two weeks. Railroad lists are unusually heavy, including the following: Baltimore & Ohio, 17,880 tons; Louisville & Nashville, 16,760 tons; Chesapeake & Ohio, 10,011 tons; Wabash, 2880 tons; Southern Pacific, 2766 tons; International Great Northern, 895 tons; Texas & Pacific, 820 tons; Southern, 782 tons; Ann Arbor, 282 tons; Kansas City Southern, 239 tons; Great Northern, 90 carloads; Cotton Belt, 25 carloads; Nickel Plate, 21 carloads; St. Louis-San Francisco, 16 carloads; Chicago & Eastern Illinois, 13 carloads; Chicago, Milwaukee, St. Paul & Pacific, 11 carloads.

Dealers' buying prices, per gross ton, f.o.b. St. Louis district:

Heavy melting steel	$11.25 to $11.75
No. 1 locomotive tires	12.00 to 12.50
Heavy shoveling steel	11.25 to 11.75
Miscellaneous standard-section rails, including frogs, switches and guards, cut apart	12.75 to 13.25
Railroad springs	13,75 to 14.25
Bundled sheets	8.75 to 9.25
No. 2 railroad wrought	11.25 to 11.75
No. 1 busheling	9.50 to 10.00
Cast iron borings	9.00 to 9.25
Iron rails	13.00 to 13.50
Rails for rolling	13.00 to 13.50
Machine shop turnings	7.00 to 7.50
Steel car axles	17.50 to 18.00
Iron car axles	23.50 to 24.00
Wrought iron bars and transoms	21.00 to 21.50
No. 1 railroad wrought	10.00 to 10.50
Steel rails, less than 3 ft.	15.00 to 15.50
Steel angle bars	12.00 to 12.50
Cast iron carwheels	13.50 to 14.00
No. 1 machinery cast	13.00 to 13.50
Railroad malleable	11.00 to 11.50
No. 1 railroad cast	13.50 to 14.00
Stove plate	12.00 to 12.50
Agricultural malleable	12.00 to 12.50
Relaying rails, 60 lb. and under	20.50 to 23.50
Relaying rails, 70 lb. and over	26.50 to 29.00

Birmingham

Southern Pipe Foundries Receive Large Orders—Sheets Reduced $1

BIRMINGHAM, May 15.—Conditions in the pig iron market are practically unchanged. Sales for the week barely reached the average of the two preceding weeks. Buying is in small lots for early delivery and furnace interests are unable to definitely determine the strength of the market. Stove plants and machine shops are the chief buyers at present. Increased business with pressure pipe makers is expected to increase the demand from that field shortly. Iron under contract is moving out at a fair rate. The Woodward Iron Co. blew in furnace No. 1 on foundry May 12. This was blown out on March 31 for relining. No other changes have been made. Eighteen furnaces are now in blast. Of this number 11 are on foundry, five on basic, one on recarburizing iron and one on ferromanganese.

Prices per gross ton, f.o.b. Birmingham district furnaces:

No. 2 foundry, 1.75 to 2.25 sil.	$15.50 to $16.00
No. 1 foundry, 2.25 to 2.75 sil.	16.00 to 16.50
Basic	15.00

Finished Steel.—A reduction of $1 a ton has been made on black, galvanized and blue annealed sheets. May bookings in principal lines compare favorably with the corresponding period for April and little decrease in mill operations is in prospect for the next few weeks. Structural steel fabricators and bar manufacturers booked very little business during the past week. Local demand is the lowest for some time. Openhearth operations have not changed during the past three weeks. The Tennessee company is operating seven at Ensley and four at Fairfield. The Gulf States Steel Co. is working four at Alabama City.

Cast Iron Pipe.—New business with the pressure pipe manufacturers showed a good increase during the past week. Local plants shared in the recent contracts placed by Detroit; the United States Cast Iron Pipe Co. took 5750 tons, the American Cast Iron Pipe Co. 1000 tons, and the National Cast Iron Pipe Co., 750 tons. The American Cast Iron Pipe Co. was awarded contracts on small municipal jobs at Greer, S. C., and Montgomery, Ala. The United States Cast Iron Pipe Co. received an order for about 8000 tons for Long Beach, Cal. Contracts are still pending on tonnages at Knoxville, Tenn., and Summerville, S. C. Inquiries have been received on additional tonnage for the district around Detroit. Shipments are keeping close to production. Quotations continue to be made at $31 to $33 on 6-in. and larger. The soil pipe market shows little or no improvement.

Coke.—The between-quarters inertia is noticeable in the coke market, where sales show a decline. Shipments have dropped below the average for the past several weeks. Quotations are unchanged from a $5 base.

Old Material.—The market is still weak and prices on some grades have been lowered. Heavy melting steel is being quoted at $9 to $9.50 instead of $9.50 to $10, and short shoveling turnings are being offered at $7.50 to $8. No. 1 cast has dropped 25c. Other prices remain the same.

Prices per gross ton, delivered Birmingham district consumers' yards:

Heavy melting steel	$9.00 to $9.50
Scrap steel rails	11.00 to 11.50
Short shoveling turnings	7.50 to 8.00
Cast iron borings	8.00
Stove plate	13.50
Steel axles	19.00 to 20.00
Iron axles	20.00 to 21.00
No. 1 railroad wrought	10.00 to 10.50
Rails for rolling	13.00
No. 1 cast	14.25
Tramcar wheels	12.50 to 13.50
Cast iron carwheels	12.00 to 13.00
Cast iron borings, chemical	13.50 to 14.00

Canada

Pig Iron Producers Not Yet Encouraging Third Quarter Buying

TORONTO, ONT., May 15.—Forward buying of pig iron is light at present as neither producers nor consumers are interested in negotiating third quarter business. Some existing contracts call for deliveries as far ahead as the middle of the third quarter, but generally speaking local blast furnace representatives have not opened their books for third quarter business and are not encouraging it. Spot sales are holding up well. Several inquiries appeared during the week, each of 200 to 600 tons. Melters now inquiring are specifying water delivery on which freight charges are considerably less than on rail shipments. Canadian pig iron producers continue to complain of the strong competition in the local markets from United States and British pig iron makers. This competition has not only deprived Canadian furnace operators of a part of their market for foundry and malleable grades, but at the same time has had a tendency to bring prices here to a level at which some furnaces cannot afford to sell, and as a consequence some are refusing orders outright or are quoting $1 per ton above the going prices. The increased consumption of foundry and malleable iron in Canada, which amounts to from 10 to 20 per cent over that of a year ago, is mostly supplied by imported iron; thus Canadian producers have not materially benefited by the betterment in general conditions here.

Prices per gross ton:

Delivered Toronto	
No. 1 foundry, sil. 2.25 to 2.75	$23.10 to $23.60
No. 2 foundry, sil. 1.75 to 2.25	23.10 to 23.60
Malleable	23.10 to 23.60
Delivered Montreal	
No. 1 foundry, sil. 2.25 to 2.75	24.50 to 25.00
No. 2 foundry, sil. 1.75 to 2.25	24.50 to 25.00
Malleable	24.50 to 25.00
Basic	24.00
Imported Iron at Montreal Warehouse	
Summerlee	33.50
Carron	33.00

Old Material.—A spotty but somewhat improved demand features the Canadian old material markets.

Several large sales were made during the week, and inquiries for forward delivery were more prominent in both Toronto and Montreal markets. Current demand calls chiefly for heavy melting steel, machine shop turnings and machinery cast in Toronto, while in Montreal wrought iron and steel axles are also in demand. Prices are unchanged, but a softening tendency is setting in.

Dealers' buying prices:

Per Gross Ton	Toronto	Montreal
Heavy melting steel	$9.00	$8.00
Rails, scrap	10.00	10.00
No. 1 wrought	9.00	11.00
Machine shop turnings	7.00	6.00
Boiler plate	7.00	7.00
Heavy axle turnings	7.50	7.50
Cast borings	7.50	6.00
Steel turnings	7.00	6.50
Wrought pipe	5.00	6.00
Steel axles	14.00	19.00
Axles, wrought iron	16.00	21.00
No. 1 machinery cast	....	16.00
Stove plate	....	12.00
Standard carwheels	....	14.50
Malleable	....	13.00
Per Net Ton		
No. 1 machinery cast	15.00	....
Stove plate	9.00	....
Standard carwheels	13.00	....
Malleable scrap	13.00	....

Cincinnati

Pig Iron Sales of 9,000 Tons—Some Falling Off in Steel Business

CINCINNATI, May 15.—Pig iron sales in the past week have amounted to about 9000 tons, of which 6000 tons was bought by a malleable foundry at Muncie, Ind., from a Lake Erie furnace. The only other sizable transaction consisted of 500 tons of Jackson County silvery iron for delivery to a Michigan consumer. Aside from 400 tons of foundry iron for the Lunkenheimer Co., Cincinnati, inquiries have been for small lots ranging from 100 tons down to single carloads. The price situation is virtually unchanged. Southern iron is reported to be available at $15.50, base Birmingham, although some producers declare that they are refusing to book orders under $16. Southern Ohio foundry remains nominally at $19, base Ironton, while Jackson County silvery is selling at $25, base furnace, for 8 per cent. Northern Ohio makers are said to be quoting a minimum of $16.50, base furnace, for delivery into this district.

Prices per gross ton, delivered Cincinnati:

So. Ohio fdy., sil. 1.75 to 2.25		$20.89
So. Ohio malleable	$20.14 to	20.89
Alabama fdy. sil. 1.75 to 2.25	19.19 to	19.69
Alabama fdy., sil. 2.25 to 2.75	19.69 to	20.19
Tennessee fdy. sil. 1.75 to 2.25	19.19 to	19.69
Southern Ohio silvery 8 per cent		26.89

Freight rates, $1.89 from Ironton and Jackson, Ohio; $3.69 from Birmingham.

Finished Material.—There has been a further recession in specifications and orders for heavy steel products and for sheets. Fabricators are disappointed because the amount of work now pending is less than normal for this time of the year and several major projects for which plans have been made will not come up for bids until fall. Meanwhile, most shops are counting upon a moderate number of small orders to keep production up to a fair level. Bars, structural shapes and plates are firm at 1.85c., base Pittsburgh, and there is an increasing tendency on the part of mills to accept that figure for small miscellaneous lots. In the sheet market, bookings have slumped in the past two weeks to a point considerably short of production and shipments. The brightest spot is the activity in electrical sheets, many consumers being busy on electrical apparatus for the radio industry. Releases of tonnages for automobile makers still hold up well. There has been no change of consequence in prices, which are stationary at the low level of the year, black sheets bringing 2.75c. to 2.85c., base Pittsburgh, blue annealed 2c. to 2.10c., galvanized, 3.65c. to 3.75c. and automobile body sheets, 4c. Users of wire goods are taking only a fair volume of material and prices are depressed. Common wire nails are selling at $2.50 per keg, base Ironton, plus a 14c. barge rate to this city, while plain wire is quoted at $2.40 per 100 lb., base Ironton.

Warehouse Prices, f.o.b. Cincinnati

	Base per Lb.
Plates and structural shapes	3.40c.
Bars, soft steel or iron	3.30c.
New billet reinforcing bars	3.15c.
Rail steel reinforcing bars	3.00c.
Hoops	4.00c. to 4.25c.
Bands	3.95c.
Cold-finished rounds and hexagons	3.85c.
Squares	4.35c.
Black sheets (No. 24)	4.05c.
Galvanized sheets (No. 24)	4.90c.
Blue annealed sheets (No. 10)	3.60c.
Structural rivets	3.85c.
Small rivets	65 per cent off list
No. 9 annealed wire, per 100 lb.	$3.00
Common wire nails, base per keg	2.95
Cement coated nails, base 100 lb. keg	2.95
Chain, per 100 lb.	7.55
	Net per 100 Ft.
Lap-welded steel boiler tubes, 2-in.	$18.00
4-in.	38.00
Seamless steel boiler tubes, 2-in.	19.00
4-in.	39.00

Warehouse Business.—Shipments from warehouses of local jobbers are closely paralleling those in the corresponding period of 1927. From the standpoint of tonnage, bars and structural steel are the leaders. Quotations are steady and unchanged.

Coke.—The purchase of 12,000 tons of by-product furnace coke by the Kokomo Steel & Wire Co., Kokomo, Ind., from a central Indiana company was the feature of the week. By-product foundry coke specifications have fallen behind the volume maintained during April. Shipments of beehive foundry coke into this district have been rather sluggish.

Foundry coke prices per net ton, delivered Cincinnati: By-product coke, $9.02; Wise County coke, $7.09 to $7.59; New River coke, $9.09 to $9.59. Freight rates, $2.14 from Ashland, Ky.; $2.59 from Wise County and New River ovens.

Old Material.—While there have been no changes in prices, quotations in some items are showing a tendency toward weakness. Offerings of railroads in the past week are reported to have brought less than in April. Shipments to district steel plants have been of fair volume.

Dealers' buying prices per gross ton f.o.b. cars, Cincinnati:

Heavy melting steel	$11.00 to	$11.50
Scrap rails for melting	11.25 to	11.75
Loose sheet clippings	8.25 to	8.75
Bundled sheets	9.25 to	9.75
Cast iron borings	8.00 to	8.50
Machine shop turnings	7.50 to	8.00
No. 1 busheling	10.00 to	10.50
No. 2 busheling	7.00 to	7.50
Rails for rolling	12.50 to	13.00
No. 1 locomotive tires	12.75 to	13.25
No. 1 railroad wrought	10.00 to	10.50
Short rails	15.75 to	16.25
Cast iron carwheels	12.25 to	12.75
No. 1 machinery cast	15.25 to	15.75
No. 1 railroad cast	12.75 to	13.25
Burnt cast	7.50 to	8.00
Stove plate	8.25 to	8.75
Brake shoes	9.50 to	10.25
Railroad malleable	11.50 to	12.00
Agricultural malleable	11.00 to	11.50

Buffalo

Lackawanna Plant Increases Operations —Pig Iron Market Quiet

BUFFALO, May 15.—The pig iron market is very quiet. Prices remain at about the levels of recent weeks. Buffalo iron can be bought in New England at prices ranging from $16 to $16.50, Buffalo, but $17 for No. 2 plain and $17.50 for malleable prevail in this district. A part of the Thatcher Co.'s inquiry for 2000

Warehouse Prices, f.o.b. Buffalo

	Base per Lb.
Plates and structural shapes	3.40c.
Soft steel bars	3.30c.
Reinforcing bars	2.75c.
Cold-finished flats, squares and hexagons	4.45c.
Rounds	3.95c.
Cold-rolled strip steel	5.85c.
Black sheets (No. 24)	4.30c.
Galvanized sheets (No. 24)	5.15c.
Blue annealed sheets (No. 10)	3.80c.
Common wire nails, base per keg	$3.65
Black wire base per 100 lb.	3.90

tons of No. 2X and No. 2 plain has been placed. One maker reports orders for about 2000 tons of foundry and malleable. There is some third quarter inquiry from New Jersey and Pennsylvania. A Maryland inquiry for 1000 tons of foundry is reported to be still open.

Prices per gross ton, f.o.b. furnace:

No. 2 plain fdy., sil. 1.75 to 2.25	$17.00
No. 2 foundry, sil. 2.25 to 2.75	17.50
No. 1X foundry, sil. 2.75 to 3.25	18.50
Malleable, sil. up to 2.25	17.50
Basic	$16.50 to 17.00
Lake Superior charcoal	27.28

Finished Iron and Steel.—Bethlehem's Lackawanna plant has increased open-hearth operation to 22 furnaces out of 24. Bar, shape and plate prices are firm, and sheet prices show a firmer tendency. A 500-ton inquiry for reinforcing bars is pending. Reinforcing bar prices are not strong, showing a range of 2.40c. to 2.75c. for truck delivery. The nut and bolt demand from the automobile industry is tapering slightly, but railroad buying is satisfactory. An improvement is noticed in the market for semi-finished nuts, on which the market has been not quite so firm as on bolts. Makers report heavy commitments for road mesh.

Old Material.—The market is unusually quiet and is rendered more so by the continued suspension of shipments by one of the large consumers. There have been no sales of size. Prices in general have softened. One mill has taken in about 1500 tons of heavy melting steel by barge from an Eastern point. Dealers' stocks are low. Pennsylvania, Erie, New York Central and Michigan Central railroad lists closed last week. The Pennsylvania heavy melting steel brought $15.50, Pittsburgh district.

Prices per gross ton, f.o.b. Buffalo consumers' plants:

Basic Open-Hearth Grades		
No. 1 heavy melting steel	$14.50 to	$14.75
No. 2 heavy melting steel	12.50 to	13.00
Scrap rails	13.50 to	14.00
Hydraulic compressed sheets	12.50 to	13.00
Hand bundled sheets	8.50 to	9.00
Drop forge flashings	12.00 to	12.50
No. 1 busheling	13.25 to	13.75
Heavy steel axle turnings	12.50 to	12.75
Machine shop turnings	8.25 to	8.75
Acid Open-Hearth Grades		
Railroad knuckles and couplers		15.50
Railroad coil and leaf springs	15.50 to	16.00
Rolled steel wheels	15.00 to	15.50
Low phosphorus billet and bloom ends	16.50 to	17.00
Electric Furnace Grades		
Heavy steel axle turnings	12.75 to	13.25
Short shoveling steel turnings	10.75 to	11.25
Blast Furnace Grades		
Short shoveling steel turnings	10.50 to	11.00
Short mixed borings and turnings	9.50 to	10.00
Cast iron borings	9.25 to	9.75
No. 2 busheling	9.00 to	9.25
Rolling Mill Grades		
Steel car axles	17.00 to	17.50
Iron axles	22.00 to	23.00
No. 1 railroad wrought	12.50 to	13.00
Cupola Grades		
No. 1 machinery cast	14.50 to	15.00
Stove plate	13.50 to	13.75
Locomotive grate bars	12.00 to	12.50
Steel rails 3 ft. and under	16.50 to	17.00
Cast iron carwheels	13.00 to	13.50
Malleable Grades		
Railroad		15.00
Agricultural		15.00
Industrial		15.00

A. M. Castle Co. to Build Plant at Los Angeles

Contract for the construction of a new steel plant at Los Angeles for the A. M. Castle Co., Chicago, has been awarded to the Baker Iron Works, Los Angeles. The new structure will cover about five acres and will be devoted to the warehousing and distribution of iron and steel products. The building will be in four bays, each 70 x 500 ft., which will be constructed entirely of steel and will be served by traveling cranes. Additional equipment will include motor-driven cutting machines for plates, sheets, bars and structural shapes. When completed the plant will represent an outlay of approximately $350,000.

The Castle company also has branches at Seattle and San Francisco. Officials of the company state that in addition to caring for the needs of southern California, the markets of Mexico and South America will be served from the Los Angeles plant.

Youngstown

Steel Demands of Motor Car Builders Chief Prop of Mill Activities

YOUNGSTOWN, May 15.—Steel manufacturers in this district still make a favorable report about business, crediting the good showing largely to the fact that motor car builders are taking steel freely. There has rarely been a better movement of automobile body sheets than now. Strips also are moving well from plants in this district. The other products of the district mills, however, are not doing particularly well, and doubt is expressed that the present rate of ingot production, which ranges from 75 to 80 per cent of capacity, could be maintained if there is any letdown by the automotive industry.

Pipe, which ranks with sheets in importance in point of output in this district again is quiet. The withdrawal of the extra 5 per cent discount on standard-weight pipe, effective as of April 2, stimulated buying by jobbers, who were given the right to order a month's supply at the old prices, but such business now is water over the dam, and new mill orders are somewhat limited while the jobbers work off their extra purchases. Oil country pipe demands are small, as they have been since late last year, and there are few so optimistic about the situation as to predict that the oil situation will have been corrected in time to have a helpful effect upon the demand for drill and drive pipe and casing during the remainder of this year. There are several gas pipe line projects under consideration taking huge tonnages of large outside diameter pipe, but they do not appear to be moving very rapidly toward the mills.

Demand for the common finishes of sheets has been adversely affected by the weakness of prices, and there is not only a lighter operation of sheet mills than that of a few weeks ago, but also a lighter demand for sheet bars from the non-integrated manufacturers. The larger sheet producers here are making an effort to maintain black sheets at 2.75c., base Pittsburgh, galvanized at 3.65c., base Pittsburgh, and blue annealed at 2c., base Pittsburgh, but find that such prices are not easily obtainable in markets to the north and west. Competition makes necessary a price of 2.80c., mill, in Cleveland, on black sheets, which works back to 2.70c., base, at Pittsburgh, and similarly on blue annealed sheets it is necessary to make a Pittsburgh base equivalent of 1.90c. to get orders. Some makers are meeting rather than making these prices. Usually, a mill base on sheets is quoted only to large users within the confines of the Youngstown district.

The experience of the one maker of wire products in this territory is that the larger producers generally are holding firmly to $2.65, base, per keg, Pittsburgh or Cleveland, on bright nails and that there is a fair amount of specifying on second quarter contracts carrying that price. Bars are only fairly active, as makers of bolts and nuts are not as busy now as they were a short time ago and producers of cold-finished bars, in response to smaller orders for their product, are specifying less freely for hot-rolled bars. While occasional sales are being made at 1.90c., base Pittsburgh, 1.85c. is the ruling price and is being quoted on what would have been regarded as a small order recently when the buying was better. Tin plate plants are running practically full.

It is reported that basic iron recently has been sold at less than $16.50, Valley furnace, and while details are lacking, there is a disposition to credit the statement, since it is generally realized that the market for merchant Valley basic iron has been reduced to the territory adjacent to the Valley furnaces, in which there is only a limited demand. To get into the Pittsburgh district with that grade, producers would have to sell at $16 or less, furnace, to meet competition. The recent sale at $17, delivered Alliance, suggests a similar condition in that direction.

Most recent sales of heavy melting steel scrap in this district were at $15.50 for No. 1 grade, while $15 was paid for hydraulic compressed sheet scrap.

Boston

More Scrap Being Loaded for Danzig at an Advance of 50c. a Ton

Boston, May 15.—Pig iron sales have dropped sharply. The Mystic Iron Works booked orders for 3500 tons, divided between No. 2X and No. 1X, most of it for New England delivery, while the combined sales of other stacks did not quite reach that figure. Prospective business is confined to a few sizable tentative inquiries, aggregating several thousand tons, but foundries give no indication when they may buy. Contract iron is being taken on schedule, and stock piles in foundry yards have shrunk materially in the past month. Consequently, it is practically certain that third quarter buying will be more active shortly and of larger proportions than previously anticipated by sellers. At least one Buffalo furnace continues to accept business at $16 a ton, base stack, and recently has waived the 50c. differential on No. 2X. In addition, new rail-and-water freight rates from Buffalo, Troy and Port Henry, N. Y., give the seller quite a latitude in figuring on business. For the next four months, at least, the all-rail rate of $4.91 from Buffalo to New England will apply in only a few unimportant cases. Buyers will be able to secure a much lower rate in most instances.

Prices of foundry iron per gross ton, delivered to most New England points:

Buffalo, sil. 1.75 to 2.25	$20.91 to	$21.91
Buffalo, sil. 2.25 to 2.75	21.41 to	22.41
East. Penn., sil. 1.75 to 2.25	23.15 to	23.65
East. Penn., sil. 2.25 to 2.75	23.65 to	24.15
Virginia, sil. 1.75 to 2.25		25.71
Virginia, sil. 2.25 to 2.75		26.21
Alabama, sil. 1.75 to 2.25	22.91 to	24.77
Alabama, sil. 2.25 to 2.75	23.41 to	25.27

Freight rates: $4.91 from Buffalo, $3.65 from eastern Pennsylvania, $5.21 all rail from Virginia, $6.91 to $8.77 from Alabama.

Coke.—New England makers of by-product foundry coke see some improvement in contract specifications, and are reasonably certain that in June there will be a decided betterment, for by that time reserve stocks of foundries should be depleted. Competition from coke made outside of New England is still keen. While the tonnage brought into New England is not important, it has an important influence on prices.

Shapes and Plates.—The Boston & Maine Railroad will enter in the market this week for 15 bridges. How much steel is called for is not yet known. It is reported that the company will ask for bids next week on additional bridges. This week it will close on three, calling for 1900 tons of steel. Fabricators are securing a good number of small orders at good prices. Contract standard shapes are being billed out by mills at 1.80c. per lb., base Pittsburgh. Producers are soliciting new business at 1.85c. per lb. for round tonnages, and at 1.90c. for small lots, but fabricators maintain 1.80c. can still be done. Current business in plates is in small lots, but the weekly movement foots up well. Plates are steady at 1.85c. per lb., base Pittsburgh.

Warehouse Prices, f.o.b. Boston

	Base per Lb.
Plates	3.365c.
Structural shapes—	
Angles and beams	3.365c.
Tees	3.365c.
Zees	3.465c.
Soft steel bars and small shapes	3.265c.
Flats, hot-rolled	4.15c.
Reinforcing bars	3.265c. to 3.54c.
Iron bars—	
Refined	3.265c.
Best refined	4.60c.
Norway, rounds	6.60c.
Norway, squares and flats	7.10c.
Spring steel—	
Open-hearth	5.00c. to 10.00c.
Crucible	12.00c.
Tire steel	4.50c. to 4.75c.
Bands	4.015c. to 5.00c.
Hoop steel	5.50c. to 6.00c.
Cold rolled steel—	
Rounds and hexagons	*3.45c. to 5.45c.
Squares and flats	*3.95c. to 6.95c.
Toe calk steel	6.00c.
Rivets, structural or boiler	4.50c.
	Per Cent off List
Machine bolts	50 and 5
Carriage bolts	50 and 5
Lag screws	50 and 5
Hot-pressed nuts	50 and 5
Cold-punched nuts	50 and 5
Stove bolts	70 and 10

*Including quantity differentials.

Cold-Rolled Strip.—New business is coming in slowly, and current orders are for consumers' immediate requirements only. Prices hold steady at 3c. to 3.15c. per lb., base Pittsburgh, on 1 to 3-ton lots. The American Steel & Wire Co. quotes 3.15c. to 3.30c. per lb., base Worcester, Mass.

Cast Iron Pipe.—Prices on small sizes of cast iron pipe have advanced about $2 a ton during the past fortnight. Four-inch pipe is now selling at $46.10 to $47.10 a ton, delivered common Boston freight rate points, and 6-in. at $41.10 to $42.10. Foundries are fairly well booked on these sizes. Concessions are still being made on 16-in. and larger pipe, however. The usual $5 differential is asked on Class A and gas pipe. One of the largest New England gas companies has closed several thousand tons of 24-in. pipe, and it is reported the Warren Foundry & Pipe Co. secured the business. That foundry was awarded 400 tons of 16-in. pipe by Haverhill, Mass. The Great Barrington, Mass., fire district has bought 200 tons of 6-in. and 8-in. pipe from the Donaldson Iron Co. Attleboro, Mass., closed bids May 14 on 100 tons 6-in. pipe.

Old Material.—So far as shipments of scrap to steel mill centers are concerned, the market is quieter than it has been for some time. Activity appears to center in scattering carlots of heavy cast at $10.50 to $11 a ton, on cars shipping point; heavy melting steel at $9 and $9.10; cotton ties at $6 to $6.50; No. 2 steel at $7.50 to $7.75, with an occasional lot at $8, and mixed borings and turnings at $6 to $6.25 in most cases. Otherwise activity centers in local or nearby deliveries. One steamer is practically loaded with No. 1 yard steel for Danzig at $9.50 a ton on dock here, an advance of 50c. a ton. Another boat has started to load 4500 tons, and a third will load this month, bringing the total exports for May up to more than 12,000 tons. The advance in price was made with the understanding that automobile scrap would be eliminated. Indications are that exports will continue in June, with a possibility that on this movement more than 20,000 tons of scrap will have been taken out of New England. Foundries have bought textile machinery cast, mostly at $14 a ton, delivered, and No. 1 machinery cast at $14.50 to $15, with an occasional sale at $15.50 where the freight rate has been favorable.

Buying prices per gross ton, f.o.b. Boston rate shipping points:

No. 1 heavy melting steel	$9.00 to	$9.10
Scrap T rails	8.50 to	9.00
Scrap girder rails	7.50 to	8.00
No. 1 railroad wrought	10.00 to	10.25
No. 1 yard wrought	7.50 to	8.00
Machine shop turnings	5.50 to	6.00
Cast iron borings (steel works and rolling mill)	6.00 to	6.25
Bundled skeleton, long	5.75 to	6.25
Forge flashings	6.60 to	7.25
Blast furnace borings and turnings	5.75 to	6.25
Forge scrap	6.00 to	6.25
Shafting	13.00 to	13.50
Steel car axles	15.50 to	16.00
Wrought pipe 1 in. in diameter, (over 2 ft. long)	7.50 to	8.00
Rails for rolling	10.00 to	10.25
Cast iron borings, chemical	9.50 to	10.00

Prices per gross ton delivered consumers' yards:

Textile cast	$13.50 to	$14.00
No. 1 machinery cast	14.50 to	15.00
No. 2 machinery cast	13.00 to	13.50
Stove plate	10.00 to	10.50
Railroad malleable	13.00 to	13.50

The Dravo Contracting Co. is building on its own account a modern river and rail transfer dock at Woodlawn, Pa., on the Ohio River, just beyond the Aliquippa works of the Jones & Laughlin Steel Corporation. This is probably the first of several similar projects, since the Youngstown district steel companies still are interested in securing some use of the Ohio River in the inward movement of coal and the outward movement of steel products.

The American Rolling Mill Co. has moved its Pittsburgh office from suite 432 to suite 1632 Henry W. Oliver Building.

Heat-Treating Educational Conference

(*Concluded from page* 1409)

common amounts of the added elements as alloy steels. Alloys of nickel and chromium dominate the field, while alloys of vanadium, molybdenum, tungsten, silicon, manganese and aluminum have wide uses but are distinctly secondary.

Alloy steels are produced in basic and in acid open-hearth furnaces, in electric arc and induction furnaces, in crucibles and in Bessemer converters. In order of importance the basic open-hearth dominates and the basic electric furnace is next.

Nickel, Chromium and Molybdenum as Alloys

Outstanding reasons for the use of nickel as an alloy are that it increases strength without loss of ductility and it lowers the temperature at which steel hardens. The latter advantage results in less scaling and less distortion, especially advantageous with parts finished to shape before treatment.

Chromium is the only alloying element that covers all ranges from carbonizing steel to hard steel, such as ball race steels. These steels demonstrate that physical chemistry is more important than quantitative chemistry, for the analysis is usually easily controlled but physical factors are difficult to govern. Economically, chromium dominates the field because of its wide application, but it has the disadvantages of high critical temperatures and slow diffusion rates. In all carbonized applications, chromium steels are best treated with fused salts or lead baths. In the medium-carbon ranges, they may be treated in any manner if machined to shape after treatment.

Vanadium serves best where hot treatments are severe. Molybdenum is commercially satisfactory in water-hardened parts when the machine work is done after treatment. A combination of molybdenum and aluminum serves well for surface-hardening applications that are to be nitrated. Serious trouble is encountered in cooling nickel-molybdenum steels if much carbon is present. This combination requires further study, because the depression of the critical temperature of nickel is pronounced when molybdenum is present.

Metal Fatigue Shown by Motion Pictures

Motion pictures and many photomicrographs taken of specimens when being subjected to repeated alternating stresses were shown by H. F. Moore, professor of engineering materials University of Illinois, Urbana, Ill., who spoke on "The Fatigue of Metals." The motion pictures plainly showed the development of slip planes, followed by the opening of the cracks. Professor Moore pointed out that slipping in itself is not serious, provided that nothing else happens, but this situation rarely occurs, because repeated slippage is almost certain to result in actual fracture or cracks. The rate of slip increases rapidly as the elastic limit is approached.

Experiments have shown that the unit stresses at the edges of irregularities may be four times the average through the piece. This applies to moving and not to stationary loads. Cracks may readily start at the edges where these stresses prevail. Tool marks and the surfaces remaining after grinding and reaming leave irregular surfaces, notwithstanding their appearance of smoothness to the naked eye. These marks are points of concentration of high stresses, opening chances for cracks and ultimate failure of the part. Cracks often hunt out inclusions, and they seldom follow grain boundaries. In the absence of specific data, fatigue strength may be roughly estimated as 250 times the Brinell number or one-half the tensile strength of the material.

PRICE CUTTING UNETHICAL

Profitless Selling Affects Public Interest as Much as Price Fixing, Says Charles F. Abbott

PRICE cutting is unsound and unethical, and should be just as illegal as collusion among sellers to control prices, said Charles F. Abbott, executive director American Institute of Steel Construction, New York, in an address before the Purchasing Agents' Association of Buffalo on May 9. The remedy lies to a large extent with manufacturers, he added.

"There are many instances on record where manufacturers are selling to the ultimate consumers at prices lower than either the jobber or the retailer could possibly quote," he stated. "Then, again, we experience in many instances the old vicious system of secret rebating with all of its destructive influences. We also find manufacturers who are selling to jobbers or retailers of questionable financial standing, thereby encouraging destructive competition on the part of the incompetent. We witness manufacturers selling to brokers or those who have no rightful position in the cycle of distribution.

"If demoralizing price cutting is to be eliminated and the business transacted on a basis of profit, the manufacturer must exert his leadership. In the formation of his selling policy, he must define fair practices and then vigorously enforce them without any partiality or deviation. One of the most constructive influences is the establishment of a one-price policy, thereby establishing prices and discounts fair to all.

"It is obvious that the problem of the distributers, therefore, becomes the problem of the manufacturers. On the other hand, the distributers cannot expect to profit unless they on their part extend to the manufacturer that degree of efficient distribution which he has a right to expect.

"Price cutting is to be condemned as being unsound and unethical. Society is affected because any industry that fails to make a reasonable profit is a liability. Prosperity depends upon the ability of our business organizations to transact a volume of business upon a basis of reasonable profit.

"The purchasing agent who is interested in the prosperity of his company must recognize that to jeopardize the interests of his principal sources of supply, forcing prices below cost in a vain attempt to obtain a cut price or concession, is the direct means of undermining the whole business structure. The whole problem of purchasing is based upon business procedure, and, while it may appear that in one instance a purchasing agent may be receiving an unusual concession which will enable his concern to quote lower prices, the fact remains that his competitor has probably gone him one better and received an even greater concession.

"It is illegal for manufacturers to get together and control selling prices. It should be just as illegal for any seller to solicit business on a basis of cost or below cost, because public interest is just as seriously affected by business transacted on such a basis as it would be should it be legal to agree upon selling prices for the purpose of obtaining an exorbitant profit.

"There is no more constructive suggestion that I can think of than for purchasing agents and sellers to get together and frankly discuss the problems of buying and selling in the hope that policies may be established and ethics defined which will eliminate unfair methods and create a condition whereby all relations between the buyer and seller can be conducted upon a sound business basis, with the interests of both amply protected.

"The success of the manufacturer of any commodity depends largely upon his ability to create consumer good will, to exploit demand and build up public recognition. Such an investment should be protected by a clear recognition of the rights of the jobber or distributer, and the retailer. Their support must be obtained, as it is through them that service must be extended and applied. If this service is inefficient, the manufacturer suffers and his interests are jeopardized because good will becomes impaired.

"The solution for much of the present demoralization of prices is, to a very large extent, in the hands of the manufacturer or producer, who is the only one who has the power to lead in the campaign to improve conditions, and he can do so if he will exert that leadership which is rightfully his by virtue of his position in the industry."

NON-FERROUS METAL MARKETS

The Week's Prices Cents per Pound for Early Delivery	May 15	May 14	May 12	May 11	May 10	May 9
Lake copper, New York	14.37½	14.37½	14.25	14.25	14.25	14.25
Electrolytic copper, N. Y.*	14.12½	14.12½	14.00	14.00	14.00	14.00
Straits tin, spot, N. Y.	52.50	52.20	....	52.00	51.80	51.80
Lead, New York	6.10	6.10	6.10	6.10	6.10	6.10
Lead, St. Louis	6.00	6.00	6.00	6.00	6.00	6.00
Zinc, New York	6.40	6.35	6.32½	6.30	6.30	6.30
Zinc, St. Louis	6.05	6.00	5.97½	5.95	5.95	5.95

*Refinery quotation; delivered price ¼c. higher.

NEW YORK, May 15.—Large sales and higher prices have featured copper. Tin is quiet, but prices are slightly advanced. Zinc is also up because of continued uncertainty as to the ore situation. Lead is dull at unchanged prices.

Copper.—Heavy buying of copper last week preceded the issuance of statistics for April that were decidedly favorable to the producers' side of the market. During the past week sales of electrolytic have probably been not less than 75,000,000 lb., much of which was sold for May-June at 14.25c., delivered Connecticut Valley. On Monday producers advanced quotations ⅛c. per lb., but there was further large buying at the higher level. On Tuesday the export price was raised by Copper Exporters, Inc., to 14.62½c., c.i.f. European ports, it having been 14.50c. for some time. Export buying has continued a strong feature of the market, one important transaction involving 2500 tons for France. Lake copper has advanced along with electrolytic and has also had a week of large buying. The copper statistics for April showed a total reduction of refined and blister stocks during that month of 21,000 tons, of which 14,000 tons was in refined stocks and 7000 tons in blister stocks. Export shipments last month were more than 60,000 tons. Production of refined copper last month declined more than 6500 tons from that of March. Total production for the first four months of the year was 499,367 tons, compared with 508,554 tons in the corresponding period last year. Domestic shipments in the four months were 54,000 tons less than in the first four months of 1927, but export shipments were 41,000 tons larger.

Tin.—The past week has been rather uneventful in the tin market. Sales were probably under 1000 tons, and most of this consisted of trades between dealers. In some cases the trades were for the purpose of switching deliveries. Consumers took little or no interest in the market. Most of them are covered for May and June, and although they will need metal for July shipment they are not yet in a mood to come into the market. In part, at least, their indifference may be a result of recent published predictions that production of Malay tin will increase to a point that will tend to relieve any scarcity, and that prices over the next year or so may tend downward rather than upward. In the week the price changes have been upward, ranging from 51.80c. per lb. on May 9 and 10 to a nominal quotation of 52.50c. on May 15. Tin stocks are not large. Dealers who have metal are holding it, but on the other hand there is very little demand for it. London prices today were £232 15s. for spot standard, £232 for future standard, £237 5s. for spot Straits, and the Singapore price was £234 12s. 6d.

Lead.—Buying is in moderate volume and at unchanged prices, namely 6c., East St. Louis, for the outside market and 6.10c., New York, the contract price of the leading interest.

Zinc.—The zinc market is still largely dominated by the ore situation, which is stronger at Joplin, with prospects that the price may be advanced $1 a ton. In the last few days prices paid for zinc have ranged from 6c. to 6.10c., St. Louis. In all probability the 6c. price was on stocks in dealers' hands, and little, if any, metal is now available at less than 6.05c. and sales have been made at 6.07½c., with some interests asking 6.10c. A representative range of the market is 6.05c. to 6.10c.

Metals from New York Warehouse

Delivered Prices Per Lb.

Tin, Straits pig	53.25c. to 54.25c.
Tin, bar	55.75c. to 56.75c.
Copper, Lake	15.37½c.
Copper, electrolytic	15.12½c.
Copper, casting	14.37½c.
Zinc slab	7.00c. to 7.50c.
Lead, American pig	7.00c. to 7.50c.
Lead, bar	9.25c. to 10.25c.
Antimony, Asiatic	13.00c. to 13.50c.
Aluminum No. 1 ingots for remelting (guaranteed over 99 per cent pure)	25.00c. to 26.00c.
Aluminum ingots, No. 12 alloy	24.00c. to 25.00c.
Babbitt metal, commercial grade	30.00c. to 40.00c.
Solder, ½ and ½	33.50c. to 34.50c.

Metals from Cleveland Warehouse

Delivered Prices Per Lb.

Tin, Straits pig	56.50c.
Tin, bar	58.50c.
Copper, Lake	14.85c.
Copper, electrolytic	14.85c.
Copper, casting	14.00c.
Zinc, slab	7.50c.
Lead, American pig	6.95c.
Antimony, Asiatic	16.00c.
Lead, bar	9.25c.
Babbitt metal, medium grade	18.50c.
Babbitt metal, high grade	60.50c.
Solder, ½ and ½	32.75c.

Rolled Metals from New York or Cleveland Warehouse

Delivered Prices, Base Per Lb.

Sheets—	
High brass	18.50c. to 19.25c.
Copper, hot rolled	23.00c. to 24.00c.
Copper, cold rolled, 14 oz. and heavier,	25.50c. to 26.50c.
Seamless Tubes—	
Brass	23.37½c. to 24.37½c.
Copper	24.50c. to 25.50c.
Brazed Brass Tubes	26.50c. to 27.50c.
Brass Rods	16.25c. to 17.25c.

From New York Warehouse

Delivered Prices, Base Per Lb.

Zinc sheets (No. 9), casks	9.50c. to 10.00c.
Zinc sheets open	10.50c. to 11.00c.

Non-Ferrous Rolled Products

Mill prices on copper wire were advanced ⅛c. on May 14 and rolled brass products and copper tubing were advanced ¼c. on May 15. Zinc sheets and lead full sheets are unchanged.

List Prices, Per Lb., f.o.b. Mill

On Copper and Brass Products, Freight up to 75c. per 100 Lb. Allowed on Shipments of 500 Lb. or Over

Sheets—	
High brass	19.00c.
Copper, hot rolled	23.00c.
Zinc	9.00c.
Lead (full sheets)	9.75c. to 10.00c.
Seamless Tubes—	
High brass	23.87½c.
Copper	24.75c.
Rods—	
High brass	16.75c.
Naval brass	19.50c.
Wire—	
Copper	16.12½c.
High brass	19.25c.
Copper in Rolls	22.00c.
Brazed Brass Tubing	23.00c.

Aluminum Products in Ton Lots

The carload freight rate is allowed to destinations east of Mississippi River and also allowed to St. Louis on shipments to destinations west of that river.

Sheets, 0 to 10 gage, 3 to 30 in. wide	33.00c.
Tubes, base	42.00c.
Machine rods	34.00c.

Rolled Metals, f.o.b. Chicago Warehouse

(Prices Cover Trucking to Consumers' Doors in City Limits)

	Base per Lb.
Sheets—	
High brass	18.75c.
Copper, hot rolled	23.00c.
Copper, cold rolled, 14 oz. and heavier	25.25c.
Zinc	10.00c.
Lead, wide	9.75c.
Seamless Tubes—	
Brass	25.12½c.
Copper	26.00c.
Brazed Brass Tubes	26.75c.
Brass Rods	16.50c.

Nickel.—Ingot nickel in wholesale lots is quoted at 35c., shot nickel is 36c. and electrolytic is 37c.

Aluminum.—Virgin metal, 98 to 99 per cent pure, is held at 23.90c. per lb., delivered.

Antimony.—There has been fairly good buying of antimony at 11.25c. per lb., duty paid, for prompt and future deliveries. Some consumers have covered up to and including July and August.

Non-Ferrous Metals at Chicago

This market is marked by moderate activity. Prices for tin and zinc have advanced and quotations on other commodities are steady. A fair volume of business is being done in old metals.

Prices, per lb., in carload lots: Lake copper, 14.37½c.; tin, 53c.; lead, 6.10c.; zinc, 6.10c.; in less-than-carload lots, antimony, 12.75c. On old metals we quote copper wire, crucible shapes and copper clips, 10.50c.; copper bottoms, 9.50c.; red brass, 9.25c.; yellow brass, 7c.; lead pipe, 4.75c.; zinc, 3.25c.; pewter, No. 1, 30c.; tin foil, 36c.; block tin, 45c.; aluminum, 11.75c.; all being dealers' prices for less-than-carload lots.

Railroad Equipment

Wheeling Steel Corporation has inquired for 10 gondola and 20 hopper cars.

Chicago, Burlington & Quincy has ordered 10 gas-electric rail motor cars from Pullman Car & Mfg. Corporation.

Interborough Rapid Transit Co. has ordered 23 built-up, bar-type trucks for motor subway cars from American Car & Foundry Co.

Northwestern Pacific is inquiring for from one to seven gas-electric passenger-baggage rail motor cars.

Baltimore & Ohio has purchased 10 70-ft. steel baggage and mail cars from American Car & Foundry Co.

Missouri Pacific has revived its inquiry for five 2-8-4 type locomotives.

New Pipe Warehouse in New York

A downtown warehouse has been opened in New York by E. D. Giberson & Co., 40 Rector Street, New York, distributer of boiler tubes, pipe and welding rods and seamless steel tubing for mechanical purposes. E. D. Giberson & Co. are also Eastern sales representatives for the Lebanon Iron Co., Lebanon, Pa., maker of iron bars, bolts, nuts, spikes and rivets and are agents in the United States for Ferrostahl G. m. b. H., a German iron and steel export organization, and the German tube works, Kronprinz A. G. at Immigrath, Rhineland.

Suspends Proposed Increase in Rates from Atlanta to Gulf Ports

WASHINGTON, May 15.—The Interstate Commerce Commission today suspended, from May 15 to Dec. 15, tariff schedules proposing cancellation of present export and coastwise rates on iron and steel products in carloads from Atlanta, Ga., to Mobile, Ala., and New Orleans, by way of rail lines in connection with the barge line of the Mississippi-Warrior River service, and to apply domestic rates in their place. The tariffs would increase the rates from Atlanta via Mobile to Cuba and other coastwise territory from 18c. per 100 lb. to 27.5c. per 100 lb. From Atlanta via New Orleans to Cuba the present rate of 18c. would be increased to 34c., while the present rate of 20c. to coastwise territory outside of Cuba would also be increased to 34c.

Old Metals, Per Lb., New York

The buying prices represent what the large dealers are paying for miscellaneous lots from the smaller accumulators and the selling prices are those charged consumers after the metal has been properly prepared for their uses.

	Dealers' Buying Prices	Dealers' Selling Prices
Copper, heavy crucible	12.25c.	13.75c.
Copper, heavy and wire	12.00c.	13.00c.
Copper, light and bottoms	10.25c.	11.375c.
Brass, heavy	7.00c.	8.50c.
Brass, light	6.00c.	7.50c.
Heavy machine composition	9.50c.	10.625c.
No. 1 yellow brass turnings	7.75c.	9.00c.
No. 1 red brass or composition turnings	8.75c.	9.75c.
Lead, heavy	5.00c.	5.50c.
Lead, tea	4.00c.	4.50c.
Zinc	3.00c.	3.50c.
Sheet aluminum	12.75c.	14.50c.
Cast aluminum	12.50c.	14.00c.

FOUNDRYMEN MEET

Thirty-Second Annual Convention of American Association Opens in Philadelphia

PHILADELPHIA, May 15.—The thirty-second annual convention of the American Foundrymen's Association, which began on Monday, promises to be very successful. Attendance at the three technical sessions this morning at the Bellevue-Stratford Hotel on gray iron, steel castings and non-ferrous foundry products was decidedly large. Marked interest, particularly in gray iron, is a feature. Registration is heavy thus far.

The exhibition, the first since the fall of 1926 at Detroit, was formally opened Monday morning by Mayor Mackey of Philadelphia, who, in the presence of city officials and officers of the foundrymen's association, pressed a button in the mayor's reception room which started in motion the power machinery at the Commercial Museum. Exhibits of at least 250 companies present an attractive display which is drawing a large attendance.

The convention committee of the Chamber of Commerce tendered the officers and exhibitors a luncheon Monday at the Museum.

Tonight at the Manufacturers' Club a dinner is being given to 34 of the men who assisted in forming the association in Philadelphia in 1896. Including the officers, past officers and board of directors, 50 men were in attendance.

A new feature this year is four sessions on cupola operation, one each day, led by prominent foundrymen. The first was directed by Dr. Richard Moldenke. The attendance was about 250. The second, held this afternoon, was led by E. J. Lowry.

At the regular business meeting today, the retiring president, S. W. Utley, delivered an address on the functions of the association. Chairmen of the chief committees made their reports. President Utley was unanimously chosen an honorary member. New officers and directors, as published in THE IRON AGE, May 3, were elected.

American Refractories Institute Elects J. M. McKinley President

J. M. McKinley, Crescent Refractories Co., Curwensville, Pa., was elected president American Refractories Institute at its annual meeting at White Sulphur Springs, W. Va., May 8; R. M. Sievers, Evens & Howard Fire Brick Co., St. Louis, first vice-president; W. B. Coullie, Harbison-Walker Refractories Co., Pittsburgh, second vice-president; C. E. Edmunds, McLain Fire Brick Co., Pittsburgh, treasurer, and Miss Dorothy Texter, secretary.

Five well-known specifications were reviewed and the requirements of the specifications discussed at this meeting, with producers, consumers and technicians participating. The desirability of having tests follow service conditions was emphasized, and it was brought out that it has been difficult to interpret the test data available. Indeed, all that has been possible is to stimulate service conditions. Attention to service tests was urged.

FABRICATED STRUCTURAL STEEL

Two Western Pipe Lines to Take 15,000 Tons of Plates—Awards Only 13,800 Tons

WITH a pipe line at Denver requiring 12,000 tons of plates and another at Oklahoma City, 3000 tons, new fabricated structural projects reported during the week totaled 31,400 tons. Awards declined to 13,800 tons, one of the lowest weekly totals in several months. The largest project, a bridge across Lake Champlain at Crown Point, N. Y., took 3000 tons. Awards follow:

State of New Hampshire, 150 tons, highway bridge, to Berlin Construction Co., Inc.

Boston, 100 tons, additional work on Sears, Roebuck & Co. warehouse, to New England Structural Co.

Hartford, Conn., 125 tons, trade school, to an unnamed fabricator.

Crown Point, N. Y., 3000 tons, bridge over Lake Champlain; probably to American Bridge Co., low bidder.

New York, 2000 tons, apartment building at 720 Park Avenue, to Hay Foundry & Iron Works.

New York, 275 tons, section of Pier 21, North River, to American Bridge Co.

Flemington, N. J., 120 tons, bridge for New Jersey State Highway Commission, to Phoenix Bridge Co.

Trenton, N. J., 125 tons, highway bridge, to American Bridge Co.

Pennsylvania Railroad, 200 tons, bridge, to Bethlehem Steel Co.

Lewistown, Pa., 1500 tons, silk mill, to McClintic-Marshall Co.

Sunbury, Pa., 1900 tons, highway bridge, to Bethlehem Steel Co.

Wilmington, Del., 300 tons, shop building for Pennsylvania Railroad, to Belmont Iron Works.

Dayton, Ohio, 200 tons, recreation building, to Massillon Bridge & Structural Co.

Chicago, 1700 tons, bascule bridge over Chicago River for Baltimore & Ohio Railroad, to an unnamed fabricator.

Oak Park, Ill., 180 tons, hotel, to Gage Structural Steel Co.

State of Illinois, 400 tons, highway bridges, to A. C. Wood Co., Rockford, and Wisconsin Bridge Co., Milwaukee.

Minneapolis, 1600 tons, building for University of Minnesota, to American Bridge Co.; previously reported to an unnamed fabricator.

Minneapolis, 250 tons, building for Russell Grader Mfg. Co., to American Bridge Co.

Seattle, 100 tons, Bon Marche Store, to Wallace Bridge & Structural Steel Co.

Port Townsend, Wash., 150 tons of plates, two tanks and towers for Zellerbach Paper Co., to Chicago Bridge & Iron Works.

Grays Harbor, Wash., 100 tons of plates, two tanks for Grays Harbor Pulp & Paper Co., to Chicago Bridge & Iron Works.

San Francisco, 150 tons of plates for Standard Oil Co., to an unnamed interest.

Oakland, Cal., 360 tons, Twentieth Century Market, to Judson-Pacific Co.

Los Angeles, 425 tons, warehouse for A. M. Castle Co., to Baker Iron Works.

Structural Projects Pending

Inquiries for fabricated steel work include the following:

Boston, 150 tons, mercantile building on North Street.

Cambridge, Mass., 500 tons, addition to Langdell Hall, Harvard University.

Quincy, Mass., 200 tons, office building for Granite Trust Co.

New York, 500 tons, fur storage warehouse on Twenty-eighth Street.

Syracuse, N. Y., 2500 tons, office building.

Utica, N. Y., 250 tons, Oneida County Hospital.

Philadelphia, 3000 tons, Y. M. C. A., previously reported as 2000 tons; general contract to Irwin & Leighton.

Philadelphia, 800 tons, Homeopathic Hospital.

Philadelphia, 250 tons, highway bridge.

Pennsylvania Railroad, 500 tons, bridges.

Wilkes-Barre, Pa., 1100 tons, Wilkes-Barre Savings Bank.

Norfolk & Western Railway, 100 tons, bridge.

Southern Railway, 500 tons, bridge.

Cleveland, 655 tons, Parkhurst and Nathan Hale schools.

Cleveland, 400 tons, Thirty-seventh Street bridge for Nickel Plate Railroad.

Akron, Ohio, 500 tons, Loew theater.

Toledo, Ohio, tonnage unstated, Masonic Temple.

Chicago, tonnage being estimated, office building for Union Carbide & Carbon Corporation.

Chicago, 600 tons, addition to billet mill of Interstate Iron & Steel Co.

Chicago, 400 tons, St. Michael's High School.

Kansas City, Mo., 600 tons, office building for Swift & Co.

Oklahoma City, Okla., 3000 tons of plates, water pipe line; general contract let.

Freeport, Tex., 400 tons, bridge over Brazos River.

Denver, 12,000 tons of plates, water pipe line; bids June 1.

Tacoma, Wash., 1600 tons of plates, 51 to 66-in. riveted pipe line; bids in.

Tacoma, 115 tons of plates, 48-in. pipe line; Birchfield Boiler Co., low bidder.

Olympia, Wash., 600 tons, bridge over Queets River; general contract to McGuire & Blakesley, Great Falls, Mont.

Eugene, Ore., 215 tons, dam, penstock and power house; bids June 4.

San Francisco, 700 tons of plates, carfloat for Western Pacific Railroad.

San Francisco, 130 to 200 tons, addition to Dollar Building.

Oakland, Cal., 1100 tons, office building at Fourteenth and Franklin Streets.

Oakland, 250 tons, school at Eighty-seventh Avenue and Foothill Boulevard.

Los Angeles, 225 tons, apartment building at 906 North Bonnie Brae Street.

Phoenix, Ariz., 260 tons, bridge on Benson-Douglas highway; general contract to Charles & E. W. Steffgen, San Diego, Cal.

Asks Deferring of New Southwestern Rates on Wrought Pipe

Washington, May 15.—Postponement of the effective date, July 8, of the decision of the Interstate Commerce Commission in the Consolidated Southwestern cases in so far as it affects wrought iron or steel pipe and fittings is asked in a petition filed with the commission by the Transcontinental Oil Co. The petition says that the commission has postponed the effective date as it applies to cast iron pipe and fittings and that the reasons cited for that postponement apply with equal, if not greater force, to wrought pipe, with the exception of the allegation that the value of cast iron pipe is less than the value of wrought iron pipe.

Practically all wrought pipe consumed by the oil industry, it is stated, is purchased directly from the manufacturer and shipped directly to final destination. In all cases where it is necessary, because of an emergency, to purchase from stocks in this field, it is stated, the freight from point of last loading to final destination must be borne by the purchaser, in addition to the transportation cost from point of manufacture to storage point. Due to this fact and the absence of storage-in-transit provisions, and also because of the large consumption of wrought pipe in the affected territory, it is declared, competition between jobbing points, so marked on other commodities, "does not now and probably never will prevail." It is submitted by the petitioner that there is less competition between jobbing cities in the Southwest on wrought iron pipe than on cast iron pipe. It is pointed out that the minimum weight of 40,000 lb. prescribed on wrought pipe is 72.1 per cent of the average loading in the Southwest, 55,480 lb., while the other minimum weights prescribed on iron and steel products range from 78.4 per cent to 90.4 per cent of the average loading. The general minimum weight on wrought pipe in the Southwest at the present time is 46,000 lb. The average weight of wrought iron pipe received by the Transcontinental Oil Co. is declared to be 68,000 lb. It is contended that consumers of wrought pipe should not be penalized by having this product placed with other iron and steel products on a higher rate than is justifiable on wrought pipe because of its heavier loading and the absence of the commercial characteristics that prevail on other iron and steel products.

It is urged that transportation and commercial conditions affecting wrought pipe are such as to warrant its separation from the other articles of iron and steel.

PERSONAL

C. F. W. Rys, since 1911 metallurgical engineer in charge of the metallurgical department of the Carnegie Steel Co., Pittsburgh, has been made an assistant to the president. He has been with the Carnegie company since 1904 and is a graduate of the School of Mines, Freiberg, Saxony. He achieved considerable distinction as a member of committees of national engineering societies in connection with work done on standard specifications for iron and steel materials and products. He is a member of the American Iron and Steel Institute, Iron and Steel Institute (British), and the American Society for Testing Materials, and is on the metallurgical advisory board of the Carnegie Institute of Technology.

C. F. W. RYS

E. J. Lowry, until recently metallurgist for Hickman, Williams & Co., Pittsburgh, but more recently engaged in consulting engineering work, with offices in the General Motors Building, Detroit, has been engaged as a consulting metallurgist by the Molybdenum Corporation of America, Pittsburgh, to further the use of molybdenum in iron and steel.

W. P. Gleason, general superintendent Gary, Ind., works, Illinois Steel Co., has been named a member of the board of trustees of the Lake County, Ind., Tuberculosis Sanitarium.

A. T. Leavitt has been made president of the Hamilton By-Product Coke Ovens, Ltd., Hamilton, Ont.

O. W. Stokes has been transferred from the Seattle to the San Francisco office of the Worthington Co., Inc., and is now located at 543 Howard Street, San Francisco.

Harry E. Kies, executive manager of the malleable iron department of the American Radiator Co., Buffalo, has also taken over the activities of the Arco steel department and is now manager of both plants. He succeeds E. P. Langworthy in the Arco department.

Fred A. Hanlin was elected secretary Weirton Steel Co., Weirton, W. Va.; Frank M. Hesse was elected treasurer, T. J. Hudson, assistant secretary, and W. L. Horner, assistant treasurer at a special meeting of the directors of the company held in Pittsburgh, May 8. Mr. Hanlin and Mr. Hesse previously were respectively assistant secretary and assistant treasurer of the company, the official personnel of which, except for these promotions, is unchanged.

J. E. Heber has been elected vice-president of the Truscon Steel Co., Youngstown, in charge of its Pacific Coast activities, with headquarters at Los Angeles. For the past 17 years he has been district manager for the company in that city, and for the preceding five years he was connected with the Truscon sales organization in Canada.

A. Levin, for the past two years connected with the Pacific Coast sales organization of the Minneapolis Steel & Machinery Co., Minneapolis, has joined the sales organization of the Moore Drydock Co., Oakland, Cal.

Hans J. Meyer has been made an engineer of the foreign department, International Combustion Engineering Corporation, New York, and will sail on June 6 for the Far East. Mr. Meyer's early engineering training was with the Milwaukee Electric Railway & Light Co. His later identifications were as district engineer Allis-Chalmers Co.; sales engineer Westinghouse Electric & Mfg. Co.; superintendent Shreveport Gas, Electric Light & Power Co., Shreveport La.; partner in the consulting engineering firm of Vaughn, Meyer & Sweet, Milwaukee; and partner in the consulting engineering firm of Charles L. Pillsbury Co., Minneapolis and St. Paul. During the war he served as administrative engineer, United States Fuel Administration, Bureau of Conservation. He became identified with Combustion Engineering Corporation in 1926 and was placed in charge of design and construction of complete fuel burning and steam generating equipment for the Kip's Bay station of the New York Steam Corporation.

H. N. Smith has been appointed district sales manager of a new office which has been opened at 48 West McLemore Avenue, Memphis, Tenn., by the Linde Air Products Co., New York. His territory will include western Tennessee, northern Mississippi and eastern Arkansas.

Charles S. Garland, New York district manager for Hickman, Williams & Co., has resigned to become associated with Brown Brothers & Co., New York investment bankers. He has been associated with Hickman, Williams & Co. since his graduation from Yale University in 1920, for four years in the company's Pittsburgh office and since November, 1924, as district manager at New York.

Earl D. Stearns, formerly with the Stearns Conveyor Corporation, Cleveland, has been appointed vice-president of the Fairfield Engineering Co., Marion, Ohio, manufacturer of conveying equipment.

Messrs. Nagel and Blumenfeld, general manager and director respectively of the Badische Machine Works, Durlach, Germany, manufacturer of foundry equipment, arrived in the United States on May 7 and will visit the convention of the American Foundrymen's Association in Philadelphia, and also numerous foundries and equipment companies in this country. They will maintain headquarters at Albert T. Otto & Sons, Inc., 18 East Forty-first Street, New York, agent in the United States for the Durlach works.

Henry D. Sharpe, president Brown & Sharpe Mfg. Co., Providence, R. I., has been made vice-president of the American Association of Community Chests and Councils. He is president of the Providence Community Chest.

C. H. Heist, formerly furnace superintendent Mayville Iron Co., Mayville, Wis., subsidiary of the Youngstown Sheet & Tube Co., has been named superintendent in charge of all blast furnaces of the latter company, with headquarters in Youngstown.

Allen Wood Smith has been appointed manager of the roll sales department, Aetna Standard Engineering Co., Youngstown. Associated with him is Robert G. Crawford, formerly with the Mesta Machine Co., Pittsburgh.

W. C. Fownes, formerly president Standard Seamless Tube Co., Pittsburgh, now head of Fownes & Orr Co., Inc., has been elected a director McKinney Mfg. Co., Pittsburgh, hardware manufacturer. J. B. Orr, associated with Mr. Fownes, also has been elected a director of the McKinney company.

W. B. Ohl, formerly auditor Trumbull Steel Co., has been appointed to the newly created office of comptroller of the Republic Iron & Steel Co., Youngstown. Harry D. Rhodehouse, for many years traffic manager Youngstown Chamber of Commerce, has been appointed traffic manager of the Republic company.

Charles L. Hyland has been appointed sales representative for the Empire Steel Corporation, Mansfield, Ohio, in the Cincinnati territory. His district will include portions of Ohio, Kentucky, Tennessee and West Virginia. Mr. Hyland was formerly with the Wheeling Steel Corporation, Wheeling, W. Va., and more recently with the Trumbull Steel Co., Warren, Ohio. His address is 3437 Hazelwood Avenue, Cincinnati.

W. B. Ohl, formerly general auditor of the Trumbull Steel Co., has been appointed comptroller of the Republic Iron & Steel Co.

Louis Renault, head of Societe Anonyme des Usines Renault, French automobile manufacturer, and E. C. Serre and E. A. Tordet, chief engineer and factory manager of the Renault company, are in this country devoting considerable time to inspecting automobile and parts making plants. At Flint, Mich., M. Renault and party were the guests of B. W. de Guichard, president AC Spark Plug Co.

Reginald G. Matthews, Floral Park, N. Y., has been appointed assistant chief of the industrial machinery division, Department of Commerce, Washington. He was born at Orange, N. J., and attended Pratt Institute, Brooklyn, and other technical schools, specializing in mechanical and electrical engineering. His experience includes extensive travel abroad and in the United States selling and estimating machinery, and service with a financial house, which took him to Japan. During the World War he served in the United States Ordnance Department.

Eugene G. Grace, president Bethlehem Steel Co., Bethlehem, Pa., and G. H. Blakeley, vice-president, are on a business trip to the Pacific Coast.

A. F. Morris, vice-president and general manager of sales Morgan Engineering Co., Alliance, Ohio, has been elected president. He was appointed sales manager in 1903 and in 1923 was elected vice-president.

Henry F. Angelberger, engineer for the H. K. Ferguson Co., Cleveland, will sail for Japan on May 17 to take charge of the company's construction work in that country.

Thomas G. Kus, formerly with the St. Louis Gas & Coke Corporation, Granite City, Ill., has been appointed vice-president of the Arthur L. Stevens Corporation, 205 West Wacker Drive, Chicago, furnace engineer.

T. L. Simpson has been placed in charge of a branch office which has been opened at 1209 Empire Building, Pittsburgh, by the American Cast Iron Pipe Co., Birmingham.

Welding Prizes Awarded at Meeting of Mechanical Engineers

PITTSBURGH, May 15.—The Lincoln arc welding prizes were awarded at the business session of the American Society of Mechanical Engineers, which is now holding its spring meeting at Pittsburgh. Three awards were made for essays which were held to contribute materially to the art of arc welding. The society had engaged some time ago to conduct the competition and had appointed a committee of judges under the chairmanship of L. P. Alford, J. F. Lincoln, president Lincoln Electric Co., Cleveland, explained the purpose of the contest as aiming particularly toward advancement of the art. The first prize, carrying a check of $10,000, was awarded to James W. Owens, director of welding Newport News Shipbuilding & Dry Dock Co. His paper was entitled "Arc Welding, Its Fundamentals and Economics." It covers design and shop practice, together with an analysis of industrial applications and world-wide possibilities.

C. F. Bailey, engineering director Newport News company, represented President Homer Ferguson in expressing pleasure at the award and eulogy of the winner. The second prize went to Prof. Henry Dustin, of the faculty of applied science, University of Brussels, Belgium. This was for $5,000. The third prize, $2,500, was awarded to Com. H. E. Rossell, mathematics department, Naval Academy, Annapolis.

OBITUARY

A. M. CAMPBELL

ARCHER MAYNARD CAMPBELL, chairman of the board of the Glamorgan Pipe & Foundry Co., Lynchburg, Va., whose death on May 7 was metioned in THE IRON AGE last week, was born at Lynchburg in 1873 and had been identified with the Glamorgan company since 1888. He began work in clerical capacities and was advanced through various executive positions until he became president of the company in 1916. He had been chairman since 1921. Mr. Campbell had taken an active part in the industry with which he had been identified and had served as chairman of the Cast Iron Pipe Research Association since its formation in 1915. He was also a councillor in the United States Chamber of Commerce and was a director of the United Cigarette Machine Co. and of numerous other financial and industrial companies. A brother, H. L. Campbell, is president of the Glamorgan company.

MICHAEL BLAKE, for many years president Federal Iron & Metal Co., Newark, N. J., died on April 30 at Tucson, Ariz., where he had been living since the first of the year on account of illness. He was 59 years of age and had been engaged in the scrap metal business in the East for more than 40 years. During the war he served on the Mayor's Committee of National Defense of New York, and at the time of his death he was a member of the American Iron and Steel Institute and of the Chamber of Commerce of Newark.

Memory of Charles A. Coffin Honored

In the presence of more than 10,000 employees, the board of directors and a few invited guests, a bronze tablet honoring the memory of Charles A. Coffin, founder of the General Electric Co., was unveiled by Miss Alice Coffin, his daughter, May 8, at the Schenectady plant of that company. Elaborate ceremonies included an address by E. W. Rice, Jr., honorary chairman of the General Electric board. The fund which made the tablet possible was established 25 years ago by General Electric employees.

Industrial activity in the New England States in the first quarter of the year is estimated by *Electrical World* at 113.7, on the basis of 100 as the average monthly figure for 1923 to 1925. This shows a reduction of 2.7 per cent from the average of 116.8 for the first quarter of 1927. A number of industries, however, showed a gain, these including chemicals, leather, metals, paper and rubber. The metals were 126.5, against 118.7 a year earlier.

Where Steel Exports Went in First Quarter

Canada Took 119,249 Tons of Nine Leading Items—Japan Retains Second Position with 42,268 Tons, Followed by Philippines, 12,153 Tons; Argentina, 11,505 Tons; Brazil, 10,923 Tons; Mexico, 10,467 Tons

Exports from United States, by Countries of Destination

Machinery Markets and News of the Works

BUSINESS STEADY

Demand Well Distributed and Tools Are Largely for Replacement

New Inquiry Includes Equipment for Chicago Continuation School

ALTHOUGH there has been a slight decline in machine tool orders in some districts, the letdown is attributed to seasonal conditions and little significance is attached to it by some of the larger builders. Pending business is still of good volume, and, taken as a whole, market activity may be characterized as steady.

Favorable conditions are also indicated by the monthly review of the National Machine Tool Builders Association, issued May 10, which points out that indexes used to measure general business conditions are rather uniformly favorable, and that the machine tool industry is no exception to this general rule.

"Demand for machine tools seems to have been coming from broadly distributed sources, without such concentration in the automotive industry as there was in 1923 and 1924," states the review. "The result is a healthier demand. Another favorable factor is that the business coming out is very largely a replacement rather than an expansive business."

The railroads have shown little interest in the market during the past week. Activity in the Detroit district has been slow, and business from some of the companies that have taken Ford contracts has not been of the volume expected.

Among new inquiries is a list of three tools for a continuation school in Chicago. Orders for the nine machines for the Alexander Hamilton junior high school, Cleveland, have been placed.

It is reported in New England that good demand for small tools continues, the volume of this business so far this month being greater than that in the same period in April, the best month to date in 1928.

Price advances in woodworking equipment are noted in the Cleveland district.

New York

NEW YORK, May 15.

REPORTS from the local machine tool trade quite uniformly point to a slight falling off in business in the first half of May, compared with the last half of April. A fair amount of buying is being done, however, and a good deal of inquiry is pending. Sales are frequently governed by the promise of delivery rather than price. Some machine tool builders have certain sizes and types of machines in stock, while others quote deliveries ranging from one to three months. Mack Trucks, Inc., has bought a few machines for its New Brunswick, N. J., plant. The New York, New Haven & Hartford Railroad has inquired for a few machines. The New York Central Railroad continues to send out inquiries, but has done very little buying. A promising prospect for the near future is the large requirements of the Wright Aeronautical Corporation, but no inquiries have yet appeared.

The Niles-Bement-Pond Co., including the Pratt & Whitney division, reports the following sales: A 6-ft. plain Right-Line radial drill, a 60-in. horizontal boring mill, a Cincinnati No. 2 B I high-speed drilling machine, a Ransom No. 109 grinder, a Long & Allstatter vertical I-beam punch, a Brown & Sharpe No. 1 wire feed screw machine, an Oster 16-in. shaper, a used 48-in., 200-ton wheel press, a 13 x 48-in. lathe, a 16 x 36-in. lathe, three 5-in. production hand milling machines, a No. 2 jig borer, a 12-in. vertical shaper, a 14-in. surface grinder, two 3-spindle Sigourney drilling machines.

Chain Products Co., Cooper Avenue and Pennsylvania Railroad, Cleveland, manufacturer of Hodell chains, has removed its New York office from 150-152 Chambers Street to 200 Varick Street. Thomas A. Troy is the New York manager.

Ireland Aircraft, Inc., Garden City, N. Y., has been organized to manufacture flying boats. Company has plant at Garden City, where entire plane is built, with exception of motor, instruments, etc., and is in market for materials.

Automatic Metal Drawing & Stampings, Inc., 30 Church Street, New York, has been formed to manufacture sheet metal drawings and stampings. Company also make dies when not supplied by customer. Plant is in New York.

Contract has been let by New York, New Haven & Hartford Railroad Co., Grand Central Terminal, New York, to Babor-Comeau & Co., Inc., same address, for proposed two-story electric inspection and operating shop, 106 x 375 ft., on Mathews Avenue, to cost $180,000, with equipment.

Nichols Copper Co., Laurel Hill, L. I., has disposed of block of 140,000 shares of stock to net more than $4,000,000, entire proceeds to be used exclusively for new electrolytic copper refining plant in southwestern district; site will soon be selected. An option has been secured on property in Ascarate district, near El Paso, Tex., with view to utilizing for proposed mill. Plans will soon be drawn. Company is affiliated with Calumet & Arizona Mining Co., New Cornelia Copper Co., and Phelps Dodge Corporation, 99 John Street, New York. C. Walter Nichols is president; Frank E. Lee is secretary. Walter Douglas, president of Phelps Dodge organization, will be active in project.

Andrew J. Thomas, 2 West Forty-sixth Street, New York, architect, has filed plans for extensions and improvements in two-story service, repair and garage building at 335-37 East Forty-seventh Street, reported to cost close to $100,000, with equipment.

Superintendent of Lighthouses, Staten Island, N. Y., is asking bids until May 21, for four 2-kw. automatic gasoline engine-driven generator units, proposal 26993.

Purty Boat Works, Inc., Bayview Colony, Port Washington, N. Y., has awarded general contract to Standard Erecting Corporation, 551 Fifth Avenue, New York, for one-story boat-building and ship repair works, to cost about $175,000 with equipment. Ned Purty is president.

Department of Plant and Structures, Municipal Building, New York, will soon begin construction of municipal airport on Barren Island, Jamaica Bay, comprising hangars, equipment and repair shops, oil storage and distributing buildings and other mechanical units, estimated to cost $500,000, in which amount appropriation has been made.

Ovens, power equipment, conveying machinery and other mechanical equipment will be installed in new baking plant unit to be built by Cox Baking Co., Inc., Van Wyck Boulevard and Ninety-first Street, Jamaica, L. I., reported to cost about $100,000.

Hugo E. Magnuson, 420 Lexington Avenue, New York, architect, has plans under way for five-story automobile service, repair and garage building at 1076-82 First Avenue, to cost approximately $190,000 with equipment.

Street Cleaning Department, Municipal Building, New York, has been granted appropriation of $2,052,495, by Board of Estimate, for construction of six steel and con-

The Crane Market

THERE is only a small volume of new inquiry for electric overhead and locomotive cranes. No action has been taken as yet by Dwight P. Robinson & Co., New York, on six crawl tread locomotive cranes and seven steam shovels for use at Buenos Aires, Argentina. The Mullaney Iron Works, West New York, N. J., is about to close on a 10-ton, 60-ft. span, electric traveling crane. Two 15-ton lumber handling cranes and a 10-ton crawl tread locomotive crane for the Franklin Lumber Co., Newark, N. J., are still pending.

Among recent purchases are:

New York Edison Co., New York, 100-ton, 31-ft. 8-in. span, 3-motor overhead crane from Niles Crane Corporation.

General Electric Co., Schenectady, N. Y., 15-ton, 90-ft. span, 4-motor gantry crane reported purchased from Alliance Machine Co.

Public Service Production Co., Newark, N. J., 10-ton, 17-ft. 8-in. span hand power crane for Trenton, N. J., from New Jersey Foundry & Machine Co.

La Cour Iron Works, Hunters Point Avenue, Brooklyn, N. Y., 7½-ton, 45-ft. span, 3-motor overhead crane from Box Crane & Hoist Corporation.

Gilbert & Barker Mfg. Co., Springfield, Mass., two 5-ton electric transfer cranes, two 1-ton single I-beam cranes, one 5-ton and one 2-ton electric hoists from an unnamed builder.

Gaffney Construction Corporation, Zerega and Storey Avenues, New York, two 7½-ton crawl tread locomotive cranes from Browning Crane Co.

Welker & Wade, Inc., New York, one truck crane from Browning Crane Co.

Atchison, Topeka & Santa Fe, six gib cranes for several of its shops from unnamed bidder.

Link-Belt Co., Chicago, 15-ton electric crane from Shaw Electric Crane Works and a 5-ton and two 3-ton overhead electric cranes from Cleveland Crane & Engineering Co.

---

crete dumping and handling stations on waterfront, replacing present wooden units, with installation of unloading, conveying and other mechanical handling equipment.

Westchester Service Corporation, New Rochelle, N. Y., recently formed to take over and consolidate group of ice manufacturing plants at Mount Vernon, New Rochelle, Port Chester, White Plains and Yonkers, is disposing of preferred stock issue to total $600,000, a portion of proceeds to be used for extensions and improvements.

Board of Education, Park Avenue and Fifty-ninth Street, New York, has arranged fund of $476,000, for mechanical equipment in proposed three-story Samuel Tilden high school at Beverly Road and East Fifty-ninth Street, Brooklyn, for which plans will soon be completed. Entire structure will cost $1,891,000.

In connection with proposed future development of its properties, Cerro de Pasco Copper Corporation, 44 Wall Street, New York, contemplates installation of electrolytic zinc plant, with water power facilities and other expansion, estimated to cost $5,000,000. E. H. Clark is vice-president.

United Electric Light & Power Co., 130 East Fifteenth Street, New York, has plans for two one-story equipment storage and distributing buildings, with repair facilities, each 35 x 136 ft., at Walnut Avenue and 134th Street, to cost $50,000. Thomas E. Murray, Inc., 55 Duane Street, is architect and engineer.

Signal Corps Procurement District, Governors Island, New York, is asking bids until May 22, for 250 manhole frames and 200 manhole covers, circular 158.

Village School Board, Dobbs Ferry, N. Y., has plans for a one-story trade school building and mechanical shop for automobile work. P. B. Nichols, Depot Plaza, West Plains, N. Y., is architect.

Frederick J. Maywald, William and Main Streets, Belleville, N. J., chemist, and associates are organizing new company to be known as Fremay Co., to establish and operate plant at Carlstadt, N. J., for manufacture of rubber products. Former factory of S. Klaber & Co., Hoboken Road and Tenth Street, Carlstadt, marble and stone products, has been acquired, and will be remodeled and equipped at early date.

Simmons Co., Brunswick Avenue, Linden, N. J., manufacturer of brass and other metal bedsteads, with main plant at Kenosha, Wis., has plans for a new one-story addition to local factory, including improvements in present plant, reported to cost in excess of $50,000. Company has arranged for increase in capital from 1,000,000 to 2,000,000 shares of stock, no par value, portion of fund to be used for expansion at different branch plants throughout country.

North Jersey District Water Supply Commission, 24 Commerce Street, Newark, contemplates installation of new pumping plant in connection with water supply system at Wanaque, N. J., to cost $300,000, with machinery. George W. Fuller is engineer.

D. W. May, Inc., 380 Central Avenue, Newark, electrical equipment and supplies, automotive specialties, etc., has plans in progress for two one-story factory units, reported to cost more than $50,000. Marshall N. Shoemaker, 15 Central Avenue, is architect and engineer.

Syndicate Toy & Novelty Co., 181 Chestnut Street, Newark, has leased space in factory at 339 Chestnut Street, for expansion. Present works will be removed to new location and capacity increased.

American Telephone & Telegraph Co., 195 Broadway, New York, has acquired tract of land between Netcong and Flanders, Morris County, N. J., as site for new radio receiving station for trans-Atlantic service, to include steel towers, power station, etc.

Sonatron Tube Co., 88 Eighth Avenue, Newark, manufacturer of radio equipment, is disposing of a stock issue to total about $652,000, a portion of fund to be used for expansion.

Board of Public Works, City Hall, Paterson, N. J., will receive bids until June 12, for refuse destructor plant equipment, including monorail grab-bucket type electric hoist; electric skip and tub hoists, ash bunker, tunnel trackage, tip cars, and movable hopper; pneumatic ash conveyor system complete; and ventilating, air washing and chlorinating system complete. Plans and specifications at office of city engineer, City Hall.

New England

BOSTON, May 15.

MACHINE tool dealers in New England States except Connecticut report little business of importance. Connecticut dealers are getting some good business, particularly in lathes, radial drills, milling machines and grinding equipment. Quite a few Connecticut industrial plants are running well in excess of operations a year ago, and practically all of those directly or indirectly affiliated with the iron and steel business are more active than they have been in a long time. Among sales reported locally the past week were a new 20-ft. x 12-in. Monotrol lathe, a new 20-in. upright drill, a new 10-ft. bending roll, and a large used planing machine. Quite a few core making machines were sold to foundries. The Boston & Albany Railroad may make purchases this week. Small tools continue to sell freely.

The General Electric Co. has booked 28 electric-drive equipments for gasoline buses for the Boston Elevated Railway.

New company to be known as the Maine Steel Products Co. will shortly be announced. It will practically be a re-establishment of the Union Iron Works, Bangor, Me., but will be located at South Portland. It is to manufacture steel snow plows, snow removal machines and various other types of highway construction equipment.

Baird Machine Co., Bridgeport, Conn., is to erect one-story, 110 x 150-ft. machine shop to cost, without equipment, $80,000.

Davis-Furber Machine Co., Water Street, North Andover, Mass., has started a two-story, 30 x 50-ft. foundry addition.

George Howard & Sons Co., Brockton, Mass., has been awarded contract to build a two-story cold storage plant for Cudahy Packing Co., at North Montello, Mass. Conveying equipment is required.

Fafnir Bearing Co., New Britain, Conn., has been granted permission to build a two-story, 60 x 70-ft. and a one-story, 60 x 120-ft. plant additions to cost, without equipment, $56,000.

Kenney Mfg. Co., Wellingford Avenue, Cranston, R. I., curtain rods, has started work on a two-story, 66 x 120-ft. plant addition. E. B. Whipple, Weybosset Street, Providence, R. I., is engineer.

Real estate, machinery and equipment of Vermont Machine Co., Inc., Bellows Falls, Vt., will be sold at public auction May 17 and 18.

Boston Gear Works, Inc., Norfolk Downs, Mass., manufacturer of standardized gears, speed reducers and power transmission equipment, has erected brick and concrete plant addition, 67 x 95 ft. Building is of three stories, the third given over to company's recreation facilities.

Contract has been let by Collyer Insulated Wire Co., North Main Street, Pawtucket, R. I., manufacturer electrical wires, etc., to Henry M. Soule, 110 Brook Street, for a three-story addition, 75 x 105 ft. to cost about $115,000 with equipment. Monahan & Meikle, Main Street, are architects.

Ever-Spark Plug Co., Inc., Fitchburg, Mass., has acquired one of local mill units of Grant Yarn Co., for consideration of $38,000, and will equip for a new plant.

Rumford Falls Power Co., Rumford, Me., controlled by Oxford Paper Co., same address, has arranged for bond issue of $2,000,000, a portion of fund to be used for expansion in generating and transmission facilities. Hugh J. Chisholm is president.

Connecticut Light & Power Co., Hartford, Conn., has awarded contract to United Gas Improvement Contracting Co., Broad and Arch Streets, Philadelphia, for additions to gas storage and distributing works on Harbor Avenue, Norwalk, Conn., to cost $150,000.

William H. Haskell Co., Bailey Street, Pawtucket, R. I., manufacturer of expansion bolts, studs, etc., has awarded general contract to Cruise Construction Co., Pawtucket, for one-story addition to machine shop, 60 x 66 ft. Warren B. Lewis is engineer.

Atlas Plywood Corporation, 31 St. James Avenue, Boston, has arranged for increase in capital stock from 50,000 to 100,000 shares, no par value. A bond issue of $2,500,000 is being sold, a considerable portion of proceeds to be used for expansion, including acquisition of Empire Mfg. Co., Goldsboro, N. C., manufacturer of textile frames and equipment, and for expansion of such line of production in Southern territory.

Rosenblatt Brothers, Mallaney Building, Framingham, Mass., architects, will soon begin construction of one-story automobile service, repair and garage building, 100 x 140 ft., at Union Avenue and Mount Wayte Road, to cost about $90,000 with equipment.

C. H. Smith Corporation, 33 Sylvan Street, West Springfield, Mass., manufacturer of wire cloth, etc., has begun erection of one-story addition, 36 x 70 ft., for which general contract was let recently to Unit Construction Co., Springfield. R. G. Milliken is manager.

Raybestos Co., Bridgeport, Conn., manufacturer of automobile brake lining, etc., is disposing of stock issue to total $1,960,000, portion of fund to be used for expansion. Company operates subsidiaries and branch plants at Stratford, Conn., Charleston, S. C., and Peterborough, Ont. Sumner Simpson is president.

Henry Weyand Co., Brown Place, Waterbury, Conn., manufacturer of pipe, pipe bends, etc., has plans nearing completion for one-story addition, 18 x 105 ft., for which bids will be asked by Thomas M. Freney, Waterbury, architect.

Greenfield Electric Light & Power Co., Greenfield, Mass., has secured permission to dispose of stock issue totaling 300,000 shares, a portion of proceeds to be used for expansion and improvements.

St. Louis

St. Louis, May 15.

PLANS are being considered by International Oil Heating Co., 3939 Magnolia Street, St. Louis, manufacturer of oil burning equipment for a new one-story plant, reported to cost about $20,000.

Cudahy Packing Co., 111 West Monroe Street, Chicago, meat packer, has awarded general contract to Miller-Straub Construction Co., Railway Exchange Building, Kansas City, Mo., for new six-story packing plant, with power and refrigerating departments, at Kansas City, Kan., to cost approximately $400,000, with equipment.

Officials of Braden Steel & Winch Co., Tulsa, Okla., manufacturer of sectional steel buildings, steel derricks, etc., have organized a new subsidiary to be known as Braden Steel Corporation to take over and expand the structural steel branch of business. Present company will continue to function as heretofore and plans extensions in its division.

Oklahoma Portland Cement Co., Perrine Building, Oklahoma City, Okla., has purchased tract of about 100 acres of land near Saratoga, Ark., and is said to be planning construction of new mill to cost more than $600,000, with equipment. M. O. Mathews is manager.

Board of Trustees, University of Arkansas, Fayetteville, is considering rebuilding of engineering laboratory and machine shop on campus, destroyed by fire, May 4, with loss reported in excess of $100,000, including equipment.

Viking Refrigerator Co., 7500 Independence Road, Kansas City, Mo., manufacturer of refrigerators, etc., has awarded general contract to Charles F. Woodling, 126 South Van Brunt Street, for a one-story addition, reported to cost more than $20,000, with equipment.

Board of Education, University City, Mo., is having plans completed for first unit of new senior high school, with manual training department, to cost approximately $450,000, for which bids will be received in near future. Ferrand & Fitch, 6188 Delmar Boulevard, St. Louis, are architects.

Talbot Mfg. Co., 1213 Chestnut Street, St. Louis, Albert R. Walker, head, recently formed by Mr. Walker and associates, is said to be planning operation of local plant for manufacture of electrical equipment and devices.

Phillips Petroleum Co., Bartlesville, Okla., has begun an expansion and improvement program at gasoline refining plants, reported to cost close to $450,000 with equipment. Work will include addition to Pampa plant in Texas Panhandle to develop a capacity of about 25,000 gal. per day; new plant in Hutchinson County, Tex., to be equipped for ultimate output of 20,000 gal. per day, to be known as Rock Creek plant; new plant at Sanford, Tex., now nearing completion, with capacity in excess of 18,000 gal. per day; and proposed new plant in Texroy district, Panhandle field, to be equipped for output of more than 15,000 gal. daily.

Board of Education, Stillwater, Okla., will soon break ground for proposed one-story manual training school, 100 x 100 ft., to cost more than $70,000, with equipment. Philip A. Wilbur, Architectural Department, Agricultural and Mechanical College, Stillwater, is architect.

Missouri Insulating & Refractories Corporation, St. Louis, has been formed by Frederick E. Kern, Syndicate Trust Building, and associates, to carry out proposed new mill on Clayton Road for manufacture of firebrick, insulating brick and other refractories, to cost more than $150,000, including equipment.

General Airplane Co., Wichita, Kan., M. L. Howe, president, is reported planning a new branch plant at Muskogee, Okla., to cost more than $25,000, with equipment.

Cleveland

Cleveland, May 14.

MACHINE tool business continues fair, although not quite up to the April volume. Orders with few exceptions are for single machines. April was the best month of the year with some of the local dealers, whose total volume of sales was helped materially by good orders from two or three companies equipping plants for making parts for Ford cars. Business from other companies that have taken Ford contracts has not materialized to the extent that was expected. Activity in the Detroit territory is rather slow. Turret lathes are moving well in single machine orders from scattered sources. The Cleveland Board of Education, which recently inquired for nine metal and woodworking machines for the Alexander Hamilton Junior High School, placed its orders during the week, dividing the business among several dealers. The Electric Auto-Lite Co., Toledo, purchased a few small machines. A price advance of from 7 to 10 per cent, and in a few cases as much as 15 per cent, was announced on woodworking machinery.

Erie City Iron Works, Erie, Pa., maker of powdered fuel equipment, steam boilers and engines, gray iron castings and fabricated steel, has established direct sales office at 1105 Leader Building, Cleveland, with Eugene Smith as district manager.

Ohio Power Shovel Co., Lima, Ohio, maker of gasoline shovels, has opened an office at 30 Church Street, New York, with L. H. Morris in charge; a Philadelphia office at 1119 South Fifty-sixth Street, in charge of E. E. Fort, and a Chicago office at 1250 Straus Building, with H. P. Steinbrenner in charge.

Contract has been let by Acme Auto Radiator Co., 7707 Carnegie Avenue, Cleveland, to A. H. Binns & Co., 7504 Carnegie Avenue, for one-story addition, 40 x 175 ft., to cost about $60,000 with equipment. T. C. Cerny, 4025 East Fifty-second Street, is architect. J. T. Bares is manager.

Solomon Auto Parts Co., Fostoria, Ohio, plans rebuilding of portion of works destroyed by fire, May 4, with loss reported in excess of $40,000 with equipment.

Toledo Central Garages, Inc., Produce Exchange Building, M. O. Baker, head, has plans nearing completion for six-story service, repair and garage building on Superior Street, near Monroe Street, to cost in excess of $250,000 with equipment. Mills, Rhines, Bellman & Nordhoff, Ohio Building, are architects.

B. F. Goodrich Co., Akron, Ohio, manufacturer of tires, mechanical rubber goods, etc., is arranging for increase in capital from 750,000 to 1,000,000 shares of stock, no par value, a portion of proceeds to be used for expansion. A new plant is being completed at Los Angeles, with rated capacity of 6000 tires and 7500 tubes per day. Plans are reported under consideration for rebuilding of plant at Tokio, Japan, to cost more than $500,000.

Gledhill & Kime Lumber Co., Cresline, Ohio, is planning installation of additional machinery at its mill, including motor-driven saws, combination wood-working machine, and other tools.

Spicer Mfg. Corporation, South Plainfield, N. J., manufacturer of universal joints, axles, etc., has completed construction of branch plant at Toledo, Ohio, and will develop capacity to increase present gross output at all plants about 50 per cent. New plant will be operated under name of Dana Mfg. Co., and represents investment of close to $500,000. Charles A. Dana is president.

J. E. Orford, Jefferson, Ohio, has awarded general contract to Lakeshore Construction Co., Ashtabula, Ohio, for a one-story automobile service, repair and garage building on Chestnut Street, to cost close to $65,000, with equipment.

Gulf States

BIRMINGHAM, May 15.

PLANS are being arranged by Gonzales Cement Works, Gonzales, Tex., for removal of mill to San Antonio, Tex., where consolidation will be carried out with another plant at that place. Proposed to increase capacity with installation of additional equipment.

Ovens, power equipment, conveying machinery and other mechanical equipment will be installed in proposed two-story addition to be erected by Malbis Baking Co., 871 Broad Street, Mobile, Ala., 100 x 160 ft., to cost about $70,000, with equipment.

Marianna Lime Products Co., Marianna, Fla., has acquired limestone properties of Lime Products Co., White Cliffs, Little River County, Ark., and plans early construction of new plant for manufacture of lime products, reported to cost more than $90,000, with machinery. A. M. Lewis heads first-noted company.

Humble Pipe Line Co., operated by Humble Oil & Refining Co., Houston, Tex., will build two docks at Aransas Pass, Tex., with elevating, conveying and other handling equipment, estimated to cost $200,000.

Central Power & Light Co., San Antonio, Tex., has acquired Nixon Electric Light & Power Co., Nixon, Tex., and will operate as subsidiary. Plans are under way for extensions in Nixon district, including installation of transmission lines.

Herman Rosch, city clerk, El Paso, Tex., is asking bids until May 24, for buildings for municipal airport, including hangar with repair facilities, lighting system for landing field, etc.

Golden West Oil Co., National Bank of Commerce Building, San Antonio, Tex., is planning construction of new refining plant in Medina County for lubricating and other refined oils, reported to cost more than $85,000, with equipment.

Belchie & Laskey, Inc., Slattery Building, Shreveport, La., has surveys under way for a new 16 and 20-in. pipe line from Richmond to Lafayette, La., for natural gas transmission, reported to cost more than $100,000.

Chevrolet Motor Co., Laredo, Tex., local representative for Chevrolet automobile, will soon begin work on one-story service, repair and garage addition, 55 x 110 ft., reported to cost in excess of $80,000, with equipment. Guy M. Trout, Ramos Building, is architect.

Board of Water Commissioners, Dallas, Tex., will soon take bids for equipment for large central pumping plant in connection with $4,000,000 expansion and improvement program for municipal waterworks. Fuller & McClintock, 170 Broadway, New York, are consulting engineers. S. E. Moss is head of board.

City Council, Vernon, Tex., has approved plans for a one-story municipal electric light and power plant, reported to cost about $30,000, with equipment. A traveling crane will be installed. R. H. Stuckey, Vernon, is architect.

Board of Education, Big Spring, Tex., is said to be planning installation of manual training equipment in proposed three-story high school addition, reported to cost in excess of $175,000. Trost & Trost, Two Republics Building, El Paso, Tex., are architects.

American Potash Co., Dallas, Tex., care of T. G. Leachman, 3725 Stratford Avenue, recently organized, has taken title to potash properties in vicinity of Odessa, Tex., and plans early installation of complete mining plant. A refining plant for daily capacity of about 2000 tons will be installed. Entire project is reported to cost more than $500,000. Max Agress has been elected president.

Tritex Oil Co., Gunter Building, San Antonio, Tex., is planning construction of pipe line, about 15 miles long, to Uvalde, Tex., and vicinity, for natural gas supply, reported to cost approximately $50,000, with equipment.

Linde Air Products Co., 30 East Forty-second Street, New York, a subsidiary of Union Carbide & Carbon Corporation, same address, will soon begin work on first unit of new industrial oxygen plant at Shreveport, La., to cost about $45,000, with equipment. Other units will be built at later date.

Duval-Texas Sulphur Co., Second National Bank Building, Houston, Tex., J. W. Cain, president, plans installation of mining plant on sulphur properties in vicinity of San Diego, Duval County, to cost more than $80,000, with machinery. Company has arranged with Houston Gulf Gas Co. for construction of pipe line to plant site for fuel supply.

Stilwell Benzol Refining Co., Port Arthur, Tex., A. E. Stilwell, head, is reported planning a new refining plant on local site, with rated output of about 800 bbl. per day, to cost approximately $300,000, with machinery.

City Council, Laredo, Tex., has acquired a tract of about 400 acres of land for municipal airport and plans early construction of hangars, repair shop, oil storage and distributing building, and other mechanical structures.

Philadelphia

PHILADELPHIA, May 15.

PLANS have been filed by Pennsylvania Railroad Co., Philadelphia, for eight-story cold storage and refrigerating plant on Oregon Avenue, near Delaware Avenue, with one-story unit adjoining for power service, etc., to cost close to $1,100,000, for which erection contract has been let to United Engineers & Constructors, Inc., 125 East Forty-sixth Street, New York. Day & Zimmermann, Inc., Sixteenth and Walnut Streets, is engineer.

Welsbach Street Lighting Co. of America, Twentieth and Arch Streets, Philadelphia, manufacturer and operator of highway gas-lighting equipment, has leased two-story factory, 60 x 275 ft., to be erected at Westmoreland and Stokley Streets, reported to cost in excess of $75,000, for a new plant. E. A. Stopper, 10 South Eighteenth Street, is architect.

Union Dental Instrument Mfg. Co., 831 Cherry Street, Philadelphia, has purchased property at 700-2 North Franklin Street, and will have plans drawn for a new plant, totaling about 20,000 sq. ft. floor space.

American Brown-Boveri Corporation, 420 Lexington Avenue, New York, operating former plant of New York Shipbuilding Co., Camden, N. J., has taken an option on purchase of part of shipbuilding plant of William Cramp & Sons Ship & Engine Building Co., Richmond and Norris Streets, Philadelphia, where operations recently were discontinued, and purposes to use for new shipbuilding unit; majority of light machinery and portable equipment at plant has been sold, and will be replaced by purchasing company.

Crown Smelting Co., Chester, Pa., plans to devote a considerable part of production in future to manganese bronze propellers, and has secured a contract from Government for 20 naval propellers for scout cruiser service, totaling about $75,000.

Sentry Safety Control Co., Thirteenth and Cherry Streets, Philadelphia, manufacturer of safety devices and equipment for motion picture booths, etc., has leased additional space in building at location noted to double present quarters and will increase capacity. Joseph E. Cohen is president.

Barbour Brothers, Trenton, N. J., operating an iron and steel works at Marion Street and line of Reading Railroad, are having plans drawn for a one-story shop addition, 76 x 150 ft. Walter Hankin, 224 East Hanover Street, is architect.

Board of Education, Pleasantville, N. J., plans installation of manual training equipment in new three-story high school, reported to cost more than $200,000, for which bids will be asked in about a month. S. Hudson Vaughn, Guarantee Trust Building, Atlantic City, N. J., is architect.

Board of Trustees, Lafayette College, Easton, Pa., is having plans prepared for a three-story engineering building, to cost about $500,000 with equipment. C. Z. Klauder, 1429 Walnut Street, Philadelphia, is architect. Dr. Mathew Lewis is president.

James K. Peck, 1013 Olive Street, Scranton, Pa., and associates have organized Scranton Auto Body Co., to operate a local body-building and repair plant. H. E. Thomas, Scranton, is also interested in company.

Pusey & Jones Corporation, Wilmington, Del., has begun an expansion and improvement program in paper-making machinery division of plant, to include new forge shop and two-story woodworking plant, with installation of additional equipment in machine shop and foundry. Entire expansion will cost about $350,000.

New York & Pennsylvania Co., Lock Haven, Pa., is reported planning a new building at its paper mill to cost in excess of $200,000 with equipment. Headquarters are at 200 Fifth Avenue, New York.

Reading Co., Reading Terminal, Philadelphia, has work under way on extension and improvement program at engine terminal and shops at Sunbury, Pa., to include installation of additional equipment, estimated to cost about $100,000. Program will also provide facilities for handling repair and reconditioning of locomotives of Pennsylvania Railroad, which will abandon its present engine terminal at that place.

South Atlantic States

Baltimore, May 15.

CONTRACT has been let by C. Hoffberger & Co., 538 East Monument Street, Baltimore, operating ice-manufacturing and cold storage plants, to M. A. Long Co., 10 West Chase Street, for an eleven-story and basement cold storage and refrigerating plant, 115 x 140 ft., to cost $1,000,000 with machinery. It will provide 1,330,000 cu. ft. of space. John H. Wickersham, Lancaster, Pa., is engineer.

Board of Education, Baltimore, plans installation of manual training equipment in proposed four-story junior high school on site selected on Barrington Road, near Garrison Boulevard, reported to cost $1,000,000, for which architect will soon be appointed. H. J. Leimbach, Municipal Office Building, is chief engineer, Public Improvement Commission, in charge.

Annapolis & Chesapeake Bay Power Co., Annapolis, Md., operated by Consolidated Gas, Electric Light & Power Co., Lexington Building, Baltimore, has secured permission to acquire Herald Harbor Power Co. and Severna Electric Co., Anne Arundel County, and will consolidate with system. Plans under consideration for expansion in acquired properties, including transmission line construction.

Bureau of Yards and Docks, Navy Department, Washington, is asking bids until June 13, for 12,138 lineal ft. wire fencing for naval petroleum reserve No. 3, Natrona, Wyo., 7 ft. high, non-climbable type with link chain, diamond mesh wire fabric, extension arms, etc., specification 5610. Also, for salt water pumping plant for naval operating base, San Diego, Cal., no closing date stated, specification 5478.

General Public Service Corporation, Citizens Bank Building, Baltimore, Clarence B. Love, secretary, recently organized, has plans for a one-story plant, 75 x 125 ft., for manufacture of fertilizer products, to cost close to $40,000 with equipment. Howard Borden, Catonsville, Baltimore, is architect.

Toland & Son, 232 North Front Street, Baltimore, manufacturer of saws, tools, etc., plan early rebuilding of portion of plant recently destroyed by fire with loss estimated at close to $25,000 including equipment.

Chevrolet Motor Car Co., Flint, Mich., has completed initial units of new assembling plant at Atlanta, Ga., and will place in service at once. It is proposed to develop a production schedule of 6000 cars per month.

Board of Crisp County Power Commissioners, Cordele, Ga., is asking bids until July 10, for a hydroelectric power project on Flint River, to be operated as county property and for which appropriation of $1,250,000 has been approved. Project will include power dam; one-story power house, 40 x 150 ft.; two 3600-hp. vertical waterwheels, with generators and complete accessories. At later date, bids will be asked for additional generating equipment to develop gross output of 14,000 hp.; also, for transmission lines, etc. Emmett S. Killibrew, Albany, Ga., is engineer; J. E. Sirrine & Co., Greenville, S. C., are consulting engineers.

Yancey Brothers, 550 Whitehall Street, Atlanta, Ga., manufacturers of road-building machinery, are planning rebuilding of portion of machine shop destroyed by fire, May 4, with loss reported in excess of $20,000; storage and distributing building was also destroyed in same fire.

Roanoke Gas Light Co., Roanoke, Va., is planning extensions and improvements in plant and system, including construction of lines to Salem, Va., and vicinity, installation of air compressors and other equipment. W. J. McCorkingdale is manager and engineer.

American Creosoting Works, Inc., Bank of Commerce Building, Norfolk, Va., has plans completed for a new plant for distillation of creosote from coal tar, to be equipped for initial output of about 350,000 gal. per month, reported to cost in excess of $450,000 with machinery.

City Council, Kings Mountain, N. C., is asking bids until May 29 for a complete water purification plant for municipal waterworks, with capacity of 1,000,000 gal. Carolina Engineering Co., Johnston Building, Charlotte, N. C., is engineer.

Procter & Gamble Co., Sixth and Main Streets, Cincinnati, has awarded a general contract to H. K. Ferguson Co., Hanna Building, Cleveland, for new soap manufacturing plant at Baltimore, where 8-acre tract of land recently was acquired in Locust Point district. Will consist of several units, with power house, machine shop and other mechanical buildings, reported to cost $4,000,000 with machinery.

Southern Factories & Stores Corporation, Richmond, Va., care of Rives Fleming, 3609 Hawthorne Avenue, recently formed with capital of $1,000,000, is said to be concluding arrangements for purchase of Cameron Stove Co., 2100 Decatur Street, and intends carrying out expansion program.

Bristol Gas & Electric Co., Bristol, Va.-Tenn., will carry out expansion and improvement program to cost about $500,000, including expansion in power facilities, installation of automatic power substations and transmission line construction. Company is under direction of Henry L. Doherty & Co., 60 Wall Street, New York.

Fruit Growers' Express Co., Munsey Building, Washington, W. D. Martin, chief engineer, is reported planning a new one-story ice-manufacturing plant at Aberdeen, N. C., 50 x 180 ft., with cold storage and refrigerating division, reported to cost more than $200,000 with machinery.

Chemical Warfare Service, Edgewood Arsenal, Md., will receive bids until May 22 for valves, traps, plugs, tees, unions, copper floats and kindred supplies, circular 101; for bolts, nuts, screws, clamps, gage glasses, oil cups, etc., circular 102; and for electric equipment, including compensators, switches, fuses, 30,000 ft. rubber-covered wire, etc., circular 103.

Detroit

Detroit, May 15.

GENERAL contract has been let by White Co., Seventy-ninth Street and St. Clair Avenue, Cleveland, manufacturer of motor trucks, to Corrick Brothers, Owen Building, Detroit, for one-story factory branch, with service and repair departments, on Twelfth Street, Detroit, to cost $150,000 with equipment. Hadlow, Hughes, Hicks & Conrad, Union Mortgage Building, Cleveland, are architects.

National Gas & Electric Co., Battle Creek, Mich., will make extensions and improvements in gas plant at Grand Haven, Mich., including installation of two 217-hp. boiler units and accessories, to cost about $35,000.

Machinery and equipment at plant of Wills-St. Claire Co., Marysville, Mich., manufacturer of automobiles, inactive since November last, has been sold to A. Shiffman and Theodore Friedeberg, 30 Church Street, New York, machinery dealers, who will dismantle the plant and dispose of tools and equipment at private sale. The plant originally carried a valuation of $2,000,000.

Monroe Auto Equipment, Monroe, Mich., manufacturer of tire pumps, automobile heaters, etc., has awarded general contract to Gettins & Kopitke Co., Fifteenth Street, Toledo, Ohio, for one-story addition, 55 x 175 ft., to cost in excess of $75,000 with equipment. Other expansion will be carried out at early date to cost approximately double this sum. C. O. Miniger, president, Electric Auto-Lite Co., Toledo, has acquired an interest in company and will become actively identified with management.

Chrysler Motor Corporation, Highland Park, Detroit, has plans in progress for a one-story power house, reported to cost in excess of $75,000 with equipment. Smith, Hinchman & Grylls, Marquette Building, are engineers. Company will proceed with immediate erection of new one-story unit for nickel-plating service, to cost close to $60,000 with equipment.

Officials of Roamer Motor Car Co., Kalamazoo, Mich., manufacturer of automobiles, have formed a new company under Delaware laws to be known as Roamer Consolidated Corporation, capitalized at $2,500,000, to take over and expand present company. Several companies in kindred field will be acquired by new organization and merger carried out. A. C. Barley, head of present concern, will act in same capacity with new corporation.

Wilson Foundry & Machine Co., Pontiac, Mich., affiliated with Willys-Overland Co., Toledo, Ohio, is carrying out an expansion program for increase in manufacture of six-cylinder motors for Whippet automobiles, to cost more than $500,000, the bulk of fund being used for new machinery and equipment. Working force has been increased by more than 500 men, making a total of more than 4300 operatives at plant, highest in history of company.

Wisconsin-Michigan Power Co., Iron River, Mich., will make extensions in transmission lines from Iron River to Phelps and vicinity, reported to cost close to $24,000.

Bohn Aluminum & Brass Co., 2512 East Grand Boulevard, Detroit, is said to have plans under way for an addition to plant devoted to production of aluminum pistons for aircraft motors, to increase present capacity by about 50 per cent. Company has recently secured large contracts for pistons for Whippet cars and other automobiles.

Michigan Transit Co., 6649 Dix Street, Detroit, has acquired a tract of waterfront property at Ecorse, Mich., totaling about 18 acres, and plans to use portion of site for a new dock, 1000 ft. long, to be equipped with elevating, conveying and other mechanical-handling equipment.

Contract for construction work on new dryer building for Postum Co., Battle Creek, Mich., has been let to H. G. Christman-Lansing Co., Lansing, Mich., and work will begin immediately with view to completion July 1. Lockwood, Greene & Co., Inc., Chicago, is engineer.

Hutchins Car Roofing Co., Detroit, has removed its office from 1203 Ford Building to 2310 Eaton Tower, Woodward Avenue at Grand Circus Park.

Durant Motors, Inc., Lansing, Mich., has awarded a general contract for a plant addition to H. G. Christman & Co.

Milwaukee

MILWAUKEE, May 14.

WHILE but slight gains are being made in the volume of machine-tool business, considerable satisfaction is expressed in some quarters over the fact that trade is well maintained. The lull in automotive buying is expected to be relieved, there having been a renewal of inquiry. Usually, however, requests for prices and deliveries cover but one or two machines. Several important industrial projects are developing in Milwaukee which will require considerable equipment. Moderate activity is reported in the used machinery market.

L. J. Mueller Furnace Co., 197 Reed Street, Milwaukee, a pioneer manufacturer of hot air and vapor heating furnaces, is preparing to engage extensively in the production of gas heating units for domestic, institutional and industrial heating. A bond issue of $500,000 has been underwritten by the Mississippi Valley Trust Co., St. Louis, the proceeds to be applied to the acquisition of new machinery, additions to the sales force, and advertising. No plant extensions are contemplated at this time. L. J. Mueller, Jr., is president and treasurer.

Appleton Machine Co., 618 South Oneida Street, Appleton, Wis., has engaged W. F. Dolke, consulting engineer, 1841 Asbury Avenue, Evanston, Ill., to design a new foundry building of brick and steel construction, estimated to cost $75,000. Preliminary plans will be ready about May 25. F. E. Saecker is president.

E. I. DuPont De Nemours Co., Tenth and Market Streets, Wilmington, Del., expect to begin June 1 on new and reconstruction work costing about $425,000, to provide a complete ammonia oxidization plant at its works at Barksdale, near Washburn, in Bayfield County, Wis. R. T. Cann is general superintendent.

Board of Education, Racine, Wis., is closing bids May 23 for furnishing shop tools, electric shop equipment, motors, auto mechanics equipment, printing shop equipment and mechanical drawing equipment for the vocational training departments of the new Washington Park and the William Horlick High Schools. Each school will cost about $750,000. The architects are Croft & Boerner, 1004 Marquette Avenue, Minneapolis, Minn., and J. Mandor Matson, Racine.

U. S. Property and Disbursing Officer for State of Wisconsin, Camp Douglas, Wis., closes bids June 2, separately on a 150-ft. 10-in. bore deep well; 100-ft. steel tower and 50,000 gal. steel tank; about 8000 lineal ft. of cast iron pipe; two 200-gal. pumps; hydrants, valves, fittings, for a central water system on the State military reservation. Maj. H. C. Engels, 445 Milwaukee Street, Milwaukee, is State military architect and engineer. The work will cost about $80,000.

Metal Forms Corporation, 1440 Booth Street, Milwaukee, making metal forms for concrete construction, will build a one-story factory extension, 21 x 64 ft. Roy M. Moss is secretary and manager.

Milwaukee Electric Railway & Light Co., 217 Michigan Street, Milwaukee, was granted a franchise May 7 for the construction of a $4,000,000 subway and rapid transit line, 2.8 miles long, with a tunnel of about ½ mile, from the terminal at Second and Michigan Streets to Eighth Street and St. Paul Avenue. All grade crossings will be eliminated by two stretches of elevated line, one 500 ft. and the other 1100 ft. long. E. J. Archambault is engineer in charge.

Maynard Electric Steel Casting Co., Milwaukee, has plans by Frank S. Gurda, architect, 448 Mitchell Street, for a two-story pattern storage building, 60 x 108 ft., at Twenty-second Avenue and Kilbourn Road. It will cost about $30,000. Frank J. Wabisczewski is secretary and general manager.

Milwaukee Works, International Harvester Co. of America, 784 Park Street, Milwaukee, which has started work on a new boiler room building, 65 x 140 ft., 75 ft. high, costing $500,000, also will build a factory addition to be known as building No. 33, estimated to cost $350,000. Both projects are in charge of the Worden-Allen Co. Plans for the factory, to be four stories, will be ready about June 15. Paul F. Schryer is general superintendent.

Thinker Motor Co., 84 Farwell Avenue, Milwaukee, distributer of Pierce-Arrow motor cars and trucks, will build a one-story fireproof sales and maintenance building, 120 x 150 ft., at 365-371 Kenilworth Place, at a cost of about $50,000 complete. The general contractor is H. Schmitt & Sons, Inc., 14 Burleigh Street, local.

Drott Tractor Co., 123 Wisconsin Avenue, Milwaukee, closes bids May 17 on the erection of a new office-service building, 90 x 130 ft., three stories, on Wisconsin Avenue, near Thirty-seventh Street. It will cost about $80,000. The concern is distributer of Caterpillar tractors and equipment. E. A. Drott is president and general manager.

Chicago

CHICAGO, May 14.

THE Chicago machine tool market holds steady from the viewpoint of sales. Inquiry, both old and new, from miscellaneous industries bulks large. The railroads are showing very little interest in the market, the only new inquiry this week being for a die grinder by the Chicago, Burlington & Quincy. Although the Santa Fe placed a few items several weeks ago, additional purchases against its list apparently have been deferred. The Board of Education, Chicago, is asking for a No. 80 C. Oliver saw, a tool room grinder and a 15-in. x 6 ft. engine lathe for the Sheldon Continuation School.

Julius Schultz and Maurice Cohn, Waterloo, Iowa, have formed a partnership to purchase equipment and stock of Waller Mfg. Co., Waterloo, and have occupied company plant at Westfield Avenue and Lamson Street, where manufacture of auto heaters will be continued.

Waterloo Register Co., Waterloo, Iowa, manufacturer of warm air registers and cast iron smoke pipe for furnaces, has sold its present factory at 110 Rath Street to Rath Packing Co. and has purchased plant of Interstate Tractor Co., 2520 Fourth Street, which register company will occupy July 1. New plant consists of two factory buildings, foundry and office building. John C. Knox is president.

University of Chicago will build a power plant to cost $1,500,000.

Madison Silo Co., Madison, Wis., has purchased two and one-half acres on which it will erect a modern factory building.

Evans-Miller Co., Adrian, Mich., manufacturer of battery separators, has practically completed the installation of equipment and is now on a production basis.

George J. Meyer Mfg. Co., Milwaukee, manufacturer of bottle washing machinery, has acquired the Cudahy, Wis., plant of the Worthington Pump & Machinery Co. The Cudahy property will provide facilities that will enable the company to more than double its production.

Lyons Metal Products, Inc., is the name of the new company formed as the result of the consolidation of the Lyons Metallic Mfg. Co., Aurora, Ill., and the Durand Steel Locker Co., Chicago Heights, Ill., manufacturers of steel lockers, cabinets and other steel products. New company will have assets of about $3,375,000. F. S. Waters is president and Keith Spalding vice-president.

Negotiations have been closed for a $15,000,000 merger of the Borg & Beck Co., Chicago, the Warner Gear Co., Muncie, Ind.; the Marvel Carburetor Co., Flint, Mich., and the Mechanics Machine Co., Rockford, Ill. The new company will be known as the Borg-Warner Corporation. It will have $5,000,000 of 7 per cent preferred stock of which $3,500,000 will be issued, and 500,000 shares of no par common stock, of which 410,000 shares will be issued.

City Council, Evanston, Ill., contemplates installation of municipal electric light and power plant, reported to cost in excess of $60,000 with equipment. R. Long, City Hall, is city engineer.

Bassick Mfg. Co., 2650 North Crawford Avenue, Chicago, manufacturer of lubricating equipment for automobile service, an interest of Stewart Warner Speedometer Corporation, 1828 Diversey Parkway, has filed plans for a three-story addition, 80 x 120 ft., reported to cost about $175,000 with equipment.

Bliss & McLaughlin, Inc., Harvey, Ill., manufacturer of shafting, cold finished bar stocks, etc., has purchased former plant of Hotchkiss, Blue & Co., Harvey, manufacturer of railroad car equipment, and adjoining site, totaling about five acres in all, and will occupy for expansion. Present buildings will be remodeled and improved.

Empire Zinc Co., Belden, Colo., is considering erection of new milling plant at its Eagle mine, estimated to cost $200,000 with equipment.

National Wire Cloth & Iron Co., St. Paul, Minn., recently organized, will operate a plant at 260 West Fairfield Avenue, for manufacture of wire window guards, coal screens and kindred products.

Signal Corps, Procurement District, Chicago, will receive bids until May 22, for magnet wire, hand generator, 1000 washers, induction coils, cranks, etc., circular 99.

Western Public Service Co., Colorado Springs, Colo., has approved plans for a new steam-operated electric power plant at Laramie, Wyo., reported to cost about $80,000 with equipment.

Cellucraft Co., 1709 West Austin Avenue, Chicago, manufacturer of ventilators for automobiles, celluloid products, etc., has begun work on a new addition, 25 x 100 ft., on adjoining site, for which general contract recently was let to G. Kehl & Sons, 1225 North Maplewood Avenue.

Board of Education, Decatur, Ill., is said to be planning installation of manual training department in new three-story junior high school on John's Hill, estimated to cost $300,000. Brooks, Bramhill & Dague, National Bank Building, are architects.

Wyoming Carbonizing & Briquetting Co., Kemmerer, Wyo., C. D. Stafford, president, has plans under way for a new coal briquette manufacturing plant at Conroy, near Kemmerer, with capacity of about 150 tons per day, reported to cost close to $150,000, with machinery.

Kelly Mfg. Co., 131 South Fifth Street, Clinton, Iowa, manufacturer of furniture, will soon take bids for a new three-story plant on Eighth Avenue, near Third Street, to cost about $65,000. A. M. Morrell, Weston Building, is architect.

Buffalo

BUFFALO, May 15.

PLANS are being arranged for a merger of United States Light & Heat Corporation, Niagara Falls, N. Y., manufacturer of electric storage batteries, car lighting equipment, etc., and Electric Auto-Lite Co., Toledo, Ohio, manufacturer of automobile starting and lighting equipment. It is proposed to continue both plants in service, as well as present branch factories, with expansion program for increased output. Last-noted company plans to increase capital from 250,000 to 1,000,000 shares of stock, no par value, and to dispose of preferred stock to an amount of about $10,000,000, portion of fund to be used for development program. C. O. Miniger is president of Electric Auto-Lite Co.

A. J. Grad, Buffalo, operating an automobile body plant at 718 Broadway, has organized a new company under name of A. J. Grad Sons' Body Corporation, capitalized at $35,000, to take over and expand present works, including additional facilities for body manufacture. New company is headed by Anthony J. and Frank A. Grad.

Yingling-Martin Brick Co., Johnsonburg, Pa., is carrying out an expansion and improvement program, including installation of conveying and other mechanical handling equipment, buckets, etc. William H. Signor is superintendent.

Following recent acquisition of chain block, electric hoist and crane division of Chisholm & Moore Mfg. Co., Lakeside Avenue, Cleveland, by Columbus-McKinnon Chain Co., Tonawanda, N. Y., officials of last-noted company have formed a new subsidiary under name of Chisholm-Moore Hoist Corporation, with capital of $200,000, and 14,000 shares common stock, no par value, to take over and expand the purchased division. The plant will be continued in Cleveland, as heretofore. Another company has been formed, independently, under name of Chisholm-Moore Malleable Iron Co., to take over and continue production of foundry branch of company.

Spencer Kellogg & Sons, Inc., Niagara Square, Buffalo, operating crushing mills and refining plants for vegetable oil production at Buffalo, Edgewater, N. J., Minneapolis, Minn., and Superior, Wis., is disposing of a stock issue to total $2,041,000, a portion of proceeds to be used for expansion and improvements. Howard Kellogg is president.

Frederick W. Cheshire, 1718 James Street, Syracuse, N. Y., and associates have formed a new company to be known as F. W. Cheshire, Inc., to operate a local plant for manufacture of heating and cooking appliances.

Board of Education, Cooperstown, N. Y., contemplates installation of manual training equipment in new two-story addition to high school on Main Street, to cost about $175,000, for which it is expected to ask bids on general contract during summer. Kinne & Frank, 7 Hopper Street, Utica, N. Y., are architects.

Fairchild Amusement Machine Corporation, 404 S. A. & K. Building, Syracuse, N. Y., has been organized to manufacture automatic amusement machines and parts. At present equipment is manufactured by contract and company is not in market for materials. After Aug. 1 bids will be taken on certain types of equipment.

Morrison Railway Supply Corporation, Buffalo, has purchased railroad track material business formerly conducted by Morrison & Risman Co., Inc. Former company operated plants and warehouses at Chicago, Indianapolis, Pittsburgh and Harrisburg, Pa., and Buffalo and engaged in reconditioning of rails and of railroad track material.

Pittsburgh

PITTSBURGH, May 14.

OCCASIONAL single tool orders and fairly steady buying of repair parts are the dependence of machine tool dealers in this area. New inquiries are few. The Miller Saw Trimmer Co., which is to build a new plant for the manufacture of printers' machinery, is planning to move all of its present equipment to the new plant and it is reported will not have to have many new machines. Crane companies have a rather imposing pending list, but no orders of importance were closed in the past week.

The Miller Saw Trimmer Co., Point Building, Pittsburgh, builders of printers' machinery will build a new plant at Reedsdale and Walker Streets, North Side, Pittsburgh, at an estimated cost of $200,000. F. F. Nicola is president.

Contract has been let by Mine Safety Appliance Co., Braddock Avenue, Pittsburgh, to Taylor-Meyer Co., Keystone Building, for two new additions to plant, used for production of safety equipment for coal-mining service, each one and four-story and basement, 80 x 100 ft., to cost approximately $200,000 with machinery.

Dicks Aeronautical Corporation, Pittsburgh, care of George H. Lee, 451 Orchard Avenue, Bellevue, Pa., recently formed by Mr. Lee and associates, plans operation of local plant for assembling of aircraft and manufacture of airplane parts. James H. Reniers, 6609 Church Street, Ben Avon, Pa., is also interested in company.

Allied Power & Light Co., recently organized by officials of Stevens & Wood, Inc., 120 Broadway, New York, engineer, and other interests, will take over controlling interest in Penn-Ohio Power Co., Sharon, Pa.; Northern Ohio Power Co., and other utility properties in this section. New company is capitalized with 500,000 shares of preferred stock, and 2,000,000 shares of common stock. A bond issue will soon be sold, portion of proceeds to be used for expansion, including transmission line construction. R. P. Stevens is president.

Consolidated Gas Co., 821 Sixth Avenue, Huntington, W. Va., George I. Neal, president, is planning construction of 12-in. pipe line for natural gas service. A franchise has been secured.

John Miller, 575 Oxford Street, Pittsburgh, and associates have organized Lonsdale Brass Works, Inc., with capital of $50,000, to operate a local plant for production of brass pipe, couplings, etc. It is understood that new company will succeed to and expand Lonsdale East End Brass Works, with plant at 5708 Harvard Street. James H. Lonsdale, 5456 Kincaid Street, will be one of heads of new organization.

Erie Forge Co., Sixteenth and Cascade Streets, Erie, Pa., plans rebuilding of portion of pattern department destroyed by fire, May 7.

Indiana

INDIANAPOLIS, May 15.

BIDS will be asked early in June by Board of Education, Muncie, Ind., for one-story vocational training school on North Walnut Street, to cost about $150,000 with equipment. Houck & Smenner, 108 East Washington Street, are architects.

Rub-Tex Products Co., Indianapolis, has been organized to take over and expand plant and business of Rub-Tex Products, Inc., 3500 East Twentieth Street, manufacturer of rubber battery boxes and kindred products. Last-noted company has recently been in financial difficulty and property has been purchased at receivership sale by heads of new concern for $222,000. An expansion program will be carried out, with facilities for larger production. Edwin H. Emrich, formerly president, will continue with new organization in executive capacity. Fred G. White heads company.

Dean Forging Co., Muncie, Ind., manufacturer of drop forgings for automotive service, plans rebuilding of machine shop and other portions of plant destroyed by fire, May 5, with loss reported at close to $50,000 including equipment. Wilbur A. Full is manager.

Servel Corporation, Morgan Avenue and Illinois Street, Evansville, Ind., manufacturer of electric and gas-operated refrigerating equipment, has awarded general contract to M. J. Hoffman Construction Co., Furniture Building, for one-story addition, 65 x 130 ft., reported to cost about $30,000 with equipment.

J. Everett Jones, 936 West Eighth Street, Anderson, Ind., and associates have awarded general contract to James I. Barnes, Anderson, for new two-story and basement automobile service, repair and garage building, 85 x 124 ft., at Broadway and Third Streets, Logansport, Ind., reported to cost about $100,000 with equipment. E. F. Miller, Farmers' Trust Building, Anderson, is architect.

Receiver for Steinbrenner Rubber Co., Noblesville, Ind., is planning for early sale of plant and property of company, which is appraised at $275,000, including real estate and machinery.

Electric Shovel Coal Corporation, Clinton, Ind., operating coal mining properties under electric shovel stripping method, is disposing of a preferred stock issue to total about $2,900,000, a portion of proceeds to be used for expansion in property holdings and operations in Clay and Vermilion Counties. J. B. F. Melville is president.

Southeastern Indiana Power Co., Indianapolis, has made application for permission to acquire transmission lines and other property of Suburban Light & Power Co., in Fayette, Union, Johnson and Shelby Counties; and Eastern Light & Power Co., in Marion and Johnson Counties. New owner will consolidate with organization, and plans expansion in acquired territory, including transmission line construction.

Cincinnati

CINCINNATI, May 14.

MACHINE tool orders declined somewhat the past week with the result that sales in the first half of May were from 10 to 15 per cent less than the average of April. Important builders do not attach any special significance to the letdown in buying, attributing it to seasonal conditions. Few large inquiries are before the local trade, although the total volume of pending business is considered fairly good. Recent bookings have been well distributed among manufacturers in many industries, automobile companies having been a comparatively small factor in the market. The Union Pacific has closed for a 6-ft. Right Line radial drill.

The Metal Aircraft Corporation, Cincinnati, has been incorporated for $500,000 to manufacture an all-metal airplane. A factory will be constructed near Lunken Airport. Incorporators include T. Higbee Embry, John B. Hollister and E. F. Lunken.

The Chevrolet Aircraft Corporation, Indianapolis, has been incorporated to manufacture and sell airplanes and airplane motors. Plans will not be completed for several months and the type of motor to be manufactured has not been decided upon. Louis and Charles Chevrolet are the incorporators. The former is now associated with the Chevrolet Brothers' Mfg. Co., 410 West Tenth Street, Indianapolis.

The Howser Tool Mfg. Co. has moved its plant from LaPorte, Ind., to Nineteenth and Martindale Streets, Indianapolis, and is now in production at the latter location.

Arrangements have been completed by Mal-Gra Casting Co., Cambridge City, Ind., for purchase of plant and business of Mid-West Casting Co., Middletown, Ohio, and companies will be consolidated. Purchasing company will remodel and extend Middletown plant and proposes to remove present Cambridge City works here, concentrating production at one plant. Harry Bachman is one of heads of Mal-Gra company.

Kodel Radio Corporation, Cincinnati, has arranged for increase in capital from 62,500 to 100,000 shares of stock, no par value, a portion of proceeds to be used for expansion. Company has also arranged for change of name to Kodel Electric & Mfg. Co., and will increase lines of output.

Basic Products Co., Peebles, near Portsmouth, Ohio, is considering rebuilding of portion of stone-crushing plant, destroyed by fire, May 7, with loss reported at close to $90,000, with equipment.

Tennessee Eastern Power Co., Johnson City, Tenn., has made application for permission to construct and operate a hydroelectric generating plant on Holston River, Sullivan and Washington Counties, with initial capacity of 48,000 hp., reported to cost close to $5,000,000, with power dam and transmission lines. Company is operated by Henry L. Doherty & Co., 60 Wall Street, New York.

Ovens, power equipment, conveying machinery and other mechanical equipment will be installed in proposed new baking plant to be erected by Linker Brothers, 1125-27 Market Street, Louisville, on adjoining site, reported to cost close to $100,000, with equipment. Harry Linker is head.

Standard Sanitary Mfg. Co., Bessemer Building, Pittsburgh, manufacturer of cast iron and other sanitary ware, has plans for a two-story and basement factory branch and distributing plant, 100 x 100 ft., at Seventeenth and Church Streets, Nashville, Tenn., reported to cost close to $100,000, with equipment. Marr & Holman, Stahlman Building, Nashville, are architects.

General Electrical Supply Corporation, Memphis, Tenn., has completed negotiations for purchase of plant and business of Southeastern Electric Co., 429-31 Broad Street, Chattanooga, Tenn., with branch at 312 West Jackson Avenue, Knoxville, Tenn., and will consolidate with organization. Expansion is planned. George R. Hernstein is president of purchasing company.

Air Corps, Material Division, Wright Field, Dayton, Ohio, is asking bids until May 21, for 192 keyseat cutters, 192 pairs of jaws, steel rules, tinners' snips, open end wrenches, etc., circular 329. Until May 24, for 50 engine overhaul tilting stands, circular 292.

Southern Cities Utilities Co., operating Southern Cities Power Co., Provident Building, Chattanooga, Tenn.; Wheeling Public Service Co., Wheeling, W. Va.; Durham Gas Co., Durham, N. C.; Carolina Coach Co., and other electric light and power properties, is disposing of a bond issue of $10,500,000, a portion of proceeds to be used for expansion and betterments, including transmission line construction. Walter Whetstone is president.

Ashland By-Products Coke Co., Ashland, Ky., has made application for permission to construct coal and coke loading terminal at plant of Semet Solvay Co., near Dam 29, Ohio River, including mechanical conveying and handling equipment.

Cincinnati Gas & Electric Co., Cincinnati, recently organized, has secured permission to take over and consolidate local company of same name, Columbia Power Co., and Union Gas & Electric Co., all operating in this district, with combined assets totaling $92,580,000. New company plans expansion program, including transmission line construction.

Pacific Coast

SAN FRANCISCO, May 10.

IN connection with expansion program, Southern California Edison Co., Los Angeles, has work in progress on a new hydroelectric generating plant for Big Creek system, to be equipped for capacity of 107,200 hp.; new transmission lines will be built. Construction is in progress also on new steam-operated electric power plant at Long Beach, to be known as steam station No. 3, with initial unit of 125,000 hp. It is proposed to add other units to latter plant to develop a total rating of 1,000,000 hp. Projects will represent investment of more than $10,000,000.

John O. Rankin, Long Beach, Cal., local representative for Cadillac automobile, has leased a two-story building, 75 x 140 ft., to be erected at First Street and American Avenue, for a service, repair and sales unit, reported to cost close to $90,000, with equipment.

Ovens, power equipment, conveying machinery and other mechanical equipment will be installed in connection with proposed rebuilding of baking plant of Torino Baking Co., 2801 Twenty-third Street, San Francisco, recently partially destroyed by fire with loss of about $100,000.

Seattle Lighting Fixture Co., Seattle, has leased a new one-story and basement factory, 97 x 105 ft., to be erected by Union Investment Co., at 829 Rainier Avenue, estimated to cost about $30,000, and will occupy for new plant. Fred B. Stephen, Thompson Building, is architect.

Bureau of Reclamation, Denver, Colo., is asking bids until May 25, for construction of 19.1 miles of 66,000-volt transmission line in vicinity of Adrian and Nyssa, Ore.

Centralia Lumber & Mfg. Co., Centralia, Wash., has acquired property at Ash and Pine Streets, and plans new mill with capacity of 75,000 ft. of finished lumber per day, reported to cost more than $85,000. Equipment will be electrically operated. W. C. Hamilton heads the company.

Ford-Nelson Motor Co., Ogden, Utah, has awarded a general contract to Vincent-Peterson Construction Co., 40 East Second Street, Salt Lake City, for a new one-story and basement service, repair and garage building, 100 x 165 ft., reported to cost about $90,000, with equipment, on site at 2222 Washington Avenue. C. D. Ford is head.

Board of County Supervisors, Salinas, Cal., has approved plans for one-story machine shop at county yard and mechanical plant, for repair of highway machinery, etc., estimated to cost close to $24,000, with equipment.

Hydrocarbon Apparatus, Inc., 405 South Hill Street, Los Angeles, has been formed to take over business of former Oil Engineering Co. and will engage in sale of mist extractors, steam separators, fractionators, scrubbers, stills, etc., for oil and chemical industries and power plants. Company will also handle products of Fisher Governor Co., Marshalltown, Iowa.

Canada

TORONTO, May 15.

PROSPECTS for business in machine tools were increased by several small lists which have just made their appearance. Included in current inquiries are lists from the Boards of Education at Welland and Toronto, Ont., which will purchase lathes, drills, woodworking equipment, etc., for vocational schools. The Canadian National Railways are purchasing tools and equipment for locomotive and machine shops under construction at Point St. Charles, Montreal, Que., while other small lists are appearing from time to time for replacement needs in other shops. The automotive industry is responsible for a steady flow of orders for single tools. Several industrial concerns are having lists prepared for tools and equipment required in connection with new plants and additions.

Niagara Falls Water Commission, Niagara Falls, Ont., is having plans prepared by F. A. Dallyn, 71 King Street West, Toronto, Ont., for the construction of a power house and filtration plant in Queen Victoria Park, to cost $400,000.

Canadian National Railways, McGill Street, Montreal, Que., have awarded contract to Anglin-Norcross, Ltd., 65 Victoria Street, for erection of the superstructure for the locomotive and machine shops at Point St. Charles. The project will cost approximately $1,000,000.

Gilmour Chair, Ltd., Coaticook, Que., is contemplating the erection of a factory there to cost $80,000.

Granby Elastic Web, Ltd., Granby, Que., has started excavation work in connection with a $50,000 addition to its plant there.

Hydro-Electric Commission, Tillsonburg, Ont., proposes to build a sub-station there and to instal larger transformers.

General Metal Devices, Ltd., Oakville, Ont., recently formed with a capital stock of $200,000, is calling for tenders for the erection of a factory building on Kerr Street, to be 60 x 300 ft., cement block and steel construction. Thomas Strachan, Toronto, is president.

T. J. Eansor & Sons' Structural Steel & Ornamental Iron Works, Windsor, Ont., is making arrangements for the building of a new manufacturing plant on property recently acquired.

Western Canada

City Council, Nelson, B. C., has started work on a power development plant at Bonnington Falls, B. C., to cost $230,000. The Canadian General Electric Co., has the contract for machinery and equipment.

Town Council Assiniboia, Sask., has provisionally accepted the offer of $120,000 for the local power plant made by the Dominion Electric Co. It is the intention of the company to start work immediately on the construction of a 900 hp. electric plant.

Substitution of electric current development in the low grade coal fields of Saskatchewan for the present power system is now engaging the attention of the Montreal Engineering Co. The first unit of a project to cost $1,000,000 is being constructed in the Estevan, Sask., field. It is the intention of the company to build five such units, and similar units will be built at four points in Alberta.

Crow's Nest Pass Coal Co., Ltd., Fernie, B. C., has decided to electrify its Coal Creek plant and is erecting the necessary buildings. A new power plant is under construction at Coal Creek, which will be equipped with three Bellis Morcham 300-ft. compressors and four Ingersoll-Rand 1200-ft., 4-stage compressors.

Foreign

PLANS are being arranged by Maudal Karftanlegg (Maudal Power Works), Stavanger, Norway, for a new hydroelectric power project at Maudalsfallene (Maudal Falls), with initial development to cost about $300,000. Project will require about 24 months for completion. Information at office of Bureau of Foreign and Domestic Commerce, Washington, reference Norway No. 275041; also at American Consulate, Stavanger, F. C. Sigmond, vice-consul.

Davis Gelatine Pty., Ltd., Melbourne, Australia, has secured permission for construction of new glue factory at Flemington, about six miles from city, to cost in excess of $200,000 with machinery.

Russian Soviet Government, Petrograd, is planning construction of aluminum plant near Zaporozhie, vicinity of Dnieprostroy hydroelectric power development, now in progress, and which will furnish service for works. Initial plant will be equipped for capacity of 10,000 tons per annum, and is estimated to cost approximately $10,000,000. Amtorg Trading Corporation, 165 Broadway, New York, is official buying agency in United States.

Pomerania Electric Co. (Ueberlandzentrale Pommern, A. G.), Stettin, Germany, operating throughout Province of Pomerania, is disposing of bond issue of $3,500,000 in United States, a portion of fund to be used for expansion and improvements in power plants and system.

P. Lyall & Sons, Ltd., Montreal, Que., contractor, has closed a contract with Government of Colombia, South America, for construction of new railroad line between Tunja and Belez, to cost about $20,000,000, including engine terminals, locomotive and car shops, etc.

Free Zone Committee, Government of Greece, Athens, is planning for extensions and improvements at Port of Saloniki, including construction of wharves and jetties, erection of silo, installation of crane equipment and other mechanical elevating and conveying machinery. Entire project is estimated to cost 400,000,000 drachmas (about $5,203,000).

Railroad Administration, Government of Argentina, Buenos Aires, is planning a call for bids in fall for construction of new railroad line from La Paz-Feliciano to San Jaime, including engine terminals and shop facilities. American Consulate, Buenos Aires, Alexander V. Dye, commercial attaché, has information regarding project.

Contract for an electric bulb factory at Tokio, Japan, for Tokio Electric Co. has been awarded to H. K. Ferguson Co., Cleveland. Cost of building and equipment is estimated at $500,000. Building will be 120 x 205 ft., of two- and three-story reinforced concrete construction. Part of structure will have concrete roof with steel trusses.

Officials of Fox Brothers International Corporation, 33 Rector Street, New York, specializing in construction of light and power utilities, waterworks, sewage plants and other similar projects in foreign countries, have organized French subsidiary under name of Société Franco-Americaine d'Entreprises et de Travaux Publics, with headquarters at 33 Rue Cambon, Paris, to carry out such contracts in France, Roumania, Turkey, Greece and Poland. Branch offices will be opened at Constantinople and other points. John J. Teal is president of parent company.

Municipality in State of Coahuila, Mexico, is planning installation of municipal waterworks, including pumping machinery and other power equipment, estimated to cost $150,000, and is interested in using American-made equipment. Catalogs and information desired; it is purposed to begin work during summer. Information at office of Bureau of Foreign and Domestic Commerce, Washington, reference Mexico No. 274425; also, at American Consulate, Piedras Negras, Mexico, Oscar C. Harper, vice-consul.

National Railways of Mexico, Mexico City, Mexico, have authorized an increase in monthly appropriation for extensions and improvements in lines, shop facilities and other mechanical expansion work, from 50,000 pesos (about $25,000) to 300,000 pesos (about $150,000).

Bonus System for Foremen

Controllable Burden and Labor Expenditures Feature Information Given to Minor Executives of A. O. Smith Corporation

BY ROGERS A. FISKE*

THE blanks reproduced on the next two pages indicate how a foreman's monthly bonus is calculated. They cover the cases of both so-called productive and non-productive departments.

With a perfect record, the bonus amounts to 30 per cent of the foreman's salary for the month. One-fifth of the bonus, or 6 per cent on the salary, covers performance for which he alone is held responsible. The remainder, or 24 points, is an allotment measuring the perfect performance of his department. The percentage of these 24 points that the foreman realizes is equal to the percentages his department reaches of the standards set for its production schedules, its standard of controllable burden expenditures, etc.

SPECIAL information in respect to both the cost and economy of plant operation, combined with the policy of taking each foreman into its confidence in so far as controllable burden and labor expenditures in his department are concerned, are features of a foremen's bonus system used by the A. O. Smith Corporation, Milwaukee. Results obtained are high-grade workmanship, low-cost production and a broadened viewpoint on the part of the foreman, which makes him fill his present position in a more satisfactory manner than otherwise and develops his natural ability so that he will be prepared for further advancement as opportunities occur.

This system has now been in operation for several years. It has served its purpose as an incentive to high-grade work on the part of those men who have been entrusted with the responsibilities of minor executive positions. It is at once apparent that the aim of this bonus system is to secure the best possible results for the company and at the same time to reward, in direct proportion to the good results from these efforts, those who are active in that accomplishment.

In this plant, as in most others, men who step up into positions of foremanship, or assistant foremanship, are practical men from the ranks. They are good workmen with a natural ability to control and direct the efforts of others. Previous to the time of their promotion, however, they have not had, in most cases, any training in the matter of operating costs economies, and as a result do not have a keen realization of just what the expenditures in a department amount to, aside, possibly, from those involved directly in production.

To these men the details of operation as presented under the bonus system come as something new and something interesting. They soon learn that burden is an active factor in the matter of the cost of production, and that it is impossible to manufacture without it. The problem of trimming this burden to the minimum and holding it there becomes of special interest to the man when he shares in the savings.

It is the policy of the A. O. Smith Corporation to take its foremen into its confidence in the matter of controllable burden and labor expenditures. The company does not confine itself to presenting a list of these expenditures after the bonus has been figured, but actually furnishes, day by day, a statement of these expenditures, so that the foreman may be in a position to head off unsatisfactory conditions as soon as they appear. The company records are so kept that additional information desired by a foreman along special lines in which he may be interested can be had on short notice.

The company does not in any way stress to the foreman the matter of non-controllable expenses, but as a matter of general education does give him some idea of what they are and what they amount to. He is also given an approximate idea of the value of the equipment under his control. In short, each foreman is put in the position of a well-posted executive, as far as his own work is concerned, and is made a participant in the benefits accruing from his efficient management.

The maximum, or 100 per cent monthly bonus earnings of a foreman, amount to 30 per cent of his regular monthly salary. Eighty per cent of the bonus is based on finding of fact, while 20 per cent is reserved for arbitrary rating. The policy has been adopted that this arbitrary rating shall belong fully to the foreman, unless there shall have been some particularly glaring shortcoming on his part, in which case deductions may

be made up to the extent of the full 20 points.

In the productive departments of this corporation the work is of a highly repetitive nature and is paid for almost wholly on a piece work schedule. This situation is ideal for establishing bonus earnings based on fact finding in three clean-cut divisions; namely, the operation of the productive work wholly on a piece work basis; accomplishment of the schedule as laid down by the production department, and maintenance of controllable burden expenditures at the practicable minimum.

The forms, D-202, sheets 1 and 2, shown on this page, indicate the details of the bonus of a regular productive department. The details of the controllable burden, as shown in Fig. 2, are merely a summary of the departmental expenditures for the month, with an extended column figured to a cost per $100 of productive labor, which is equivalent to a percentage rating. Against this last column is also shown the rating of the preceding month. In the upper form, on this page, under "Basis of Above Calculation" this burden is shown to be equal to 140 per cent of the productive labor. This figure is then entered in column 4, "Burden Relation to Productive Labor" and the calculations made as indicated, resulting, as shown in column 8, with 28 points earned out of a possible 40.

By items *d* and *f*, under "Basis of Above Calculations," is shown the method of calculating the relation of piece work to total productive work. The 98 per cent shown as the mark attained here is then entered on the schedule at the top of the sheet, and it results, after the indicated calculations have been made, in a 12-point bonus earning under column 8.

In like manner items *g* through *m* indicate the method by which the accomplishment of the department against its schedule is measured. It will be noted that this work is rated on a double basis, that is, by hours and by jobs. This is done so that the department head will be tempted to pile

THE forms shown on this page are used when computing foremen's monthly bonus in production departments. Total points earned under column 8 (upper form) represent the per cent earned of the maximum possible bonus.

The lower form gives the detail of the controllable burden as tabulated both in productive and non-productive departments.

p credits neither solely in the
atter of hours, by running all
ng jobs, nor in the matter of
obs by running all short jobs.
his rating is then carried to the
chedule at the top of the page and
ecessary calculations made.

Item *n* indicates that the fore-
an has been lax in the enforce-
ent of fire regulations, and is
erefore penalized 3 points of his
ossible 20 personal marks.

The sum of his points earned,
s shown in column 8, amounts to
9.5 per cent. If this foreman re-
eived a salary of $300 per month,
is maximum possible bonus would
e 30 per cent of that amount, or
90. His bonus rating for the
onth would entitle him to receive
9.5 per cent of $90, or $62.55.

Calculations for the non-pro-
uctive departments are made as
ndicated on forms D-200 and
)-201, shown on this page. In
he upper form under *a*, is entered
he amount paid in this depart-
nent for service to the plant plus
he amount expended in the de-
artment for any items of expense
which may be within the control
f the foreman. Service of an un-
sual nature, and work on items
f capital investment, are not in-
luded in this calculation.

The lower form is used where
department carries a fair-sized
verhead in connection with the
articular line of service rendered.
n the top line is figured the de-
artmental standing on the basis
f the amount of service or mainte-
ance labor performed as against
he productive labor of the depart-
nents served. In the second line
s noted the standing attained by
he department in the matter of
ts controllable burden to its par-
icular productive labor.

The maximum and minimum
imits set for a bonus of this kind
re determined only after a care-
ul study. These limits must be
quitable both to the company and
he men. If the limits are too
asy of accomplishment, the com-
any can gain little. If they are
oo hard, the foreman will only be
iscouraged. The top limit must
e attainable for the man who de-
ivers exceptionally well. It has
roved interesting to see what an
nspiration and spur it is to the
est when the information goes out
hat so and so has made a perfect
mark.

In the case of major non-productive departments the bonus summary is recorded on the lower form. Burden details similar to those shown on page 1446 are furnished with this statement.

Foundrymen Meet in Birthplace

Hold Reunion of Living Organizers—Much Interest Displayed in Technical Sessions—Exhibition Large and Successful

MEETING in the city of its birth 32 years later, the American Foundrymen's Association held a general meeting and exhibition last week in Philadelphia, May 14 to 18. It was in 1896 that the concerted effort of a few live foundrymen brought to a culmination a movement which has grown to its present very large proportions. The gathering this year was both a reunion and a celebration and resulted in one of the most successful conventions of recent years. It was the fourth one held in Philadelphia, others falling in 1907 and 1919.

A feature was the very decided interest manifested in any session associated with gray iron. And a new development was four sessions on cupola operation, which attracted much attention. Attendance at most of the sessions was remarkably large. At 17 sessions nearly 45 papers and several committee reports were presented by leaders in each important field. Total registration was about 6000, which is a record. Of these, about 1200 were representatives of exhibitors.

The exhibition of equipment, while not the largest the association has conducted, was eminently successful. Notable was its compactness, housed under one roof of the Commercial Museum. It is discussed in some detail in this report.

Commemorating the birthplace of the organization of the A. F. A., a special dinner was given to as many of the living organizers as could be present.

Dinner Tendered to Living Founders

AN entirely informal and convivial occasion was made of the dinner tendered by the association to members who were present when the foundrymen's association was formally organized in Philadelphia in May, 1896. Over 30 signified their intention to be present and nearly all of these were able to attend. A list of those who sent acceptances will be found on another page.

On Tuesday evening, May 15, at the Manufacturers' Club, which stands on the site of the old building in which the A. F. A. was formed, these original organizers, together with some of the officers, directors and past officers of the association—in all about 50—gathered around tables presided over by S. T. Johnston, chairman of the committee which planned the reunion. Many greetings and reminiscences were exchanged previous to the dinner by men who had not seen one another in many years.

No formal post-prandial addresses were scheduled, but the chairman, on each side of whom sat Howard Evans and Walter Wood, who were considered as specially honored by this occasion for their pioneer work and their continued activity to the present day, called on various foundrymen to speak.

Walter Wood traced the early steps in the formation of the A. F. A. in 1896, pointing out that it was due to the efforts of the Philadelphia Foundrymen's Association in interesting the Western group and others to come to Philadelphia in May, 1896, and form a national organization. He emphasized the fact that in those days only a spade and a shovel were the molder's tools, but today an inspection of the modern exhibition revealed how machinery was revolutionizing the foundry. Mr. Wood stressed his belief that coordination of research was the next step which the foundry industry most needed to take.

Howard Evans, still secretary of the Philadelphia local organization, said that the Philadelphia Foundrymen's Association, when it started the A. F. A., really laid the foundation for many other technical, business, and trade associations. He said that one inspiration leading to the formation of the national organization was a consideration of business ethics and of the demoralization of price cutting.

By special invitation, John A. Penton, one of the association's founders and its first secretar addressed the old-timers. He sai that if he had been fortunate i any way in his early associatio with the A. F. A., he attributed i to the character of the men h worked with. Recalling some o the circumstances surrounding th first meeting, which was the resu of a call sent out by the Philade phia Foundrymen's Association, h mentioned the first officers, onl three of whom are still living, an pointed out that the Philadelphi meeting in 1896 was really th foundation of two large societies– the A. F. A. and the Nationa Founders' Association. Looking t the future, Mr. Penton said tha those industries that are going t survive are the ones having th most forward-looking policy, an added that research must mo and more be a factor. In this h hoped the newly formed Gray Iro Institute would be influential.

The retiring president, S. W Utley, pointed out that Philade phia has become the birthplace so many important organizatio that the mayor may need a soci secretary to keep track of the He paid a warm tribute to Secr tary Hoyt for the success of th association in recent years.

Other speakers were W. H. M

Fadden, Ponca City, Okla.; C. E. Hoyt and George C. Davies. When the question was asked if any were present who had attended every convention, John J. Hill, president Hill & Griffith Co., Cincinnati, arose.

Gray Iron Topics at Three Sessions

THREE sessions were held on the general subject of cast iron. The first one, under the chairmanship of R. F. Harrington, Hunt-Spiller Mfg. Corporation, Boston, was devoted to cupola developments in the founding of cast iron and was featured by three papers. The second cast iron session, under the chairmanship of J. W. Bolton, Lunkenheimer Co., Cincinnati, dealt with cupola metal, temperature measurements, test bars, and the influence of carbon and silicon variations. The third cast iron session, under the chairmanship of Dr. H. W. Gillett, Bureau of Standards, Washington, was devoted primarily to research questions and was concluded by a report of the committee on gray iron.

Test Bar for Testing Hardness

IN the absence of the author, M. Dudouet, foundry manager Société Métallurgique de Normandie, Paris, France, his paper was read by Willard H. Rother, Buffalo. Its title was: "Study on the Use of a Hardening Test for Cast Iron with Medium Silicon Content," and it was presented on behalf of the Association de Technique de Fonderie de France. The paper was devoted largely to the development of a form of test piece for making hardening tests with medium and high-silicon content in the iron. The author traced the influence on the depth of hardening produced by the thickness of the test piece, its width, the character of the chill used and its temperature, the humidity of the sand, the temperature of pouring, etc. Variations in these properties were traced by means of diagrams.

To insure comparability of results, it is necessary that all the factors affecting the hardening should be maintained strictly constant. With such precautions the author concludes that it is unquestionable that two test pieces, cast from the same metal at the same temperature, will show practically similar depths of hardening.

In opening the discussion on this paper, John Shaw, Southsea, England, expressed the opinion that the test as outlined is not sufficiently practical for foundry purposes. The time required for making it was believed to be too great. He described briefly his own methods of making a wedge 6 in. long, 4 in. wide, and varying in thickness from 2 in. at one end to a point at the other. By means of this wedge a rough idea can be obtained of the silicon and carbon contents at various points and the depth of the chill can be measured. The chill described in the paper was characterized by Mr. Shaw as too complicated for ordinary shop purposes. He believes that the whole question gets down to one of economics, in utilizing the method which can be handled to best advantage and at lowest cost.

Influence of Carbon and Silicon Variations

ORAL presentation was made by D. G. Anderson of the paper prepared by Mr. Anderson and G. R. Bessmer, foundry engineers Western Electric Co., Chicago. The title was "Influence of Carbon and Silicon Variations in Gray Cast Iron." The paper was brief, consisting in presentation of results from 23 heats melted in an induction electric furnace with magnesia lining. Several curves and tables were given, showing results on the 1.10 per cent silicon series, the 2 per cent silicon series, and the 2.20 per cent silicon series. Broken test specimens were exam-

ined and photomicrographs were shown.

The authors concluded that the total carbon content of gray cast iron of 2 per cent or higher in silicon may be somewhat reduced without materially increasing the amount of combined carbon in the casting. This reduction of carbon for these irons was reported as resulting in some improvement of physical properties.

Opening the discussion, James T. MacKenzie, American Cast Iron Pipe Co., Birmingham, referred to the deflection calculations shown in one of the author's tables. Mr. MacKenzie had calculated roughly the modulus of elasticity from the deflection figures given for the various tests. He found that these varied considerably, going as high as 25,000,000 for test No. 5 in the 1.10 per cent silicon series and as low as 9,800,000 for test No. 11 in the 2 per cent silicon series. He recommended the use of this calculation showing modulus of elasticity in studying the properties of cast iron.

Another speaker reported the practice of molding with the heavy section at the top instead of the bottom, and using appropriate gating so that the light sections at the bottom would be properly filled. He reported getting far better results in his castings by this means than by any other which he had used. In response to a question as to the entire accuracy of the colorometric method of determining the amount of combined carbon in the iron, Mr. Anderson agreed that it is not thoroughly accurate, but stated that it had the advantage of being inexpensive and of giving results which might be relied upon as sufficiently accurate within the practical limits of foundry operation.

Heat Losses from Hot-Metal Ladle

DETERMINATION of the heat losses from a 75-ton hot metal car of the Pollock type were reported in a paper by William F. Roeser, consulting physicist Bureau of Standards, Washington. The car was divided into seven zones and temperature measurements were made at various places around each zone. It was found that the cooling rate varied considerably during the course of a single determination. One table shows a loss of temperature in the molten metal of 63 deg. C. in the first hour and only 78 deg. in the succeeding 10 hours. In fact, the second hour showed only 12 deg. and there was a gradual reduction hour by hour until the last four showed 6 deg. each.

Calculations were made of the radiation losses from the surface of the ladle, as well as convection losses and conduction of heat through the lining. The average value of the heat losses worked out at about 140 B.t.u. a second.

Calculation of the specific heat for molten iron was made from the determinations in the test. This was placed at about 0.23. This value, it was stated, may be in error, due to the fact that the weight and rate of cooling of the slag were not known and that some of the iron was freezing in with the slag.

It was concluded finally that metal tapped from a blast furnace at about 1500 deg. C. (2732 deg. Fahr.) can be held for 40 hr. before freezing. As a matter of fact, one case was cited where a ladle of metal went off the track and it was not possible to pour it until 36 hr. after it had been cast. While there was a large skull left in the ladle, it was successfully poured after that interval.

Temperature Measurements of Molten Cast Iron

OPTICAL pyrometers were given a rather poor bill of health in a paper by H. T. Wensel and W. F. Roeser, Bureau of Standards, Washington. Many comparisons were cited in the paper between the readings of the optical pyrometer and those of the thermocouple, in which a wide variation was shown between the two, resulting in necessity for a considerable correction to optical pyrometer readings before they can be accepted as accurate. If this correction were uniform, or reasonably so, this might not cause trouble, but as a matter of fact they varied considerably, being greatest not only actually, but proportionately, at highest temperatures. In one table these variations ranged from 3 per cent at a temperature around 1200 deg. C. to 8 per cent at a temperature around 1500 deg. C. A difference of more than 10 per cent was shown in one case, where the thermocouple gave about 1600 deg.

One explanation of the variance was given as a change in the surface emissivity around 1375 deg. C. on cast irons. It was conjectured that this transition might be from liquid to solid oxide or from liquid to solid slag. While the melting points of the various oxides of iron are higher than this, it is believed by the authors that the solid oxide formed below that temperature is comparatively insoluble in molten iron, while the molten oxide formed above that point goes into solution as fast as it forms.

Discussion on this paper centered largely on whether the alloy additions in the heat were made in the ladle or before. It developed that some of the additions were made in the ladle or at the spout, while others were made in the furnace before the heat was poured.

Recent Developments in Cupola Metal

POINTING out that our object in foundry practice is primarily to make a better and a cheaper gray iron, John D. Miller, of the Cresson-Morris Co., Philadelphia, read a paper entitled "Some Recent Developments in Cupola Metal." The engineer is continually demanding stronger irons with higher tensile strength, and at the same time demanding a refinement in the irons for pressure work and a high machinability. In his plant the author stated that some cupola metal had been poured into bars giving as high as 65,000 lb. to the square inch in tensile strength. This is about three times the strength of what formerly was considered a regular foundry metal and it costs only a few cents more a ton to produce it.

Regarding iron made in the electric furnace it was pointed out that the additional strength over cupola metal is about 10 to 25 per cent, but it costs 25 to 50 per cent more to produce this result. Consequently the comparison of the two metals is not fair to the cupola, unless the difference in the cost is indicated at the same time.

There are other qualities besides tensile strength which are important in iron. There is unquestionably a demand and a place for cast iron of the usual grades. Nevertheless the speaker advocated an extension of the use of high-strength cast iron.

Castings of High Strength

IN the discussion P. T. Bancroft, superintendent John Deere Harvester Works, East Moline, Ill., stated that the gray iron foundry is not slipping back very far, despite the lugubrious statements of some critics. The strength of our metals in general is getting better. Formerly it used to be believed that 5 or 10 per cent of steel scrap in the charge was the limit which could be used satisfactorily in foundry practice. Now, however, it is found that a charge of all steel can be used under proper precautions and control.

Lots of castings are made, according to James T. MacKenzie, where fluidity is the paramount consideration, rather than a strength of 65,000 lb. to the square inch. Along this line David McLain, Milwaukee, stated that, when it was found possible to attain a strength of 45,000 lb., there was no demand discovered for such a cast iron. As a matter of fact, he said that his company had not yet been asked for it.

For high-tensile cast iron, one speaker reported using a charge including 96 per cent of steel rails. His practice is to add ferromanganese and 75 per cent ferrosilicon to the charge, getting from the spout a metal containing 0.65 per cent manganese and from 1 to 1.25 per cent silicon. Additions in the spout were made to get a silicon up to 2 or 2.5 per cent and other additions for nickel from ¾ to 1¼ per cent.

In obtaining these results it is found desirable to melt with a very high coke bed—up to 48 in.—thus resulting from the start in a very hot metal. Readings with the optical pyrometer show this metal to run from the cupola at 2700 to 2800 deg. Fahr. Equally good results were reported from a 36-in. and a 60-in. cupola. The maximum

W. F. ROESER

J. D. MILLER

E. F. HESS

test showed 69,800 lb., with an average running around 65,000 lb. Only a half dozen heats were made, all experimental and each resulting in about 1500 lb. of castings.

Not better iron but better castings is what we are after, according to R. F. Harrington. This opinion was voiced also by other speakers in discussing the paper. Unless the castings will do what is expected of them the quality of the iron going into them is a secondary consideration.

Research and Practice in Gray Iron

OPENING the session on research methods and plans, Doctor Gillett pointed out that the term "research" is applicable only when we do not know what we are going to find out. He compared it with the old-time navigation, particularly that of the day of Columbus and immediately afterward. Cartographers put continents and islands on old maps in a haphazard way and eventually the map assumed a form which made it possible for the navigator to reach any predetermined destination with the least possible loss of time and effort.

Enlarging upon this theme, Doctor Gillett said that the gray iron industry needs charts showing all the data available, if it is to make progress. Only by filling in the unknown territory and thereby eventually producing a completed whole can this result be achieved.

Theory or Practice in Gray Iron Foundry

SPEAKING extemporaneously and covering a considerable field not carried in his paper, John Shaw, of Southsea, England, presented a paper on the above topic. He dealt in his paper largely with the theoretical side of cupola practice and the relationship of the various elements to the resulting iron characteristics. Melting temperatures and investigations of the effect of the size of the test bar were discussed.

The author took up a large number of Maurer's results, with the aid of three lantern slides in which he had segregated into groups the Maurer tests. These groups were based on certain uniformity of results under varying sets of conditions.

Working from these diagrams Mr. Shaw expressed himself as very much opposed to using as a base the sum of the total carbon and the silicon for comparative work, unless the total carbon is practically uniform and other conditions are unchanged. Otherwise, he said, the variations will result in giving discordant conclusions.

Another practice which Mr. Shaw deplored was the use of the pearlitic theory. He said that it is perfectly possible to obtain pearlitic iron which is exceedingly poor in its practical qualities, and equally possible to obtain excellent pearlitic iron. From this he argued that pearlite alone is no criterion as to the suitability of the iron for any given purpose.

Discussing Mr. Shaw's paper, J. W. Bolton stated that the sum of the total carbon plus a percentage of the silicon gives a much better base to work from than the total carbon plus total silicon. Formerly one-fourth or one-third of the silicon had been used by different investigators. Using 30 per cent of the silicon as an addition to the carbon was recommended. Under this arrangement the strength results, according to Mr. Bolton, fall into proper relationships with the reported carbon and silicon contents found on analysis.

Research Problems of the Gray Iron Foundry

ORGANIZED research can be applied with advantage to the engineering properties of gray iron, according to J. W. Bolton, who read a paper on the topic carried in the crosshead. It is known that the properties of the metal depend largely on the absolute and the relative amounts of graphitic and cementitic carbon and on their distribution and size. The silicon and total carbon content are the most important composition factors influencing these carbon forms.

Mr. Bolton classified gray iron into 40 groups, according to their silicon and carbon content. The latter ranged from 2½ to more than 3½ per cent and the silicon from ¾ to more than 2½ per cent. He gave a large amount of tabular material from tests and showed correlation among these several groups of irons. In particular, he showed a certain correlation between castings and test bars made from the same ladle of metal. A number of specific cases of castings came up for discussion in this connection.

Interpretation of test results and discussion of his data were given in considerable detail. He concluded that extension of systematic research will furnish foundrymen with proper information on the properties of their product. It was admitted that the job of obtaining this information is going to be large, but the author believed that progressive foundrymen would undertake the task.

Consideration of pouring temperature or the original superheat in the metal, in addition to composition and cooling rate of the metal, must be had, according to Dr. Richard Moldenke, Watchung, N. J. He cited this as a third important factor in our study of con-

Chairmen of Three Technical Sessions

A. E. HAGEBOECK

J. W. BOLTON

ditions. He expressed the opinion that it is impossible to correlate results from a test bar with those from the casting. This was in direct opposition to Mr. Bolton's findings.

That there are several difficulties in this correlation was pointed out by John Shaw. He questioned the use of the shear test in this connection. Discussing the testing, James T. MacKenzie referred to transverse strength, as well as tensile and shear strength, as being due largely to the size and character of graphitic inclusions in the metal. Deflection of the test piece, on the other hand, representing ductility, is based on the amount of these inclusions.

Committee Reports

PRESENTING the sub-committee report on refractories for the gray iron foundry, James T. MacKenzie told of sending out questionnaires to about 200 selected foundries and receiving replies from 56. In general, the data obtained were disappointing. Refractory costs, including labor, were reported as varying all the way from 5c. to the ton of castings to $1.68 a ton. These two extreme figures were reported from two foundries of about the same size. Relations of stack area to tuyere area are varied in the different cases from 1½ to 1 as a minimum, to 9.9 to 1 as a maximum. Charges on a 72-in. cupola varied from 3600 lb. to 12,000 lb.

Analysis of the slag is something which apparently is outside the knowledge of nearly all foundrymen. Very few reported on this. Heats obtained for each lining of the cupola varied from a single heat in a foundry which relines after every heat to a run of six months, representing perhaps 150 heats, in another case. The hours of operation on the melting zone on each lining varied similarly, from 9 in the case of the single heat to 3600.

Following the presentation of the two papers, Mr. MacKenzie presented, in the absence of Mr. Jones, the chairman, the report of the committee on gray iron. An investigation is under way, in conjunction with the American Ceramic Society, on the enameling of cast iron. One of the items on the program of the committee is a fluidity test, involving among other things viscosity, which is important in connection with filling of the mold. Another problem is that of liquid shrinkage. This is particularly important in connection with high-test cast irons, while wear tests and machinability are of value as affecting the usefulness of gray iron castings.

Determination of the gases in the iron is a problem now being worked on by the Bureau of Standards. Relationship of the iron-carbon alloys is to be studied by the committee, in conjunction with a committee of the American Iron and Steel Institute and other interested groups.

Automatic Air Control for Cupolas

THE necessity of close control of air in the melting operation in a foundry cupola and the arrangement of equipment intended to assure such control, were dealt with in a paper on "Automatic Blast Gate Control for Cupolas," by H. V. Crawford, industrial department General Electric Co., Schenectady, at a session devoted to cupola developments.

Air should be charged by weight, not by volume, said Mr. Crawford. Only 23 per cent of standard air is oxygen; therefore only this portion fulfils the purpose for which the air is introduced, and the other 77 per cent works against the melting operation. The total weight of air used during any heat is more than the combined weight of the coke and iron, which fact emphasizes the importance of air control.

In discussing the amount of air required it was pointed out that for a 10 to 1 fuel ratio, 24,000 cu. ft. of air instead of 30,000 cu. ft., is all that is required to melt a ton of iron. This is based on good coke having about 88 per cent fixed carbon, and takes account of carbon taken up by carbon dioxide, also of air leakage, etc. If the 30,000 cu. ft. figure is used 25 per cent too much air, or 25 per cent too much oxygen, is introduced to exist as free oxygen and oxidize the iron. Also, 25 per cent more inert gas is introduced to help retard the melting operation. More coke can be added, he said, but this decreases the ratio and slows up the melting rate.

Calculations in the paper were based on the weight of air at standard conditions of 14.7 barometer and 60 deg. Fahr. temperature. It was pointed out that these conditions were not always standard because the air temperature will vary from zero to 100 deg. in some localities and the barometer will also vary. The weight of a given volume of air will therefore change with the temperature and barometer, and therefore blowers should be operated to give constant weight, rather than constant volume.

The effect of temperature, barometer and humidity were briefly discussed, and in concluding this section of his paper Mr. Crawford said: "The above figures show that a serious error is made if the air required is figured on the old basis of 150 cu. ft. of air per pound of coke, or 30,000 cu. ft. for a ton of iron for all conditions of the intake air. At the minimum conditions of 0 deg., 15.2 barometer and no humidity, the excess of air or oxygen will be the difference between 30,000 and 20,500 cu. ft., or 46.5 per cent.

The effects of too much and too little oxygen, and the part that air pressure plays in the melting operation were outlined, and the apparatus for automatically assuring the supply of a constant weight of air to the cupola, irrespective of atmospheric conditions and the resistance through the cupola, were described in detail. This is an electrical control system connected with the line supplying the current to an electrical motor which operates the centrifugal compressor. This control operates a blast gate placed in the pipe between the blower and the cupola. Details of the system, such as the hand and automatic blast gates, control panels, meters, etc., as well as test and operating curves, were shown by means of lantern slides. The equipment was also demonstrated at the booth of the General Electric Co., during the exposition.

Describes Manufacture and Properties of Cupola Blocks

"CUPOLA Refractories," by C. E. Bales, Ironton Fire Brick Co., Ironton, Ohio, was another paper at the session devoted to cupola developments. The clays used were described and the manufacture of the blocks by hand, by machine and by dry press method were outlined and pictured by lantern slides. A section of the paper was devoted to the properties of various types of cupola blocks.

Steel Foundry Problems Reviewed

THREE sessions were devoted to steel foundry subjects. Eight papers and several important committee reports were presented. One session was given over largely to alloy castings and to heat treatment, another to foundry practice and a third to general topics. W. J. Corbett, Steel Founders' Society of America, Pittsburgh, was the chairman of two of the sessions, and J. Fletcher Harper, Allis-Chalmers Co., Milwaukee, presided over the other. In the following account it is possible to touch on only a few of the papers.

A PAPER which attracted considerable attention was the fourteenth in a series of exchange papers between the Institute of British Foundrymen and the A. F. A. It was contributed by F. A. Melmouth, manager of steel foundry, Thos. Firth & Sons, Ltd., Sheffield, England, and entitled "Variables in Steel Foundry Practice." In the absence of the author it was presented in abstract by George Batty, director of research Steel Castings Development Bureau, Philadelphia, an old friend and co-worker of the author.

British View of Foundry Practice

Mr. Melmouth's paper is quite long and deals with many phases of the subject. Briefly he says that factors influencing to the largest extent the production of a steel casting are: The human element; various molding operations; metallurgical behavior of the steel in the form of a sand casting, and heat treatment. Each one of these factors are treated in detail.

Castings have been described, says the author, as "badly designed ingots" and with this he is quite in agreement. Considerable research is still necessary to produce an ideal or "perfect" steel casting which is also true of the ingot. The lower the carbon content, the more difficult to produce a casting free from unsoundness of the porosity type. In normal quantities silicon has very little effect on physical properties, but high silicon in mild castings tends to produce coarse ferritic structures with lower strength and impact resistance. Serious variations in manganese, Mr. Melmouth says, should be avoided. As to sulphur, 0.06 per cent can be taken as a perfectly safe upper limit. As to processes it is not true that theoretically steels of equal general composition should behave similarly, irrespective of process. Based on their comparative ability to produce steel with a degree of fluidity high in proportion to the temperature, the author places the convertor first, the single slag electric furnace second, the open-hearth third and the double slag electric fourth.

Various deoxidizers such as aluminum, ferrotitanium and calcium carbide are discussed as is also heat treatment. The great majority of specifications for mild steel castings can be met by a straight annealing, cooling either in the furnace or in the air, depending on the type of casting being handled. Faults directly attributable to incorrect manipulation during treatment are due to too low a temperature, too high a temperature or too short a period at temperature.

In the discussion Major R. A. Bull, research director Electric Steel Founders' Research Group said that the author's views on sulphur and phosphorus correspond closely to those in this country, so far as they have been determined. Interest was displayed in the question of tarring steel casting molds, and this was explained by Mr. Batty as resulting in a casting with a better surface and one more easily cleaned, also one less liable to burning in.

Many opinions were expressed in the use of deoxidizers, particularly aluminum. It was generally agreed that this deoxidizer must be used to offset the bad effect of green sand molds, but no more should be used than necessary. The use of silicon-zirconium was suggested as being both a deoxidizer and a diffuser of sulphur.

Less New Sand Needed

NEW information on steel foundry sand problems is contained in a paper "Reducing New Sand Consumption in the Steel Foundry" by H. A. Mason, assistant to superintendent Gould Coupler Co., Buffalo. The author, who presented the paper, described a new system of reclaiming sand by which economies far beyond their expectations were realized. New sand consumption has been reduced from 1200 lb. to 300 lb. per ton of good castings. Clay consumption has dropped from 150 lb. to 80 lb. per ton. Savings made have averaged $3,500 per month. Thus the original investment of $3,000 for the sand reclaiming unit and the small additional cost for a high grade bonding clay is considered as money well spent.

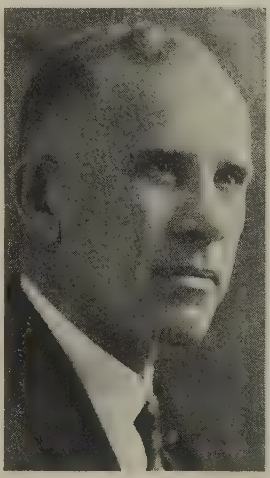
Three Kinds of Alloy Castings

A PAPER of considerable interest is entitled "General Characteristics of Alloy Steel Castings," by J. W. Frank, chief metallurgist Chicago Steel Foundry Co., Chicago. A statement which met with a cordial response was to the effect that foundrymen have all seen a tendency to advertise extensively steels with fancy names or even numbers, steels with varying contents of carbon and manganese, which cannot be compared to the real alloy steels which carry, in addition, nickel, chrome, vanadium and molybdenum.

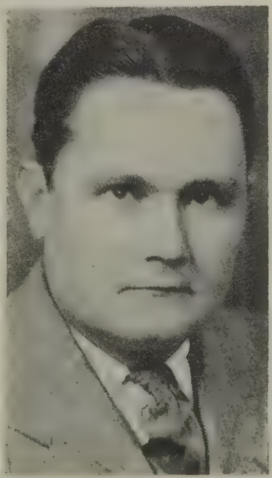
Mr. Frank divides alloy steel castings into three distinct classes. First are those having high physical properties; second, those with extraordinary properties such as resistance to corrosion and magnetic permeability, and in the third classification he puts heat-resisting alloys. Manganese, nickel, nickel-chrome, chrome-vanadium and molybdenum alloy castings are then discussed in some detail.

As to molybdenum, he says straight molybdenum steel is not common in castings at the present time, the molybdenum usually running 0.20 to 0.40 and sometimes as high as 0.80 per cent. The main advantage in this alloy is the relative ease in welding such castings to other parts in fabricating.

Authors of Steel Foundry Papers



H. P. EVANS



H. A. MASON

G. O. CARTER

Molybdenum in conjunction with chromium produces a steel, the use of which is increasing by leaps and bounds, says the author. The addition of molybdenum to nickel-chrome steel results in a metal that should be of particular interest to foundrymen. It retains all the good quality of the nickel and the chromium, the ease of machining of the chrome-molybdenum steel and, in addition, has the peculiar characteristic of hardening almost as hard by air quenching as if a liquid medium were used.

Special Heat Treatment for Castings

AN interesting description of a heat treatment plant for miscellaneous steel castings was presented by A. W. Lorenz, metallurgist Bucyrus-Erie Co., South Milwaukee, Wis. It is a modern plant, uniquely equipped for the full quenching and tempering of miscellaneous steel castings. With this plant an output of over 500 tons per month may be obtained at a cost of about ½c. per lb. It has been found, said the author, that when certain types of alloy steel castings are subjected to quenching treatment, their physical properties may be improved from 50 to 100 per cent. When such results can be obtained at a relatively small increase over the cost of casting, the subject of heat treatment becomes a lively issue, suggesting many applications which would otherwise be prohibited.

The author's statements are based upon his company's experience with heat-treated castings for over a period of 18 years and it is interesting to note that at the present time approximately one-third of the entire foundry output is a fully quenched and tempered product.

In the discussion in which the author answered numerous questions, it developed that all castings are annealed first before quenching and tempering.

Economies in Oxyacetylene Cutting

LARGER risers and more pouring gates are now used than in earlier steel foundry practice, because an ample reservoir capacity above the casting is essential to compensate for shrinkage and thus prevent pipes and blowholes. This is made possible by economies in oxyacetylene removal of such risers, said G. O. Carter, consulting engineer Linde Air Products Co., New York, in a paper entitled "Economies in Oxyacetylene Cutting for Riser Removals." In this way the foundry is sure of getting a good casting when small risers and gates are used.

Other Papers

OTHER papers presented at the steel foundry sessions were "Manganese Steel," by H. P. Evans, metallurgist Pettibone Mulliken Co., Chicago, describing in some detail the metallurgy and heat treatment of high-manganese steel castings, as well as their uses, and a description of an interesting new research steel foundry laboratory contributed by W. C. Hamilton, research director American Steel Foundries, Indiana Harbor, Ind., entitled "Research Laboratory —American Steel Foundries."

Specification Controversy Unsettled

AT the close of one of the sessions the chairman of the committee on steel castings, A. H. Jameson, Deemer Steel Casting Co., New Castle, Del., made a report, the discussion of which consumed much time. It dealt with the old controversy concerning the specifications for flanges, valves and fittings of carbon steel castings for high temperature use. Reference was made to the action which was taken a year ago at the A. F. A. convention in Chicago and at the annual meeting of the American Society for Testing Materials when the serious differences of opinions which existed were referred back to the committee.

Mr. Jameson then related the attempts that have been made to effect a compromise by the appointment of an arbitration committee. Failure resulted in the formation of this committee, as suggested by the A. S. T. M., but a compromise was suggested by those interested which did not meet with the approval of the A. F. A. committee. The compromise was to the effect that the words "other approved processes" should be used in the specification, instead of eliminating the names of the converter or

Flew to Convention

AIRPORT facilities as well as railroad connections may soon play an important part in the selection of sites for future A. F. A. conventions if the experience of W. F. Piper, E. O. Beardsley and L. W. Kreicker (reading from left to right) of the Beardsley & Piper Co., Chicago, maker of sandslingers and other foundry equipment, may be taken as a precedent. These men went to Philadelphia from Chicago by airplane in order to save time in transit and be present at the opening of the exhibit. Messrs. Beardsley and Piper have retained confidence in airplane travel in spite of the fact that about six weeks ago they went into a nose dive near Sharpsville, Pa., the crash resulting in injuries which for a time threatened Mr. Piper's life.

the crucible process. It was also suggested as a compromise that the sulphur limits be raised from 0.05 per cent to 0.06, but the stipulation of definite limits for carbon, manganese and silicon were still to stand.

R. A. Bull presented a lengthy minority report, urging the adoption of the so-called "Cleveland compromise" as the only solution to a controversy which had lasted altogether too long and which was doing harm to the producers of this particular grade of castings and to the making of specifications in general. After many opinions had been expressed by various members present, Mr. Jameson offered a resolution that the sense of this meeting is opposed to the suggested compromise and also is opposed in principle to the inclusion of chemical limits where physical results are stipulated. The final vote showed a decided majority in favor of the resolution, although the total attendance at that time was but 26. Among those who took part in the discussion were John Howe Hall, one of the members of the committee and L. W. Spring, Crane Co., Chicago.

Progress Made in Sand Control

EMPHASIS on the progress that is being made in sand conservation, in making successful synthetic sands and in developing satisfactory tests both in the laboratory and under practical shop conditions were brought out in the one session on sand control. Five papers and several committee reports were scheduled.

Ferric Oxide Film on Sand Has Influence on Bond Strength

ALTHOUGH it has been recognized that colloidal ferric oxide films might have an important influence on the bond strength of sands, no quantitative data have been available to show the effect of the films. Such data, showing the relation of colloidal ferric oxide absorbed on the sand grains and on the clay bonding material to the strength of bond in the molding sand, and the successful preparation of synthetic molding sand, were presented in a paper entitled, "The Influence of Ferric Hydrogel in the Bond of Natural Molding Sands." G. G. Brown, professor of chemical engineering University of Michigan, Ann Arbor, who was joint author with C. C. DeWitt, professor of chemistry Michigan College of Mining and Technology, read the paper.

To investigate the cause of bond in natural molding sand, a sample of fresh Albany molding sand was adopted for testing and analysis. This sand was tested for permeability and compression, and was then separated into silica, iron oxide and clay. It was found that the presence of the natural film of colloidal ferric oxide has a measurable effect on the strength of the base sand. It was also ascertained that the absence of bond material or "clay substance" causes a marked decrease in the strength of the natural molding sand.

Synthetic molding sand was made of pure silica, kaolin and ferric hyrosol in quantities approximating the base sand, bond and ferric oxide in the natural sand. Numerous other constituents of natural molding sand that have been identified were not found essential. The synthetic sand virtually reproduced the properties of the natural molding sand. Similar results were obtained by making a synthetic bonded molding sand, using clean Michigan City beach sand as a base.

Why Bond Strength Decreases

"CAUSE of the Decrease in Bond Strength on Heating Molding Sands to 600 Deg. Fahr." was the title of another paper by the same authors. The loss in bond on heating, at least to 600 deg. Fahr. for 3 hr., is not due to any change in the ferric hydrogel absorbed on the silica, the experiments disclosed. On the other hand, heating the bond material before mixing with the silica base material causes the mixture to lose practically all of the strength lost on heating the mixture. This clearly indicates that the loss in bond on heating is due entirely to changes in the clay bond as distinct from the sand or colloidal ferric hydrogel.

New Machine to Test Sand

"An Automatic Precision Strength Test for Sand," the title of a third paper by these two authors, describes a new machine for making compressive tests of sand. The device was built with the following considerations in mind:

1. No initial loading of sample.
2. Freedom from impact forces.
3. Constant rate of loading.
4. Automatic operation, stopping and indication of breaking load.
5. Accuracy and sensitiveness to less than 1 gm.

With this machine the compressive strength of sands is ascertained with an accuracy of plus or minus 1 per cent. Although such accuracy is probably not necessary in industrial routine testing, it is valuable in careful research work. The machine was used in the investigation of the influence of ferric hydrogel on the bond of molding sands.

Bank Sand Additions to Core Sand

"SURFACE Conditions of Castings as Affected by Core Sand Mixtures," was the title of a paper by H. L. Campbell, associate professor of metallurgical engineering, University of Michigan, Ann Arbor. To obtain definite information on the effects of different core sand mixtures on the surfaces of metal castings, a special mold was designed which permitted a test specimen to be cast in contact with dry sand cores. The mold was formed from two cores which were clamped together in a vertical position.

The investigation showed that the most desirable properties of dry sand cores are obtained when the core sand contains grains of uniform size and of sufficient fineness to produce the required smoothness on the surfaces of the cores.

The smoothness of castings formed by contact with cores will be practically the same as the smoothness of the cores, provided the metal is sufficiently fluid when it is poured to fill the minute cavities on the cores. In all cases where smooth surfaces are required on castings, the cores which form these surfaces must be smooth.

The additions of bank sand or other finely divided materials to core sand mixtures within reasonable proportions do not improve, to any appreciable extent, the smoothness of the surfaces of castings made in contact with these cores.

Sand Control for Gray Iron

"SAND Control and Sand Conservation in a Gray Iron Jobbing Foundry" was the title of a paper by T. F. Kiley, metallurgist Brown & Sharpe Mfg. Co., Providence, R. I. Various tests used in reclamation of sand are described. The company has used clay in rebonding spent molding sand since June, 1925, and shortly after that sand tests were adopted as a guide to the proper use and treatment of this material. The character of clay was found to have considerable influence over the rate of drying out of reclaimed sand. The more colloidal the clay, the less the rapidity of the drying out of the reclaimed sand.

Tests indicated that clay-treated sand bakes as strong as one of the natural sands used to a large extent on medium work; that a fine sand weaker in the green state than a coarser sand with the same amount of clay present in each case seems to bake stronger than the latter, possibly because of less rapid destruction of clay bond in the fine sand.

Fines or silt tend to accumulate in the heap when sand is repeatedly used. However, this tendency is not serious because no attempt is made to reclaim sand that adheres strongly to castings, which is removed at the cleaning room. The addition of new sand to piles on lessening in quantity, sharp sand additions on rebonding, unavoidable core droppings in reclaimed sand, formation of compound grains in casting into the sand; all these probably have their influence in preventing such an accumulation of silt as to cause concern.

After about two and one-half years of reclaiming, light foundry reclaimed sand showed practically the same screen tests as it did in the initial stages. After the same length of time heavy foundry facing sand was found to be more open than the facing formerly used.

It was found that the best method of distributing clay in rebonding is by means of a muller type of mixer. Coarse sands rebond more readily than fine sands.

Permeability Decreased by Clay

Clay decreases the permeability of sand on rebonding to an extent depending on the amounts of clay used. Rebonded sands seem to increase somewhat in permeability and get coarser on using, probably on account of the clay's baking in grains and forming compound grains, and, to some extent, because of core droppings or shot accumulations in the heap. The removal of shot, remulling and rebonding seems to fine the sand down again. In fact, facing sand would get entirely too fine without silica sand additions.

Troubles attributed to the use of clay and rebonded sands in the experimental stage were found on investigation to be due either to molding practice, improper mixing or some deficiency in temper, bond or permeability.

No unusual difficulty is noted in cleaning castings made in sand rebonded with lower fusing, more colloidal clays and the life of this sand is apparently as long as higher fusing clays.

The more colloidal clays seem to give reclaimed sand more of the velvety feel of a natural sand, and the rapidity of drying out seems lessened on both heaps and molds. Higher permeabilities with the same strengths are obtainable with the more colloidal clays because of the smaller quantity used. It seems safe to assume that the less rapid the drying out, the better will the bonding agent withstand the heat action of molten metal which causes decomposition of the clay bond. Decomposition of clay bond, according to some authorities, is responsible in certain cases for cuts, washes and scabs.

Sand treated with very high colloidal clay takes very little water without getting muddy when the slicking tool is applied. Apparently, in swabbing, most of the water is absorbed near the surface and, when a slight excess of water is present, this is quickly brought to the surface by slicking. A molder has to be careful in the use of a swab when using sand rebonded with this type of clay.

When asked whether it is possible to "overmull" sand, Mr. Kiley said his company tried to keep mulling time down to a minimum. Reclaimed sand is ordinarily mulled dry for 1 min. and then for 3 min. during tempering.

M. A. BLAKEY

T. F. KILEY

A. A. Grubb, Ohio Brass Co., Mansfield, Ohio, interposed that it is not necessary to mull so long with colloidal clays as with other rebonding materials.

Sand Control in Light Castings Foundry

METHODS of testing and controlling sand in a light castings foundry of the mechanical handling type were outlined in a paper by W. G. Reichert, metallurgist Singer Mfg. Co., Elizabethport, N. J. Natural sands submitted for trial are subjected to the following tests to determine their suitability:

1. Tensile strength test.
2. Permeability test.
3. Grade test.
4. Dry strength test.
5. Durability test.
6. Relative fusion test.
7. Microscopic examination.

A sand possessing a low fusion point has a tendency to adhere to the casting, especially in the corners where its cost of removal is sometimes very large. It is also the experience of the Singer company that sand with a low fusion point tends to produce an inferior surface.

Mulling tends to bring out the latent strength value of the sand to a marked extent, depending on the time mulled and the clay content.

To determine the effect of using heavier rolls in mulling sands, rolls weighing 1 and 2 tons were compared under identical conditions for a 10-min. mulling period. The heavier rolls also had a 40 per cent larger face surface than the lighter rolls. The heavier rolls were found to give a better distribution of clay, as indicated by an increase in strength, and also have a greater tendency to break down the grain clusters.

Sand deteriorates considerably because of the coarsening of the sand from the balling of the fine grain particles of clay. Sand that is moistened and remains for at least several hours before cutting over, allowing the moisture to distribute uniformly, as in floor molding, will ball up very slowly. It is generally known that sand becomes coarser through handling, and this effect is of greater magnitude with mechanical handling.

Observations in the Singer plant indicate that the balling of sand is due to the movement of the sand containing a critical moisture content, together with an uneven distribution of moisture, and that the balling effect is increased by an excess clay content.

Balling may be counteracted by the addition of a fine sand, a lower clay content sand, mulling, improvement in handling conditions, or a combination of these.

Moisture variation was reduced and a uniform facing sand was insured by attaching a water meter to the muller, as well as by constantly checking the sand with a laboratory moisture tester.

The Singer company first attempted to reclaim sand from tumblers, which consisted of about 4 per cent iron dust, by converting the iron dust into ferric oxide by an "aging" process; the sand later being made into a substitute for natural sand by mulling with the proper addition of clay. After a long period of use the surface quality began to deteriorate and at the same time the fusion point declined because of the gradual accumulation of iron oxide. For this reason the experiment was discontinued.

Now the company is successfully reclaiming the burnt sand that clings to the sprues and gates, which is not contaminated with iron.

In the discussion of Mr. Reichert's paper the question was raised whether the fusion point or the vitrification point in sand is the more important. (The vitrification point is where the sand will not take bond). It seemed to be the consensus of opinion that both high vitrification and high fusion points are essential. M. A. Blakey, International Harvester Co,. Milwaukee, pointed out that the amount of organic matter in the sand has a great deal to do with its propensity to burn on a casting. Organic matter helps his company to make good castings, he said. The reclaimed sand contains considerable core oil, pitch binder, cereal binder, etc. Better results are obtained with such sand than with new sand, he said. Scabs are overcome with organic matter. It can be done with flour and with sea coal.

Authors of Papers on Foundry Management

J. H. MARKS A. D. LYNCH J. D. TOWNE

A Test for Durability

"TESTING Molding Sands for Durability" was the subject of a paper by M. A. Blakey, International Harvester Co., Milwaukee. A small simple mold was made in the laboratory of each sand tested, and was taken to the foundry and poured with regular iron from a hot hand ladle. This was repeated several times with each sample of sand, but before each cast the bond strength and permeability were determined. When the tests were started it was expected that five casts would show the characteristics of sand quite well, and for natural molding sands they have done so. For synthetic sands, however, at least 10 casts were necessary, as the durability of the synthetic sands was much greater.

Although the original purpose of the tests was to determine the relative effect of use on the bond strength and permeability, it was soon found that other information obtained through them was of equal or greater importance. Examination of the castings made during the test indicated what could be expected in the foundry if a particular sand were used. Some sands burned on and some peeled nicely, some gave a smooth finish and some a rough finish, some cut and scabbed easily and some did not. Some shook out of the mold with little effort, while others became as hard as a dry sand core.

Subcommittee on Tests Makes Report

A NEW pamphlet, incorporating additions to and modifications to sand tests recommended in a report issued in June, 1924, has been completed by the subcommittee on tests, according to an announcement by the chairman, Dr. H. Ries, Department of Geology, Cornell University, Ithaca, N. Y. The pamphlet has been divided into two parts: (1) "Tentative Standard Methods of Testing," and (2) "Foundry Control Methods."

Among the recommendations of the committee is that the compressive test be the standard strength test of the association, in preference to tensile and shear tests.

In connection with the refractories test, the point was raised whether it is more important to determine the melting or sintering point, and the decision was in favor of the latter. In determining the sintering point, a specimen is rammed and a ribbon of platinum is placed on it. A current is run through the ribbon, and an optical pyrometer is used to ascertain the temperature at which the grains cling to each other and to the ribbon. That temperature is regarded as the sintering point.

In connection with the fineness test the committee recommends that sieves Nos. 30 and 50 be added to the series now in use.

After an investigation of four new shaking machines which gave results that checked very closely, the committee recommends that a milk shaker stirrer can be used instead of a rotary shaker.

A sub-subcommittee was appointed to test cores. This body recommends that test specimens be packed by mechanical ramming instead of hand ramming.

To determine the permeability of a mold it was recommended that a tube ½ in. in diameter and a standard rubber tip be used.

The committee is making bond clay tests, to evaluate the various bond clays used, but is not yet ready to report.

Other subjects now being studied include the following: Determining the hardness of molds; shortening the fineness test; a rapid method of colloidal determination; flow of sand in the mold, and sea coal.

Much Bond Clay Bought

PURCHASES of bond clay to rebond sand or to make synthetic molding sand are increasing rapidly, according to a report presented by R. F. Harrington, Hunts-Spiller Mfg. Corporation, Boston, chairman of the subcommittee on sand conservation and reclamation. One producer of bond shipped 30,000 tons in 1927, compared with 15,000 tons in 1926, and expects to ship 50,000 tons this year. One of the largest producers of motor cars used 25 carloads of rebonding material in 1927 and would have used it 100 per cent, so it reported, if it had had the equipment to do so.

Report on Grading Sand

THE system of grading sands tentatively adopted by the association has made definite, although slow, progress, according to a report by the Sub-Subcommittee on Grading, of which A. A. Grubb, Ohio Brass Co., Mansfield, Ohio, is chairman. There is still a strong tendency to cling to the old grade numbers, which differ widely among themselves for the same grades; in some cases the same sand is sold under two or three different numbers—these numbers being the ones with which their customers have been acquainted.

The subcommittee has proposed the terms "angular," "sub-angular" and "rounded" as descriptive of grain shapes and has prepared photographs of typical sand grains of each class.

The addition of the 30 and 50 mesh sieves to the original standard set recommended for foundry sands raised the question as to what multipliers should be used for these sieves when calculating grain fineness. The sub-subcommittee recommends that the weight or percentage of sand on each sieve be multiplied by the "approximate mesh number" of the sieve through which it passed. Inasmuch as mesh numbers differ among the testing sieve makers for sieves of approximately the same opening, "approximate mesh numbers" or multipliers have been listed along with the actual mesh numbers of both the Tyler Standard and the United States Standard openings.

In connection with the tentative standard A. F. A. dye adsorption test, the term "colloidal properties" is suggested rather than "quality of clay." The latter term implies that a sand of low dye adsorption value has poor quality clay, which is not a fact. A sand of low colloid content is actually superior for some purposes. Colloidal properties are also a factor in the behavior of core sands. Sands of low dye adsorption value require less oil binder, and produce cores that bake hard but can be knocked out of castings readily.

These considerations point to the advisability of grading sands according to their colloidal properties, and it is hoped that this can be made an active matter in the near future.

Progress in Cost, Apprenticeship and Other Subjects

AT sessions devoted to foundry costs, management and apprenticeship, as well as materials handling, a notable array of papers was provided. Some of the features of these programs are reviewed in the following.

Uniform Cost System for Steel Foundries

FOUNDRY costs and management problems occupied two afternoon sessions, one under the chairmanship of A. E. Hageboeck and the other of H. Cole Estep, as well as cropping up in many other sessions supposedly devoted to technicalities of production or metallurgy.

Mr. Hageboeck has been chairman of a committee on foundry costs which after some extensive work has produced a report on "Cost Finding Practice for Steel Foundries." In this 36-page publication may be found a classification of accounts within the various operating departments, and supplementary notes indicating where border-line operations are to be allocated. General overhead and special charges are described in such a way that, when any foundry adopts the recommendations of the committee, the management will be assured that all items of expense are included.

It is hoped by the American foundrymen's committee that this report will form the basis of a uniform accounting system for steel foundries. This will enable all such organizations to compete on a better basis, each knowing its real costs. Lack of such data usually results in one sales organization, ignorant of its costs, following another equally ignorant one down to rock bottom in an effort to get or hold business, and to the general disorganization of business in the entire region. In view of such situations, the cost committee recommends that foundry managers in various localities should meet with the avowed purpose of adopting this uniform system, making only such rare modifications as are clearly necessary for local conditions, and perhaps jointly engaging some reputable accountant to supervise the installation of the system in all the plants.

It was also emphasized that overhead and general charges should be carried on estimate sheets on the basis of *average* production. This will enable a plant which is fortunate in being able to operate now at a rate considerably higher than the average (which is now about 60 per cent of capacity for the whole industry) to build up a reserve against the expected swing to a low productive rate.

Selling by Schedule Vicious

IF foundries had been working under such a system the vicious practice of selling by schedule would never have gained headway, in the opinion of J. J. Ewens, of the George H. Smith Steel Casting Co., Milwaukee, Wis. In a paper, entitled "The Schedule Fallacy," he says that whatever justification there may have been in the days when labor was cheap to sell heavy castings at a lower rate per ton than light castings, it has vanished in these days when general overhead may be as much as twice the metal cost. Any organization which accepts work on the schedule basis will eventually find that it is making the difficult varieties at a ruinous price, while the easy ones (weighing the same per piece) are retained in the buyer's own foundry or are placed with some other which knows its costs and estimates each pattern separately.

It was pointed out from the floor that the schedule system of sales would remain as long as manufacturing costs were not known in detail and as long as the purchaser insisted on buying by weight rather than by units. Even the latter could be circumvented if the foundry would, after figuring the cost per piece, translate this into a cost per ton *for that particular pattern only*, and then absorb any profit and loss due to variation from computed weight (a matter of almost vanishing importance).

Bonus Paid to Reduce Scrap

AT the Ohio Brass Co., bonus for low scrap losses is paid only to the molder supervisors called "instructors," according to R. A. Greene, assistant manufacturing superintendent. Each instructor is in charge of no more than 18 molders, who are paid piece rates and consequently are penalized directly for defective castings. Every day the production of each molder is counted up, and the defectives classified and inspected. If by the end of the week any particular molder or any particular pattern seems to be running consistently bad, it is discussed in regular Saturday meeting of the various foremen and technical representatives interested. Any loss greater than 5 per cent is given immediate attention. By this system of daily posting of records, constant watch of difficult castings, cooperation of all manufacturing departments and especially the competition between the instructors, scrap losses in the malleable foundry have been reduced to 5.3 per cent, a grand average since 1924, as compared to 9.8 per cent for a similar previous period. This amounts to about 465,000 lb. of castings a year saved from the remelt. No special clerical help is needed for the system of instructor bonus. All basic information is gathered in order to compute molders' pay. Extra work making up totals and posting records on bulletin boards amounts to a few hours per week.

Payment Methods to Increase Production of Salable Castings

A MANAGEMENT problem was considered in two papers before a session on malleable iron. In one "An Incentive Bonus Plan for Molders Based on Scrap Control" was described by R. J. Teetor of the Cadillac Malleable Iron Co., Cadillac, Mich. His is a rather young organization, set up in a region where little foundry work had previously been done. The biggest problem had been to educate the workmen to the fact that it was possible to melt iron, to make castings, and to make them at a good rate. At first piece rates were set which would give theoretically 50c. per hour to molders, and a bonus of 100 per cent of excess earnings over 50c. per hour paid. This increased the number of molds made, but increased the scrap losses at a greater rate. The bonus plan was then changed to apply on the percentage of good castings, but while this reduced the scrap losses it slowed down production.

A compromise plan was adopted early in 1926, and has operated successfully since. The molder's regular pay envelope contains his piece rates plus a bonus for production. Suppose for instance he is expected to make 100 molds daily and the rate is 5c., but his actual set up is 120. He gets 120 pieces at 5c. or $6 plus 100 per cent bonus on his surplus of 20, that is: 20 at 5c. or $1 more. His total pay for the day is $7.

In addition to this he gets twice a month a separate envelope containing a bonus for the number of good castings made and his regularity at work. No supplemental bonus is paid if he fails to get at least 91 per cent of good castings, or is absent more than a day and a half. If 91 per cent of his castings are good, this supplemental bonus is 10 per cent of his piece rate money; if 92 per cent his bonus is 12 per cent; if 93 per cent of good castings his bonus is 14 per cent and so on. Only full time for two weeks entitles the molder to this entire supplementary bonus; a half-day's absence cuts one-third off it; a full day's absence is penalized two-thirds.

Experience shows that the production bonus amounts to 8 per cent of the piece rate pay, and the supplemental bonus amounts to 10 per cent of the piece rate pay. Therefore instead of paying, say, 5c. for a mold, the average cost is 5.9c., but these bonuses amount to only 2 per cent of the total cost of the castings. While this scheme apparently runs counter to the principle that a bonus should decrease the molding price per piece, it is felt that it is justifiable on the ground that it has reduced the remelt, the hand trimming, inspection and general overhead. It has also reduced the labor turnover and is in line with the sound principle that it allows the workman to participate in the savings he is responsible for.

Horse Sense in Cutting Costs

AN interesting paper on "Stabilizing Labor and Cutting Costs by Horse Sense" was read by A. D. Lynch, personnel manager Ohio Brass Co., Mansfield, Ohio. Mr. Lynch said he was a cost accountant first and a personnel man second, consequently he knew that the greatest waste in industry today is in labor turnover. To stabilize labor it is necessary to give them working conditions so that they will wish to stay. Many managers fail to regard the workers as human beings, as part of the selling and manufacturing organization which must profit from the business if it is to endure. Most so-called personnel work, like athletic fields and loan associations, are frills; the essentials are rather the following:

a. Clean buildings and attractive surroundings.
b. Machinery, tools and equipment in good condition.
c. Fair pay.
d. Continuity of employment.
e. Correct leadership.

The last is regarded by Mr. Lynch as most important. He believes that the foremen can do more to create a contented working force than any one else. But they must be well selected and trained. Several essentials of good foremanship were mentioned, such as skill and knowledge of the work, honesty, fairness, sympathy, good judgment and open mindedness. It would be the greatest mistake to interpose a so-called personnel manager between such a foreman and his men. The manager's part is rather to see to it that the foremen are kept well informed about the company's policy, and given all facts and figures regarding the status of the business which will enable him to bring the workmen into his confidence and build up in their minds the thought that they are partners, essential to success, or contributors to failure, and will gain or lose as the business prospers or languishes.

JOHN SHAW
Prominent British foundryman, who presented an important paper on gray iron

Apprentices Trained Through Community Effort

A SMALL but interested audience participated in a discussion of apprentice training on Thursday morning, under the chairmanship of E. S. Sparks, secretary Metal Manufacturers' Association of Philadelphia. Hardly a member of the audience but was actively engaged in organizing or supervising apprentice training, or was employing them. As one Southern foundry superintendent put it: "If you'd take away my boys, there would be nothing left in my foundry worth working for." His is the type of organization in the smaller community where the entire burden of selecting and training new workers falls upon the manager; he is the type of man who enjoys working with young men more than with things, and he is able therefore to enter and influence their lives even in their play time.

Many other communities are following the lead started by Milwaukee so successfully over 20 years ago, and since developed into the most comprehensive and successful system in the United States. Even yet, with 905 indentured apprentices in various mechanical trades, the supply of skilled workers from this source is hardly half the number continually needed. The fundamental ideas are cooperation of the employers through a metal trades association, chamber of commerce, or some other similar organization, looking toward uniformity of shop training, rates of pay, and (if necessary) interchange of apprentices in order to round out the experience. Essential mental training of from four to eight hours weekly is arranged by the public school system. Proper coordination of school and shop work cannot be neglected.

System Used in Nine Centers

In at least nine industrial centers such a system for machine shop and foundry apprentices is in successful operation. Details vary with the local necessities. The cost generally is shared by the employing plants (in the form of wages paid), the public school system (through funds for continuation schooling) and by the United States Government. Returns to the student are very great. It has been computed that the added pay which a well trained mechanic receives above that of an ordinary one is the equivalent to interest on a $12,000 investment. To the community the advantage is greatest in keeping a young man from acquiring vicious or idle habits during the two years between the age of 16, when his compulsory education is finished and 18, the minimum age which most compensation laws permit his employment in regular work.

Before any success may be attained in apprentice training, the managers of the industry or group of industries, must be thoroughly awake to the desirability of replacing the natural mortality in skilled workers with younger men, trained not only in the manual trade, but of considerable intelligence and loyalty to the community.

Mechanical Handling of Materials

FOUR papers on materials handling in the foundry were read at a session devoted exclusively to this subject. The attendance was small, but those present showed keen interest. L. L. Anthes, managing director Anthes Foundry, Ltd., Toronto, Ont., was chairman.

In a paper on "Materials Handling and Its Relationship to Building Plans," E. F. Scott, engineer of layout, design and equipment of foundries for the Austin Co., Cleveland, went into details regarding the layouts for the varying conditions of foundry plant development. Yard handling, charging, hot metal transportation, mold conveying, sand handling and distribution, return of flasks, etc., to the molding machine, conveying cores, shakeout, knockout, conveying of castings to the cleaning room all demand some sort of material handling, said Mr. Scott, and he pointed out the best available methods for these foundry operations.

Some interesting data on the results that may be expected from the installation of mechanical handling equipment in the foundry

Amount That May Be Spent for Each $1 per Ton Reduction in Cost, Using 20 Per Cent per Year Fixed Charges

Annual Earning in Percentage	Annual Production in Tons									
	1,000	2,000	3,000	5,000	10,000	20,000	30,000	40,000	50,000	60,000
100	$833	$1,660	$2,493	$4,165	$8,330	$16,660	$24,990	$33,320	$41,650	$49,980
50	1,428	2,856	4,284	7,140	14,280	28,560	42,840	57,120	71,400	85,680
33⅓	1,875	3,750	5,625	9,375	18,750	37,500	56,250	75,000	93,750	112,500
25	2,222	4,444	6,666	11,110	22,220	44,440	66,660	88,880	111,100	133,320
20	2,500	5,000	7,500	12,500	25,000	50,000	75,000	100,000	125,000	150,000

were given by J. J. Hartley, engineer Link-Belt Co., Chicago. The most startling economies have been made in the "continuous process" foundries, Mr. Hartley said, but by proceeding with discretion and sound judgment the "intermittent foundries" have successfully applied materials handling equipment and have also effected savings. Definite methods of computing the economies of labor-saving equipment have been worked out by the materials handling division of the American Society of Mechanical Engineers, but Mr. Hartley suggested the accompanying table for determining the amount that may be spent for each $1 per ton reduction in cost, using 20 per cent per year fixed charges.

Jobbing Foundry Can Save by Mechanical Handling

IN his paper on "What Materials Handling Equipment Can Do for the Jobbing Foundry," W. B. Marshall, sales engineer Chain Belt Co., Milwaukee, gave the following specific experiences in support of his contention that jobbing foundries can reduce costs by the correct application of materials handling equipment:

"A jobbing steel foundry, after installing for its central sand conditioning unit materials handling equipment consisting of elevators, overhead sand bins and electric lift trucks for distributing sand to the molders, accomplished direct labor savings amounting to over $10,000, the sand handling labor having been reduced from 120 hr. to 59 hr. per working day. Two 10-hr. shifts of six men each were formerly required. Now, five men working days only, plus 3 hr. for three men on the night shift, is all that is necessary. In other words, this has meant a saving of $2 per ton of castings produced.

"This same saving has been accomplished in other foundries and it is conservative to assume that at least 15 per cent per ton of sand handled can be saved by the use of materials handling equipment.

"In another instance the problem was of a different nature and increase in capacity was secured in the existing plant by the application of suitable sand handling equipment and production was increased 300 per cent. This was made possible by providing an overhead supply of sand for the molding machines, shakeout conveyors and a central sand conditioning unit."

Adaptability of Electric Trucks

"THE Application of the Electric Truck to Materials Handling in the Foundry" was the subject developed by Harold J. Dorus and C. S. Schroeder of the Yale & Towne Mfg. Co., Stamford, Conn. The value of the electric truck lies in its ability to reduce costs of operation, said the authors, who pointed out specific examples of such savings. In several foundries a relatively new use for the electric industrial truck has been found in carrying melted metal from the cupola to the molding floor. In one malleable foundry four electric industrial charging trucks carry 2500 tons of boxes and castings over a period of 24 hr. The haul varies from 80 to 300 ft., and the loads vary from 3000 to 4000 lb. each. In another annealing furnace, having a capacity of 36 tons, it has been found that the furnace may be unloaded by one truck and one driver in 1 hr. and loaded in ¾ hr., or a total of 1¾ hr. per charge carrying the pots approximately 600 ft. This represents 21 tons per hour for one truck.

In the discussion it was pointed out that a danger of mechanization is a too complete reliance on the equipment. Representatives of equipment manufacturers stressed the necessity of the human element and of not making the mistake of assuming that even the most automatic equipment does not require constant watchfulness. The humanitarian aspect of mechanization of foundries was also emphasized as a means of taking some of the drudgery out of foundry work.

No Royal Road to Malleable Iron

ONE technical session on malleable iron founding was held under the chairmanship of F. M. Robbins, Ross-Meehan Foundries, Chattanooga, Tenn. A round-table discussion at luncheon (which lasted until late in the afternoon), under the direction of F. L. Wolf, Ohio Brass Co., Mansfield, Ohio, brought the technologists again together for informal chat over production problems.

WHILE the round-table meeting was not reported, it is understood that a valuable interchange of opinion was had on such problems as the effect of small amounts of alloy in white cast iron, the cause and correction of brittle malleable, the short annealing cycle reported from some quarters, and duplex melting with cupola and electric furnaces.

Oxidation Phenomena

A PAPER, interpreting Dr. Schenck's exhaustive investigations, recently published in Germany, which developed a series of curves showing the relationship among temperature, carbon, oxygen, and iron, was prepared by H. A. Schwartz, National Malleable & Steel Casting Co., Cleveland, Ohio. Much iron and steel metallurgy is condensed into these diagrams; within certain areas representing particular temperatures and CO:CO_2 ratios, iron ore is reduced to iron, as in a blast furnace; under other temperatures and gas concentrations the opposite reaction occurs. Other fields in the diagram represent case carburization. Mr. Schwartz pointed out that the surface conditions on malleable iron destined for high-speed machining or threading operations are of the utmost importance.

The foundryman must avoid a surface of decarbonized iron, and also a steely surface with undecomposed iron carbide. This means that the atmosphere of gases in the annealing pots, in contact with the castings, must be maintained within fairly narrow limits, and fortunately iron silicate is a substance which keeps this balance correct automatically. It was brought out that air furnace slag is a good raw material for packing, far better than roll scale.

Gas-Tight Annealing Boxes

W. R. BEAN, president Grindle Fuel Equipment Co., formerly with the Eastern Malleable Iron Co., said the latter company had abandoned scale filling for annealing boxes ten years ago. In his opinion, temperature variations during the annealing cycle are responsible for much more unsatisfactory iron than are chemical variations in the cast iron itself, and for this reason hand firing of furnaces is being abandoned. Mr. Schwartz said that if white iron castings are placed in an empty, gas-tight box, the reactions between the enclosed air and hot iron are such that a satisfactory anneal and surface will result, but emphasized that brickwork or muffles are by no means gas tight in the above sense.

Effects of Various Elements

L. E. GILMORE, of Crane Co., Chicago, in a paper on the "Effect of Various Elements on Malleable Cast Iron," after recounting the specific effects of each of the common elements, all the rest being constant for the time being, emphasized the view that malleable iron should be thought of, not so much as an alloy in which each element has a fixed and individual function, but more as a mixture of compounds and interacting elements which, when properly balanced with each other, will produce the highest quality iron. It is in the manner in which the elements unite in compounds and the relative proportions of certain elements as well as the total percentage of any one element that determines the degree of success in producing good malleable castings.

Brass Foundrymen Discuss Melting

ONLY one session was devoted to non-ferrous foundry subjects. It was presided over by G. H. Clamer. Five papers were scheduled and in part are briefly reviewed below. A round table luncheon, under the leadership of N. K. B. Patch, secretary Lumen Bearing Co., Buffalo, attracted close to 100. Many phases of brass foundry problems were informally discussed.

IN a paper entitled "Science in the Foundry," E. F. Hess, Ohio Injector Co., Wadsworth, Ohio, emphasized the thought that scientific control and persistent research could be done in any foundry, even without a staff of special workers. Rather it required a certain desire on the part of all the principal employees to find out the way to do things right. Such an attitude of mind would quickly lead the melting department to adopt ingot metal rather than compound alloys from virgin metal because it makes for uniformity in castings, reduces the number of analyses thought to be necessary, and also cuts down the inventory.

Control of pouring temperature is another essential in order to get the largest number of molds from one pot, none poured either too hot or too cold. One man should do this work in order to reduce the chances of personal error. Sand control gives good dividends on a small investment. One man working over the various heaps during the night is sufficient for a moderate sized foundry. Correlation of the various records is also necessary in order that they may be interpreted by the manager.

Furnace Lining

"Refractories for Brass Foundry Furnaces," by H. M. St. John, metallurgist Detroit Lubricator Co., Detroit, contained some data in addition to the report of a committee presented in September, 1926. A number of firms had reported the average life of furnace linings. When classified according to types of furnace it was found that in each group will be found a half dozen or more plants which get from two to three times the general average number of heats. In part this is due to more continuous operation, but in oil or gas crucible furnaces, open flame furnaces, and indirect-arc furnaces the following important factors also contribute to a high average:

1. Preheat thoroughly.
2. Glaze lining before using first time.
3. Inspect daily and hot patch.
4. Cold patch weekly.
5. Use a mild cleaner, or a slice bar in careful hands to remove accumulated slag.

Some discussion about carborundum brought out that its conductivity did not cause irregularities in electric furnace operation, as might be suspected. Red brass is likely to pick up enough silicon from carborundum to cause unsound castings, but the low zinc alloys containing lead and tin do not react in this manner with carborundum. Mr. St. John also emphasized that many good refractories are spoiled by the bond used, which contracts, cracks, and allows penetration of metal and general derangement of the lining.

Overheated Aluminum Alloys

It is the general impression that metals should not be greatly overheated, although many alloys show no deterioration if cooled to the correct temperature before pouring. In a paper on the "Effect of Melting and Pouring Conditions Upon the Quality of No. 12 Aluminum Alloy Sand Castings," T. W. Bossert, Technical Direction Bureau, Aluminum Co. of America, New Kensington, Pa., said that high melting temperature, or long soaking increases the grain size in the casting, even when poured from a proper temperature. Increasing the pouring temperature causes even more coarsening. This effect also exists in the aluminum-silicon casting alloys now so much used. Fortunately, however, if such overheated metal is merely cast into ingots and remelted at a correct temperature the proper fine grained structure is restored, and the detrimental effects, which formerly caused drawing and cracking, are removed.

Lead in Complex Brass

O. W. Ellis, Westinghouse Electric & Mfg. Co., East Pittsburgh, investigated "The Effects of Lead on the Properties of a Complex Brass"—a yellow brass containing iron, manganese, aluminum and tin. Lead percentages from zero to 3.5 were studied. As little as 0.04 per cent could easily be seen in the microstructure, and had pronounced effects on the fracture; this result is at variance with certain French authors who claim that nearly 1 per cent of lead can be taken into solid solution. Mr. Ellis concludes that while such leady brasses are of some value, a lead-free brass has the best physical properties, especially for cold rolling, and where high strength and good ductility are desired.

Report of A. F. A. Committee on International Relations

DURING the past winter this committee has been engaged mainly on preliminary arrangements for the Third International Foundrymen's congress which will be held in London, June 11 to 15, 1929, under the auspices of the Institute of British Foundrymen. The first International Foundrymen's congress was held in Paris in September, 1923; the second was held in Detroit in September, 1926.

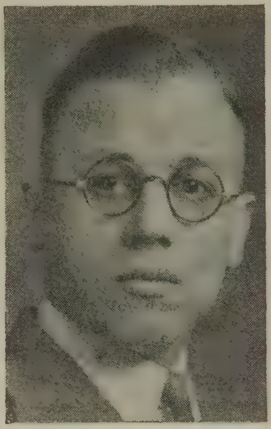
The plans, which have now been agreed upon, provide for the American delegation leaving New York about May 15, 1929, in order to arrive in England in time for a three weeks' preconvention tour of England and Scotland, which will include several days in London prior to the opening of the Third International Congress on Tuesday, June 11.

On the preconvention tour such important British foundry centers as Birmingham, Manchester, Glasgow, Newcastle, Sheffield and Derby will be visited. Elaborate arrangements will be made by the different branches of the Institute of British Foundrymen for the entertainment of the visiting foundrymen from overseas on this tour.

The program will include plant inspections and many sightseeing excursions. The latter will include points of great historic interest such as Warwick Castle, Shottery, Stratford-on-Avon, Guys Cliffe, Kenilworth Castle, Loch Lomond, Scotch Highlands, the Dukeries,

Chairmen of Cupola Practice Meetings

DR. RICHARD MOLDENKE



H. W. DIETERT

E. J. LOWRY

Haddon Hall, Windsor Castle, etc. After the international congress, various continental postconvention tours are contemplated.

The details of the preconvention tour can be obtained from H. Cole Estep, chairman.

During the week of the congress itself in London, what is expected to be the largest exhibition of foundry and shop equipment ever held in Europe will be staged under the auspices of the prominent British foundrymen's organizations. At the sessions of the congress, papers will be read and discussed by some of the world's most prominent foundrymen. The committee on international relations of the A. F. A. expects that at least 200 American foundrymen will attend.

The committee on international relations now consists of H. Cole Estep, Penton Publishing Co., chairman; L. L. Anthes, Anthes Foundry, Ltd.; G. H. Clamer, Ajax Metal Co.; Vincent Delport, Penton Publishing Co., Ltd.; Stanley G. Flagg, Jr., Stanley G. Flagg Co.; and Verne E. Minich, American Foundry Equipment Co. The personnel of the committee will be considerably enlarged during the next few months.

New and Improved Equipment at Foundry Exposition

THIS exhibit, which has taken on the proportions of a local industrial exposition, is in itself a striking object lesson in the foundry progress that has marked the past 11 years in the United States. Last year at Cleveland, in what was considered a remarkable showing of the appliances and equipment of the modern foundry, 40 firms were represented. This week's exhibition at Philadelphia has no less than 70 firms. . . . To one who attended the meeting of 1896 the evolution into the conditions of the present convention is simply amazing.—**From The Iron Age of May 23, 1907.** Foundry progress in the 21 years since was clearly emphasized by the exhibition last week, a brief general account of which follows:

SEVERAL new and many definitely improved forms of equipment for all departments of the foundry were to be seen at the exposition held last week at the Commercial Museum, Philadelphia. With more than 240 companies, each showing a number of products, for the most part in operation and supplemented in many cases by cut-away views, moving pictures and detail plans of actual installations, there was enough of interest to warrant more than one visit during the week of the convention.

The great progress made in the development of foundry equipment since the 1907 Philadelphia convention and exposition, the report of which is quoted in part above, undoubtedly was impressive to those who could recall the earlier exhibits. On the whole, this progress has been perhaps more or less gradual, until today time and labor saving devices for the foundry are not only more numerous but the equipment is being built to high standards of design. Machine tool standards are being followed and ball and roller bearings, steel cut gears and automatic lubrication are being extensively employed. Frames are of strong and of rigid design, bearings are thoroughly protected from dust and dirt, and facility of operating control is a major consideration.

Some of the new and improved equipment at this year's exposition is reviewed below:

Improved Mold and Core Making Equipment

MOLDING machines of more than 15 companies were on view. In addition to recent models of sand straddler molding machines, portable roll-over jolt equipment, and a jolt stripper with adjustable stripping pins, one company featured a working installation of a continuous molding unit. The system included sand treating and sand and mold handling equipment, and molds were made at the rate of one a minute. The conveyor was arranged to handle comparatively small squeezer molds, alternating with drags and copes of medium size. Of interest also was the provision for power handling of the cope and closing the larger size mold.

Another exhibit that attracted attention included a 13 x 18-in. multiple-molding machine making molds for pipe fittings, the cope and drag being made at the same time. This machine has an electric pattern heater. It is rammed by velocity and the drag pattern is drawn by return. The cope draw is by a central plunger, air and oil operated, the yoke being also air and oil operated. The same company had in operation a shockless jarring roll-over and pattern drawing molding machine equipped with new air clamps and air wedges, and a new four-point suspension equalizing device, all of which are intended to increase production by saving steps and eliminating lost motion.

Air-operated jolt, clamp, leveler, roll-over and pattern draw were features of a new jolt roll-over machine shown by another company. No clamps or wedges are required for the roll-over operation, and no unclamping nor leveling of the bottom board is required for the draw. The machine has two-roll-over cylinders and one oil cylinder for controlling the roll-over operation. An improved base-type jarring machine, with automatic lubrication, was shown by another well known builder. Another large exhibit included portable and stationary squeeze strip machines with a 14-in. squeeze cylinder. Provision is made for pattern draw and flask lift and automatic vibrators are employed.

Jolt squeezers with a cast steel squeeze head which swings horizontally and may be readily adjusted up or down to the proper height to require a minimum amount of air to make the mold was another new machine. Other companies showed stationary and portable jolt squeezers of late design. A large motive type Sandslinger on jobbing work and tractor type Sandslinger making molds with stripping plate machines were centers of interest. The "Sandblower," a compressed air sand-ramming machine of German design, also attracted attention. There was also a working demonstration of the making of gray iron castings in permanent molds, a small electric furnace being used in conjunction with a single head hand-operated permanent molding machine.

Core Making Machines

AMONG core making machines was a new hinged roll-over unit exhibited by a large builder of molding machines. This machine, said to cut machine time 38 per cent and increase production correspondingly, has no clamps to handle, no leveling device to lock or unlock and requires no foot work. The standard machine is for core boxes up to 14 in. wide, 24 in. long, 7 in. deep and with 4-in. draw. It can also be had for boxes up to 16 in. wide, with 8-in. draw. A rockover type core machine with 12 x 16-in. table, 8-in. pattern draw, and accommodating a core box and bottom plate 10 in. high was featured by another company.

A rollover core machine, with air jolt, shown by another molding machine manufacturer, has a 14 x 14-in. table and a draw of 8 in. The jolt cylinder is 3 in. in diameter.

A new machine for grinding cores was a feature of the exhibit of a manufacturer of core knockout machines, shakeout bales, etc. This unit is said to be the first standard core grinder shown at these exhibits. It employs a 12-in. cup wheel, which is driven by a ½-hp. electric motor, the wheel and motor being mounted on overhead ways and arranged to travel 3 ft. longitudinally. The cores to be ground are placed in fixtures mounted on the bed of the machine.

Large Showing of Materials Handling Equipment

MATERIALS handling equipment, consisting of cranes, hoists, overhead track systems and switches, mold conveyors, belt conveyors and elevators for sand, cupola charging machines, hot metal carrying and pouring devices, overhead chain conveyors, industrial trucks and trailers, and accessory equipment, was again an outstanding feature. More than 25 companies were represented, and the equipment shown was for the most part under power.

Industrial trucks, included electric and gas-powered elevating platform, crane and other types. One company exhibited a new "sand digger," which is equipped with a hopper bucket and scoops, lifts and carries its load of sand, ashes or other material. The machine carries 9-ft. buckets on low and high lifts, and is adapted for foundry clean-up work. The load can be scraped up, elevated and dumped over the side of a motor truck or a gondola car. Another company showed a special oven charger, and others, special trailers for foundry use.

J. J. HARTLEY

Contributors to the Materials Handling Program

E. F. SCOTT

Among a number of new items announced by one company was an electric ladle-pouring device with push-button control on the handle of the ladle, the operating triggers directly under the fingers of the man who pours. Unusually smooth up and down movements is a feature of the device. The same company exhibited a chain-driven overhead conveyor for the first time, as well as a new overhead trolley track of special section, having a 3-in. flange at the top and a 2-in. flange at the bottom. Of interest also was a new trussed crane with span of 36 ft. 10 in., capacity 2000 lb., which may be pushed by one man. The device combines maximum strength with minimum weight, and is intended to supplement the larger electric cranes. Push-button pouring devices and turntable pouring were also shown by other companies. Crane trolleys with herringbone gears and roller bearings was a new feature of one large equipment maker.

Something of the history of electric hoist development was to be noted from one of the older manufacturers of this equipment, who had on exhibition five electric hoists, the first of which was developed in 1889.

Sand Blast Equipment

INDIVIDUAL exhibits of sand blast equipment were large. An unnamed cascading blast mill unit, featuring quick loading and unloading, less than 1 min. for each operation, was a center of interest at one booth. The device consists of an inclosed apron conveyor that travels from front to back. One thousand or more pounds of castings may be cascaded continuously into position in front of the three nozzles. At the conclusion of the operation the conveyor travel is reversed and the load fed out on to an unloading belt or into a receptacle. Other new equipment shown by the same company included an oscillating pan "downdraft" room with rotary table.

An automatic continuous-operating rotary sand blast table, 18 ft. in diameter, said to be one of the largest of its type, shown by another company, was a center of interest. This new equipment, available also with 12-ft. table, is for small work in large quantities or for large single pieces such as sinks, bath tub bases, etc. It employs a blast unit of direct pressure type.

Tumbling mills of improved design were exhibited, and a number of companies exhibited abrasives for the cleaning of castings and forgings.

New sand preparing machinery included a portable unit which cuts, screens and piles foundry sand in heaps. The same company introduced improved gas-driven and electric-driven sand cutters. A variety of sand sifting, riddling and conditioning equipment for core and molding rooms was demonstrated by several companies. One of these was a counterflow screen, for material from 6-in. opening to 300-mesh, operating on the rotary principle. The screen is operated by eccentrics which give it rotary motion, vibrating the screen both horizontally and vertically. It is stated that this action not only cuts the sand, but cleans the screen as well. An improved core and facing sand mixer, with tapered roller bearings, speed-reducer drive and hexagonal screen, improvements said to result in much higher speed, was shown by another company.

Cupolas and Blowing Equipment

ONE new cupola, with a heavy bottom plate of boiler plate and structural shapes, to eliminate cracking and distortion, was exhibited. Other improvements included wrought steel cylindrical columns filled with concrete and a safety opening of fusible lead plate which is tightly clamped in a vertical position so that it will not become covered with coke, etc.

Cupola blowers with characteristics that permit the use of a blast gate and control board so that the blast gate may be controlled to deliver a constant weight of air to the cupola irrespective of atmospheric conditions or resistance through the cupola was a new item of this year's exposition.

A preheated blast cupola arrangement and a continuous melt cupola were shown in blueprint form by one company. The preheated blast arrangement is intended to economize coke and increase the melting ratio. Roller bearing cupola blowers were demonstrated by another company.

Electric furnace exhibits included units for steel, gray iron, copper, brass and bronze melting. Core ovens of a variety of sizes and types, including drawer, rack, continuous, tower and other types of core ovens were demonstrated by several companies.

Exhibits of woodworking machines for pattern and flask work featured a number of recent models. Sanders, saw tables, band saws, planers, borers, pattern lathes and jointers were among the 17 tools shown by one company, an inside sander being the newest item.

Sand testing and control equipment, optical and other types of pyrometers, microscopes, photomicrographic apparatus, hardness, transverse and other physical testing equipment were exhibited.

Pneumatic and Electric Tools

DISPLAYS of pneumatic tools were, as in previous years, attractive. Several companies were represented and late models of all types of equipment, including sand rammers, core breakers, hammers, chippers, riveters, grinders, drills and sanders, were demonstrated. Air hoists were shown, and compressors of various types were under power. Portable electric drills, tappers, screw drivers, nut setters, grinders and sanders, including high-frequency tools, and flexible shaft equipment were also on display.

Grinding and snagging equipment was exhibited by several companies. High speed swing frame grinders and snagging stands, in one case operating at wheel speeds of 9000 ft. per min., were centers of interest.

Welding and cutting equipment was demonstrated by three companies and an improved special sprue cutting band saw for soft metals was shown by another. Apparatus which, in melting, atomizing and applying coatings of any of the commercial metals on metal surfaces, may be regarded as a "putting-on" tool, was a center of interest. Paint spray equipment was shown at another booth.

Several manufacturers of flasks, pouring jackets and similar equipment were represented and there were working demonstrations of shakeout apparatus by other companies.

Lubricating devices, including automatic systems, were demonstrated by two companies. The application of automatic lubrication from a central point on overhead cranes was a feature of one exhibit.

Companies supplying pig iron, alloys, coke, fluxes, refractories, molding, core and blast sands, facing and parting materials, core oils and core binders and other raw material were represented.

Large Educational Exhibit of Castings

AN exhibit sponsored by the A. F. A. and intended to show the engineering possibilities of gray iron, malleable and steel castings was a center of interest. The steel exhibit was gathered through the efforts of the Steel Founders' Society of America and the malleable exhibit was secured by the Malleable Iron Research Institute.

Among the gray iron exhibits, which were collected by a special committee of the A. F. A., were specimens showing the possibilities through the use of nickel. There were automotive cylinder castings of intricate design, and intricate small parts made possible by the fluidity of the iron. A number of ornamental castings showing possibilities as to finish were also to be seen. Passenger car air brake equipment, including a universal valve requiring 133 cores, each cored passage being subjected to 165-lb. air pressure, were among other cast iron displays.

Malleable iron exhibits included castings for automotive and railroad use. A water base formerly made up of five castings was shown and there were a number of specimens illustrating the ductility of malleable iron. Machinability was demonstrated in malleable iron clutch castings and other pieces. Of interest was a malleable iron casting of ⅝-in. section which had a 1½-in. hole in the center, the hole having been drifted from a ¾-in. punch hole. Another casting, ½ in. thick, had a number of ⅝-in. cold punched holes, the distance between the punched holes being, in some cases, ⅛ in., no sign of fracture being shown.

The steel exhibit contained a number of interesting castings, some of very intricate design. A cast steel combination chain sheave and gear served to illustrate the accuracy obtainable in castings of this nature. Good surface appearance and uniformity of metal was shown in a cast steel automobile headlight bracket. A cast steel hub, on which 10 machining operations are performed and in which even minute defects are objectionable, was also of interest. Another exhibit was a cast steel gear housing, formerly made of several parts, but now cast as a single piece to eliminate machining and assembling operations.

Steel hitch castings, used in a trailer hitch, were a center of interest. This piece, formerly built up of steel shapes, wood blocks, etc., comprised 54 parts. The steel castings now employed eliminate machine work and minimize assembly. The castings are of thin section, which reduce the weight.

Another exhibit was a baggage truck wheel which has replaced a similar wheel made up of 77 pieces that required 119 machining operations. Use of the steel casting has eliminated all assembly work and reduced machining from 119 to four operations. A cast steel dipper stick for an excavator was shown as an illustration of the replacement of a number of assembled parts by a single casting. A cast steel crawler side frame for a steam shovel, another casting shown, was said to have replaced 350 welded and riveted parts, eliminating assembly costs and permitting marked reduction in machining costs. Another exhibit was a one-piece cast steel boom which replaced an assembled boom made up of 35 pieces of plates, angles and castings and which required 376 rivets. The steel casting was featured as eliminating loose joints, repair parts and adjustments, and as being lighter and stronger than the built-up boom.

The Course in Cupola Operation

AMONG the best attended sessions were those on cupola operation. The time of each of the four sessions was set at 4 p. m. and they lasted over two hours, were extremely lively and interesting and the value derived was such that doubtless a considerable extension will be given these practical discussions in future conventions.

Dr. Richard Moldenke presided over the first meeting and introduced the subject of the cupola melting process by outlining the principles involved. He explained the combustion of coke and the heat generated by means of two diagrams, the first showing the interior of a slagging-producer in colors, under heat—this being in effect a cupola charged with coke only. The second diagram showed the location of the metal as charged into the zone of maximum temperature of such a slagging producer, making it the cupola operation. The desired objectives of cupola melting were next explained and how these are best attained, with many practical points on successful cupola melting.

In the general discussion which followed, a wide range of subjects was touched upon, questions of uniform layering of the charges, the desirability of small charges, extent of the melting zone, cutting of the lining, the advantages of bucket charging for mechanical operation, and many other matters came in for a thorough analysis. Over 250 members of the convention attended each of these sessions.

The second session was in charge of E. J. Lowry, who outlined the cupola construction details which must be watched by the foundryman for successful operation. He discussed the installation of blast pipes and tuyeres, height of charging door and other details.

The discussion went far into the subject of upper and lower tuyeres, the shape of tuyeres, oblique versus straight drop mechanical charging, blast preheating with successful developments and also failures. In these discussions, the foundrymen present gave their difficulties and much interchange of information and advice for overcoming troubles resulted.

The third session, under the chairmanship of David McLain, was opened by the presentation of a paper by him describing the ideal method of charging a 42-in. cupola. The complete sequence of operations was fully gone into, and later discussed at greater length. Many problems in the correction of defective work were brought up, most of them hinging on working with too low a bed and giving oxidized iron.

The final session, in charge of H. W. Dietert, was on cupola improvement. This consisted of a series of papers, or presentation of new cupola developments. The first was the description of the Vial Hot Blast Cupola, presented by F. K. Vial, Griffin Wheel Co., Chicago. This has been described in THE IRON AGE, Oct. 20 and 27, 1927. The discussion brought out a number of details as well as the present status of the use of these cupolas in daily work. From 165 down to 135 lb. of coke per ton of iron melted is the record of achievement.

The second paper was presented by Nat. Skelly, on the somewhat phenomenal results in melting in the ordinary way obtained at the Maytag Foundries. Considering that 1 to 16 down to 1 to 14 for the fuel ratio is claimed, a stormy discussion ensued. This brought out some pertinent reasons for the figures in question, in that the sprues are charged at about 800 deg. Fahr., the melting done very low in the bed with a probable oxidation of much silicon and heat thus derived. Nevertheless there was brought out the fact that, by careful supervision of every phase of the charging and melting operation, a very economical process resulted.

The next paper was by Dr. Fritz Meyer, who presented the results of the powdered-coal fired cupola—that is supplementing the coke used by adding powdered coal (burned in external combustion chambers) by way of the tuyeres. This paper was also very interesting, the claim being 120 lb. fuel per ton of iron melted. Much discussion ensued, notably on the temperatures produced.

Mr. Dietert then gave some curves showing that the velocity of the gases passing through the melting zone affected the melting rate. Mr. Skelly also gave the diameters of tap-holes for different melting rates. This concluded the cupola operation course and showed also that preheated air cupolas have come to stay.

CHICAGO'S INDUSTRIAL MUSEUM

Reconstructed Fine Arts Building of 1893 World's Fair to Be Used

AN industrial museum, occupying 400,000 sq. ft. of floor space, is to be located in the Fine Arts Building, Jackson Park, Chicago. This building, having a total floor space of 7 acres, was erected in 1893, at the time of the Columbian World's Fair. Notwithstanding that it was of a more permanent character than most buildings erected for similar purposes, it will require $5,000,000 to rehabilitate it. This sum has been provided by a bond issue voted by the South Park commissioners. Julius Rosenwald, chairman board of directors, Sears, Roebuck & Co., Chicago, is sponsor for the industrial museum, which has been incorporated as the Rosenwald Industrial Museum. Through his generosity a sum of not less than $3,000,000 has been made available for the purpose of purchasing, building and installing exhibits.

The South Park commissioners estimate that it will require two years to reconstruct the building, which consists of a center portion and two wings. In order to make use of the basement it will be necessary to raise the main floor. The height of the ceiling in the main section will be reduced by building in it a second floor. Much of the structural steel work and the brick walls will be retained. The exterior finish, which originally was done in plaster, will now be overlaid with either limestone or marble.

Mr. Rosenwald, after making a study of industrial museums in Europe, has determined on a course in installing exhibits which will show the effects upon, and the progress made by, civilization through the invention, use and development of mechanical devices. Replicas will be used where originals cannot be obtained. It is hoped that many originals of developments made wholly or in part in this country will be made available through the cooperation of American industries. Where possible, exhibits will be full size, supplemented by panoramas, in an effort to tell a complete story. Many models will be set up to be operated by push buttons that will be accessible to visitors.

Waldemar Kaempffert, at present scientific editor, New York *Times*, has been appointed executive director. As plans for the museum take more definite form, the directors will consult leaders in each of the various fields to be covered. The plan is to call on one man actually engaged in a given industry and also some academic man who is interested in the same field. These men will cooperate with the board of directors in laying plans and shaping the exhibit for that industry. This museum is being given the support of the Commercial Club of Chicago. The board of directors is as follows:

William Rufus Abbott, president Illinois Bell Telephone Co.; Sewell L. Avery, president United States Gypsum Co.; Edward F. Carry, president Pullman Co.; Rufus C. Dawes; T. E. Donnelley, president R. R. Donnelley & Sons Co.; John V. Farwell, chairman J. V. Farwell Co.; Robert P. Lamont, vice-president American Steel Foundries; Charles H. Markham, chairman Illinois Central Railroad; Charles Piez, chairman Link-Belt Co.; Theodore W. Robinson, vice-president Illinois Steel Co.; Julius Rosenwald, chairman Sears, Roebuck & Co.; Joseph T. Ryerson, president Joseph T. Ryerson & Son, Inc.; Albert A. Sprague, director Sprague, Warner & Co.; Robert W. Stewart, chairman Standard Oil Co. of Indiana; Harold H. Swift, vice-president Swift & Co.; Charles H. Thorne; Frank O. Wetmore, chairman First National Bank of Chicago, and Leo F. Wormser.

The Center Portion of the Field Columbian Museum, Remaining from the World's Fair at Chicago in 1893, Will House the Rosenwald Industrial Museum. An auditorium, to be located in one wing, will seat 4500. Photograph copyrighted by A. M. McGregor, Chicago.

Piercing Billets for Making Tubes

Rounds of a Few Sizes, Small Rather Than Large, Advocated for Plug-Mill Process—Expanding Mills for Extending Range of Tube Sizes

THE automatic or plug mill process of making seamless tubes was discussed at length at the Pittsburgh meeting of the American Society of Mechanical Engineers, May 14-17. Comparisons were made with the pilger process but the paper which was the subject of the discussion was devoted almost wholly to the plug mill system and argued for a small range of sizes of round billets, perhaps three or four, and small rather than large, for the whole range of sizes of seamless tubes. The paper was contributed by R. C. Stiefel and George A. Pugh, both of the Aetna Standard Engineering Co., Ellwood City, Pa. It was an unusually lucid explanation of the design of piercing mills and covered recent developments in the use of expanding mills calculated to produce the seamless product up to 24 in. in diameter. Generous extracts from the paper are given in the following, together with various points developed in the general discussion:

Pilger and Plug Mill Processes Compared

The pilger process is in use chiefly in Europe and the automatic or plug-mill process chiefly in the United States. Experience with both processes has established the following comparable economic features between the two methods:

1 The output in tons with the plug-mill process is two or three times more than with the pilger process.

2 The cost of installation is about the same for either process or is rather less for the plug-mill process.

3 The cost of tool equipment, such as rolls and mandrels, is several times greater with the pilger process than with the plug-mill process.

4 Rolls and mandrels must be of the best grade of alloy steel in the pilger process, and in the plug-mill process they are of similar composition to those used in other steel working methods.

5 Maintenance of plant and tool equipment is much less costly and more simple with the plug-rolling method than with the pilger method.

6 The quality of the tube produced with reference to evenness of wall thickness and smoothness of outside and inside surface is better and more uniformly reliable with the plug rolling process than with the pilger process.

7 Tube lengths obtained with the pilger process are currently 40 ft. to 60 ft., and exceptionally up to 80 ft. or 90 ft. With the plug-rolling process, lengths obtained today are 30 ft. to 40 ft.; with slight modification of the heretofore usual equipment, it will be possible to produce 50-ft. lengths.

8 The largest tubes produced with the pilger method are 20 in. in diameter and with the plug-mill process about 14 in. diameter. A recent development (expanding) will permit the production of 24 in. diameter and larger with the plug-rolling method.

Modern Plug-Mill Unit

In the typical modern plug-mill steel billets are charged into the piercing-mill furnaces, and from there into piercing machine *A* or piercing machine *B*, either of which can be operated as a piercer, or the first piercer for piercing only and the second piercer for enlarging the pierced billet.

From either of the piercing machines the billet is conveyed to the plug mill *C*. Here the billet is passed through the rolls two or more times for the purpose of reducing wall thickness and elongating it. All of the movements of the billet are performed mechanically on the plug mill with practically no hand labor.

From the plug mill the tube is conveyed to either of the reeling machines *D*, in which it is acted upon by oblique rolls on the outside and a cylindrical mandrel on the inside, for the purpose of equalizing the wall thickness and smoothing its outside and inside surfaces. In the reeling operation the diameter of the tube is slightly increased, resulting from a slight reduction of the wall thickness.

After the reeling operation, the tube is passed through the sizing machine *E* for the purpose of reducing it to the required diameter. This machine usually contains several pairs of grooved rolls. The tube, after leaving the sizing machine, is shifted on to a conventional type of cooling table consisting of a number of slowly moving conveying chains, rolling the tubes on a slightly inclined table.

Advocates Using Smallest Possible Billets

Referring to Fig. 2, it will be understood that the piercing mandrel over which the billet is forced explores, so to say, the inside of the solid billet on its full length for defects. An annular outside volume of the solid billet, represented in dotted lines, equal to the volume of the pierced billet, has remained unexplored by the mandrel. Any defect *d* in the explored section *S* of the solid billet, in the shape of what is commonly called a lamination, resulting from a blow hole in the ingot

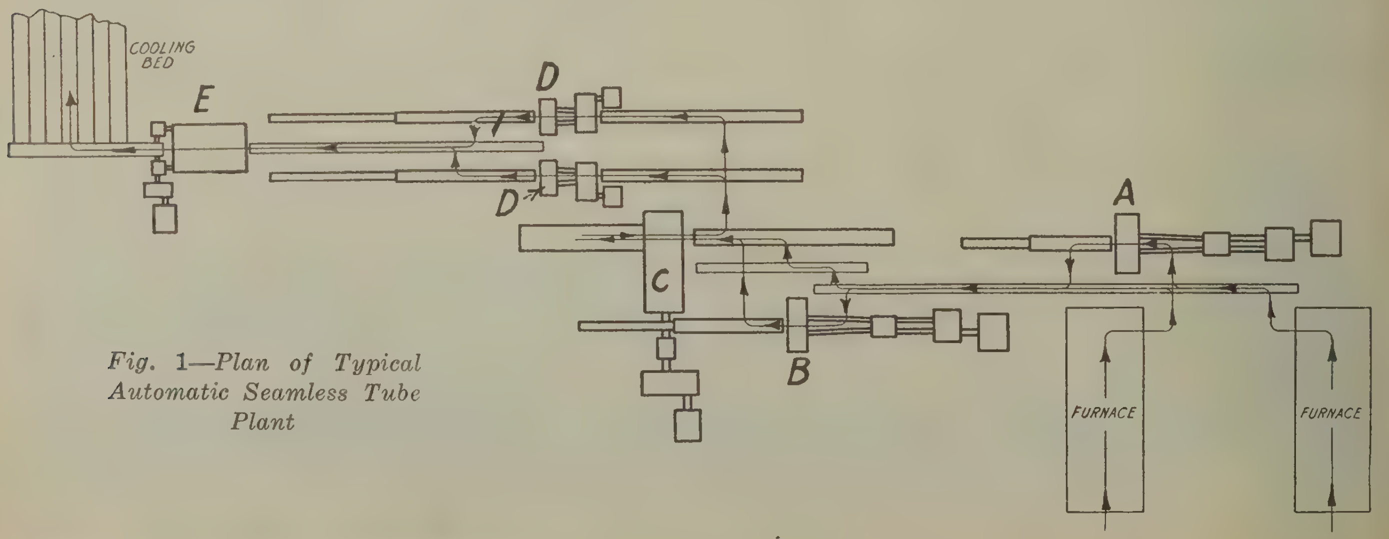


Fig. 1—Plan of Typical Automatic Seamless Tube Plant

from which the billet was rolled, is laid out or exposed on the inside surface of the pierced billet in the shape of a tear, seam, or lap, while any such lamination *l* existing in the unexplored annular section of the solid billet will remain practically undisturbed in about the same relative location in the annular section of the pierced billet. Therefore, the smaller the unexplored section is in relation to the full section of the solid billet, the fewer such laminations may be contained in the displaced central volume of the billet and consequently fewer or no tears, seams, or laps may be obtained on the inside of the pierced billet.

This condition again points in the direction of using as small a solid billet as possible for the production of a given size tube.

Design of Piercing Pass

Until lately there has been no good and reliable procedure established to determine the most favorable size of solid billet from which to produce a given size tube; it has been largely a matter of "rule of thumb." A common practice was to choose a solid billet of a diameter approximately the same, or somewhat smaller, than the desired tube. The correct method to determine the most favorable size of solid billet is as follows:

The piercing diagram illustrated in Fig. 3 is arranged in such a manner that the converging pass *CA* formed between the rolls establishes enough grip on the billet, by the time the latter has progressed to point *D*, to force it over the point of the mandrel. The elongation of the billet, that is, the reduction of its cross-sectional area, should be done only in the converging pass from *C* to *A* with a minimum draft or reduction of the billet. The diverging pass, from *A* to *B*, between the rolls and the mandrel is arranged so that the cross-sectional area of the billet at *A* is equal to that at *B*. In a piercing pass established to fill these conditions, the billet is subjected to expansion only in the diverging pass and to elongation in the converging pass.

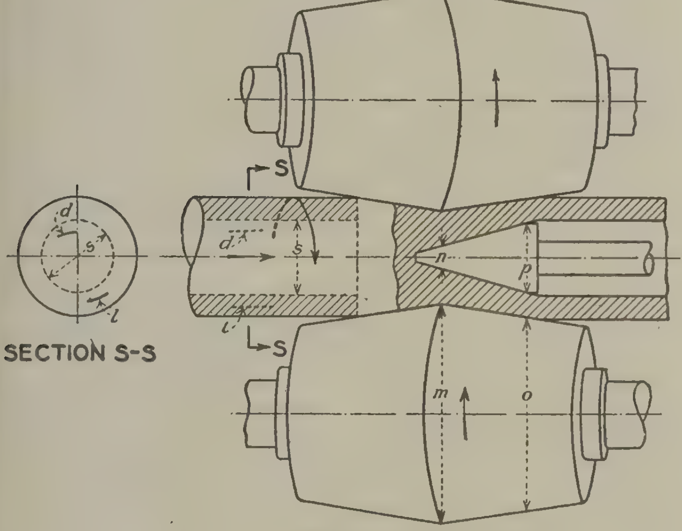

FIG. 2

It will be clear from a closer study of Fig. 3 that the metal of the billet has a fair chance to flow lengthwise (or the billet has a chance to elongate) in the converging pass, where it is gripped between the two roll faces forming a comparatively large included angle *a* between them. But where the metal is gripped between the two diverging roll faces and the two corresponding mandrel faces, it becomes almost impossible for it to flow lengthwise between the respective roll and mandrel faces which form a smaller flow angle *g* for the metal than is the case in the converging pass.

On the other hand, it is evident from the cross-section at *yy* of Fig. 3 that the flow angle in the transverse direction is greater than in the longitudinal direction, from which it follows that in the diverging pass the metal meets less resistance to flow in the transverse direction (expansion) than in the longitudinal direction (elongation). From this analysis it becomes clear that the diverging pass should logically be determined, as described, so as to compel expansion, and no elongation of the billet, instead of by using a mandrel the shape of which is determined by guess work.

Function of Piercing Rolls

It will be noted from Fig. 3 that, at the first contact *C* established between the billet and the rolls, the diameter of the roll is small while the billet is large; as the billet progresses from *C* to *A*, the diameter or circumference of the billet decreases while that of the roll increases; from *A* to *B* the reverse takes place, that is, the diameter or circumference of the billet increases while the corresponding diameter or circumference of the rolls decreases.

This irrational relation between corresponding diameters, and consequently speeds, of the rolls and billets at different contact points during the progress of the billet through the piercing pass, results in the setting up of the injurious stresses in the billet heretofore referred to; it also results in the breaking up of the center of the billet before it reaches the point of the mandrel, thereby favoring the penetration of the mandrel into the center of the billet; but it also has the effect of producing enormous friction or slippage between the rolls and the billet on the outside as well as between the mandrel and the billet on the inside. When considering that the metal pressure exerted by the rolls on the billet may amount to several hundred thousand pounds, it will be evident at once that much slippage under such great pressure will result in enormous waste of power.

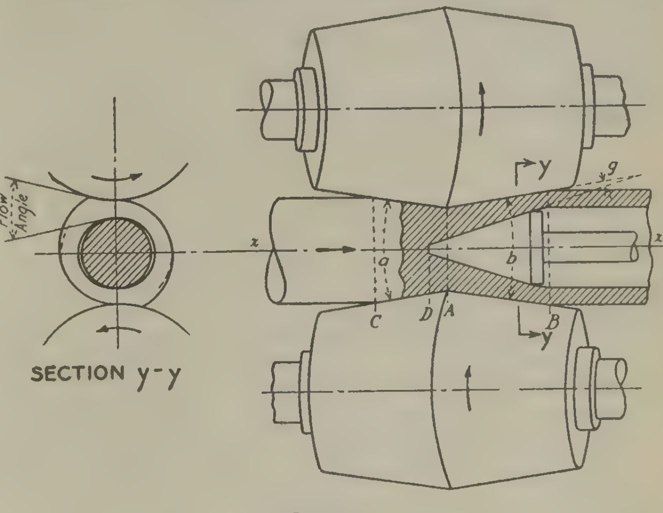

FIG. 3

Function of Piercing Mandrel

The peculiar functioning of the mandrel in the pass of the now customary piercing machine also greatly contributes to the setting up of injurious stresses in the billet. Referring to Fig. 2, it is apparent that the rolls, being obliquely disposed in relation to the axis of the billet or pass, tend to rotate the billet and feed it forward over the mandrel. The axis of the billet and the axis of the mandrel being the same, it is clear that the mandrel has no forward feeding effect on the billet; the billet therefore is fed or pulled or pushed forward on the outside by the rolls while the mandrel on the inside tends to prevent it from moving forward.

Furthermore, it will be noted that to the large diameter *m* (Fig. 2) of the roll is opposed the small diameter *n* of the mandrel, while to the small diameter

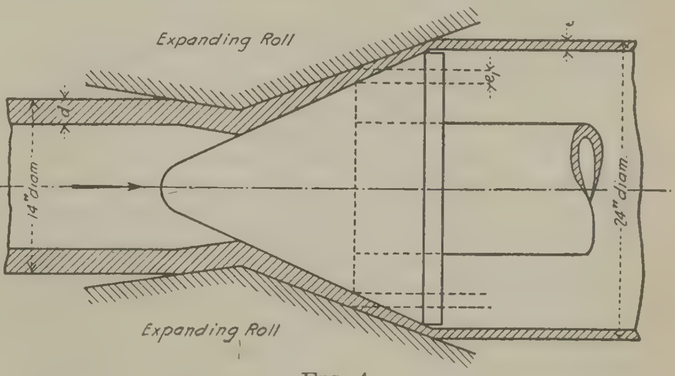

FIG. 4

o of the roll is opposed the large diameter *p* of the mandrel. The torsion and slippage stresses to which the outside of the billet is subjected by the speed differences of the rolls, as explained before, are therefore being repeated for the same reasons on the inside by speed differences of the mandrel. All this occurs under the heavy pressure on the metal necessary to displace it from under the contacting surfaces between it and the rolls and mandrel.

What has been stated heretofore with reference to power absorption by slippage or friction by the rolls on the outside of the billet, also applies in connection with the similar great friction or slippage occurring between the mandrel and the inside of the billet.

Piercing Power and Small Billets

The total power necessary in piercing consists of three main divisions:

1 Power absorbed by machine friction

2 Power absorbed by roll and mandrel friction on the metal

3 Power absorbed by metal displacement.

A careful analysis of the three power divisions would probably prove that, in many cases, the power absorbed by roll and mandrel friction on the metal is far greater than the power absorbed by actual metal displacement.

From the foregoing it becomes evident that the power required in piercing is of injurious character to the steel and that the amount of power required to produce a tube of a given size in a given time represents the measure of punishment imparted to the billet.

The tendency, therefore, should be to reduce the power in piercing to a minimum in the manner described and rather spend a little more power in the bar mill to produce billets of smaller diameter, the additional bar-mill power required being of a beneficial character to the steel, refining it to a higher degree. Thus a three-fold advantage will be obtained; better steel, less power consumption, and less punishment of the steel in piercing.

The conclusion should not be drawn that these difficulties are constant and standing in the way of producing seamless tubes as cheap or cheaper than lap-welded tubes. Good yields, varying between 80 per cent and 90 per cent from solid billet to finished tube, are now being obtained when producing lengths of about 30 ft. to 35 ft., which is a creditable result when considering crop-end losses and about 3 per cent furnace loss.

Expanding for Tubes as Large as 24 In.

Another inconvenience inherent in the now usual seamless plants lies in the fact that, when it is necessary to change production from one size of tube to another, considerable time, five hours or more, is lost in making the necessary shift in the machine equipment and size of solid billet.

Great advantages can be obtained in this respect by replacing the now commonly used reeling machine with an expanding machine, which may function the same as the present reeling machine or may be used to expand the tubular body coming from the plug mill, or from the piercing machine, into larger sizes of correspondingly thinner walls. Sufficient experimental work has been done to justify the assumption that this expanding method will permit the production of large size tubes up to about 24 in. diameter at comparatively little additional power requirement and with an initial plant cost equal to the cost of a plant for the direct production of tubes with the now usual plug-mill process up to about 14 in. diameter. Allowance for additional cost of larger finishing equipment will, of course, have to be made.

The benefits obtained from the expanding mill will become evident by a study of Fig. 4. A tubular body of 14 in. diameter and wall thickness *d*, coming from the plug mill or from the piercing mill, is expanded to 24 in. diameter of corresponding wall thickness *e*. If a tube of less than 24 in. diameter should be required, for instance, of a diameter as shown by dotted line, it could be produced without changing the setting of the rolls of the expanding mills by simply using a smaller expanding mandrel, as shown by dotted lines. This smaller tube, however, would have a wall thickness e_1, in the same proportion greater than *e* as its diameter is less than 24 in. Should the wall thickness of the smaller tube have to be less than e_1, then it could be obtained by simply preparing a tubular body at the plug mill or piercing mill of the same diameter (14 in.), but of correspondingly less wall thickness than *d*. On the other hand, if the wall thickness e_1 should be required to be greater than shown, then the wall of the entering tube would have to be correspondingly greater than that shown and designated by *d*.

Wide Range in Sizes from Few Sizes of Billets

The same advantages with reference to simplification in the production of different sizes which are described in the foregoing grouping of sizes from 14 in. to 24 in. obtain when grouping other sizes as, for instance, all sizes from 8-in. to 14-in. diameter and all sizes from 5-in. to 8-in. diameter.

It must be noted here that the indicated division of all sizes of tubes from 5 in. to 24 in. in diameter into only three groups, each to be produced from only three different tubular bodies of constant diameters, was given as an illustration only, and that it will be advisable to arrange the working program for more than only three groups in order to obtain the best possible piercing condition for one size of tube of each group and not too much deviation from the best piercing conditions for all the other sizes of each group.

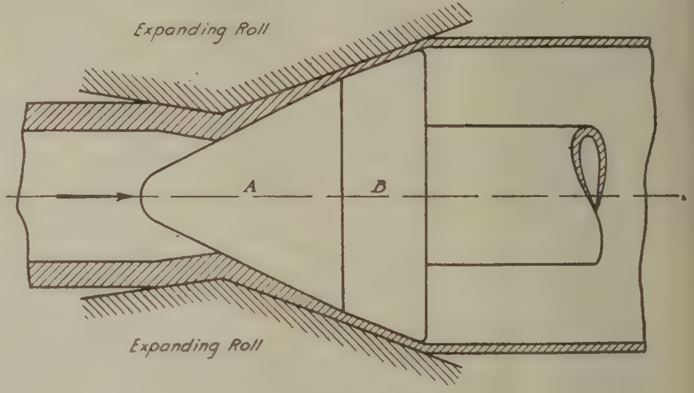

FIG. 5

This great flexibility in sizes obtainable from an entering tube of constant diameter dispenses with changes of guide and roll settings at the plug mill and at the piercing mill. The variation required in the wall thickness *d* of the entering tubular body can be obtained at the plug mill and piercing mill by a simple change of mandrels. At the expanding mill a change in the setting of the outlet guides would be required to accommodate the varying diameters from 14 in. to 24 in. of the outgoing tubes, but no change of the inlet guides would be required, the entering tube being of constant diameter. Changes in the settings of the reeling machine and sizing machine would have to be made in the same way as in the present installations.

Referring to Fig. 5, a modification of Fig. 4, the expanding mandrel is provided with two different cones *A* and *B*. Cone *A* forms a converging pass for the entering tube wall between it and the expanding rolls, and cone *B* forms a parallel pass for the tube wall between it and the expanding rolls. On cone *A*, the entering tubular body has its wall reduced and its diameter enlarged, and on cone *B* the wall is smoothed out in exactly the same manner as is now the case in the customary reeling machine. By the use of this modified mandrel, the expanding and reeling operations may be performed simultaneously in the thus-formed expanding-reeling pass. The expanding method referred to forms the subject of United States patents.

Output, Cost and Quality

The output in a modern plug-mill plant in tubes of 5 in. diameter and larger is about 200,000 tons per year.

The cost of production of seamless tubes of usual sizes is the same as, or less than, that of lap-welded tubes. Inasmuch as the seamless-tube industry is comparatively new, it is reasonable to assume that more progress will be made with reference to cost of production.

The method of manufacturing seamless tubes permits the use of high-carbon steel or alloy steel, resulting in a product of superior quality, with reference to strength and usage. It is also applicable to other metals, such as copper, brass, aluminum, etc., all of which are impossible by the welding process.

Better Steel Needed for Automatic Process

Among those who discussed the Stiefel-Pugh paper at length was J. B. Wharton, Standard seamless tube plant of Spang, Chalfont & Co., Economy, Pa. He said in part:

"For the pilger process cast round ingots are used. The ingots are always considerably larger than the finished tube to be made. These ingots are reheated and pierced with a heavy wall. The inside diameter of the pierced blank is approximately the same as will be the inside diameter of the finished tube. The outside diameter, however, is 3 to 4 in. larger than will be that of the finished tube. The pierced blank is then forged down in the pilger mill to the desired outside diameter. This operation tends to forge out and cover up any defects developed in the piercing operation.

"For the automatic mill process, rolled rounds are used. The diameter of the round is much smaller than the finished tube. The initial piercing is with a heavy wall comparable to the pierced blank for the pilger mill. The diameter of the pierced blank is still much smaller than the finished tube. In the second piercing operations the pierced blank is expanded 30 to 40 per cent in diameter, elongated 50 to 100 per cent and wall thickness reduced to a thickness of about 50 per cent greater than the finished tube. The second piercing operation therefore not only aggravates any defects developed in the first piercing operation, but uncovers others which may have been in the steel and not brought out in the first piercing.

"As opposed to a reduction in diameter in the pilger process, there is an expansion in diameter in the automatic mill process. It would therefore seem clear that a better quality of steel is required for the automatic process than for the pilger.

"We have been able to secure very consistent results on the power required to expand a pierced billet. The calculation was the power required to displace a given volume of metal per second. The table shows that the number of kilowatts per cubic inch of metal displaced per second varies from 11.5 to 14.2. This result is reasonably close when we consider the fact that no attempt was made at temperature control, other than the furnaceman's judgment."

Comparison with Lapwelded Tube Conditions

H. H. Murray, superintendent Babcock & Wilcox Co., Beaver Falls, Pa., also discussed the paper. "The authors state," said he, "that the difficulties experienced in seamless tube manufacture should not lead us to draw the conclusion that seamless tubes cannot be produced as cheaply or cheaper than lapwelded tubes. All of us who manufacture seamless tubes are looking forward to the time when this will be accomplished, but at the moment, excepting perhaps a few individual cases, this has not generally been the case. Most of the seamless tube mills at present in existence were designed to take care of a more or less general business of varying sizes and types of tubes, whereas lapweld mills as a rule, due largely to the enormous requirements of the oil industry, are built to give a maximum output on a narrow margin of sizes processed in large quantities. When hesitancy of capital has been overcome, perhaps we may have seamless mills built along these latter lines. When that time comes, we should be well able to meet the lapweld man on his own ground."

Ingots Cast for Piercing

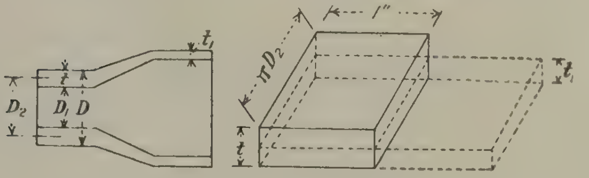
W. M. Selkirk, chief engineer, Pittsburgh Steel Products Co., said that cast steel ingots pierced with heavy walls have been used in Germany in connection with the plug mill but this involves as many as 18 passes in the plug mill and also reheating and the sawing off of the rolled billets between certain passes in order to produce hot finished tubes of commercial size and quality—a procedure not considered economical in the United States.

"It is apparent from the paper," said he, "that a pierced billet with a much heavier wall would be necessary for the production of all classes of seamless tubes —a condition favorable to the use of cast ingots for the plug as well as the pilger mill. A great deal of equipment could be eliminated, especially with the pilger process." Tubes over 130 ft. in length have been produced in the pilger process in this country, he added, and while he admitted these display certain economies in the matter of scrap losses, reduced cropping, etc., the commercial value of such lengths was questionable in the light of handling and transporting difficulties.

An investigation of freight rates in the Chicago switching district opened May 15 at Chicago before J. B. Campbell, chairman of the Interstate Commerce Commission. The present hearings, which have extended into this week, cover I. C. C. Docket 19610, which provides for a general investigation of Chicago district switching rates, and also I. C. C. Docket 2900, under which the commission suspended an advance in rates published by the railroads. These tariffs called for a rate of 3c. per 100 lb. for a one-line haul, and 3½c. for a two-line haul, and 4c. for three or more. The old rates are 2c., 2½c. and 3c., respectively.

In a proposed report by Examiner W. M. Carney to the Interstate Commerce Commission it is held that rates on spelter, in carloads, from points in Arkansas, Oklahoma, Missouri and Kansas to Newport, Ky., are not unreasonable, but are unduly prejudicial to the extent they exceed the rates to Chicago, which are 11c. per 100 lb. lower.

Determination, as Explained by J. B. Wharton, of Amount of Power Required to Displace Metal in Piercing Operation



The volume of metal displaced per unit of feed of billet is equal to

$$\frac{\pi}{4}(D^2 - D_1^2) - \pi D_2 t_1$$

The table gives the results of the observed power for the cases cited.

Size of finished pipe, in.	9	9⅝	11¾	13⅜
Pierced billet:				
Weight, lb.	1345	1060	1712	1825
Outside dia., in.	7¼	7½	9	10½
Wall, in.	1½	1⅝	1⅝	2½
Area, sq. in.	27.1	29.99	37.65	62.84
Mean dia., in.	5¾	5⅞	7⅜	8
Mean circum., in.	18.06	18.45	23.17	25.13
Expanded billet:				
Outside dia., in.	9½	10⅛	12	13⅞
Wall, in.	11/16	11/16	⅞	¾
Mean circum., pierced billet and thickness exp. billet	12.4	12.7	20.4	18.9
Displaced metal per in. length pierced billet	14.7	17.29	17.25	44.04
Feeding speed, in. per sec.	12.35	7.50	9.4	4.8
Displacement, cu. in. per sec.	182	130	162	212
Total kilowatts	2100	1850	2250	2600
Kw. per cu. in. per sec.	11.5	14.2	13.9	12.3

Supply Associations May Combine

Manufacturers' and Two Distributers' Organizations Approve Consolidation Plan at Nashville Convention—"Business at a Profit" Slogan of Meeting

ACTION leading toward consolidation of the National Supply and Machinery Distributers Association, the Southern Supply and Machinery Dealers' Association and the American Supply and Machinery Manufacturers' Association, was taken at the joint convention of these organizations at the Hotel Hermitage, Nashville, Tenn., May 15, 16 and 17. A committee of nine, consisting of three representatives from each of the three associations, will confer within a short time to see if it is possible to work out an arrangement whereby a common secretariat can be established and the activities heretofore carried on separately can be coordinated.

The unusually large attendance testified to the interest of the mill supply industry in the striking slogan of the convention, "Business at a profit rather than profitless prosperity," and the sessions were planned so as to give ample opportunity for discussion of this subject. The convention consisted of separate business meetings of each association as well as joint sessions. At the latter the union of the associations was the main topic.

To consider plans for consolidation, the American Supply and Machinery Manufacturers' Association appointed a committee the members of which are D. S. Brisbin, Columbus-McKinnon Chain Co., Columbus, Ohio; J. Harvey Williams, J. H. Williams & Co., Buffalo, and S. P. Browning, Ohio Valley Pulley Works, Maysville, Ky. This committee will confer with a similar group from the National Supply and Machinery Distributers' Association, consisting of E. P. Welles, Charles H. Besly & Co., Chicago; George Puchta, Queen City Supply Co., Cincinnati, and H. W. Strong, Strong, Carlisle & Hammond Co., Cleveland, and a group from the Southern Supply and Machinery Dealers' Association, composed of D. D. Peden, Peden Iron & Steel Co, Houston, Tex.; W. W. Doe, Alabama Machinery & Supply Co., Montgomery, Ala., and T. C. Keeling, Nashville Machine & Supply Co, Nashville.

Proposals for amalgamation were first made by the American Supply and Machinery Manufacturers' Association, which extended invitations to the other two associations to join with it in the formation of a new body to take the place of the three existing organizations. If the committees from the associations agree upon a plan for a union, each of the bodies will conduct a referendum vote of its members to ascertain whether a majority is in favor of consolidation.

Remedial Trust Legislation Favored

Declaring that the present administration and interpretation of the Sherman and Clayton anti-trust laws operate in such manner as to prohibit competitors from entering into agreements and exchanges of information, regardless of the reasonableness thereof, the three associations adopted resolutions urging Congress to pass remedial legislation giving equal weight to the interests of capital and labor with that of the consumer. To bring attention of members of Congress to this situation, committees from each of the three associations were named.

At the first joint session of the convention, E. P. Welles, president of the Mill Supply Council, related the history of that organization and told about its activities in the past year.

"Business at a Profit" and Maintenance of Resale Prices

AT the opening of the twenty-third annual convention of the National Supply and Machinery Distributers' Association, President E. P. Welles reviewed the history of the association. In his annual presidential address he stated that a repetition of the unsatisfactory business conditions in 1927 could be avoided by members insisting upon dealer distribution, by the suggestion and maintenance of resale prices by manufacturers with a spread sufficient to cover modern cost of distribution, by determination to have business at a profit and by members following the association's national program for 1928.

The tendency of some manufacturers to place their lines with numerous distributers, and particularly with those engaged in other businesses, such as plumbing supply houses, pipe jobbers and hardware retailers, was deplored by George A. Fernley, secretary-treasurer, in his annual report. Mr. Fernley emphasized the fact that manufacturers are giving more serious thought to the prosperity of the distributer and are urging industrial users to make purchases through him.

Among the topics discussed by Mr. Fernley were the Mill Supply Council, National Wholesale Conference, overhead expense reports, local and sectional associations, direct competition of manufacturers with distributers, resale price legislation, price cutting, overstock and goods wanted bulletins, simplification, collection bureau of the association, inadequate margins of profit allowed distributers, tax reduction, keeping salesmen informed of price changes, analyses of costs and sales, inventory discrepancies or concealed losses and motor truck deliveries.

During the past year the association added 35 new members.

Average Distribution Cost 22.54 Per Cent

Accomplishments of the association were set forth in a brochure distributed at the convention. In the brochure is a summary of overhead expense reports of members for the past six years. This shows that in 1927 the average expense was 22.54 per cent, the average gross margin 22.83 per cent and the average turnover 4.13 times. Turnover has risen gradually and consistently to that figure from 3.52 times in 1924. The brochure also contains the 1928 platform of the association. In regard to salesmen, the platform states that "we believe it is an erroneous policy for the distributer to give salesmen cost figures or to permit salesmen to make prices. All selling prices should be determined by a responsible executive in the house and no deviation from such selling prices should be made, except with the consent of the sales manager."

Statistics prove that it is impossible to distribute goods on a margin of 12 or 15 per cent, declared B. H. Ackles, Rayl Co., Detroit, in discussing "business at a profit rather than profitless prosperity." The only way to make the manufacturer realize this fact is through educational work on the part of each individual member cooperating with the association. H. O. Wentworth, Vulcan Copper & Supply Co., Cincinnati, in a paper suggested that the slogan of distributers should be "business at a profit or no business at all." He likewise stressed the point that operating for volume and cutthroat competition are synonymous. He cited the fact that expense sheets of the past three years, tabulated by the association's office, show a net profit for the distributer of less than 0.5 per cent. This situation can be corrected by arriving at an average basis of selling prices that will meet the present-day cost of doing business plus a further allowance representing a profit at the end of the year. Much can be done by the distributers to bring about this correction, but in six or eight lines an adjustment is dependent upon manufacturers. Here the desired results can best be accomplished by urging manufacturers to fix consumers' resale prices on their products. The same procedure followed by the bolt and nut makers should be followed in drills, files, taps, wrenches, cap and set screws and other commodities.

Knowledge of Costs Necessary for Profits

Distributers can conduct their businesses so as to get maximum profits by having an exact knowledge of the cost of doing business, by keeping a careful check of general expenses and by proper cooperation from all departments or divisions of the company, stated P. O. Boylan, W. M. Pattison Supply Co., Cleveland. Mr. Boylan said that every order must carry a profit and that the setting of a low price does not mean good service and does not insure a repeat order. He declared that "where the low-priced house has one chance for business, the house insisting on a profit commensurate with the service given has nine."

From a local point of view, asserted A. E. Douglas, E. A. Kinsey Co., Cincinnati, simplification of the following lines would be beneficial by enabling the company to carry a smaller inventory: machinists' tools, pipe threading tools, goggles, drill chucks, abrasive wheels, paper and cloth disks. In fact, these are but a few of the lines which should be simplified. While simplification will reduce burden in stock carrying, if sales are affected, resulting in loss of profit, caution should be exercised. Mr. Douglas stated that standardization means the elimination of variety, which is one of the most potent selling arguments. He said that the solution for simplification is for each distributer to have an arrangement with his source of supply whereby items in his line may be returned for credit or exchange for items which will move more rapidly.

Benefits of simplification were listed by Lawrence G. Puchta, vice-president Queen City Supply Co., Cincinnati, in a paper read at the convention, while W. A. Slack, president Torchweld Equipment Co., Chicago, brought out the value of a one-price policy.

E. P. Welles Reelected President

E. P. Welles was reelected president of the association, while H. H. Kuhn, Hardware & Supply Co., Akron, Ohio, will serve as first vice-president, and H. E. Ruhf, Cleveland Tool & Supply Co., Cleveland, as second vice-president. Members elected to the executive committee were T. E. Hazell, William H. Taylor & Co., Allentown, Pa.; Arthur Yorke, Hanson & Yorke Co., Inc., Scarsdale, N. Y.; Charles E. Allinger, Charles A. Strelinger Co., Detroit, and William Todd, Jr., Somers, Fitler & Todd Co., Pittsburgh. In addition, E. B. Hunn, C. S. Mersick & Co., New Haven, Conn., and Louis A. Clark, Samuel Harris & Co., Chicago, will serve on the committee, their terms not expiring until next year.

Uniform Accounting for Distributers Recommended

"A SCIENTIFIC and uniform accounting system is the common language by which we can discuss our problems and measure our proficiencies and deficiencies," stated T. C. Keeling, in his annual address as president of the Southern Supply and Machinery Dealers' Association. Having put into operation a modern system of accounting, the dealer must next seek to interpret the data it reveals. Mr. Keeling emphasized the fact that laws governing the cost of distribution in the mill supply industry have not been formulated, and that "we have all acted blindly on the assumption that costs will decrease, or at least remain stationary, as volume increases. There are good reasons for believing that it is a fallacy when applied to all units, regardless of their volume of sales. If it be true, how can we account for the fact that overhead expenses of all companies reporting for the Southern and the National associations have been steadily climbing year after year, when commodity prices in general have been decreasing?"

Mr. Keeling stated the principle that distribution costs are a function of the volume of goods produced, and the greater the volume the greater will be the unit cost of distribution. He further declared that distributers must prove conclusively to manufacturers that the latter can get their goods into the hands of consumers at the lowest possible costs by distributing solely through distributers.

"As long as we suffer from a feeling that price, and price only, will secure us business, and that any effort, worthy or unworthy, made to get this business is a proper way to get it, just so long should we refrain from any criticism of manufacturers who sell direct and do not protect the distributers, or from criticism of other distributers who may enter our field and meet the conditions created by us," stated the executive committee, of which L. J. Larzelere, Farquhar Machinery Co., Jacksonville, Fla., is chairman, in its annual report.

Unprofitable Sales Should Not Be Made

The executive committee asserted that "more important even than the establishment of a resale price and the adherence to it is the determination to refuse to make a sale that does not carry a decent margin of profit." It indorsed the stand taken by the United States Chamber of Commerce in regard to national tax relief, and expressed the opinion that members of Congress do not realize that the great mass of business in this country is composed of small corporations. The committee deplored the fact that railroads serving the South have announced a policy of cancelling all less-than-carload commodity rates, substituting higher rates.

Alvin M. Smith, Smith-Courtney Co., Richmond, Va., secretary-treasurer of the association, referred in his annual report to the district meetings held during the past year at Huntington, W. Va., Nashville, Memphis, New Orleans, Dallas, Birmingham, Charlotte, N. C., and Jacksonville, Fla. He declared that, while 1927 was not a particularly good year in either volume of sales or extent of profits, it could have been much better if manufacturers and distributers had made the proper effort to secure a living margin of profit. He said that "it is just as easy to get a profit as it is not to get one, and when our practice is to indulge in 'fear-mindedness' and, wherever we can find the opportunity, to cut below the other fellow's price, it is time for us to retire from business." Mr. Smith also discussed the increased freight rates put into effect by Southern railroads, the functions of a trade association, relations with manufacturers and other association activities.

W. W. Doe was elected president of the Southern association. Officers who will serve with him are D. D.

Peden, first vice-president; C. J. Salm, Dixie Mill Supply Co., Inc., New Orleans, second vice-president; T. C. Keeling, chairman of the executive committee; L. J. Larzelere, Philip Pidgeon, Pidgeon-Thomas Iron Co., Inc., Memphis; C. W. Beckner, West Virginia-Kentucky Hardware & Supply Co., Huntington, W. Va., and W. M. Given, Young & Van Supply Co., Birmingham, members of the executive committee.

Manufacturers Reiterate Belief in Distribution by Dealers

ROBERT B. SKINNER, Skinner Chuck Co., New Britain, Conn., in his message as president of the American Supply and Machinery Manufacturers' Association, called attention of the members to the report on "The Mill Supply Situation" of the delegates of the organization to the Mill Supply Council. This report already had been approved by the association's executive committee and advisory board. It pointed out that the council in its meetings had established a code of business ethics, had induced the National Supply and Machinery Distributers' Association to abolish its manufacturer membership and had received assurance from the American Supply and Machinery Manufacturers' Association that it would drop from its roster those members who have not expressed themselves as favoring distribution of mill supplies through dealers, wherever possible. Incidentally, the National Supply and Machinery Distributers' Association and the Southern Supply and Machinery Dealers' Association voted at the convention to discontinue the practice of accepting manufacturers as associate members, this policy to become effective May 31. At the same time they reiterated the belief that the association should continue to indicate "by deed as well as by word our sincere belief in dealer distribution and our function to lend all aid possible to that result, but on a basis of nothing less than absolute equality." It is as a result of this stand taken by the association that it proposed a United Mill Supplies Association to take the place of the three present associations.

Dixon C. Williams Chosen President

At the annual election Dixon C. Williams, Chicago Nipple Mfg. Co., Chicago, was chosen president. Other officers to serve the coming year are S. P. Browning, Ohio Valley Pulley Works, Maysville, Ky., first vice-president; C. O. Drayton, Graton & Knight Co., Worcester, Mass., second vice-president; B. F. Ruether, Mechanical Rubber Co., Cleveland, third vice-president; W. C. Allen, Black & Decker Co., chairman executive committee; David C. Jones, Lunkenheimer Co., Cincinnati; K. G. Merrill, M. B. Skinner Co., Chicago; Eugene Grant, Dodge Mfg. Co., Mishawaka, Ind., and K. W. Atkins, E. C. Atkins & Co., Inc., Indianapolis, members of the executive committee.

STEEL TREATERS ELECT

Officers and Executive Committees Are Named by Several Chapters

F. F. Lucas, Bell Telephone Laboratories, Inc., New York, has been elected chairman of the New York chapter of the American Society for Steel Treating. E. C. Bain, Union Carbide & Carbon Corporation, has been named vice-chairman, and T. N. Holden, E. W. Bliss Co., secretary-treasurer. The new executive committee is as follows: J. J. Crowe, Air Reduction Sales Co.; J. B. Romer, Babcock & Wilcox Co.; F. C. Langenberg, Climax Molybdenum Co.; F. B. Coyle, International Nickel Co.; E. P. Gaffney, Crucible Steel Co. of America; J. T. Wyzalek, Hyatt Roller Bearing Co., and Gordon Bell, Central Alloy Steel Corporation.

Chicago Chapter

A. M. Steever, metallurgical engineer Great Lakes Forge Co., Chicago, has been elected chairman of the Chicago chapter, and Donald Colwell, metallurgist Stewart Die Casting Co., will serve as vice-chairman. J. A. Comstock, assistant metallurgist People's Gas, Light & Coke Co., continues as secretary-treasurer. Those elected to serve on the executive committee are Ray Mau, district manager Vanadium Alloy Steel Co.; W. A. Scheuch, metallurgist Western Electric Co., Inc.; Harry Hardwicke, vice-president Atlas Steel Corporation; F. R. Jeffries, superintendent of heat treating for Templeton Kenly, Ltd.; E. J. Gossett, president Bell & Gossett Co., and A. T. Clarage, president Columbia Tool Steel Co.

Detroit Chapter

The Detroit chapter has named the following officers: F. P. Zimmerli, metallurgist Barnes-Gibson-Raymond, Inc., chairman; C. Upthegrove, associate professor of metallurgy University of Michigan, vice-chairman, and Joseph G. Gagnon, metallurgist Hudson Motor Car Co., secretary-treasurer. The executive committee is made up of E. J. Hergenroether, metallurgist Cadillac Motor Car Co.; A. L. Grinnell, district representative General Alloys, Inc.; H. O. Lang, sales engineer Halcomb Steel Co.; J. W. Robinson, sales engineer Higgins-Bothwell Co.; E. H. Stillwell, metallurgist Dodge Brothers, Inc.; E. C. Wahl, district representative Leeds & Northrup Co.; F. C. Young, metallurgist Ford Motor Co.; Charles Foreman, metallurgist Buick Motor Car Co., Flint, Mich.; Gordon A. Stumpf, metallurgist Reo Motor Car Co., Lansing, Mich., and Leo L. Vasold, metallurgist Willys-Overland Co., Toledo, Ohio. These men will take office at the annual outing to be held June 9.

Rochester, N. Y.

C. F. Wattel has been named chairman of the Rochester, N. Y., chapter; E. S. Roscoe, vice-chairman, and I. C. Matthews, secretary-treasurer. These men, together with G. E. VanVechten, F. W. Arvine, H. J. LeClaire, C. E. Codd, R. F. Kimber and D. I. Harrison, will serve on the executive committee.

Golden Gate Chapter

At a meeting of the Golden Gate chapter held on May 9 at the Athens Athletic Club, Oakland, Cal., Dr. W. J. Crook was elected chairman for the coming year. Clyde Williams was named vice-chairman and H. E. Morse secretary-treasurer. The following executive committee was elected: C. Hawley, G. E. Batten, J. S. Fowler, D. H. Grubb, W. Grothe, Ivan Johnson, H. J. F. Niemann, E. E. Fess, J. V. Coulter, S. H. Edwards, C. M. Henderson and J. R. Gearheart.

The meeting, which was held jointly with the American Welding Society, was also the occasion of talks on the selection of automotive steels, by Edgar E. Jamison; on the selection of tool steels, by S. H. Edwards, and on the selection of methods for steel castings, by Ivan Johnson. K. V. Laird presented an illustrated paper on "Welds at High Temperatures."

Syracuse Chapter

At the annual meeting of the Syracuse, N. Y., chapter, held on May 8, J. J. Driscoll, Crucible Steel Co. of America, was elected chairman; S. P. Peskowitz, Halcomb Steel Co., vice-chairman, and K. J. MacKenzie, Brown-Lipe-Chapin Co., secretary-treasurer. W. R. Frazer, Halcomb Steel Co.; C. B. Smith, Crucible Steel Co. of America; Earl Houghton, Brown Lipe Gear Co.; William F. McNally, New Process Gear Corporation, and R. L. Manier, Syracuse Lighting Co., were chosen members of the executive committee.

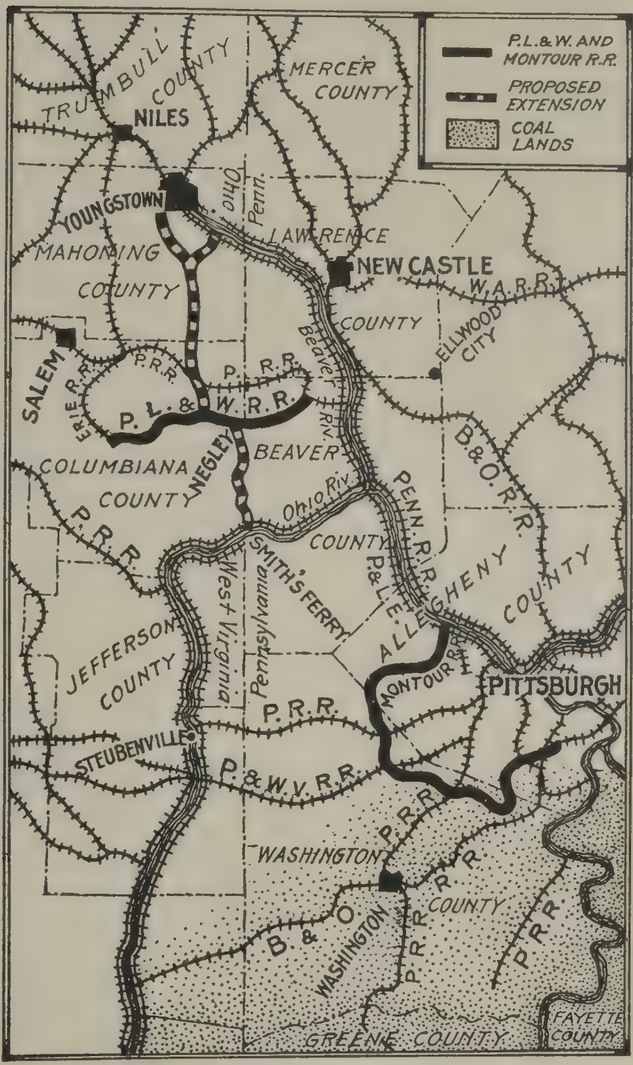
Orders for electric hoists during April, according to reports by members of the Electric Hoist Manufacturers' Association, decreased 29.44 per cent as compared with the previous month. The value of such orders decreased 23.91 per cent as compared with March and shipments were 11.73 per cent less.

CARNEGIE LIBRARY OF ATLANTA

Valleys Seek Ohio River Outlet

Youngstown Steel Makers Say P., L. & W. Extensions Would Open Ohio Valley Markets and Lower Freight Rates on Incoming Coal

WASHINGTON, May 22.—Iron and steel interests of the Mahoning and Shenango Valleys are awaiting with interest the outcome of the application of the Pittsburgh, Lisbon & Western Railroad to construct two branch lines which would connect the Valleys with water transportation through the Ohio River. Hearings on the application before C. V. Burnside, assistant traffic director of the Interstate Commerce Commission, were concluded last Thursday. The hearings also covered an application of the Montour Railroad, a subsidiary of the Pittsburgh Coal Co., to acquire control of the P., L. & W. stock.



Map of Proposed P., L. & W. Extensions

Trunk Line Carriers Oppose Plan

Opposition to the proposed construction was offered by Trunk Line carriers, including the Baltimore & Ohio, the Pittsburgh & Lake Erie and the Pennsylvania. Counsel for these lines contended that the proposed branches would not be in the public interest and would not further public convenience as required by the Transportation Act, under which the applications were made. It was argued that the Trunk Lines already have ample capacity to meet the requirements of the Valleys, and it was implied that the desired river-and-rail service would be given by the P. & L. E. through connection at Monaca, Pa., on the Ohio River, and by the Pennsylvania through connection at Beaver, Pa., at the junction of the Beaver River and the Ohio, at rates as low as those suggested by the P., L. & W. over its proposed branches.

Youngstown District Slipping

Witnesses supporting the proposed construction program pointed out that they have appealed in vain to these carriers for river-and-rail service for many years and declared they had lost faith in them. They stated also that the proposed branches of the P., L. & W. would serve their interests best. In the meantime, they asserted, the iron and steel industry in the Valleys has reached a point of little or no profits, with no prospect of further development and every evidence that this industry, as well as other industrial activities of the district, will continue to decline. High freight rates were assigned as the reason for this situation. Unless the river service is made available, some witnesses went so far as to say, the very existence of the iron and steel industry in the Valleys will be threatened. A. E. Adams, Youngstown banker, testified that Youngstown has been strangled by high freight rates and has been able to live during the past 10 years only by past prosperity. He strongly urged lower rates to meet competition with rail-and-water service from the Pittsburgh and Wheeling districts, saying this was necessary to save the Valleys from industrial stagnation.

The proposed extensions would make Ohio River transportation available for coal coming from western Pennsylvania, thus affording water traffic for all but about 40 miles. This movement of coal into Youngstown was placed at 6,000,000 tons annually. It was declared that the Pittsburgh and Wheeling districts have access to much all-water service for both incoming shipments of raw materials and outgoing shipments of finished products.

The Valleys also see in the proposed branch lines a chance to put their products on the river with only about 40 miles of rail service and, by so doing, find it easier to compete with Pittsburgh and Wheeling producers in the markets of the Ohio and Mississippi Valleys which may be reached by reshipment of products from concentration warehouses located along the two rivers. Frank Purnell, assistant to the president of the Youngstown Sheet & Tube Co.; Richard Jones, Jr., counsel for the Republic Iron & Steel Co.; E. R. Griffith, traffic manager of the Sharon Steel Hoop Co.; H. D. Rhodehouse, traffic manager of the Youngstown Chamber of Commerce, and Mr. Adams testified that the Valley interests have been trying for many years to get relief from the so-called disruption of their competitive relationship with the Pittsburgh and Wheeling districts, which resulted, they said, from freight rate increases during the war.

Sheet & Tube Company Would Cooperate

It was stated by Mr. Purnell that the interests of the Youngstown Sheet & Tube Co. and the Pittsburgh, Lisbon & Western Railroad are identical. He further said that Youngstown shippers must be assured of a permanent arrangement and that the proposed 60c. rate from Beaver, Pa., to Youngstown on coal from Pennsylvania would have to be subject to future adjustments as competitive conditions arose. He admitted that the Pennsylvania and the P. & L. E. have adequate capacity to handle the tonnage that would develop between Youngstown and Beaver and could afford probably a rate of 90c. on coal delivered from western Pennsylvania into Youngstown, as against the present rate of $1.42.

In the course of further cross-examination, Mr. Purnell said that the proposed branch of the P., L. & W. would connect with the Youngstown Sheet & Tube plant at Struthers, Ohio.

Mr. Purnell said that the Youngstown Sheet & Tube Co. expects to acquire all the equipment necessary to operate in connection with the branch line, including coal yards, etc., at Smith's Ferry. The company, he said, has no financial interest in the P., L. & W., but has promised to encourage operation of the line. He said the principal products the Sheet & Tube company would ship by rail and water via the proposed line would be steel pipe, wire, sheets and perhaps bars and plates. On redirect examination Mr. Purnell said the chief handicap suffered by Sheet & Tube company relates to fuel.

Freight Rate Handicaps

In his direct testimony Mr. Purnell said that the Youngstown district is the third largest producer of iron and steel products in the United States and, until comparatively recently, was the second largest, having been superseded by the development in the Chicago district. It was declared that output of iron and steel in the Youngstown district last year declined materially and that, had it not been for the Chicago properties of the Sheet & Tube company, it would have made scarcely any showing in the way of profit. This was attributed to the alleged handicap Youngstown suffers in the way of high freight rates, as compared with lower rail-and-water rates enjoyed by the Pittsburgh district.

Mr. Purnell complained that Youngstown had suffered because of the high freight cost of assembling raw material. He quoted rates and costs showing the advantage which, he declared, is now enjoyed by the Pittsburgh district in assembling costs of raw materials. Assembling costs of the basic raw materials for the blast furnace at Youngstown were said to be $4.44 per ton, as against approximately $2.59 for Aliquippa, Pa., and $3.11 for the Pittsburgh district. He said that the additional cost needed to make and finish the steel is from 75c. to $1.25 per ton, depending on how highly finished the steel is. These additional costs, it was stated, come as a result of additional steam coal and gas coal required beyond production of pig iron.

Pittsburgh Said to Have Profited

In 1923, Mr. Purnell stated, the Youngstown company purchased the Steel & Tube Co. of America at Chicago because of high freight rates into Youngstown, and future growth of the company, he added, will be in the Chicago district. In the Youngstown district, he said, it is not expected to expand in pig iron and steel production, "but only spend such sums as may be necessary to lower costs of production unless and until we obtain material reductions on costs of transportation of our raw materials." Pittsburgh mills, he said, have established distributing points at Cincinnati, Louisville, Memphis, Tenn., and New Orleans in comparatively recent years and are shipping on their own barge lines and distributing from their warehouses at these points. Youngstown, he said, is denied use of the river and its fair share of business in the Mississippi and Ohio valleys, together with many points distant from the river. He cited instances of much business lost to the Youngstown district because of what he said were higher costs of production due to the so-called handicap in freight rates.

Traffic Increase on Ohio River Emphasized

It was brought out that iron and steel traffic on the Ohio River has trebled in the past six years. On the Allegheny and Monongahela rivers, it was testified, much of the through and local traffic, both in raw materials and finished products, arises from the iron and steel industry.

The entire P., L. & W. application, it was suggested in the testimony, is apparently based upon the fact that the Government has made a statutory declaration that its policy is "to promote, encourage and develop water transportation, service and facilities." Witnesses supporting the application made it evident that they have taken this declaration at its face value and have taken this way to show that the declaration of Congress and the many millions of dollars spent by the Federal Government on inland waterway development are not merely for the benefit of properties and industries located directly on rivers.

It was estimated that the through rate on coal from western Pennsylvania to Youngstown would range from 50c. to 75c. per ton by way of the proposed branch lines, while the existing rate from the Pittsburgh district is $1.34 and from the Connellsville district it is $1.43.

Say Cost Would Not Be High

Engineers for the Trunk Line carriers sought to show that the estimated cost of the proposed branch lines, $5,500,000, was much too low. They placed the figure at $8,500,000. This was combatted by proponents of the proposed line, who declared that the Trunk Line carriers had based the cost on much heavier and long lines, heavier bridges and greater right-of-way charges than would be involved, and had used their own construction costs as a basis. The plan, it was pointed out, was to adopt standards such as those existing on the Montour Railroad, which is engaged largely in transporting low-grade products, such as would be hauled by the proposed branches.

MACHINERY EXPORT AGENCY

Cooperative Sales Office for India Established by 26 American Companies

A GROUP of 26 American machine tool and supply manufacturers has arranged for cooperative selling effort in India. C. Warren-Boulton of Calcutta, India, has been appointed exclusive representative for a term of years, and after spending several months in the United States at the works of the companies he will represent, he is now on his way to India.

The cooperating companies are: Niles-Bement-Pond Co. and Pratt & Whitney Co., 111 Broadway, New York; Warner & Swasey Co., Osborn Mfg. Co., W. W. Sly Mfg. Co., Standard Tool Co. and National Acme Co., of Cleveland; E. W. Bliss Co., Brooklyn; Cushman Chuck Co. and Jacobs Mfg. Co., Hartford, Conn.; Landis Machine Co. and Landis Tool Co., Waynesboro, Pa.; Yates-American Machine Co., Rochester, N. Y.; L. S. Starrett Co., Athol, Mass.; Kearney & Trecker Corporation, Milwaukee; Barnes Drill Co., Rockford, Ill.; Monarch Machine Tool Co., Sidney, Ohio; Simonds Saw & Steel Co., Fitchburg, Mass.; Morton Mfg. Co., Muskegon Heights, Mich.; J. G. Blount Co., Everett, Mass.; Cincinnati Shaper Co., Cincinnati; J. H. Williams & Co., Buffalo; C. C. Bradley & Son, Inc., Syracuse, N. Y.; Racine Tool & Machine Co., Racine, Wis.; Adams Co., Dubuque, Iowa; Gallmeyer & Livingston Co., Grand Rapids, Mich.

These companies cover a wide field of machine tools and accessories. While the group is not definitely and finally closed for membership, it is not the intention to expand it materially. Non-competing manufacturers of machine tools may obtain information on this group from R. M. Derby, manager foreign department, Niles-Bement-Pond Co. and Pratt & Whitney Co., 111 Broadway, New York, or from C. J. Stilwell, sales manager, Warner & Swasey Co., Cleveland.

Central Iron & Steel Co. Entertains Engineers at Plant Inspection

The Central Iron & Steel Co., Harrisburg, Pa., Robert H. Irons, president, was host on Wednesday afternoon, May 16, to a large group of engineers from the Susquehanna section of the American Society of Mechanical Engineers. Following a buffet luncheon, the engineers were taken through the plant on cars and were given an opportunity to inspect all departments, a particular object of interest being the Fuller-Lehigh coal pulverizing plant. At the time of the inspection, one of the mills was rolling floor plate to be laid in one of the new buildings of the Ford Motor Co., Detroit.

Press for Lower Freight Rate to Coast

Mid-West Steel Interests and Illinois Central Railroad Petition for Reduced Water-and-Rail Rate—Question Commission's Jurisdiction

WASHINGTON, May 22.—Struggles within the iron and steel industry of the United States to recover, maintain or build up markets through desirable freight levels have been particularly marked since the decision of the Interstate Commerce Commission in April, 1925, in the so-called Jones & Laughlin case, which readjusted rates on a mileage basis from Pittsburgh and Chicago. Succeeding conflicts between various districts of the industry have followed through a number of important proceedings, some of which have been decided, such as the Consolidated Southwestern cases, Central Freight Association pig iron cases, long-and-short haul cases and the export rate case, in which rates for shipment of iron and steel abroad were reduced by 20 per cent. Meanwhile there is pending the broad investigation under the Hoch-Smith resolution which proposes readjustment of the entire iron and steel rate structure throughout Official Classification territory. Also an important bearing on the situation is given by the application of the Pittsburgh, Lisbon & Western Railroad to connect the Mahoning and Shenango valleys with the Ohio River.

Most recent is the proposal of the Illinois Central Railroad to join with the Redwood steamship line and equalize the Chicago district with Pittsburgh and other Eastern producing sections in iron and steel rates to Pacific Coast ports. The Illinois Central tariff proposes a reduction of 8.5c. per 100 lb. on iron and steel moving from the Chicago district through New Orleans, the schedules, filed to become effective May 31, ranging from 56c. to 86c. per 100 lb. Producers and railroads in the East are offering spirited opposition to the proposed tariff, while Middle Western producers and the Illinois Central are making equally strong efforts on behalf of the new rates. Each side stoutly maintains its position in petitions filed with the Interstate Commerce Commission. The substance of claims of some protestants, including Pittsburgh district producers and Eastern carriers, was published in THE IRON AGE of May 10, page 1328.

Petitions to permit the new rates to become effective were filed subsequently by Middle Western independent steel interests, the Illinois Central Railroad and others. Among those joining the Middle Western producers is the Youngstown Sheet & Tube Co. The United States Steel Corporation strongly opposes the Illinois Central tariff, as does its subsidiary, the Elgin, Joliet & Eastern Railway. Among its steel producing companies, the American Sheet & Tin Plate Co., the Carnegie Steel Co., the American Bridge Co. and the National Tube Co. charge that the proposed rates would deprive them of their natural advantages in reaching the Pacific Coast markets through Atlantic ports and the Panama Canal. The Illinois Steel Co., Steel Corporation subsidiary in the Chicago district, has filed no petition.

Independent steel producers in the latter district have pointed out in their petitions that the E. J. & E. not only has refused to concur in the proposed rates but that, acting under the direction of the Steel Corporation, has asked for their suspension "all to the detriment of the Middle West and Chicago producers of iron and steel articles and railroads serving said districts, including the Elgin, Joliet & Eastern." Separation of the Isthmian Steamship Line from ownership by the Steel Corporation is asked the commission. It is requested to reverse its decision approving such ownership of this line, which operates through the Panama Canal. Despite the commission's finding, it is charged that ownership of this water line by the Steel Corporation is in violation of the Clayton act, it being alleged that it does away with competition between the water carrier and the E. J. & E. The petition seeking this action was filed by Clayton, Mark & Co. and the Acme Steel Co., and is signed by Robert Hula, traffic manager and assistant sales manager of the former company, and J. B. O'Rear, traffic manager of the Acme company.

It is charged that the ownership of the steamship line by the Steel Corporation results in a policy of having the railroads maintain high rates on iron and steel from the Chicago district to Pacific Coast ports. The claim is made that the Steel Corporation desires to serve this market from its Pittsburgh district mills by way of the Atlantic ports and the Isthmian line. The declaration is made that prior to the development of the Isthmian line, the E. J. & E. favored low rates from the Chicago district to the Pacific Coast, and that this was also true regarding the Steel Corporation itself as reflected, it is maintained, in a petition of the Illinois Steel Co., in 1922, supporting a fourth section application to obtain low rates from the Chicago district to Pacific ports. Middle Western producers, it is asserted, have been virtually excluded from the Pacific Coast market by reason of the lower rail-and-water rates from the Pittsburgh district through the canal.

Other independent iron and steel interests in the Chicago and adjacent territory, together with the Chicago Association of Commerce, the Peoria Association of Commerce, the Rockford Manufacturers' and Shippers' Association, the Bloomington Association of Commerce, the Louisville Board of Trade, the Evansville Chamber of Commerce, the Indiana Chamber of Commerce, the Springfield Chamber of Commerce, the Illinois Manufacturers' Association and additional organizations and concerns, filed a joint petition supporting the Illinois Central tariff. They called attention to the fact that the protestants had referred only to the great disparity in land distances from Chicago to New Orleans, on the one hand, and the land distances from Pittsburgh to Baltimore, on the other hand. Instead of confining their calculation to this basis they turn to the relative distances by rail-and-water from the Middle West and Pittsburgh to the Pacific Coast, stating that the average distance from the Middle West is 242 miles less than from Pittsburgh.

"It is ridiculously absurd for the protesting producers in the Pittsburgh and Valley district," said the petition, "to contend that they will be unable to meet Middle Western competitors in a given market when they now have the advantage in price of from $2 to $4 a ton, and it will therefore be readily seen that the mere equalization of freight rates will in no wise impair the ability of Eastern producers to market their products in Pacific Coast markets. In fact, it is the Chicago and Middle Western producer who will be obliged to absorb such disadvantages in price if they expect to participate in the Pacific Coast business."

It is also declared to be ridiculous for the Eastern shippers to contend that the Eastern carriers will be obliged to reduce their rates to a relative basis, and it is stated that the assertion by the Eastern carriers of an impending rate war is entirely unfounded and absurd under these conditions.

"The proposed tariff holds out the first ray of hope of allowing the Middle Western manufacturer and shipper to retrieve a loss occasioned by construction of the Panama Canal," it is stated. "This tariff will have the effect of bringing back to the Middle Western shippers the opportunity to compete on traffic which they formerly enjoyed and to which they are justly entitled."

The Illinois Central Railroad in its petition laid down two broad principles. First, it was stated that the commission has no power to establish the proposed

(*Concluded on page* 1512)

GRAY IRON INSTITUTE

New Organization Elects Directors and Officers at Philadelphia Meeting

THE Gray Iron Institute held its first general meeting at Philadelphia, May 18, on the occasion of the convention of the American Foundrymen's Association. A certificate of incorporation, by-laws and a report of a committee on merchandising were adopted, and officers and directors were chosen. At the conclusion of the meeting numerous applications for membership in the institute were received.

A board of directors nominated by a committee headed by Walter Wood, R. D. Wood & Co., Philadelphia, was elected unanimously as follows:

Walter L. Seelbach, Forest City-Walworth Run Foundries Co., Cleveland
A. E. Hageboeck, Frank Foundries Corporation, Moline, Ill.
J. H. Bruce, Bowler Foundry Co., Cleveland
J. L. Carter, Barlow Foundry Co., Newark, N. J.
H. S. Chafee, Builders Iron Foundry, Providence, R. I.
A. E. Clarke, Des Plaines Foundry Co., Des Plaines, Ill.
J. D. Coltman, Bullard Machine Tool Co., Bridgeport, Conn.
Horace R. Culling, Carondelet Foundry Co., St. Louis
Fred Erb, Erb-Joyce Foundry Co., Detroit
W. J. Grede, Liberty Foundry Co., Milwaukee
A. J. Hartman, United Engineering & Foundry Co., Pittsburgh
John Hartman, Atlas Foundry & Machinery Co., Tacoma, Wash.
B. H. Johnson, Cresson-Morris Co., Philadelphia
Don McDaniel, Hamilton Foundry & Machine Co., Hamilton, Ohio
Edward B. Sherwin, Chicago Hardware Foundry Co., North Chicago, Ill.

The board of directors elected the following officers: Walter L. Seelbach, president; B. H. Johnson, first vice-president; A. E. Hageboeck, second vice-president; H. S. Chafee, treasurer. These officers, with J. L. Carter, Newark, N. J., compose the executive committee. Dan M. Avey, editor *Foundry*, Cleveland, who has been temporary secretary since the preliminary organization of the institute, will continue in that capacity until a secretary-manager is chosen by the executive committee.

The Gray Iron Institute is the outcome of two movements, one of which started in Philadelphia and the other in the Central West, which recognized the need of cooperative effort to improve the quality of gray iron castings through research and to perfect merchandising methods. At a conference held in Philadelphia, Feb. 13, the two groups decided to pool their efforts, and on March 13 a meeting was held at Pittsburgh, where a temporary organization was effected.

Purpose of the Institute

The purpose of the institute is to promote the interests of the gray iron foundry industry by all lawful means, such as—

1. The promotion of sound business ethics in the industry, based on honor and integrity in manufacturing and selling gray iron castings by its members.
2. The collection and distribution of information relative to the manufacture of gray iron castings.
3. To study new methods for merchandising gray iron castings, to strengthen present markets, to develop new markets and to discover new uses for gray iron castings.
4. The promotion of uniformity in methods of cost accounting.
5. Research work to improve further the quality of gray iron castings and to increase their utilization in industry, cooperating with other research agencies toward that end.
6. The stimulation, by cooperative effort, of the use and sale of gray iron castings.
7. The establishment and maintenance of standards of quality for gray iron castings.

The officers elected at Philadelphia will hold office only until the first annual convention, which will be held this fall.

A feature of the Philadelphia meeting was an inspiriting address by Charles F. Abbott, executive director American Institute of Steel Construction, New York. Businesses, he said, differ only in details; in principles they are all alike. Current economic problems cannot be solved by the individual. Unorganized industries have lost the aggressive and are being told by buyers what they can expect. The new competition is not between individuals but between industries for a share of the consumer's dollar. We find reinforced concrete arrayed against structural steel, electric refrigeration against ice, oil against coal, Florida against California, lumber substitutes against lumber, etc. Incidentally, the lumber industry has appropriated $25,000,000 to regain lost markets.

The difficulties confronting an industry are national, not local, in scope. An individual plant is solely dependent on the fortunes of the industry to which it belongs. It has been argued that the small company should be eliminated, but such elimination would not be a cure for a condition characterized by excess capacity, since a new crop of small plants would spring up to take the place of those that went out of business. A spirit of "live and let live" should control the policy of each industry. It is better, said Mr. Abbott, to operate at 60 per cent at a profit than to run full at cost or less than cost. The problem of a given industry is also the problem of the nation at large. If industries cannot find a way to operate profitably, the unemployment problem is bound to grow worse. If companies cannot make profits in fairly active times, what can be expected if a depression sets in?

MECHANICAL ENGINEERS

Nominees for Officers of American Society—Award of Holley Medal

ELMER A. SPERRY, of gyroscope fame and the organizer recently of the Sperry Rail Service Corporation for investigating such matters as transverse fissures or other defects in steel rails, came in for special honors at the meeting last week in Pittsburgh of the American Society of Mechanical Engineers. He was awarded the Alexander Holley medal and was nominated as president of the society for the year beginning in December. Mr. Sperry is chairman of the Sperry Gyroscope Co., Brooklyn, which has manufactured gyroscopic compasses and also gyroscopic stabilizers, as for shipboard, and searchlights of high candle-power.

The Holley medal was presented to Mr. Sperry by George I. Rockwood, Rockwood Sprinkler Co., Worcester, Mass., who instituted and endowed the medal in 1924. The medal is bestowed "for some great and unique act of genius of an engineering nature that has accomplished a great and timely public benefit," and Mr. Rockwood characterized the invention of the gyroscopic compass as a brilliant, valuable achievement.

Charles M. Schwab, past-president of the society, was also present at the banquet and gave one of his characteristic talks. George S. Davison, past-president American Society of Civil Engineers, was toastmaster, being introduced by A. N. Diehl, vice-president Carnegie Steel Co., who was general chairman of the subcommittees for the 1928 spring meeting.

The other nominees for office, as presented by the regular nominating committee of the society are given below. Election will be by letter ballot of the membership, closing on Sept. 25.

Vice-presidents, William Elmer, special engineer, Pennsylvania Railroad, Philadelphia; Robert L. Daugherty, professor mechanical and hydraulic engineering, California Institute of Technology, Pasadena, Cal., and Charles E. Gorton, chairman, American Uniform Boiler Law Society, New York.

Managers, Charles M. Allen, professor of hydraulic engineering, Worcester Polytechnic Institute, Worcester, Mass.; Robert M. Gates, manager, industrial division, Superheater Co., New York, and Ely C. Hutchinson, president and general manager, Pelton Water Wheel Co., San Francisco.

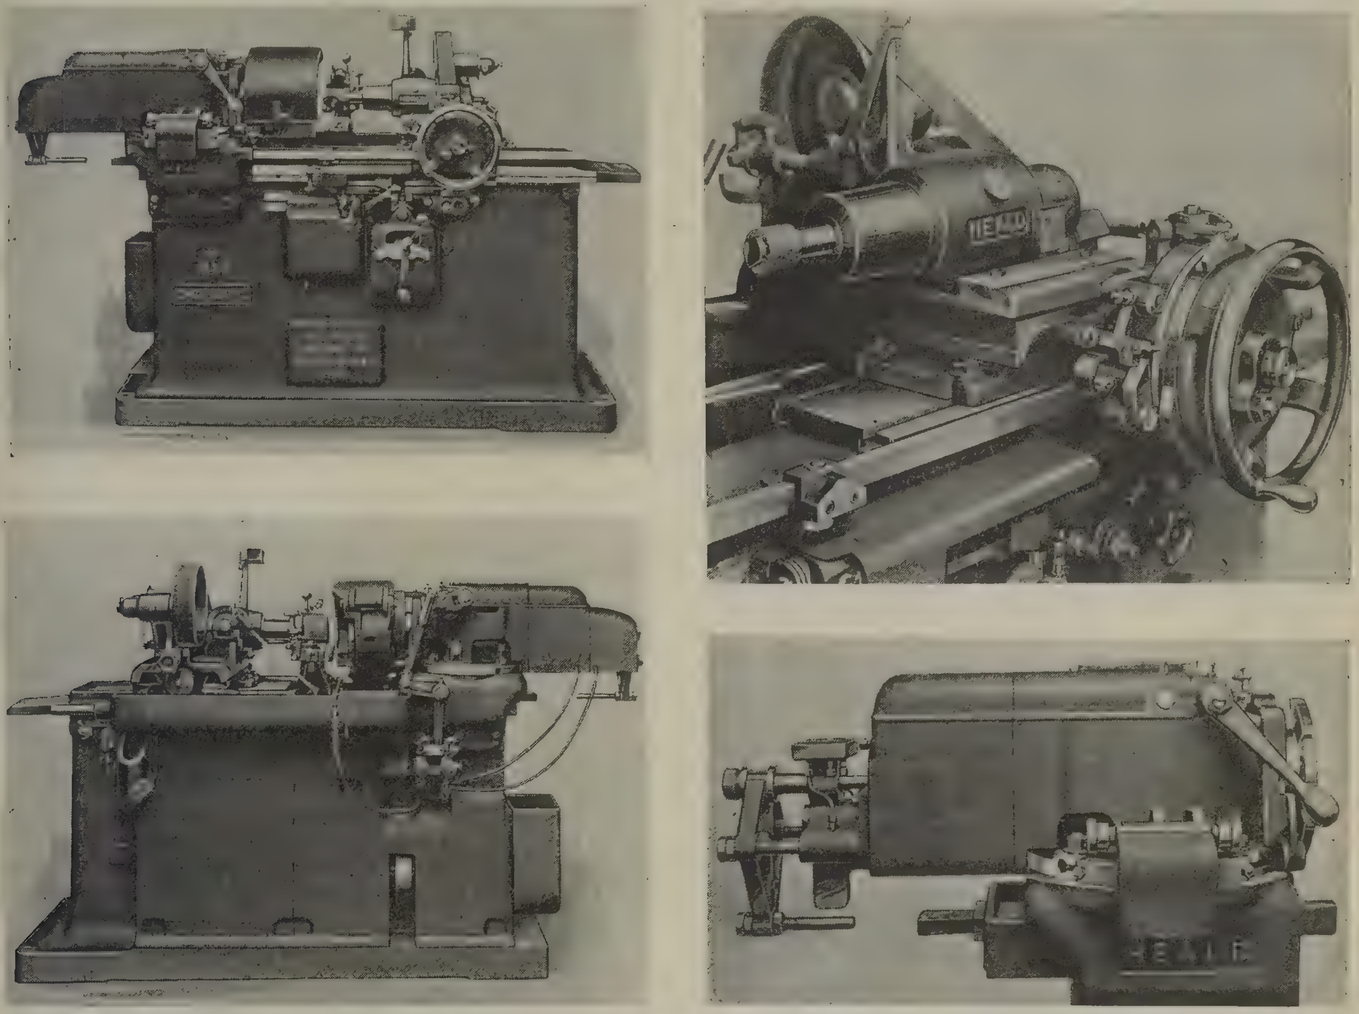
Delegates to the American Engineering Council: Elmer A. Sperry, Brooklyn; E. O. Eastwood, University of Washington, Seattle; Dean E. Foster, Tulsa; W. P. Hunt, president Moline Tool Co., Moline; O. P. Hood, Bureau of Mines, Washington; Charles Penrose, Day & Zimmermann, Philadelphia; Frank A. Scott, Warner & Swasey Co., Cleveland; Max Toltz, St. Paul; E. N. Trump, Solvay Process Co., Syracuse; and D. Robert Yarnall, Yarnall-Waring Co., Philadelphia.

NEW HEALD INTERNAL GRINDER

Gage-Matic Unit Offered for Continuous Production of Straight Open-End Work

THE Heald Machine Co., Worcester, Mass., has brought out a new internal grinding machine, named the Gage-Matic, for continuous production of straight open-end work, such as ball bearings, bushings, gears and similar parts.

The machine was made possible when the company acquired the internal grinding machine line of the Giddings & Lewis Co., Fond du Lac, Wis., which purchase embraced not only the machines but also all patent rights, including the McDonough automatic gaging device patents. The latter device is an essential element of the Teromatic internal grinder, and is likewise a fundamental mechanism in the Gage-Matic. Its positive sizing plug permits consistent sizing even where the limits are unusually close, and only slight attention is demanded of the operator.



After the Work Is Chucked and the Starting Lever Thrown, the Cycle of Operation, Including Gaging, Is Automatic. Arrangement of the cross-slide is shown at upper right, and a close-up view of the work-head at the lower right

The gaging device on the new machine differs from that on the Teromatic in that a single disk is used, which controls the sizing and permits the grinding of fairly short work. The control for short stroking the table at the proper time to enable the wheel to be trued is on the cross-slide, where a single electric contact point performs the operation. The cross-slide is similar to that of the company's Size-Matic, to which the Gage-Matic is a companion machine, using the same base with hydraulic drive for the table, the same wheelhead, the same wheel-truing device and with the same motor and belt main drives.

When the operator has chucked the work and thrown over the starting lever, the cycle of operation is entirely automatic. The wheel enters the work and rough grinds at roughing speed and feed until only a predetermined amount of stock is left. Then a contact is made on the cross-slide, the table short strokes, changes to truing speed and the diamond drops into position, truing the wheel. The wheel again enters the work and grinds with finishing feed and speed until the gaging plug enters the hole, when a second electric contact causes the wheel to withdraw and the entire machine to come to the rest position. The work is chucked from the front and is held by quick-acting fixtures, oil-operated to give a quick, positive and flexible movement with no effort on the part of the operator.

The workhead is mounted on a rigid bridge which in turn is bolted directly to the base. The swivel circle has been enlarged to 16 in. in diameter, and movement is obtained through knurled knobs on the front of the bridge. The work spindle runs in large, self-adjusting ball bearings. A multiple-disk clutch on the inside of the work spindle provides positive drive, and a separate multiple disk brake arrangement is provided to stop the work spindle as the pulley clutch is released. The brake works automatically while grinding is in progress, but it may also be operated by hand.

Working in conjunction with the workhead is the size gage mechanism. This consists of a gage mounted on the end of a rod which revolves with the work spindle, concentric with it and reciprocating in synchronism with the main table in such a manner that as the front end of the wheel clears the back of the hole, the gage is firmly pressed against the piece at this point. The sizing is complete as soon as the gage enters the hole, when an electric contact is made and the machine comes to rest.

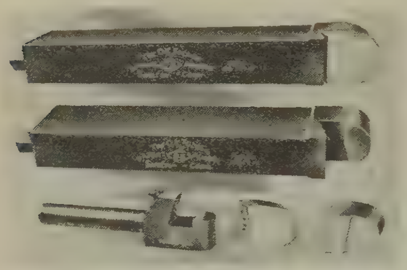
The cross-slide, which carries the flexible idler and wheelhead, is mounted on the table. Coarse feed for the wheel may be set for rough grinding up to within a desired limit of finish size of hole, when the roughing feed changes automatically to a finishing feed. The change is mechanical and positive, taking place just before the diamond trues the wheel.

Wheel-truing is controlled from a cross-slide by a slip ring carrying a stop, which at a set point engages a finger. This forms an electric contact that permits current from a generator on the back of the machine to energize a magnet which operates the various levers and dogs necessary to short stroke the table and drop the diamond to position. The same slip ring after engaging with the finger permits the handwheel to progress further on each successive work piece by an amount approximately equal to the reduction of the wheel due to grinding and dressing, thus compensating for wheel wear.

Shankless Tool Bits and Holders for Wheel and Other Heavy Turning

Shankless tool bits and tool holders for locomotive tire and other heavy turning operations have been placed on the market by the O. K. Tool Co., Shelton, Conn.

The tool bits are retained in the holder by a double-tapered groove as shown in the illustration and are, in effect, self-locking in the direction of the feed, although the usual rear locking arrangement is used in the holder. The tool may be adjusted sidewise for wear in the direction of the feed merely by moving the lock forward, which makes the bit project farther out of the side of the holder.



The Tools Are Made in Right- and Left-Hand Types. The small holder, in the foreground, is for use in grinding the tool bits

In having no shank, manufacture of the tool bit is simplified and the cost is reduced. Another advantage emphasized is that in having no hole through it, the tool holder is stronger.

Tool bits may be removed, reground and replaced conveniently, a hand grinding holder, shown in the foreground of the illustration, being available to facilitate grinding of the bits. The tool bits are of drop forged high-speed steel, carefully heat treated. The holder is of forged chrome-nickel steel, heat treated. The tools are available in a number of sizes and in right- and left-hand types.

Light, Rugged Construction Features Portable Conveyor

Built light enough so that one man can move it easily and quickly, the "Jax" portable conveyor has been brought out by the Link-Belt Co., Chicago, for unloading packages, bags, coal, rock, etc., on wharves, from or to box cars, both indoors and out. Mounted on agricultural-type wheels of 14-in. diameter and 2-in. face, this 12-ft. conveyor complete, with ¾-hp. motor, weighs but 640 lb. The 15-ft. conveyor, complete, with motor, weighs 710 lb.

The wheels are movable to practically any point along the frame, which consists of two heavy pipes tied together at head and foot ends by electric steel castings. A pipe handle at the foot end facilitates handling. The casting at the head end provides a base for the motor and a grease-tight inclosed housing in which the cut reduction gears operate.

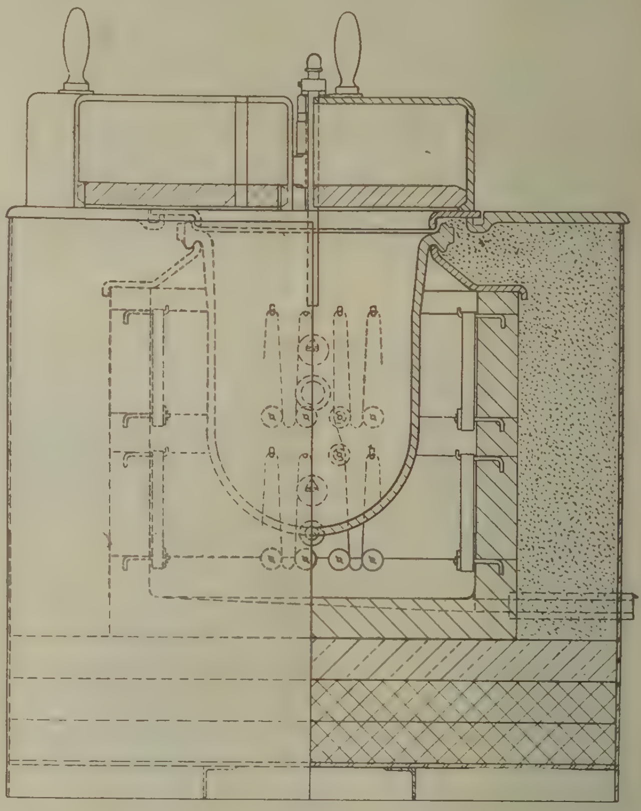
The height of the discharge point of the conveyor can be adjusted by moving the wheels forward or backward along the conveyor frame. The wheels are provided with three positions for vertical adjustment. Lubrication is seldom necessary, as all bearings are of the anti-friction type and all gears run in a bath of grease.

Designed for a speed of 200 ft. a minute, the three-ply rubber belt, with ⅛-in. rubber cover, is 12 in. wide. Steel skirt boards, forming a belt trough, are arranged for endlap into additional units, if required.

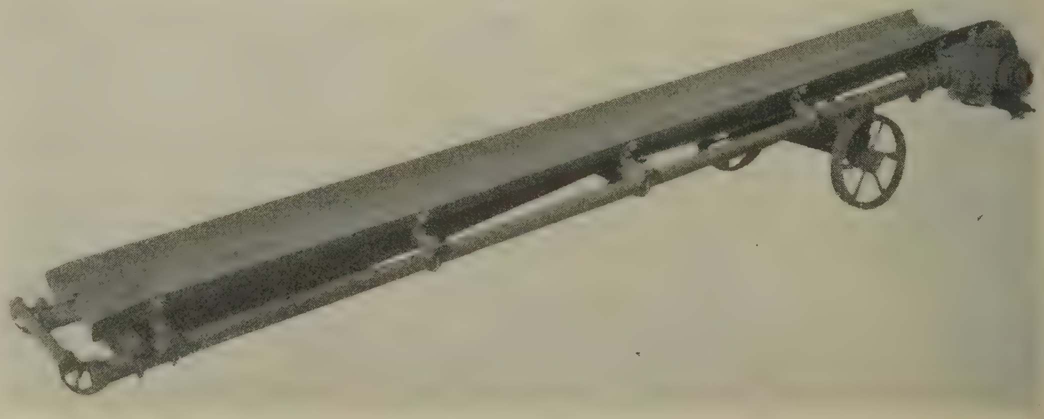
Electrically Heated Lead Pots

A series of electrically heated lead pots has been designed by General Electric Co., Schenectady, N. Y. The pots range in size from 8 in. in diameter by 12 in. deep to 16 in. in diameter by 24 in. deep. The smallest will heat 75 lb. of steel per hour to 1500 deg. Fahr. When working at this rate it uses 11 kw. of single-phase power at 75 volts. The largest will harden 250 lb. steel per hour, using 29 kw. at 220 volts.

Pots are of special alloy, and rest on an alloy collar built into the fire brick casing. The upper flange of the pot is separated by a ring of insulation from the cast iron drip plate; thus heat losses by conduction are reduced to the minimum. Heating units are ranged on the inside walls of the cavity surrounding the pot.



Heating curves have been worked out showing that a small furnace, for instance, will cool to 750 deg. in a 13.5-hr. overnight shutdown, following which it will require 70 min. on power to reach 1500 deg. After a 43-hr. week-end shutdown, the furnace will be at 250 deg. Fahr. and will require 2 hr. 10 min. to reach heat.



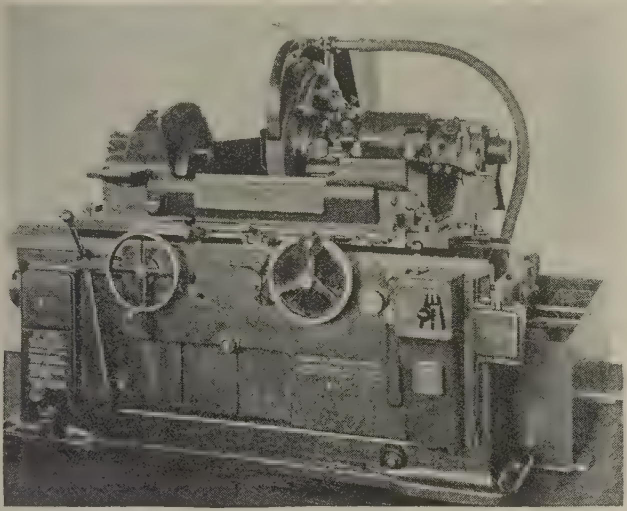
The Conveyor Can Be Moved Easily by One Man. The wheels are movable to any point along the heavy pipe-form frame

HEAVY-DUTY PLAIN GRINDERS

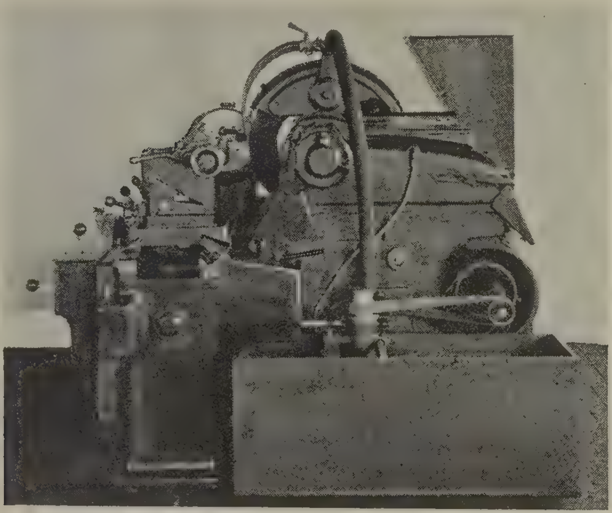
Massive Design, Wide Range of Speeds and Ease of Control Are Features of New Production Units

SMOOTH operation, increased speed, and facility of control are features of a new series of plain grinding machines for heavy-duty production work, which is being placed on the market by the Brown & Sharpe Mfg. Co., Providence, R. I.

Three sizes of the machine, designated as the No. 30, 32 and 33, respectively, and of similar design except for length of bed, are available. Two modified forms of each size of machine, for work not requiring all of the automatic features, can also be furnished. The capacity is for work 18, 36 and 48 in. long respectively, between centers. The centers will swing 12 in. in diameter with 24-in. wheels having from 2 to 10 in. width of face, and 6 in. in diameter with 30-in. wheels having 2 to 6 in. face.



The No. 30 Plain Grinder With Belt Drive Is Shown Above. The rugged construction may be noted from the view of the right-hand end of the machine, below

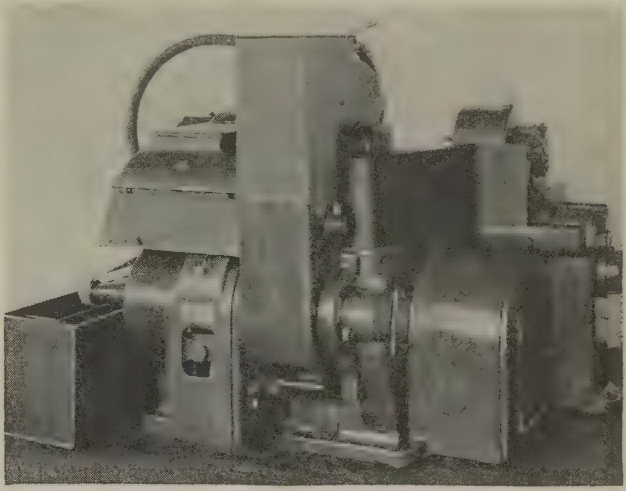


The machines are essentially production units and have an unusually wide range of table and work speeds. Because of a table dwell, which is provided at each end of the table, and a shock absorber in the reversing mechanism, high table speeds may be used without affecting the finish on the work. In this connection it is stated that the table dwell permits unusual finish on the work.

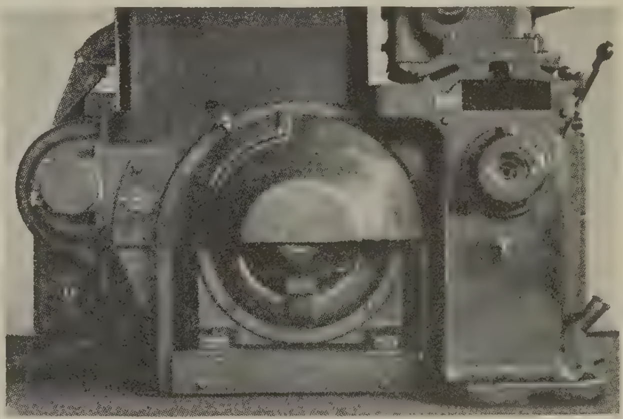
Operating controls are grouped so that they may be reached conveniently from the normal operating position. Changes of speed of the work drive and table movement, which are entirely independent, are made through sliding gears by means of individual levers. Cross feed controls, both for automatic and hand operation, are located on the right-hand feeding wheel. Adjustment for the table dwell is located at the extreme right. Both spring-lever and screw-and-handwheel operation of the footstock are provided.

The machines are of heavy construction to assure high degree of accuracy. Special care is said to have been taken to make the work drive smooth and vibrationless, this being accomplished by the combination of a torsion shaft and balanced belt drive from within the machine. The wheel-slide and wheel-slide base are heavy and of rugged design, and have long automatically lubricated ways which assure accurate alinement and full support to the wheel spindle. The bed is of ample length to support the sliding table at all points in its travel. All moving parts and scraped surfaces are well guarded in all positions.

Lubrication of the wheel spindle and all main mechanisms is by gravity flow of filtered oil from a reservoir which is kept filled with oil by means of a geared pump. The wheel-slide incloses the oil filters which are conveniently accessible for cleaning. The few necessary oiling stations are clearly marked with the necessary instructions as to the intervals at which oiling is required. The coolant tank is separate from the machine, but is arranged to come within the floor space limits, as shown.



A Compartment in the Base Accommodates the Driving Motor, Which Is Protected by a Hood, but Is Accessible for Lubrication. Arrangement of the rear of the machine may be noted from the view above



Either overhead countershaft or motor drive arrangement is available. One main motor drives the entire machine. When motor equipped, the motor, of 15 to 40 hp., depending upon the work to be ground, is inclosed in a compartment in the base of the machine. The compartment is hooded, as shown, which protects the motor but permits easy access for lubrication. The control equipment may be mounted on a stand close to the base of the machine and within the floor space limits.

One of the modified machines, designated as the "A" machine, is provided with hand operation for the table, with one power table feed for wheel truing, and is adapted particularly for straight-in-feed grinding, using either power or hand cross-feeds. The second modified machine, the "B," has only hand table and cross-feeds. This unit is also for straight-in-feed grinding, using hand cross feed only.

Coke Production Continues at Exceptionally High Rate

WASHINGTON, May 19.—The rate of production of by-product coke in April was the highest, except for that of March, in the history of the industry, according to the Bureau of Mines. Total output in the 30 days of April was 3,925,195 net tons, against 4,064,940 tons in March. The decrease of 0.2 per cent in the daily output in April reflected a decline in the demand for house-heating fuel with the coming of milder weather. There were 79 by-product plants active in April, and these plants produced about 84 per cent of their capacity. The output of beehive coke was 377,000 tons in April as compared with 449,000 tons in March, a decrease of 16 per cent. The total production of all coke was 4,302,195 tons, of which 91.2 per cent was contributed by the by-product plants and 8.8 per cent by the beehive ovens.

Taking its figures from THE IRON AGE, the bureau shows that the output of pig iron in April was 3,185,504 gross tons, or 106,183 tons a day, an increase of 2.9 per cent over March in daily rate, but a decrease of 7 per cent when compared with April of last year.

Total production of coke during the first four months of 1928 was 17,202,404 tons, a decline of 4.1 per cent from the production of the corresponding period of 1927. By-product coke output during the first four months, however, with a total of 15,610,404 tons, showed a gain over 1927, when the four-month total was 14,727,829 tons. Beehive production made a sharp decline to 1,592,000 tons, as against 3,210,000 tons. Pig iron production during the first four months of 1928, amounting to 12,155,065 tons, was 6.1 per cent under the output of the first four months of last year, when the total was 12,950,087 tons.

In response to requests for information on the relative rate of increase in the output of domestic and of metallurgical coke, the bureau has prepared a table giving data for the period 1915-1926. The highest production of all coke for this period was in 1918, aggregating 56,611,766 tons, of which 50,002,988 tons was consumed in the blast furnace and 3,861,208 tons in the foundry cupola. Of these tonnages 21,901,043 tons of the furnace coke was made at by-product plants and 28,101,945 tons at beehive plants, while 1,631,052 tons of the 72-hr. fuel was made in by-product plants and 2,230,156 tons in beehive ovens. In 1926 total production of all coke was 56,420,484 tons—within ⅛ per cent of the maximum—of which 45,019,560 tons was consumed by blast furnaces and 3,331,677 tons by foundry cupolas. Of the metallurgical coke, 35,028,461 tons and 2,168,017 tons respectively were by-product fuel and 9,991,099 tons and 1,163,660 tons beehive coke.

Sharp Drop in Foundry Equipment Orders

Orders for foundry equipment in April are reported by the Foundry Equipment Manufacturers' Association at 107.7 per cent of the average monthly shipments for 1922, 1923 and 1924. This is a decline of nearly one-fourth from the 138.6 reported for March, and represents the lowest figure for any month so far this year. It compares with 130 in April, 1927, and with 113.2 in April, 1926. It represents the lowest April figure since 1922.

Shipments in April are given at 112.5 and unfilled orders at 126.1, on the same base as for new orders.

Wholesale Prices Up in April

The index number for wholesale prices reported by the Bureau of Labor Statistics, on the base of 100 as the average for 1926, was 97.4 for April, 1928. This is a substantial increase from the 96 of the preceding month and is still further above the 93.7 of April, 1927. Of the 10 major groups, five showed increases, two decreases and three remained stationary. Metals and metal products, at 98.4, did not change from the March figure. Both were slightly above the 97.8 of a year ago. Iron and steel under this heading showed a slight decline, with non-ferrous metals slightly higher. Agricultural implements and automobiles did not change.

Heavy Decline in Steel Corporation Unfilled Orders

Unfilled orders on the books of the United States Steel Corporation showed a decline in April of 463,073 tons, or nearly 11 per cent of the 4,335,206 tons reported at the end of March. The figure on April 30 was 3,872,133 tons. While this is higher than the corresponding figure at the end of April of 1927 or of 1926, it is the lowest figure reported since Nov. 30, last. However, the four months preceding April, 1928, and the figure for the last day of 1926, are the only ones in more than two years which have been higher than the current figure. One year ago the unfilled orders amounted to 3,456,132 tons, or 11 per cent under the recent figure, while two years ago, at 3,867,976 tons, the recent figure was closely paralleled. The table gives the reported figures for the past 28 months.

	1928	1927	1926
Jan. 31.......	4,275,947	3,800,177	4,882,739
Feb. 28.......	4,398,189	3,597,119	4,616,822
Mar. 31.......	4,335,206	3,553,140	4,379,935
April 30.......	3,872,133	3,456,132	3,867,976
May 31.......	....	3,050,941	3,649,250
June 30.......	....	3,053,246	3,478,642
July 31.......	....	3,142,014	3,602,522
Aug. 31.......	....	3,196,037	3,542,335
Sept. 30.......	....	3,148,113	3,593,509
Oct. 31.......	....	3,341,040	3,683,661
Nov. 30.......	....	3,454,444	3,807,447
Dec. 31.......	....	3,972,874	3,960,969

At the end of April, 1917, the highest total in unfilled orders of the Steel Corporation ever attained was reported at 12,183,193 tons. The lowest figure ever reported was 2,754,757 tons, Dec. 31, 1910.

Smaller Production of Commercial Steel Castings

Production in April of commercial steel castings is reported by the Department of Commerce at 83,795 tons. This is the smallest monthly total since December, comparing with 92,806 tons in March. In April, 1927, the output was 94,677 tons. For the first four months of the year the total was 338,006 tons, comparing with 373,514 tons a year ago. Both the railroad specialties and the miscellaneous castings participated in the decline. Each was approximately 10 per cent lower in the first four months of this year than last year.

New orders in April were only slightly lower than in March, being reported at 81,835 tons against 82,536 tons. This compares with 81,044 tons in April, 1927. For the first four months the total was 346,120 tons against 373,547 tons last year. The reduction was less than in production and both classes of castings were influenced in about equal proportions.

Railroad specialties ordered in April were 32,722 tons, or 49 per cent of capacity, comparing with 32,279 tons a year ago—also 49 per cent of capacity. Miscellaneous castings ordered in April amounted to 49,113 tons, or 63 per cent of capacity, comparing with 48,765 tons a year ago—also 63 per cent of capacity. Orders for railroad castings in April showed a gain over March, which recorded 30,992 tons, but miscellaneous castings fell below March, in which 51,554 tons were ordered.

Heavy Production of Steel Barrels

Steel barrels manufactured in April are reported by the United States Department of Commerce at 667,827—a gain of 5 per cent over the high production of March and the highest total which has been reported since these figures were first compiled, in 1923. In April, 1927, the total was 599,771—a figure which was exceeded by only one month that year. Shipments in April fell 1 per cent behind production; in March, shipments were somewhat above production. Unfilled orders declined about 70,000 units during the month. As of April 30, they called for 357,131 units for delivery within 30 days and 919,863 units for later delivery.

Shipments of members of the Steel Barrel Manufacturers' Institute in April totaled 370,960 units, with 457,832 unfilled orders on hand on May 1. Capacity was engaged during the month to the extent of 57 per cent, rating 22.6 per cent for I.C.C. barrels and 66.5 per cent for light barrels.

Business Analysis and Forecast

BY DR. LEWIS H. HANEY

DIRECTOR, NEW YORK UNIVERSITY BUREAU OF BUSINESS RESEARCH

Current Statistical Data, Considered Independently of Trade Opinion, Indicate That:

Steel ingot output may hold large for several weeks more, but a sharp and prolonged decline is likely to follow.

Unfilled orders showed a heavy decrease in April but remained higher than at the same time for two years past.

Pig iron production continues moderate compared with ingot output; prices are decidedly low.

Finished steel prices are almost in line with the general level of commodity prices and no early change is indicated.

IT may be said that the most notable general development in the iron and steel industry is the negative one that the industry is not gaining in activity or prosperity. Prices are rather weak. If industries in general were expanding and prosperity were on the increase, the upward trend would probably be reflected in growing activity in iron and steel and strong prices for those products. The absence of this condition is an unfavorable indication.

Ingot Production Above Requirements

AS nearly as it can be measured the position of the steel industry at the beginning of May can be summed up as follows:

(1) Steel ingot production showed an average rate about 19 per cent above normal.

(2) The production of steel ingots was in excess of the indicated current requirements of the chief consuming industries.

(3) Production had increased over the March rate, in spite of the fact that there is usually a seasonal decline in April—in short, the *trend* was upward.

(4) The trend of the unfilled orders of the Steel Corporation was downward, which presumably represents the situation in general.

(5) The volume of unfilled orders, after making due allowance for the merely seasonal changes, was 89 per cent of the average for the years 1923-1927.

(6) The average price of finished steel was holding barely steady, the April average, according to THE IRON AGE composite index, being 2.359c. against 2.361c. in March. It compares with 2.360c. a year ago.

This list of facts can hardly be called "bullish" as regards the outlook for the industry during the next few months. If we make allowance for the slow normal growth in the country's requirements, the production of steel ingots is found to have been the highest last month that has existed since the middle of 1923. *It represented an annual rate which the experience of recent years shows cannot be long maintained.* However conditions may seem, the cold statistical facts indicate that steel production is excessive.

This is the clearer in that the high production is not warranted by the volume of forward buying. There was a decrease of 463,000 tons in the unfilled orders of the Steel Corporation, substantiated by trade reports of a decreasing volume of new business. This indicates that current activity in steel making must be justified, if at all, by current requirements of steel-consuming industries. But in our analysis of demand last week reasons were presented for believing that such requirements are likely to decline, if they are not already pointed downward.

The trend of steel prices is certainly not upward. The response to the gain in unfilled orders during the first few months of the year was very limited and it may even be doubted if the price concessions that have been made have not quite counterbalanced most of the small advance.

Steel production will probably hold large through May—perhaps even through June—but under the foregoing circumstances a fairly sharp and prolonged decline seems probable thereafter. Steel prices can hardly advance. At the same time, they can hardly decline much from such a low level as now exists. It seems probable, therefore, that there will be approximate stability for another month or two.

Pig Iron Output Low in Relation to Steel

PRODUCTION of pig iron continues very moderate compared with the steel output. In April the daily average was about 106,000 tons, against 103,200 tons

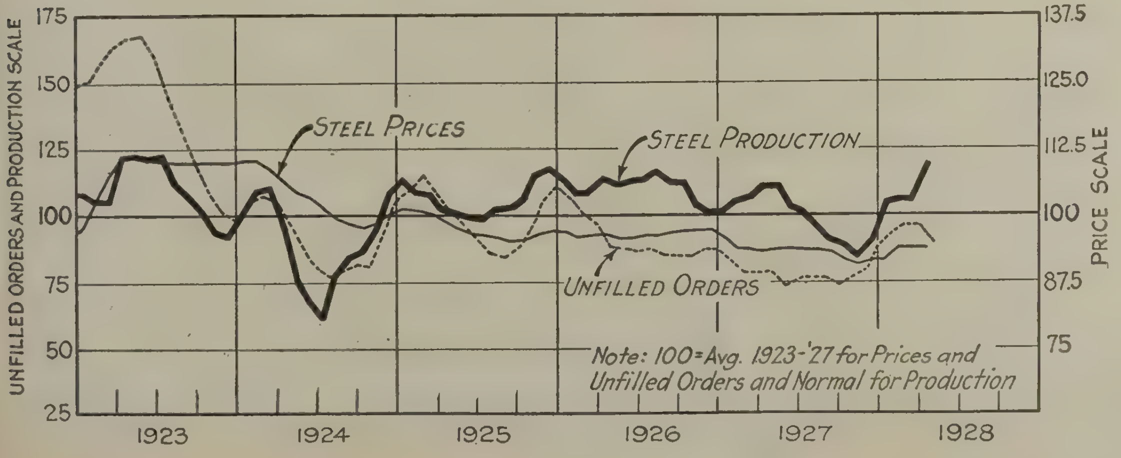


Fig. 1—Steel Production Appears to Be Well Above Normal Requirements. Prices have held fairly steady. Unfilled orders are much lower, showing declining demand

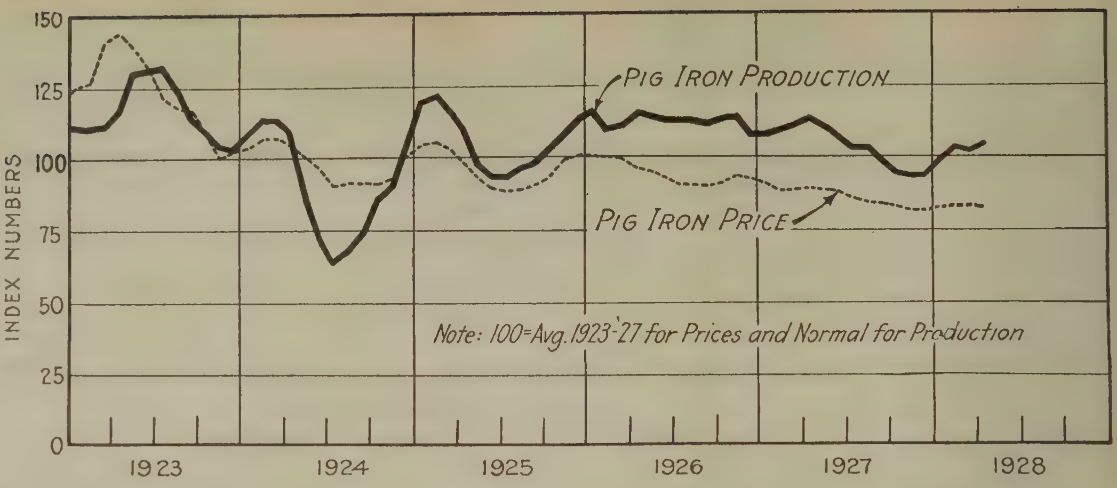

Fig. 2—Firmness in Pig Iron Prices Would Be Logical, with Pig Iron Output So Low Relatively to Steel. Pig iron today is decidedly cheap

in March. This is only 5 per cent above our estimate of the normal trend of pig iron production. Usually little change occurs in the average daily figure between March and April—if anything, a slight reduction being common. The April increase in production, therefore, represents a real upward trend, bringing our adjusted index to 105 against 102.1 in the preceding month. A year ago, however, the index was 113.9. Though so much below April, 1927, the pig iron output last month was at the highest annual rate, allowing for the small seasonal changes from month to month, that has appeared since last June.

Yet the April iron output was small compared with the steel figure, which, it will be remembered, showed an index of 119. The ratio of pig iron production to steel production, allowing for their respective normal trends, is the lowest found since 1922. In fact, if we are to assume any justification for the present level of steel production, it is hard to see why the pig iron output may not be called low and equally difficult to understand why pig iron prices should be so weak.

None the less, pig iron prices have continued to decline. The April average was $17.67, which compares with $17.73 in March and $19.21 last year. At the present writing THE IRON AGE composite index is $17.42, which is the lowest in a good many years. Pig iron is decidedly cheap. Perhaps there are two possible explanations for this condition. It may be that the steel situation is not so strong as the current high rate of ingot production would suggest—that the decline in new business and the weakness in steel prices is reflected in the price of the raw material. Or it may be that the pig iron market is particularly influenced by competition, including foreign competition.

In any event, it must be admitted that the trend of pig iron prices casts a rather unfavorable light on the present condition of industry in general. That prices of this basic commodity are so weak, in spite of so moderate a level of production, is a sad commentary on demand. Possibly it indicates the existence of considerable stocks of pig iron remaining over from the second half of 1927, when pig iron output was excessive in comparison with steel making. In our opinion, the normal thing would be to find greater strength develop in the pig iron market in the near future. If such a development does not occur, that fact will be good evidence of fundamental weakness in the industry. It is significant that there has yet appeared no sign of strength. Even a 12-month moving average of pig iron prices continues to show a declining trend.

Steel About on Par with General Prices

COMPARED with the general level of commodity prices, the average of finished steel appears to be quite reasonable. As measured by the Bradstreet index, the curve of commodity prices shown in the third chart is very close to the steel price curve and the two are running nearly parallel, with steel prices only a little below their average relationship to the general level. There is thus no indication given by this chart of any considerable early change in steel prices.

The most pronounced change shown in the chart is the rise in heavy melting scrap at Pittsburgh. This material averaged $15.31 in April, against $14.81 in March. At this writing the price is $15.50. Nevertheless, we do not think that this temporary strength in the scrap market can be maintained. The decline in unfilled steel orders is significant in this connection. Also there is the relative cheapness of pig iron. The ratio of steel production to pig iron production is quite high, considering the level of steel prices, which is a condition that generally precedes a weakening in the scrap market. Finally, scrap is not particularly cheap in comparison with finished steel. Apparently there has been some covering of short sales made by scrap dealers, and this has affected the Pittsburgh market temporarily. A good many other markets show no strength.

In the case of finished steel, the weakness in sheets, strips and nails is noteworthy. Rarely is there such a decline in sheets and nails without weakness develop-

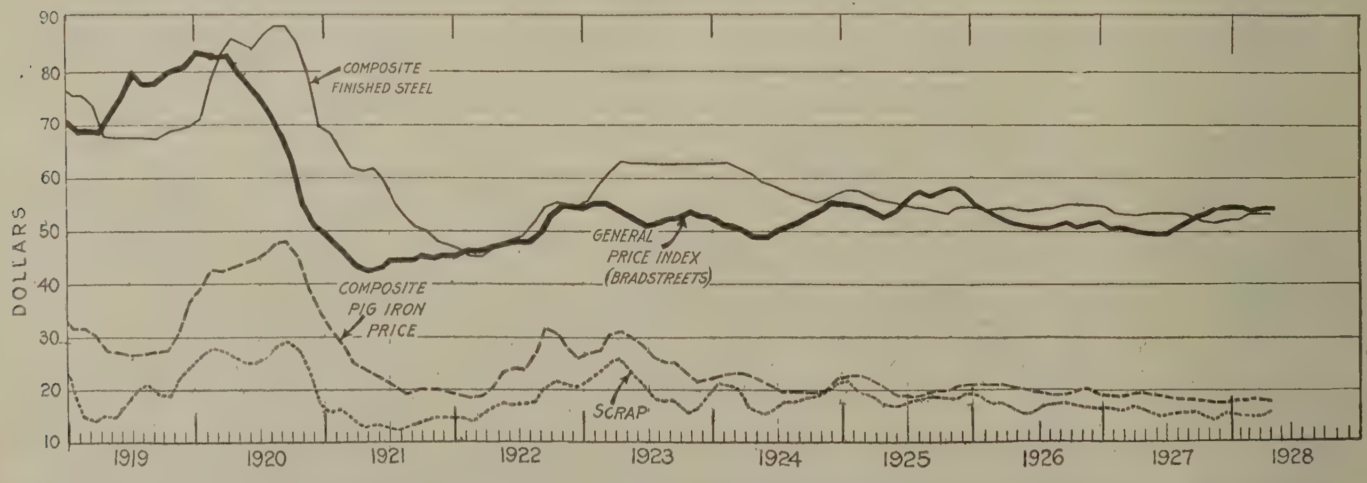

Fig. 3—Commodity Prices Have Been About on a Level With Finished Steel for Some Time. Finished steel price declines recently have been moderate. Pig iron prices may be unable to move upward so long as fuels and scrap remain low

ing also in steel bars. Billets, too, are likely to be affected unfavorably, and it seems that sheet bars can hardly escape the effect of the reduced demand and lower prices for sheets. It thus seems probable that, sooner or later during the next few months, price concessions on steel products will become more general, and that quoted prices when next tested by any large volume of buying will show declines.

Eastern Steel Foundries Form Research Group

Realizing the importance of organized research work and in order to cooperate more closely with users of steel castings, a group of prominent eastern foundries has recently formed an association known as The Steel Castings Development Bureau, with offices in the Stock Exchange Building, Philadelphia. George Batty, a practical foundryman and metallurgist of many years' experience, has been appointed research director, and he will be assisted by J. V. McCrae, who, for some time, has been working as a research associate of the United States Bureau of Standards, Washington. The following are active members of the new organization:

Atlantic Steel Casting Co., Chester, Pa.
Crucible Steel Casting Co., Lansdowne, Pa.
Deemer Steel Casting Co., Newcastle, Del.
Dodge Steel Co., Tacony, Pa.
Empire Steel Casting Co., Reading, Pa.
Eagan-Johnson Steel & Iron Co., Crum Lynne, Pa.
Pennsylvania Electro Steel Casting Co., Hamburg, Pa.
Riverside Steel Casting Co., Newark, N. J.
Treadwell Engineering Co., Easton, Pa.

The bureau comprises manufacturers of steel by the open-hearth, converter and electric furnace processes, each having its own particular application in the steel foundry field.

Practical research work is already in progress on improvements in the process of manufacture, greater efficiency, and better castings; on possibilities in the use of alloy steel castings; heat treatment, resulting in improvement of physical properties, and general betterment of quality. Arrangements are also being made whereby users or probable users of steel castings can consult with the technical advisors of the bureau on any problems relating to the use or application of castings.

The research director, George Batty, will be available at the bureau's office for personal consultation on Fridays and Saturdays, and correspondence at any time is invited. The hearty cooperation and active help of the Bureau of Standards, Washington, has been secured and arrangements have been made, through the courtesy of the Bureau, for the group to have a permanent research associate stationed in Washington, where the full facilities of the Government's unique scientific appliances will be available.

New Export Machinery Company

To aid American machinery manufacturers in the development of foreign markets, Paul H. Peterson, Inc., has been established with offices in the Graybar Building, New York. Through contact with dealers and distributers in foreign countries, the company will act as representative of American machinery builders, furnishing, when necessary, the finances to meet demands for long-term credits.

The new company will specialize in machine tools, railroad equipment, road building, textile, laundry, baking, shoe and sugar machinery and electric and hydraulic equipment. Paul H. Peterson, president, is an engineer, and was formerly export manager for Joseph T. Ryerson & Son, Inc., Chicago.

$12,000,000 FOR EXPANSION

Canadian Steel Company Plans to Develop Michipicoten Mines—Bounty and Higher Tariff Expected

The Lake Superior Corporation, Sault Ste. Marie, Ont., expects to spend approximately $12,000,000 in the next two or three years, according to Robert Dodd, president of the corporation. The conversion of Michipicoten Harbor into a large coal distributing port by the building of coal docks, from which coal arriving by water can be distributed both east and west, and the building of a smelter at Michipicoten, were announced as part of the building program of the next two years. Other construction work will include the erection of a benzol plant, a skelp mill and a sheet mill. Construction work on the benzol plant will be started within two weeks, and the outlay will be approximately $500,000. On improving the Michipicoten Harbor and erecting docks $5,000,000 will be spent.

To fully complete the program the corporation has in view, Mr. Dodd said, some concessions were expected from the Canadian Government in the way of a better tariff and an iron ore bounty. One hundred million tons of ore have been blocked out at Michipicoten. At present it costs $1 a ton more to treat the Michipicoten ore than is the case with the United States product, hence a large ore treatment plant will have to be built, and a fleet of vessels will be required to handle the Michipicoten business. Mr. Dodd further stated that $5,500,000 will be spent on improvements and enlargements to the rail mill and merchant mills of the Algoma Steel Corporation.

"Everything will develop gradually," Mr. Dodd said. "If we get a tariff half as large as that enjoyed by the United States steel interests, we will have 10,000 people employed at the Soo within the next five or six years. Just now we are operating some of our branches at a loss, and others at a very small profit. We must get into competition with American steel, and just now we are endeavoring to hold our business until we can do so. We are losing money on merchant bars, alloy bars and splice bars, and are about breaking even on pig iron. The profits on rails are not large. The lack of a proper tariff is ruining the Canadian steel industry. A readjustment of the Canadian steel trade is coming within the next five years; commodities will be made where they can be manufactured the cheapest."

Bethlehem Steel Co. Producing 33-In. Beams and Girders

The Bethlehem Steel Co. has added to its line of wide-flanged structural shapes a series of 33-in. beams and girders, said to be the deepest sections ever rolled in the United States. The beams are available in four weights, ranging from 125 to 152 lb. per ft., and with section moduli respectively of from 394.3 to 478.4. The girders also are being rolled in four weights, of from 202 to 230 lb. per ft., and with section moduli respectively of from 676.0 to 778.0. These sections are designed to afford the maximum strength per pound of metal. They have the same contour as other Bethlehem sections.

The first of an eight-unit steam station on the Catawba River in Gaston County, N. C., has been started by the Duke Power Co. When completed, the station will be the largest in the Southeastern part of the United States. Each unit will develop 75,000 hp. The Westinghouse Electric & Mfg. Co., East Pittsburgh, Pa., will furnish for the first unit two steam turbo-generators.

This Issue in Brief

Obtains better castings by molding with the heavier section at the top, instead of at the bottom. Appropriate gating is used so that the light sections at the bottom will be properly filled.—Page 1450.

Initiate your foremen into the mysteries of overhead and thereby cut your costs. Automotive equipment manufacturer gives foremen in both productive and non-productive departments a daily statement of items of controllable burden and labor expenditures. A bonus is paid for maintaining expense at a minimum.—Page 1445.

Pearlitic iron is over-rated, British foundry authority believes. Pearlite alone is no criterion of the suitability of the iron, he says. It is perfectly possible to obtain excellent pearlitic iron, and equally possible to obtain pearlitic iron poor in quality.—Page 1451.

Plug mill superior to Pilger mill in making seamless tubes, say equipment builders. Plug mill's output is two or three times higher; quality of product is better; equipment costs less, and maintenance costs are lower, they declare.—Page 1466.

Keeping labor contented depends largely upon the foreman. Correct leadership is the most important factor in low labor turnover. Workers want to be treated as human beings. Most so-called personnel work consists of frills and is ineffective, says personnel manager.—Page 1459.

Foundry authorities differ on value of test bars. They reveal what the casting will be, J. W. Bolton contends. Not so, says Doctor Moldenke, for cooling rate of the metal is an important factor.—Page 1451.

Scrap losses in malleable foundry cut almost in half by supervisory system. Each supervisor has about 18 molders under him. Every day each molder's output is counted, and defective castings inspected and classified. At the end of the week any molder or pattern with a bad record is discussed at the Saturday meeting of foremen.—Page 1458.

Paying a bonus on percentage of good castings cut down production, so this foundry installed a better system. Now, molders are paid piece work rates, plus a bonus for production. An extra bonus is paid monthly for the number of good castings made. Average must be at least 91 per cent to earn the extra bonus.—Page 1458.

To improve your cupola operation, measure your air by *weight* rather than by volume, says equipment builder. Weight of a cubic foot of air changes with temperature, and therefore blowers should be operated to delivers constant weight rather than constant volume. Too much air retards the melting operation.—Page 1452.

Mill supply houses' average distribution cost is 22.54 per cent. Their average net profit is only 0.5 per cent. To help raise this figure they want manufacturers to fix consumers' resale prices. Turnover has risen gradually and is now 4.13 times annually.—Page 1470.

Very existence is threatened, say Valley iron and steel producers, unless river transportation is made available. They urge Commerce Commission to permit P. L. & W. Railroad to build extensions down to Ohio River, to widen markets for Ohio Valley steel and to lower freight rates on incoming coal. Trunk line railroads fight the proposal.—Page 1473.

Sand reclaiming unit more than pays for itself in one month. It cost $3,000, and is saving steel foundry $3,500 a month, reducing new sand consumption from 1200 lb. to 300 lb. per ton of good castings.—Page 1453.

Molding sand's latent strength value is brought out by mulling, says metallurgist. Heavier mulling rolls give better distribution of clay, increase strength, and also break down the grain clusters.—Page 1456.

Don't permit salesmen to make prices. Distributers of mill supplies urge that selling prices be determined by a responsible executive in the house, and that cost figures be kept from salesmen.—Page 1470.

Condemns practice of selling castings by weight schedule. Knowledge of manufacturing costs will eliminate the schedule system, says foundryman. If the purchaser insists upon buying by weight rather than by units, quote a cost per ton *for that particular pattern only.*—Page 1458.

Fight to regain share of Pacific Coast business. Middle Western producers want rail rates cut, so that they may regain Coast business lost to Eastern producers when the Panama Canal was opened. Illinois Central Railroad is agreeable to reduction, and proposes to join with a steamship line, so that shipments may be made by way of New Orleans. Eastern producers offer spirited opposition.—Page 1475.

Doctor Haney sees no early change in finished steel prices. They are almost in line with the general level of commodity prices, and can hardly advance. Nor can they decline much from such a low level as now exists.—Page 1481.

Schwab and Baldwin Are Right

SPEAKING in London last week Premier Baldwin dwelt on a note which Mr. Schwab had struck with force in his acceptance of the Bessemer medal at the hands of the Iron and Steel Institute a fortnight before. The great steel industry, with its immeasurable contribution to human progress in every land, with its long roll of triumphs in mechanical and metallurgical invention, is wrestling with poor success with the problem of winning an adequate return on its capital.

Mr. Baldwin, it need not be said, had the more doleful tale to tell. For himself, he had to say that for the vast investment he had made in the iron and steel properties of Baldwins, Limited, which are outstanding in the British industry, he had today only a penny for every shilling he had put in. Mr. Schwab, repeating in effect what he told the American Iron and Steel Institute last October, said that the great aim of the future, for steel producers, would be not the perfecting of costs of manufacture but of methods of distributing the steel so as to get a better price.

We draw attention now to these utterances of two men who are in the forefront in steel in Britain and America, to emphasize again what was said in an IRON AGE editorial of April 19 of the need of more and better publicity for steel. Premier Baldwin, with even an American sense of the remedy to which British steel makers must turn, said this:

> It does look as though business and industry are groping toward a position in which businesses making the same kinds of goods will have to combine, at least for the purpose of pushing and advertising those goods and bringing new orders home. They are trying to do it in the coal trade. They will doubtless have a try at it in the steel trade.

At one and the same time steel producers on both sides of the water are seeing that if their industry is to make any real headway it must adopt marketing methods that will be as much ahead of the old as its production methods are ahead of those of 25 years ago. There is no real salesmanship in getting an order by the brute argument of a lower price than a competitor made. Too long has the idea survived that steel is just steel, in the way that "pigs is pigs." The public, that has so much of its life tied up with things made from steel, that is moving every day in a world built of steel, eating nothing and wearing nothing that does not require equipment made from iron or steel for its production or transportation, must not go on believing that the industry to which it owes so much cannot win a fair reward for its unparalleled labors.

Steel makers should do much more to glorify their product and their service to modern life. The very psychology of all such effort would be of vast help in displacing the thought now uppermost in the public mind that the chief characteristic of steel today is its low and unprofitable price.

We firmly believe that President Schwab could raise no more enduring monument to his administration than by leading the American Iron and Steel Institute in this campaign to put steel in the high place which it has every right to hold in American life.

Publicity Works for Both Old and New

ATTENDANTS at the foundrymen's convention in Philadelphia last week had differing views of the outlook for the industry. One quoted Census statistics showing a consistent gain in the number of workers and the value of output. A. F. Jensen of Hanna Engineering Co., Chicago, speaking on behalf of the Foundry Equipment Manufacturers' Association, said that, while steel and malleable production per capita of population had increased largely in 25 years, gray iron founding had decreased 14 per cent in the same period. Apparently one's opinion depends upon the point of view; on whether the industry as a whole is visualized; whether one section appears to be backward; whether other groups are over-expanded; whether selling prices are low and return on investment unsatisfactory.

This condition within the foundry trade strikes such a parallel to that in the whole steel industry that Mr. Jensen's analysis of the conditions and recommendations of remedies may be applied to the broader field. He says that those business groups which have studied their fields intensively, adopted a sound merchandising plan and backed it with correct publicity, have been the ones to get a goodly share of the profitable business. But it is essential to know the field, know the product, and tell the world about it.

This matter of publicity will bear more emphasis. It has helped establish so many new things in the market. Yet seldom does any one think it may be used effectively to retain the market position of the old favorites. Refrigeration is a case in point. Where would Frigidaire, G. E., Kelvinator and the other refrigerating units be if their manufacturers had not taken pains to tell the world about the new idea? The ice men were first amused, then interested; and now, worried, they are campaigning (with publicity as a principal weapon) to impress the public with the obvious fact that a block of ice never gets out of order, and it doesn't cost very much.

In this age of rapid changes and easy money, a novelty is quickly seized upon. The old fashioned is readily replaced. New products, new uses, new operations are widely discussed and get much attention because of the novelty. In the competition between metals, iron and steel has suffered at the hands of aluminum. Aluminum—the "metal from clay"—and its many light strong alloys, is always interesting. Any one would read or listen to the story of making a railroad car of aluminum. Making it of steel is an old, outworn tale. Yet it is very important that railroad men especially and the public generally be reminded frequently that *steel* is the material from which railroad cars are being built; steel in passenger coaches has saved thousands of travelers' lives; steel in freight cars has handled America's trade.

Sound publicity about steel and iron is needed by all branches of the industry, and by the industry as a whole. Some few branches have made a start, are pointing the way. A broader, more intensive effort is necessary. Sound publicity includes not only the dissemination of information about the new uses for steel and iron but participation in society and trade meetings where competing materials are likely to be discussed. Parallel data should be presented by competent persons to show comparative qualities of the old reliable materials. Conferences, lecturers and data sheets for engineering and technical colleges, for trade and manual training schools, are of greatest importance in teaching the coming generation about the excellencies of steel and iron.

These are a few of the things included in publicity, as well as an effort to feed out through every available channel appropriate, well written and attractive matter about the strength, reliability, and honorable history of iron and steel—iron, the most important material underlying our present mechanical civilization.

This is a big job—too big for anything but the united effort of the entire industry.

IT might well have been stressed at the reunion of the charter members of the American Foundrymen's Association at Philadelphia last week that the association has been peculiarly fortunate in its secretaries. John A. Penton, the first of the four, was a master promoter and organizer. Then came Dr. Richard Moldenke, master technician, who in his 14 years made the A. F. A. influential at home and throughout the foundry world of Europe. A. O. Backert, whose untimely death was widely lamented, showed himself a master builder whose boundless energy and unflagging industry were always at the association's command. And now for a decade C. E. Hoyt, master manager and developer, conserving all that his predecessors had wrought, has been opening up new fields, bringing the association to an eminence beyond the liveliest imaginings of the founders.

Automobile Demand in Future

A FEW years ago it was merely a pastime to attempt to guess the future of automobile demand. Now, with an accumulation of annual statistics of production and registration, and a reasonable assumption as to the cars scrapped, there is some definite light. Considering only the statistics of production, an editorial in THE IRON AGE of April 26, 1928, concluded that "the figures suggest that large gains in automobile production disappeared quite a while ago."

The complication produced by the cessation of Ford production was largely eliminated by comparing production in twelvemonth periods ended March 31 instead of Dec. 31. The largest twelvemonth was that ended March 31, 1926.

Now we have a very interesting table for study in "Facts and Figures," 1928 edition, just published by the National Automobile Chamber of Commerce, page 24. This covers passenger cars and trucks for the United States. Production is given, exports deducted, and the United States market thus ascertained. Then registration is given, and finally there is a computation of the number scrapped.

These columns of figures, 1913 to 1927 inclusive, increase in quite different ways. They all move more by geometrical than arithmetical progression. In percentage, production increased rapidly, but registration still more rapidly, as cars were piling up, so to speak, while scrapping increased still more rapidly, because there were more and more cars to wear out. Taking 1919 and 1926 as convenient years for the illustration, production increased 112 per cent, registration 190 per cent and scrapping 346 per cent.

The "Facts and Figures" table is accompanied by a diagram, which shows average car life to have been about five years in the early period, to have increased to seven years afterward, and to have remained at just seven years for about five years past. On an average cars pass through two or three ownerships and it is hard to believe that the average life will remain at only seven years.

To avoid being misled by figures, on the geometrical scale, going up faster in registrations than in production, and faster still in scrapping, we make another computation, which shows a slow increase, the percentage scrapped in a given year to the production of that year, thus:

Cars and Trucks Scrapped in Percentage of Production

	Per Cent		Per Cent
1920	17.4	1924	34.6
1921	32.6	1925	43.5
1922	34.3	1926	46.9
1923	22.9	1927	68.1

The last named figure is not significant, as the scrapping had to be one-half estimated, while the number was put in relation to a light production.

With the percentage failing to increase sharply of late, the stimulus to production fails to increase as formerly. These geometrical progressions, so impressive for years, have really disappeared long enough ago for the disappearance to be visible in the statistics if sufficient study is made. The question is whether there will be even much arithmetical increase in production after the probable large Model T mortality has been offset.

Capital In Carrying Stocks

COMMENT on the large amount of brokers' loans used in the carrying of securities has been chiefly to the effect that the amount is excessive and something ought to be done about it. Last week's report (on Wednesday) showed that these loans amounted to four and a half billion dollars, and then on Thursday the New York Federal Reserve Bank raised its rediscount rate from 4 to 4½ per cent.

The phenomenon is worthy of consideration from another standpoint, that of capital. Margins are large, and assuming for convenience that they are one-third, we have two and a quarter billions involved in margins, or a total of six and three-quarter billions. Whether or not the share market has a big slump, the four and a half billions of capital will be intact. As to the other two and a quarter billions, it is capital now and may remain as such. The holders on margin expect to do one of two things—either to sell out to others, who thereupon would be investing capital, or gradually to pay off the loans so as to be outright owners of the shares. In either case the existence or creation of additional capital is presupposed.

Then there are our loans abroad, constantly growing and presumed to represent investment of capital newly created. Like the brokers' loans, they have been widely criticized, and in both cases the inference is clear that the capital goes where it does because it has less inducement to go elsewhere. Capital has been in process of creation in excess of the requirements of commerce as commerce has lately been conducted.

In the past, advances in the share market have run into scarcity of loanable capital, whereupon it appeared that the needs of commerce called for the available capital. We seem to have before us a situation in which the pressure will be in the opposite direction, capital calling upon commerce to expand to provide a use for it, instead of an expansion in commerce calling for capital to come out of the stock market.

That commerce as a whole does need a stimulus has been obvious. By growing efficiency in the old lines of manufacture and service, labor has been released and new lines of activity are needed. In the past as such things came out they sought capital. The tendency now is for capital to seek them.

The human element is not to be disregarded. Many observers claim that people have been speculating because it was easier, and seemed more profitable, than productive work. They may find it is better to work. That will be the case if share values continue advancing, for dividends as a rule are not increasing and yields accordingly would decrease. With more disposition on the part of such people to work, and with capital calling for new work to be done, there are auguries for commercial expansion in the next few years. By no means, of course, is this the whole story, or the greater part of it, but these clear points may be set against such auguries as are considered unfavorable.

CORRESPONDENCE

"Too Many Engineers?"

To the Editor: I regard the editorial under the above title in THE IRON AGE of May 17 as the ablest presentation and analysis of this very debatable question I have ever read. I believe a great deal of the difficulty lies with the technical universities, in that they regard engineering as the alpha and omega of the careers of all the students they graduate. If they would more frankly expound the idea that engineering is one of the best stepping stones to higher executive positions, we would not have the unfortunate situation of men hesitating to accept opportunities with greater possibilities, merely because it means scrapping the direct application of their detailed engineering education which they have been taught to value so highly.

Engineering principles and methods of reasoning and analysis, rather than detailed application of formulas and rules, are the real heritage of an engineering education. If the universities will thus amend their attitude, the graduation of engineers into higher executive positions not directly concerned with engineering will be tabulated as a gain rather than a loss in statistics regarding former students.

It is unfortunate that practically all engineering societies are more concerned with the advancement of the technical knowledge of their profession rather than with the financial advancement of their members. To say that any concerted effort to better the financial rewards of engineers is unprofessional, as some societies do, puts their officers in an embarrassing light, in that the eminent engineers who head these societies are by virtue of their own standing the very men who are likely to be the direct employers of the junior engineers who seek this financial advancement. It is much better to correlate this "proper reward for services rendered" program with the professional program of the existing engineering societies than to permit it to organize as a separate movement with increased remuneration as its sole objective.

If this situation is forced upon the rank and file of engineers, such an independent movement may unfortunately pattern itself too closely after labor union organizations. If, however, it is sincerely fostered by the engineering societies now in existence, it will not be likely to be conducted in an unprofessional or unethical manner, or be overemphasized, but will be a coordinated part of a real engineering program.

JOHN F. HARDECKER.

Philadelphia, May 18.

A Compelling Reason for Larger Use of Structural Steel

To the Editor: Your editorial on "Over-Capacity and Competition" is a pleasing contrast to the usual articles of pure economists, who apparently assume that the supply and demand can be represented by two tanks partly filled with water which can be equalized by simply turning off a valve.

You make the point more clearly than I have ever seen it stated elsewhere that capitalization of enterprise must be kept going and that the economic corrective is delayed on that account and it is this continued excess capacity that is the most serious element of the situation.

The one additional step that can be taken by an industry finding itself in an over-capacity situation is to increase the use of its products, a point which has been emphasized many times by THE IRON AGE.

Recently in our own structural shop I saw some large 14-in. rolled H columns weighing about 300 lb. per lineal ft. with flanges 2¼ in. thick being fabricated in lengths of 70 ft. without a splice. Prior to the use of this rolled H section it was the practice to order a 14-in. web plate, four flange angles and four 14-in. cover plates, each of which had to be punched and painted and finally assembled and riveted to give the same final section that we now get in a rolled shape from the mill. This is a fair sample of increased capacity in fabricating shops that has developed almost unconsciously, and the only solution is a larger use of structural steel such as you have long advocated.

H. H. COSLEY,
Contracting Engineer
Mississippi Valley Structural Steel Co.

Chicago, May 15.

Mechanization of Industry Has Helped Social Life

Magnus W. Alexander Tells National Industrial Conference Board That Our Progress Has Been Other Than Economic—America's Position in World Finance

AMERICA has been leading the world in the intensive mechanization of industry and its national prosperity is due in large measure to that circumstance, declared Magnus W. Alexander, president National Industrial Conference Board, when he addressed the members of the Conference Board at its twelfth annual meeting at the Hotel Astor, New York, last week. The great increase in national income and wealth in recent years, the high wage levels and particularly the high purchasing power of American wages he attributed to standardized, highly mechanized production, emphasizing that the substitution of power and machines for hand labor, far from reducing employment, in the long run increases the opportunities for employment.

Great significance was attached by Mr. Alexander to the beneficial effects of the mechanization of industry upon social life. The resulting economic gain, which has made it possible to combine a high wage level with relatively low price levels, he declared, accounts for high standards of living and shorter working hours. The resultant high wage earnings and increased leisure, he pointed out, enable the American wage earner to devote more time to cultural pursuits than workmen in most other countries are able to do. Mechanized industry's increasing demand for men and women with more knowledge and training and the correlative desire for more education among all classes, he declared, is not only developing a new type of workers, but also tends to evolve a more homogeneous population. Even the content of the immigration stream during recent years, he pointed out, reflected the greater demand in the United States for persons with professional training, while there had been a marked falling off in the influx of common labor.

Mr. Alexander deplored the wide publicity given to unemployment estimates during recent months. Asserting that the wide discrepancy of various estimates, ranging from less than 2,000,000 to 8,000,000 unemployed persons, in itself was evidence of the unreliability of estimates of unemployment and of the inadequacy of the available statistical material for such calculations, he warned against accepting as fact pure assumptions, the propagation of which is exerting a definitely deterrent influence on business progress.

America's Position in World Finance

Discussing the bearing of the international creditor position of the United States upon American industry and trade, Virgil Jordan, chief economist of the Conference Board, said that "in view of the vast responsibilities which rest upon the United States in international finance and trade, it is not safe or wise to rely altogether upon one or the other of the conflicting answers which economic theory gives to the difficult questions of the future, or upon the naive hopefulness that everything will come out right in the end. It has been wisely said that the best road to bankruptcy is a good tip and a fat pocketbook, and both of these the United States has in abundance today.

"Being the world's greatest creditor nation involves a great deal of hard work and constant worry, some of which is done for us by the Government, but most of which necessarily falls upon private citizens and groups of citizens of many different kinds. This does not mean that we are doomed to work like the devil to collect our foreign debts or to worry about how they will be paid back. Only very naive people trouble themselves about things like that, for of course these debts will never literally be paid back. They are not debts or loans but investments, and even in the case of war loans and reparations, the problem that faces us is not how to collect them but how to scale them down so that they can safely be absorbed by private investors and converted into sound public investments. They will be funded and refunded and spread over the investing public of the world, but no one wants them paid back 'til Judgment Day, when it will no longer matter whether they are or not.

"All that we are interested in is the stability of their value and their yield; and this means simply that we are interested in the business operations of which they are the basis. The so-called creditor position of the United States means simply that we have engaged on a large scale in foreign enterprise. Being the largest creditor nation implies the obligations and responsibilities of running the largest international business, which is the most difficult kind of business to conduct successfully. Historical precedent and current opinion are not reliable guides in a situation so new, vast and complex as that which now faces us. We shall have to approach these problems with an open mind and with a desire to know fully the facts, conditions and tendencies as they exist. Above all, we must be on our guard against the uplifting sentimentality about the duties and responsibilities of the United States in relation to the welfare of the rest of the world, an attitude which is widely prevalent today in America in connection with these questions."

Overhauling of Anti-Trust Laws May Be Demanded

Diminishing profits and the increasing difficulty of many small and medium-sized manufacturers and distributers to maintain themselves, in the face of the mass production and the mass distribution of their stronger competitors, are developing a feeling of unrest that politically may translate itself into a concerted demand for overhauling all of our present anti-trust laws, according to Gilbert H. Montague, member of the New York bar, who addressed the Conference Board. He said:

"Prosperity, so long as it continued at high tide, temporarily took the anti-trust laws out of politics, and kept them out of politics longer than anyone could have anticipated, but disappearing profits on the part of a growing number of small and medium-sized manufacturers and distributers, and increasing clamorous criticisms on the part of a growing number of particular groups and interests, may soon bring the anti-trust laws back into politics again."

Considerable Obsolete Machinery Still in Use

In spite of the rapid and radical progress made particularly during the past decade in automatic machinery, which has helped to reduce production costs in many instances to a fraction of what it is when obsolete machinery is used, approximately 44 per cent of machine equipment used in the metal-working field today is more than 10 years old, declared K. H. Condit, editor of the *American Machinist*. Labor saving machinery, Mr. Condit said, will return its purchase price in from five years to as many weeks and sometimes less, yet many makers of such machinery find it difficult to make profits.

Iron and Steel Markets

Steel Production Tapering

Mill Operations in Greater Pittsburgh District Decline to 75 Per Cent—Valley Basic and Bessemer Pig Iron Drop 50c.

MILL operations are tapering, but the gradual character of the decline is testimony to the large volume of steel passing directly into consumption. With prices no longer buoyant, consumers are ordering sparingly and, in some instances, are delaying purchases in the hope of buying more advantageously later. This spirit of caution is reflected not only in new business, but in a reduction in the average size of individual specifications. Shipping orders in the aggregate, however, show surprisingly little change.

Steel output in the Greater Pittsburgh district has dipped to 75 per cent, compared with a recent rate of 80 per cent of capacity. At Chicago, where production has been holding at 95 per cent, there has been virtually no curtailment to date. Average operations of Steel Corporation subsidiaries are now placed at 85 per cent, a decline of three or four points in the past week.

The volume of tonnage still reaching the mills is all the more impressive when the uneven tendencies of consumption are considered. Makers of wire products are feeling the overstocked condition of jobbers, particularly in nails. Business in steel pipe is making a poor showing compared with recent years. The decline in demand for oil country pipe is marked, even in comparison with last year, when first quarter shipments satisfied most of the first half requirements. Railroad equipment orders are disappointing, and the consumption of hot-rolled bars by makers of cold-finished bars and bolts, nuts and rivets has declined, bolt and nut output being 10 per cent lower than a month ago.

On the other hand, tin plate demand remains active, supporting mill operations well above 90 per cent of capacity. Specifications for automobile steel are undiminished and, with the exception of one or two companies, there has been no slowing down in motor car output. Ford's bar requirements now exceed the capacity of his own mill, and an increasing tonnage is being bought in the open market. At Chicago new business in soft steel bars is equal to shipments and alloy steel bar mills are running at capacity.

Specifications for automobile body sheets remain heavy. Some interruption in the flow of steel to motor car plants is expected, however, in about 30 days, when new models will be brought out.

The structural steel outlook continues good, although awards of fabricated work for the week were light. At New York fully 90,000 tons of new work will come up for bids before mid-summer, and at Chicago 50,000 tons for a single project will probably be placed by the middle of June.

Prices of finished steel, in view of the small amount of new business, show little change. Recent minimum prices on black and blue annealed sheets are becoming more general, and galvanized sheets have dropped another $1 a ton to 3.55c., Pittsburgh. On 6 to 12-in. hot-rolled strip 1.75c., Pittsburgh, or $1 a ton under the recent base, is more commonly quoted.

Alloy steel bar mills have increased the differential on Series 3200 nickel chromium steel bars $7 a ton. The advance represents a readjustment to bring a particular grade more nearly in line with other grades.

Prices of primary materials continue to give ground. Basic and Bessemer pig iron have declined 50c. a ton in the Valleys and Cleveland malleable and foundry grades have receded 25c. to 50c. for delivery to competitive districts. The Michigan market on foundry and malleable iron, which has held at $18 a ton, furnace, for some time, is now represented by a range of $17.50 to $18. At Pittsburgh heavy steel scrap has dropped 50c. a ton.

The Virginian Railway has bought 1000 hopper car bodies, and the Erie Railroad has ordered 35 locomotives. The Wheeling & Lake Erie has placed a supplementary order for 1000 tons of rails, and a Western road has bought 4000 tons. Rail mills at Chicago continue to operate at 90 per cent, but diminishing backlogs point to an early curtailment.

Merchant producers of pig iron are encountering increasing competition from steel company furnaces as steel output tapers. Weakness in scrap prices, by stimulating the use of old material in open-hearth furnaces, has also released more steel works pig iron for the open market. The drop of 50c. a ton on basic and Bessemer pig iron in the Valleys brings these grades to the lowest levels since the fall of 1915. The reduction in Valley basic was brought out by a 25,000-ton inquiry from a steel company.

At Chicago, pending third quarter business in foundry iron totals 30,000 tons, and smaller amounts are under consideration at other points. The pig iron situation in the Chicago district is being watched anxiously, following the arrival of cargoes of hematite iron from England and foundry iron from Lake Erie ports.

Bookings of fabricated structural steel fell off in April from March in the ratio of 69 per cent of capacity for March to 63 per cent for April. Fabricated steel plate work, on the other hand, bulking roughly one-fourth the volume of fabricated structural steel, showed an increase from 57 per cent of capacity in March to nearly 61 per cent in April.

For the third successive week THE IRON AGE pig iron composite price has reached a new low level. It is now $17.34 a ton, the lowest figure since 1915. Finished steel remains for a third week at 2.348c. a lb.

On export business there are frequent variations from the above prices. Also, in domestic business, there is at times a range of prices on various products, as shown in our market reports on other pages.

Pittsburgh

Basic and Bessemer Pig Iron 50c. Lower —Steel Output Tapers Slightly

PITTSBURGH, May 22.—Not much change is noted in the aggregate rate at which steel orders and specifications are coming to local manufacturers, as a slowing up in the demand for some products is quite fully compensated by gains in others. Wire products are not doing nearly as well this month as they did last month, but it is quite uniformly reported by strip makers that this month's business is running about 10 per cent ahead that of last month. The past week's releases against orders for bars, plates and shapes ran a little ahead of those of the week before. Tin plate is holding to a high rate of production and movement, but pipe business, although enjoying occasional spurts, appears to be gradually decreasing in volume. The automobile steels still are doing well, car builders being rather anxious to obtain shipments to complete production schedules on present models and get ready for the new series, which will begin to reach the market in the next 60 days. But whether it is automobile steel or steel for other uses, the tonnage moving is chiefly against old orders.

As strictly new steel business is very light, order books have dwindled to a point where some curtailment of ingot production has been found necessary. The average this week for this and nearby districts is closer to 75 per cent than to 80 per cent, the rate of a week ago.

Steel prices show no particular change, inquiries being too few and small to furnish real tests. Pig iron prices, however, have yielded, for which merchant producers are inclined to blame the steel makers, who have been consuming iron rather sparingly, using scrap freely, thus having rather sizable surplus supplies of iron which they have been forcing on the market.

Pig Iron.—The Valley-Pittsburgh market clearly is weaker and 50c. per ton lower on the steel-making grades. On the large basic iron inquiry which appeared about 10 days ago, $16, Valley furnace, has been quoted, a drop of 50c. a ton from the recent nominal quotation. Incidentally, that price was not interesting to the company seeking the iron, as it has an even lower delivered price than $16 at any of the Valley furnaces would mean. Moreover, a Pittsburgh district steel maker has bought within the week a good-sized lot of this grade at close to $17, delivered, and the iron carries a freight rate that will mean a price at the furnace, from which it is believed the iron is coming, of about $15.25. Bessemer iron is offered at $17, Valley furnace, also a drop of 50c. a ton from its recent price, which, while still being quoted, is sustained only by carload lots. Foundry and malleable grades are holding at recent prices, being somewhat freer of steel company competition than is true of the steel-making grades. Steel company production of pig iron is large by comparison with consumption. The pig iron market also is affected by the weakness of scrap prices, which stimulates the use of old material and makes steel company pig iron available for the market. Except for the activity in basic iron, the business again in the past week has been chiefly for one and two carload lots. The Richmond Radiator Co., Uniontown, Pa., is in the market for 5000 tons of foundry iron for third quarter shipment.

Prices per gross ton, f.o.b. Valley furnace:

Basic	$16.00
Bessemer	$17.00 to 17.50
Gray forge	16.75
No. 2 foundry	17.25
No. 3 foundry	16.75
Malleable	17.25
Low phosphorus, copper free	26.50

Freight rate to the Pittsburgh or Cleveland district, $1.76.

Ferroalloys.—British makers of ferromanganese appear to have written a good deal of business for delivery during this quarter prior to the recent advance to $105, and with consumers generally well covered at the old price to the end of July and able to enter specifications for August shipment at $100, there has been no urge to sign second half contracts. Except for steady deliveries on contracts, there is little of interest in the other commonly used ferroalloys.

Fluorspar.—Although the price of gravel spar is higher at mines than it was earlier in the year, the delivered price in this district is substantially the same. The company which has obtained most of the recent business is shipping it by river barge, the rate being $3 a ton, against $5.25 per ton by rail. It is estimated that close to 10,000 tons has been booked in this district and will move by river to destinations, the sales including one of 3700 tons. This company now is quoting $16.25 on barge, the price including a handling charge of 25c. a ton. Companies obliged to ship by rail would have to make a price of $14, mines, to match a barge delivered price of $19.25.

Semi-Finished Steel.—Makers of sheet bars here and in Youngstown are making an effort to establish firmly a price of $34 on contracts; while that price has long been the open quotation, producers were not always rigid in their insistence upon the full amount. Most companies making sheet bars for sale also roll sheets and the firmer stand on sheet bars is believed to be prompted by the desire to stop the decline in the latter. There is only moderate activity in sheet bars, but rolling mills are specifying rather well for billets and slabs. Skelp is also moving steadily on contracts. The prevailing price on wire rods is $42, base Pittsburgh, although a good many contracts have been written at $44, base, and there is some specifying against contracts for high carbon and acid open-hearth rods carrying the latter base.

Bars, Plates and Shapes.—Releases against old orders are making a creditable showing in the aggregate, but new business is not equaling completed orders. Backlogs, principally of bookings made late in March, are dwindling. It requires sales effort to bring in specifications as well as new business, because consuming demands are not as large now as they were earlier in the month. Bars are affected by the recession in bolt, nut and rivet business and in the demand for cold-finished bars. Plate tonnage is not heavy and fabricated steel inquiries, though fairly numerous, are small individually and in the aggregate. In the territory dominated by Pittsburgh district mills through favorable freight rates, the market is firm at 1.85c., base Pittsburgh, on these products.

Rails and Track Supplies.—Steady deliveries on old orders do not help the outlook much, since there is a dearth of new buying. Inquiries for light-section rails are usually for single carloads. The market for small spikes still waits on some definite improvement in coal mine operations. Prices are steady.

Wire Products.—Makers still find business slow, although there is some evidence of a larger movement into consumption. Scarcely enough business is being quoted on to establish prices definitely, but the larger manufacturers continue to regard the market as $2.65, base, per keg, Pittsburgh, for nails and $2.50, base, per 100 lb. on plain wire. However, the report continues, nails can be bought at $2.55, base; seemingly, some makers are content with that price plus the new card of extras, which produces a price of $2.77½ per keg for 20 to 60 pennyweight nails, making allowance for the 10 per cent discount on the extras for carload lots.

Tubular Goods.—Pipe business is running behind the volume at this time last year and is making a rather poor showing compared with the average of the past few years to this date. Standard-weight pipe is going out fairly steadily, but there is not much activity in line pipe, and there are suggestions that the demand for gas does not indicate the need of the laying of some of the long lines that have been talked of for some time. The deficiency in oil country pipe business, even compared with that of a year ago, is fairly marked, and it will be recalled that last year the first quarter shipments proved sufficient for most of the first half's requirements. A revision of lapwelded steel boiler tube prices is in the making.

Sheets.—Automobile body sheets still are moving actively, but there seems to be some doubt that the demand will continue much longer at the present rate, since the releases now are against present series models and new models of most cars are due to appear in the next 60 days. While the new cars will call for the ordering of sheets, a gap in specifications usually occurs when the engineers make their last minute changes in designs. Metal furniture sheets are doing well. The ordinary finishes are slow. The flexibility in prices has not stimulated buying. The market on galvanized sheets is very weak. Those for uses other than roofing and siding can be fairly quoted at 3.60c. to 3.65c., base Pittsburgh, but lower figures are coming out on roofing and siding sheets, particularly in the South, where exists the largest market for them.

Tin Plate.—Makers are well satisfied with the way contracts are being specified. That releases are large is indicated by the fact that mill operations of leading producers are well above 90 per cent of capacity. Counting in its Pittsburgh works, which probably will not be operated again, the American Sheet & Tin Plate Co. is running at 91 per cent of capacity.

Cold-Finished Steel Bars and Shafting.—Orders are

	Carbon Vanadium	0.95	3.60

Above prices are for hot-rolled steel bars, forging quality. The ordinary differential for cold-drawn bars is 1c. per lb. higher. For billets 4 x 4 to 10 x 10 in., the price for a gross ton is the net price for bars of the same analysis. For billets under 4 x 4 in. down to and including 2½ in. squares, the price is $5 a gross ton above the 4 x 4 billet price.

Slabs with sectional area of 16 in. or over carry the billet price; slabs with sectional area of 12 in. to 16 in. carry a $5 extra above the billet price and slabs with a sectional area under 12 in. carry the bar price.

Band sizes are 40c. per 100 lb. higher.

Rails

	Per Gross Ton
Standard, f.o.b. mill	$43.00
Light (from billets), f.o.b. mill	36.00
Light (from rail steel), f.o.b. mill	34.00
Light (from billets), f.o.b. Ch'go mill	36.00

Track Equipment

	Base Per 100 *Lb.*
Spikes, $\frac{9}{16}$ in. and larger	$2.80
Spikes ½ in. and smaller	2.80
Spikes, boat and barge	3.00
Tie plates, steel	2.15
Angle bars	2.75
Track bolts, to steam railroads	$3.80 to 4.00
Track bolts, to jobbers, all sizes, per 100 count	70 per cent off list

Welded Pipe

Base Discounts, f.o.b. Pittsburgh District and Lorain, Ohio, Mills

Butt Weld

Less carloads, 4 points less. Add $8 per net ton for more than four gages heavier than standard. No extra for lengths up to and including 24 ft. Sizes smaller than 1 in. and lighter than standard gage to be held at mechanical tubes list and discount. Intermediate sizes and gages not listed take price of next larger outside diameter and heavier gage.

Seamless Mechanical Tubing

	Per Cent Off List
Carbon, 0.10% to 0.30%, base	55
Carbon, 0.30% to 0.40%, base	50

Plus differentials for lengths over 18 ft. and for commercial exact lengths. Warehouse discounts on small lots are less than the above.

numerous, but are usually for small lots. The volume is not as large as it was a month ago. Some pressure is being exerted against prices, but does not appear to have brought about any marked weakening.

Hot-Rolled Flats.—Very narrow strips and hoops and bands hold well at 2.20c., base, and the market is fairly steady on strips from 3 in. to 6 in. in width. In wider material, prices show irregularity, owing to competition from sheets and plates. Specifications generally are well up to the April rate, and with some companies they are exceeding those of a month ago by as much as 10 per cent. Strictly new business is moderate.

Cold-Rolled Strips.—New business is light, but buyers are taking shipments freely on old orders. Prices are steady, but the absence of large new business precludes a real test.

Bolts, Nuts and Rivets.—Some makers having a considerable share of railroad business are doing well, but the industry as a whole averages at least 10 per cent less active this month than last month. Prices are steady.

Coke and Coal.—No material change in general market conditions is noted. The demand for spot tonnages of both furnace and foundry coke is limited and the principal outlet for furnace grade is still to water gas plants. Foundries are getting ample supplies in shipments against contracts. Some tendency is noted to scale down coke production in preparation for a larger demand for coal. The Baltimore & Ohio Railroad has not followed the Pennsylvania and New York Central in reducing rates on coal for the Lake trade, and as a number of industrial consumers along the Lake front will not benefit from the reduction, which is to apply only on Northwestern shipments, there is some doubt that the Interstate Commerce Commission will approve it. However, if it does it would sustain a former decision establishing a differential of 45c. per ton between rates from Southern and Northern mines. The matter is before the commission and a decision is yet to be made. Meanwhile, there is not much Lake business, and demands from other directions are light. If much Lake business develops, it probably would mean a firmer coke market, since the coal prices, which are expected to run from $1.65 to $1.75, at mines, would be much more profitable than coke at its present prices.

Old Material.—A recession in consuming demand and smaller interest in the market by dealers have weakened the steel works grades, heavy melting steel being down 50c. a ton from its range of a week ago. Dealers are picking up tonnage for one or two points at as low as $14.50 and the market is quotable up to $15.50 for strictly No. 1 railroad steel. Prices have receded rather sharply on steel foundry grades, demand for which is extremely limited on account of a low rate of operations of such foundries. Blast furnace scrap also has given ground, as have also machine shop turnings.

Prices per gross ton delivered consumers' yards in Pittsburgh and points taking the Pittsburgh district freight rate:

Basic Open-Hearth Furnace Grades:	
Heavy melting steel	$14.50 to $15.50
Scrap rails	15.00 to 15.50
Compressed sheet steel	14.75 to 15.00
Bundled sheets, sides and ends	13.75 to 14.00
Cast iron carwheels	14.50 to 15.00
Sheet bar crops, ordinary	15.50 to 16.00
Heavy breakable cast	12.50 to 13.00
No. 2 railroad wrought	15.00 to 15.50
Heavy steel axle turnings	13.00 to 13.50
Machine shop turnings	10.00 to 10.50
Acid Open-Hearth Furnace Grades:	
Railroad knuckles and couplers	16.00 to 16.50
Railroad coil and leaf springs	16.00 to 16.50
Rolled steel wheels	16.00 to 16.50
Low phosphorus billet and bloom ends	18.50 to 19.00
Low phosphorus, mill plate	17.50 to 18.00
Low phosphorus, light grade	16.50 to 17.00
Low phosphorus sheet bar crops	17.50 to 18.00
Heavy steel axle turnings	13.00 to 13.50
Electric Furnace Grades:	
Low phosphorus punchings	16.50 to 17.00
Heavy steel axle turnings	13.00 to 13.50
Blast Furnace Grades:	
Short shoveling steel turnings	10.75 to 11.00
Short mixed borings and turnings	10.75 to 11.00
Cast iron borings	10.75 to 11.00
No. 2 busheling	10.00 to 10.50
Rolling Mill Grades:	
Steel car axles	18.00 to 19.00
No. 1 railroad wrought	11.00 to 12.00
Sheet bar crops	17.00 to 17.50
Cupola Grades:	
No. 1 cast	14.50 to 15.00
Rails 3 ft. and under	16.00 to 16.50
Malleable Grades:	
Railroad	15.00 to 15.50
Industrial	14.50 to 15.00
Agricultural	14.00 to 14.50

Cement coated nails, per keg	3.05

New Vanadium-Titanium Pig Iron

A vanadium-titanium pig iron made in Norway from ore containing the vanadium and titanium has been put on the market in this country by Rogers Brown & Crocker Brothers, New York, who have been appointed exclusive agents in the United States and Canada. The iron is made in electric furnaces, using Norwegian charcoal as a reducing agent. Production is by the Bremanger Kraftselskap (Bremanger Power Co.), Bergen, and the Christiania Spikerverk (Christiania Nail Works), Oslo, associated companies. The latter has an annual capacity of 2000 tons, and the former, after July 1, will be able to make 20,000 tons a year.

The standard analysis of the pig iron is as follows: Carbon, about 4 per cent; phosphorus, 0.025 per cent maximum; sulphur, a maximum of 0.025 per cent; silicon, 0.5 to 2.0 per cent, as desired; manganese, a maximum of 0.2 per cent; vanadium, a minimum of 0.5 per cent; titanium, about 0.5 per cent. The sulphur content can be reduced to 0.015 per cent, if stipulated.

Ordinarily vanadium acts as a "scavenger" and only a fraction is left in the metal for alloying effect, but in this instance, it is said, the titanium acts as the scavenger and the vanadium content is left virtually intact. At the same time the loss in titanium is only 20 per cent, it is stated. The titanium is also recommended for its graphitizing effect, acting in the same manner as silicon, only in a greater degree.

The iron is said to be particularly effective, when added to the cupola mixture, in making cylinders and other castings exposed to wear. It is also recommended for the manufacture of tool steels and other alloy steels, particularly by the crucible process. Good results are said to accrue from use of the iron in making malleable iron and electric steel castings. The pig iron is offered at $40 per ton, duty paid, Atlantic ports.

The Fort Worth Structural Steel Co. has been established at Fort Worth, Tex. It has taken over by lease the structural steel and tank department of the Fort Worth Steel & Machinery Co., but there is no financial connection between the two companies. J. H. Brillhart is president and general manager, C. H. Brillhart, vice-president, C. A. Fischer, treasurer and G. A. Brightwell, secretary.

Chicago

Steel Demand Tapering Gradually—30,000 Tons of Pig Iron for Third Quarter on Inquiry

CHICAGO, May 22.—The Chicago district steel market, though giving definite signs of tapering to summer output and demand, is nevertheless undergoing this change gradually and at a much slower pace than has been the experience of mills in recent years.

The leading producer, having made a week ago a switch in furnaces at South Chicago and at Gary, has actually increased pig iron output for the reason that the blast furnace added at Gary is of larger capacity than the one put out at South Works. Ingot production, while now a shade below 95 per cent of capacity, is holding remarkably steady in view of the fact that rail mill schedules are expected momentarily to taper.

The possibility of a sustained demand for structural shapes is indicated by unusual activity on the part of architects and the well scattered and large aggregate tonnage that is actually on inquiry. The site is being cleared for the Mercantile Mart, and it now seems probable that the 50,000 tons or more of steel that will be required may be purchased by the middle of June. The development of air rights over the Randolph Street terminal of the Illinois Central is being considered.

Water shipments of steel to Chicago are assuming larger proportions and give promise of being a definite factor in this market during the open season of navigation.

The price situation remains unchanged except for a more clearly defined weakness in wire nails. In heavy tonnage products, quotations on narrow plates show the least stability.

Pig Iron.—This week has marked the arrival at Chicago of about 2000 tons of English hematite iron for delivery to a Milwaukee melter. A cargo of Northern iron has arrived at Milwaukee from a Lake Erie port. The trade is anxiously watching the effect of the new $18 price at Chicago on the movement of iron from Lake furnaces by boat. Several cargoes are under contract and are expected to arrive here early in June. Shipments from local furnaces are steady, but sales are confined to spot business, which in the aggregate is not heavy. On the other hand, the outlook is favorable because not less than 30,000 tons for third quarter and last half delivery is being openly asked for. One user will take 5000 tons of malleable iron. Like tonnages of Northern foundry iron are being sought by two other foundries. Miscellaneous lots of charcoal iron are moving at the full prices. Several small inquiries are out for low phosphorus iron.

Prices per gross ton at Chicago:

Northern No. 2 foundry, sil. 1.75 to 2.25	$18.00
N'th'n No. 1 fdy., sil. 2.25 to 2.75	18.50
Malleable, not over 2.25 sil.	18.00
High phosphorus	18.00
Lake Superior charcoal, averaging sil. 1.50	27.04
Southern No. 2 fdy. (all rail)	21.51
Southern No. 2 (barge and rail)	20.68
Low phos., sil. 1 to 2 per cent, copper free	$28.50 to 29.00
Silvery, sil. 8 per cent	29.79
Bessemer ferrosilicon, 14 to 15 per cent	46.79

Prices are delivered consumers' yards except on Northern foundry, high phosphorus and malleable, which are f.o.b. local furnace, not including an average switching charge of 61c. per gross ton.

Ferroalloys.—The advance of $5 a ton on ferromanganese has not brought out business, as had been expected by some. It is clearly indicated that many users will exercise first half contracts to lay in a supply which will carry well into the second half. Several inquiries for 200 to 300 tons each of spiegeleisen are before the trade.

Prices delivered Chicago: 80 per cent ferromanganese, $112.56; 50 per cent ferrosilicon, $83.50 to $87.50; spiegeleisen, 19 to 21 per cent, $37.76 to $39.76.

Plates.—It is reported that a Western producer has obtained the contract for pipe for a gas line that will extend from the Southwest into Kansas City, but financial arrangements have not been completed and the 100,000 tons of plates required has not been inquire for. Two orders for tank plates totaling 2500 ton have been placed by two Texas oil producers. Inquir is small, but steel producers are led to believe tha additional business will come out soon. Chicago district plate mills are engaged at not far from capacit in practically all sizes up to the extreme widths. I some quarters it is believed that new railroad busines is developing. Some car inquiry, it is said, is waitin only on official sanction. In the meantime, howeve Western car builders continue to reduce their orde books and it is not improbable that curtailment of sho operations will be necessary before new business get under way, even if orders are placed in the next fe weeks. Specifications to mills from car builders ar in fair volume, and there still remains a moderat amount of steel to be ordered against car contract that have been taken in recent weeks. Prices for plate in the immediate Chicago territory are moderatel steady at 2c., Chicago, the greatest unevenness appearing on scattered sales in narrow widths.

Mill prices on plates per lb.: 2.00c., base Chicago.

Structural Material. — Miscellaneous structura awards in the week total about 5500 tons. Individual orders are not large. Going business is much t the liking of some fabricators, who are in need of sma work to fill in shop schedules for economical operatio The American Bridge Co. has taken 950 tons for building for the Crane Co., Chicago, and the Wisconsi Bridge Co., Milwaukee, has been awarded 600 tons fo a school at Fond Du Lac, Wis. Previous bids on th Austin High School, Chicago, which requires close t 3500 tons, were thrown out, and it was disclosed i opening the new bids that the Great Lakes Constructio Co., Chicago, is low. Bids on the restoration of th Fine Arts Building, Jackson Park, Chicago, have over run estimates by $500,000. The South Park Commissioners have not made public the course that will no be taken. Prominent among new inquiries are 160 tons for an office building in Chicago, a like tonnag for a theater in San Antonio, Tex., and 800 tons fo the Delco-Remy Corporation, Anderson, Ind. Prices fo structural material remain unchanged at 2c., Chicag except where producers are influenced to make lowe quotations on specific projects.

Mill prices on plain material per lb.: 2.00c., base, Chicago.

Rails and Track Supplies.—A Western railroad ha ordered 4000 tons of standard-section rails for deliver in the early summer months. Inquiry is small. Miscellaneous orders for track supplies total 3000 tons, an only a small amount of business is before the trade A few carlot orders for light rails have been placed Although the aggregate tonnage is not large, it is th heaviest for any like period in several months. Ra mills are operating at close to 90 per cent of capacit this week, but shipping instructions and order book are such that output will begin to taper at an earl date. Track accessory departments are busy an changes in tonnage produced will lag a measurabl time behind the cut in rail mill output. The iron ti plate market is quiet.

Prices f.o.b. mill, per gross ton: Standard-section open-hearth and Bessemer rails, $43; light rails, rolled from billets, $36. *Per lb.:* Standard railroad spikes, 2.80c.; track bolts with square nuts, 3.80c.; steel tie plates, 2.25c.; angle bars, 2.75c.

Cast Iron Pipe.—The only new order of note thi week was placed by St. Clair Shores, Mich. This business, which went to the National Cast Iron Pipe Co called for 19 miles of 6 and 8-in. centrifugal pipe. Contractors in the immediate Chicago territory are busy but on pipe that was ordered some time ago and whic has been on the ground awaiting favorable weathe New orders from that source are close to the low poin in two years and this situation is causing some concern to pipe sellers, who sense a condition wherein it i not improbable that subdivision and suburban work having been rushed for many months, is now actuall ahead of demand. It is believed that pipe laying programs will be curtailed for some time to come, that i until the growth in population more than makes use o the pipe that is already in the ground. Orders by th railroads are small and little new tonnage is comin from public utilities, which in many instances have already placed contracts for the pipe needed in thei spring and summer programs. With pipe foundries working on an average of a single 8-hr. turn, deliveries are about 30 days in most sizes. Foundry stocks of cast iron pipe are reported as not being overly large for this time of the year. Prices for going tonnages are steady at $31 to $33, Birmingham, for 6-in. and larger diameters.

Prices per net ton, delivered Chicago: Water pipe, 6-in. and over, $38.20 to $41.20; 4-in., $42.20 to $45.20; Class A and gas pipe, $4 extra.

Sheets.—Lack of orders has forced Chicago hot mills to cut operations to 50 per cent of capacity. Summer weather, of which several days already have been experienced, is now close at hand and will have its usual bearing on the willingness and ability of labor to produce sheet products. In some respects sellers are reconciled to small orders at this time of the year, for they point to the fact that the period from May 15 to June 15 or a little later is normally a low point in purchases of sheets in this territory. Sheets are moving out of warehouse in fair tonnage, but stocks have been well built up, and the result is that few orders come from that source to producers. The roofing trade is quiet because of the lack of interest in districts where farmers are busily engaged in the fields. A fair tonnage is still coming from the Northwest, where the season has been backward. Prices, unchanged from a week ago, lack strength.

Base prices per lb., delivered from mill in Chicago: No. 24 black, 2.85c. to 2.95c.; No. 24 galvanized, 3.75c. to 3.85c.; No. 10 blue annealed, 2.20c. to 2.30c. Delivered prices at other Western points are equal to the freight from Gary plus the mill prices, which are 5c. per 100 lb. lower than the Chicago delivered prices.

Bars.—Specifications and also new sales in soft steel bars are on a parity with shipments, as miscellaneous buyers in an ever widening circle continue to find use for large tonnages of this commodity. Judged by orders to Chicago mills, there is little or no change in demand from the automobile trade, although adjustments up or down are going on at individual plants. Ford's requirements have already gone beyond the capacity of his own steel mills and many of his parts makers are free to buy steel in the open market. Alloy steel bars are being shipped at mill capacity, and prices are steady. Backlogs in iron bars are the best in months, but after a short run of heavier specifications there is a lessened demand for shipments. Both specifications and new purchases in rail steel bars have climbed well above the rate of output and Chicago Heights mills have completed a two and a half year period without an interruption in double turn operation. Fence post shipments are heavier. Producers will announce fall terms on this commodity before June 1. Hard steel bars are steady at 1.85c., local mills.

Mill prices per lb.: Soft steel bars, 2.00c., base, Chicago; common bar iron, 2.00c., base, Chicago; rail steel bars, 1.85c., base, Chicago Heights mill.

Coke.—Chicago district users of by-product foundry coke are expecting a steady demand. Ovens are all lighted. Prices are firm at $9, f.o.b. local ovens, and $9.50, delivered in the Chicago switching district.

Bolts, Nuts and Rivets.—Specifications for these commodities are measurably lower, though release orders on makers' books are of such size that output remains close to 65 per cent of capacity. Prices for rivets are steady.

Warehouse Prices, f.o.b. Chicago

	Base per Lb.
Plates and structural shapes	3.10c.
Soft steel bars	3.00c.
Reinforcing bars, billet steel	2.30c. to 3.00c.
Reinforcing bars, hard steel	2.00c. to 2.70c.
Cold-finished steel bars and shafting—	
Rounds and hexagons	3.60c.

Bands	3.65c.
Hoops	4.15c.
Black sheets (No. 24)	3.95c.
Galvanized sheets (No. 24)	4.80c.
Blue annealed sheets (No. 10)	3.50c.
Spikes, standard railroad	3.55c.
Track bolts	4.55c.
Rivets, structural	3.60c.
Rivets, boiler	3.60c.
	Per Cent Off List
Machine bolts	60
Carriage bolts	60
Coach or lag screws	60
Hot-pressed nuts, squares, tapped or blank	60
Hot-pressed nuts, hexagons, tapped or blank	60
No. 8 black annealed wire, per 100 lb	$3.30
Common wire nails, base per keg	3.10
Cement coated nails, base per keg	3.10

Reinforcing Bars.—New business in reinforcing bars is confined almost wholly to a great number of small tonnage sales and inquiries. Heavy tonnage projects are moving slowly, though many of them seem assured. New price schedules are holding. Warehouses are quoting 2.30c. to 3c. on billet stock bars and 2c. to 2.70c. for the rail steel commodity. Warehouse extras are the same for both hard and soft steel bars, being $3 a net ton for trucking, $8 for beam and slab bending, $20 for stirrup and column tie bending and $5 for engineering service. Many small orders are largely responsible for a higher rate of bending shop operations. Books are small, however, and output can be sustained only by a steady flow of new business.

Wire Products.—Little change is noted in this market. Nail business is dull. Sellers are quoting prices on small lots from $2.55 to $2.60, base per keg, Chicago. The overstocked condition of many jobbers is still an unsettling factor throughout this territory. In the larger centers, prices for manufacturers' wire are holding firmly at $2.55, Chicago, but this price has been shaded at St. Paul. On the whole, the volume of business being booked is good for this time of the year and production is at an undiminished rate. Prices for wire and wire products are given on page 1493.

Old Material.—A Chicago steel mill has arranged to take direct from a Milwaukee producer not less than 35,000 tons of heavy melting steel. Purchasers of specialties are insistent on deliveries on old orders, but they are not interested in new purchases. Prices have changed little since a week ago. Some dealers feel that the market has strengthened because certain signs point to a shortage of scrap. However, buyers are taking the opposite viewpoint and are insisting upon, and in most instances are getting, the grades sought. The Rock Island has sold 5000 tons of scrap and the Chicago & Alton will dispose of 1000 tons.

Prices delivered consumers' yards, Chicago:

Per Gross Ton	
Basic Open-Hearth Grades:	
Heavy melting steel	$13.00 to $13.50
Shoveling steel	13.00 to 13.50
Frogs, switches and guards, cut apart, and miscellaneous rails	13.50 to 14.00
Hydraulic compressed sheets	11.25 to 11.75
Drop forge flashings	9.50 to 10.00
Forged, cast and rolled steel carwheels	15.50 to 16.00
Railroad tires, charging box size	16.75 to 17.25
Railroad leaf springs, cut apart	16.75 to 17.25
Acid Open-Hearth Grades:	
Steel couplers and knuckles	14.50 to 15.00
Coil springs	17.00 to 17.50
Electric Furnace Grades:	
Axle turnings	13.00 to 13.50
Low phosphorus punchings	14.25 to 14.75
Low phosphorus plate, 12 in. and under	14.25 to 14.75
Blast Furnace Grades:	
Axle turnings	10.00 to 10.50
Cast iron borings	9.25 to 9.75
Short shoveling turnings	9.25 to 9.75
Machine shop turnings	6.75 to 7.25
Rolling Mill Grades:	
Iron rails	14.00 to 14.50
Rerolling rails	14.50 to 15.00
Cupola Grades:	
Steel rails less than 3 ft	15.25 to 15.75
Angle bars, steel	14.50 to 15.00
Cast iron carwheels	13.50 to 14.00
Malleable Grades:	
Railroad	13.00 to 13.50
Agricultural	12.00 to 12.50
Miscellaneous:	
*Relaying rails, 56 to 60 lb	23.00 to 25.00
*Relaying rails, 65 lb. and heavier	26.00 to 31.00
Per Net Ton	
Rolling Mill Grades:	
Iron angles and splice bars	14.25 to 14.75
Iron arch bars and transoms	19.50 to 20.00
Iron car axles	23.00 to 23.50
Steel car axles	16.00 to 16.50
No. 1 railroad wrought	11.75 to 12.25
No. 2 railroad wrought	11.50 to 12.00
No. 1 busheling	10.00 to 10.50
No. 2 busheling	5.75 to 6.25
Locomotive tires smooth	12.50 to 13.00
Pipes and flues	8.00 to 8.50
Cupola Grades:	
No. 1 machinery cast	14.00 to 14.50
No. 1 railroad cast	12.75 to 13.25
No. 1 agricultural cast	12.50 to 13.00
Stove plate	11.25 to 11.75
Grate bars	11.25 to 11.75
Brake shoes	11.00 to 11.50

*Relaying rails, including angle bars to match, are quoted f.o.b. dealers' yards.

Philadelphia

Shipments of Steel Fairly Good, but New Orders Are Restricted

PHILADELPHIA, May 22.—A good volume of steel tonnage is being shipped to consumers on second quarter contracts, but new business is decidedly small. As prices show no tendency to advance, hand-to-mouth buying has again set in. Mills are maintaining a fair rate of operation, but current bookings are apparently of insufficient size to assure continuation of the present production schedules. Prices of plates and bars are not strong, but 2c. per lb., Coatesville, on plates and 1.85c., Pittsburgh, on bars are apparently the minimum as well as maximum quotations to consumers in this district. Shape prices show more irregularity than those on other products, and the tendency of fabricated steel prices is still downward.

Automobile body builders, especially manufacturers of commercial bodies, are active consumers of sheets, but the market generally continues unsteady. Eastern Pennsylvania producers of blue annealed sheets are still endeavoring to maintain 2.10c., Pittsburgh, despite a growing volume of sales at 2c. Concessions of $1 a ton from 2.70c., Pittsburgh, on black sheets are appearing on desirable business. The minimum price on galvanized sheets is apparently 3.60c. per lb., Pittsburgh, and this is seldom exceeded, except on less than carload lots.

Ferromanganese.—Consumers are beginning to inquire for small tonnages for third quarter and second half, but contracting is not expected for another week or two. Both domestic producers and importers of ferromanganese are quoting $105 per ton, seaboard.

Billets.—No large buying is reported. Prices are unchanged at $33 per ton for rerolling billets and $38 per ton, Pittsburgh, for forging quality.

Bars.—Except on orders for less than carloads, 1.90c., Pittsburgh, or 2.22c., delivered Philadelphia, has disappeared, and 1.85c., Pittsburgh, or 2.17c., Philadelphia, applies.

Pig Iron.—An increase in the number of foundry iron inquiries is reported, with buyers showing some interest in third quarter requirements. Furnaces are maintaining prices on foundry grade at $20, furnace, which is apparently firm on the small volume of current business. Foundries are operating at a fair rate, and are consuming most of the iron shipped to them on second quarter contracts and have only small stocks of iron on their yards. There is very little inquiry for low phosphorus iron and sales are limited to occasional carloads. Buffalo foundry iron, sold prior to the opening of canal navigation for delivery by water and rail to eastern Pennsylvania consumers, is beginning to arrive, but no new business of consequence is reported for this delivery. Virginia iron prices are unchanged at $20 to $20.50 per ton, furnace, but Virginia cast iron pipe producers are expected to be in the market within the next week to 10 days for 10,000 tons or more of foundry iron, and with Birmingham furnaces quoting $15.50 to $16 per ton, furnace, a reduction by the Virginia interest is expected.

Warehouse Prices, f.o.b. Philadelphia

	Base per Lb.
Plates, ¼-in. and heavier	2.50c. to 2.60c.
Plates, 3/16-in.	2.80c. to 3.00c.

3/16-in.	5.50c.
Rails	3.20c.
Swedish iron bars	6.60c.

---

*For 50 bundles or more; 10 to 49 bundles, 4.25c. base; 1 to 9 bundles, 4.50c. base.

†For 50 bundles or more; 10 to 49 bundles, 5.10c. base; 1 to 9 bundles, 5.45c. base.

Prices per gross ton at Philadelphia:

East. Pa. No. 2 plain, 1.75 to 2.25 sil.		$20.76
East. Pa. No. 2X, 2.25 to 2.75 sil.		21.26
East. Pa. No. 1X		21.76
Basic (delivered eastern Pa.)	$19.00 to	19.50
Gray forge	19.75 to	20.25
Malleable	21.00 to	21.50
Standard low phos. (f.o.b. New York State furnace)	22.00 to	23.00
Copper bearing low phos. (f.o.b. furnace)	23.50 to	24.00
Virginia No. 2 plain, 1.75 to 2.25 sil.	24.54 to	25.04
Virginia No. 2X, 2.25 to 2.75 sil.	25.04 to	25.54

Prices, except as specified otherwise, are delivered Philadelphia. Freight rates: 76c. to $1.64 from eastern Pennsylvania furnaces; $4.54 from Virginia furnaces.

Shapes.—Based on current quotations of 2c. per lb., Pencoyd, and 2c. per lb., Bethlehem, delivered prices are quotable at 2.06c. to 2.13c. per lb., Philadelphia. While 2.06c., delivered Philadelphia, has been shaded occasionally, such concessions have apparently been granted only on large orders. Current fabricated steel projects are small, and prices show continued weakness. The Phoenix Iron Co. has recently increased its range of sizes to include 6-in. H-beams. Two bridges in Philadelphia will require about 250 tons of steel and an apartment building at Rittenhouse Square calls for 2000 tons.

Old Material.—Prices show a slight tendency toward recession on certain grades of scrap, as reflected by recent purchases. No. 1 blast furnace scrap has been bought at $10.50 per ton, delivered Steelton, Pa., the amount totaling about 2000 tons. A consumer at Phoenixville has paid $11.75 for a fair tonnage of stove plate, and a Harrisburg user of stove plate has bought at $11.50 per ton. No contracts for machine shop turnings are reported, but $10.50 to $10.75 per ton is being paid on current shipments of carload lots to eastern Pennsylvania consumers.

Prices per gross ton delivered consumers' yards, Philadelphia district:

No. 1 heavy melting steel	$13.50 to	$14.00
Scrap T rails	13.00 to	13.50
No. 2 heavy melting steel	11.00 to	11.50
No. 1 railroad wrought	14.50 to	15.00
Bundled sheets (for steel works)		10.50
Machine shop turnings (for steel works)	10.50 to	10.75
Heavy axle turnings (or equivalent)	12.00 to	12.50
Cast borings (for steel works and rolling mill)		10.50
Heavy breakable cast (for steel works)	15.50 to	16.00
Railroad grate bars	11.50 to	12.00
Stove plate (for steel works)	11.50 to	11.75
No. 1 low phos., heavy, 0.04 per cent and under	17.50 to	18.00
Couplers and knuckles	15.50 to	16.00
Rolled steel wheels	15.50 to	16.00
No. 1 blast furnace scrap		10.50
Machine shop turnings (for rolling mill)	11.00 to	11.25
Wrought iron and soft steel pipes and tubes (new specifications)	12.00 to	12.50
Shafting	17.50 to	18.00
Steel axles	19.00 to	20.00
No. 1 forge fire	11.00 to	11.50
Steel rails for rolling	14.75 to	15.25
Cast iron carwheels	15.50 to	16.00
No. 1 cast	16.00 to	16.50
Cast borings (for chemical plant)	14.50 to	15.00

Plates.—The market is fairly firm at 2c. per lb., Coatesville, or 2.10c. per lb., delivered Philadelphia. This price applies even on small tonnages, which represent practically all of current purchases by plate consumers. Mills are still maintaining a fair rate of operation, but new business is small, so that unless there is a good volume of contracting for third quarter some curtailment of present production seems likely. Oil company consumption of plates is reported fairly good. The Baldwin Locomotive Works has received an order from the Erie Railroad for 35 locomotives.

Sheets.—Eastern Pennsylvania producers of blue annealed sheets are still endeavoring to maintain 2.10c. per lb., Pittsburgh, or 2.42c. per lb., delivered Philadelphia. This price still applies on less than carload lots, but 2c. and 2.05c. per lb., Pittsburgh, are commonly quoted on the more desirable tonnages. Black sheets are quiet at 2.70c., Pittsburgh, and 2.65c. is obtainable on desirable specifications. Galvanized sheets are quoted at 3.60c., Pittsburgh.

Warehouse Business.—Jobbers report a fair volume of small orders, which should, at the present rate, bring the total for May well up to the April shipments. Quantity differentials on bars, bar-size shapes, cold finished steel, hoops and bands are now being applied throughout the local warehouse territory and prices apparently are firm.

Imports.—A total of 537 tons of pig iron arrived at this port in the week ended May 19, 497 tons coming from India and 40 tons from Norway. Steel imports consisted of 326 tons of skelp, 155 tons of steel bars, 177 tons of shapes and 63 tons of bands from Belgium, and 42 tons of shapes and 9 tons of bars from France.

New York

Steel Buying at a Slower Pace—Pig Iron Less Active

NEW YORK, May 22.—Pig iron buying dropped sharply during the week, possibly because of the foundry exhibition at Philadelphia, and sales in this district totaled only 7000 tons. A New Jersey company, which was in the market for 1000 to 2000 tons of No. 1X, has bought, but otherwise sizable transactions have been lacking. The Worthington Pump & Machinery Corporation, New York, is inquiring for 125 tons of Bessemer and 225 tons of foundry iron for early delivery at Harrison, N. J. The General Electric Co. is asking for prices on 400 tons of No. 2X for shipment to Schenectady, N. Y. Two New England inquiries call for 1000 tons of foundry each. A buyer in this district has not yet taken action on an inquiry for 2000 tons of malleable. Eastern Pennsylvania producers continue to quote $20, base furnace, on foundry iron without getting much business in this district. Buffalo foundry iron remains unchanged at $16 to $16.50, base furnace, with the occasional waiving of silicon differentials on large purchases. The Standish, N. Y., furnace, which had been expected to blow out, is still in blast.

Prices per gross ton, delivered New York district:

Buffalo No. 2 fdy., sil. 1.75 to 2.25	$20.91 to $21.91
East. Pa. No. 2 fdy., sil. 1.75 to 2.25	20.39 to 22.52
East. Pa. No. 2X fdy., sil. 2.25 to 2.75	20.89 to 23.02
East. Pa. No. 1X fdy., sil. 2.75 to 3.25	21.39 to 23.52

Freight rates: $4.91 from Buffalo, $1.39 to $2.52 from eastern Pennsylvania.

Ferroalloys.—Some sellers of ferromanganese report fairly heavy contracting for the second half at the new quotation of $105, seaboard. There have also been some sales of carload and larger lots for delivery before July 1 at the new price. Business in spiegeleisen is confined to frequent orders for carload and small lots, but specifications on contracts are satisfactory. Consumers of ferromanganese are specifying liberally on their first-half contracts and this is also true of ferrosilicon and ferrochromium under contracts made for the year.

Finished Steel.—The tendency in the local steel market is toward a slower pace. Consumers are ordering on a hand-to-mouth basis again whether in the form of specifications against contracts or otherwise. Some buyers who were, for example, taking lots of 100 tons at a time are now ordering in 10-ton lots. In the aggregate, however, business is fairly good, excepting such products as plates, sheets and wire nails. Eastern plate mills have distinctly felt a falling off in business in the last few weeks and their operations are slightly lower. Demand for sheets seems to have declined along with the drop in prices, while the situation in wire nails is that jobbers' stocks are still ample to take care of demands from their trade and not much new business is developing. In nearly all lines individual orders are too small to bring about much of a test of prices. Sheets continue weak, but there have been no further declines. Galvanized sheets are more easily obtainable at 3.55c., Pittsburgh, while most of the business in black sheets is at 2.70c. Blue annealed sheets continue at 2c. to 2.10c., Pittsburgh. Fabricated structural lettings are light, but the amount of work in prospect is constantly growing. An inquiry is out for an office building on John Street calling for 4000 tons. Approximately 90,000 tons is involved in the following projects which will probably be up for bids before mid-summer: Reynolds Building, Forty-second Street and Lexington Avenue, which has been postponed for two months, 17,000 tons; hotel at Lexington Avenue and Forty-eighth Street, 2500 tons; ninth unit of Tudor City, 5000 tons; Tietjens warehouse for Baltimore & Ohio and Lehigh Valley railroads at Eleventh and Thirteenth Avenues and Twenty-sixth and Twenty-seventh Streets, 16,000 tons; building for News Syndicate, Inc., at 216-224 East Forty-second Street, 8000 to 10,000 tons; Western Union Building, 6000 tons; New Yorker Hotel, 9000 tons; Lincoln Building, Madi-

son Avenue and Forty-second Street, 15,000 tons; loft building for H. Uris at Thirty-eighth Street and Seventh Avenue, 5000 tons. Manhattan Towers Hotel and church at Broadway and Seventy-seventh Street, 2100 tons, and Market Plaza Hotel in Newark, 3000 tons. An apartment hotel at Thirty-ninth Street and Park Avenue has been postponed indefinitely.

Mill prices per lb., delivered New York: Soft steel bars, 2.19c. to 2.24c.; plates, 2.12½c. to 2.22½c.; structural shapes, 2.14½c. to 2.19½c.; bar iron, 2.14c.

Cast Iron Pipe.—Although most producers are only moderately well provided with orders, prices are being maintained with considerable firmness by both Northern and Southern makers. Northern foundries are quoting $38.60 per ton, delivered New York, on the smaller sizes of pipe, while Birmingham makers are maintaining $31 and $33 per ton, base, which with a $9.25 per ton freight rate to New York brings the delivered prices above the market here. Hartford, Conn., opens bids June 4, on about 400 tons of 6 to 16-in. water pipe. Bids have been opened by Belmar, N. J., on a contract including about 700 tons of pipe. A Trenton, N. J., contractor is understood to have been low bidder. There are some export inquiries in the market, one of which calls for about 2300 tons of small sizes for shipment to the Dutch East Indies.

Prices per net ton, delivered New York: Water pipe 6-in. and larger, $37.60 to $38.60; 4-in. and 5-in., $42.60 to $43.60; 3-in., $52.60 to $53.60; Class A and gas pipe, $4 to $5 extra.

Reinforcing Bars.—A building for the New York Dock Co. in Brooklyn will require about 2500 tons of bars; 700 tons will be needed for a section of the subway in that borough. About 500 tons has been placed recently for subway work in Manhattan and a slightly larger tonnage has been let for road work in New Jersey. The somewhat more active market has had little effect on the price situation. Distributers are quoting 2c., Pittsburgh, but 1.95c. is more common on sizable jobs. Warehouse prices are unchanged.

Warehouse Business.—Orders are smaller and less numerous than earlier in the month, and jobbers in this district are beginning to doubt that the total for May will be as large as the April figure. Small concessions are still being offered on black and galvanized sheets, and there are occasional reports of shading of about $1 a ton on structural material.

Coke.—Another special brand of foundry coke has been reduced to a basis of $4.85 per net ton, so that the market on these brands is now $4.85 to $5 per ton, ovens. Only occasional carload lots are being booked for prompt shipment. The New England producer of by-product coke has opened its books for second half, contracting on a basis of price prevailing at time of shipment. Delivered prices on special brands of foundry coke are: To northern New Jersey, Jersey City and Newark, $8.56 to $8.71 per net ton; to New York and Brooklyn, $9.44 to $9.49 per net ton. By-product foundry coke ranges from $9 to $9.40 per net ton, Newark or Jersey City, N. J., and from $10.06 to $10.29 per ton, New York or Brooklyn.

Old Material.—Mixed borings and turnings are being bought by brokers at $10 per ton, delivered Steelton, Pa., on the basis of a recent purchase by a consumer at $10.50 per ton. On old contracts for borings and turnings, $10.50 per ton is still being paid in a few cases. Stove plate for steel mill use is being bought at $11 per ton, delivered to a Harrisburg, Pa., user and at $11.25 per ton, delivered to Phoenixville, Pa. All grades of scrap are lacking in strength, and there is apparently no scarcity of material, even at the present level of the market.

Dealers' buying prices per gross ton f.o.b. New York:

No. 1 heavy melting steel	$10.00 to $10.85
Heavy melting steel (yard)	6.75 to 7.25
No. 1 heavy breakable cast	11.25 to 12.00
Stove plate (steel works)	7.25 to 7.50
Locomotive grate bars	7.50 to 8.00
Machine shop turnings	6.25 to 7.25
Short shoveling turnings	6.25 to 7.25
Cast borings (blast furnace or steel works)	6.25 to 7.25
Mixed borings and turnings	6.25 to 7.25
Steel car axles	15.00 to 15.50
Iron car axles	23.75 to 24.75
Iron and steel pipe (1 in. dia., not under 2 ft. long)	8.00 to 8.50
Forge fire	6.50 to 6.75
No. 1 railroad wrought	10.00 to 10.50
No. 1 yard wrought, long	8.50 to 9.00
Rails for rolling	10.00 to 10.50
Cast iron carwheels	11.00 to 11.50
Stove plate (foundry)	8.50 to 9.00
Malleable cast (railroad)	10.00
Cast borings (chemical)	10.75 to 11.25

Prices per gross ton, delivered local foundries:

No. 1 machinery cast	$13.50 to $14.00
No. 1 heavy cast (columns, building materials, etc.), cupola size	11.50 to 12.00
No. 2 cast (radiators, cast boilers, etc.)	11.00 to 11.50

Warehouse Prices, f.o.b. Cleveland

	Base per Lb.
Plates and structural shapes	3.00c.
Soft steel bars	3.00c.
Reinforcing steel bars	2.25c. to 2.75c.
Cold-finished rounds and hexagons	3.65c.
Cold-finished flats and squares	4.15c.
Hoops and bands	3.65c.
Cold-finished strip	*5.95c.
Black sheets (No. 24)	3.75c.
Galvanized sheets (No. 24)	4.40c. to 4.50c.
Blue annealed sheets (No. 10)	3.25c.
No. 9 annealed wire, per 100 lb.	$2.85
No. 9 galvanized wire, per 100 lb.	3.30
Common wire nails, base per keg	2.85

*Net base, including boxing and cutting to length.

Cleveland

May Steel Business Holds Up Fairly Well—Sheets Continue Weak

CLEVELAND, May 22.—Specifications for steel bars are coming out in fair volume, largely from the automotive industry, but there is not much new demand and this is limited to small lots for early needs. Structural material is moving fairly well, but plates are very dull. While the market as a whole is not very active, the volume of business in May will show up well as compared with April, when specifications fell off sharply, following the heavy volume of orders late in March against expiring contracts. One large producer reports that its orders so far this month show a gain of more than 50 per cent over the same period in April.

The Otis Steel Co. has taken 1000 tons of plates for 35 Erie Railroad locomotives awarded to the Baldwin Locomotive Works. However, little work is developing in this territory requiring round lots of plates. Some new steel bar business is coming from the Michigan territory, but consumers are not buying very far ahead. Some seem to feel that they may be able to buy at lower prices later.

A small order for steel bars for water shipment to Detroit was taken by a Cleveland mill. With a saving in freight rate, the steel will cost the consumer approximately 2c., delivered, compared with 2.14c. when shipped by rail from a Pittsburgh district mill.

Reports from Detroit indicate that, with only one or two exceptions, there has been no slowing down in the automotive industry.

The Wheeling & Lake Erie Railroad has placed 1000 tons of rails with a Pittsburgh district mill, this order being supplemental to its original order for 1928 requirements.

No deviations are reported from regular quotations of 1.85c., Pittsburgh, for steel bars, plates and structural material and 1.85c., Cleveland mill, for steel bars.

Pig Iron.—The market has a slightly weaker tone on foundry and malleable grades. For shipment in competitive sections, the recent minimum Cleveland furnace quotation of $16.50 is being shaded 25c. a ton and a local producer is reported to have gone as low as $16 on one large lot for the last half. The Michigan market, which has held firmly at $18, furnace, for some time, is now represented by a price range of $17.50 to $18. For Cleveland delivery, $18 is still quoted. Cleveland interests sold 18,000 tons during the week. Not much inquiry is pending, as few consumers are showing an interest in the last half. Among inquiries is one for 1000 tons from an Akron manufacturer of heating equipment. The Corrigan, McKinney Steel Co. placed a furnace in blast May 18 and is now operating all four of its Cleveland stacks. Shipments are holding up to recent volume, but a slowing down in the demand from the automotive industry is looked for shortly.

Prices per gross ton at Cleveland:

N'th'n No. 2 fdy., sil. 1.75 to 2.25	$18.50
Southern fdy., sil. 1.75 to 2.25	$21.50 to 22.00
Malleable	18.50
Ohio silvery, 8 per cent	28.00
Basic, Valley furnace	16.00
Standard low phos., Valley furnace	26.50

Prices, except on basic and low phosphorus, are delivered Cleveland. Freight rates: 50c. from local furnaces; $3 from Jackson, Ohio; $6 from Birmingham.

Iron Ore.—There is very little activity in the ore market. Furnaces consumed 4,781,205 tons of Lake ore in April, a decrease of 26,870 tons, compared with March. During April, last year, the consumption was 5,018,834 tons. The amount of ore on hand at furnaces May 1 amounted to 14,387,793 tons. The amount at furnaces and Lake Erie docks on that day was 19,570,181 tons, compared with 20,752,613 tons on the same date a year ago. Central district furnaces consumed 2,364,779 tons last month, an increase of 44,218 tons over April consumption, and Eastern furnaces consumed 76,949 tons, an increase of 2012 tons. Lake front furnaces used 2,220,256 tons, a loss of 68,847 tons, and all-rail furnaces consumed 119,221 tons, a decrease of 4343 tons. On April 31 there were 168 furnaces in blast using Lake ore, a gain of one for the month. The vessel rates for carrying ore prevailing last year have been reestablished for this season. The rates are 70c. a ton from the head of Lake Superior and 63c. from Marquette to Lake Erie and Lake Michigan ports, 52½c. from Escanaba to Lake Erie ports and 42c. from Escanaba to Lake Michigan ports.

Sheets.—The demand for auto body sheets, from the Detroit territory particularly, continues in good volume. While there has been a slowing down in orders from some sources, this seems to have been offset by larger specifications from the Ford Motor Co. In this territory, the demand is rather slow. Some of the mills have specifications to keep them operating at close to capacity for three or four weeks, but others need orders, and there has been some curtailment in operations. Prices continue weak except on auto body sheets, which are holding to 4c., Pittsburgh. While minimum quotations are no lower than during the previous week or two, the lower prices have become more general. Black sheets are being freely offered at 2.65c., Pittsburgh, and 2.70c. to 2.75c., Valley. Blue annealed sheets are commonly quoted at 2c., both Pittsburgh and Valley base. A quotation of 1.90c., Pittsburgh, appears occasionally, but this is evidently for wide material that competes with hot-rolled strip and plates. On galvanized sheets, there are quotations of 3.50c., Pittsburgh, and 3.55c., Valley. One Cleveland jobber has reduced its price to 3.60c., Valley, for car lots.

Strip Steel.—Specifications for hot-rolled strip are fair, but new business is light. The base price is not well defined, as net prices are often being quoted. However, 1.75c., Pittsburgh, appears to be commonly recognized as the base price for material 6 in. to 12 in. and wider. On strip narrower than 6 in., there is a range of from 1.85c. up to 2.10c. On cold-rolled strip, 2.75c., Cleveland, is the ruling price for large lot buyers. Fender stock has settled down to 4.10c., Cleveland.

Reinforcing Bars.—New inquiry is slow. It has developed that the Union Terminals work, Cleveland, for which bids were taken today, will require 1600 to 1700 tons instead of 800 tons as previously reported. Rail steel bars are unchanged at 1.75c., mill.

Warehouse Business.—The demand is slow from all consuming industries. Price concessions appear occasionally on structural shapes, these being attributed to fabricators who are moving surplus stocks. The seasonal demand for galvanized sheets is not up to normal.

Nails and Wire.—Manufacturers' wire is moving well to consumers engaged in automotive work, and the market is firm at 2.50c., Cleveland. Nail specifications continue rather light. The regular $2.65 price is being maintained in the northern Ohio territory for most consumers.

Semi-Finished Steel.—While there has been some talk in the Valley district of an advance of $1 a ton on sheet bars for the third quarter, a local mill continues to quote these at $33, Cleveland. Billets and slabs are the same price. Specifications continue heavy, but there is little new business.

Alloy Steel.—Makers have advanced series 3200 nickel chromium steel $7 a ton to 4c. per lb. by increasing the differential on the grade from 1c. to 1.35c. The price of this grade was 4.75c. before the adoption a few weeks ago of the new method of quoting prices with a base and a differential, and it is claimed that the 3.65c. net price that has been prevailing since the revision was out of line with the prices on other grades. Orders from the autmotive industry continue at about the recent volume.

Bolts, Nuts and Rivets.—The demand for bolts and nuts from the automotive industry is holding up well and considerable business is coming in for oil tank work. The demand is only slightly below that during April. Rivets are in light demand and manufacturers are unable to accumulate a backlog. Current orders are scarce. Prices are well maintained on both lines of products.

Coke.—New demand is very light. Shipments on contracts are only fair. The present price of $7.75, f.o.b. Painesville, for Ohio by-product foundry coke probably will be named for June shipments. Connellsville foundry coke ranges from $3.85 to $4.85 for standard brands.

Old Material.—A Cleveland mill has purchased 15,000 tons of scrap, including heavy melting steel and blast furnace grades, paying about the prices that have been prevailing recently. Dealers are paying $13 and $12.50 respectively for Nos. 1 and 2 heavy melting steel to fill their new orders from this mill. Blast furnace scrap is weaker. Considerable tonnage has been placed by dealers at $9.10 to $9.35, although this material in some cases is still bringing $9.50. No. 1 cast scrap is 25c. a ton lower.

Prices per gross ton, delivered consumers' yards:

Basic Open-Hearth Grades		
No. 1 heavy melting steel	$13.00 to	$13.25
No. 2 heavy melting steel	12.50 to	12.75
Compressed sheet steel	12.50 to	13.00
Light bundled sheet stampings	11.50 to	11.75
Drop forge flashings	11.50 to	11.75
Machine shop turnings	7.00 to	7.50
No. 1 railroad wrought	11.50 to	12.00
No. 2 railroad wrought	13.50 to	13.75
No. 1 busheling	11.00 to	11.25
Pipes and flues	9.00 to	9.50
Steel axle turnings	12.50 to	13.00
Acid Open-Hearth Grades		
Low phosphorus forging crops	16.50 to	17.00
Low phosphorus, billet, bloom and slab crops	17.00 to	17.50
Low phosphorus sheet bar crops	16.50 to	17.00
Low phosphorus plate scrap	16.00 to	16.50
Blast Furnace Grades		
Cast iron borings	9.15 to	9.35
Mixed borings and short turnings	9.15 to	9.35
No. 2 busheling	9.15 to	9.35
Cupola Grades		
No. 1 cast	16.25 to	16.75
Railroad grate bars	11.00 to	12.00
Stove plate	12.00 to	12.50
Rails under 3 ft	16.75 to	17.25
Miscellaneous		
Railroad malleable	15.00 to	15.50
Rails for rolling	16.25 to	16.50

Exports and Imports Continue at High Daily Rate

WASHINGTON, May 22.—Exports of iron and steel products from the United States in April totaled 215,184 gross tons, a decrease of 6750 tons from March, and imports aggregated 72,329 tons, a decline of 1799 tons from the preceding month, according to preliminary figures of the iron and steel division, Department of Commerce. The average daily export total for April, however, was 7173 tons, as against 7159 tons in March, while the average daily import movement in April was 2411 tons, as compared with 2391 tons in March.

The principal products exported, in point of tonnage, were scrap, 40,616 tons; heavy rails, 23,513 tons; tin plate, 19,809 tons; and plain shapes, 13,653 tons. The largest imports were pig iron, 20,845 tons; shapes, 16,577 tons; cast iron pipe, 6566 tons; and "other" pipe, 6211 tons, consisting chiefly of seamless tubes.

San Francisco

Sheet Prices Reduced $3 a Ton—Structural Awards 1500 Tons

SAN FRANCISCO, May 19 (*By Air Mail*).—Buying of iron and steel products during the past week was by no means heavy, most consumers ordering only for their immediate needs. Structural shapes were again the most active product, though awards did not exceed 1500 tons. Included among lettings were 600 tons of shapes for the Smith River bridge in California, placed with the Virginia Bridge & Iron Co., and 445 tons of plates for a pipe line at Monrovia, Cal., secured by the Western Pipe & Steel Co. Sheet prices were reduced $3 a ton this week.

Eugene G. Grace, president Bethlehem Steel Corporation, has been on the Coast for the past 10 days and among other things that he has taken under consideration is the advisability of establishing steel warehouses in Los Angeles, San Francisco, Portland and Seattle. The leading interest for some years has maintained large stocks at San Francisco, Los Angeles and Seattle.

Pig Iron.—Sales of foundry iron were confined to small lots. Inquiry is negligible. Foundry operations, especially among the jobbing class, have shown little or no improvement. Quotations are unchanged.

Prices per gross ton at San Francisco:

*Utah basic	$25.00 to $26.00
*Utah foundry, sil. 2.75 to 3.25	25.00 to 26.00
**Indian foundry, sil. 2.75 to 3.25	24.00 to 25.00
**German foundry, sil. 2.75 to 3.25	24.25

*Delivered San Francisco.
**Duty paid, f.o.b. cars San Francisco.

Bars.—Awards of reinforcing steel bars totaled less than 1300 tons, the largest booking being secured by the Northwest Steel Rolling Mills and calling for 1000 tons for the Peck & Hills Furniture Co. warehouse in Seattle. Distributers report a fair volume of small-sized inquiries, but few large lots are up for figures. Approximately 1500 tons is involved in the Wildcat and Sequoia aqueducts at Oakland and will be purchased by the Lock Joint Pipe Co. of Ampere, N. J., general contractor. The price situation in the bay district continues unsettled, and lower than 2c. on out-of-stock material is being quoted in many instances.

Plates.—Coast plate fabricators have received two severe setbacks during the past 10 days. The aqueducts in Oakland for the East Bay Municipal Utility, which would have required more than 8000 tons of plates had steel pipe been purchased, will be built of reinforced concrete, and the city of Tacoma just placed an order with the Western Concrete Pipe Co. for 54 and 66-in. pipe, alternate bids having been taken on riveted steel pipe involving 1600 tons of material. The Moore Dry Dock Co. took 250 tons for a dredger for the Harbor Commission at San Francisco, the Birchfield Boiler Co. secured 115 tons for 48-in. pipe for Tacoma and the Pittsburgh-Des Moines Steel Co. booked 445 tons for the Horseshoe and Morrison Canyon siphons of the Yakima project in Washington. Pending business includes two car floats, one for the Santa Fe and the other for the Western Pacific, each requiring 700 tons. In addition, 1500 tons of No. 14 gage blue annealed sheets for the steel lining of the Wildcat and Sequoia aqueducts are pending. Prices remain firm at 2.30c., c.i.f.

Shapes.—Structural bookings totaled less than 1500 tons. Inquiries include 300 tons for an office building at Long Beach, Cal., and 200 tons for a school warehouse in San Francisco. Working drawings on a large number of office buildings and apartments in Los Angeles and San Francisco are being prepared.

Warehouse Prices f.o.b. San Francisco

	Base per Lb.
Plates and structural shapes	3.15c.
Soft steel bars	3.15c.
Small angles, 3/16-in. and over	3.15c.
Small angles under 3/16-in.	3.55c.
Small channels and tees, ¾-in. to 2¾-in.	3.75c.
Spring steel, ¼-in. and thicker	5.00c.
Black sheets (No. 24)	4.95c.
Blue annealed sheets (No. 10)	3.90c.
Galvanized sheets (No. 24)	5.50c.
Structural rivets, ½-in. and larger	5.65c.
Common wire nails, base per keg	$3.40
Cement coated nails, 100-lb. keg	3.40

Cast Iron Pipe.—Several fair-sized cast iron pipe awards were reported this week. The United States Cast Iron Pipe & Foundry Co. booked 1050 tons of 4 to 12-in. class B pipe for Monrovia, Cal. Livingston, Cal., placed 275 tons of 2 to 10-in. class 150 pipe with James Currie, Burlingame, Cal. Pasadena, Cal., placed 333 tons as follows: to the National Cast Iron Pipe Co., 182 tons of 8-in., class 150, and to the Pacific States Cast Iron Pipe Co. 151 tons of 6-in., class 350. Inquiries consist of 634 tons of 4 to 10-in. class B or centrifugal pipe for the Monte Vista (Cal.) County Water District, 127 tons of 4 and 6-in. class B for Redwood City, Cal., bids on which open May 21, and 229 tons of 4 to 10-in. class B for Inglewood, Cal., bids May 21. Prices continue around $35 to $36 a ton, delivered, on 6-in. and larger.

Standard Pipe.—Demand for standard tubular products and oil country goods is quiet, especially so for this time of the year. Few inquiries for line pipe are before the trade for figures. The Standard Oil Co., San Francisco, has recently come into the market for a number of small lots of standard pipe, but individual inquiries have seldom exceeded 50 or 60 tons. The Grinnell Co. secured 625 tons of 6-in. seamless pipe for the city of Los Angeles, quoting 55.88c. per ft. The Ducommun Corporation, Los Angeles, was low on 193 tons of ½ to 4-in. standard pipe. The Monte Vista County Water District, Cal., is taking bids on several hundred tons of 2 to 10-in. lapweld and standard pipe, the principal item being 78,000 ft. of 2-in. standard.

Sheets.—Prices have lost some of their recent strength, and 4.25c., 3.45c. and 2.62c., c.i.f., are now being quoted respectively on No. 24 gage galvanized, No. 24 gage black and No. 10 blue annealed sheets. The previous levels were $3 a ton higher. Demand has improved somewhat but consumers continue to order in small lots.

Birmingham

Pig Iron Shipments Improve—Steel Buying Continues in Good Volume

BIRMINGHAM, May 22.—Shipments of pig iron have increased. Two producers are now shipping more than their make, while in the case of a third shipments are keeping pace with production. May production to date is approximately the same as for the corresponding period in April. From the standpoint of new business, the pig iron market is no more active than it has been in the last few weeks. Soil pipe makers are expected to come into the market in two or three weeks. For this immediate district, quotations on foundry iron remain at $16, base, and furnace interests are confident of a steady market for the remainder of the quarter. Eighteen furnaces remain in blast, 11 on foundry iron, five on basic, one on recarburizing iron and one on ferromanganese.

Prices per gross ton, f.o.b. Birmingham district furnaces:

No. 2 foundry, 1.75 to 2.25 sil.	$15.50 to $16.00
No. 1 foundry, 2.25 to 2.75 sil.	16.00 to 16.50
Basic	15.00

Finished Steel.—Consumers showed more tendency toward closing contracts during the past week, and sales in several lines were slightly in excess of those of the preceding week. No change is seen in the volume of inquiries. The market for sheets is still dull. Supplemental tonnage on railroad accessories is playing a large part in maintaining the volume of new business. The Ingall Iron Works Co. has an order for 1500 tons of fabricated structural steel for a new textile plant at Waycross, Ga. Structural steel fabricators and bar manufacturers report business dull. Open-hearth operations are the same as for the past four weeks; the Tennessee company is operating seven at Ensley and four at Fairfield, and the Gulf States Steel Co. has four on at Alabama City.

Cast Iron Pipe.—Pressure pipe buying during the past week dropped back to a nominal amount of small-order business. Inquiries on important municipal tonnage are developing from time to time. Plants are operating at about 80 per cent capacity, and shipments are in keeping with production. In some instances pipe has been moved from stock. The base prices of $31 to $33 show a tendency toward firmness.

Coke.—The lack of demand is attributed to seasonal dullness and previous bookings by important consumers. Shipments against contracts are fair. Quotations remain at $5.

Old Material—Following the recent reduction of prices on several lines, a somewhat improved demand is noticeable. New business is confined to small orders. Prices are unchanged.

Prices per gross ton, delivered Birmingham district consumers' yards:

Heavy melting steel	$9.00 to $9.50
Scrap steel rails	11.00 to 11.50
Short shoveling turnings	7.50 to 8.00

St. Louis

Pig Iron Weakened by Reduction at Chicago—Steel Operations High

ST. LOUIS, May 22.—The reduction of 50c. a ton on Northern pig iron made by Chicago interests to meet the competition of Lake Erie iron has caused a weakness in the market here, although the St. Louis Gas & Coke Corporation still is selling at $19, Granite City furnaces. One Southern maker has reduced its price 50c. a ton, but this cut has not been met by the leading interest in that section. The melt in the district is being curtailed by several of the larger mills. There is renewed activity among stove foundries, now that they have decided on their patterns for the next season. The Granite City maker sold 4600 tons during the week, including 600 tons of malleable to one northern Illinois melter and 500 tons to another. The remainder was foundry grades, including two 300-ton orders for Illinois melters and 250 tons to a western Missouri concern.

Prices per gross ton at St. Louis:

No. 2 fdy., sil. 1.75 to 2.25, f.o.b. Granite City, Ill.	$19.00
Northern No. 2 fdy., delivered St. Louis	20.16
Southern No. 2 fdy., delivered	$19.92 to 20.42
Northern malleable, delivered	20.16
Northern basic, delivered	20.16

Freight rates: 81c. from Granite City to St. Louis; $2.16 from Chicago; $4.42 from Birmingham.

Coke.—With a reduction in the melt of pig iron has come a lessening in the demand for industrial grades of coke in this district. Dealers have been buying fairly well of domestic grades.

Finished Iron and Steel.—A slight improvement in the demand for galvanized sheets is reported by the Granite City Steel Co., and it is this producer's belief that the demand will increase during the next few weeks. The company continues well fortified with backlog tonnages on virtually all of its other products, and in the case of tin mill sheets sufficient business is booked to warrant 100 per cent operation for several weeks. Demand in the oil fields is at a low ebb. No large lots of freight cars are being inquired for, but it is understood that some roads may buy freight equipment in the near future. Reinforcing bar awards for the week totaled 185 tons, and the only project of consequence pending is a sewer, which will require 300 tons.

Warehouse Prices, f.o.b. St. Louis

	Base per Lb.
Plates and structural shapes	3.25c.
Bars, soft steel or iron	3.15c.
Cold-finished rounds, shafting and screw stock	3.75c.
Black sheets (No. 24)	4.45c.

Hot-pressed nuts, hexagons, blank or tapped, 200 lb. or more	60
Less than 200 lb.	50

Old Material.—A leading East Side interest bought about 4000 tons of specialties and melting rails from several dealers to average down the price of its raw materials, and it is understood would have bought more, but dealers considered the offers too low. Interest by some mills in No. 1 machinery cast, and railroad malleable, brought dealers' prices up 50c. a ton, and for the same reason No. 1 busheling is up 25c. a ton. No. 1 railroad cast is off 50c. a ton and miscellaneous rails are 25c. a ton lower. Railroad lists include: Chicago & Alton, 1000 tons; St. Louis & Hannibal, 600 tons; Louisville & Nashville, 440 tons of cast iron and 533 tons of bridge material; Pullman Co. (St. Louis), 6 carloads; Chicago, Rock Island & Pacific, 180 carloads.

Dealers' buying prices, per gross ton, f.o.b. St. Louis district:

Heavy melting steel	$11.25 to $11.75
No. 1 locomotive tires	12.00 to 12.50
Heavy shoveling steel	11.25 to 11.75
Miscellaneous standard-section rails, including frogs, switches and guards, cut apart	12.50 to 13.00
Railroad springs	13.75 to 14.25
Bundled sheets	8.75 to 9.25
No. 2 railroad wrought	11.25 to 11.75
No. 1 busheling	9.75 to 10.25
Cast iron borings	9.00 to 9.50
Iron rails	13.00 to 13.50
Rails for rolling	13.00 to 13.50
Machine shop turnings	7.00 to 7.50
Steel car axles	17.50 to 18.00
Iron car axles	23.50 to 24.00
Wrought iron bars and transoms	21.00 to 21.50
No. 1 railroad wrought	10.00 to 10.50
Steel rails, less than 3 ft.	15.00 to 15.50
Steel angle bars	12.00 to 12.50
Cast iron carwheels	13.50 to 14.00
No. 1 machinery cast	13.50 to 14.00
Railroad malleable	11.50 to 12.00
No. 1 railroad cast	13.00 to 13.50
Stove plate	12.00 to 12.50
Agricultural malleable	12.00 to 12.50
Relaying rails, 60 lb. and under	20.50 to 23.50
Relaying rails, 70 lb. and over	26.50 to 29.00

Buffalo

Pig Iron Firmer for Outside Shipment —Galvanized Sheets 3.55c.

BUFFALO, May 22.—Extreme dullness marked the week's pig iron business. No sizable inquiries are before the makers. All report having taken a few 100-ton lots of foundry and malleable. Some business was placed at Auburn, N. Y., and Warren, Pa. The outstanding development of the week was the decision of one of the local makers, who has been active in Eastern business, to advance the base price on foundry iron for all delivery points to $17, Buffalo furnace.

Prices per gross ton, f.o.b. furnace:

No. 2 plain fdy., sil. 1.75 to 2.25	$17.00
No. 2 foundry, sil. 2.25 to 2.75	17.50
No. 1X foundry, sil. 2.75 to 3.25	18.50
Malleable, sil. up to 2.25	17.50
Basic	$16.50 to 17.00
Lake Superior charcoal	27.28

Finished Iron and Steel.—Operations continue at the rate of recent weeks. New commitment on bars,

Warehouse Prices, f.o.b. Buffalo

	Base per Lb.
Plates and structural shapes	3.40c.
Soft steel bars	3.30c.
Reinforcing bars	2.75c.
Cold-finished flats, squares and hexagons	4.45c.
Rounds	3.95c.
Cold-rolled strip steel	5.85c.
Black sheets (No. 24)	4.30c.
Galvanized sheets (No. 24)	5.15c.
Blue annealed sheets (No. 10)	3.80c.
Common wire nails, base per keg	$3.65
Black wire base per 100 lb.	3.90

shapes and plates are fair. The ruling price appears to be 2c., Lackawanna, with 1.95c. on sizable tonnage. Sheet business is off somewhat, most of it coming in on contracts. Black sheet prices are fairly firm at 2.80c. to 2.85c. The lowest price hereabouts has been 2.75c. on occasional lots. The automobile body sheet price is firm at 4c. On galvanized, most of the business is being taken at 3.55c. Bolt and nut demand is not quite so heavy. A third quarter price list, it is expected, will be announced soon. Reinforcing bar business is active; close to 2000 tons in sizable lots is pending. A fabricator took 200 tons of structural for a Binghamton concern. The new Rand Building, plans for which are awaited, will require 4500 tons of structural steel.

Old Material.—There has been a dearth of new buying and the market is soft and quiet. One of the principal consumers continues its order suspending shipments. Another large mill is receiving boat shipments of scrap from Detroit at the rate of at least one a week. This mill is consuming heavily. Machine shop turnings are off 25c.

Prices per gross ton, f.o.b. Buffalo consumers' plants:

Basic Open-Hearth Grades	
No. 1 heavy melting steel	$14.50 to $14.75
No. 2 heavy melting steel	12.50 to 13.00
Scrap rails	13.50 to 14.00
Hydraulic compressed sheets	12.50 to 13.00
Hand bundled sheets	8.50 to 9.00
Drop forge flashings	12.00 to 12.50
No. 1 busheling	13.25 to 13.75
Heavy steel axle turnings	12.50 to 12.75
Machine shop turnings	8.00 to 8.50
Acid Open-Hearth Grades	
Railroad knuckles and couplers	15.50
Railroad coil and leaf springs	15.50 to 16.00
Rolled steel wheels	15.00 to 15.50
Low phosphorus billet and bloom ends	16.50 to 17.00
Electric Furnace Grades	
Heavy steel axle turnings	12.75 to 13.25
Short shoveling steel turnings	10.75 to 11.25
Blast Furnace Grades	
Short shoveling steel turnings	10.50 to 11.00
Short mixed borings and turnings	9.50 to 10.00
Cast iron borings	9.25 to 9.75
No. 2 busheling	9.00 to 9.25
Rolling Mill Grades	
Steel car axles	17.00 to 17.50
Iron axles	22.00 to 23.00

No. 1 machinery cast	14.50 to 15.00
Stove plate	13.50 to 13.75
Locomotive grate bars	12.00 to 12.50
Steel rails, 3 ft. and under	16.50 to 17.00
Cast iron carwheels	13.00 to 13.50
Malleable Grades	
Railroad	15.00
Agricultural	15.00
Industrial	15.00

Boston

Pig Iron Inquiry for Third Quarter—Scrap Market Weaker

BOSTON, May 22.—Although pig iron sales the past week dropped off noticeably, general sentiment among brokers is that improved buying will develop soon. A Vermont foundry is inquiring for 1000 tons of No. 1X for third quarter, and a Massachusetts melter wants 500 to 1000 tons, half No. 2 plain and half No. 1X, also for third quarter. These are the first important open inquiries in many weeks. In addition, sellers are negotiating with various foundries for sizable lots of iron, mostly No. 2X and No. 1X. Sales of pig iron in New England so far this month have approximated 25,000 tons, of which the Mystic Iron Works has taken more than 15,000 tons. In the past week that furnace booked an order for 2000 tons No. 2X and No. 1X for third quarter delivery, and about 1000 tons in small lots. Other furnaces did not do so well.

Prices of foundry iron per gross ton, delivered to most New England points:

Buffalo, sil. 1.75 to 2.25	$20.91 to $21.91
Buffalo, sil. 2.25 to 2.75	21.41 to 22.41
East. Penn., sil. 1.75 to 2.25	23.15 to 23.65
East. Penn., sil. 2.25 to 2.75	23.65 to 24.15
Virginia, sil. 1.75 to 2.25	25.71
Virginia, sil. 2.25 to 2.75	26.21
Alabama, sil. 1.75 to 2.25	22.91 to 24.77
Alabama, sil. 2.25 to 2.75	23.41 to 25.27

Freight rates: $4.91 from Buffalo, $3.65 from eastern Pennsylvania, $5.21 all rail from Virginia, $6.91 to $8.77 from Alabama.

Importations.—Pig iron importations during the first half of May were limited to 198 tons of Indian No. 2X. During the first half of April imports were 809 tons, while in the first half of May, last year, they were 641 tons; the first half of May, 1926, 1994 tons, and the first half of May, 1925, 2574 tons. A small amount of Belgian cast iron pipe, 92 pieces, was received in the first half of May, the first importation of this product in many weeks.

Coke.—On May 21, New England by-product foundry coke makers opened their books for last half contracts. As formerly, these contracts are subject to a sliding scale of prices, the price to be fixed on the first day of each month. Anticipating the opening of books, brokers rounded up regular customers, and consequently both the New England Coal & Coke Co. and the Providence Gas Co. have approximately 50 per cent of the consumers signed up. The current demand for coke is a little heavier than a week ago, indicating a gain in the New England melt of iron. The price remains at $11 a ton, delivered within a $3.10 freight rate zone.

Cold-Rolled Strip.—May will pass out a comparatively lean month with the cold-rolled strip makers. Buying during the first quarter was sufficiently heavy to carry consumers through most of the second three months. Better business is expected in June for third quarter delivery. Prices are holding at 3c. to 3.15c. per lb., base Pittsburgh, on 1 to 3 ton lots.

Shapes and Plates.—Bridge jobs predominate in the fabricated steel market. The State of Vermont and the Boston & Maine Railroad have inquired for a large number of such structures, though the tonnage of steel involved in each is not large. The market for standard shapes is 1.80c. to 1.90c. per lb., base Pittsburgh, depending on the tonnage involved. Buying of plates is on a hand-to-mouth basis, with prices steady and unchanged.

Cast Iron Pipe.—Open municipal inquiries for pipe are few. Quincy, Mass., has closed with the Warren Foundry & Pipe Co. for 100 tons of 6-in. pipe. Attleboro, Mass., instead of buying 100 tons of 6-in. pipe, bids for which were recently opened, took a car lot from an unnamed foundry. Private bookings are quite satisfactory. The market for 4-in. pipe is holding firm at $46.10 to $47.10 a ton, delivered common Boston freight rate points, and for 6-in. to 16-in., at $41.10 to $42.10. On larger sizes concessions are still obtainable. The usual $5 differential is asked on class A and gas pipe.

Old Material.—Old material is moving more freely, but mostly at easier prices. Local exporters of yard steel have again lifted their price, this time 25c. a ton to $9.75, making a total advance of 75c. within a fortnight. Two steamers have just departed for Danzig with approximately 8000 tons of scrap, and another is loading 4000 tons this week. In addition, a steamer is

*Including quantity differentials.

taking on 250 tons at Providence, R. I., mostly automobile steel, at $9 a ton on dock, also for Danzig. Sales of No. 1 heavy melting steel for Pennsylvania delivery are reported at $9.10 on cars, shipping point, but some business was taken in the past week at $8.60, indicating further weakness in that material. Prices paid for No. 1 railroad wrought, steel mill borings and forge flashings are lower, while inside prices are paid more often than outside for other grades of scrap. The best offer made recently on shafting is $11 a ton on cars, shipping point. Textile machinery cast sells at either $13.75 or $14 a ton, delivered, but the most some brokers will pay is $13.50. No. 1 machinery cast continues to sell at a premium over textile cast.

Buying prices per gross ton, f.o.b. Boston rate shipping points:

No. 1 heavy melting steel	$8.60 to $9.10
Scrap T rails	8.50 to 9.00
Scrap girder rails	7.50 to 8.00
No. 1 railroad wrought	9.00 to 10.00
No. 1 yard wrought	7.00 to 7.50
Machine shop turnings	5.50 to 6.00
Cast iron borings (steel works and rolling mill)	5.50 to 6.00
Bundled skeleton, long	5.50 to 6.00
Forge flashings	6.50 to 7.00
Blast furnace borings and turnings	5.75 to 6.25
Forge scrap	6.00 to 6.25
Shafting	13.00 to 13.50
Steel car axles	15.50 to 16.00
Wrought pipe 1 in. in diameter (over 2 ft. long)	7.50 to 8.00
Rails for rolling	10.00 to 10.25
Cast iron borings, chemical	9.50 to 10.00

Prices per gross ton delivered consumers' yards:

Textile cast	$13.50 to $14.00
No. 1 machinery cast	14.50 to 15.00
No. 2 machinery cast	13.00 to 13.50
Stove plate	10.00 to 10.50
Railroad malleable	13.00 to 13.50

Cincinnati

Steel Demand Slows Up—Pig Iron Quiet —Coke Shipments Fall Off

CINCINNATI, May 22.—Pig iron sales in the week amounted to less than 3000 tons. Inquiries are scarce. Buying for third quarter is not yet under way, partly because there is no incentive in the price situation to justify forward purchasing and also because many consumers have not taken all of the tonnage on present contracts. Reports of low prices on both Northern and Southern iron are current, but in most instances are difficult to substantiate. Alabama and Tennessee makers insist that they are holding to $16, base Birmingham, but iron has been offered to large consumers at 50c. under that figure. Northern Ohio iron is being sold at $16.50, base furnace, and in several instances sellers are understood to have dipped as low as $16. Contract users of Jackson County silvery iron are specifying against present requirements at a moderate rate, and prices are firm at $25, base furnace, for 8 per cent. There has been no change in southern Ohio foundry, which remains at $19, base Ironton. The Niles Tool Works Co., Hamilton, Ohio, is asking for 500 tons of Northern foundry, and a Mt. Vernon, Ill., melter is inquiring for a like amount of malleable. The furnace of the Hamilton Coke & Iron Co., Hamilton, Ohio, was blown in on basic iron May 21.

So. Ohio malleable	$20.14 to 20.89
Alabama fdy., sil. 1.75 to 2.25	19.19 to 19.69
Alabama fdy., sil. 2.25 to 2.75	19.69 to 20.19
Tennessee fdy. sil. 1.75 to 2.25	19.19 to 19.69
Southern Ohio silvery, 8 per cent	26.89

Freight rates, $1.89 from Ironton and Jackson, Ohio; $3.69 from Birmingham.

Finished Material.—There has been a curtailment of buying in the past week. Specifications against second quarter contracts have not been placed in the volume expected, and many sellers are directing their main efforts toward the correction of this condition. Numerous structural steel jobs scheduled to appear about this time have been indefinitely postponed, with the result that fabricators have little work on which they are figuring. Despite the slowness of the general market, bars, structural shapes and plates are firm at 1.85c., base Pittsburgh. The weakest spot in finished steel is wire products, which are being sold at low prices by an Ohio River producer. Common wire nails are reported to be bringing $2.50 per keg, Ironton, and plain wire $2.40 per 100 lb. This seller is now delivering to lower Ohio River points approximately 50 carloads of wire and nails by barge. In the sheet market, specifications and orders continue at a fairly good rate. Releases of substantial tonnages by automobile manufacturers have strengthened the situation somewhat, while the call for electrical sheets also has been active. Mill operations are holding up well and in some cases approach 90 to 95 per cent of capacity. There is no indication of a stiffening of prices, which remain at 2c. to 2.10c., base Pittsburgh, for blue annealed, 4c. for automobile body sheets, 3.65c. for galvanized and 2.75c. to 2.85c. for black stock.

Warehouse Business.—Jobbers report a moderate movement of bars, structural shapes and plates, but sheets and wire products are lagging. Prices in all commodities are showing strength.

Coke.—Declining specifications from automobile foundries have resulted in lessened shipments of by-product foundry coke, and indications are that the volume in May will fall off 10 per cent or more from that of April. Dealers are encouraged by the somewhat liberal movement of by-product domestic coke, which is considerably greater than in the spring of 1927. New River beehive foundry coke is steady at $6.50 to $7, ovens.

Foundry coke prices per net ton, delivered Cincinnati: By-product coke, $9.02; Wise County coke, $7.09 to $7.59; New River coke, $9.09 to $9.59. Freight rates, $2.14 from Ashland, Ky.; $2.59 from Wise County and New River ovens.

Old Material.—Shipments to district steel plants have fallen off slightly, and dealers are of the opinion that the market during the next 30 days will be quiet. Demand for foundry grades has been slack. While quotations have not been changed, several of them are merely nominal.

Dealers' buying prices per gross ton f.o.b. cars, Cincinnati:

Heavy melting steel	$11.00 to $11.50
Scrap rails for melting	11.25 to 11.75
Loose sheet clippings	8.25 to 8.75
Bundled sheets	9.25 to 9.75
Cast iron borings	8.00 to 8.50
Machine shop turnings	7.50 to 8.00
No. 1 busheling	10.00 to 10.50
No. 2 busheling	7.00 to 7.50
Rails for rolling	12.50 to 13.00
No. 1 locomotive tires	12.75 to 13.25
No. 1 railroad wrought	10.00 to 10.50
Short rails	15.75 to 16.25
Cast iron carwheels	12.25 to 12.75
No. 1 machinery cast	15.25 to 15.75
No. 1 railroad cast	12.75 to 13.25
Burnt cast	7.50 to 8.00
Stove plate	8.25 to 8.75
Brake shoes	9.50 to 10.25
Railroad malleable	11.50 to 12.00
Agricultural malleable	11.00 to 11.50

The American Sheet & Tin Plate Co. has completed a loading pier at its National (tin plate) works, Monessen, Pa., and has loaded a barge of tin plate for southern delivery, which will move in the next tow of steel products of the United States Steel Corporation taken south by the Carnegie Steel Co.

Canada

Pig Iron Melters Showing More Interest—April Output Declined

TORONTO, ONT., May 22.—Production of pig iron in Canada during April amounted to 74,736 gross tons, a decline of 5 per cent from the 78,390 tons reported for March, and 4 per cent below the output of 77,240 tons in April, 1927. April figures show that the production of foundry iron advanced to 21,539 tons, from 5151 tons in March, while the output of basic iron declined to 52,346 tons from 67,162 tons in March, and malleable iron dropped to 851 tons from 6077 tons in March.

For the four months ended with April, the cumulative production of pig iron in this country totaled 282,823 gross tons, an increase of 12 per cent over the 255,289 tons produced in the first four months of last year, and 24 per cent over the 227,248 tons produced in the first third of 1926. This year's output consisted of 217,817 tons of basic iron, 54,411 tons of foundry iron, and 10,565 tons of malleable iron.

Production of steel ingots and castings in Canada during April amounted to 112,780 tons, compared with 118,258 tons in the previous month and 109,107 tons in April, 1927. For the four months ended with April, the total output of steel ingots and castings was 414,153 tons, or 26 per cent greater than the 330,659 tons produced in the first four months of last year, and 59 per cent above the 260,394 tons produced in the first third of 1926. This year's output consisted of 398,788 tons of ingots and 15,365 tons of direct steel castings.

The Dominion Bureau of Statistics price index for iron and its products (1913—100) remained unchanged at 141.7.

The Canadian Furnace Co., Port Colborne, Ont., has completed improvements at its blast furnace and ore docks and will put its furnace in blast on May 24. This is Queen Victoria's Day in Canada, and as the company's product is known as Victoria iron and the furnace is called the Victoria furnace, it was decided to begin operations on that day. The company's sales office is at Hamilton, Ont. George A. Simpson is sales manager.

Pig Iron.—Melters are beginning to show more interest in the market. During the past few days inquiries have been received by local dealers ranging from 500 to 1000 tons for delivery up to the middle of August. Current sales are chiefly for spot delivery and range from 50 to 200 tons. Prices are unchanged.

Prices per gross ton:

Delivered Toronto	
No. 1 foundry, sil. 2.25 to 2.75	$23.10 to $23.60
No. 2 foundry, sil. 1.75 to 2.25	23.10 to 23.60
Malleable	23.10 to 23.60
Delivered Montreal	
No. 1 foundry, sil. 2.25 to 2.75	24.50 to 25.00
No. 2 foundry, sil. 1.75 to 2.25	24.50 to 25.00
Malleable	24.50 to 25.00
Basic	24.00
Imported Iron at Montreal Warehouse	
Summerlee	33.50
Carron	33.00

Old Material.—Business was slightly better during the past week or 10 days. A number of good tonnage orders were included in recent sales. Current demand is chiefly from consumers who buy as demands dictate. The market, however, is spotty.

Dealers' buying prices:

Malleable scrap	13.00	....

Detroit

No Slackening in Automobile Production Yet Discernible

DETROIT, May 22.—While it is yet too early to get a close estimate on what May automobile production will total, indications reveal no slackening of the pace established last month.

The Employers' Association index shows a further increase in industrial employment of 2662, which brings the figure for the current week to 256,497. This figure indicates the number of persons on the combined payrolls of representative manufacturers, which account for two-thirds of the city's working population. A year ago the index figure stood at 226,228, or 30,269 less than at present.

W. S. Knudsen, president Chevrolet Motor Co., announced a final total of April production at 135,832 units, which sets a new all-time record and is approximately 2000 units ahead of the previous month and approximately 17,000 units ahead of February.

Changes in plant and equipment at the Hudson Motor Co. are being made to accommodate greater production. It is reported that an output of 2000 units per day is expected when alterations have been completed.

Willys-Overland began the current month with 35,000 unfilled orders on the books.

Retail sales for General Motors cars and trucks for April developed a new record of 209,367 units, against 183,706 for March and 180,106 for April, 1927. Retail sales for the first four months of the current year total 632,380 units, compared with 509,416 units in 1927 and 361,363 in 1926.

Edward G. Budd Mfg. Co. has been awarded about $1,500,000 worth of work from Europe. Domestic contracts with the same company will run probably to about $500,000 a month additional. Shipments for the first quarter of 1928 were $7,955,000.

Hayes Body Corporation estimates deliveries for May, June and July at 60,000 bodies, against 26,000 for the same period of 1927.

Melters in this district are taking out their pig iron very close to the amounts contracted for, so it is expected there will be a buying movement of considerable proportions for the third quarter. Several inquiries involving a large tonnage have developed, but no sales have been made.

Prices on old material are the same as quoted a week ago.

Dealers' buying prices per gross ton f.o.b. cars, Detroit:

Heavy melting and shoveling steel	$11.00 to $11.50
Borings and short turnings	7.25 to 7.75
Long turnings	6.75 to 7.25
No. 1 machinery cast	14.00 to 15.00
Automobile cast	19.50 to 21.00
Hydraulic compressed sheets	9.75 to 10.25
Stove plate	11.00 to 12.00
No. 1 busheling	8.50 to 9.00
Sheet clippings	6.00 to 7.00
Flashings	9.25 to 9.75

Ashland Steel Co. to Be Sold at Public Auction

The property of the Ashland Steel Co., Ashland, Ky., two-thirds of which is owned by the Belfont Steel & Wire Co., Ironton, Ohio, will be sold at public sale on order of the court, June 7. The property is being sold as the result of foreclosure proceedings brought by the bondholders as represented by the Ashland National Bank. O. D. Hayes of Ironton and T. A. Field of Ashland have been appointed receivers and special masters by the court and the sale will be made by them.

Rail Steel Bar Association to Meet May 25

The Rail Steel Bar Association will hold its semiannual meeting May 25 in New York, coincident with the spring meeting of the American Iron and Steel Institute. The former organization comprises a group of rolling mills in the United States and Canada producing rail steel reinforcing bars and other products. As an association its activities have been directed toward extending the use of reinforced concrete for construction.

*Refinery quotation; delivered price ¼c. higher.

NEW YORK, May 22.—Sales of copper continue large, with prices advancing. Tin has been exceedingly quiet, but quotations are steady. Dullness in the lead market persists at unchanged values. Higher prices for zinc have followed an advance in ore.

Copper.—So heavy has been the buying of copper the past two weeks that electrolytic copper is regarded by many as scarce, and most producers are sold up through June. Some buyers are attempting to obtain June copper and are having some trouble as well as anxiety, and some producers have been requested to anticipate June shipments thus early in May. Sales for export have been large in the last week, and it is safe to say that the total for the first three weeks of 65,000 to 70,000 tons is larger than any monthly total in the past. Foreign consumers must still buy metal for June and domestic consumers are not all covered even for July. The price of electrolytic copper was advanced about May 17 to 14.50c., delivered in the Connecticut Valley. No metal can be bought below that today and higher prices are being talked about. Copper Exporters, Inc., also advanced its quotation last week from 14.62½c. to 14.75c., c.i.f. European ports, this being the second increase in less than 10 days. If the present pace of buying continues, only an increase in production can meet the situation. Lake copper is active and higher at 14.62½c. to 14.75c., delivered.

Tin.—Only about 600 tons changed hands in the last week and the market has been exceedingly dull. Trading between dealers was at a minimum and consumers were waiting for lower prices. Their expectations were met yesterday and today and their entry into the market may be expected shortly. The spot and May positions are still under close control and command a premium of about ½c. per lb. over May-June. It is figured that consumers still have considerable metal to buy for July-August. London prices today were considerably lower than a week ago, with spot standard quoted at £227 15s., future standard at £227 2s. 6d. and spot Straits at £232 5s. per ton. The market here today was not particularly active, with spot Straits tin quoted at 51.50c., New York. Arrivals thus far this month have been 5935 tons and 4585 tons is reported afloat.

Lead.—Buying continues in only moderate volume and the stability of the market is the only feature. Quotations are a little weaker in the West at 5.97½c. to 6c., East St. Louis, for the outside market, but the leading interest continues to maintain its contract price at 6.10c., New York.

Zinc.—Ore producers at Joplin advanced the price to $40 per ton last week and sold over 17,000 tons, thus reducing stocks materially. They are also limiting output and some refiners in the East are predicting still higher prices. The advance in ore has had some effect on the price of prime Western, which today is quoted at 6.15c., St. Louis, or 6.50c., New York. It is generally admitted that 6.25c., St. Louis, would be none too high with ore at $40, and higher prices are naturally expected. Demand from consumers is light and producers, outside of taking care of their regular customers, are not pressing the market.

Nickel.—Wholesale lots of ingot nickel are quoted at 35c. with shot nickel at 36c. and electrolytic nickel at 37c. per lb.

Antimony.—With Chinese exchange higher and

Metals from New York Warehouse

Delivered Prices Per Lb.

Tin, Straits pig	53.00c. to 54.00c.

firm, Chinese metal is quoted steady at 11c. to 11.25c. for all positions. Buying is only in moderate volume.

Aluminum.—Virgin metal, 98 to 99 per cent pure, is quoted at 23.90c. per lb., delivered.

Non-Ferrous Metals at Chicago

Chicago, May 22.—This market is moderately active and prices for copper and zinc have advanced. Quotations on tin are lower. Fair activity is noted in the old metal market and prices are steady.

Prices, per lb., in carload lots: Lake copper, 14.62½c.; tin, 52.50c.; lead, 6.10c.; zinc, 6.25c.; in less-than-carload lots, antimony, 12.75c. On old metals we quote copper wire, crucible shapes and copper clips, 10.50c.; copper bottoms, 9.50c.; red brass, 9.25c.; yellow brass, 7c.; lead pipe, 4.75c.; zinc, 3.25c.; pewter, No. 1, 30c.; tin foil, 36c.; block tin, 45c.; aluminum, 11.75c.; all being dealers' prices for less-than-carload lots.

REINFORCING STEEL

Awards of 5375 Tons—Inquiries for 7750 Tons Include One Lot of 2500 Tons

A NUMBER of small projects made a total of reinforcing steel jobs awarded during the week of 5375 tons. The total of new projects now under negotiation is about 7750 tons, of which 2500 tons is for a building for the New York Dock Co. in Brooklyn and 1000 tons is for a building for the Continental Can Co. at Chicago. Awards follow:

New York-Vermont, 1000 tons, Lake Champlain bridge, to unnamed Middle West company.

Boston, 100 tons, Falkner Hospital, to C. S. Henry & Co.

Boston, 150 tons, foundations for Boston & Maine warehouse, to Kalman Steel Co.

State of Connecticut, 150 tons of road mesh, to Concrete Steel Co.

Mamaroneck, N. Y., 125 tons, water filtration plant, to Joseph T. Ryerson & Son, Inc.

New York, 200 tons, one section of subway; from Moranti & Raymond, Inc., general contractor, to Concrete Steel Co.

New York, 350 tons, terminal warehouse for Central Railroad of New Jersey; from White Construction Co., general contractor, to Concrete Steel Co.

Jones Beach, Long Island, 150 tons, causeway paving for New York State Highway Department; from Conners Brothers, Long Beach, N. Y., general contractor, to Concrete Steel Co.

State of New Jersey, 250 tons, road work in Monmouth and Mercer counties, to Igoe Brothers.

Chicago, 100 tons, building for General Tire & Rubber Co., to Concrete Steel Co.; previously reported at 500 tons to an unnamed bidder.

Corwith, Ill., 200 tons, building for Crane Co., to Jones & Laughlin Steel Corporation.

Chicago, 200 tons of rail steel bars, laboratory at University of Chicago, to Inland Steel Co.

Chicago, 125 tons of rail steel bars, building for Republic Food Products Co., to Calumet Steel Co.

Chicago, 190 tons of rail steel bars, Fair Oaks garage, to Calumet Steel Co.

State of Illinois, 400 tons of rail steel bars for roadwork, to Calumet Steel Co.

Milwaukee, 400 tons, St. Mary's College, to Concrete Engineering Co.

State of Wisconsin, 100 tons, road work, to Olney J. Dean & Co.

St. Louis, 175 tons, warehouse for Independent Plumbing Supply Co., to Laclede Steel Co.

Old Metals, Per Lb., New York

The buying prices represent what the large dealers are paying for miscellaneous lots from the smaller accumulators and the selling prices are those charged consumers after the metal has been properly prepared for their uses.

	Dealers' Buying Prices	Dealers' Selling Prices
Copper, heavy crucible	12.25c.	13.75c.
Copper, heavy and wire	12.00c.	13.125c.
Copper, light and bottoms	10.25c.	11.50c.
Brass, heavy	7.00c.	8.50c.
Brass, light	6.00c.	7.50c.
Heavy machine composition	9.50c.	10.75c.
No. 1 yellow brass turnings	8.00c.	9.25c.
No. 1 red brass or composition turnings	9.00c.	10.00c.
Lead, heavy	5.00c.	5.50c.
Lead, tea	4.00c.	4.50c.
Zinc	3.00c.	3.50c.
Sheet aluminum	12.75c.	14.50c.
Cast aluminum	12.50c.	14.00c.

Granite City, Ill., 110 tons of billets and bars, high school, to Laclede Steel Co.

Seattle, Wash., 1000 tons, Peck-Hills Furniture Co. warehouse, to Northwest Steel Rolling Mills.

Reinforcing Bars Pending

Inquiries for reinforcing steel bars include the following:

New York, 300 tons, Lee Brothers warehouse; Turner Construction Co., general contractor.

Brooklyn, 2500 tons, building for New York Dock Co.; Russell G. Cory, architect.

Brooklyn, 700 tons, subway section 2-A, route 109; Rodgers & Hagerty, Inc., general contractor.

Binghamton, N. Y., 500 tons, Ansco Building; Turner Construction Co., general contractor.

State of New Jersey, 100 tons, road work; D. H. Winans, Elizabeth, general contractor.

Buffalo, 278 tons, School No. 81; bids taken.

Buffalo, 800 to 1000 tons, five-span bridge over Cazenovia Creek; bids June 5, city engineer's office.

Buffalo, 125 tons, Cornelius Creek drain.

Buffalo, 500 tons, road-bed and canopy, New York Central station; bids asked.

Chicago, 1000 tons, building for Continental Can Co.; Wells Brothers, general contractors.

Chicago, tonnage not stated, reconstruction of Fine Arts Building; Great Lakes Construction Co., low bidder on general contract.

Chicago, 120 tons, Nurses' Home for the city of Chicago; Great Lakes Construction Co., low bidder on general contract.

Chicago, 270 tons, steam tunnel for University of Chicago.

Urbana, Ill., 160 tons, testing laboratory for University of Illinois.

St. Louis, 300 tons, Rocky Branch sewer for Board of Public Service.

Railroad Equipment

Erie Railroad has ordered 35 2-8-4 type locomotives from Baldwin Locomotive Works.

Boston & Maine is inquiring for two eight-wheel switching locomotives.

Ferrocarril de Pacifico, Colombia, S. A., has ordered 10 4-8-0 type locomotives from Baldwin Locomotive Works and Ferrocarril de Antioquia, Colombia, has ordered four Mikado-type locomotives from same company.

Detroit & Toledo Shore Line has withdrawn its inquiry for 100 gondola bodies.

North American Car Co. has purchased 500 used tank cars. This does not affect company's inquiry for 500 new tank cars. This company is also inquiring for 50 to 100 steel underframes.

Chicago, Milwaukee, St. Paul & Pacific will build 10 baggage cars in its own shops.

Virginian Railway has ordered 1000 hopper car bodies from Virginia Bridge & Iron Co.

Hainesport Mining & Transportation Co. has ordered four 50-ton steel hopper cars from American Car & Foundry Co.

Central of Brazil has ordered eight sleeping cars, two buffet baggage cars and 10 steel passenger cars from American Car & Foundry Co.

Chicago, South Shore & South Bend has purchased 10 rail motor cars from Standard Steel Car Co.

Northern Pacific has ordered three gas-electric rail motor cars from Standard Steel Car Co. and one from J. G. Brill Co.

Guayaquil & Quito Railroad, Ecuador, has ordered 50 box cars from American Car & Foundry Co.

Cincinnati Street Railway Co. has ordered 100 electric passenger cars from Cincinnati Car Co.

FABRICATED STRUCTURAL STEEL

Small Jobs Predominate in Week's Awards of 23,500 Tons—26,750 Tons On Inquiry

STRUCTURAL steel awards during the week, as reported to The Iron Age, were about 23,500 tons, of which 5800 tons of miscellaneous work in New York is outstanding. For a building in Minneapolis, 2000 tons was awarded, and 1700 tons was let for a lift bridge at Chicago. Among inquiries totaling 26,750 tons, those of largest size are 4000 tons for an office building in New York, 3500 tons for a high school building in Chicago and 3000 tons for an office building in Buffalo. Awards follow:

Biddeford, Me., 800 tons, Boston & Maine Railroad bridge, to Phoenix Bridge Co.

Boston, 1000 tons, Boston & Maine Railroad terminal building, to Levering & Garrigues.

Lowell, Mass., 700 tons, Boston & Maine Railroad bridge, to Boston Bridge Works, Inc.

Holyoke, Mass., 400 tons, Boston & Maine Railroad bridge, to Boston Bridge Works, Inc., and Phoenix Bridge Co., jointly.

Quincy, Mass., 200 tons, mercantile building, to New England Structural Co.

State of Massachusetts, 322 tons, Boston & Maine Railroad bridges at Graniteville, North Littleton, Brookside and Westford, to Boston Bridge Works, Inc.

Binghamton, N. Y., 200 tons, new plant for Agfa Ansco Corporation, to Kellogg Structural Steel Co.

New York, 5800 tons in the following awards reported to the Structural Steel Board of Trade, Inc.: St. Paul's Baptist Church on West 132nd Street, warehouse at 153 East Eighty-seventh Street and restaurant and loft building at 977 Eighth Avenue, to George A. Just Co.; loft building at 259 West Thirtieth Street, apartment building at Ninety-third and Ninety-fourth Streets and Park Avenue and addition to building 85 of Western Electric Co. at Kearny, N. J., to McClintic-Marshall Co.

State of New Jersey, 110 tons, five highway bridges, to American Bridge Co.

Philadelphia, 500 tons, theater, to McClintic-Marshall Co.

Philadelphia, 125 tons, Goldfine Garage, to Shoemaker Bridge Co.

Pennsylvania Railroad, 250 tons, bridges, to American Bridge Co.

Pottsville, Pa., 150 tons, high school, to McClintic-Marshall Co.

Newark, Del., 130 tons, University of Delaware extension, to Jones & Laughlin Steel Corporation.

Standard Oil Co. of Louisiana, 600 tons, various projects, to an unnamed fabricator.

Waycross, Ga., 1500 tons, plant for Troy Cotton & Woolen Manufactory, Fall River, Mass., to Ingalls Iron Works Co., Birmingham.

Dayton, Ohio, 100 tons, Oakwood Manon Apartments, to Massillon Bridge & Structural Co.

Troy, Ohio, 232 tons, building for Advance Aircraft Co., to Massillon Bridge & Structural Co.

State of Michigan, 100 tons, highway bridges in Genesee County, to Massillon Bridge & Structural Co.

Logansport, Ind., 400 tons, Pennsylvania Railroad bridge, to Bethlehem Steel Co.

Fort Wayne, Ind., 400 tons, building for International Harvester Co., to McClintic-Marshall Co.

Chicago, 200 tons, Simon Building, to Mississippi Valley Structural Steel Co.

Chicago, 200 tons, building at 234 South Wabash Avenue, to American Bridge Co.

Chicago, 180 tons, building for American Can Co., to McClintic-Marshall Co.

Chicago, 400 tons, building for Harris Brothers Co., to McClintic-Marshall Co.

Chicago, 225 tons, building at 226 South Wabash Avenue, to unnamed bidder.

Chicago, 1700 tons, lift bridge for Baltimore & Ohio Railroad, to Mount Vernon Bridge Works.

Chicago, 950 tons, building for Crane Co., to American Bridge Co.

Chicago, Burlington & Quincy Railroad, 150 tons, I-beam spans, to an unnamed bidder.

State of Illinois, 440 tons, highway bridges, to Milwaukee Bridge Co.

Minneapolis, 2000 tons, Foshay Tower Building, to Duffin Iron Co., Chicago; this in addition to 2000 tons recently awarded to Minneapolis Steel & Machinery Co. for first four floors.

Fond Du Lac, Wis., 600 tons, St. Mary's School, to Milwaukee Bridge Co.

Denver, Colo., 445 tons, plates, siphons for Horseshoe and Morrison Canyon, Yakima project in Washington, to Pittsburgh-Des Moines Steel Co.

San Francisco, 140 tons, apartment, Pine near Gough Street, to McClintic-Marshall Co.

San Francisco, 250 tons of plates and 250 tons of shapes, dredger for State Harbor Commission, to Moore Dry Dock Co.

San Francisco, 125 tons, barge for Shasta-Butte Gold Dredging Co., to Dyer Brothers.

San Francisco, 120 tons, warehouse, Fifteenth and Vermont Streets, to Schraders Iron Works.

Sacramento, Cal., 600 tons, bridge over Smith River in Del Norte County, to Virginia Bridge & Iron Co.

Monrovia, Cal., 445 tons, plates for 12 to 20-in. pipe, to Western Pipe & Steel Co.

Tacoma, Wash., 115 tons, plates, 48-in. pipe line, to Birchfield Boiler Co.

Structural Projects Pending

Inquiries for fabricated steel work include the following:

State of Vermont, 580 tons, 18 bridges.

Boston, 100 tons, Diocesan House, 1 Joy Street.

Boston, 100 tons, Community House, Roxbury district.

Boston & Maine Railroad, 1000 tons, bridges.

New York, 4000 tons, office building on John Street; Starret Brothers, general contractors.

New York, 400 tons, building for Rockefeller Institute on Avenue A.

Philadelphia, 150 tons, highway bridge at Abbottsford Avenue; Jaffola & Mark, Inc., low bidder on general contract.

Philadelphia, 105 tons, highway bridge at Cottman Avenue; Horridge, Elcock & Hall, Inc., low bidder on general contract.

Philadelphia, 2000 tons, apartment building at Nineteenth and Locust Streets.

Pennsylvania Railroad, 300 tons, bridges.

Baltimore, 500 tons, Y. M. C. A.

Washington, 400 tons, train shed for Pennsylvania Station.

Buffalo, 3000 tons, office building for Marine Trust Co. at Washington Street and Lafayette Square; John W. Cowper Co., general contractor.

Detroit, 1000 tons, research laboratory for General Motors Corporation.

Chicago, 3500 tons, Austin High School; Great Lakes Construction Co., low bidder on revised quotations.

Chicago, 1600 tons, office building to be erected by Patterson estate.

Chicago, tonnage being estimated, building for Bowman Dairy Co.

Gary, Ind., 600 tons, court building; A. Bolter's Sons, Chicago, low bidders.

Rock Island, Ill., 500 tons, 40 steel pontoons for United States Engineers Corps; Midland Barge Co., Midland, Pa., low bidder.

Anderson, Ind., 800 tons, foundry for Delco-Remy Corporation.

Urbana, Ill., 450 tons, Lincoln Hall at University of Illinois.

Louisville, Ky., 1500 tons, highway bridge.

San Antonio, Tex., 1600 tons, theater.

Marinette, Wis., 350 tons, Interstate bridge to Menominee, Mich.; bids close June 8.

Portage, Wis., 160 tons, new Dewitt Street bridge; Worden-Allen Co., Milwaukee, low bidder.

Milwaukee, 200 tons, St. Mary's College buildings; bids about July 1; Herbst & Kuenzli, 130 Wisconsin Avenue, Milwaukee, architects.

Milwaukee, 300 tons, new Lincoln Avenue span; general contract to Klug & Smith Co., Milwaukee.

San Francisco, 200 tons, school warehouse on Harrison Street.

Oakland, 1500 tons, No. 14-gage blue annealed sheets for Wildcat and Sequoia aqueducts; sub-bids by Lock-Joint Pipe Co., Ampere, N. J.

Tacoma, Wash., 1600 tons plates, 51 to 66-in. riveted pipe, to Western Concrete Pipe Co. on basis of reinforced concrete pipe.

Long Beach, Cal., 300 tons, office building, Pine and Ocean Avenues; bids being taken.

Orders for Fabricated Steel Plates Gain

Washington, May 22.—Orders for fabricated steel plates in April totaled 48,493 tons, or 60.7 per cent of the capacity of the 51 firms reporting to the Department of Commerce. This compares with 45,505 tons, or 57 per cent of capacity, in March.

April orders were distributed as follows: Oil storage tanks, 21,330 tons; refinery materials and equipment, 2370 tons; tank cars, 4344 tons; gas holders, 4654 tons; blast furnaces, 619 tons; stacks and miscellaneous, 15,176 tons.

Orders for the first four months of the present year aggregated 179,605 tons, as against 198,251 tons for the corresponding period of last year.

PERSONAL

Loyall A. Osborne, president Westinghouse Electric International Co., was reelected chairman of the National Industrial Conference Board, Inc., at its twelfth annual meeting last week at the Hotel Astor, New York. The following were among the vice-chairmen named: Irenee du Pont, chairman of finance committee, E. I. du Pont de Nemours & Co., Wilmington, Del., and Herbert F. Perkins, International Harvester Co., Chicago. The executive committee will include the following: William D. Baldwin, Otis Elevator Co., New York; Cornelius F. Kelley, Anaconda Copper Mining Co., New York, and William H. Nichols, Jr., General Chemical Co., New York.

L. A. OSBORNE

—

Norman E. Craig has been made district manager at New York for Hickman, Williams & Co., succeeding Charles S. Garland, who recently resigned. Mr. Craig has been identified with Hickman, Williams & Co. since February, 1917, and was in the company's Pittsburgh office until June, 1926, when he was transferred to the New York office.

—

Frank M. Beeson, for several years in charge of the Los Angeles branch of the Luitweiler Pumping Engine Co., has been placed in charge of a new office which has been opened at 808 Pacific National Bank Building, Los Angeles, by the Graver Corporation, East Chicago, Ind. The Luitweiler company had formerly been Pacific Coast distributer of the Graver organization.

—

John R. Williams has been elected president of the Electric Storage Battery Co., Philadelphia, succeeding Herbert Lloyd, who has been made chairman of the board.

—

E. F. Entwisle, who has been assistant general manager of the Steelton plant of the Bethlehem Steel Corporation, has been appointed superintendent of the Saucon plant, Bethlehem, Pa., succeeding S. J. Cort, who has been appointed assistant general manager of the Maryland plant. R. B. Gerhardt, who has been assistant general manager of the Maryland plant, becomes assistant general manager at Steelton.

—

C. F. Niemann, president Parkersburg Iron & Steel Co., Parkersburg, W. Va., has been elected a director of the Colonial Trust Co., Pittsburgh.

—

T. P. Gaylord, vice-president Westinghouse Electric & Mfg. Co., has been reelected president of the Chamber of Commerce of Pittsburgh.

—

W. S. Unger, who has been assistant superintendent Carrie furnaces, Carnegie Steel Co., Rankin, Pa., has been appointed superintendent, succeeding J. E. Lose, recently appointed assistant general superintendent Homestead works.

—

Louis T. Lott has rejoined the Weirton Steel Co., Weirton, W. Va., and will serve as assistant general manager of sales in the strip steel department.

—

B. I. Ashmun, since 1893 associated with the Armstrong Mfg. Co., Bridgeport, Conn., manufacturer of pipe stock, dies, cutters, etc., has been made president of the company, and his son, Frederick S. Ashmun, has been named secretary-treasurer. The latter is a grandson of Frank Armstrong, who founded the business in 1869. Coincident with the change in the company's management the New York sales and general export offices were removed to larger quarters at 27 Cleveland Place at Spring and Lafayette Streets, which will be shared with the Self Propelling Nozzle Co. Leslie H. Taylor, for many years sales manager for the Williams Pipe Threading Machine Co., Erie, Pa., has been placed in charge of sales in the Middle West for the Armstrong company and has opened an office at 9 South Clinton Street, Chicago.

—

B. R. Sausen, since 1918 associated with the Binks Spray Equipment Co., Chicago, at first in charge of the design and development of spray equipment and subsequently as general sales manager, has been placed in charge of the paint spray equipment department of the Alexander Milburn Co., Baltimore. He is a graduate in mechanical engineering from the University of Minnesota and gained his early mechanical experience with the Westinghouse Electric & Mfg. Co., East Pittsburgh.

—

H. R. Sykes has been made manager of sales in the locomotive division, Cincinnati Car Co., Winton Place, Cincinnati. The company makes Diesel, gasoline, electric and gas-electric locomotives for industrial uses.

—

Robert M. Derby, manager of foreign sales for the Niles-Bement-Pond Co. and Pratt & Whitney Co., 111 Broadway, New York, sailed May 11, for a trip of several months in European countries. The day of his departure was the occasion for a luncheon given him by the members of his department to commemorate the fifteenth anniversary of its establishment and his 25 years of service with the Niles-Bement-Pond Co.

—

W. W. Lower, who has been secretary and treasurer of the National Association of Sheet and Tin Plate Manufacturers and of the recently organized National Association of Flat Rolled Steel Manufacturers, has resigned and his duties have been assumed by E. T. Sproull, who has been commissioner of the Cold Rolled Strip Steel Institute and who has been affiliated with the Flat Rolled Steel organization as head of the Cold Rolled Strip division. The sheet steel statistical work heretofore handled by Mr. Lower will also be under Mr. Sproull's direction.

—

Clayton L. Patterson, who for nine years has been secretary of the Bureau of Labor of the National Association of Sheet and Tin Plate Manufacturers, and for the past four years secretary of the Sheet Steel Trade Extension Committee, has tendered his resignation of both positions, effective May 31.

—

W. P. Bradley, Wheeling Mold & Foundry Co., Wheeling, V. Va., has been nominated for president of the Pittsburgh Foundrymen's Association, L. W. Mesta, Mesta Machine Co., West Homestead, Pa., for vice-president, and William J. Brant, for secretary-treasurer. C. D. Carey, American Steel Foundries, Verona, Pa.; L. V. Stevens, Standard Stoker Co., Pittsburgh; W. J. McMillen, Mackintosh-Hemphill Co., Pittsburgh; L. A. Glaser, McKenna Brass & Mfg. Co., Pittsburgh, and Robert N. Cook, Eclipse Pattern Co., Pittsburgh, have been nominated for members of the executive committee. They will be elected at the annual meeting to be held at the Chamber of Commerce of Pittsburgh, Thursday evening, May 24.

—

John F. Tinsley, vice-president and general manager Crompton & Knowles Loom Works, Worcester, Mass., and Mrs. Tinsley are visiting Italy. Later they expect to visit France and England, returning late in June.

—

W. D. Moore, president, and J. T. MacKenzie, chief chemist and metallurgist of the American Cast Iron Pipe Co., Birmingham, will speak on "Centrifugal Testing of Cast Iron Pipe," before the Quad-City Foundrymen's Association, May 28, at the Davenport, Iowa, Chamber of Commerce.

H. O. Coe has been appointed manager of the Cleveland office of the United States Electrical Tool Co., with quarters at 403 Erie Building. For the last eight years he has been identified with the sales department of the W. Bingham Co., Cleveland jobber, and previously was engaged in the retail hardware business.

J. V. Moore, formerly with the Simonds Saw & Steel Co., Fitchburg, Mass., is now representing the Billings & Spencer Co., Hartford, Conn., in Pennsylvania, Delaware and New Jersey. His headquarters are at the Leister House, Huntingdon, Pa.

L. V. Quigg, superintendent of the Franklin plant at Johnstown, Pa., of the Bethlehem Steel Co., has resigned to become general superintendent, effective June 1, of the Colorado Fuel & Iron Co., at Pueblo, Colo.

H. J. G. Rudolf has been placed in charge of the factory and laboratory of the Winslow Boiler & Engineering Co., Galesburg, Ill., following a reorganization of that company's plant and personnel. William H. Rehm, president of the company, has taken over the duties of general manager, and T. C. Kyle has been appointed sales manager.

C. A. Heiser, formerly assistant sales manager of the Southwest General Electric Supply Co., Dallas, Tex., has been appointed district manager at Dallas by the Oliver Iron & Steel Corporation, Pittsburgh. He will represent the line material and the bolt, nut and rivet departments of the Oliver corporation and will have headquarters at 409 Browder Street.

David Thomas has been appointed manager of bar iron sales for the Reading Iron Co., Reading, Pa., manufacturer of wrought iron tubular and bar iron products.

F. W. Hawkins has resigned as superintendent of the blooming and bar mills of the Trumbull Steel Co., Warren, Ohio, now being absorbed in the Republic Iron & Steel Co.

E. D. Pike, for 26 years associated with the Wagner Electric Corporation, St. Louis, most recently in charge of the company's Pacific Coast service operations, has been appointed manager of the San Francisco branch sales office, 457 Ninth Street. He is a graduate of Washington University, St. Louis, and has served the company in various capacities at New York, Philadelphia, St. Louis and San Francisco.

E. E. Gregg has been placed in charge of the new hoist and body division of the Commercial Shearing & Stamping Co., Youngstown. Ward Beecher, heretofore connected with sales engineering activities, has been placed in charge of all sales promotional enterprises.

John P. Hubbell, until May 1 assistant chief of research for the New Jersey Zinc Co., has become a partner in Singmaster & Breyer, 420 Lexington Avenue, New York, chemical engineers and metallurgists. He is a graduate of Williams College and Columbia University, and, prior to his nine years' connection with the Zinc company, he was with the General Chemical Co. and in the gas defense division of the United States Army.

Alfred H. Wilson, Jr., formerly assistant metallurgist in charge of the laboratory and special heat treating department of Henry Disston & Sons, Inc., has become associated with Horace C. Knerr, consulting metallurgical engineer, Philadelphia.

Boyd Nixon has become associated with the Louis G. Henes organization, distributers of machine tools and supplies, with offices in San Francisco and Los Angeles. Mr. Nixon, who will be connected with the San Francisco office, was with Harron, Rickard, McCone Co., San Francisco, from 1905 to 1914; with the Niles-Bement-Pond Co. and Pratt & Whitney in Cleveland from 1915 to 1919; he was sales manager of the St. Paul office of Niles-Bement-Pond Co. and Pratt & Whitney from 1919 to 1924; and sales manager of the Philadelphia office of the two companies since that time.

William W. Neckerman, superintendent of tube mills of the Youngstown Sheet & Tube Co., was appointed general manager of the Republic Iron & Steel Co. He succeeds J. W. Deetrick, who recently resigned. Mr. Neckerman has been with the Sheet & Tube company 21 years and is regarded as one of the country's foremost authorities on steel pipe mill operations, controlling important patents in his own name. The Republic company has also named W. J. Mossman, who has been with the Chicago offices of the Sheet & Tube company, as general purchasing agent, succeeding Sidney H. Hedges.

Clyde MacCornack, general manager and chief engineer of the Phoenix Bridge Co., Phoenixville, Pa., has been appointed treasurer and general manager, being succeeded as chief engineer by J. R. Lambert, his assistant. William T. Hodge, sales manager, has been elected secretary of the company, a position which has been unfilled since the death of George Gerry White about a year ago.

J. H. Brillhart, formerly vice-president Fort Worth Steel & Machinery Co., Fort Worth, Tex., has resigned his position with that company, and with the assistance of some friends, has organized the Fort Worth Structural Steel Co. He is a graduate of Lehigh University, was chief engineer for Guerber Engineering Co., Bethlehem, Pa., from 1906 to 1912, then chief engineer and consulting engineer for Mosher Mfg. Co., Dallas and Houston, until 1922, since which time he has been vice-president and manager of the structural steel and tank departments of the Fort Worth Steel & Machinery Co.

H. B. Carpenter, for the past four years general superintendent Colorado Fuel & Iron Co., has resigned, effective June 1, to become assistant to the general manager Republic Iron & Steel Co., Youngstown, Ohio. Mr. Carpenter was graduated from the University of Michigan in 1906 and before going with the Colorado company in 1916 he had been with the Cambria Steel Co., Johnstown, Pa., and the Jones & Laughlin Steel Corporation, Pittsburgh. He was assistant superintendent of the coke plants at Johnstown, and his first position with the Colorado company was superintendent of the coke works. Subsequently he became assistant to the vice-president and general manager, and in 1924 general superintendent.

H. G. O'Brien, since 1922 general manager department of special products Trumbull Steel Co., Warren, Ohio, has resigned. Previously for three years he had been general superintendent of the strip mill department of the company and was the designer of the three mills of that unit.

D. W. Wilson has been elected vice-president and general manager of the Dry Quenching Equipment Corporation, which is a subsidiary of the International Combustion Engineering Corporation, and was organized to exploit in this country the Sulzer system for the dry quenching of coke. Mr. Wilson has been intimately associated with the coke oven and gas industries. Previous identifications have been with the Wilputte Coke Oven Corporation and the Iroquois Gas Corporation. He was also assistant professor of chemical engineering at the Massachusetts Institute of Technology.

O. S. Sleeper has been appointed engineer in charge of special development work for the Buffalo Foundry & Machine Co., Buffalo. Mr. Sleeper, who is an authority on vacuum dryers and chemical plant equipment, has for the past seven years conducted the O. S. Sleeper Co., manufacturing similar equipment. Prior to that, for 15 years he was associated with the Buffalo Foundry & Machine Co. as engineer in charge of engineering.

L. G. Gorman, who has been purchasing agent of the Trumbull Steel Co., has been appointed assistant purchasing agent of the Republic Iron & Steel Co.

Dr. Fridtjof Andersen, Bremanger Kraftselskap (Bremanger Power Co.), Bergen, Norway, recently arrived in New York, and is assisting Rogers Brown & Crocker Brothers, New York, in introducing a vanadium-titanium pig iron, made by his company, to the American trade.

Howard W. Foote, chairman of the board of the North Western Expanded Steel Co., Chicago, was seriously injured, May 21, when he was hurled from the steps of a north shore electric train at Glencoe, Ill.

Salvage Conference to Be Held in Wilmington, Del.

Representatives of large industrial corporations and public utilities have been invited to meet in Wilmington, Del., June 6 and 7, for a conference to consider problems connected with the disposal of their waste materials, obsolete equipment and surplus material. A preliminary conference was held in New York in December, and sufficient interest was shown to justify a further conference, as well as the organization of a Salvage Division, operating in connection with the National Association of Waste Material Dealers, Inc.

A dinner will be given by the Dupont company at the Dupont Hotel, and some of the speakers on that occasion will be Lammot Dupont, president Dupont Co.; Col. William C. Spruance, who will speak on "Twenty-one Years of Salvage and Reclamation Service in the Dupont Co;" William B. Foster, director of the company's service department, who will speak on the "Benefits of Salvage and Reclamation from a Service Rendering Standpoint;" and Dr. Charles M. Stine, chemical director of the company, who will discuss "Chemistry as an Aid in the Disposition of Industrial Wastes."

Press for Lower Freight Rate to Coast

(*Concluded from page* 1475)

joint rail-and-water rates and therefore should not suspend them. Secondly, the Illinois Central declared that it is not doing anything arbitrary or undertaking to give the territory from which the rates would apply an advantage, but, on the contrary, is merely undertaking to restore that territory to its place in the markets on the Pacific Coast it once held. The railroad company said it would welcome a hearing, suggesting the week beginning May 20, but said it should precede consideration by the commission of applications for suspension of the tariff. It is declared to be of the greatest significance that the protesting (Eastern) carriers have not alleged that the proposed rates would violate the act to regulate commerce and it is added that such a charge cannot be justified. The Illinois Central pointed out that the law specifically exempts from the minimum rate power of the commission joint rates where one of the carriers is a water line.

The Illinois Central petition said that it is not so much a question of comparative distances from Chicago and Pittsburgh through the Panama Canal as it is a question of placing the shippers of Chicago and the Middle West on a rate parity with their powerful competition in the United States.

"And they are entitled to at least a parity, bearing in mind that the overland short distances from Chicago are to Los Angeles, 2217 miles; San Francisco, 2260 miles, making a producer in Chicago, typical of the Middle West, 400 miles closer to the consumer in California than the Pittsburgh man, and, if there are rights constituted by difference in distances, those rights in this case accrue to Chicago and other midwestern points," said the petition.

The Bethlehem Steel Co., protesting against the tariff, contended that the present basis of charges to Chicago on business moving to Pacific ports is already more favorable than the basis accorded the Bethlehem company. The latter, it was pointed out, is subjected to charges based upon the full combination of the local rates to port of transshipment and beyond, whereas from Chicago to New Orleans the proportional rates are materially lower than the local rates contemporaneously prevailing.

OBITUARY

L. H. COOPER, secretary Crosby Co., Buffalo, manufacturer of sheet metal stampings, died suddenly on May 14.

WILLIAM WALLACE EWING, civil engineer and most recently representative in Japan for the Jones & Laughlin Steel Corporation, Pittsburgh, died on May 17 at the home of his son, in Syracuse, N. Y. He was born at Rochester 62 years ago. After some years of experience with the New York City department of building, he spent three years in engineering work at Barcelona, Spain. Later he was special agent in South America for the bureau of foreign and domestic commerce of the United States Department of Commerce. As representative of the Jones & Laughlin company he had traveled widely in Europe and Asia and had returned from Japan only two weeks prior to his death.

FREDERIC R. C. BOYD, president Power Equipment Co., Boston, died on May 15 at the Deaconess Hospital in that city, following an operation. He was born at Hartford, Conn., and after graduating from the Massachusetts Institute of Technology in 1901 he became associated with the General Electric Co., Lynn, Mass., in the turbine department. Subsequently he was connected with the Power Equipment Co., having become president four years ago.

EDWARD C. SMITH, president and founder of the Edward C. Smith Co., Chicago, plumbing supply manufacturer, died May 15.

JOSEPH RITER, formerly associated with the Riter-Conley Co., of which his father, Thomas B. Riter, was one of the founders, died May 16 in London, where he had made his home since 1916. He was 46 years old.

CAPT. THOMAS E. CLARK, president Marine Mfg. & Supply Co., Pittsburgh, died at his home in Bellevue, Pa., May 8. In 1885 Captain Clark entered the boat building industry and a short time later established a firm of steam engine builders, which later was merged with the Pittsburgh Valve, Foundry & Construction Co. In 1901 he established the Marine Mfg. & Supply Co. For 10 years he was president of the Allegheny River Improvement Association.

Automobile Production in April Highest, Except for March, in 20 Months

WASHINGTON, May 22.—Production of motor vehicles in the United States in April totaled 409,948, of which 364,877 were passenger cars and 45,071 were trucks. This compares with 413,379 vehicles in March, of which 371,821 were passenger cars and 41,558 were trucks, according to the Department of Commerce. The figures are based on reports from 160 manufacturers, 49 making passenger cars and 129 making trucks, 18 making both passenger cars and trucks. For the first four months of the present year production of passenger cars and trucks in the United States totaled 1,378,829 units, against 1,342,892 for the corresponding period of last year. Of the output in the current year, 1,233,425 were passenger cars, compared with 1,166,741 for the four months of 1927, and 145,404 were trucks, against 176,151 a year ago.

Except for March, the April production of passenger cars and of all vehicles was the greatest since August, 1926, when 426,606 vehicles were turned out, of which 382,651 were passenger cars. Three months in the spring of 1926—March, April and May—are the only other months since October, 1925, showing greater production than March or April, 1928.

European Prices Still Advancing

Upward Movement Based on Higher Production Costs—British Secure Contracts on Foreign Construction Projects

(By Cable)

London, England, May 21.

PIG iron is quiet, but Cleveland makers' stocks are now less than 10,000 tons and prices are firm. Export demand for East Coast hematite is improving as prices are low and makers are desirous of clearing off surplus stocks. Foreign ore is quiet.

The steel makers' association has reaffirmed the minimum quotations on plates and shapes and export inquiry is improving, but domestic business is generally poor, especially in shipbuilding materials.

Welsh tin plate bars are officially £5 17s. 6d. ($28.61), but some sellers are asking £6 ($29.22) and up to £6 2s. 6d. ($29.83) per ton is talked of because of the scarcity of scrap and the heavy demand. Tin plate is consequently strong for early delivery and the market is quite active with consumers covering steadily. Most makers are sold up to the end of August.

Galvanized sheet makers have advanced the agreed minimum price for No. 24 gage corrugated sheets 5s. ($1.22) per ton to £13 5s. per ton (2.88c. per lb.), mainly because of higher cost Continental steel. Inquiry is reviving, especially from India, but not much actual business has been done. Black sheets are dull and prices are unchanged.

Recent rail orders have included 7000 tons for the Central Argentine Railway placed with Bolckow, Vaughan & Co. Braithwaite & Co. are to build a Calcutta, India, bridge involving 17,000 tons of steel. Sir William Arrol & Co. have been awarded the contract for the Benue River bridge in Nigeria.

Continental iron and steel prices are strong as a result of the continued upward trend of Continental costs. Foreign sheet bars have sold at £4 18s. 6d. ($23.99) per ton, f.o.b. to Welsh consumers. Merchant bars are quoted up to £5 16s. per ton (1.28 per lb.), f.o.b. works, and good tonnages are reported to have been sold prior to the recent advance.

British Pig Iron Active; Tin Plate Mills Well Booked

London, England, May 11.—There have been few features of interest in the British iron and steel trade during the past two weeks. Production figures for April, which have just been released, show a decline of 37,600 tons in pig iron and 149,200 tons in steel, the decrease being due mainly to the Easter holiday. At the end of April, 149 blast furnaces were operating, a net decrease of one furnace. New inquiry for pig iron has been light, with the result that the Tees shipments in April were only 8053 tons. Cleveland makers, while having practically regained the home market, are striving to reestablish themselves in Continental markets, but there is a difference of 2s. 6d. (61c.) in the prices abroad, so that Continental producers are the gainers. Buying by domestic consumers is small. There has been a tendency to refrain from buying in the belief that makers would be obliged to give way on prices, but values are quite stable and purchasing is still of a hand-to-mouth character.

There is no improvement in the hematite market and, as stocks are large, producers are obliged to shade prices to secure orders. The slack market is due to the poor demand from foreign steel-producing countries, and East Coast makers have to compete with foreign producers on the Continent.

In semi-finished material there has been considerable strength in the market on Welsh tin plate bars, and, because of an acute shortage of heavy steel scrap, makers have been obliged to advance their quotations by 2s. 6d. (61c.) to £5 17s. 6d. ($28.50) per gross ton, and higher prices are expected. At the same time the Continental price has been advanced, so that the margin between the two remains about the same. There has been, however, a heavy demand for Welsh sheet bars by Welsh tin plate makers, who are now experiencing a revival of activity. Foreign demand for tin plate has developed, and makers have withdrawn the

British and Continental European prices per gross ton, except where otherwise stated, f.o.b. makers' works, with American equivalent figured at $4.87 per £ as follows:

Durham coke, del'd.	£0 17½s.		$4.27	
Bilbao Rubio ore*	1 2½		5.48	
Cleveland No. 1 fdy.	3 8½		16.56

(a) Nominal.

restriction on output and mills are sold to normal capacity for many weeks, in some cases well toward the end of the year.

The heavy steel trade is still depressed. The makers' rebate scheme is not operating entirely satisfactorily, as merchants are dissatisfied with their treatment and are continuing more than ever to place orders on the Continent. Shipbuilders are receiving very few new orders, so that the plate mills are suffering from a lack of demand for ship steel. Domestic business in engineering and structural material contributes a fair tonnage, but export demand is negligible and plants can operate only on a part-time basis.

Trade with Far East Curtailed by Warfare in China

NEW YORK, May 22.—Export trade with the Far East is quiet, partly as a result of the warfare in China and partly because of the recent decline in the exchange value of the Japanese yen. There has been some inquiry from Japan for tin plate, one specification calling for about 10,000 base boxes of canning sizes. The Welsh price, however, is still lower than the quotations of American mills, although exporters to Japan express the opinion that the present range of $5.25 to $5.30 per base box, c.i.f. Japanese port, might be shaded to about $5.15 per base box if actual business were in sight.

Light-gage black sheets are quiet, British, German and Japanese domestic sheets being several dollars below the current offers of American mills, which are about $77 per ton, c.i.f. Japan. Recently the Kawasaki Dockyard Co., Japan, has been quoting prices equivalent to about $73.25 per ton, c.i.f. Japan.

Steel importers in New York report continued activity in steel hoops and bands and a moderate volume of business in structural material. Demand for bars, both plain and deformed, is rather light, and prices of the foreign product are high. Plain steel bars, following recent Continental advances, are quoted at 1.78c. to 1.80c. per lb., duty paid. Prices on foreign shapes are stronger, with the minimum at about 1.68c. per lb., duty paid, Atlantic port. There are some outstanding quotations on reinforcing bar projects, including an inquiry from the Ambursen Contracting Co., Grand Central Terminal, New York, for about 3000 tons of bars for work in Mexico.

Steel Dwelling Construction Being Hastened in Germany

With an estimated shortage of 800,000 dwellings in Germany, the development of steel house construction in that country is being hastened, according to a statement prepared by the iron and steel division, Department of Commerce, Washington, which is based on a report from Hugh S. Fullerton, consul at Cologne. Replacement of existing structures is fixed at 200,000 dwellings annually. It is estimated that between 150,000 and 200,000 houses will be built in the Cologne district alone, which supports a population in excess of 12,000,000, and that the average dwelling will accommodate 4.6 persons.

Widespread publicity pointing out the advantages of steel houses is being engaged in by manufacturers of these structures. Some of the most effective arguments relate to the simplicity and rapidity of this method of construction, its practicability, low price, hygienic character, durability, fireproof character, conservation of space in congested municipal areas and the general layout to provide for ample gardens and backyards. The prejudice against the steel house is traditional in the Cologne area and is based principally upon aesthetic grounds. Steel house manufacturers emphasize their durability and economy, thus appealing to the poorer and middle classes. At the same time attention is being given to steel houses of more pretentious and ornate construction. Steel houses constructed by various entities of the Vereinigte Stahlwerke in plants at Duisberg, Kettwig, Wuerenburg and Bochum in the Cologne district, as well as in such cities as Munich and Berlin, range in price between $1,428 and $2,380.

SWEDISH IRON AND STEEL

Poor Conditions Have Prevailed for Some Years —Production Only Half of Maximum

WASHINGTON, May 22.—Difficulties faced by the Swedish iron and steel industry, and its trade movement since 1920, are traced in a report prepared by A. Crenshaw Thompson of the iron and steel division, Department of Commerce. It is pointed out that it was not until 1924, however, that the situation became grave, due to competition with European countries, including Germany, France and Belgium-Luxemburg, with their depreciated currencies. Efforts to reduce wages developed labor troubles in the iron ore fields and in the steel industry. In 1925 vain attempts were made by the Government to bring about a merger of seven companies, but in the succeeding year four of the principal companies were consolidated through the efforts of the Svenska Handelsbanken, a large shareholder in each of the concerns affected. On Jan. 1, 1927, the new organization began operations, with production so apportioned that each company would make its own specialties.

Pig iron output in 1913 amounted to 730,300 metric tons, or approximately 100,000 tons less than that of the peak year of 1917. A steady decline from the latter year was experienced until the low mark of 264,300 tons was reached in 1922. While production of pig iron has recovered somewhat from the 1922 level, it is still only about 55 per cent of the last pre-war year.

Steel produced during 1913 totaled 749,400 tons, the peak output. It reached its lowest point in 1921, with 236,000 tons.

Of the 121 blast furnaces in the country only 33 were operated in 1927, when production was 413,500 tons, while of the 162 Lancashire open-hearth furnaces and 81 Martin furnaces only 54 and 31 respectively were active, producing 516,200 tons of steel.

Due largely to heavy shipments of scrap in the early months, exports of iron and steel in 1927 aggregated 287,700 tons, against 242,600 tons in 1926. Imports of iron and steel in 1927 increased to 333,200 tons, compared with 299,900 tons the preceding year. Exports of iron ore showed a large increase to 10,726,000 tons in 1927, compared with an estimated movement of 9,000,000 tons in 1926. Swedish iron ore deposits are calculated at 250,000,000 metric tons of high-grade material.

South African Railroads Use More Steel Ties

The South African Railway Administration, during the past four years, has been using steel ties in increasing quantities, according to a report received by the Department of Commerce, Washington, from the assistant trade commissioner at Johannesburg. It is stated that steel ties have been found to be more economical on light branch lines and on certain sections of the main system than wood ties. Present plans, the report says, are not to use steel ties to the exclusion of wood, but it is known that the administration favors the former whenever conditions are suited to their use. Purchases of steel ties from 1924 to 1927 were valued at £574,843, of which £414,991 worth come from Germany, £140,707 worth from France and £19,145 from Belgium.

Polish Steel Output Increases 64 Per Cent in 1927

Reflecting an increase of 361,316 metric tons, or 64.3 per cent, production of rolling mill products in Poland last year totaled 923,383 tons, compared with 562,067 tons in 1926, according to a report received by the Department of Commerce, Washington, from the assistant trade commissioner at Warsaw. The largest production of any single commodity was in structural shapes, of which 292,568 tons were rolled in 1927 and 189,303 tons in the preceding year. Next came black sheets, of which 211,151 tons were rolled last year, compared with 153,474 tons in 1926.

Machinery Markets and News of the Works

MARKETS ARE QUIETER

Sales Drop Off in Some Centers—Conditions Now Somewhat Spotty

Cincinnati Reports Only Slight Falling Off from April Rate but at Cleveland Decline Is 25 Per Cent

SPOTTY conditions are developing in machine tool business. At Cincinnati, the volume is described as "only slightly behind that of April," but at Cleveland the decline is as much as 25 per cent in some cases. Elsewhere, business is somewhat quieter.

Several of the Detroit automobile manufacturers are figuring on small lots of tools, but generally the peak of automobile buying for the first half of the year has been passed. Railroad buying continues disappointingly small, especially in the heavier tools. The Santa Fe has the only large list now before the trade. Some of the small tools inquired for have been bought, and orders for others are expected shortly.

Farm implement manufacturers are the principal support of trade in the Chicago district. New England looks to the development of the manufacture of airplanes and parts as an encouraging sign. In the New York district, the Wright Aeronautical Corporation is one of the most active buyers, its purchases last week including two engine lathes and other tools. The General Electric Co. has bought a few tools for service stations. Additional inquiries from this company are pending.

New York

NEW YORK, May 22.

THERE is very little new inquiry for machine tools, but some sizable business is still pending. The General Electric Co., Schenectady, has closed on a few of the tools for service stations and has additional inquiries for equipment in various plants. Further purchases of service station equipment are not planned until next month when a new appropriation is received. The Wright Aeronautical Corporation, Paterson, N. J., is still a buyer of machine tools and closed last week on several, including two engine lathes. The New York Central Railroad has inquiries out for a few small tools for the Collingwood shops at Cleveland and for shops of the Indiana Harbor Belt Railroad, Indiana Harbor, Ill.

The railroads continue inactive in purchases of tools. The list of the New York, New Haven & Hartford Railroad has not yet been closed and other railroad purchases have been decidedly small in the past week. There are two railroad shop equipment inquiries from foreign markets, however, which may develop into business sometime this year. One of these calls for a list of tools for export to Colombia and the other is for equipment of shops on the new Turkish railroads.

Plans are being arranged by Transogram Co., Inc., 215 Fourth Avenue, New York, manufacturer of toys, etc., for one-story plant at Haskell, N. J., to cost more than $70,000 with equipment. Missac Thompson, 191 Joralemon Street, Brooklyn, is architect.

Ward Leonard Electric Co., South Street, Mount Vernon, N. Y., manufacturer of electrical resistance products, has superstructure in progress for a one-story addition, 115 x 116 ft., to cost in excess of $85,000 with equipment.

Brislin Lumber Co., Jamaica Avenue, Brooklyn, has purchased former smelting and metallurgical works of Williams-Harvey Corporation, Mill Basin, Jamaica Bay, L. I., and will install conveying, elevating, loading and other equipment for a new storage and distributing plant.

Hugo F. Magnuson, 420 Lexington Avenue, New York, architect, has filed plans for a five-story automobile service, repair and distributing building, to cost close to $200,000 with equipment.

Quartermaster, Mitchel Field, Long Island, is asking bids until June 6 for motor-driven deep-well pumping station, with complete auxiliary apparatus.

Associated Gas & Electric Co., 61 Broadway, New York, operating electric light and power utilities in different parts of country, is disposing of bond issue of $35,000,000, a portion of proceeds to be used for expansion in properties, power lines, etc.

M. Raubvogel Co., 206 East 104th Street, New York, manufacturer of bakers' equipment and fixtures, has purchased factory at 413-15 East 109th Street, 50 x 100 ft., and will remodel for new plant.

Board of Trustees, Museum of Natural History, Columbus Avenue and Seventy-seventh Street, New York, is considering new power and service station to cost more than $500,000 with equipment. Trowbridge & Livingston, 527 Fifth Avenue, are architects.

Brooklyn Union Gas Co., 176 Remsen Street, Brooklyn, has filed plans for a one-story by-products plant, to cost close to $500,000 with machinery.

A. J. Thomas, 2 West Forty-seventh Street, New York, architect, has plans for two-story addition to automobile service, repair and garage building to cost approximately $100,000 with equipment.

Board of Education, Plattsburg, N. Y., plans installation of manual training equipment in new two-story high school to cost $200,000, for which bids will soon be asked on general contract. A. Irman, 35 Clinton Street, is architect.

New York Dock Co., 44 Whitehall Street, New York, has asked bids on general contract for a multi-story factory, storage and distributing plant at 336-74 Furnam Street, Brooklyn, to cost $2,200,000 with equipment. Russell G. Cory, 30 Church Street, New York, is architect and engineer. L. E. Driver is chief engineer for company.

Lidgerwood Mfg. Co., Lidgerwood Avenue, Elizabeth, N. J., manufacturer of hoisting machinery, etc., is reported planning early construction of one-story foundry at new plant, where production recently has been concentrated, to replace unit on Frelinghuysen Avenue, now in service for production of castings, which are being machined at Elizabeth works.

Bayway Terminal Co., Bayway, Elizabeth, N. J., operating a cotton storage and distributing plant, has filed plans for new five-story unit, 240 x 260 ft., to cost $200,000 with equipment. George F. Bial is company architect.

J. H. Gautier Co., 1 Greene Street, Jersey City, N. J., manufacturer of crucibles, refractories, etc., will rebuild portion of plant destroyed by fire May 17, with loss reported upward of $75,000 with equipment; boiler house was destroyed.

Western Electric Co., Kearny, N. J., has filed plans for new six-story unit, 200 x 300 ft., to cost $1,200,000 with equipment. Executive offices are at 195 Broadway, New York.

Plant and property of Sloan & Chace, Inc., Sixth Avenue and Thirteenth Street, Newark, manufacturer of machinery and tools, will be offered at a public sale May 28 by Oliver

The Crane Market

INQUIRY for overhead traveling cranes is small, but interest in purchases of locomotive cranes continues fairly active. The Amtorg Trading Corporation, 165 Broadway, New York, has appeared again as a prospective buyer for export to Russia, with an inquiry for five electrically driven locomotive cranes, capable of lifting 11,000 lb. at 92 ft. This would require a capacity of about 65 tons each. The New York Central Railroad has revived an old inquiry for two 20-ton locomotive cranes, which are to be used at Cleveland.

Among recent purchases are:

Empire Architectural Iron Works, 530 Truxton Street, New York, 5-ton, 47-ft. 6-in. span, 3-motor, overhead crane from Northern Engineering Works.

Lorain Steel Co., Johnstown, Pa., 20-ton, 66-ft. span overhead electric traveling crane from Alliance Machine Co.

W. Hopkinson, receiver, including good will and name of company as going concern.

Art Metal Works, Inc., has been organized under State laws to take over and expand company of same name with plant at 7 Mulberry Street, Newark, manufacturer of metal goods, including toys, novelties, etc. New company plans construction of addition for which adjoining site recently was acquired. A preferred stock issue to total $1,180,000 is being sold, portion of fund to be used for expansion.

Carrier Engineering Co., 750 Frelinghuysen Avenue, Newark, manufacturer of air-conditioning machinery and devices, has asked bids on general contract for one-story addition, to cost approximately $70,000 with equipment. R. DeVere Hope is company architect.

Board of Education, Paterson, N. J., will soon begin work on three-story addition to vocational school on Ellison Street, 60 x 100 ft., to cost in excess of $75,000.

Henry L. Crowley & Co., Inc., 545 North Arlington Avenue, East Orange, N. J., has been organized to manufacture synthetic ceramic products, particularly Crolite. Factory is in operation but company will be in market for additional equipment, especially machine tools similar to those used in metal works.

Buffalo

BUFFALO, May 21.

WORK is scheduled to begin soon by Great Lakes Portland Cement Co., Marine Trust Building, Buffalo, on new mill near Cleveland to cost more than $2,000,000. Company is affiliated with Lehigh Portland Cement Co., Allentown, Pa.

Niagara, Lockport & Ontario Power Co., Buffalo General Electric Building, Buffalo, has asked bids on general contract for one-story equipment storage and distributing plant, with repair facilities, at Angola, N. Y., to cost about $40,000.

Cheektowaga Crushed Stone Corporation, Cheektowaga, N. Y., recently organized by Mark Kyler, North Tonawanda, N. Y., and associates, has secured permission to construct and operate stone quarrying and crushing plant near Bennett and Union Roads, to cost $100,000, of which about one-half will be expended for machinery.

Board of Education, Lackawanna, N. Y., is considering installation of manual training equipment in new two-story high school to cost $250,000, for which plans are being drawn by Bley & Lyman, 505 Delaware Avenue, Buffalo, architects.

Gordon Motor Parts, Inc., Rochester, N. Y., recently organized by Simon Gordon, 240 Rosedale Street, and associates, with capital of $150,000 contemplates early operation of local plant for manufacture of automobile accessories and parts. Max Gordon, 350 North Main Street, Elmira, N. Y., will be one of heads of company.

New York Power & Light Corporation, Northampton, N. Y., will construct transmission lines to Hope, Wells, Bemson and vicinity, Hamilton County, about 25 miles, and install automatic substation equipment, etc.

Pratt & Letchworth Co., 189 Tonawanda Street, Buffalo, manufacturer of iron castings, etc., is carrying out an expansion and betterment program, including installation of mechanical sand-handling equipment and other apparatus, to cost about $45,000.

Rochester Brass & Iron Works Co., Rochester, N. Y., has sold building at 76 Exchange Street to Barr & Creelman Co., 74 Exchange Street, which will raze structure preparatory to erecting an addition. Brass & Iron Works company will remove to new location at Mount Hope and South Avenues where new building containing 20,000 sq. ft. of floor space is planned.

General Railway Signal Co., Rochester, N. Y., will distribute in United States and Canada Kuprox railroad rectifier, a device used in connection with changing of electric current from alternating to direct, which is being manufactured by Kodel Radio Corporation, Cincinnati.

New England

BOSTON, May 21.

AT least two local machine tool dealers the past week did a very good business, running into several thousand dollars each. Details are withheld, but it is understood that large tools were involved. In addition, final papers were closed on the sale of two floors of used equipment at the plant of the General Shoe Machinery Co., South Boston, including radial drills, milling machines, American shapers, planers, lathes, miscellaneous metal-working tools and wood-working equipment. A Jones & Lamson turret lathe, from another source, went to a Massachusetts shop, and drilling machines, small lathes, a fairly good sized power press, shear and miller made up a representative used tool market.

None of the so-called active new tool prospects were closed, and aside from additional requisitions for equipment from the Boston & Albany Railroad, new inquiries have been scarce. This railroad has a prospective list of more than 15 tools, mostly lathes, running from 14-in. to 24-in., and drilling machines. It is reported that the company will buy one or two tools each week, until the list is completed.

Small tools are still selling freely, with a majority of orders for immediate shipment.

New England has established a footing in the aircraft industry, and machine tool interests are watching its growth as a possible outlet for metalworking equipment. Most important of new industries is Pratt & Whitney Aircraft Co., Hartford, Conn., an offspring of Pratt & Whitney Co., which began in a small way in summer of 1925. Today it has 150,000 sq. ft. of manufacturing space, and this is expected to be greatly expanded within the next year. So far it has confined itself to supplying needs of Army, Navy and Marine Corps and Canadian Air Force, but it is gradually expanding its field. At Monson, Mass., in former Rubwood Wheel, Inc., plant, under secret environment, is being manufactured an airplane of unusual construction. It is reported that this plant is turning out planes molded from various materials by means of hydraulic pressure, quite a departure from recognized standards of today. Definite specifications and other important data are expected any day. Bourdon Aircraft Co., East Greenwich Bay, Chepiwanoxet, R. I., is producing planes. In several other New England localities companies are working either on airplane engines or superstructure, and as trend of superstructure is toward all metal, involving welding and other methods of construction, it is felt that New England has a potential undeveloped machine tool field.

Western Electric Co., West Haven, Conn., will erect plant for manufacturing and storage, to cost, without equipment, $100,000.

International Silver Co., Meriden, Conn., has acquired E. G. Webster & Sons, Inc., Brooklyn, and will remove business to Meriden. Parent company has under consideration purchase of new equipment, especially presses.

Alden Mfg. Co., Springfield, Mass., radio products, has leased manufacturing quarters on Plain Street, Brockton, Mass. Installation of equipment will start this week, and production will begin about July 1.

The Barker Steel Co., Boston, reinforcing steel, has moved from 19 Congress Street to 250 Stuart Street, room 310.

Plans have been filed by Koppers Co., New Haven, Conn., for one-story machine shop, 82 x 110 ft.; power substation, 35 x 70 ft., and booster shop, 31 x 42 ft., at its new gas and coke plant now in course of building. New structures will cost about $100,000 with equipment. Company is said to be concluding arrangements for purchase of substantial interest in Massachusetts Gas Companies, Inc., Boston, to be followed by construction of a second gas and by-products coke plant, to cost more than $4,000,000. Headquarters of Koppers Co. are in Union Trust Building, Pittsburgh.

Stone & Forsyth Co., 67 Kingston Street, Boston, paper products, has awarded general contract to Blake & Pope Co., 38 Chauncy Street, for a two-story addition to cost close to $50,000 with equipment.

Bullard Machine Tool Co., Bridgeport, Conn., has awarded general contract to Hewlett Co., 886 Main Street, for a two-story foundry addition, 100 x 200 ft., to cost in excess of $85,000 with equipment. Fletcher-Thompson, Inc., 542 Fairfield Avenue, is architect and engineer.

Consolidated Lamp Co., Danvers, Mass., manufacturer of electric lamps, radio tubes, etc., has acquired factory of Albert M. Creighton Shoe Co., Lynn, Mass., and will remove present works to new location. Additional equipment will be installed.

Camire & Gauthier Welding & Machine Co., Lawrence, Mass., has leased old Boston & Lowell depot property, and will operate a new works at that location, including machine and parts, and welding divisions.

Ames Shovel & Tool Co., Seavey Street, Westbrook, Me., is considering rebuilding portion of plant destroyed by fire May 12, with loss reported close to $45,000 including equipment. Headquarters are in Ames Building, Boston.

Uppercu-Cadillac Co., 532 Fairfield Avenue, Bridgeport, Conn., representative for Cadillac automobiles, has filed plans for one- and two-story service, repair and garage building, 100 x 250 ft., to cost upward of $160,000 with equipment.

State Board of Education, Hartford, Conn., has awarded general contract to Wise & Upson, Inc., 7 Forest Street, for three-story State trade school at 10 Washington Street, and foundations will soon be laid. Equipment will be secured later, including machine shop, wood-working and carpenter shop, plumbing and electrical shops, automobile shop and other mechanical departments. Carl J. Malmfeldt and T. Merrill Prentice, Hartford, are associated architects.

St. Louis

St. Louis, May 21.

PROPERTY near Leeds, Mo., has been acquired by Chevrolet Motor Co., Detroit, for new assembling plant, comprising three main units, one-story, 462 x 480 ft.; one-story, 161 x 200 ft.; and three-story, 43 x 208 ft., to cost more than $1,000,000 with equipment. Albert Kahn, Marquette Building, Detroit, is architect.

Harrison Smith Co., 711 North Broadway, Oklahoma City, Okla., manufacturer of automobile accessories, has awarded general contract to Charles E. Huffman & Son, 224 West Twenty-third Street, for new two-story plant, 140 x 150 ft., to cost about $80,000 with equipment. Harry Reynolds, 915 North Hudson Street, is architect.

Poter Oil Refining Co., 1434 Whittenberg Avenue, St. Louis, is considering new oil storage and distributing plant, to cost in excess of $45,000 with equipment.

Southern Malleable Iron Co., Twenty-first and Bond Street, East St. Louis, Ill., has awarded general contract to St. Louis Structural Steel Co., Amherst Street, East St. Louis, for one-story foundry addition, 85 x 280 ft., to cost $40,000 with equipment.

Oklahoma Gas & Electric Co., Oklahoma City, Okla., has acquired municipal electric light and power plant at Elmore City, Okla., and plans expansion in that section, including transmission lines. Company has acquired municipal property at Calera, Okla., and will make similar extensions.

Leland I. Shumway, Alexander Building, Tulsa, Okla., architect, has completed plans for six-story and basement automobile service, repair and garage building, 100 x 140 ft., to cost close to $100,000 with equipment.

Imperial Casket Co., 1415 St. Louis Avenue, Kansas City, Mo., has asked bids on revised plans for two-story plant to cost close to $45,000 with equipment. W. J. Kosh, Mutual Building, is architect.

E. R. Porter, Brandeis Theater Building, Omaha, Neb., and associates will soon have plans drawn for three-story automobile service, repair and garage building, to cost about $160,000 with equipment.

Burlington Ice, Refrigeration & Express Co., Omaha, Neb., is planning early rebuilding of ice-manufacturing and cold storage plant destroyed by fire May 8, with loss reported in excess of $40,000 with equipment.

Laclede Power & Light Co., Eleventh and Locust Streets, St. Louis, has plans for a two-story power switching station, 20 x 145 ft., to cost about $45,000 with equipment.

Independent Plumbing & Heating Co., 1119 Chestnut Street, St. Louis, has awarded general contract to McCormack-Combs Construction Co., Columbia Building, for one and two-story storage and distributing plant, with pipe fitting and repair department, 110 x 281 ft., to cost about $125,000 with equipment. D. R. Harrison, Ambassador Building, is architect.

City Council, Campbell, Mo., is asking bids until June 5, for one-story municipal electric light and power plant, to cost approximately $40,000 with equipment. A. C. Moore, Joplin National Bank Building, Joplin, Mo., is consulting engineer.

Chicago

Chicago, May 21.

SALES the past week were widely scattered and usually in small lots. From the viewpoint of inquiries, the railroads are in need of little machine tool equipment. The Santa Fe has the only large list before the trade and it is moving very slowly, although there is some promise of more activity soon. The Chicago & North Western will buy an 18-in. x 2½-in. double-wheel grinder. Among industrials, farm implement manufacturers are the most active, the outstanding business before the trade being the list in preparation by Deere & Co. A plating equipment maker has ordered a 14-in. x 6-ft. lathe, and a tool and die shop has purchased a 3-ft. radial drill. Dealers are having little trouble in disposing of used tools in good condition.

Huguelet Brothers, 911 Ernst Court, Chicago, will build a four-story garage, 50 x 200 ft., to cost $150.000.

Northwestern Barb Wire Co., Sterling, Ill., suffered a $300,000 loss by fire on May 18.

Minnesota Steel Co., Duluth, is enlarging its steel fence post department 40 per cent.

Contract has been let by Link-Belt Co., 329 West Thirty-ninth Street, Chicago, to P. M. Tilley, Inc., 844 Rush Street, for one-story plant unit, 120 x 220 ft., to cost about $60,000 exclusive of equipment. H. Jacoby, 329 Pershing Road, is architect.

Duro Metal Products Co., 2649 North Kildare Street, Chicago, has awarded general contract to Austin Co. for one-story addition, to cost $50,000 with equipment.

American Gas & Power Co., Minneapolis, Minn., operating Minneapolis Gas Light Co. and other electric light and power properties, is disposing of bond issue of $6,500,000, a portion of proceeds to be used for expansion and acquisition of properties, transmission lines, etc.

City Council, Willmar, Minn., is asking bids until May 28 for equipment for municipal electric light and power plant, including one 1000-kw. engine generator and turbine generator set, one surface condenser, one cooling tower, with complete accessories. Pillsbury Engineering Co., 2344 Nicollet Avenue, Minneapolis, Minn., is engineer.

Dominion Electric Co., 116 First Avenue, North, Minneapolis, Minn., manufacturer of electrical equipment and supplies, is reported planning two new units to cost close to $100,000 with equipment.

Hudson Mfg. Co., 324 Third Avenue, North, Minneapolis, Minn., manufacturer of pumping equipment for farms, barn equipment, etc., is said to be considering construction of new plant at Waukesha, Wis.

Cooper Mfg. Co., Marshalltown, Iowa, manufacturer of automobile parts and equipment is contemplating construction of one-story branch plant at Cedar Rapids, Iowa, to cost approximately $50,000 with equipment.

Dry Zero Corporation, 130 North Wells Street, Chicago, R. S. Phillips, head, manufacturer of dry ice under special process, is said to be planning a new plant to cost in excess of $60,000 with equipment.

Super Maid Corporation, Chicago, has been organized to take over and consolidate Super Maid Cook-Ware Corporation, 2742 West Thirty-sixth Place, and Advance Pattern & Foundry Co., with plant on adjoining site, manufacturer of aluminum cooking ware products. Work is in progress on a new unit of 65,000 sq. ft. floor space, providing a total of 120,000 sq. ft. in two plants. New company will dispose of stock issue to approximate $1,925,000, a considerable portion of fund to be used for expansion.

Common Council, Sleepy Eye, Minn., is asking bids until June 5 for new stoker suitable for 305-hp. boiler unit, now installed in municipal power station, with complete accessories. Charles Baugatz is superintendent of electric light and water works.

Ovens, power equipment, conveying and other machinery will be installed in new two and four-story plant to be built by Zinsmaster Baking Co., Sherburne and Park Streets, St. Paul, Minn., at Minneapolis, Minn., to cost $180,000. Charles W. DeJarnett, Hubbell Building, Des Moines, Iowa, is architect.

Union Furnace Co., Columbus, Ohio, has purchased Marshalltown Heater Co., Marshalltown, Iowa, and will continue manufacture of furnaces. Transaction will not affect Marshalltown Mfg. Co., which has been operated by same interests and which is now beginning expansion program to double plant production.

Blackhawk Foundry & Machine Co., Clark Street and Telegraph Road, Davenport, Iowa, manufacturer of aluminum and gray iron castings, has let contract for foundry, 42 x 90 ft., adjoining its present group of buildings. It will contain equipment for mixing, handling and conditioning sand for molding.

Rockford Metal Specialty Co., 700 Cedar Street, Rockford, Ill., manufacturer of metal stampings, has let contract for a two-story factory, 50 x 100 ft., to cost $100,000. It will be constructed to carry two additional floors. Company expects to occupy new building in about three months and will abandon old plant at 616 Cedar Street.

H. K. Porter Co., Pittsburgh, has removed its Chicago office from 447 Monadnock Building to Engineering Building at Wells Street and Wacker Drive. George Kirtley is district manager.

Manganese Steel Forge Co., Philadelphia, maker of manganese steel products, has removed its Chicago office from Old Colony Building to Builders Building, LaSalle Street and Wacker Drive. W. H. Potter is in charge.

Philadelphia

PHILADELPHIA, May 21.

PERMIT has been taken out by Philadelphia Rapid Transit Co., Broad and Locust Streets, Philadelphia, for a one-story repair shop to cost $115,000 with equipment.

Williams Brothers, Inc., 3078 Helen Street, Philadelphia, automotive engineer, has asked bids on general contract for one-story shop, 36 x 100 ft. Benjamin Shulman, 1722 Arch Street, is architect.

Cohn Brothers, 137 South Eleventh Street, Philadelphia, manufacturer of metal specialties, has leased three-story building at 1225 Race Street and will occupy for new plant.

Machinery and equipment of Eagle Charger Corporation, 121 North Eighth Street, Philadelphia, bankrupt, will be offered at public sale May 28, by Abraham Goldman, receiver.

Department of Wharves, Docks and Ferries, Municipal Pier No. 4, foot of Kenilworth Street, Philadelphia, Richard Weglein, director, will receive bids until May 28 for steel rolling doors for Cherry Street Pier No. 9, North Delaware Wharves, schedule D.

I. W. Levin, 1011 Chestnut Street, Philadelphia, architect, has asked bids on general contract for two-story automobile service, repair and garage building, 100 x 110 ft., to cost about $90,000 with equipment.

Niles-Bement-Pond Co., Meadow and Mifflin Streets, Philadelphia, Niles crane division, has filed plans for a one-story addition to cost about $19,000 with equipment.

Norman B. Mathieu, Philadelphia, has purchased three-story factory at 96 Collom Street, with L-extension, and will remodel for a woodworking plant.

Atlantic City Electric Co., Atlantic City, N. J., is negotiating for purchase of municipal electric light and power plant at Beach Haven and plans expansion, including transmission line construction.

Board of Education, Camden County Vocational School, Pensauken Township, N. J., has plans for two one-story additions to institution, 36 x 51 ft. and 25 x 26 ft. Lackey & Hettel, 5 Hudson Avenue, Camden, N. J., are architects.

Borough Council, West Chester, Pa., will receive bids until June 13 for equipment for pumping station and filtration plant for municipal waterworks, including motor-driven centrifugal pumps, electrical equipment, switchboard, filter equipment, etc., and one 3,000,000-gal. capacity steel reservoir piping and accessories. Remington & Vosbury, 509 Cooper Street, Camden, N. J., are engineers.

Board of School Control, Scranton, Pa., will take bids in about a month for four-story technical high school, with manual training division, to cost about $500,000 with equipment. A. J. Ward, Scranton-Lackawanna Office Building, Scranton, is architect.

Delaware Electric & Supply Co., Shipley Street, Wilmington, Del., is carrying out an expansion and improvement program, including new two-story equipment storage and distributing plant, pipe fitting and cutting shop, 90 x 90 ft.

City Garage, 718 Main Street, Towanda, Pa., operated by J. R. Overton and W. Smith, will take bids soon on general contract for new two-story service, repair and garage building, to cost in excess of $80,000 with equipment. H. C. Child, 501 South Keystone Avenue, Sayre, Pa., is architect.

Danville Structural Steel Co., Danville, Pa., has begun foundations for one-story addition to No. 2 plant, 95 x 250 ft., to develop tube mill to total length of 600 ft. Plant No. 1 is being rebuilt and additional equipment will be installed for increased output in brake beam division. Entire project will cost more than $300,000 with equipment.

South Atlantic States

BALTIMORE, May 21.

PLANS are being arranged by Bowker Chemical Co., First Street and Tenth Avenue, Baltimore, for rebuilding fertilizer manufacturing plant recently partially destroyed by fire, to cost upward of $45,000 with equipment. Engineering department, American Agricultural Chemical Co., 419 Fourth Avenue, New York, in charge.

Carolina Cement Co., New Bern, N. C., recently formed by J. A. Acker, Port Huron, Mich., identified with New Egyptian Portland Cement Co., has plans nearing completion for local mill on property acquired about five months ago, to consist of main kiln unit, 110 x 500 ft.; one-story grinding mill, 100 x 460 ft.; one-story machine shop, 50 x 155 ft.; storage and distributing plant, 180 x 580 ft.; power house with capacity of 5000 kva., and other structures, for output of about 4000 bbl. per day, to cost close to $2,000,000 with equipment. Samuel E. Flexner is consulting engineer.

Chemical Warfare Service, Edgewood Arsenal, Md., is asking bids until May 31 for taps, dies, reamers, cutters, mandrels, emery wheels, drills, etc., circular 109.

Consolidated Gas, Electric Light & Power Co., Lexington Building, Baltimore, will take over plant and property of Northern Maryland Power Co. at Havre de Grace, Md., and vicinity, and plans expansion including transmission line construction.

Mount Airy Canning Co., Mountain Lake Park, Md., has plans for an addition to power house, to include installation of two 50-hp. boiler units, engine and auxiliary equipment.

Julian Friez & Son, Baltimore and Central Avenues, Baltimore, manufacturer of scientific instruments, etc., plan early call for bids for two-story addition, 67 x 85 ft., to cost approximately $75,000 with equipment. E. H. Glidden, Jr., American Building, is architect.

Georgia Power Co., Atlanta, Ga., has acquired municipal power plant at Winder, Ga., for $300,000 and plans expansion, including installation of additional equipment and construction of transmission lines.

Burwell-Harris Motor Co., 229 North Tryon Street, Charlotte, N. C., is completing plans for four-story addition to service, repair and garage building, totaling about 32,000 sq. ft. floor space, to cost in excess of $100,000 with equipment. Lockwood, Greene & Co., Charlotte, are architects and engineers.

Lindsay-McMillan Co., 93 South Water Street, Milwaukee, manufacturer of refined oils, has begun work on new branch plant at Savannah, Ga., where 5-acre tract was recently secured, for production of heavy oils from rosin under special process. It is reported to cost about $60,000 with equipment. Other units are contemplated later.

Virginia Electric & Power Co., Richmond, Va., plans expansion in vicinity of Quantico, Va., including construction of power transmission line from that place to Occoquan, to cost $150,000. Robert Throckmorton is manager of light and power division.

Board of Education, District of Columbia, District Building, Washington, is said to be planning installation of manual training equipment in new two-story junior high school in Brightwood district to cost close to $500,000, for which bids will be asked on general contract early in June. A. L. Harris, District Building, is architect.

General purchasing officer, Panama Canal, Washington, will receive bids until May 29, for 60 metal-cutting band saws, boiler punch dies, 200 chain shackles, six double-acting pumps, eye bolts and other equipment, Panama schedule 2458; until June 7 for gasoline section cars, split pulleys, wire cloth, gate valves, blower, tie plates, etc., Panama schedule 1878.

National Garages, Inc., 1432 Buhl Street, Detroit, has awarded general contract to Carr Construction Co., Candler Building, Atlanta, Ga., for five-story service, repair and garage building at Atlanta, 90 x 133 ft., to cost approximately $275,000 with equipment.

Board of Education, Atlanta, Ga., will receive bids until June 15 for mechanical and other equipment for all school buildings now authorized, to cost about $150,000, including addition to commercial high school, for which bids are being received on general contract until May 28. R. R. Ritchie is assistant superintendent.

Sterling Motor Truck Co., West Allis, Wis., has completed plans for a merger with Corbitt Truck Co., Henderson, N. C., and will carry out an expansion program. Both plants will be continued in service with provision for parts for Sterling trucks at Henderson works.

Semmes Motor Co., 613 G Street, Washington, has plans for four-story service, repair and garage building to cost about $200,000. George N. Ray, 1219 Connecticut Avenue, is architect.

Pittsburgh

PITTSBURGH, May 21.

MACHINE tool business still is disappointingly light. Inquiries create hopes that only infrequently are realized, and with most firms this month will probably be as lean in sales as April. A good many steel plant improvements are under way or in prospect, but they are not developing many machine tool inquiries, the call being chiefly for cranes and other heavy equipment.

In connection with proposed rayon mill at Meadville, Pa., Viscose Co. of America, Inc., Marcus Hook, Pa., plans purchase of pumping machinery, hydraulic filter presses, cast iron vessels, tin-lined steel vessels, bronze valve and fittings and other equipment. Information at purchasing department, Marcus Hook.

Fairbanks, Morse & Co., Law and Finance Building, Pittsburgh, are completing a new factory branch at Fortieth and Butler Streets, comprising repair works, storage and distributing departments. Headquarters are at 900 South Wabash Avenue, Chicago. R. J. Ray is district manager.

McKinney Mfg. Co., Metropolitan and Liverpool Streets, Pittsburgh, manufacturer of shelf hardware, builders' hardware, etc., has disposed of a stock issue to total $390,000, portion of proceeds to be used for expansion. Facilities will be provided for production of new line of hardware specialties.

Morrison, Gross & Co., Elkins, W. Va., operating a hardwood mill, are planning purchase of narrow gage industrial locomotive, 20 to 24 tons capacity.

Erie Railroad Co., Meadville, Pa., will make improvements in local west yards, including installation of ash-handling system, to cost close to $100,000. Engineering department, 50 Church Street, New York, in charge.

Baltimore & Ohio Railroad Co., B. & O. Building, Baltimore, has plans for rebuilding engine house and repair department at Connellsville, Pa., recently damaged by fire. H. A. Lane is chief engineer.

Norman Allderdice, 5727 Wilkins Avenue, Pittsburgh, and associates have organized Chromium Co. of Pittsburgh, Inc., and plan operation of local factory for manufacture of metal-plated goods. Mr. Allderdice will be treasurer; Edward C. McHugh, 747 Union Trust Building, is also interested in company.

Joseph Greenspon's Sons Iron & Steel Co., 3130 Hall Street, St. Louis, has taken title to plant of Sharon Pressed Steel Co., Sharon, Pa., idle for about four years, and will remodel for branch works for production of oil and gas well pipe.

Cleveland

CLEVELAND, May 21.

MACHINE tool business and inquiry is rather light. Orders with some manufacturers so far this month show a falling off of 25 per cent as compared with the corresponding period in April. An Ohio manufacturer outside of the automotive industry purchased five machines the past week and has a few more tools to place. Several Detroit automobile manufacturers are figuring on small lots of tools. In the Cleveland territory the market is dull with only a few scattering sales of single machines.

Contract has been let by United States Air Compressor Co., 5300 Harvard Avenue, Cleveland, to J. L. Hunting Co., Guarantee Title Building, for one-story addition, 140 x 150 ft., to cost approximately $65,000 with equipment. G. S. Rider Co., Century Building, is architect and engineer.

Eaton Axle & Spring Co., East 140th Street and New York Central Railroad, Cleveland, has leased a building at Bridgeport, Conn., for a new branch plant exclusively for manufacture of automobile bumpers, for which company has secured a contract totaling more than $1,200,000.

Board of Directors, Young Men's Christian Association, Central Branch, Cleveland, Robert Lewis, secretary, has plans for a four-story technical nad vocational school, 50 x 120 ft., to cost $200,000. Hubbell & Benes, 4500 Euclid Avenue, are architects.

Ohio Public Service Co., Lorain, Ohio, will carry out an expansion and improvement program at local Edgewater generating plant, including installation of new generating equipment and auxiliary machinery to cost close to $450,000. Work has been started on new power sub-station. Executive offices are in Hanna Building, Cleveland. Plans are nearing completion for one-story equipment storage and distributing plant, with repair facilities, at Elyria, Ohio, to cost approximately $80,000 with equipment. R. S. Silsbee, Elyria Savings & Trust Building, is architect for latter structure.

J. F. Steffens, Fidelity Mortgage Building, Cleveland, architect, has revised plans for two-story automobile service, repair and garage building, to cost in excess of $100,000 with equipment.

Electric Public Utilities Co., Findlay, Ohio, operating electric light and power and railroad properties, is disposing of a note issue of $3,000,000, a portion of proceeds to be used for expansion and improvements, including transmission line construction.

J. T. Seaver, Inc., Fairmount Cedar Building, Cleveland, has been appointed representative in that district for American Hoist & Derrick Co., St. Paul, Minn.

Steel Improvement & Forge Co., Cleveland, recently at 5003 Windsor Avenue, has completed new shop on Addison Road which it will occupy shortly. Company manufactures drop forgings and does general jobbing business. Considerable new equipment has been purchased.

Gulf States

BIRMINGHAM, May 21.

PLANS are being arranged by Valley Bonded Warehouse Co., Brownsville, Tex., for a two-story cold storage and refrigerating plant, 100 x 235 ft., to cost about $250,000 with equipment. J. A. Taylor, 2302 Indiana Street, Houston, Tex., is engineer.

Sweetwater Refining Co., Sweetwater, Tex., has been acquired by new interests, headed by J. A. Johnson, Tulsa, Okla., which will reorganize company and operate under name of Sweetwater Oil & Refining Co. Plans are under way for extensions and improvements in local refinery to more than double present capacity, to cost upward of $80,000 with machinery.

Saxet Co., Houston, Tex., operating Saxet Gas Co., with natural gas properties in south central section of State, and Saxet Sand & Gravel Co., operating plants in same district, is disposing of bond issue of $1,850,000, a portion of proceeds to be used for expansion and installation of additional equipment.

Continental Wirebound Box Co., 1909 Campbell Street, Houston, Tex., has purchased plant and business of Republic Box Co., 4100 Leeland Avenue, and will consolidate with organization. Plans are being arranged for expansion.

Alabama Power Co., Birmingham, has begun excavations for new steam-operated electric power plant on Warrior River, near Gorgas, Ala., with initial capacity of 80,000 hp. It is proposed to have station ready for service early next year. Provisions will be made for later installation of three additional generating units of same size. Extensions will be made in transmission lines. Entire project will cost more than $15,000,000.

Burford Oil Co., Shreveport, La., recently formed by F. W. Burford, vice-president and general manager Crystal Oil Refining Corporation, Shreveport, and associates, with capital of 200,000 shares of stock, no par value, has acquired property at Pecos, Tex., and plans early construction of new oil refinery with capacity for handling about 5000 bbl. crude oil per day; department will be installed for refining of gasoline. A pipe line will be constructed from Hendricks field, Winkler County, to new refining unit. Entire project will cost in excess of $600,000.

United States Hammered Piston Ring Co., 611 First Avenue, St. Petersburg, Fla., W. T. Baynard, manager, is having plans prepared for new one-story factory to cost close to $50,000 with machinery. Edgar Ferdon, Sumner Building, is architect.

Clarence W. King, Giddens-Lane Building, Shreveport, La., architect, will take bids on general contract early in June for four-story automobile service, repair and garage building, to cost close to $100,000 with equipment. Same architect also has plans for three-story and basement garage unit, 115 x 150 ft., to cost approximately $95,000 with equipment.

Following recent sale of note issue for $2,500,000, Texas Cities Gas Co., El Paso, Tex., operating natural and artificial gas properties, is arranging for additional financing and will dispose of bonds in amount of $5,400,000, a considerable portion of fund to be used for expansion and betterments in plants and systems.

Common Council, Mangham, La., is asking bids until May 31 for equipment for municipal waterworks, including pumping machinery and accessories and elevated tank and tower F. P. Joseph, Glenmora, La., is consulting engineer.

Swift & Co., Union Stock Yards, Chicago, has awarded general contract to R. S. Gillespie, 111 West Ashley Street, Jacksonville, Fla., for multi-story lard and vegetable oil refinery at Jacksonville, 100 x 200 ft., to cost approximately $240,000 with machinery.

State Building Commission, Jackson, Miss., O. J. Turner, Belzoni, Miss., member in charge of budget, is arranging fund of $225,000 for construction of new power plant, ice-manufacturing and cold storage plant at East Mississippi Hospital for Insane; and fund of $225,000 for new structures at Alcorn Agricultural and Mechanical College, including mechanical trades building.

Mississippi Power Co., Gulfport, Miss., is planning extensions and improvements in vicinity of Richton and Hattiesburg, Miss., including construction of about 44 miles new power transmission lines, installation of automatic substation equipment, etc., to cost upward of $80,000.

Town Council, Wiggins, Miss., is asking bids until May 29 for equipment for municipal waterworks, including motor-driven centrifugal pumping unit and accessories; elevated tank on 100 ft. tower, 100,000-gal. capacity, etc. Morgan & Co., Edwards Building, Jackson, Miss., are engineers.

Cincinnati

Cincinnati, May 21.

SALES held up fairly well the past week, and the amount of business placed with local machine tool builders is running only slightly behind that in April. The market is somewhat spotty, however, with some manufacturers reporting a moderate volume of orders and others stating that activities are quiet. A pick-up in sales of heavy tools is a development worthy of note. The Santa Fe, which recently purchased some of the small machines on its list, is now closing for large equipment on which bids were taken several weeks ago. The Southern Pacific has bought a 30-in. x 14-ft. heavy-duty engine lathe, while the Department of City Transit, Philadelphia, has contracted for a No. 2 carwheel lathe, a 48-in. carwheel borer and a combination journal turning and axle lathe.

Metal Aircraft Corporation, Cincinnati, recently incorporated, will begin construction of a one-story building containing 35,000 sq. ft. for manufacture of an all-metal monoplane. Thomas E. Halpin is third vice-president and general manager.

Contract has been let by National Broach Co., Third and June Streets, Dayton, Ohio, to J. C. Gohn, Dayton, for one-story addition to cost approximately $27,000 with equipment. Oscar M. Pook is president.

Hedges, Walsh & Weidner Co., Chattanooga, Tenn., has been organized to take over and consolidate Walsh & Weidner Boiler Co., West Main and Sycamore Streets, and Casey-Hedges Co., Chestnut and Twenty-sixth Streets, manufacturer of boilers, tanks and other plate products. Present plants will be continued in operation, and plans are being arranged for expansion in production. M. M. Hedges will be president of consolidated company.

City Council, Paducah, Ky., is considering installation of a municipal electric light and power plant, to cost in excess of $75,000 with equipment. Burns & McDonnell Engineering Co., Interstate Building, Kansas City, Mo., is engineer.

Board of Education, Mount Healthy, Ohio, is considering installation of manual training department in new two-story high school to cost close to $170,000, for which bids have been asked on general contract. Samuel Hannaford & Sons, Dixie Terminal Building, Cincinnati, are architects.

An industrial committee at Columbia, Tenn., headed by Dr. J. B. Hardison, chairman, is in negotiation with a company, name temporarily withheld, for establishment of local foundry for production of stove castings. Initial unit, to be provided by city, will be one-story, 70 x 320 ft., with adjoining site for expansion.

Henry Fischer Packing Co., 1860 Mellwood Avenue, Louisville, will erect one-story and basement cold storage and refrigerating plant, 70 x 93 ft., to cost approximately $50,000, with equipment.

Schuler Axle Co., N and Jones Streets, Louisville, is planning for one-story addition to cost close to $20,000 with equipment.

Dayton Power & Light Co., Dayton, Ohio, is completing plans for new auxiliary steam-operated electric power plant, to cost in excess of $300,000 with equipment. Extensions will be made in transmission lines.

Emery Candle Co., Cincinnati, has changed its name to Emery Industries, Inc.

Indiana

Indianapolis, May 21.

PLANS are being drawn by Cleveland, Cincinnati, Chicago & St. Louis Railroad Co., Cincinnati, for new engine house and shops at Beach Grove, Ind., to cost more than $200,000 with equipment.

Board of School Trustees, Sheridan, contemplates installation of manual training equipment in two-story and basement high and grade school to cost $250,000, for which bids will be asked on general contract in July. McGuire & Shook, 941 North Meridian Street, Indianapolis, are architects.

Central Indiana Power Co., 2 West Washington Street, Indianapolis, is disposing of note issue of $3,000,000, a portion of proceeds to be used for expansion, including transmission line construction. Company is affiliated with Middle West Utilities Co., 72 West Adams Street, Chicago.

Enos Coal & Mining Co., Oakland City, has plans for one and two-story equipment storage and distributing plant, with repair facilities, to cost approximately $50,000 with equipment. H. D. Boyle, Furniture Building, Evansville, Ind., is architect.

Board of Trustees, Edinburg, is asking bids until June 4 for a municipal electric light and power plant. Donald Graham, Hume-Mansur Building, Indianapolis, is architect. Roy Porter is city clerk.

Delco-Remy Corporation, Anderson, manufacturer of automobile starting and lighting equipment, division of General Motors Corporation, is completing plans for one-story addition to plant on Noble Street, 250 x 270 ft., to cost upward of $100,000 with equipment. Portion of structure will be equipped as foundry.

Indiana Electric Corporation, Indianapolis, has arranged for a bond issue of $3,268,000, portion of proceeds to be used for expansion in power facilities and transmission lines.

Hoosier Gas & Light Co., Greensburg, is completing arrangements for purchase of natural gas properties and systems in this vicinity, including Zoller Gas Co., Muddy Fork Gas Co., Citizens' Gas Supply Co., and Hoosier Public Utilities Co. Permission has been asked to dispose of bond issue of $500,000, and stock issue of 10,000 shares, no par value, proceeds to be used in part for acquisition of properties and extensions in facilities, pipe lines, etc.

Shadberg Co., 4048 North Pennsylvania Avenue, Indianapolis, has been organized to take over patents on shallow well water pumps, line shaft clutches and rights on certain automobile brake inventions. Company will probably grant rights for manufacturing these products to other companies

Milwaukee

Milwaukee, May 21.

ORDERS for machine tools are being maintained at a fairly even rate, and judging by inquiry, prospects are for a continuance of moderate activity. There has been an improvement in opinion concerning the future, due largely to the fact that business has held up considerably better than had been expected. Few users are undertaking or contemplating plant expansion, but there is more than the usual effort to make replacements to keep shops at the highest efficiency. Business is coming from widely diversified sources, and the aggregate of orders is relatively satisfactory.

City Commission, Kenosha, Wis., is asking for bids until June 1 for construction of a municipal filtration plant designed by Alvord, Burdick & Howson, consulting engineers, Chicago, and estimated to cost $95,000. Proposals are solicited on any or all of these contracts; (a) Filter plant structures; (b) filtration equipment, 6,000,000 gal.; (c) steel wash water tank, 100,000 gal. C. M. Osborn is city manager, and P. J. Hurtgen, director of public works.

Wisconsin Power & Light Co., 16 North Carroll Street, Madison, Wis., has accepted bid of J. H. Findorff & Son, local, for general contract to erect a ten-story headquarters building, including motor bus terminal, garage and maintenance plant. The total cost will approximate $500,000. E. J. Kallevang is chief engineer. Architects are Law, Law & Potter, Madison.

Racine Electric Co., Bridge and Ontario Streets, Racine, Wis., manufacturer of fractional horse-power motors for household and industrial appliances, has changed its name to Racine Universal Motor Co., and increased its capitalization from $75,000 to $120,000. Enlargement of plant and production is contemplated, but details have not been divulged.

Wisconsin Knife Works, Clinton, Wis., manufacturer of high-speed steel knives, carbon steel cutters, molding blanks, etc., has been taken over by a group of Beloit, Wis., capital and will build a new plant in Beloit, 40 x 250 ft., part two stories and basement, costing about $50,000. Construction contracts have just been awarded. P. G. Farrow, 902 Wisconsin Avenue, Beloit, is president and general manager.

Tobin Tool & Die Co., 220 Ruggles Street, Fond du Lac, Wis., has broken ground for a one-story addition, 50 x 75 ft., designed by Frank J. Stepnoski, local architect. An investment of about $20,000 in building and equipment is contemplated.

Badger Metal Products Co., Milwaukee, has been organized with $20,000 capital stock to manufacture metal and wood products, forms, dies, etc. The principals are Russell W. and John K. Stambaugh, 683 Fiftieth Street, and W. E. Browne. Plans for manufacturing will be made public shortly.

Loeffelholz Co., 170 Clinton Street, manufacturer of brass castings, has started work on erection of a shop extension costing about $25,000.

Eastman Mfg. Co., 1002 North Eleventh Street, Manitowoc, Wis., manufacturer of hose couplings, is building a $20,000 manufacturing addition.

George H. Smith Steel Casting Co., 500 Clinton Street, Milwaukee, has increased its capitalization from $450,000 to $810,000, to accommodate growth of business. Some new construction is contemplated, but details are not yet ready.

Hudson Mfg. Co., Minneapolis, Minn., steel barn equipment, farm pumps, vents, hay loaders, etc., is negotiating with Association of Commerce of Waukesha, Wis., with a view of building a new plant in which its operations will be consolidated. It now maintains factories in Minneapolis and at Oshkosh and DePere, Wis. Annual output is valued at $2,000,000.

Detroit

DETROIT, May 21.

AN expansion program is being arranged by O. L. Anderson Co., Inc., 1347 East Fort Street, Detroit, manufacturer of sheet metal parts for automobiles, including gasoline tanks and fenders, to include installation of additional equipment, to cost more than $35,000.

Wilder-Strong Implement Co., First Street and Kentucky Avenue, Monroe, Mich., is said to have plans under way for rebuilding portion of plant recently destroyed by fire, with loss in excess of $35,000 with equipment.

Public Lighting Commission, 172 East Atwater Street, Detroit, is having plans drawn for extensions in municipal electric lighting plant with installation to include a 20,000-kw. turbo-generating unit, condenser, boilers, stoker, pumping machinery and accessories, to cost about $550,000. Smith, Hinchman & Grylls, Marquette Building, are architects and engineers.

General Motors Truck Corporation, Flint, Mich., is planning for early removal of its yellow taxi-cab manufacturing division from Chicago to new main plant at Flint, recently completed, where increased capacity will be developed. Production will be concentrated at local works for motor trucks, parlor coaches and taxi-cabs.

Grand Rapids Sash & Door Co., Grand Rapids, Mich., is considering rebuilding portion of millwork plant destroyed by fire May 13, with loss reported at $100,000 including machinery.

Chevrolet Motor Co., Flint, Mich., is said to be planning early call for bids for new branch plant at Saginaw, Mich., consisting of several two-story units to cost more than $5,000,000. Albert Kahn, Inc., Marquette Building, Detroit, is architect.

Consumers Power Co., Jackson, Mich., will soon begin work on a one-story addition to steam-operated electric generating plant at Grand Rapids, Mich., 80 x 100 ft., to cost more than $400,000 with equipment.

Kinsey Motors, Inc., 105 Sheldon Street, S. E., Grand Rapids, Mich., has filed plans for one-story service, repair and garage building, 100 x 170 ft., to cost close to $90,000 with equipment.

Chrysler Motor Corporation, Highland Park, Detroit, has plans for a new four-story unit, largely for assembling, to cost upward of $450,000 with machinery. Smith, Hinchman & Grylls, Marquette Building, are architects and engineers.

Accuralite Co., Terrace Street, Muskegon, Mich., manufacturer of piston rings and kindred products, will soon begin erection of one-story plant, 80 x 200 ft., to cost approximately $40,000 with equipment.

Fisher Body Corporation, General Motors Building, Detroit, manufacturer of automobile bodies, is reported planning construction of new plywood mill in vicinity of Longview, Wash., where site is being secured, to cost more than $350,000 with equipment.

Standard Oil Co. of Indiana, Inc., 910 South Michigan Avenue, Chicago, has leased property at Muskegon, Mich., for new oil storage and distributing plant, including pumping facilities for loading tank cars, to cost close to $100,000 with equipment.

Michigan Clay Products Co., Williamston, Mich., manufacturer of brick, is considering an expansion program to double present capacity, including installation of presses, conveying machinery, power equipment and other apparatus to cost more than $85,000.

Allis-Chalmers Mfg. Co., Milwaukee, has removed its Grand Rapids, Mich., branch to 310 Building & Loan Building. G. C. Culver is in charge.

Pacific Coast

SAN FRANCISCO, May 16.

CONTRACT has been let by Magnavox Co., Emeryville, Cal., manufacturer of radio equipment, to H. J. Christiansen, Syndicate Building, Oakland, Cal., for one-story addition to cost close to $25,000 with equipment. B. J. S. Cahill, 357 Twelfth Street, Oakland, is architect.

H. C. Smith Co., Los Angeles, manufacturer of oil well equipment and supplies, has awarded general contract to Union Iron Works for new plant, consisting of main machine unit, one story, 70 x 225 ft.; one-story welding works, 60 x 100 ft.; warehouse and distributing unit, 60 x 125 ft.; office and administration building, 45 x 80 ft., to cost approximately $100,000 with equipment.

Fred D. Colby, 215 Currier Building, Los Angeles, has filed plans for a one-story battery and electrical equipment repair works, 50 x 120 ft., to cost close to $20,000 with equipment. J. T. Zeller, Currier Building, is architect.

City Council, Ellensburg, Wash., is considering extensions and improvements in municipal electric light and power plant, including installation of equipment, to cost more than $35,000.

Binder & Curtis, 35 West San Carlos Street, San Jose, Cal., architects, have plans for two-story automobile service, repair and garage building, to cost $150,000 with equipment.

Celite Products Co., 1320 South Hope Street, Los Angeles, manufacturer of insulating products, is planning extensions and improvements in plant of National Magnesia Co., Redwood City, Cal., recently secured. Work will consist of new buildings and installation of machinery for mining raw material, refining, etc., to cost approximately $200,000.

Uttley & Kleindenst, 354 Hobart Street, Oakland, Cal., engineers, have plans for a cold storage and refrigerating plant for company whose name is temporarily withheld, to cost upward of $400,000 with equipment.

City Water Board, Eugene, Ore., is asking bids until June 5 for construction and equipment for municipal hydroelectric power project, comprising Leaburg unit with power dam, penstocks, tailrace, headworks, etc., one-story power house, 48 x 83 ft., for ultimate output of 210,000 hp.; 30-ton traveling crane switchboard and auxiliary apparatus. Stevens & Koon, Spalding Building, are engineers.

Richfield Oil Co., Seattle, has leased waterfront property and plans early construction of oil storage and distributing plant, to cost close to $200,000 with equipment.

Royal Crystal Salt Co., Salk Lake City, Utah, care of I. A. Clayton, Jr., 201 Regent Building, an official of Inland Crystal Salt Co., has plans for a new refinery on tract of salt deposits about 12 miles from city, to cost close to $400,000 with machinery.

Firestone Tire & Rubber Co., Akron, Ohio, has acquired property, 140 x 200 ft., at Phoenix, Ariz., and plans construction of factory branch and distributing plant to cost in excess of $100,000 with equipment.

Los Angeles Gas & Electric Corporation, Los Angeles, has purchased site at Alhambra, Cal., for new equipment storage and distributing plant, with repair department, to cost $50,000 with equipment.

Portland Bolt Co., Fourteenth Street, Portland, has plans for a two-story addition, 80 x 85 ft., to cost about $27,000 with equipment. Edmund T. Bidwell, Corbett Building, is architect.

Winner Tool Co., Puyallup, Wash., is in the market for two No. 3 double Lapointe broaching machines; two No. 1 single or double Lapointe broaching machines; one No. 0 single Lapointe broaching machine; two No. 7 H Becker

Lincoln type millers; one five or six-spindle sensitive high-speed drilling machine ½-in. or ⅜-in. capacity.

Pure Iron Culvert & Mfg. Co., Portland, Ore., has been appointed distributer in Oregon and western Washington for wire fence and highway guard products of Page Steel & Wire Co., Bridgeport, Conn. Eugene W. Gibson is manager of Portland company.

Earl Aircraft Corporation, Portland, Ore., is receiving machinery for plant to manufacture an airplane motor designed by Harry W. Earl, president of new company.

Woodbury & Wheeler, 55 Second Street, Portland, Ore., and Cunningham Electric Co., 2123 Pacific Avenue, Tacoma, Wash., have been appointed representatives in their respective districts for Foote Brothers Gear & Machine Co., Chicago.

Canada

TORONTO, May 21.

BOTH dealers and builders report a good demand for machinery and tools, manufacturers also having a considerable volume of unfilled orders on their books. Sales the past week were somewhat better than those for the first two weeks in May, and business for the month promises to compare favorably with any month so far this year. A small list of machine tools and woodworking equipment has been closed by the local Board of Education for a technical school, and some fair sized inquiries are out for new industrial plants.

Backus Brooks Co., Minneapolis, Minn., through its subsidiary, Great Lakes Paper Co., Ltd., will erect a newsprint paper mill at Fort William, Ont., to have an annual capacity of 100,000 tons, with provision for increasing this to 200,000 tons. First unit of mill will be started within a month.

Robert Mitchell Co., Ltd., Montreal, has purchasel local plant of National Bronze Co., Ltd., and will carry on manufacture of architectural bronze, fittings, etc.

Electric light and power plant at St. Jovite, Que., was totally destroyed by floods several days ago, causing loss to plant and equipment of $30,000.

Public Utilities Commission, Picton, Ont., will proceed with construction and installation of waterworks plant and system to cost $50,000. New pump house will be erected and auxiliary gas engine and other equipment will be installed.

Suspended-Air-Tires, Ltd., 1089 Bathurst Street, Toronto, will build a factory at Orillia, Ont., one story, 100 x 100 ft.

Eastern Cement Products, Ltd., 111 Princess Street, East St. John, N. B., will start work immediately on erection of a factory. John Flood & Sons have general contract.

Sandwich Foundry Co., 400 Bloomfield Avenue, Sandwich, Ont., has awarded several contracts in connection with erection of a one-story addition to its foundry, to cost $20,000. New equipment will be purchased.

Foundation Co. of Canada, Ltd., 745 Sherbrooke Street West, Montreal, has the general contract for addition to Three Rivers, Que., paper mill of St. Lawrence Paper Mills, Montreal. Engineer, H. S. Taylor, 1111 Beaver Hall Hill, Montreal. Addition will be one story, reinforced concrete construction.

Ratepayers of Gore Bay, Ont., have authorized expenditure of $15,000 for erection of an electric light plant.

Canadian Salt Co., Sandwich, Ont., will build addition to its plant to cost $300,000.

St. Jerome Light & Power Co., St. Peter Street, Quebec, has awarded contract to Ferland & Laliberte, for construction of a hydroelectric power plant at Metabetchouan, Que.

R. T. Gee Co., 173 Dundas Street, London, Ont., has let contract to C. Hubbell, Thamesville, Ont., for erection of a factory at Thamesville, to cost $32,000. It will consist of four buildings, each 40 x 120 ft.

Western Canada

W. J. Cunningham, superintendent, Edmonton, Alta., has recommended purchase of $34,000 worth of new machinery for city power plant. While the machinery proposed will meet present needs, a larger program will have to be considered within two years.

Crow's Nest Pass Coal Co., Fernie, B. C., has started work on a power plant, 35 x 102 ft., at Coal Creek to cost $25,000. B. Caulfield is engineer.

Bartholomew, Montgomery & Co., Standard Bank Building, Vancouver, B. C., have contract for building hydroelectric power development plant at Whitewater Mines, B. C., to cost $20,000 for Whitewater Mines, Ltd., Vancouver and Retallack, B. C.

With granting of licenses by Provincial Government of British Columbia permitting use of Nimpkish River for power purposes, Canadian Forest Products Ltd., an organization backed by International Harvester Co. of Chicago will erect a paper mill and power development plant on east coast of Vancouver Island. Plans have been completed for construction of a dam 200 ft. high.

Foreign

PLANS are being arranged by Stewarts & Lloyd of Australia, Ltd., Sydney, for new mill for manufacture of welded steel pipe and tubing under lap-weld process, to cost close to $4,750,000. Company is branch of English concern of same name, with plants at Birmingham, England, and Glasgow, Scotland.

Standard Oil Co. of New Jersey, Inc., 26 Broadway, New York, is reported planning early construction of new plant in Ruhr district, Germany, for production of glykol, a substitute for glycerin, for which process patents were secured from German Dye Trust several months ago. Initial units are expected to cost more than $500,000.

Brown Coal Industrial Corporation Zunkunft, Dortmund, Germany, manufacturer of brown coal briquettes, is disposing of bond issue of $2,000,000 in United States, portion of fund to be used for expansion and improvements. Company also operates power properties, and is controlled by Rhine-Westphalia Electric Power Corporation, with plant and system in Westphalia district.

Corn Products Refining Co., 17 Battery Place, New York, is planning for new refinery at Sao Paulo, Brazil, to cost close to $1,000,000 with machinery. Similar plant is contemplated in Japan, work to begin early next year.

Officials of State of Hessen and City of Frankfort, Germany, have organized Hefrag Corporation, to construct and operate a coal distillation plant and power station at Wolfersheim, Wetterau district, utilizing brown coal deposits in that section. Project will include by-products units for tar and tar products, and benzine factory, with coal-preparing works, drying plant and other divisions. Entire enterprise is estimated to cost 10,000,000 m. (about $2,380,000) with machinery. American Consulate, Frankfort-on-Main, Germany, Hamilton C. Claiborne, consul, has information regarding project.

Durant Motors, Inc., 250 West Fifty-seventh Street, New York, has purchased property through its president, William C. Durant, now abroad, from Deutsches Werke at Havelhost, suburb of Berlin, Germany, consisting of group of buildings on about six acres. Structures will be remodeled for branch plant and will be ready for service in about 90 days.

New Trade Publications

Regenerative Air Preheater.—Blaw-Knox Co., Pittsburgh. Folder of 6 pages, illustrated, describing a method of holding air at 1500 deg. Fahr. without the use of checkers. Some of the illustrations show applications.

Reducing Gears, etc.—Winfield H. Smith, Inc., Springville, N. Y. Booklet of 16 pages illustrating and describing speed reducers of various types, together with pulleys, pillow blocks, hangers, etc.

New York, May 31, 1928

ESTABLISHED 1855

VOL. 121, No. 22

Vertical and Overhead Core Ovens

Greatly Increased Capacity from Removing Old Ovens from Floor—Continuous Conveyors Handle Cores Through Ovens

BY ROGERS A. FISKE*

HEMMED in on all sides so that an extension to the foundry building was impracticable, the Nash Motors Co., Kenosha, Wis., has taken advantage of its air-rights between the floor and the roof of the foundry building, with the net result that, where formerly it appeared that all available production space was in use, there now stands equipment that has increased production by 50 per cent and has halved direct labor cost. Furthermore, in laying out the new plan it was found that the saving in floor space was such that the new units can be duplicated, thus doubling the present output. Not one square foot has been added to the foundry building, nor will any increase be necessary when the present equipment is duplicated.

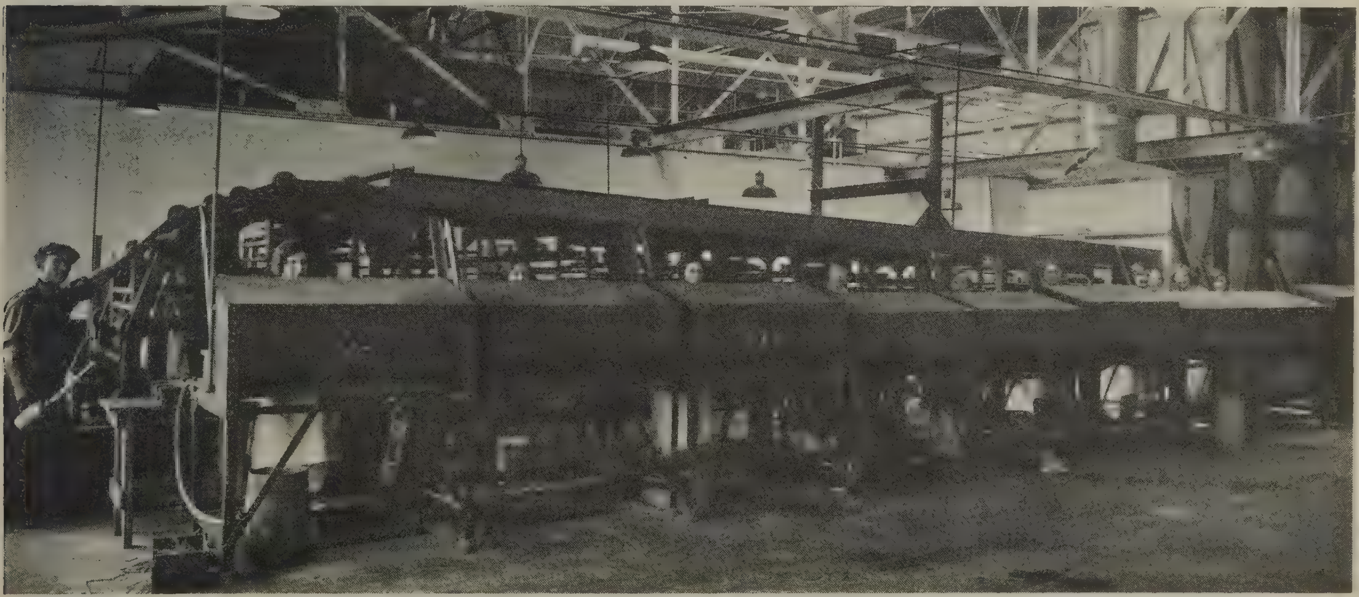
Early in 1926 truck conveyors and sandslingers were installed for the production of cylinder, cylinder head and transmission case castings. The capacity of this equipment was never fully utilized for the reason that core-making facilities, limited by the floor space in the foundry, were inadequate. This situation led to the installation of three continuous core ovens, two of the vertical type and the third arranged overhead, so that molders may now use the space formerly occupied by the old core ovens. One oven is used for baking small cores, another for large core work, and the third is a drying oven for cores that have been pasted

The small core oven is used for work up to 3½ in. in diameter by 2½ in. thick. It is of the vertical type and was made by the Mahr Mfg. Co., Minneapolis. It is 6 ft. wide by 9 ft. long and 45 ft. high. It rests on the main floor and extends through a steel and concrete mezzanine floor sufficiently large to accommodate a duplicate unit.

Core sand, delivered to the mezzanine floor by an overhead crane, is loaded into two-wheel buggies, from which it is shoveled to bins mounted on the core-making tables. The conveyor for core baking comes up through the mezzanine floor and then runs horizontally between two rows of core benches. Ten girls work on each side of the conveyor, permitting it to be loaded from both sides.

Conveyor Speed Adjusted to Suit Baking Time

Each conveyor basket is provided with three trays, which are adjustable as to height. The trays are made of ¼-in. grating, which permits core plates to be laid



AFTER Coming Up to the Mezzanine Floor the Small Core Oven Conveyor Makes a Horizontal Run Over What Is Known as the Loading Station and Enters the Oven, Which Extends Through the Roof of the Building. A core sand bin is mounted at the back of each core bench in any position desired and insures good circulation of hot gases through the baskets, thus baking the cores uniformly and without burning them. The basket travel speed may be varied from 0.51 ft. to 2.53 ft. a minute. Under present operating conditions of 1.10 ft. a minute each basket is in the baking zone 56 min.

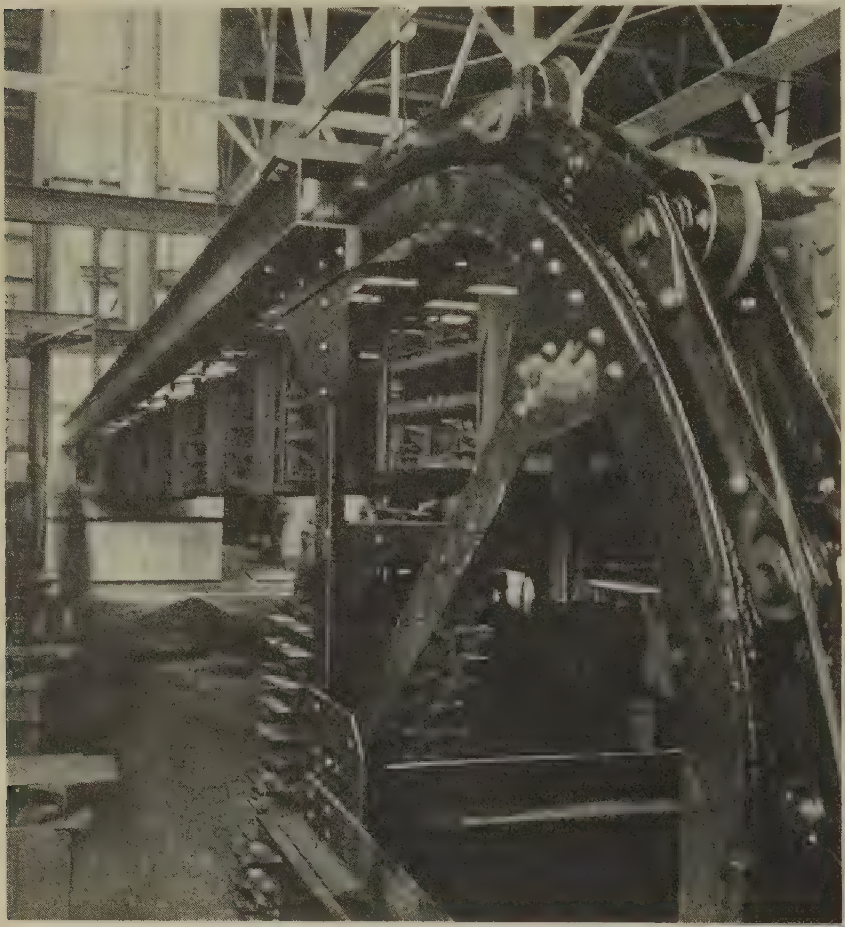
---

*Resident editor at Chicago for THE IRON AGE.

Entering the oven at the mezzanine floor level the conveyor passes upward and over sprocket wheels near the top of the oven. It then passes downward to sprocket wheels near the bottom of the oven, where it turns to a horizontal run and leaves the oven at the main floor level, to turn up again later to the mezzanine floor. The lower horizontal run is the unloading station, where one man unloads the cores made by 20 girls. He removes the cores from the conveyor and places them in boxes which are moved on roller tables. It is stated that core breakage is almost unknown. The drive is from a 7½-hp. motor.

A single combination oil or gas burner is mounted in the side of the oven. The brick combustion chamber, which is built with open slots in its roof, extends the full width of the oven and is mounted between the two vertical conveyor runs. A baffle extends from the combustion chamber to a point near the upper sprocket wheels. Products of combustion escape through the roof of the combustion chamber and travel up along the down-coming conveyor run. They pass over the top of the baffle and turn down, following the path taken by the conveyor. Gases escape to the atmosphere through a stack mounted at the loading end of the oven. The gas flow is counter to the direction of travel of the conveyor. The loaded conveyor enters the coolest part of the oven and gradually approaches the point of highest temperature, after which it passes to a recuperative chamber and then out of the oven to the unloading station.

The products of combustion are tempered with cold air at a point just above the combustion chamber. This method and the automatic control of the burner operation are used to fix baking temperatures. The mixture of air and gases first encountered by the cores has a temperature of 330 deg. Fahr. As the cores travel farther into the baking zone the temperature of the hot air and hot gases increases to 470 deg. Fahr. This maximum temperature is encountered at the end of the baking zone, which is located about 4 ft. above the mezzanine floor, and on the downward travel of the cores. From this point on, the cores pass through the cooling and recuperative zone, encountering cold, induced, atmospheric air, which cools them to permit their unloading. This also saves and carries back into the oven a large proportion of the heat of the cores, core plates, core driers, baskets and the conveyor.



TWENTY Girls, Ten on Each Side, Work on the Mezzanine Floor (Left) and Load the Conveyor Which Serves the Small Core Oven. The oven is shown in the background. Empty baskets come up through the hatch (lower right) from the unloading station below

CONTINUOUS, Vertical-Type Drying Oven Standing Near the Pasting Benches. It occupies a floor space 7 ft. 4 in. x 4 ft. 8 in. Blower, gas burner, recording and controlling cabinets and stack show in the picture

Temperatures are controlled by a Leeds & Northrup Co. four-point recorder-controller. The conveyor was furnished by the Palmer-Bee Co., Detroit.

Large cores are baked in an overhead oven made by Young Brothers Co., Detroit. It is built in three parallel sections, and is served by a Palmer-Bee Co. conveyor 980 ft. long. At the core-making stations,

CARNEGIE LIBRARY OF ATLANTA

which are on the main floor, the conveyor is suspended from an overhead track which forms a large U. The baskets, each designed with eight trays, hang from the conveyor chain. These baskets, in following the U-turn, pass between three rows of core machines. Fourteen machines stand immediately outside of one of the straight runs, and 10 machines have been placed along the outside of the opposite straight run. Between the conveyor runs are 12 machines with work benches placed back to back.

Freshly made cores are placed on the baskets by the workmen at any convenient point along the U-bend. The conveyor then pitches up and enters the first overhead oven unit, which is 200 ft. long and which has a baking chamber 16 ft. 1 in. wide and 10 ft. 8½ in. high. It returns through the second section, which is 200 ft. long, and then turns into the third section, which is about 100 ft. long. In the preheating section are five single gas burners, then follow 16 double burners and finally two single units. Burners are not used in the third section. Leeds & Northrup Co. control equipment regulates temperatures, which range from 375 deg. Fahr. near the entering end of the furnace to 600 deg. at the hottest point.

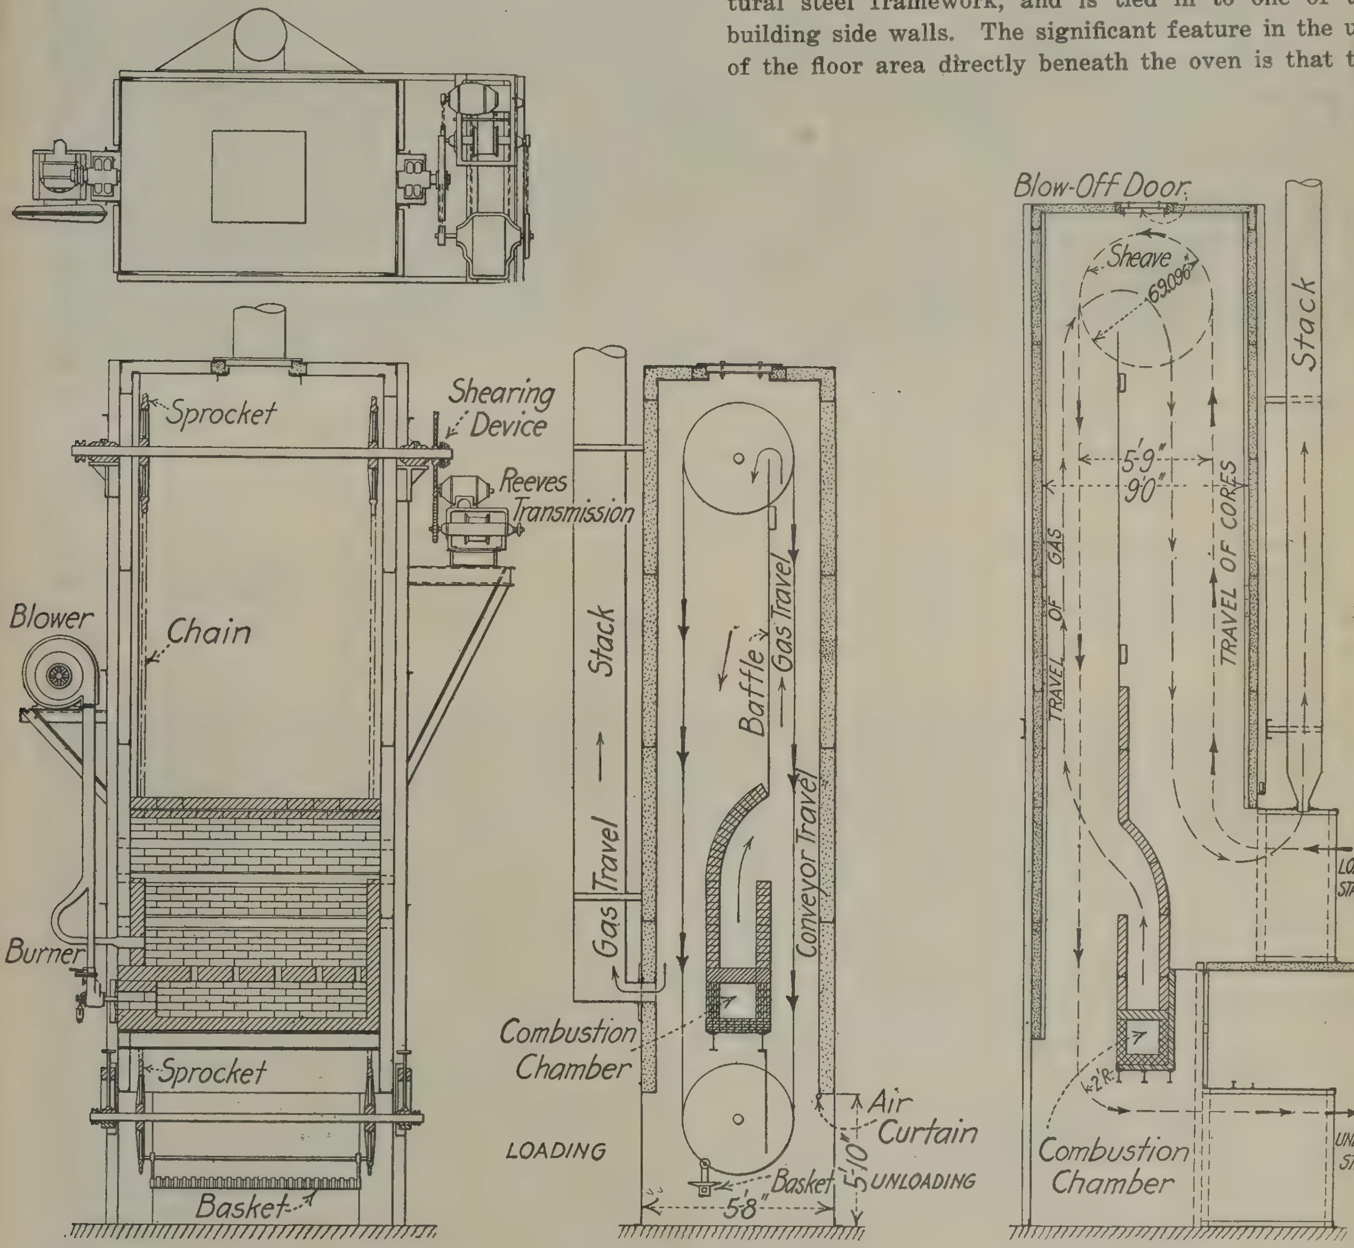
At the end of the third section of the furnace the conveyor returns to the foundry floor level, where it is unloaded by the men who perform operations such as rubbing and pasting. Slack adjustment in the chain is made at this end of the conveyor. From this point a horizontal run brings the baskets back to the U-turn at the core-makers' station.

Space remains for a second unit of this kind. Since the oven is mounted above the foundry floor, it will be practicable, if need be, to spot several rows of molding machines on the main floor beneath the ovens.

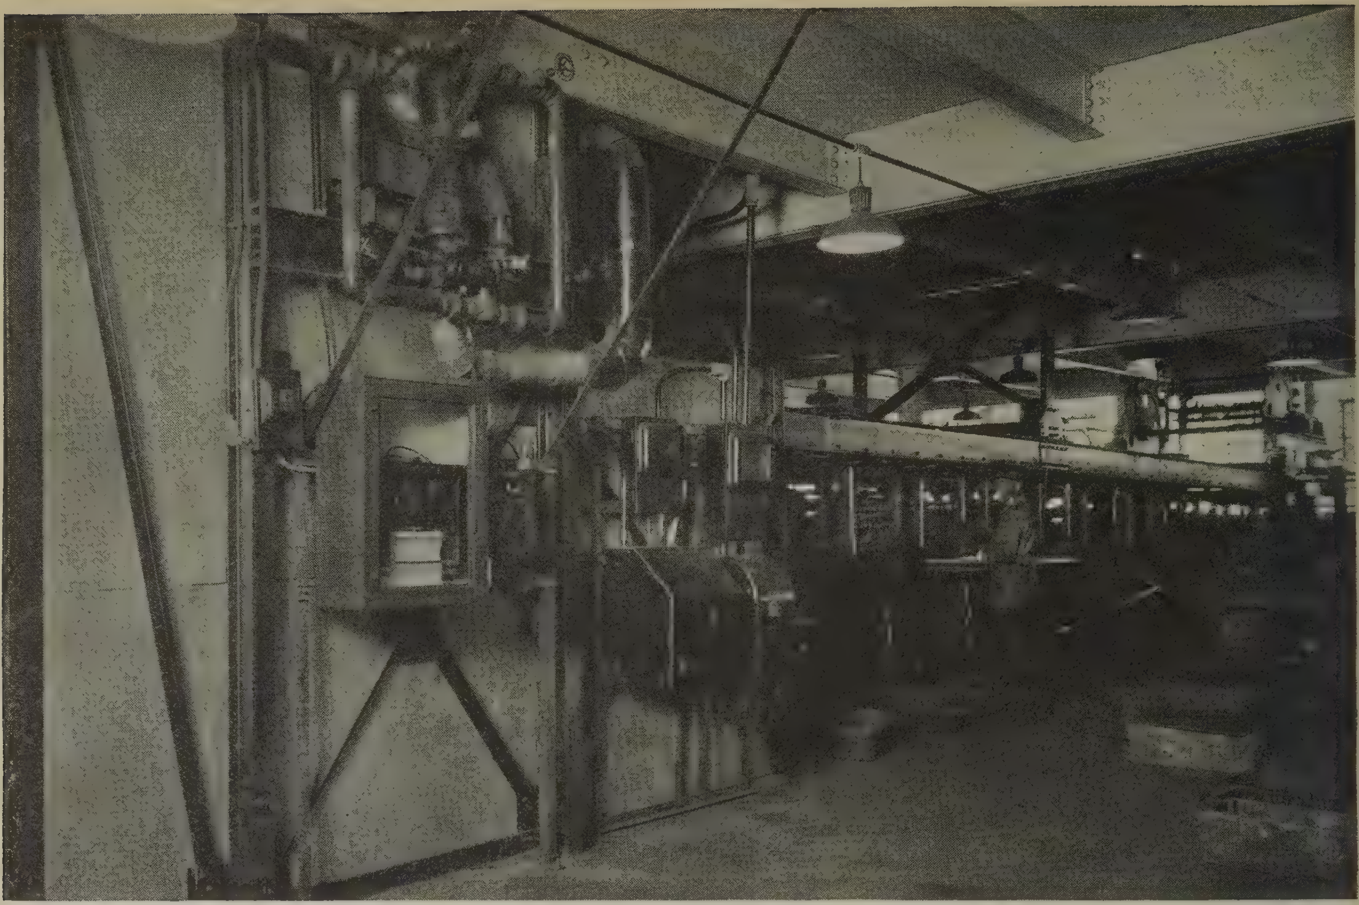
Except under its entrance and exit inclines, this conveyor has a clear height of 8 ft. from floor level to the bottom of the oven supporting beams. The oven shell is composed of standard insulated steel panels, held heat-tight and rigid by a boltless telescopic joint. The body of the oven is carried on structural steel framework, and is tied in to one of the building side walls. The significant feature in the use of the floor area directly beneath the oven is that the oven temperature in no way inconveniences the workmen there. The insulation on the oven floor is such that normal room temperatures beneath it are not changed when the oven is in operation.

The conveyor carries 144 core racks, spaced 5 ft. 6 in. on centers. Operating at 36 in. a minute, it will carry 3240 sq. ft. of shelf area into the oven each hour. While the maximum speed has not yet been used in this installation, it probably will be when peak production loads are required.

Although the final refinements of the installation



GAS Flow Is Counter to the Direction of the Conveyor Travel (Baking Oven, at Right). In the small core oven a baffle extends from the combustion chamber to the upper sprocket wheels. The drying oven (left) is self-contained. That is, the conveyor and sprocket wheels are inclosed in the oven casing



Unloading Station, Where the Conveyor Leaves the Small Core Oven at the Foundry Floor Level. In the horizontal run beneath the mezzanine floor one man removes all the cores made by 20 girls. Gas burner, automatic temperature control valve, recorder and recorder controller and starting equipment for both blower and conveyor are shown here

have not been fully completed, a preliminary test developed the following:

Production rate in racks an hour....	22
Number of racks an hour...........	26.2
Total time in oven..................	2 hr. 41 min.
Shelf area per hour (not counting unused area)	2,200 sq. ft.
Wet sand per rack..................	410 lb.
Wet sand per hour..................	10,700 lb.
Plates and driers per hour..........	21,750 lb.
Weight of rack and chain per hour..	24,900 lb.
Total iron per hour................	46,650 lb.
Iron to sand ratio..................	4.36
Water evaporated from cores........	640 lb.
Maximum baking temperature.......	450 deg. Fahr.
Gas required per hour..............	5,800 cu. ft.
Gas required per pound wet sand....	0.54 cu. ft.

In the test above referred to, the oven was operating at about half capacity in terms of core tonnage. Subsequent to the test the wet sand load for the same chain speed was doubled, and, while no accurate readings were taken of the gas consumption under these conditions, it was estimated roughly at below 0.4 cu. ft. per pound of cores.

The oven is gas fired, using a high-pressure gas system, the pressure being sustained at 5 lb. per sq. in., with a positive action blower. The pressure is distributed to 24 burners located along the oven floor, each burner equipped with a special inspirator which entrains the proper amount of air for combustion. From eight to 16 special burner tips are mounted on each burner, the number depending on the amount of heat desired at the several points. The burners fire horizontally in a direction counter to the movement of cores through the oven—thus facilitating the ventilation system used. The flame from each jet impinges at a sharp angle upon a fire brick surface which aids in heat distribution and eliminates the possibility of any single burner being temporarily smothered by air poor in oxygen. Each burner has an individual pilot light fed from an independent gas supply, as another operating safeguard.

With the heating and control elements so disposed, the cores in their passage through the oven are heated evenly and gradually until the moisture in the core binder is driven off. From the point at which the volatiles are entirely removed from the cores only sufficient heat is added to maintain a baking temperature.

Large and Small Cores Run Through Same Oven

Although the oven was designed to handle only one certain class and size of cores, both large and small cores are being baked simultaneously. The baking time for this mixed load is the same as that originally expected for the smaller cores alone. The cores vary in size from 60-lb. units 10 to 12 in. in thickness to small cores 1 in. in thickness.

The conveyor in this oven is of the malleable iron universal jointed trolley type. The trolleys are fitted with two 6-in. diameter cast iron, chilled-tread, single-flanged rollers fitted with two Timken tapered roller bearings. These wheels are, in turn, mounted on a high-grade steel shaft from which the load is suspended by means of a portion of the double-jointed trolley link. The other half of this link forms the double joint which allows bending in a horizontal plane. The trolleys are spaced 6 ft. 2¼ in. centers and are capable of carrying a suspended load of approximately 2000 to 2500 lb. each. The trolley track, as installed consists of two 4-in. x 3-in. x ⅜-in. angles supported at approximately 5-ft. centers. This conveyor was furnished by Palmer-Bee Co., Detroit.

A Mahr Mfg. Co. continuous vertical-type drying oven stands near the pasting and blacking benches. This unit is 7 ft. 4 in. long, 4 ft. 6 in. wide and 24 ft. high. It is self contained, in that the basket conveyor chain passes over sprocket wheels located at the bottom and at the top of the oven. The pasted cores are placed on the baskets at one side of the oven and removed from the opposite side.

This unit is fired by a single combination gas or oil burner. The change over from one fuel to the other can be made in 15 min. The combustion chamber is 13 in. square and extends the full width of the oven. Products of combustion escape through slots in the roof of this chamber and, after having been tempered with cold air, are guided up by a baffle through the down-coming line of baskets. This unit, like the other vertical unit previously described, is a two-pass oven with the air-gas mixture flowing counter to the direction of travel of the conveyor chain. The air-gas mixture is taken from the oven by a stack which is located at a point just above the loading opening. Temperatures, which range from 100 deg. Fahr. to 475 deg. Fahr., are automatically controlled.

An analysis of the value of this equipment is shown by the fact that core-making methods formerly employed in this foundry limited output to the equivalent of about 350 cars per 16-hr. day. The new layout steps this up to 500 cars and, if duplicate units are installed, for which there is ample room, the output of this foundry, expressed in cars per 16 hr., will be close to the 1000 mark.

Flywheel Production Unit

Another example of savings resulting from the use of modern equipment in foundries is the new flywheel production unit recently installed at the Nash foundry. It consists essentially of an elliptical Palmer-Bee Co. conveyor, 310 ft. in circumference and carrying 138 flask tables. A Beardsley & Piper Co., Chicago, sand-slinger is mounted inside the conveyor and at one end. Molds are made in four machines, mounted on a turntable. Electric hoists remove the drags and copes from the molding machines and mount them on the conveyor tables.

The completed molds are poured along one side of the conveyor and then travel around to the opposite side to the shake-out station. The rough castings are removed from the sand and placed on an inclined conveyor that elevates them to an overhead platform on which are mounted three tumblers. This platform stands inside the area bounded by the flask conveyor. The cleaned flywheels are rolled down a chute to the main floor level.

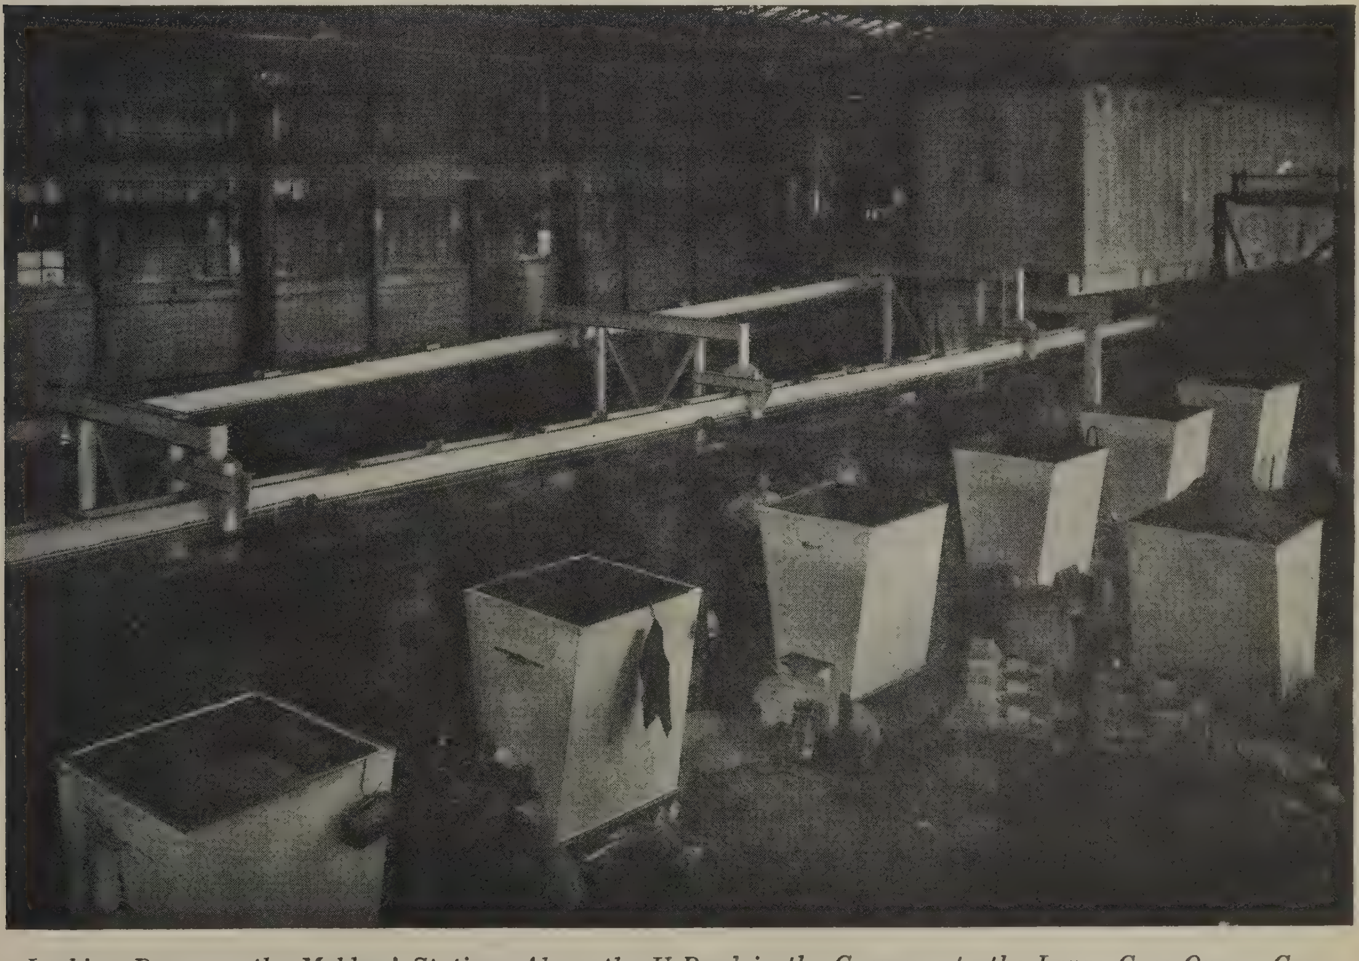
With former practice 400 flywheels were made in a 10-hr. day on a floor space of 2700 sq. ft., which does not include the area required for tumbler equipment, located in another part of the building. Molding, pouring and cleaning operations on 1200 flywheels are now performed in a 10-hr. day on a floor area of 3915 sq. ft. This figures 6.75 sq. ft. per flywheel by the old method and 3.26 sq. ft. required by the new method. Cost per flywheel by the new method is only 48 per cent of the cost of producing by the old method.

Worcester Engineering Society Organized

Worcester, Mass., sections of the various national engineering societies have come together to establish the Worcester Engineering Society, the membership of which will include all accredited engineers of the city and vicinity. While the identity of the various sections will not be disturbed, all members of the new society will receive the benefits of participation, when desired, in the deliberations of the American Society of Mechanical Engineers, American Society for Steel Treating, American Institute of Electrical Engineers, American Chemical Society, American Society of Civil Engineers and the Society of Automotive Engineers.

Officers elected on a mail ballot are: President, Admiral Ralph Earle, U. S. N., retired, president of Worcester Polytechnic Institute; vice-presidents, Lester W. West, Albert J. Gifford and Clifton F. Hood; secretary, Fred B. Crosby; treasurer, Stuart M. Anson; counsellors—Prof. Arthur W. French, for civil engineers; Dr. Lowell H. Milligan, for chemical engineers; Robert E. Bigelow, for steel treaters; Roger G. De La Mater, for mechanical engineers, and Edward H. Bauer, for engineers not affiliated with the national societies.

The Indianapolis chapter, American Society for Steel Treating, will hold its first annual June frolic June 2 at Idlewold Park, near Pendleton, Ind. Frank J. Oakes, Link-Belt Co., is chairman of the committee on arrangements.



Looking Down on the Molders' Stations Along the U-Bend in the Conveyor to the Large Core Oven. Core-carrying baskets pass to the left along the far side of the bend and toward the oven on the near side. The sand bins are filled by an overhead crane. The elevated oven is in the background

Need Amended Laws to Cut Waste

Uneconomic Distribution Cannot Be Corrected Without Changes in Statutes, Says President Schwab at Institute Meeting—Suggests Committee to Study Problem

STEEL manufacturers were urged to seek a change in existing laws as a step toward eliminating economic waste by Charles M. Schwab, president of the American Iron and Steel Institute, in an address opening the thirty-third general meeting of that organization, held at Hotel Commodore, New York, Friday, May 25.

He recommended to the directors that a committee of expert steel men be appointed "to study this problem with a view frankly to recommend to the public and to the proper public authorities a constructive plan which may result in such modification of existing law as will enable the factors in the steel industry to achieve those economies which are so important, and at the same time suggest such plan of Government knowledge and possibly supervision of such measures as may be proposed to be taken as will adequately and thoroughly protect the public interest."

The steel industry, Mr. Schwab stated, has gone about as far as can be expected in the reduction of costs, and, under present competitive conditions, "its low margin of profit is not conducive to sustained national prosperity." Higher prices would be helpful to the industry and fair to customers, but even with no change in prices there remains a possibility of reducing costs further by eliminating wasteful methods of distribution. Cross hauling of steel is one of the most glaring examples of waste in distribution.

Laws Force Uneconomic Conditions

"The steel industry is a law-abiding industry and the members of it are law-abiding citizens. But surely where laws force uneconomic conditions into existence one may well consider whether the laws should not be changed. It is obviously in the public interest that every industry should be conducted upon the most economical basis possible. It is equally important that the public interest should at all times be protected against agreements affecting prices or trade conditions which might themselves become a burden upon the public. But surely between these two horns of the dilemma there must be middle ground which would be in the interest alike of the manufacturer and the consumer, and of national prosperity as a whole."

Proposed Changes to Be Submitted to Government

In commenting on his proposal that a committee study the problem of the industry in relation to existing statutes, Mr. Schwab said:

"Business in these days must be done in the full light of day. None of us has any thought of entering into agreements or arrangements along these lines which shall be other than in the broadest public interest. We are perfectly willing, therefore, and we should be perfectly willing, that competent Government authority should be thoroughly advised as to all that we propose to do along such lines. We should be equally confident that competent public authority, acting under the influence of an enlightened public opinion, would sanction all such measures as were so obviously in the general interest. Here is a problem of practical business statesmanship to which I feel the American Iron and Steel Institute may wisely and constructively address itself, and I am confident that the ability in this industry is capable of developing measures that will commend themselves to the American people."

"No one can view the steel industry today without reaching the conclusion that this fundamental American business is apparently content with a profit on its investment amounting to little more than the interest one can earn from a savings bank deposit," asserted Mr. Schwab in emphasizing the poor earnings of steel companies.

"Here is a business which provides the essential elements of practically all industrial, manufacturing and transportation effort. It pays its workers higher wages than are paid in almost any other line of manufacture. In manufacturing efficiency it is second to no other industry in the world. Capital investment in the steel business is greater today than it ever was. Our output reaches record volume. We are wonderfully well equipped and organized to perform the enormous service which the development of a growing country demands of this basic industry.

"I do not think, however, that this country intends to demand the service we are rendering for the small return which the steel industry is currently receiving. I do not mean to imply that the steel industry expects large returns. But we have a right to expect, and it is in the public interest, that we earn enough to provide for the expansion, modernization, and development of our plants which the country's ever-growing needs constantly require.

"The economic ills of the steel industry are well known and have been much discussed so that I need refer only briefly to the outstanding facts. The total investment in the steel industry of this country is approximately five billion dollars, of which approximately one and one-half billion dollars has been added during the last 14 years. The rate of return upon this investment of five billion dollars has been approximately 5 per cent, and virtually no return at all has been earned upon the additional one and one-half billion dollars last invested, the total earnings in the industry today being only slightly more than they were 15 years ago, before the additional investment in plant had been made. The rate of return upon investment in our industry is almost, if not quite, the lowest return earned in any of the principal manufacturing industries.

Low Profits Imperil Wage Scale

"Low profits, besides depriving security holders of a fair return upon their investment, also tend to imperil the general wage scale of the country, affording as they do a constant temptation to the management of industries to reduce wages, as the only solution of their economic difficulties. Everyone agrees that the prosperity of our country is intimately connected with the liberal wage scale now prevailing, and no serious-minded man would argue that a reduction of wages in this country is a desirable thing to do if it can possibly be avoided.

"Assuming the general acceptance of my plea that the rate of return in the steel industry is inadequate, let us consider for a moment what remedies can be suggested. The two most obvious remedies are, of course, reductions in cost or an increase in prices. To the first suggestion I would say that the steel industry has already gone very far in reductions in cost, the experience of our own company showing a total reduction of $7.27 per ton in the average cost of production between 1923 and 1927."

Cross Hauling a Burden on Producer and Buyer Alike

In commenting on the economic losses through cross hauling of steel, Mr. Schwab said:

"It is manifestly uneconomic for a steel manufacturer in Chicago to ship 100,000 tons of steel to Pittsburgh at a time when a Pittsburgh manufacturer is shipping a like quantity of like material from Pittsburgh to Chicago. The sales in each case must be made at prices prevailing in the districts where the steel is sold and consequently the sales price nets less to the manufacturer in each case than they would have netted if the Chicago manufacturer had supplied the Chicago market and the Pittsburgh manufacturer the Pittsburgh market.

"The example that I have used of cross hauling between Pittsburgh and Chicago is an extreme case which, in actual practice, probably seldom occurs, but is illustrative of cross hauling which does occur in very large quantities from various districts. This is a problem in which the buyer of steel, as well as the producer, is, or should be, vitally interested. It must not be assumed that all of the cost of this cross hauling is borne by the producer. It is obvious to everyone that there is an economic waste in permitting the cross hauling to exist and it should be obvious that this waste is paid for jointly, although perhaps indirectly, by the consumer as well as the producer of steel products."

To Award Medal as Memorial to Gary

Mr. Schwab expressed his appreciation of the high honor paid him and to the American Iron and Steel Institute at the recent meeting of the Iron and Steel Institute of Great Britain, when the Bessemer medal was conferred on him. He also stated that a decoration sent him by the King of Roumania was, in his belief, intended as an expression of gratitude to the American Iron and Steel Institute for its enthusiastic reception of Dowager Queen Marie on her visit to this country.

Referring again to the British honor, he asked the approval of the membership, which was given unanimously, of a change in plan regarding the Gary Memorial. In place of a commemorative tablet, it is now proposed to found an "Elbert H. Gary Medal," which will be to the American institute what the Bessemer medal is to the British society, namely, an annual award to that person who has contributed most notable services to the iron and steel industry in any of its branches. A secondary medal in bronze was also approved, to be awarded in the name of the institute to the author of the best paper for a given year. Definite rules covering these awards are yet to be formulated.

British Institute to Meet Here in 1932

An invitation to the Iron and Steel Institute of Great Britain to meet in this country in 1932 was very warmly received, said Mr. Schwab, who was the bearer of the invitation on his recent visit to England. Later it was disclosed that the invitation to the British association had been accepted, and that the British Institute of Metals would meet in the United States at the same time as the guests of the American Society of Mining and Metallurgical Engineers.

Industry Must Unite to Solve Distribution Problem

At the conclusion of his address Mr. Schwab called upon a number of directors for remarks. "The great problem of today," said George M. Verity, president American Rolling Mill Co., Middletown, Ohio, and a new member of the institute directorate, "is intelligent distribution. That problem will not be met until we attack it as an industry, not as individuals. Only when we think in terms of the industry will we begin to make progress."

Eugene J. Buffington, president Illinois Steel Co., Chicago, spoke briefly in a similar vein.

Col. Thomas Cantley, chairman of the board Nova Scotia Steel & Coal Co., and one of the two Canadian directors of the American Iron and Steel Institute, characterized Canada's tariff policy as unwise, saying that steel imports by his country last year totaled $248,000,000 and would probably reach $300,000,000 this year.

An amendment to the constitution increasing the number of institute directors from 24 to 30 was unanimously carried. The six additional directors, however, are still to be chosen. James A. Campbell, president Youngstown Sheet & Tube Co., Youngstown, has succeeded Willis King of the Jones & Laughlin Steel Corporation, Pittsburgh, as one of the vice-presidents of the institute, Mr. King having been made an honorary vice-president.

Sir William Ellis and General Lord Speak at Banquet

The attendance at the banquet, held in the Grand Ball Room of Hotel Commodore, Friday evening, was 1635.

Before introducing the speakers, Mr. Schwab read a cablegram from James J. Farrell, president United States Steel Corporation, conveying best wishes for a successful meeting. Mr. Farrell, who has spent several weeks on the Continent, is visiting the home of his ancestors in Ireland. Mr. Schwab also related how Marshal Foch, whom he recently met in France, asked that the institute be apprised how highly he prized the honor it bestowed on him some years ago.

The first speaker of the evening was Sir William Ellis, managing director of John Brown & Co., London, England. Sir William is an honorary member of the American Iron and Steel Institute and is a past president of the Iron and Steel Institute (of Great Britain) and the Institution of Civil Engineers. He is a knight of the Grand Cross of the Order of the British Empire, a doctor of engineering and, for four years during the war, was Master Cutler of Shipping for his country. He paid tribute to American hospitality and engineering genius, being particularly impressed with our railroads. He recalled that his firm had supplied the first steel rails to be laid between St. Louis and Kansas City. He concluded with a plea for still closer relations between the English-speaking countries.

Gen. H. M. Lord, director of budget, Washington, effectively outlined the great savings that have been achieved since the Government has had a balanced budget.

Technical Program Shows Progress in Quality of Output

The papers presented at the technical sessions, abstracts of some of which follow, were impressive because they indicated the steady progress being made in improving the quality of steel, notwithstanding high records in the quantity produced.

Basic Open-Hearth Steel Practice

BY DR. G. B. WATERHOUSE

THE process has now developed to be the most important steel-making process, not alone here but in most countries. This paper is devoted to a development of this theme along three directions:

1. To point out that the basic open-hearth process is the most important of the steel-making processes.
2. To discuss briefly some of the reasons for this.
3. To point out some of the methods by which this standing can be maintained.

Present Position of the Process

The best way of bringing out the present position of the basic open-hearth industry is by means of statistics, and in the appendix are given tables of the steel production of the United States, Great Britain, Germany and France since 1900.

To consider our own country first, the proportion has steadily risen from 25 per cent in 1900 to more than 82 per cent in 1926 and 1927. It has been more than 80 per cent for the last four years, so that more than four-fifths of all the steel we make is produced by this process.

In the case of Great Britain the proportion has risen from 7 per cent in 1901 to a maximum of 64.2 per cent in 1925, dropping slightly in 1926 to 62.8 per cent. Since 1921 it has been about 60 per cent or above.

There has been a marked increase since 1920 in Germany. More than 50 per cent of the steel made in

BORN in Sheffield, England, Dr. G. B. Waterhouse was graduated from the University of Sheffield in 1901, *where he did post-graduate work until* 1903. *He received his Ph.D. degree from Columbia University in* 1907. *Coming to the United States in* 1903, *he became a naturalized citizen in* 1910. *For* 18 *years he was associated with the Lackawanna Steel Co., Buffalo, as metallographist, metallurgist and as metallurgical and inspecting engineer until* 1922. *In the fall of* 1922, *he was called to the head of the department of metallurgy at the Massachusetts Institute of Technology, Cambridge, Mass., which position he still holds. He has already contributed papers to the American Iron and Steel Institute and his translated abstracts from the German and French in* THE IRON AGE *have been a feature for a number of years. He is a member of the American Iron and Steel Institute, the Iron and Steel Institute (British), the American Institute of Mining and Metallurgical Engineers, and the American Society for Testing Materials. To most of these societies he has contributed papers, as well as discussions.*

Germany is made by the basic open-hearth process. In 1923 the proportion was 63 per cent but in the last few years appears to be somewhat stabilized at 53 to 54 per cent. It must be remembered this is for ingots alone; if castings made by this process could have been included, the percentage would have been higher. The production curve for basic open-hearth steel is rising in France, but the basic Bessemer is still the predominant process.

Reasons for This Supremacy

In order to supplement the conclusions of the first part of this paper, it may be well to consider some of the reasons for the supremacy of the basic open-hearth process, particularly in the United States. One of its outstanding advantages is the ability to deal with raw materials that vary greatly in chemical composition, particularly as to the amount of phosphorus contained. This is well known and the exhaustion of much of the low-phosphorus iron ores has required methods that will make good steel from pig iron with varying amounts of phosphorus above the Bessemer limit. For many years the basic open-hearth process was considered to be the method by which to handle raw materials that lay between the acid Bessemer limit of phosphorus and the limit for basic Bessemer practice, but it is now being increasingly recognized that this process through certain modifications can successfully handle pig iron very high in phosphorus.

Another reason for the growth of the basic process is its well-known ability to successfully deal with the large amounts of scrap. This scrap varies greatly in kind and composition. However, it is not so generally recognized how flexible this process is in regard to the percentage of scrap that can be in the charge. Depending upon the amounts of pig iron and scrap available and economic conditions, also to some extent upon the kind of steel that is to be made, the percentage of scrap can vary from 100 to 0 per cent. The amount of scrap usually runs about 40 to 50 per cent, but there are plants that have regularly used far higher scrap percentages than this. This flexibility in regard to the kind of metallic charge has added to the growth of the process.

A brief mention should also be made of the size of the furnaces. This can vary over very wide limits, much wider limits than is generally supposed. Furnaces of small capacity are operating successfully, even down to ½-ton size. There is a so-called 1-ton furnace running with splendid results in a plant near New York. From this small size, stationary furnaces range in all capacities up to the big Weirton furnaces generally called 250-ton capacity, but often tapping two heats together weighing 300 tons. One-hundred-ton stationary furnaces are now very common and this size furnace is more or less of a standard. The so-called Talbot, tilting or rolling furnaces, are built in many sizes from those of moderate capacity up to furnaces holding more than 300 tons. One such furnace in the Pittsburgh district usually gives three 100-ton heats that follow each other as quickly as the ladles can be brought to the furnace.

Variety of Steels Possible

Attention should also be drawn to the great variety and kind of steels successfully made by the basic open-hearth process. In regard to carbon percentage open-hearth steels cover a very wide range. On the low side we have material with practically no carbon, often called ingot iron, then the large tonnage of rivet steels and sheet steels very often with less than 0.10 per cent, the next great class is probably structural steel with carbon varying from about 0.15 to 0.30 per cent. Many forging steels have from 0.35 to 0.45 per cent carbon. Rail steel, of which about three million tons is made each year, varies from about 0.60 to 0.90 per cent, and spring steels and steels for special purposes are made with carbon reaching as high as 1.4 per cent in some cases. It is a remarkable range of steels, but this does not tell the whole story because it does not in-

---

Volume of Business Promises to Exceed That of 1927

IN speaking on business conditions, Mr. Schwab stated that he was presenting the joint views of all of the Institute directors. His remarks, in part, follow:

"America is enjoying an amazing period of prosperity as to volume. The past winter has been one of the most prosperous periods we have ever known, and though this is a Presidential year, the moderation in business which a Presidential year usually brings about has been less manifest this year than has been the case in other years when political uncertainties hovered over the horizon. The seasonal conditions are favorable, more so than at this time last year, and there is every justification for our anticipating that the business of the calendar year will, in volume, be in excess of the business of last year."

clude many special steels nor the alloy steels. A list of such steels would be impressive.

In common with the acid open-hearth process a great variety of fuels can be used. Producer gas is still the main fuel for the basic process, natural gas is still a favored fuel when it can be obtained, and coke oven gas is being used in increasing amounts.

The process can be successfully combined with other methods of steel making. For instance, under certain economic conditions, together with a plentiful supply of liquid pig iron, the combination of the acid Bessemer process with the basic open-hearth is to be recommended. This is usually spoken of as the duplex process, the steel being marketed as basic open-hearth steel.

Methods to Maintain This Supremacy

One of the main methods now being used to maintain this supremacy of the basic open-hearth process is to keep conversion costs low and make every effort to reduce them. This is being striven for in many different ways.

The refractory question is a very vital one and one phase of it has somewhat escaped general attention, namely, the widespread and increasing use of "prepared dolomite" for refractory purposes, particularly hearth repairs. Dead burned magnesite, imported from abroad, is still the standard material for putting in new bottoms.

Each year sees an increasing amount of "prepared dolomite" being used at the expense largely of this imported magnesite and of single-burned dolomite. Some of the trade names of this prepared material, arranged alphabetically, are: Kendymag, Magdolite, Magnefer, Magnite and Syndolag. A good deal of this class of material is being used. No accurate figures are collected but estimates of those qualified to judge believe a low figure of 200,000 net tons annually, is correct, and that it may be as high as 300,000 tons.

The question of the amount of fuel consumed in the basic open-hearth process is constantly receiving much attention. There has been a splendid series of papers presented before the institute, starting with Mr. Whigham's paper in 1913, dealing with the questions of the various fuels used, port design, regenerator design, waste heat boilers, gas producer practice, thermal efficiency and studies of the heat balance of the process. Fuel problems were gone into rather fully in Mr. Forbes's paper, last October, so need not be considered here. However, mention should be made of the fact that coke oven gas alone is being successfully used. More of it is becoming available from year to year. A battery of coke ovens is being built at one steel plant that will be heated with blast-furnace gas so that all the coke-oven gas will be set free for other uses. The use of this fuel for the open-hearth furnace will simplify certain features of design. No regenerators are needed nor should be used for the fuel, and the port design will approach that used for another high value gaseous fuel, natural gas.

Another method to maintain supremacy is to pay the most careful attention to furnace design. This is constantly followed. Almost every time a furnace is rebuilt some change is made which it is hoped will improve its efficiency, speed up the time of operation, improve quality and reduce costs. The present tendency is to go to larger furnaces, particularly in the case of stationary furnaces, and experience has shown that quality has not suffered by growth in size of the heats.

[The author gives at this point a rather detailed discussion of the tilting furnaces, which is an important part of the paper.]

Study the Reactions Which Take Place

One of the main ways in which the supremacy of the basic open-hearth process will be maintained will be by further study of the reactions that take place in steel making, the reactions in the slag, and the interreactions between slag and metal. All of these are profoundly affected by temperature and by the concentration of the various reagents in both slag and metal. It is now the custom to call this whole subject the physical chemistry of steel making, very properly so, for the reactions obey the laws of physical chemistry. This wide subject will provide a most fruitful subject for research for many years. It will undoubtedly show us how to make more steel in a given time, thereby reducing costs; and how to make better steel, thereby improving quality.

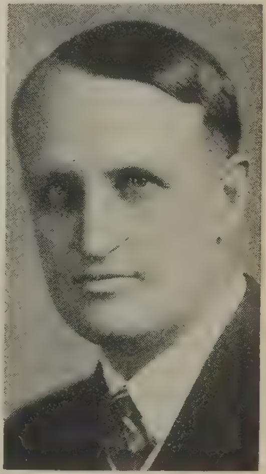
The importance of the slags in the steel-making processes is not yet fully recognized by the steel makers. All the recent scientific work teaches and demonstrates that the question of slags is of the greatest importance, and it should be the effort of those interested in the basic open-hearth process to take every advantage of this information. Before many years, it is believed, regular tests will be taken of the slag during the working of the heat, sent to the laboratory and analyzed in similar ways to the steel samples. When open-hearth men are agreed as to the prime importance of slag volume and composition, then systematic tests will be worked out by which the volume can be determined at any time during the working of the heat and the composition found out in regard to the elements or compounds that are important.

Another element that could readily be determined in the slag is the manganese, and the results might be of value in estimating the slag volume. If the manganese in the charge were known, and no manganese had been lost in run-off slags, the determination of this element in both bath and slag might be of value, because we are learning a good deal about the laws governing distribution of manganese between bath and slag, and the effects brought about.

Determination of Slag Volume Valuable

A fairly accurate method for determining slag volume would be of great value. All open-hearth men realize the need of keeping this as low as possible in order to speed up the transfer of heat from flame to metal, save fuel and increase production. On the other hand the volume must be great enough so that enough lime, oxide of iron, etc., may be present to carry on

BORN at New Brighton, Pa., E. C. Smith was graduated from Ohio State University, Columbus, in 1913, where he spent an additional year in special work before becoming connected with the Gary plant of the United States Steel Corporation. Later he entered Columbia University for further special training, following which he became an instructor in Ohio State University. During the war he was connected with the aircraft production office in Pittsburgh. In 1919 he joined the Central Steel Co., Massillon, Ohio, as chief inspector. Since then he has successively held the positions of mill metallurgist and chief metallurgist and is now assistant general superintendent of the Central Alloy Steel Corporation. He is a member of the American Institute of Mining and Metallurgical Engineers, American Society for Testing Materials, American Society for Steel Treating, American Chemical Society, Iron and Steel Institute (British), and the Institute of Metals (British).



the reaction with the bath and to be sure that the impurities are not so concentrated in the slag that they are readily reduced back into the bath. The present tendency is often to carry too large a slag volume, as shown by the high percentage of limestone charged, so as to be on the safe side and help make the process fool-proof.

Another of the main methods by which the supremacy of the basic open-hearth process can be maintained is by the production of still better steel than at present, that is, steel of improved quality. This calls for constant attention to metallurgical practice and increased care at every step of the process. For most of the steels made, it demands the greatest possible freedom from the non-metallic impurities, the "sonims" of Mr. Hibbard's excellent paper presented here in 1919.

The Manufacture of Alloy Steel

BY E. C. SMITH

WITHOUT attempting legal exactitude, an alloy steel may be defined as a steel whose special properties are dependent upon one or more alloying elements. This leads to the conclusion that alloy steels must be special steels and that chemical composition is hardly the vital factor.

If it is true that the special product of today will be the standard product of tomorrow, it will be well to consider trends of alloy steel manufacture. It may be of more interest to consider the advancing knowledge of steel working. The increased study of routine requirements is establishing the brand type of specification. An alloy steel must meet a very specific set of requirements. If this type of specification is liable to become more widespread, an inquiry into alloy practice conditions will be of interest.

Control of Charge Necessary

All the commercial methods of conversion are responsible for some of the tonnage. Essentially the tonnage comes from two sources—open-hearth and electric furnaces. By far the greatest tonnage is basic open-hearth material.

Of the secondary processes, the arc type of electric furnace appears most nearly to meet the requirement of a unit that can successfully melt all combinations which are not commercially satisfactory for basic open-hearths. The study should, therefore, cover the essentials of the two dominating processes.

As operated in this country, the essential of the industry is blast furnace pig iron. The problem is not to convert the most pig iron into steel, but to use the necessary pig iron to convert steel scrap into special steel products. The production of the alloy steels is actually a scrap conversion process in which pig iron is not so dominating as in primary steel production.

The tendency is to favor pig iron with about 1 per cent silicon, which has sulphur well under 0.05 per cent. The addition of manganese ores to carry the manganese to about 2 per cent in the iron is apparently becoming standard practice.

There is no outstanding metallurgical reason which indicates the necessity of remelting pig iron. The industry is essentially dependent upon hot metal melting practice, with a limited production of cold melt steels. The usual production from cold iron is limited to chemical combinations that require special iron as high-carbon low-manganese bases of peculiar sulphur requirements.

The other essential of the special steel business is the steel scrap. Special steels are based upon the melting of heavy melting scrap. Railroad scrap might be considered the most desirable and is a standard material. It should be carefully separated into definite ranges of composition and physical characteristics; thus rail steel should be a distinct scrap, structural steel another. Balanced charges designed to melt properly can be made up only of definite lots of chosen material. It is rather startling to find that certain special steels are successfully made only with light scrap.

The auxiliary materials such as ferroalloys, bottom materials, lime, fuel material, etc., should be carefully inspected for more reasons than are apparent at a glance. All melting practice, whether open-hearth, electric or crucible, is actually a fine art. If the raw materials are kept very uniform, the variables are more nearly constant.

Furnaces and Fuels Used

It may be assumed that alloying will be simpler if the physical constants of the metals to be alloyed are similar. Iron, the essential base, is a body centered cubic over its workable ranges except from 1400 to 900 deg. C. Iron may therefore be expected to alloy more naturally with body centered materials: chromium, molybdenum, tungsten and vanadium. Gamma iron may also be expected to alloy with certain face centered cubic materials and we find nickel, cobalt, copper and aluminum in this group.

A more important grouping is whether the alloying materials oxidize in melting. Nickel, molybdenum and copper are stable, and chromium, manganese and vanadium are not. We thus find the alloy steels sharply divided into two groups.

We may expect the oxidizing open-hearth process to be the main source of alloys of nickel, molybdenum and copper, while we would expect the chromium, vanadium and similar steels to be made in electric furnaces or under conditions as nearly neutral as it is possible to obtain in open-hearth furnaces. The open-hearth for alloy steel is of conventional design.

Probably the most satisfactory fuel is coke oven gas with enough liquid fuel tar or oil to give the proper flame conditions. Liquid fuel, such as tar or oil alone, is very desirable.

No ore is charged with the lime and in fact ore is rather sparingly used. This characteristic guarding against over oxidation would appear the essential difference between tonnage practice and special practice.

The elapsed time from last ore feed to clean up is usually two hours and the clean up and alloy period is usually one and one-half hours more.

Burnt lime, silicon pig (both 10 and 15 per cent), spiegel and silicomanganese, pig iron or billets, are used for slag shaping. It is customary to indicate the materials to be used in shaping and finishing the heat even more carefully than the choice of scrap used in the charge.

Many Intangibles Included in Customer's Demands

Essentially coarse-grained or fine-grained steels, steels that anneal under certain conditions, steels that machine, forge, or roll certain ways are all characteristic requirements of the industry. The user of the future will desire the privilege of incorporating intangibles into the requirements. That this is the trend has been well shown in the spread of specification for carbonizing steels with intangible physical requirements.

It is of importance to the maker of tonnage steel to recognize that the intangible physical requirements are a detriment to tonnage production and any attempt to combine will result in compromise of quality of the special steel and cost of the commercial tonnage steel. These intangibles are usually intimately associated with the finishing stage of the heat and are so intimately connected that the judgment of trained melters usually cannot be relied upon and certain specific routines are set up. The average result is safer than individual judgment.

As an example, we might mention an order for bar stock for differential gear forgings. The order may read as simply as "Ten tons of 2-in. Rd. S. A. E. 2315." The intangibles of this specific order may be as follows: "Two-inch round S. A. E. 2315, for John Doe & Co., is regularly used for spiral bevel driving pinion on model X. Forging produced by upset process; bar ends make smaller gear; size must be accurate; length important but not vital. Chemistry must be low aim carbon 0.11 to 0.14 per cent. Stock will be checked for McQuaid-Ehn rating, two to five desired. Stock will

Machine Tool Sales Problems Discussed

Confidence in Future of Industry Expressed by President Bliss of Builders' Association—Best Policy in Establishing Prices and Appraisals of Used Tools for "Trade-Ins" Considered

REVIEW of problems encountered and appraisal of opportunities in the machine tool industry held the close attention of 140 who were in attendance at the twenty-sixth spring convention of the National Machine Tool Builders' Association, which was held May 22 and 23, at the Hotel Stevens, Chicago. Papers on price making and on appraisals for trade-in deals were read at a general session which followed the business meeting. Interest in the 24 group meetings was clearly shown by the fact that discussion ran to such length that difficulty was experienced in adhering to schedule.

Report of the exposition committee favored holding a machine tool exhibit in 1929. Benefits to be derived from uniformity in cost analysis and methods and also standardization were presented in a report by Ernest F. DuBrul, general manager of the association. Confidence in the future of the machine tool industry was expressed in an address by the president of the association, P. E. Bliss, the Warner & Swasey Co., Cleveland. He said, however, that many problems are still to be solved. A tremendous amount of free service is being demanded, and many have recited how heavy are the costs of engineering service both for special adaptation of standard machines and for the invention and design of special fixtures and tools.

Opportunities were divided by Mr. Bliss into two general classes. First are those which afford chances to better the general situation as a result of individual efforts. Undoubtedly economies of many sorts can be effected and probably no one of these is more likely to result in substantial savings than that of reequipping and retooling machine builders' shops. Impartial studies of individual companies would also show opportunity for either reduction in selling cost or a more profitable use of the money spent in that direction. A second general class of opportunities arises, first, from cooperative activities, and, second, through those activties which may best be organized and promoted through group meetings.

How Selling Prices Should Be Established

The best policy on selling prices is to set a figure that will bring the highest continuous returns, said R. E. Flanders, manager Jones & Lamson Machine Co., Springfield, Vt., in a paper entitled, "What Is the Best Basis for Executive Policy in Making Prices." Primarily the low limit in pricing is set by the cost of production and distribution, said Mr. Flanders. If the price is below the normal cost (by normal cost is meant the cost averaged over a full period of good and bad times) the manufacturer will eat up his surplus and go out of business unless he has other more profitable lines. It is a common, even a usual, experience for a new machine to be introduced at an optimistically low price, based on faulty cost figures or estimates. Over a period of years this price is slowly raised to the point where real trial balance profits begin to appear. But meanwhile, there have been perhaps several years of losses to make up.

Any one of several factors may set the top limit of price which may successfully be asked for a given product, Mr. Flanders pointed out. If several competing machines are of equal value in the eyes of the average customer, price is likely to be the deciding factor. But if the customer can be shown that the more costly machine has a greater earning power, the top limit of selling price may be raised for this particular product. Value is therefore the second factor which sets the top limit. At this point the machine tool builder is often out of sympathy with the purchaser. The latter, it was said, frequently makes exaggerated demands in profit earning before he will consider the purchase of new and expensive production machinery.

New Designs Complicate Situation

The situation is complicated by the industry's activities in bringing out new designs which render old ones obsolete. If competition is going to force customers to purchase new machinery—as yet undesigned—in two or three years, they must realize quickly on that which they purchase now. The machine tool builder cannot guarantee not to render purchases of today obsolete tomorrow.

Patents may also have an effect in raising the top limit of prices, said Mr. Flanders. They cannot raise it above the limit set by productive value, but they may raise it above that set by free competition, if they prevent other manufacturers from reaching the higher productive value. If patents give too high a margin of price difference, however, their tendency is to stimulate the ever ready American inventive genius.

Sheer selling ability may sustain a price above competing machinery of equal value. Old established reputation may do the same. More legitimately, a reputation for prompt, intelligent and continuous service and scrupulous fairness of dealing will have the same profitable result.

There must appear in the cost a sufficient item to carry on necessary development work, to maintain a company's competitive position. The selling price must also be high enough to provide legal interest through good times and bad on that part of the net worth of the company which is actively engaged in the business. This excludes, for instance, more or less permanently invested resources, which should carry themselves.

Good Management as Essential as Good Prices for Profit

When the manufacturer examines his position from the standpoint of profits, he will find himself in one of two conditions, and he will have to solve one of two problems. He may find himself without profits, and have to decide how to get them. Or he may find a profit margin, and have to decide how much of it he will take. To raise prices is only half the answer. Good management in general must be a first factor, not a secondary one, in producing profits. One of the severest cost handicaps is excessive plant capacity. Raising prices is a legitimate remedy if it can be done. The assumption is, however, that the top line, as determined by outside conditions, is too near the cost line to permit a profit. To raise prices, therefore, something will have to be done besides sending out a new price list.

If competition sets the top limit, the manufacturer must consider whether or not his competitors are prospering. If the distressed individual manufacturer cannot arouse the trade as a whole, he has still the recourse of so raising the value of his product and rendering such service to his customer that he can obtain profitable prices above the general level.

If existing conditions offer a considerable profit, then,

1. The manufacturer should settle on a certain percentage as a fair profit to add to the cost of manufacture.
2. The sale price should be set so that the profit is a certain percentage of it.
3. The sale price should be set to provide certain ideal dividends and reserves in relation to the capital stock.

4. The ideal profit should bear a certain relation to net worth.

5. Or to the book value of the investment.

6. Or to the replacement value of the total assets.

7. Profits should bear a percentage relation to conversion cost (as suggested by Mr. Churchill at the Providence meeting in 1926).

8. Or, finally, the price may be "all that the traffic will bear."

Concluding, Mr. Flanders said:

"Costs are not rigid things. They may be manipulated by engineering and managerial skill. Selling prices are not inflexibly fixed by competition or by arbitrary printed lists. They may be raised and justified in the purchaser's mind by increased service and greater profit return to him. The highest profits are not to be obtained by setting arbitrary standards, but by applying to the business every available ounce of engineering, manufacturing, selling and financial ability, and applying it to render a maximum of service to the customer."

In a paper on "Trading Old Tools for New," J. R. Porter, president Marshall & Huschart Machinery Co., Chicago, urged either (1) the hiring of an appraiser, or (2) making use of a reliable second-hand house which will not only make appraisals but actually take in used equipment that is to be replaced by new machine tools. In Chicago, he said, these ideas are being generally accepted by the trade as good business and have largely eliminated the necessity of the mechanical department arguing with the purchasing department on account of the allowance for the second-hand trade-in. Some of the advantages of the appraisal plan were said to be that it eliminates the necessity of salesmen dickering with the customer on the price of second-hand machinery, thus saving time and energy. It also eliminates the former custom of the salesman endeavoring to sell his own sales manager second-hand machines at prices higher than could be obtained for them, with allowance for a profit.

Field Engineers Appointed to Promote Structural Steel Industry

In an effort to promote sound engineering practice and the welfare of the structural steel industry, the American Institute of Steel Construction has recently organized, and will soon place in active service, a staff of ten district field engineers. These men will establish contact with engineers, architects, contractors, public officials and technical schools throughout the United States. Data concerning the latest developments in steel construction, leading to a more effective and economical use of the material, will be made available to all charged with the selection of materials and to all responsible for proper design and construction. The bringing about of a wider use of structural steel for bridges and buildings will be one of the chief objectives of the field representatives of the institute.

A training school was opened in Cleveland on May 15, under the direction of Lee H. Miller, the institute's chief engineer. There the engineers will be instructed in the aims and policies of the institute before taking up work in the territories assigned to them. Their activities in the field will be supplemented by a more extensive preparation of educational literature to be distributed from the New York office.

The country has been divided into ten districts, with one field engineer assigned to each. Below are given the districts, the names and former connections of the engineers who will cover them, and the cities in which they will make their headquarters:

District No. 1—Maine, New Hampshire, Vermont, Massachusetts, Rhode Island and Connecticut; E. N. Adams, formerly consulting engineer in private practice and construction engineer with George W. Harvey, Boston; headquarters, Worcester, Mass.

District No. 2—New York City, northern New Jersey and Long Island; J. N. Keenan, formerly field engineer, American Institute of Steel Construction; headquarters, New York.

District No. 3—New York State (outside of Metropolitan District), Pennsylvania, southern New Jersey, Maryland, District of Columbia and Delaware; B. J. Hastings, formerly associate professor Department of Architecture, Carnegie Institute of Technology, and consulting engineer, Janssen & Cocken, architects, Pittsburgh; headquarters, Philadelphia.

District No. 4—Ohio, Michigan, Indiana (with exception of extreme northern part), Kentucky and West Virginia; Alexander Miller, formerly field engineer, American Institute of Steel Construction; headquarters, Cleveland.

District No. 5—Virginia, North Carolina, South Carolina, Tennessee, Georgia, Florida, Alabama, Mississippi and Louisiana; J. G. Allen, formerly structural engineer with Stone & Webster, Boston; headquarters, Birmingham.

District No. 6—Northern Illinois and Indiana; Henry Penn, formerly assistant professor of civil engineering, Armour Institute of Technology, and with Sargent & Lundy, Chicago; headquarters, Chicago.

District No. 7—Wisconsin, Minnesota, North Dakota, South Dakota, Montana and Wyoming; C. C. Tracy, formerly structural engineer with Densmore, LeClear & Robbins, Boston; headquarters, Milwaukee.

District No. 8—Missouri (with exception of western part), Illinois (with exception of northern part) and Arkansas; G. E. Doyen, formerly structural engineer with Dwight P. Robinson & Co., New York; headquarters, St. Louis.

District No. 9—Kansas, Oklahoma, western Missouri, Iowa and Nebraska; Jack Singleton, formerly chief engineer and general manager, Capital Iron Works Co., Topeka, Kan.; headquarters, Topeka, Kan.

District No. 10—Washington, Oregon, Idaho, Utah, Nevada, Arizona and California; W. E. Emmett, formerly structural engineer with Moore Dry Dock Co., Oakland, Cal.; headquarters, San Francisco.

Research in Alloys of Iron Launched

A conference of representatives of makers and users of irons and steels, of technical societies, of Government bureaus and of universities was held in New York, Thursday, May 24, in response to an invitation from the American Institute of Mining and Metallurgical Engineers, to consider a proposition formulated by Engineering Foundation, New York, for a cooperative research project in the broad field of alloys of iron. About 40 representatives were present, with J. V. W. Reynders as chairman. It was announced that Engineering Foundation had set aside $10,000 for the project and it was finally decided that a committee of ways and means be appointed to obtain additional funds.

The project has these as its aims: To make more readily available all reliable information published in various languages; to publish the information thus collected in two forms, one suited to industrial plants and engineering offices and the other to researchers and teachers; to discover and correct errors in the data on iron and its alloys; to increase the precision of data no longer adequate to the refinements of present-day industrial processes; to obtain new fundamental knowledge by research in the laboratories of universities, Government bureaus and the industries, and, finally, to take up these objects in the order named, the first two to be followed by the others as work develops.

The conference, after discussion and deliberation, registered its agreement in these aims. It also went on record by resolutions to the effect that it recognizes the need for the proposed work and the benefits accruing to the makers and users of iron and steel which are of sufficient magnitude to justify the expenditure of effort and funds. The conference recommended that Engineering Foundation proceed at once with the development of the project under the sponsorship of the A.I.M. and M.E. and, further, that corporations making or using irons and steels and others interested be asked to cooperate by contributing funds, data, facilities or personnel. It was also recommended that all corporations and other organizations participating in the project contribute whatever information they can, consistent with their business policies.

Warehouses Seek Reasonable Profit

Establishment of Quantity Differentials, Better Cooperation with Mills and Less Focusing on Sales Volume Are Aiding Iron and Steel Distributers

REFLECTING the experience of the iron and steel industry as a whole, the warehouse distributers of its products have also been victims of "profitless prosperity." But, as brought out at the annual convention of the American Steel and Heavy Hardware Association, held at the Copley Plaza Hotel, Boston, May 22 to 24, the establishment of warehouse quantity differentials in such lines as bolts, nuts and rivets and cold finished steel bars, the setting up of better cooperation with the mills and a growing tendency to show more interest in net profits rather than volume of sales are all factors which seem to indicate considerably improved conditions in the near future.

Although the competition of foreign steel was recognized by distributers on the Atlantic seaboard as a serious problem, unrestrained competition within the industry itself was characterized as just as destructive, and strong pleas were made for a more enlightened policy. One of the most tangible arguments favoring such cooperation was the success of the recent efforts of the Bolt, Nut and Rivet Manufacturers' Association in securing the almost universal adoption of a new card of quantity differentials by both warehouses and mills.

National Conference on Adequate Profits

AS a means of carrying the principles successfully introduced by the bolt and nut makers into other fields of industry, Charles J. Graham, president Bolt, Nut and Rivet Manufacturers' Association, Pittsburgh, outlined a plan proposing a meeting of manufacturers of diversified lines of products and distributers from all parts of the country to consider the situation. Mr. Graham said that such a meeting was practically assured and would probably be held in New York during the last week of June. He said that manufacturers should be made to realize that distribution problems are practically the same in nearly all lines and that this proposed meeting would provide opportunity for establishing a community of interests by which both the mills and warehouses would certainly profit.

Mr. Graham stated that he had taken the plan of the proposed meeting before the Department of Justice and had secured its entire approval. He further stated that full approval had been given by the National Association of Purchasing Agents. Purchasing agents, he said, were beginning to realize that lasting prosperity could not be maintained with ruinous competition for low prices and that any stabilization plan must fail if it is forced to meet the competition of price cutters and seekers after bargain quotations.

In discussing the quantity differential plan which has been introduced by the bolt, nut and rivet makers, Mr. Graham stated that practically unanimous acceptance had been secured in all parts of the country except certain centers in the Middle West. William E. Hansen, Hansen & Yorke, Inc., New York, chairman of the Steel and Heavy Hardware Association's bolt and nut committee, reported that members were making an adequate profit in these lines for the first time in a number of years.

How Foreign Steel Competition Is Being Met

THAT the warehouses have been able to do very little to compete with foreign steel, which is being imported in increasing amounts into the Atlantic seaboard and Gulf ports, was evidenced by the discussion of this subject. R. H. Sanderson, E. P. Sanderson Co., Boston, stated that the situation was not improving in Boston and that a solution rested largely with the mills. He stated that competition was keenest in structural shapes and that warehouses were being forced to do their own fabricating in order to meet it. This enabled them to compete on a reasonably profitable basis on small orders, but the speaker pointed out that the plan had not been in operation long enough to prove its success or failure.

T. C. Morris, Morris, Wheeler & Co., Philadelphia, stated that he felt a gradual strengthening of European steel prices would result in decreasing importations and the problem would thus adjust itself. Speaking of the New York territory, into which foreign importations are largest, J. B. Carse, Ogden & Wallace, New York, stated that importations of nearly 100,000 tons of shapes and bars at that port last year had taken away a considerable amount of business which might have gone directly to the mills. However, he admitted that the warehouses had suffered also, in many cases because of the purchase of foreign material which had proved unsatisfactory.

T. J. Foster, National Bridge Works, Long Island City, N. Y., offered a solution to the problem by suggesting the drawing up of a code of standard practice to be followed by both mills and warehouses and which included a clause forbidding the mills to sell to any firms which were financially, physically and mentally unfit to use this steel properly. It was also suggested that the code might be extended to prevent the mills from selling to any distributer using foreign steel.

Increasing Margin of Profits

A DISCUSSION on increasing the net margin of profits in warehouse distribution brought out a number of constructive suggestions. E. J. McCarthy, Beals, McCarthy & Rogers, Buffalo, stated that his company had been securing better cooperation from the mills by asking the mills to make fewer direct shipments to its own customers, particularly in small quantities. He also stated that a price committee had been formed which went through the firm's catalog twice a year and carefully analyzed every price and cost. Adjustments made as a result of this, he said, had saved considerable money. Representatives of other companies reported similar plans which had met with success.

"Ask your price and get it," was the suggestion offered by R. H. Welton, Chase, Parker & Co., Boston. He offered cooperation with local competitors as an essential to profits and urged members not to worry about all the inquiries which came out, but only about the orders which might be taken with a reasonable profit. The sales manager, he pointed out, should be given to understand that the company is interested in net profits and not in sales volume.

G. K. Conant, Sligo Iron Store Co., St. Louis, emphasized concentration upon sales first. The small competitors, he said, will become a decreasing factor in the business of a company which has an active sales organization and is able to get business. R. H. Sanderson stated that the expense ledger as well as the sales catalog should be gone over frequently with a resultant cutting in expenses. A. J. Dietrich, Dietrich Brothers, Baltimore, stated that the mills are not always to blame for competition with warehouses and were usually willing to cooperate if properly advised of conditions. W. J. Holliday, Jr., W. J. Holliday & Co.,

Universal Grinder of Intermediary Type Adapted for Multi-Purpose Use

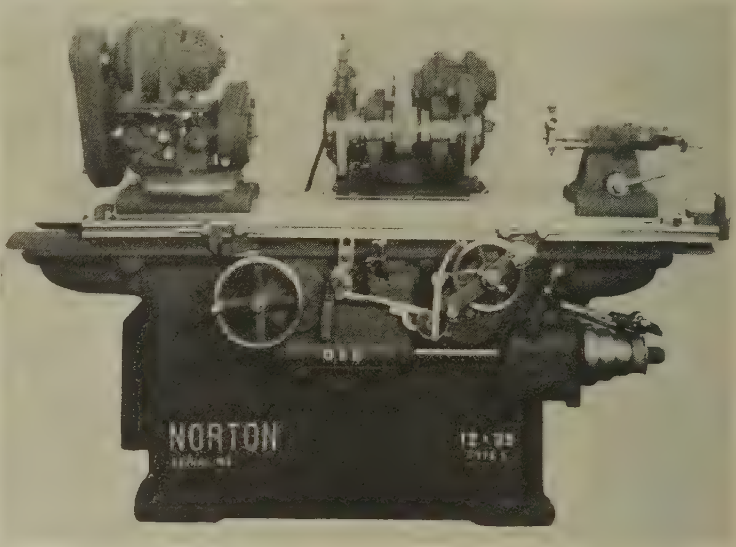
Simplicity of construction and complete power control within itself are features of an improved 12 by 36 in. universal multi-purpose grinding machine announced by the Norton Co., Worcester. The machine is designed an intermediary equipment between the tool grinder and the heavy production machine, permitting the handling of small lots of pieces too heavy for the tool grinder and not of sufficient quantity to warrant employment of the heavier machines. Its range insludes accurate external, internal and face grinding.

The machine is entirely self-contained, three separate motors driving the headstock, wheel and the work-table and pump respectively. The wheel drive is from a motor mounted on the wheelslide, the table drive is from a backshaft driven by a motor directly on the rear of the machine, and the work drive is by a motor mounted on the headstock. Each motor is individually controlled. A generator operated by the table traverse motor may be provided for the work drive motor when direct current is not available.

Use of the three motors eliminates overhead shafting and gearing and shafting and belting within the machine. Virtually all important mechanisms are on the outside and are easily accessible. Although essentially a light machine, it is rigidly built and will swing work up to 14 in. in diameter and grind pieces up to 37 in. in length. The design of the headstock and wheel-head permit a wide variety of pieces to be ground.

Both the headstock and the wheel head are of swivel type and are graduated in degrees on the base. Positions on the headstock are provided for face grinding. The wheel-head may be swiveled through an angle of 180 deg. to bring into position the internal grinding spindle, which is fixed on the double-ended wheel-head. Intermediate position for external angular grinding are also possible. The headstock is equipped with a chuck which may be attached to the spindle for small work which cannot be handled on centers. Provision is made so that the center may be live or dead for plain cylindrical grinding.

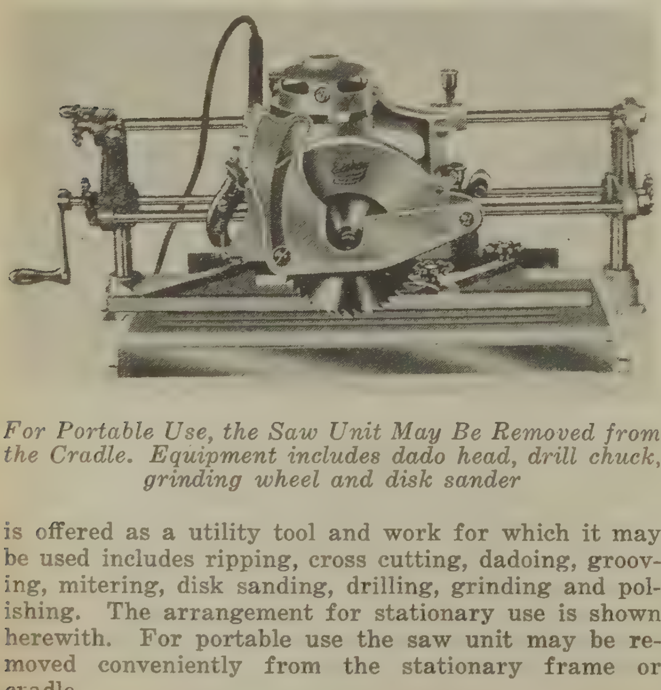
The footstock is of combination lever and screw type for quick changing of work on centers. A diamond tool holder is provided. The work-table is made in two parts, the top pivoting on a stud in the center, and may be clamped at both ends. The table is graduated in degrees for taper grinding and also in ft. per min. Eight speeds, ranging from 21 to 111 in. per min., are available. The wheel feed, both automatic and by hand, operates regardless of the position of the cross-slide relative to the work-table. The wheel may be fed at any angle at any time. An automatic stop arrests the feed when the work is to size. The reverse mechanism is of the type used on all Norton cylindrical grinding machines and permits accurate grinding close to shoulders. The pump is on the outside of the tank and is operated from the backshaft connected to the table traverse motor. Ample supply of water or compound is available.



The Range Includes External, Internal and Face Grinding. The machine is entirely self-contained, with three separate motors for the headstock, wheel and work-table and pump"

Woodworking Saw for Both Stationary and Portable Use

A combination portable and stationary motor-driven saw, which, with attachments, may be used for a number of separate operations, is being marketed by the Esskay Mfg. Co., Minneapolis, Minn. The machine is offered as a utility tool and work for which it may be used includes ripping, cross cutting, dadoing, grooving, mitering, disk sanding, drilling, grinding and polishing. The arrangement for stationary use is shown herewith. For portable use the saw unit may be removed conveniently from the stationary frame or cradle.



For Portable Use, the Saw Unit May Be Removed from the Cradle. Equipment includes dado head, drill chuck, grinding wheel and disk sander

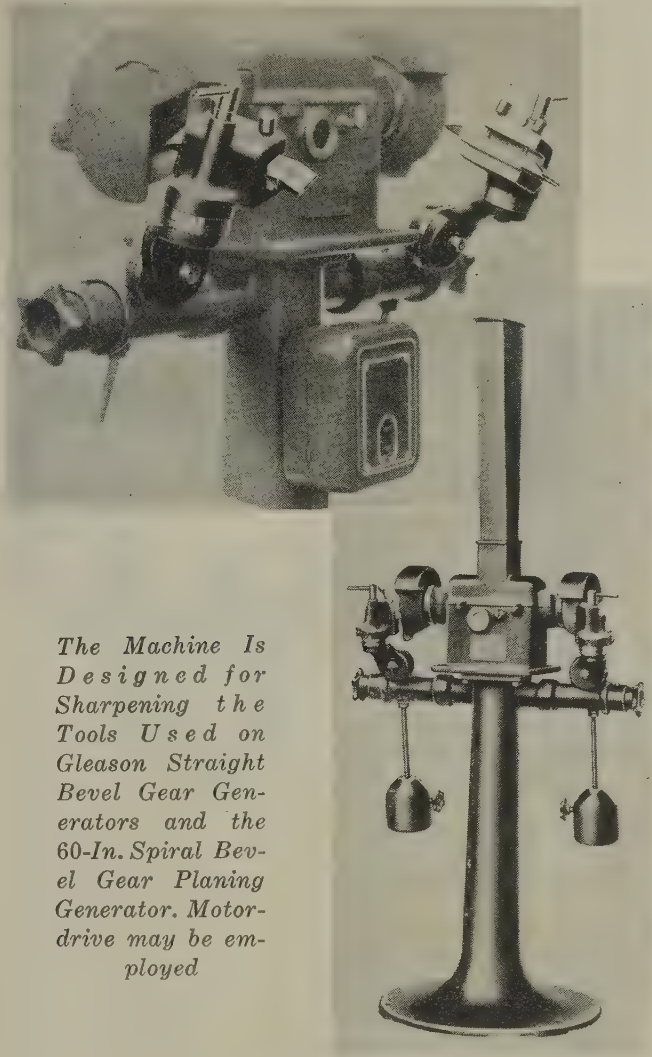
The machine is equipped either with a ½-hp. or ¾-hp. universal motor arranged to take power from the lighting circuit. Gears are of hardened steel and operate in grease. All rotating parts are mounted in ball bearings. The frame or bench base of the machine is of steel and aluminum and has lugs for attachment to the bench by screws. The bench base is arranged to permit cross cutting of lumber up to 12 in. in width, the saw being pushed back and forth on the rods. The ripping gage can be adjusted to rip strips from ¼ in. to 7 in. in width and for ripping, the saw is locked in place. Depth adjustments are made conveniently by means of the crank shown at the left-hand end of the machine; when the adjustment is made the saw may be locked at the depth desired. Depths of cut regularly range from ⅛ to 2½ in., but a larger saw is available for cuts up to 3½ in. deep. The saw can be swung to any angle up to 45 deg. from vertical for mitering. A scale is provided to facilitate angular settings and the saw may be locked in position for continuous work. The machine is also equipped with an angle device which is attached in the same position as the ripping gage and which, in connection with the tilting device, permits cutting of double angles.

The saw guard is adjustable and is equipped with a sliding device that follows the work and protects the operator. The weight of the power saw and bench complete is 104 lb. and the weight of the saw alone 27 lb. The length overall is 36 in.; the width is 14 in.; and the height is 19¼ in. Attachments available include a drill chuck, a 4-in. emery wheel; a dado head for work up to 1 in.; an abrasive wheel for cutting metal tubing and hard rubber, and a 12-in. disk sander. An elevating device for regulating the depth of cut is available for use on the portable saw.

New Tool Grinder for Gleason Bevel Gear Generators

Tools used on any of the straight bevel gear generators and the 60-in. spiral bevel gear planing generator built by the Gleason Works, Rochester, may be sharpened on the generator tool grinder illustrated, which is a recent addition to the Gleason line.

The machine is equipped with two grinding wheels, one of which is for sharpening the upper tools and the other for the lower tools. The grinding is always against the cutting edge of the tool, which eliminates the possibility of burning the edges. Tools can be ground to any side rake angle by loosening the clamp on the top of the tool holder and turning the tool to the desired angle, as marked on the collar. The desired front rake angle can be obtained by a similar setting at the point where the holder is attached. Adjustable weights on the opposite end of the tool holders serve to keep the holders away from the wheel in a convenient position for changing the work or settings. The work is pushed across the wheel by hand, and is fed in by a hand nut on the end of the shaft which carries the tool holders and work.



The Machine Is Designed for Sharpening the Tools Used on Gleason Straight Bevel Gear Generators and the 60-In. Spiral Bevel Gear Planing Generator. Motor-drive may be employed

The grinding wheels are mounted on a spindle which runs in oil on precision ball bearings. One main oil cup supplies lubricant to the spindle and bearings, the quantity of oil being indicated on a conveniently located oil sight. Sturdy construction combined with simple design is a feature of the machine. In the case of the belt-driven machine, the only moving part is the spindle on which the wheels are mounted. On the motor-driven machine the motor is mounted on the side of the column and the power is transmitted from the motor to the spindle by a belt which runs within the standard or column of the machine.

Three different pairs of tool holders are available for use with the machine, but only one pair is furnished as standard equipment. One pair of heads holds the tools for the company's 60-in. spiral bevel gear planing generator, another holds the tools used on the 25-in. bevel gear generator and the third for the 6-in., 11-in. and 18-in. bevel gear generators, 8-in. manufacturing bevel gear generator and 12-in. bevel gear generator tools.

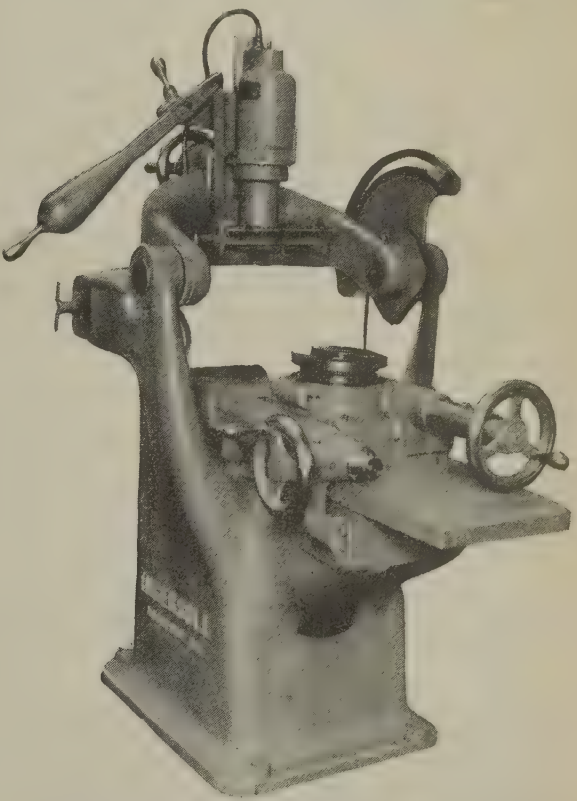
Standard machines are belt-driven. A ¾-hp. 1800-r.p.m. constant-speed motor is required for the motor drive arrangement. The floor space occupied by the machine is 18 x 21 in. The weight net is 375 lb.

Simplifies and Extends Range of Milling Cutter Grinder

The Ingersoll Milling Machine Co., Rockford, Ill, has placed on the market a simplified and improved model of its milling cutter grinder. The range of the machine has been increased, it now being possible to grind cutters up to 30 in. in diameter and 7-in. face at one setting. The cutter spindle has a ground taper hole to accommodate solid shank cutters with shanks as large as the Ingersoll "M" taper, 3¼ in.

New drive arrangement to the wheel spindle is a major improvement. The spindle is now driven by a motor mounted directly above, instead of through the system of belts previously employed. The motor and spindle are mounted in ball bearings and inclosed in a single dust-proof housing. In addition to being simpler, the new drive is safer and more efficient. Change has been made in the front of the machine and the high rim, which is unnecessary for dry grinding, has been removed, permitting of clearer view of the work.

The outstanding feature of these machines is that after the cutter has been fastened on the spindle, ready for grinding, the face, periphery and corners of the teeth are ground at a single setting. Cutters with angular faces may be ground at any angle within the range of the machine, and the corners on all cutters may be ground square, angular or with a radius—all at a single setting of the cutter. This is made possible because the grinding wheel spindle is always in the same plane with the axis of the cutter, and at the same time can be set at different angles to that axis, or can be rotated in an arc over the cutter. A 12-in. cutter showing average wear can be ground in approximately 20 min.



The Wheel Spindle Is Now Driven by a Motor Above the Spindle. The motor and spindle are mounted in ball bearings

The spindle has a maximum travel of 7½ in. and an adjustment of 2½ in. is provided to compensate for wear of the grinding wheel and to set the wheel for grinding different radii. The grinding wheel employed is 10 in. in diameter, ½ in. thick, 1 in. hole, and of Ingersoll shape. The shipping weight of the machine is 1650 lb.

Butt Welder for Miter Welding

Machines for making miter welds in angle or zee-bars have been constructed, some of which called "corner welders" make but one weld at a time. Other machines are known as "four-way welders." Both have found application to the manufacture of steel sash, automobile doors, wind-shield trimming and many similar uses. Some difficulties have been experienced in making a weld uniform throughout its length, caused largely by the method of applying the current to the weld. Usually the electrode dies have been placed on the inside of the corner, and the welding line then presents very unequal paths for the current to travel. The result is that the weld receives too much current on the inside and not enough travels out to the point, the major portion of the electrical flow naturally taking the shorter path.

Miter Welder Set at Angle So Work Can Remain Horizontal

These objections have been overcome, it is stated, in the Federal Machine & Welder Co.'s type 60 automatic butt welder by fixing the dies inside the corner, making them of steel and insulating them so they receive no current. Movable copper clamping dies are placed on the outside, and are made to act as the electrodes. With this arrangement, the current will take a path square across the corner joint and the entire welding line is subjected to a uniform flow of current, with subsequent even heating and uniform welding.

Type 60 welder is equipped with a 65-kw. transformer, and an auto coil which provides 60 per cent voltage regulation. It will weld a cross-section of about 1 sq. in., and can be adapted to larger sections by increasing the transformer capacity. Clamping and releasing the work, as well as starting the motor, is done by means of respective foot levers. A mechanical brake stops all motion at the end of the welding cycle. This machine requires 7 sec. for the welding cycle; to this, time for clamping and releasing the work must be added. In practice an average of 240 welds per hour is attained, varying with the kind of work and jigs used.

Clamping of right and left-hand members is done individually by air at 80 lb. pressure acting through cylinders mounted at the rear, and actuated and released by valves set on the floor and operated by foot levers. The "flash and push-up" operation is produced by a cam, motor driven through a worm gear reduction placed under the table at the right. Depressing the foot lever at the right causes the motor to start, continue until the welding cycle is completed, and then stop. Thus the operator is relieved from physical strain and is thereby enabled to turn out more product.

All gibbed and sliding members have been done away with, it having been found in practice that they will not stand the severe operating conditions imposed upon a flash welder. Movable dies are carried on hinged members, and the fulcrum points are well beyond the flashing zone.

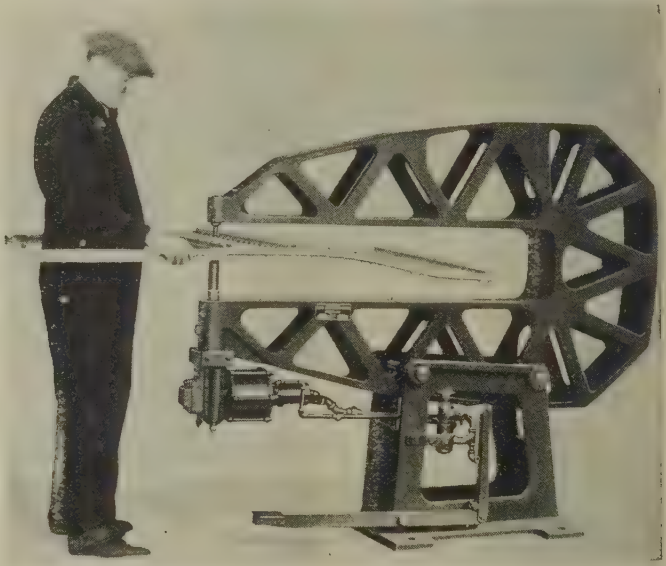
As the outside movable electrodes operate in a plane making a considerable angle with the inside dies, it is necessary to construct the machine on an angle, so the work can be held in a horizontal plane while welding, a very desirable feature when welding long sash.

Machine for Driving Duralumin Rivets

The increasing use of duralumin rivets in aircraft and motor coach body construction prompted the development of the riveter shown in the accompanying illustration, which has been made available by the Hanna Engineering Works, 1765 Elston Avenue, Chicago, in a range of sizes for portable and stationary use.

The machine illustrated has a reach of 48 in., gap of 10 in., die stroke of 1½ in. and when operated at 100 lb. air pressure is capable of driving ¼ in. diameter duralumin rivets. Ram speeds up to 60 strokes per min. are obtainable. The pressure exerted by the ram is predetermined and the arrangement for uniform pressure for a considerable portion of its stroke is said to result in well driven rivets regardless of variations in the thickness of the parts being riveted.

With the machine arranged with the dies vertical, cylinder down, as shown in the illustration, the rivets are headed on the underside. Rivets may be inserted well in advance of the riveting, and operation of the riveter may be almost continuous. The machine is operated by a foot-actuated valve, which permits the workman to use both hands in handling the work.

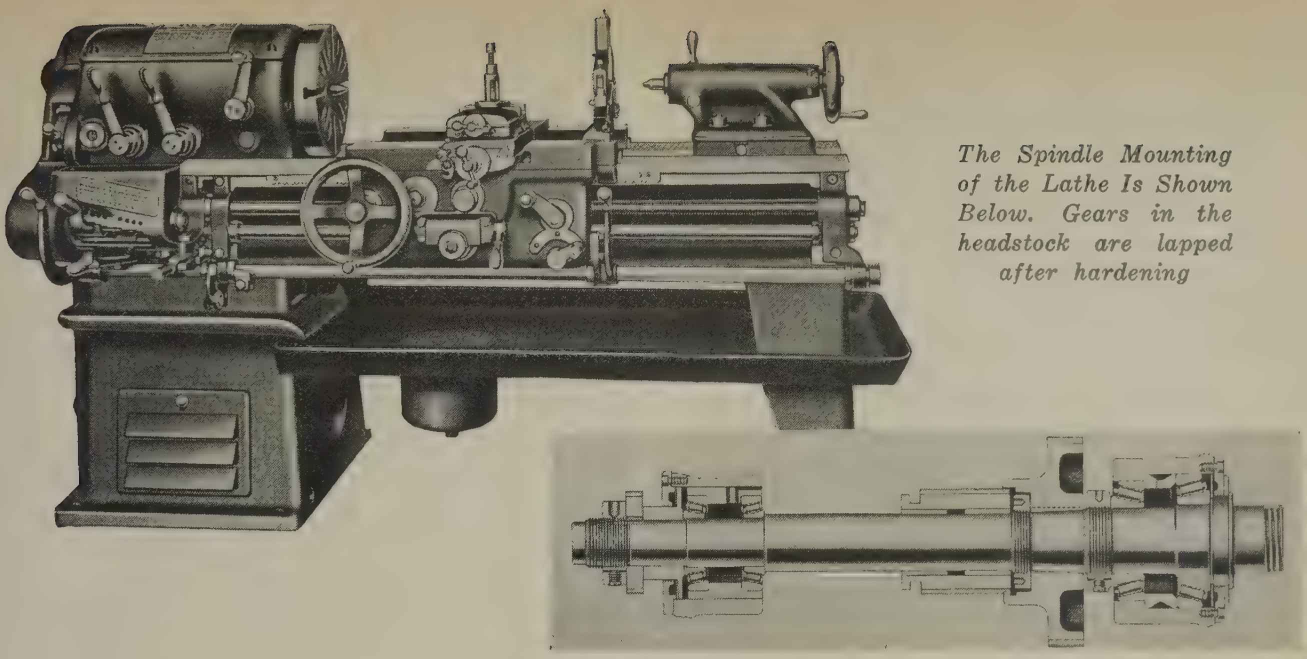


Duralumin Rivets Up to ¼ In. in Diameter Are Driven Rapidly. Rivets may be inserted well in advance of riveting and the machine operated continuously

Knife Switches for Panel Boards

To meet the demand for safety in switching operations of the low-voltage class, the Westinghouse Electric & Mfg. Co., East Pittsburgh, Pa., is offering a new line of type BB back-of-board knife switches. They are mounted on steel panels of the dead-front type, with only the operating handle passing through the panel. Complete accessibility of the switch and fuses from the front of the switchboard is provided by means of a fuse door. This is interlocked with the switch handle so that the switch must be in the full-open position before the fuse door can be opened, and the switch cannot be closed while the door is open. These switches are made for 250 volts direct current and 500 volts alternating current, for capacities ranging from 30 to 800 amp., and can be obtained in one, two, three or four-pole units, fused or unfused, and with or without quick-break attachments.

The Western Society of Engineers, Chicago, has removed its headquarters from 1735 Monadnock Block to room 1200, Engineering Building, 205 West Wacker Drive.



The Spindle Mounting of the Lathe Is Shown Below. Gears in the headstock are lapped after hardening

Sliding Gear Head Lathe With Tapered Roller Bearing Spindle Mounting

The sliding gear head engine lathe shown in the illustration, one feature of which is the use of tapered roller bearings for the spindle, has been added to the line of the Reed-Prentice Corporation, Worcester, Mass. These machines, available in 14 and 16-in. sizes, 6 ft. between centers, are designed to meet both production and toolroom requirements.

The spindle runs in a four-bearing precision Timken mounting, the thrust being taken on the front bearings. The headstock is equipped with sliding gear transmission of simple design, nine gears being used to give a range of eight spindle speeds. The gears are of nickel-chromium steel, cut and burnished before hardening, and lapped afterward. The main drive pulley is provided with disk clutch and brake. The motor is mounted within the cabinet leg on a hinged bracket, which is adjustable through nut and screw for proper belt tension. The apron consists of a one-piece box casting of double-support type. All bearings are bronze-bushed. One lever operates a double disk clutch for either cross or longitudinal feeds.

The eight speeds of the machine range in geometrical progression from 18 to 432 ft. per min., and 41 changes of feed range in inches per revolution from 0.0035 to 0.112. The net weight of the 14-in. lathe is 2450 lb. and of the 16-in. machine 2675 lb.

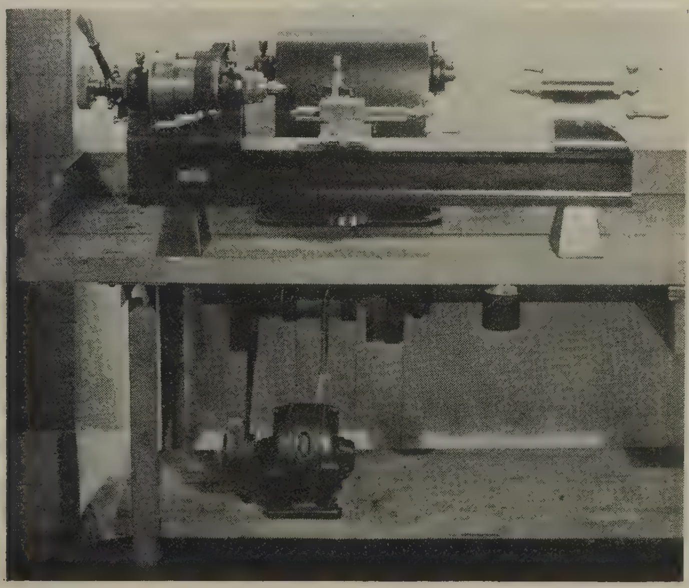
Compact Horizontal Safety Belt Drive for Bench Lathes

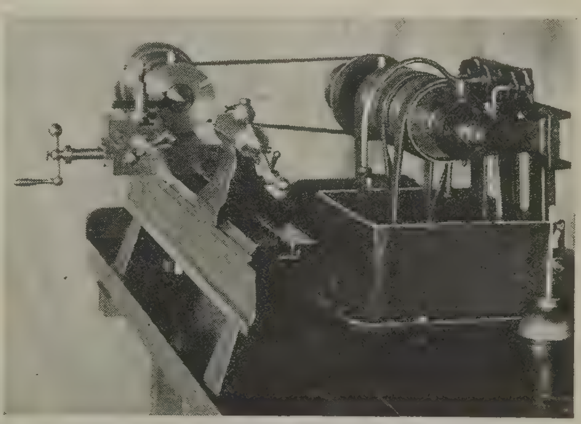
The Rivett Lathe & Grinder Corporation, Brighton, Boston, Mass., has brought out a horizontal safety drive for bench lathes, the arrangement of which may be noted from the accompanying illustrations. This drive is adapted for use on bench lathes of the Rivett company's or other manufacture and advantages claimed include the elimination of countershaft vibration and saving in length of belts.

The device is made up of a heavily ribbed countershaft base, that has bolted to it countershaft brackets, which are mounted on a fulcrum rod that extends through the sides of the heavy cast-iron bench guard. A rod, carrying adjusting nuts which bear against the front face of the bench guard, provides means for drawing forward the lower edge of the countershaft base and consequently swinging back the upper part of the base which carries the countershaft brackets. This swinging motion of the countershaft serves to tighten the horizontal belt which drives the lathe headstock, and also to tighten the vertical belt from the motor jackshaft mounted under the bench. When the tension adjustment has been made by the tightening rod, a nut on the end of the fulcrum rod is tightened, thus clamping together the sides of the bench guard against the countershaft base. A rigid countershaft mounting is thus effected.

The enameled sheet iron belt guard shown in the second illustration extends from the front edge of the bench guard over the countershaft pulleys and belts, and is attached by two thumbscrews to the top edge of the countershaft base. The belt guard is designed to permit full swing of the countershaft without interference with the countershaft pulleys.

The horizontal safety countershaft obviates the necessity of mounting the lathe countershaft in the





The Arrangement of the Horizontal Belt Drive for Bench Lathes May Be Noted from View Above. The belt guard, motor and new motor jackshaft are shown in view at left usual overhead position. In addition to elimination of countershaft vibration and savings in lengths of belting, danger from breakage of belts is a feature stressed. The adjustment feature of the safety drive permits the use of endless cemented belts, which is said to be particularly advantageous because of the high speeds at which bench lathes may be driven. Bench lathes are commonly mounted against windows, and the saving in light by eliminating the overhead countershaft belts is another advantage emphasized.

The motor jackshaft shown in the illustration is also of new and simplified design. The individual motor is controlled by a simple switch which is conveniently mounted under the front edge of the bench as shown. Patent application has been made on the safety drive described.

IMPROVED GEAR GENERATOR

Higher Production of Gears, Including Continuous Tooth Herringbone—Cluster Gears Cut Simultaneously

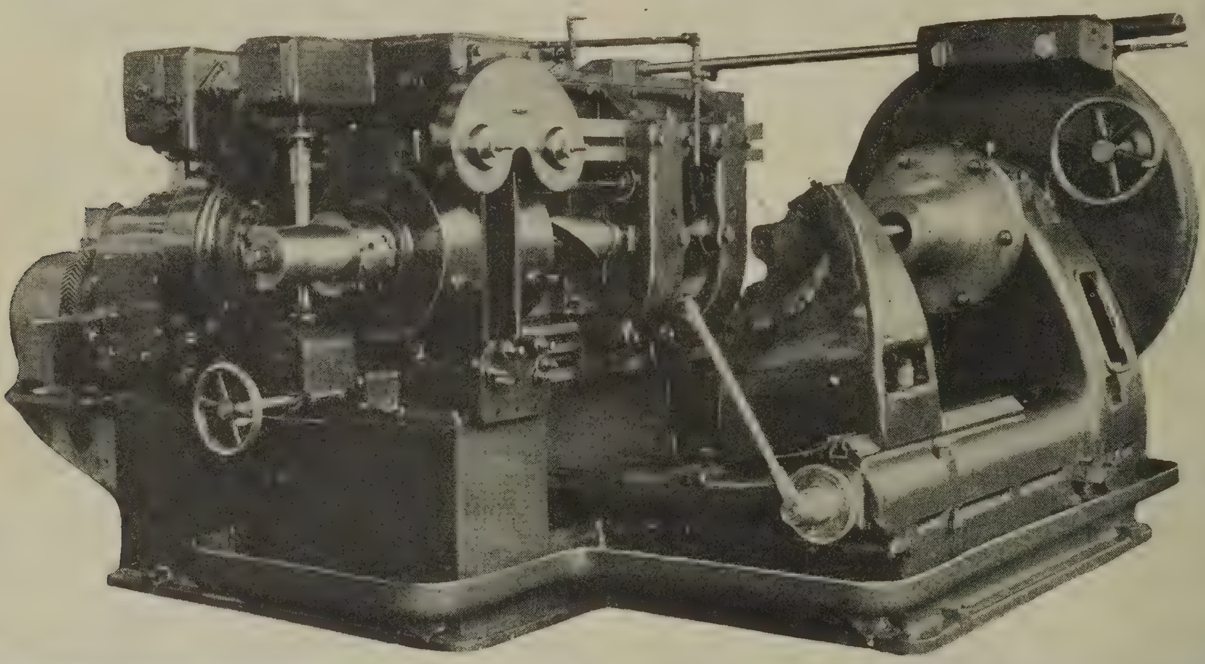
THE Farrel-Birmingham Co., Buffalo, which acquired the American patent rights of the Sykes gear generator in 1922, has brought out a new size of the machine having many improvements in design. These improvements enable continuous tooth herringbone, single helical and straight tooth gears to be cut in much less time than previously taken, and it is claimed that the finish on the teeth and the accuracy of tooth contour and division is of unusually high grade.

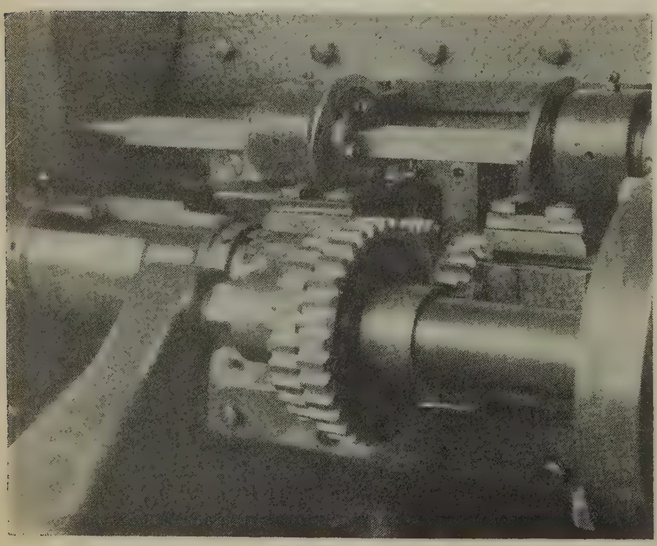
The general principle of operation of these machines was described at length in THE IRON AGE of Oct. 29, 1925, page 1189, and a brief description of new features of the size No. 2-A was given in the issue of Jan. 27, 1927, page 293. A diagram of the generating mechanism, illustrating the simplicity of the machine, is now available, and is reproduced herewith.

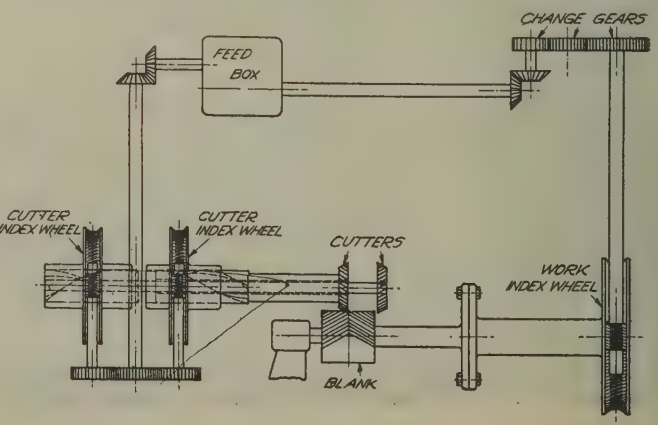
It will be noted that the principle adopted is that of the generating molding process, which is the basic principle of all gear generating machines. The utmost simplicity of operation is claimed for these machines, since there is only one set of change wheels used and since they have a ratio equal to the ratio of the number of teeth in the cutter to the number of teeth in the wheel to be cut, complicated calculations are avoided. These wheels regulate the speed of rotation of the cutters and of the gear blank so that they revolve at the relative speeds they would have if the cutter were a pinion and the blank already had the teeth cut.

Rotation of cutter and blank is continuously in one direction and there is no intermittent indexing. Therefore, the cutters and blanks may be revolved until all errors are removed from the teeth. Simultaneously with the slow rotary movement of the cutters, the reciprocating carriage, on which they are supported, is reciprocating longitudinally, thus imparting the cutting action to the cutters. The cutters are attached to guides which may be either straight or helical, depending upon the type of gear to be cut. When helical guides are used they give to the cutter a helical twist which generates the helices of the teeth of helical or double helical gears.

A feature of the machine commented upon in the previous descriptions is its ability to generate the continuous tooth herringbone gear which has no tool clearance in the center of the face width. It is stated by the builders that prior to the invention of the Sykes gear generator, double helical gears had not been used







New Sykes Machine for Cutting Double Helical Gears, of Either Continuous or Staggered Tooth Design, from 1 to 49 In. in Diameter. The arrangement of the generating mechanism is shown below, and the cutting of cluster gears at the left extensively in the smaller sizes because the tool clearance for the hobbing process detracted seriously from the strength of the gear and decreased the bearing surface. These objections to the small double helical gear are said to have been removed, small gears of this type now being used in planers, lathes, drills, milling machines, shapers, vertical boring mills and other standard and special machine tools. Other applications include herringbone speed reducers, which are said to be more compact, stronger and more durable than their spur gear predecessors. The smaller gears are also used to a certain extent on gasoline engines, airplanes and on rotary pumps.

Cuts Cluster Gears Simultaneously

The new machine, designated as the No. 4-A, will cut double helical gears of either continuous or staggered tooth design from 1 to 49 in. in diameter, from 1 to 18 in. in face width, and from 10 to 1½ diametrical pitch. It will generate straight tooth or single helical gears up to 10 in. in face width between the limits of diameter and pitch given above. It will cut cluster gears simultaneously, which operation, it is thought, has never been performed before. The accompanying illustration shows cluster gears having 33 and 29 teeth, 5/7 pitch, 1 in. face, being cut simultaneously, thus assuring, it is claimed, that the teeth of each gear in the cluster are concentric to each other, and halving the time of production.

The operation is effected by having two cutters with different numbers of teeth, the difference in number of teeth being equal to the difference between the teeth of the two gears in the cluster. They are rotated at different speeds by using a compound gear train in the cutter dividing mechanism.

In general design, the new machine is the same as the No. 2-A, previously described, but, since it cuts larger and heavier gears, the problems of production have been solved in a slightly different manner.

The bed of the machine is similar, but the work saddle ways are extended forward so that at all times they are beyond the point where the cutters are operating on the blank. This causes any deflection of the blank to be away from the cutters. The back of the work saddle has been raised and the bracket supporting the work mandrel is now seated on V-ways which are raised and are radial to the gear center. This is intended to provide more rigid support to the mandrel, permits heavier cuts to be taken and minimizes deflection. The bracket supporting the outer end of the mandrel is bored to a simi-circular form so that pinions with large extended shafts up to 9 in. in diameter can be fitted in bushings and held rigidly.

For setting up the blank a quick power traverse is provided to the work saddle. And for truing of the blank the worm driving the dividing wheel is lifted out of mesh, the work spindle being rapidly rotated by a hand wheel. Cutter brackets are heavier than on the smaller machine and two locking screws instead of one are used.

An adjustable pair of rim supports for the wheel blank is an important feature of the new machine. These are operated quickly by means of a handwheel on the side of the machine and the same system of equalizing screws as used for the cutter heads is employed to assure each support being in its proper position on the rim of the wheel. The point of contact of each support is just above the cutting point. When small gears are being cut the supports may be removed from the machine.

The machine is direct driven, through Sykes herringbone gears, from a 10 hp. motor. Unusually high production is claimed.

MACHINABILITY OF STEEL

Machine Tool Equipment, Small Tools, Material, Coolant Factors Discussed

INTERESTING data relating to the "Machinability of Metals" were presented by A. H. d'Arcambal, consulting metallurgist of the Pratt & Whitney Co., Hartford, Conn., at the May meeting of the New York chapter of the American Society for Steel Treating, New York, May 14.

Five factors that must be considered in discussing the machinability of steels were said to be the machine tool equipment used, the quality of the metal cutting tools employed, the type of material being machined, the cutting fluid or coolant used, and the human element.

In connection with the machine tool equipment factor, the great strides made by the machine tool industry in the past few years were briefly reviewed, the use of heavy-duty cutters and other tools at maximum speeds and feeds, with high-speed steel tools being operated at speeds and feeds much higher than dreamed of years ago, being emphasized. For maximum production, satisfactory finish and size, the best of cutting tools must of course be used, said Mr. d'Arcambal in discussing the second factor. It is not unusual today, he pointed out, to find ground thread taps of high-speed steel being operated at drilling speeds, and heavy-duty cutters removing chips that are dead blue in color. Small tools are also called upon to machine material of 300 Brinell or higher hardness, good production being expected.

Steels used in the small tool, gage, machine tool and aircraft divisions of the Pratt & Whitney plant were briefly described in discussing the material factor of machinability. It was stated that such steels as S.A.E. 1020 and 1045 are being rapidly supplanted by the high-manganese type of acid open-hearth steels, the latter not only having better physical properties but also much freer machining qualities. No difference is noted in the machinability of medium carbon alloy steels, such as 6150, 3145, 2345. These alloy steels are, of course, considerably more difficult to machine than the plain carbon steels of the same carbon content, said Mr. d'Arcambal, and it has been found that the Brinell limits must be fairly well controlled if maximum production is to be obtained from parts made from the medium carbon alloy steels.

The high-carbon high-chromium type of steel, with approximately 0.25 per cent carbon and 12 per cent chromium, was said to be the most difficult to machine of the higher carbon materials. Although much more difficult to machine than high-speed steel, because of its excellent wearing qualities steel of this analysis is becoming increasingly popular for many special jobs.

Sulphur Base Coolant Used on Most Jobs

In connection with discussion of the coolant factor, Mr. d'Arcambal said that a sulphur base oil mixed with a good grade of machine oil or paraffine oil is being used on the majority of jobs at the Pratt & Whitney plants. At times special oils are found desirable, such as a mixture of kerosene and machine oil for aluminum and other light non-ferrous alloys; a good grade of machine oil on many thread milling jobs; and soluble oil on some turning jobs. The sulphur base product, however, is used on the majority of work.

The human factor was emphasized as one that cannot be overlooked. Many machine operators shy at new steels that may be introduced from time to time, even if the new material is more easily machined. "Just change the name of the regular steel being used and note the complaints from the operator regarding the machinability of the supposedly new material," said Mr. d'Arcambal.

A large number of specimens showing the results obtained by the use of different types of cutting oils were exhibited, as well as samples illustrating the difference in finish obtained from different types of steels which were subjected to the same machining operations. Slides showing the effect of microstructure on machinability were also presented, as well as several views of the electric equipment now being used in the small tool and gage hardening room of the Pratt & Whitney company.

Business Analysis and Forecast

BY DR. LEWIS H. HANEY

DIRECTOR, NEW YORK UNIVERSITY BUREAU OF BUSINESS RESEARCH

GENERAL BUSINESS OUTLOOK

Favorable Factors

1. The commodity price indexes rose in April.

2. Building contracts recovered a little in April and appear to have held up well during May.

3. Automobile production is well maintained, considering the season.

4. Improvement continues in the copper and oil industries.

5. Farm purchasing power gained in March and probably in April, as farm prices averaged higher in that month.

6. Business failures decline in number.

7. Continued strong financial position of most leading companies.

8. Light mercantile inventories.

Unfavorable Factors

1. The P-V line falls a little lower, indicating the general supply of commodities to be too large in comparison with the demand at current prices.
2. Decline in unfilled steel orders.
3. Business expansion checked and halting, as seen in car loadings and factory employment.
4. Commodity price average turns downward in May; pig iron and steel scrap lower.
5. Retail trade slumps below normal.
6. Prolonged unseasonable weather; poor condition of some crops.
7. April merchandise exports decline.
8. Severe competition; narrow profits.
9. Tightening money, due to large gold exports, excessive brokers' loans, decline in Federal Reserve ratio, and policy of Reserve Banks in liquidating Government securities.
10. Excessive speculation in stocks; yields below money rates.

BOTH in number and importance, the unfavorable factors exceed the favorable ones and indicate the not distant approach of a moderate recession in business. We say "moderate," because such excesses and maladjustments as now exist are mostly confined to the stock market. The declines in the best business barometers are small, and the supplies of commodities in general are not sufficiently in excess of the demand to make a prolonged or severe readjustment necessary. There seems to be little probability of any severe or prolonged tightness in money, and lower rates may be expected, following the liquidation in stocks, which is probable. While a severe decline in the stock market would affect business unfavorably for a time, it would not be taken as a forecast of prolonged business recession, since the stock market has long been out of touch with the realities of business trends.

Bank Debits Far Out of Normal

OUR first chart illustrates the extraordinary and abnormal condition prevailing at present. It shows at a glance that bank debits are at record-breaking levels, far above any conceivable line of normal trend. Also it shows our best index of the volume of primary distribution of commodities at a relatively low level, much below any line of normal trend. In April, bank debits, or the volume of checks drawn against individual accounts, increased sharply and stood at 167 per cent of the average for 1921-1926. In the same month,

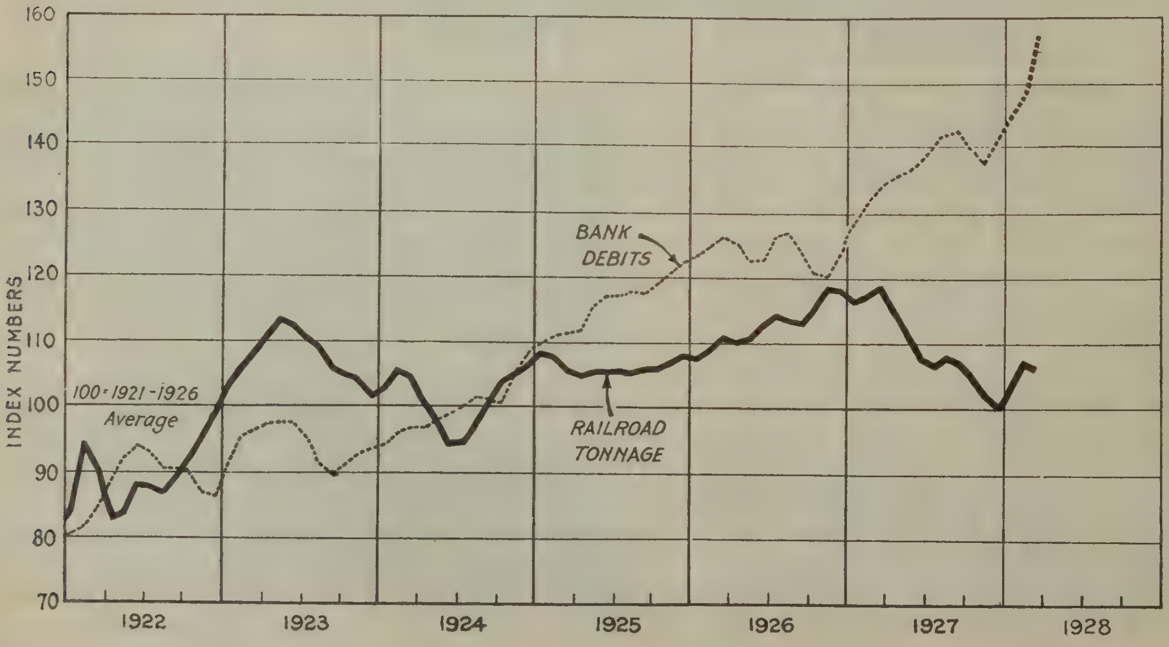


Fig. 1—Freight Traffic Has Recovered Since the End of the Year, But Is Far Below Its Normal Relation to Bank Debits. These have made the highest record ever known, but it is largely speculative

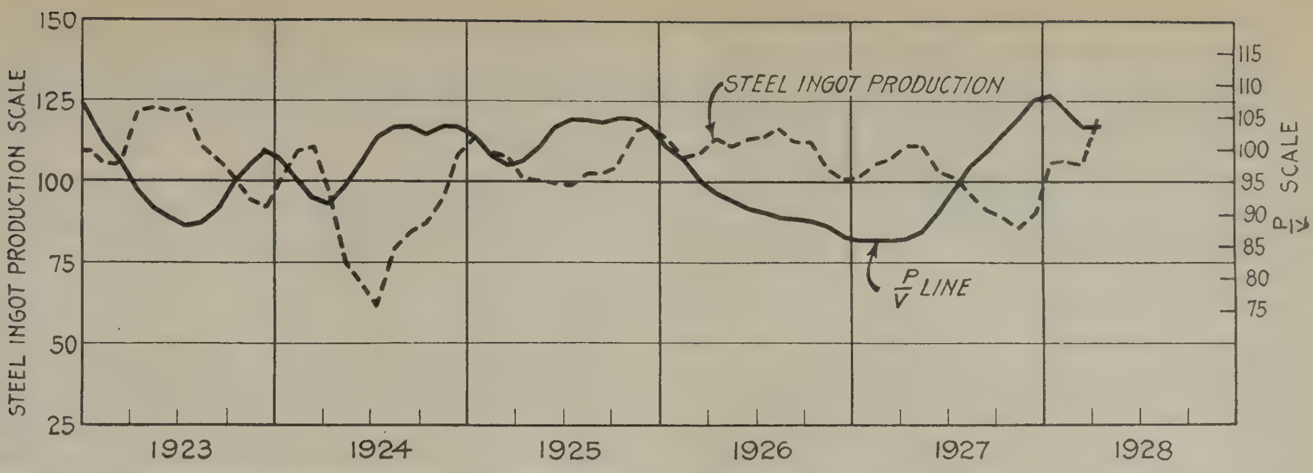

Fig. 2—Downward Movement of the P-V Line (Ratio of Commodity Prices to Physical Volume of Trade) Continued in April, Though More Slowly. Steel production (adjusted) has risen for five months and heavy tonnages may be expected for another month or two

railroad freight tonnage originated by the Class 1 roads of the country declined, and stood at only 101 per cent of the average for the same period. The nearest approach to this condition was found in July last year, but never in our history has so great a divergence appeared. What does it mean, and what portend?

It means that the volume of financial transactions, largely speculation in securities, has been carried to great excess. If the volume of checks drawn had been in proportion to the physical volume of trade (and certainly no rise has occurred in commodity prices that would justify any large divergence between the two), the bank debits curve would have been somewhere close to the railroad tonnage curve. Payrolls have not shown any such divergence and retail trade has declined considerably since the middle of last year. Thus there is no explanation other than excessive speculation.

Such a position portends a readjustment, and as there is not the slightest indication that such readjustment will come through expansion of business activity, we must infer that there will be a sharp recession in bank debits. This is likely to attend a reduced volume of speculation in securities and commodities, in which the chief factor will be a decline in the price of securities.

Ingot Output May Hold High Through June

As anticipated by us over a month ago, steel production increased quite sharply in April, considering the season, and in this followed even more closely than expected the precedent set by April, 1923, both in the rise and in the relationship with the P-V line. (See Fig. 2).

The P-V line (a general business barometer based on the ratio of commodity prices to the physical volume of trade) has now declined for three months in succession, though not sharply. This decline follows a rise in the barometer that lasted for from seven to eight months following May, 1927. Probably steel production is still under the influence of conditions forecast by this preceding rise, and, as the steel curve has risen for only five months, it may be expected to climb a little further, or at least to hold at the high April level for a month or two.

Apparently it has done this in May—remembering that we refer only to movements which are greater or less than seasonal, and do not count those changes which are merely the ordinary occurrences year after year. For example, a decline of 2½ per cent in May is the normal seasonal variation in the average daily ingot output, and a recession of that extent would leave our adjusted curve unchanged.

Of course, if we assume the validity of the relationship between the P-V line and ingot production, much will depend on the future trend of the former. At present it does not seem probable that this barometer will show an uninterrupted and prolonged decline as it did in 1923, for the simple reason that now there is no such oversupply of commodities to be worked off as then existed. But already the decline has been sufficient to warrant a forecast of a more than seasonal recession in steel production by July or August, at the latest.

This forecast applies also to business in general.

Automobiles and Buildings Normal Again

It is interesting to note that the curves of automobile production and building contracts, as shown in the third chart, have come together again, each being based on its own average for the last seven years. This is normal. It is the result of a decline in building activity and a recovery in automobile production, which has brought the two into touch at a point about halfway between the average for 1921-1927 and the peaks reached at the end of 1925.

Floor space in building contracts increased in April to 94,481,000 sq. ft., which is considerably above the preceding month or April, 1927. A good part of the increase, however, represents a usual seasonal gain. Our adjusted index is 124.5, against 118.6 in March, 144.1 in February, and 110.2 a year ago. (The average for 1921-1927 equals 100.) Thus building activity is much below the peak of the year.

(*Concluded on page* 1574)

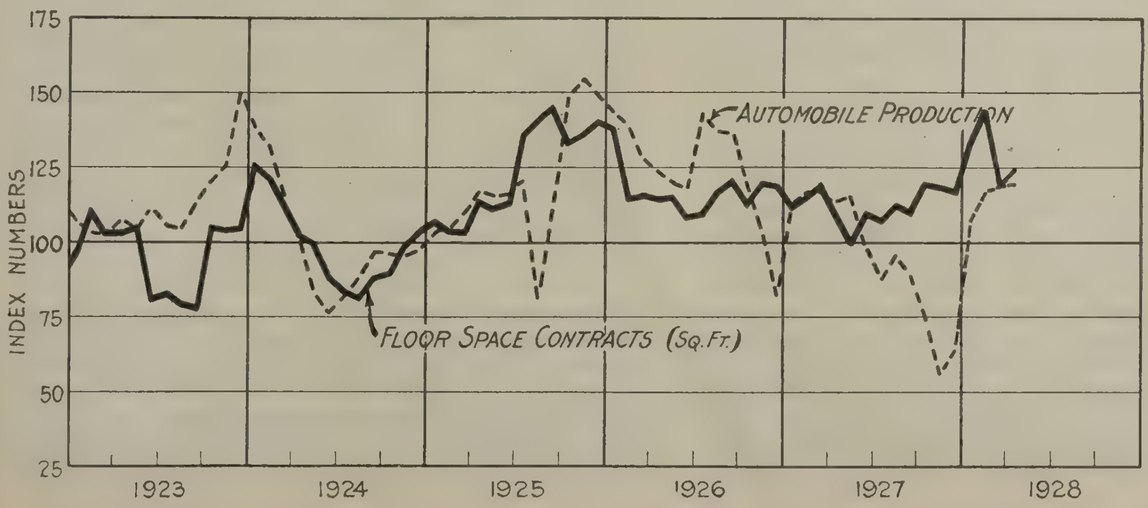

Fig. 3—Building Activity and Automobile Output Remain in Normal Relationship. Both appear to be ready for a decline

Koppers Co. Discontinues Negotiations for Massachusetts Gas Companies

Announcement has been made that negotiations for the purchase of the Massachusetts Gas Companies, Boston, by the Koppers Co., Pittsburgh, have been abandoned for the time being. This announcement was made just prior to the sailing of James L. Richards, president of the Boston company, for Europe and the departure of the Koppers Co.'s representative from Boston.

In Boston financial circles it is reported that the Koppers Co. has actually agreed to purchase terms and that upon Mr. Richards' return from abroad in about two months details will be announced. Officials of the Boston company will not affirm or deny the report. It is also reported the Massachusetts Gas Companies have negotiated the sale of some of their property to a New Jersey company and that a new industry will be established at Everett, Mass. Details are withheld, however.

When interviewed, an officer of the Koppers Co. stated that all negotiations regarding this matter had been discontinued and that there is no agreement between the companies for the purchase of the property.

The Massachussetts Gas Companies control the Mystic Iron Works, Boston Consolidated Gas Co., Citizens Gas Co., Quincy, Mass., New England Fuel & Transportation Co., New England Coal & Coke Co., Mystic Steamship Co., Caster, Curren & Bullitt, Inc., Providence, R. I., and the C. C. B. Smokeless Coal Co.

The Koppers Co., through its subsidiaries, is a large producer of coal, coke and gas.

Benefits Expected from Operation of Merchant Marine Law

WASHINGTON, May 26.—The iron and steel, machine tool, foundry and numerous other industries in the United States are expected to receive almost immediate stimulus from enactment of the Jones-White merchant marine law. Already Henry Herbermann, president Export Steamship Corporation of New York, has notified the Shipping Board that his company will apply at once for a loan out of the revolving fund, provided in the law, for the construction of four combination passenger-cargo ships to be operated between north Atlantic ports of the United States and ports on the Mediterranean-Black Sea route.

At the same time he submitted preliminary plans for the ships. These vessels will supplement the 21 cargo ships bought by the Export Corporation from the Shipping Board. The four new vessels, 450 ft. long, will have an average speed of 14 knots, with a tonnage of 9500 deadweight. cargo capacity for 5500 tons and space for mail. It is proposed to build four ships every two years for six years. Announcement of the application of Mr. Herbermann was made by Chairman O'Connor of the Shipping Board, who said that other private operators are expected shortly to avail themselves of the benefits of the new law.

"This means busy shipyards, and busy shipyards increase security and local payrolls in many seacoast and interior States," he said. He declared that, fine and fast as foreign ships are, "finer and faster American ships will be launched as a result of the Jones-White law. The United States is on its way to a new merchant marine which will carry us back to our old place of dominance."

Under the new law ships and materials for them, when built from money from the construction fund, must be of American production. It is also required that the vessels be built of steel. While permitting continued Government ownership and operation of lines which have not become self-sustaining, the act looks to eventual creation of a privately owned and operated merchant marine.

It provides a revolving construction fund of $250,000,000, and authorizes loans through the Shipping Board up to three-fourths of the cost of the vessel at a low rate of interest—the Government rate—for construction of vessels to be used in overseas trade. For vessels to be used in the coastwise trade a higher rate, 5¼ per cent, applies. The law also liberalizes the postal subvention and, it is estimated, will provide $7,500,000 annually to American ship operators in carrying mails under contract with the Post Office Department. Ships now Government-owned may be sold when approved by a vote of five of the seven members of the Shipping Board.

Republic District Sales Managers Appointed

H. T. Gilbert, vice-president in charge of sales, Republic Iron & Steel Co., and Wilbur B. Topping, general manager of sales, have largely completed the work of consolidating the district sales offices of that company, and the Trumbull Steel Co., recently merged with the Republic Co. In all cities where there were two offices, except Detroit, the Republic company district sales manager continues in that capacity, and the former Trumbull company manager becomes assistant manager. The Pittsburgh district sales manager is Frank M. Welsh, formerly assistant manager under Charles T. Johnston, who has resigned.

The district office personnel now is as follows:

New York, Whitehall Building: W. H. Oliver, district sales manager, A. R. Johnson, assistant district sales manager.

Philadelphia, Packard Building: C. S. McKinley, district sales manager, J. B. DeWolf, assistant district sales manager.

Pittsburgh, Oliver Building: Frank M. Welsh, district sales manager.

Detroit, Buhl Building: W. J. Hanna, district sales manager, C. S. Powers, assistant district sales manager.

Chicago, McCormick Building: H. W. Craig, district sales manager, L. J. Simmonds, assistant district sales manager.

Cleveland, Hanna Building: W. E. Collier, district sales manager.

The Rochester, N. Y., office of the Trumbull Steel Co. has been closed, and R. V. Jones has been transferred to the Republic company's Buffalo sales office, which is under Allan Hills. The consolidation of the Republic and Trumbull Cincinnati offices is yet to be completed.

Chapters of Steel Treating Society Name Officers

Harrison B. Parker, Trimont Mfg. Co., Roxbury, Mass., was elected chairman of the Boston chapter of the American Society for Steel Treating, at the annual meeting held recently. Dr. Robert S. Williams, Massachusetts Institute of Technology, was named vice-chairman, and Howard E. Handy, Saco-Lowell Shops, was re-elected secretary-treasurer. Mr. Handy recently changed his headquarters from Lowell, Mass., to Biddeford, Me., where the metallurgical laboratory of the company is now located.

The Canton-Massillon, Ohio, chapter of the society has named the following officers: E. C. Smith, assistant general superintendent Central Alloy Steel Corporation, chairman; R. G. Roshong, metallurgist Hoover Co., vice-chairman; R. Sergeson, metallurgist Central Alloy Steel Corporation, secretary, and R. L. Wilson, metallurgist Timken Roller Bearing Co., treasurer. The new executive committee is made up of John Edward Fick and L. D. Cable, metallurgists for the Timken Roller Bearing Co.; E. W. Hanna, general manager American Sheet & Tin Plate Co.; T. W. Hardy, chief metallurgist Timken Roller Bearing Co.; W. M. Lindsey, mill metallurgist Central Alloy Steel Corporation, and Martin H. Schmid, assistant manager of sales Central Alloy Steel Corporation.

Patents for the hollow seamless metal balls formerly manufactured by the Hollow Ball Co., Baltimore, and described in THE IRON AGE of Dec. 11, 1924, have been acquired by J. Harry Gruver, 210 West Lexington Street, Baltimore, the original patentee. A plant is being equipped for the manufacture of this product, which will be marketed for pump, valve and other uses.

Knowing Costs Has Many Advantages

Promotes Efficiency Within the Plant and, with Uniform Classification of Accounts, Serves to Tone Up Individual Industries

BY DR. ARTHUR E. SWANSON*

TOO many men lose sight of their ultimate goal in the rush and distractions of the daily task. Too many forget that they are in business for profit and profit only. We hear much about "service," but firms have crashed for lack of service just as they have failed by supplying too much service. A proper cost system correctly used can be of the same value to the firm as can the radio beam to the aviator. We may have fine plants, good sales organizations, able executives, but without the guidance of the cost system, the radio beam of industry, there is great danger, especially when too many distractions tend to cloud and fog the main issue. Only by the guidance of the cost system can the organization be kept on the right route to reach its true destination of *profits*.

Profits are the only criterion of success; the only way to be fair with your employees is to grow and supply them with the opportunity of growing with you. A firm in which employees must wait for dead men's shoes for advancement is not being fair to its employees.

Indicates Efficient and Inefficient Methods

Knowledge of costs enables you to make clear cut decisions as to what price to take business or to leave it alone. But costs have a much wider significance, knowledge of costs is most important in promoting efficiency. The cost system should be the best tool of the manufacturer. It should tell you where you are efficient and where inefficient. Even in a matter like scrap, you may have assumed that 5 per cent is the average. Often a study of costs will show you that 2 per cent can be aimed at, and once this idea goes through the shop the scrap begins to drop,—why should it drop, before, wasn't 5 per cent all right? You can not expect your men to aim at any different target from the one you aim at. If you know what to aim at, your men will come to know.

With a knowledge of costs, departments can be checked and developed. In too many plants, through lack of knowledge of what is going on, the superintendent goes by what the foreman says, the foreman goes by information from the man at the machine, who has only a narrow view of the problem. With a knowledge of costs, the trouble can be located or the possible source of saving picked out. This also means that the deserving men can be selected on their ability as workmen rather than on their ability as talkers.

Again, costs show which products should be developed and pushed, and which should be dropped or rated as of minor importance.

Once an executive actually realizes what the proper use of costs can mean it will seem incredible to him that so little attention is paid to them.

Full Significance Cost Knowledge Not Realized

Since costs are so important, why are there any who do not make the fullest possible use of them?

First, because their full significance is not appreciated.

Second, because many plants have started in a small way, say by a mechanic or two, who knew how to make an article and make it right. Then came the necessity of knowing how to sell; then burden began to develop. At first much of the cost was direct and could be seen, but as burden began to develop, as machines began to wear out and as new types of machines came in, the indirect costs began to mount up, without being recognized as a part of real costs. As this indirect cost began to grow in importance its significance was not realized, it was not seen that all this was part of the cost of every article produced.

Another reason is that the securing of costs is not an easy job. We tend to think of the things we know about, and avoid those with which we are not familiar.

Every manufacturer should get deep into this matter himself, not necessarily to operate the system, but to know how it works and to master its principles. This is a matter of study and reflection. Once into it, the matter becomes more interesting,—at every point there is a challenge. The mastery of the principles will be well worth while.

Some do not go further into this matter because of a bad experience, perhaps because the problem was not properly developed or explained. But two wrongs do not make a right,—regardless of the experience, there are too many manufacturers whose success depends upon their cost system for anyone to say that this can be overlooked or treated lightly. Like a bad experience one may have with a doctor or a dentist, even like your own bids—you don't quit bidding because you may have made a bad bid.

Sometimes the expense of the cost system seems out of proportion to the advantages secured. This is only because you do not see all the benefits and have a wrong idea of the expense. But it does cost money—the question is not what it costs, but what it is worth.

Then again there are many firms which could know their costs, but which are helpless on account of competition. Some seem forced to disregard costs and do what they know is good business. Here at least they should know the dead line,—it is one thing to know that you may be forced to be doing bad business and another to think you are doing good business when you are not.

Uniform Cost Methods Benefit Individual Industries

This brings up the newer development and attitude of management,—its relation with others in the same business. Not only is present-day management interested in its internal and its selling problems, but in the entire industry of which it is a part. If an industry is to be in a healthy state, every member of that industry must be strong. It is the selfish duty of those more fortunate to help those not so well off, since the weakness or lack of knowledge of conditions disturbs the whole industry. Selfishly it is good business, since several weak unposted organizations may think they are doing good business, and helping them set themselves right helps everyone.

If every member of a group knows his costs accurately, it is easier to secure a fair margin of profit. With uniform classification of accounts, comparative ratios can be secured so that the proper firms can locate the points on which their efficiency is challenged. This will tone up the entire industry and make it a more efficient portion of the industrial machine of today.

---

*Swanson & Ogilvie, consulting engineers, Chicago. From an address made at the general meeting of the Screw Machine Products Association, held at the Great Northern Hotel, Chicago, May 17.

With a uniform classification, differences in quotations can mean only differences in efficiency.

Three Stages in Group Cost Work

In group cost work there are three stages:

1.—There are many members who do not know costs, who do not realize what their costs can do for them. This requires propaganda, a pointing out of what it would mean to know costs.

2.—Education, study of different methods, needs, what the cost system should do for each, and a plan for each one.

3.—Adoption of a system which will allow for comparisons between plants. There may be many different methods, each good, but one of the main values of a cost system is lost if comparisons cannot be made.

The first step may take months, or years; the second step should not take more than months; and the third is almost a matter of weeks.

The final result is the uniform classification, uniform accounting, and is also most desirable since many items of cost like depreciation, obsolescence and normal working time can make a vast difference in apparent costs with differing policies. With a uniform system these matters of judgment and combined experience can be compared and checked.

It must be remembered that the teacher doesn't educate—he only supplies the materials with which the student educates himself. Just so here, it is the duty of the industry to supply materials with which each member can educate himself, and to do this there must be a common language.

There is no time to discuss some of the fundamental elements of costs, but I will touch on some of them:

1.—Burden and Its Application. As industry advances, burden increases. Robinson Crusoe had nothing but direct labor, but his costs were very high. As an industry developed, direct labor tended to lower, and burden, indirect labor and overhead increased. These are actual elements of costs no matter how disguised.

As tools developed this burden increased, and it may not have occurred to you that the ideal is no direct labor and *all burden*. Of course we will never reach this, but, as you think of the developments in industry, you will realize the trend.

2. — Depreciation and Obsolescence. These will grow as the burden grows. Here are two items, obsolescence particularly, which will have to be given more attention as we develop. Just as you are interested and gratified to see how some new machine or method in some other line will reduce costs to you, so the general public is interested in anything which will reduce costs to them. This means accelerating obsolescence if there is to be increased efficiency, and, while it hurts the industry in one sense, yet, since it helps industry, new developments must be welcomed—even sought.

In conclusion, the good executive is a good teacher. While the main idea of business is profit, the greatest profit comes from the development of men and to develop men requires performance records.

Salesmen's and Purchasing Agents' Association Elects Officers

At a recent meeting of the Salesmen's and Purchasing Agents' Association of America, A. H. Jones, Bryant Electric Co., Bridgeport, was elected president and R. T. Phipps, Bullard Machine Tool Co., Bridgeport, was chosen vice-president for the coming year. W. B. Osborne, Erie Malleable Iron Co., is secretary and W. H. Bradley, Hunter & Havens, Bridgeport, is the new treasurer.

The service of the retiring president, H. J. Behn, Hunter & Havens, Bridgeport, was recognized by a unanimous vote of thanks, and R. T. Phipps, past treasurer, was the recipient of a gold watch and chain in recognition of his work in promoting the first exhibition of the association, which was held in Bridgeport, Feb. 24 and 25. It is expected that a second exposition will be held in Bridgeport early in 1929.

An outing of the association has been planned for June 23, at Champs Farm, Bridgeport. Following a brief business session at 1.30 p.m., there will be a program of sporting events, and dinner will be served at 6 p.m. An attendance of more than 200 is anticipated.

Mining Engineers Form Iron and Steel Division

At a meeting of the iron and steel committee of the American Institute of Mining and Metallurgical Engineers, held in New York Thursday evening, May 24, the suggestion which was made at the general meeting of the institute in February, namely, that the iron and steel activities of the institute be concentrated in the form of a division of the organization, was formally adopted. This feature of the work of the institute will now be conducted by what will be known as the Iron and Steel Division, similar to the Institute of Metals Division for the non-ferrous activities.

Ralph H. Sweetser, assistant to first vice-president American Rolling Mill Co., Columbus, Ohio, was elected chairman. Three vice-chairmen were named as follows: Dr. F. C. Langenberg, vice-president Climax Molybdenum Co., New York; W. J. Priestley, vice-president Electro Metallurgical Sales Corporation, New York, and Dr. George B. Waterhouse, professor of metallurgy Massachusetts Institute of Technology, Boston. Dr. T. T. Read, assistant secretary A. I. M. and M. E., was made secretary-treasurer.

The chairmen of the nine technical committees of the iron and steel division were named as the executive committee. They are Charles B. Murray, Crowell & Murray, Cleveland; C. A. Meissner, United States Steel Corporation, New York; William H. Blauvelt, consulting engineer, New York; H. T. Morris, Bethlehem Steel Co., Bethlehem, Pa.; Arthur H. Jameson, Deemer Steel Casting Co., New Castle, Del.; F. C. Langenberg, Climax Molybdenum Co., New York; L. F. Reinartz, assistant general superintendent American Rolling Mill Co., Middletown, Ohio; A. L. Feild, Electro Metallurgical Co., New York, and Bradley Stoughton, professor of metallurgy Lehigh University, Bethlehem, Pa.

Consideration was given to a proposal that the division hold a joint meeting with the Lake Superior Mining Institute, possibly late in August.

Institute of Metals to Meet in Liverpool in September

The council of the Institute of Metals has just issued a preliminary program of the four-day annual autumn meeting which is to be held this year in Liverpool. In the course of the 20 years of the institute's existence most provincial centers and many foreign cities have been visited, but this is the first occasion on which Liverpool has received the members of this body of metallurgists and engineers. The proceedings will begin on Sept. 4 with a lecture on "Non-Ferrous Metals in the Shipping Industry," by F. G. Martin. The mornings of Sept. 5 and 6 will be devoted to the reading and discussion of papers and the afternoons to visiting works of interest in the neighborhood. On the evening of Sept. 6 there will be a reception at the town hall by the Lord Mayor (Miss Margaret Beavan). The meeting will conclude on Sept. 7 with an all-day motor trip to North Wales.

CLOSES HIGH-COST MINES

Consolidation Coal Co. Takes Steps to Correct Oversupply of Bituminous

THE Consolidation Coal Co., in closing down six of its mines in the Fairmont, W. Va., field and four in the Somerset, Pa., field, these operations being the least efficient of its many mines, has taken a step which, if followed by other large soft coal producing companies, cannot fail to have a beneficial effect upon the bituminous coal situation. The suspensions mean the throwing out of employment of 2500 men, or 20 per cent of the company's employees in the two districts, but according to Robert C. Hill, chairman of the company, steadier work will be provided for the other 10,000 miners, who may have full time instead of the part time employment they have had for some time.

George J. Anderson, who was elected president of the company just prior to the suspension order, in an open letter to other coal producers, observed that his company believed that the present plight of the bituminous coal industry would not be remedied by forcing unwanted coal upon an unwilling market. It sees no relief, either to the industry or to any producing company, by cutting prices below a level that permits a mine to remain in production, with its natural overhead unabsorbed in its average realization.

"No present useful purpose nor any contribution to future stability," continues Mr. Anderson, "is to be gained by further cutting wages below a sound economic level. Whatever may be the temporary relation of labor costs to selling prices, the primary object of both mine labor and mine management must be the most regular work-time possible under a proper wage base.

"If the industry is to progress rapidly toward its rightful economic recovery, the Consolidation Coal Co. believes each and every producing unit must make some sacrifice to that end. We speak only for ourselves and only in the spirit of friendly cooperation. The retention of the most economic mines, and the present elimination of the least efficient, adopted voluntarily as a general program, seems to offer the speediest and most effective relief for all."

Trade Commission Holds Hearing in Aluminum Company Case

A hearing in the Federal Trade Commission's suit against the Aluminum Co. of America, held at Pittsburgh, May 21, 22 and 23, and then adjourned until June 13, was featured by the refusal of A. V. Davis, president of the Aluminum Co., and other company representatives, on the advice of their counsel, to answer the questions propounded by R. P. Whitely, who, as in previous hearings, appeared as counsel for the commission. P. J. Urquhart, chief auditor, and I. W. Wilson, superintendent, were the other company officials who declined to answer questions, on advice of counsel, that the subjects were irrelevant and were not within the scope of the complaint against the company.

One of these matters was an allegation by George D. Haskell, Boston, president of the Baush Machine Tool Co., Boston, that he had an arrangement with the late James B. Duke, tobacco magnate, relative to their going into the aluminum business on the Saguenay river in Canada, which Haskell alleged had been interfered with by the aluminum company.

Another was Haskell's allegation that the aluminum company had been guilty of price cutting in competition with the Baush Machine Tool Co.

Still another was the Government's allegation that the aluminum company had entered into price-fixing agreements with certain foreign aluminum manufacturing companies.

Counsel for the company made it clear that the objections to this testimony were based solely on the contention that it was outside the complaint and was irrelevant.

The same position was taken on questions relating to bauxite ore holdings of the aluminum company in Dutch Guiana and elsewhere, which the witnesses also declined to answer, on advice of counsel, as being outside the complaint.

The commission charged that the company, seeking to remove scrap aluminum from the market, engaged in unfair practices in violation of the Clayton act. The company was alleged to have sold virgin sheet aluminum to certain manufacturers of automobile bodies and cooking utensils at lower prices than were charged other consumers for the same material and bound them, in return for the concession, to sell it all of their scrap material.

As a result, it was charged, scrap aluminum had disappeared from commerce, although 32,000,000 lb. of it was sold in 1922.

OPPOSE PIPE RATE ADVANCE

Southwestern Consumers' Committee Asks Further Hearings

WASHINGTON, May 28.—Estimating that the proposed freight rate increases on wrought iron and steel pipe provided for in the decision of the Interstate Commerce Commission in the Consolidated Southwestern cases, effective July 8, would amount to $2,000,000 annually, and would throw the burden on the public in the Southwest consuming gas and oil, the Southwestern Pipe Consumers' Committee has petitioned the commission to postpone the date of the order and grant further hearings on it. It is pointed out that the commission did reopen the cases for further hearing as to the rates on wrought iron and steel pipe and cast iron pipe, and postponed the effective date of the latter, but left the order in effect on wrought pipe. It is requested that the commission give ample opportunity to the public to defend the present level of rates and to show that if any revision in the grouping or general rate structure is to be had it should be in such a manner as not to increase the general burden on this commodity.

Reference is made to an exhibit submitted by the Chamber of Commerce of Dallas, Tex., showing prevailing and ordered rates from St. Louis, Kansas City, Pittsburgh and Birmingham to representative points in the Southwest. This exhibit shows 66 increases and 12 reductions in rates. The aggregate of the 66 increases is placed at $5.54, or an average of 8.4c. each, while the aggregate of the 12 reductions is fixed at 43c., or 3.6c. each.

The petition also states that the average carloading of pipe is 81,000 lb., and the earnings per car-mile substantially greater than those upon numerous other commodities, including almost the entire general list of iron and steel articles. Contention is made that wrought pipe should not be classed with iron and steel articles, but should have a commodity basis somewhat lower.

The petition also says that the commission has reopened the case and postponed its order indefinitely as to ocean-rail and rail-ocean-rail carriers employing routes between Trunk Line and Eastern territories and the Southwest by way of the ocean, but has prohibited the all-rail routes through the river crossings from meeting the competitive rates of the former. As a result, it is declared, the commission has substantially increased the all-rail rates but has left the water carriers free with their connections to continue the present rates or to establish others.

The present all-rail rate from Youngstown to Houston, Tex., it was pointed out, is 67c. per 100 lb., while the rail-ocean-rail rate is 64.5c., a difference of 2.5c., which, the petition declared, just about equalizes the rates. Effective July 8, the rate from Youngstown will be increased to 96.5c., so that it will be almost 50 per cent higher than the rail-ocean rate, which will be continued. McKeesport, Pa., and other important producing points, it was stated, show a similar situation. At the same time, it was added, Chester, Pa., and other nearby points, enjoy rates ranging from 36c. to 41.5c. by water. Chicago was declared to be permitted to reach Houston on a rate of 49c., but the rate will be increased to 85c., or more than 70 per cent, while Seaboard points will still have their low rates.

SWEDISH DUTIES UNCHANGED

Tariff Bill on Steel Abandoned—Ore Company Declares Large Dividend

STOCKHOLM, SWEDEN, May 14.—It is understood that the Ministry of Trade has decided to abandon a proposed bill in the Riksdag, to increase the tariff on iron and steel. The ministry has pointed out that some of the difficulties of the iron and steel industry of Sweden must be regarded as temporary and further that the proposed increase in duties suggested by the commission of inquiry would be insufficient to equalize the difference between domestic prices and those of foreign sellers. Other measures are suggested, including combinations of producers and dealers.

Although iron and steel consumers and farmers have opposed higher duties, the decision of the ministry was unexpected. The commission of inquiry found that iron and steel production of the country was lower than before the war and importation of steel had doubled. Other countries, particularly Germany, Poland and Czechoslovakia, were found to be exporting to Sweden at prices 30 to 40 per cent below those on domestic products. The proposed duties amounted to 10 to 20 kr. ($5.37) per metric ton on rolling mill products, 10 kr. ($2.68) per ton on sheets and 25 kr. ($6.70) per ton on rails, which are now duty free. There were also increases in the duties on iron, iron alloys, nails, screws, rivets, bridge and elevator material of about 6 kr. ($1.60) per ton.

The Grangesborg Co., the largest iron ore producer in Sweden, showed gross profits of 42,980,000 kr. ($11,533,534) in 1927, which was 7,360,000 kr. ($1,974,688) more than in 1926. Net profits were 20,380,000 kr. ($5,467,954) compared with 21,860,000 kr. ($5,865,038) in 1926, but from a surplus of 30,190,000 kr. ($8,100,977) a 17 per cent dividend was paid. Ore stocks declined 792,000 metric tons. At present, as a result of the protracted strike of the miners, there is practically no stock available. During the year the Grangesborg Co. acquired 23,621 shares in the North African Hematite Co. and bought iron ore deposits from the Stora Kopparberg Co.

Bauxite Output in 1927—Heavy Exports

WASHINGTON, May 27.—Reflecting a decrease of 18 per cent in both quantity and value, production of bauxite in the United States in 1927 was 320,940 gross tons, valued at $1,988,780 as against 392,250 tons, valued at $2,415,200 in 1926, according to a statement prepared by J. M. Hill, Bureau of Mines. Imports of bauxite in 1927 totaled 356,580 tons, valued at $1,572,236 as against 281,644 tons, valued at $1,187,497 in 1926. Exports of bauxite and bauxite concentrates have also increased, particularly in the last two years, because of the large increase in aluminum manufacture in the Canadian and Norwegian plants of the Aluminum Co. of America. In 1927 the exports amounted to 121,858 tons, valued at $7,800,491, as compared with 87,770 tons, valued at $4,741,260 in 1926. Producers of domestic bauxite reported sales during 1927 at prices ranging from $5 to $6.50 per gross ton.

Mined 748,420 Tons of Iron Ore Without a Lost-Time Accident
